980803	1/28/2021	NJ	68	F	1/11/2021	1/11/2021	Back pain; tired; whole body trembled; nervous; facial tingling; immediate pain in arm from injection; couldn't lift her arm at all; left eye twitching; Chills; Nausea; no appetite; whole body ache; This is a spontaneous report from a contactable consumer reporting for herself. A 68-year-old female patient received the first dose of bnt162b2 (BNT162B2, lot number and expiry date were not reported), via an unspecified route of administration, on 11Jan2021 5:15 PM at a single dose on arm for COVID-19 immunization. Medical history included ongoing shellfish allergy from 1975 (she carries epi pen), ongoing iodine allergy from 1975 (she carries epi pen), ongoing Mitral valve prolapse (for 20 years), blood pressure high, and cholesterol. The patient had mitral valve prolapse for about 20 years now. They are just watching it now. She just saw the cardiologist, and had an echo done. If the symptoms worsen, they will proceed. Concomitant medications included diltiazem for blood pressure high and atorvastatin for cholesterol, both from an unspecified date and ongoing; she has been on these medications for 30 years now. On 11Jan2021, the patient experienced facial tingling, immediate pain in arm from injection, couldn't lift her arm at all, left eye twitching, chills, nausea, no appetite, whole body ache, tired, whole body trembled, nervous. On 12Jan2021, the patient experienced back pain. The patient explained that on 11Jan2021, evening at 5:15pm, she received her first COVID 19 vaccine. The Pfizer vaccine was being given out at that time. She has shellfish and iodine allergies. So, they made her sit and wait 30 minutes after being injected. One of her daughters took her. On the drive home, a few minutes after leaving she developed facial tingling. At first, she thought nothing of it. She did have immediate pain in her arm from the injection. By the time she got home, she couldn't lift her arm at all. It was that painful. The next morning, she couldn't lift arm, and if she tried, she would be in pain. Also, her left eye started twitching right away also. That night she really noticed it. It was not a constant twitching. She thought at first it was because she was tired or from the pain in her body. But then she noticed the next day it was still doing that. It was still twitching. It is not constant, but it was here and there. She still had it on 13Jan2021, but so far nothing at the day of report (14Jan2021). She also had chills. She had on double clothes, and coverings on her feet and hands.

---

The chills wouldn't go away. Her whole body trembled. On 13Jan2021, Wednesday morning, they went away. She experienced nausea and no appetite. Her whole body ached. It was so brutal. The problem was with her left eye. It didn't twitch constantly, but it got her nervous. She is pretty sure she is going to refuse the second dose. She has heard that the 2nd part is when most people have the worst side effects. So, she is not comfortable getting it. She also got back pain. It wasn't severe, but it was there. She is against getting the second shot. She stated that she is a medical assistant at a pediatric office. She doesn't have a prescribing doctor. She got it (vaccine) because of her age. She was advised to get it as she was around patients. Work gave them the option. The inability to move her arm ended in the middle of night at 4 am 14Jan 2021. She noticed she could move her arm. Her second dose is scheduled for 01Feb2021 at 8:45 am. She does work in a pediatric office. If the second part of side effects are worse, then she doesn't want to take the chance. The eye has her concerned. Outcome of the events were as follows: facial tingling recovered on 11Jan2021, immediate pain in arm from injection recovered on 13Jan2021, chills recovered on 13Jan2021, nausea recovered on 13Jan2021, no appetite recovered on 13Jan2021, whole body ache recovered on 13Jan2021, couldn't lift her arm at all recovered on 14Jan2021, back pain was recovering, while outcome for events left eye twitching, tired, whole body trembled, and nervous, was unknown. Information about lot/batch number has been requested.

980640	1/28/2021	FL	81	F	1/11/2021	1/11/2021	Watery drainage from her right eye; Nose feels full; congestion; Phlegm; Fever blister on her tongue (sore blister on the right side of her tongue); sores on her tongue; Feels a little weird; Dizzy or dizziness like vertigo (funny feeling like vertigo); Headache; Slept hard - she never sleeps that much; Drinking a lot of water; Fever; feverish; This is a spontaneous report from a contactable nurse (patient). An 81-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot Number: EL1284, Expiration Date: 30Apr2021), via an unspecified route of administration, on 11Jan2021 at 09:00, at a single dose, for COVID-19 immunization. The patient's medical history included colitis and diverticulitis (chronic; diagnosed years ago); and allergies. The patient's concomitant medications included chlordiazepoxide/ clidinium bromide (LIBRAX) for colitis, omeprazole (PROTONIX), levocabastine hydrochloride (ZYTEC) for allergies, and cyanocobalamin (VITAMIN B12) for colitis. The patient previously took the first dose of BNT162B2 (Lot Number: EH9899, Expiration Date: 31Mar2021) on 21Dec2020 for COVID-19 immunization and experienced a little sore on site; and varicella zoster vaccine (SHINGLES VACCINE) for immunization and it hurt and she got blisters at the injection side. The patient just got her second shot on Monday (11Jan2021) at 9 in morning. After a couple of hours (11 AM), the patient feels a little weird, dizzy or dizziness like vertigo (funny feeling like vertigo), and headache. That night, the patient took ibuprofen (MOTRIN) and paracetamol (TLENOL) and she just slept hard - she never sleeps that much, she is drinking a lot of water. The patient also had a fever that night and received treatment for this. On Tuesday (12Jan2021), the patient was okay but, in the evening, she started feeling feverish and has a fever blister on her tongue (sore blister on the right side of her tongue). The patient never had a fever blister before. Last night (13Jan2021), the patient was a little feverish, still has the sores on her tongue and she was having watery drainage from her right eye and her nose feels full; congestion and phlegm. The patient wanted to know if she should go to work tomorrow but was encouraged to reach out to a health care professional for medical advice. The patient asked health employee and they told her to call the company. Got the vaccine from work at a center. The patient

980590	1/28/2021	KY	44	F	1/8/2021	1/1/2021	<p>her eye is still swollen with chills; low grade fever; chills; muscle cramps; general muscle ache; Tiredness; scratchy throat which got worse with time; tenderness around the injection site; it felt really bad almost like a flu; it felt really bad almost like a flu; This is a spontaneous report received from a contactable consumer (patient). A 44-year-old female patient received the first dose of BNT162B2 (BNT162B2 PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL3248, expiry date: 30Apr2021, NDC number: 59267100001), intramuscular in the left deltoid, on 08Jan2021, at 0.3 mL, single, for COVID-19 immunization. There were no medical history and concomitant medications. The patient reported she had side effects after receiving the first dose (Jan2021). She had a scratchy throat which got worse with time. She had a general muscle ache, tenderness around the injection site. The muscle ache increased with chills and low grade fever. She said it felt really bad almost like a flu. She reported her eye is still swollen with chills and low grade fever. She further clarified that she was given the vaccine on 08Jan2021, Friday afternoon. On 09Jan2021, Saturday, she had muscle aches, tiredness, and by Saturday night she had a scratchy throat. On 10Jan2021, Sunday, she experienced tiredness and muscle cramps. She worked half day on 11Jan2021, Monday, and by the afternoon she had chills and low grade fever. On 12Jan2021, Tuesday morning, she woke up and her eyes were swollen. She noticed the swelling has decreased a little bit. She didn't have any symptoms such as difficulty breathing. The reporter asked what have caused these side effects and why did her immune response react this way after receiving the vaccine. She mentioned that her second dose is set up for the end of January and asked if she will be able to get the second dose since she had a reaction and she was wondering if had an illness when she got the vaccine could that have caused her to have a hyper response in her immune system to the vaccine. The outcome of the events scratchy throat which got worse with time, general muscle ache, tiredness, muscle cramps, eye swelling and low grade fever was recovering; chills was not recovered; and the outcome of the remaining events was unknown.</p>

980584	1/28/2021	CA		M	1/13/2021	1/13/2021	like a slight paralysis; stiffness in the face; numbness in the face; A spontaneous report was received from a 64-year-old, male patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced like a slight paralysis, stiffness in the face and numbness in the face. The patient's medical history, as reported, included high blood pressure. Concomitant medications reported included losartan. On 13 Jan 2021, about 5 minutes prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 13 Jan 2021, about 5 minutes after getting the Moderna COVID-19 vaccine, the patient experienced a stiffness and numbness in the face, like a slight paralysis. It started in the nose and spread out to the eyes and forehead. After about half an hour, he still experienced it a little bit. No medications were taken for the events. Action taken with mRNA-1273 in response to the events was not reported. The outcome of the events, like a slight paralysis, stiffness in the face and numbness in the face, was recovering/resolving.; Reporter's Comments: This spontaneous report refers to a case of a 64-year-old, male patient with medical history of high blood pressure who experienced a serious event slight paralysis and non-serious events of stiffness in the face and numbness in the face. The events occurred 5 minutes after the administration of the mRNA-1273 vaccine (lot # unknown, expiration date-unknown). No treatment was administered, and patient is recovering. Based on the information provided which includes a temporal association, a causal association cannot be excluded.

982672	1/28/2021	MD	46	F	1/12/2021	1/12/2021	About an hour and a half after the injection, I felt nausea, a headache, tiredness, and a general feeling of not feeling well. I ate some food and drank some ginger tea and it helped a little but after another hour I felt terrible with the same symptoms. They lasted for three days where I needed to go to bed by 6:00 PM or as soon as I could each night. On Sunday, January 24, 2021, 12 days after receiving the vaccine my eyes turned red and tired. I took my Claritin that I take if my allergies bother me and did some eye drops but it did not go away. I have had red eyes for five days now, it's more of a strained eye look and no other symptoms such as discharge, just a red eye on the whites of my eye. I do not know if this is related to the vaccine, but my allergies meds are not working, eyedrops are not working, and I had a COVID Lab test Monday 1/25/21 it was negative and a COVID Rapid test today 1/28/21 and it was negative.
982815	1/28/2021	TX	56	F	12/31/2020	1/2/2021	I had facial swelling where my eyes were almost swollen shut and violent diarrhea.
980681	1/28/2021	SC	54	F	1/12/2021	1/12/2021	Dizziness; Severe migraine; Nausea; Blurred vision; This is a spontaneous report from a contactable healthcare professional (patient). A 54-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot: EL3246, expiry: unknown), via an unspecified route of administration in the left arm on 12Jan2021 at a single dose in the workplace clinic for COVID-19 immunization. Medical history included lupus SLE and known allergies with Stady. Concomitant medications included ascorbic acid (ESTER-C [ASCORBIC ACID]) and prednisone. The patient had no other vaccine in four weeks. The patient experienced severe migraine, blurred vision, dizziness and nausea on 12Jan2021 at 14:00. The patient was tested for Covid prior to vaccination but was not tested post vaccination. The events were not treated. The outcome of the events was recovering.

981600	1/28/2021		69	M	1/22/2021	1/23/2021	itching all over, puffy eyes. started 1/23/21, still present 1/25/21. On 1/28/21, resident reports he has been short of breath since the vaccine, joint pain, body aches, swollen lymph nodes, and resident's right eye is visibly swollen. Injection was done on the right arm, which is the side all symptoms have been on. Resident going to see doctor.
981545	1/28/2021	NY	54	F	1/22/2021	1/23/2021	The patient reported numbness, tingling, and heaviness in vaccinated arm which travelled up neck, to eyelid and side of face. This prompted a visit to urgent care and urgent care sent the patient to the ED for stroke rule-out. The ED did not believe patient was experiencing a stroke and administered 10 mg of IM decadron. The patient's symptoms resided overnight but the next day developed red bumps all over upper palate of mouth. The patient went to her PCP which did not test for strep at this time. The red bumps developed into ulcers with white heads and the patient went back to the PCP which performed a rapid strep test which was negative. The PCP was concerned for mono due to lymph node swelling. The patient's palate has improved slightly but they still feel fatigued.

981515	1/28/2021	VA	63	F	1/27/2021	1/27/2021	Client received Moderna Vaccination at School Based Immunization Clinic at 9:20AM. Client was sent to the observation area after the shot for 30 mins due to history of severe allergy to Morphine (self reported). At 10:05AM, client stated to complain about a headache and feeling extremely exhausted. Client was told by the observation team to lay head on table and team alerted PHN about client. PHN came over to observation area to evaluate client. While PHN was talking with client, client stated she was very nervous about getting the shot, stated she didn't want to get another one, was shaking all over, said she was dizzy and then became limp. Client was moved to the floor for evaluation. 9-1-1 was called for EMS to arrive to school clinic. PHN took initial vitals: B/P 158/96, Pulse 120, Resp 44. Client was asked to start taking slower deep breaths to help with oxygen flow. Client started to open eyes and become more alert. Stated again she was not going to get another COVID vaccine and that she was very nervous about getting this vaccine. EMS arrived at 10:24AM. Vitals were reevaluated B/P: 146/88, Pulse: 84, Oxygen 94, Resp: 22. Client was moved to sitting in a chair and recovering well. Still complained about being sleepy and headache. Client's husband arrived to the event and when client saw husband, she started to shake and became limp again. Client then moved to the floor again and then transferred by EMS to stretcher and transported to ER for evaluation.

981430	1/28/2021	AL	36	F	1/26/2021	1/26/2021	Around 6PM the evening after receiving the vaccine my arm became noticeably sore and I began to feel achy all over. I became noticeably more tired than usual around 8PM and went to bed about 8:30. At around midnight I woke up hurting all over, joints and muscle aches. I felt suddenly very nauseated and got up to go to the bathroom toilet. Once crouched down over the toilet I became very lightheaded and dizzy. My vision went white and starry and remained this way for my guess is around 5 minutes. My husband says I was showing seizure like activity, moaning and "clenching up." Once my vision cleared up I still felt awful, lightheaded, weak, dizzy. I sat up with a cold cloth on my head. My husband during the course of this was terrified and called an ambulance. The EMT's arrived and informed me the episode had occurred because I was hyperventilating. My chest was uncomfortable at this time and my fingers were tingling. They calmed me down and check my vitals which were stable. I went back to bed and slept after that. I had another feeling of dizziness and nausea about 7AM the next day which resolved. I felt very tired, weak, and achy all day the next day.
981422	1/28/2021	OR	67	F	1/25/2021	1/26/2021	I received the 2nd dose at 0900, then took Ibuprofen 200mg and 1 Zyrtec tab at 10am. I had no symptoms until 0500 the next morning, 1/26. I woke up with aching joints, aching eye sockets, hyper sensitive skin sensations, slight headache, abdominal cramping, and lethargy. The abdominal cramping subsided in a few hours. I slept the whole day, missing a day of work. I took Ibuprofen 200mg at noon. On 1/27 at 0100 am, I woke with aching joints and skin hypersensitivity. I missed a second day of work, sleeping until 10am that day. Symptoms had subsided upon waking.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
980887	1/28/2021	NM	37	F	1/8/2021	1/1/2021	tired; slept most of the day; Headache; Chills; Joint pain; Sore throat; muscle pain/muscle ache; arm was hurting more than sore/arm pain at injection site; Nausea; Loose stools; Left eye twitching; feeling pretty ill/ under the weather; a little short of breath/shortness of breath; Metal taste in her mouth; Itchy everywhere; asthma has flared up a little bit; This is a spontaneous report from a contactable consumer (patient). A 37-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number EH3246, expiry date unknown), intramuscular (right arm), on 08Jan2021, at single dose, for covid-19 immunization. Medical history included asthma since 2004 (diagnosed about 17 years ago). Concomitant medication included formoterol fumarate, mometasone furoate (DULERA) (has been on this for about 2 months) for asthma. The patient previously took formoterol and budesonide (SYMBICORT) for asthma. The patient stated she was a technician and she has a couple of questions about the Covid vaccine. She got the vaccine on 08Jan2021. Since she got the vaccine, papers said she would feel under the weather for a few days but she was still feeling pretty ill; she wanted to know if this was normal and when should she be concerned, wondering if she should call her doctor. She was encouraged to reach out to her HCP for any medical advice. She also stated that 5-10 min after the vaccine on 08Jan2021, she started to feel a little short of breath/shortness of breath but that resolved. Also, afterwards on 08Jan2021 she had a metal taste in her mouth and was itchy everywhere on that day. She went home and around 9PM on the day of the vaccination, she started to feel under the weather on 08Jan2021. Then she woke up on Saturday 09Jan2021 with headaches, chills, joint pain, sore throat, muscle pain/muscle ache, arm was hurting more than sore/arm pain at injection site, nausea, loose stools, and left eye twitching. On Sunday 10Jan2021, she was very tired and slept most of the day. She added that she has been reporting this to the link that was provided to her. She has been taking Tylenol and ibuprofen to treat these symptoms and; was also using her inhaler because it seemed like asthma has flared up a little bit on Jan2021. No other vaccines administered on the same date with the Pfizer vaccine. The adverse events did not require a visit to the emergency room or physician office. No prior

							vaccinations within four weeks. The outcome of the events feeling pretty ill/ under the weather, slept most of the day and, asthma has flared up a little bit was unknown. The outcome of events a little short of breath/shortness of breath, metal taste in her mouth, and itchy everywhere was recovered on 08Jan2021. The outcome of joint pain was recovering. The outcome of arm was hurting more than sore/arm pain at injection site was recovered on 13Jan2021. The outcome of the other remaining events was not recovered.
981366	1/28/2021	NC	49	F	1/15/2021	1/18/2021	Patient presented to the ED approximately 2 days after receiving the 2nd dose of the COVID 19 vaccine. It is unknown where the patient received the vaccine, since it was outside our facility. The ED report states the patient woke up with eye swelling (bilateral). red rash on trunk. After contacting the patient, on 25 January 2021, the patient stated that she also began using a Lotus flower facial cream that she believes may have been the cause of the reaction.
981033	1/28/2021	WI	62	F	1/10/2021	1/11/2021	Started 1/11/21 at work. I am a medical professional. Left arm tingling and numbness. Floaters and flashers mostly in left eye. Scattered ones in right eye. Elevated blood pressure 147/79 (normal for me near 120/70) Pulse 106. My normal is in 60's. R:20 POX: 95% RA. Worked full shift 2P-10:30PM. Got good night sleep. Still had symptoms on 1/12/21 so went to urgent care. I still have these symptoms.
981238	1/28/2021	OK	39	F	1/27/2021	1/27/2021	left arm pain, right eye throbbing, right side headache, nausea, shortness of breath
981232	1/28/2021	ME	56	M	1/27/2021	1/27/2021	About 15 minutes post vaccine, experience overall numbness of the left cheek from lower jaw and to the eye. No other symptoms.
981189	1/28/2021		57	F	1/21/2021	1/22/2021	low grade fever, slept all day, lymphadenopathy under arm, stuffy nose, sore throat, eyes burning. Took covid test and was negative. Also took tylenol to relieve symptoms without success. Symptoms x4 days

981180	1/28/2021	IA	19	F	1/18/2021	1/18/2021	Vaccine was administered into the subacromial space/joint of right shoulder instead of deltoid muscle. Patient presents on 1/27/2021 after onset of pain, decreased ROM ongoing since administration. I was able to visualize ecchymotic area where vaccine was administered and patient has photo evidence. The physician responsible for the vaccine administration needs to be retrained on where to give deltoid muscle IM injections and to avoid the extremities where recent surgeries occurred (patient had right shoulder labrum repair in October 2020)
981170	1/28/2021	PA	54	F	1/25/2021	1/25/2021	Moderna COVID-19 Vaccine EUA given approximately 7:50 am on 1/25/2021 I left deltoid. By 4 pm, arm sore, noticeable fatigue and headache. Approximately 7 pm, chills started and headache much worse. Temperature was 100.7. Took a Tylenol. Around 8:30 pm became extremely nauseous and began vomiting. Vomited several times, and became dizzy and near syncopal and confused. Eyesight blurred. Husband called 911. Taken to Hospital and was in hospital until 1/27/21.
981605	1/28/2021	CO	39	F	1/12/2021	1/12/2021	That evening, my left arm became extremely touch sensitive at the injection site and my throat began to feel scratchy requiring me to take 10 mg Cetirizine Hydrochloride (Allergy Relief). The following day (1/13/21) at approximately 6 a.m., a large red, raised, warm welt had formed on my left upper arm, measuring approximately 1 inch by 1 inch. By 1/14/21, the welt had grown to 1 inch by 1.5 inches and continued to be extremely touch sensitive, raised and warm with a hardness to it. By 8:30 a.m. on 1/14/21, all visual reaction was gone, but from 1/14/21 to 1/24/21, the injection site remained periodically itchy.
981399	1/28/2021	PA	74	M	1/26/2021	1/27/2021	Unable to blink left eye. Unable to smile with left side of mouth. Both appeared by the next morning. I noticed it around 10:00am. Left leg heavy cramp the night of around 5:30. It went away when I stretched it and did not return.

983620	1/28/2021	PA	27	M	1/13/2021	1/15/2021	Mild chills and not feeling great about 4am on 1/14/21 Tired feeling on 1/14/21 (no specific time) Nausea for about 30 mins on 1/14/21 around 3pm Mild swelling around both eyes at 4am on 1/15/21, got slightly worse when I woke up at 8am. I called employee health at work who told me to call my family doctor. I called my family doctors office who told me to watch it closely and that I could take an antihistamine. I took an antihistamine and the next day the swelling was essentially all gone.
983757	1/28/2021	CA	53	M	1/28/2021	1/28/2021	He tolerated the injection and went to the waiting room for sit. About 13 minutes after the injection, the patient walked back to the nurse's station, stating that he did not feel good. He was pale and clammy and started to fall. He was sat in the chair, and he started to lose consciousness. Pulse was faint and the blood pressure was initially 61, pulse about 60. He has no skin rash, stridor, respiratory distress. Respiration was regular and unlabored. Within 10 minutes, he opens his eyes and started responding, his blood pressure improved to 110-120's, pulses 60's, O2 sat 98%, unlabored breathing. He was transferred to a wheelchair and laid down on the exam table. He was observed for another 30 minutes. His vital signs remained stable. He is able to drink water and able to walk around in his own power without difficulty. The patient stated that he does not like needles, and he has not had any vaccination for a long time. Impression: Vasovagal syncope Adverse reaction to the SARS-CoV-2 vaccine, not anaphylactic reaction.

983696	1/28/2021	VA	58	F	1/9/2021	1/9/2021	About 5 hours later, I startd feeling like I was having flu symptoms; Late afternoon - 99.5 fever and fatigue. By 8:00 p - fever was 100; joint and muscle aches and fatigue; Took Tylenol finally before bed - slept a little bit but woke up with 101 temperature and I took another Tylenol and went back to bed but couldn't sleep because of pain with muscles; sore throat and it went up to 101.4 - it would go down with Tylenol but it would shoot back up after 4 hours. Rollercoaster with that up through Sunday 10th - all day fever was over 101.4 - 101.6 with extreme fatigue; really bad muscle and joint pain; eat a little and pushed fluids. Didn't have to work Monday. Rested and I felt a little tight in my chest and took Albuterol. Monday morning temp was 101; but started going down to 99 range fever; I had a previously schedule visit with my dr. and it ended up being a sick visit. He said to keep an eye on it. He told me not to go to work on Tuesday or Wednesday. Things were getting better but still had sore throat; shortness of breath and muscle aches/joint pain but lower temp. Wednesday night I called out from work because things got worse with my breathing/chest got tight etc but not fever anymore Had a virtual Urgent care visit - for the COVID test. COVID test on Thursday. Went to back to work - and I still have a slight bit of joint pain.
983667	1/28/2021	NY	28	F	1/16/2021	1/26/2021	Day of vaccine (1/16/21) arm pain and migraine, 1/17/21. Still had a migraine and felt flushed/feverish with highest temp only 99 degrees Fahrenheit. Migraine subsided with 2 doses of sumatriptan nasal spray and naproxen 500mg tablet. Felt fine until 1/26/21 around 10PM extreme congestion and runny nose with some sneezing. 1/27/21 headache, dry cough, runny nose, extreme fatigue, eye pain, chills and nausea. Today 1/28/21 feel feverish, headache, nausea, extreme fatigue, body aches and chills, runny nose. Have been taking 400mg ibuprofen. Every 4 to 6 hours since morning of 1/27/21 bit no relief in body aches.

983640	1/28/2021	FL	77	F	1/22/2021	1/22/2021	Within 3-4 minutes of receiving I felt as though my eyes "popped" . I mentioned to my husband with me something happened to my eyes. Vision was clear but eyes felt strange. I looked at eyes when I got home but did not see anything other redness. Next morning my eyes were very red and had seepage as if conjunctivitis. I have had allergic conjunctivitis for years in spring or fall. Two days later I could see my eyelids were swollen, inside eyes very red, scratchy feeling. Today the sixth day and eyes no longer feel swollen but very irritated. I am using refresh tears and Claritin 10mg.
983637	1/28/2021	TX	72	F	1/14/2021	1/28/2021	It's been 2 weeks today I received my first vaccine. My arm became itchy . I pulled up my sleeve to see if I had a bite . Then I realized it was where my vaccine was given. I looked I the mirror and saw a big red swollen area I put some Benadryl cream on it because it became very,itch, which seemed to help with the itching. Now, I. Just keeping an eye on it.
983447	1/28/2021	CA	37	F	1/13/2021	1/13/2021	Patient received the second dose of the Pfizer-BioNTech COVID-19 Vaccine at 0710 on 1/13/21. At approximately 0740 at the end of the 30 minutes observation period, she reported right eye pressure. Benadryl 25 mg was given per clinic protocol by the clinic RN and administered. Patient stayed for another 15 minutes for observation to assess if symptoms would worsen. Of note: patient reported that on receiving the first dose of the Pfizer COVID vaccine, she experienced periorbital edema and mild tongue swelling about 20 minutes after the first dose. The symptoms were relieved following Benadryl 25 mg administration.
983622	1/28/2021	TX	47	M	12/29/2020	12/30/2020	I experienced headaches, severe abdominal pain, change in bowel movements, ribs felt like they were being ripped apart, tired/fatigue, blurry vision, dizziness, my body felt hot from the inside out, tingling sensation in feet and hands.

983582	1/28/2021	VA	82	F	1/27/2021	1/27/2021	Patient observed for 15 minutes, then went to her car with her daughter, then started having slurred speech, right eye twitching and right hand clenching.
983543	1/28/2021	KY	35	F	5/21/1985	1/28/2021	Day after I received the shot. Late last night, my arm hurt but I was expecting that. This morning I was in pain, and my eyes hurt and I had a headache. I had my regular medication plus Tylenol and breakfast (toast and orange juice) this morning. By 10 am, I was extremely dizzy, and did not feel safe to walk. I?m too weak to fill out this form myself
983461	1/28/2021	KS	41	F	1/28/2021	1/28/2021	Dizziness, blurred vision, clammy hands, head pressure. Monitored for an hour. Sent home.
983626	1/28/2021	AR	62	M	12/18/2020	12/20/2020	The fist day I started feeling dizzy and stomach didn't feel good. On the second day I started having problems with my vision in my left eye, I went blind for 20minutes. When I did get my Vision back I got and slight headache. About 3am in the morning, I woke up like someone hit me in the head with a hammer. After that every second or third day the pain would come back and it would be worse, it brought tears to my eyes. I started taking Tylenol but then it stopped working. it kept kept getting worse and I went to see my Dr. and she put me on some medication, but they did work and she sent me to a Neurologist and he put two medications. They seem to be working, I'm not having them as much. I'm calling tomorrow to see when my appointment is scheduled.

983942	1/28/2021	NY	36	F	1/23/2021	1/23/2021	Immediately felt tightness in chest. Has continued on and off many times a day to this time. Continues now along with periods of difficulty breathing. Today upon waking tightness in chest felt intensified and continues now (evening). Midday experienced sudden vertigo and double vision lasting over a minute along with dizziness. I had already eaten lunch. Primary Dr ordered me to emergency room. Extensive testing along with chest x-ray and EKG performed. No abnormalities were found. ED doctor said a State test of some sort would tell us if it is an actual allergic reaction or an intensive immune response. He said it would take a few days for results. I was given diagnosis of vaccine reaction and sent home for rest. Advised to return if symptoms get worse. Tightness in chest continues at this time. Fatigue and headache have also returned.
1025694	1/28/2021		41	F	1/20/2021	1/21/2021	body aches, fatigue, sore arm, facial swelling under eyes/cheeks on 1/22/21

983784	1/28/2021	VA	39	F	1/26/2021	1/26/2021	Extreme headache beginning 10 hours after vaccination. Increased blood pressure due to pain and pressure behind eyes. Sinus pressure and pain. Headache lasted 6 hours until treated with 600 mg ibuprofen. 10/10 pain. 102 degree fever. Arm completely immobilized and unable to lift above waist beginning 6 hours after vaccine until approx 24 hours post vaccine.
983882	1/28/2021	NY	24	F	1/5/2021	1/6/2021	around 4AM of 01/06/21 (approximately 10 hours after receiving injection) I woke up with stomach cramps, feeling as if I needed to have a bowel movement which is extremely unusual at that hour. I went to the bathroom and ended up having extreme diarrhea. Went back to sleep, proceeded to wake up at 7am for work (I work at a hospital). Went to work, temperature upon arrival to work at 8am was 96.7. Didn't start to experience any other symptoms till around 10-11am. Developed a headache and thought, "hm this is weird, I haven't had a headache since I had COVID but I hope it goes away soon." Then I went to lunch at noon and everything hit me all at the same time - freezing and sweating profusely, headache became so debilitating that it was burning/hurting my eyes, uncontrollably shaking, felt so weak (body aches all over, everything hurt). Took my temperature while I was at home for lunch and it was 101.5 and my heart rate was 160 (my heart rate is usually high because I take a stimulant but it is never that high). Went back to the hospital because I wanted to go to the ER and needed to get the rest of my belongings anyways. The ER physician and staff found the same things when doing initial vitals - high fever and heart rate. I made the ER physician aware of the fact that I had just received the vaccine the night before while also just having had COVID less than one month prior. I was instructed to go home at that point to get rest and recover. For the rest of the day on 01/6/21 and all of 01/7/21 I had to take off work because of adverse symptoms and effects. For all of 01/7/21 I was extremely fatigued and the headache never went away until 01/08/21. On 01/08/21 I returned to work and symptoms diminished.
983871	1/28/2021	NJ	19	F	1/14/2021	1/22/2021	I've had a weird pressure feeling on the left front of my face, sinus-like pressure that also effects my left eye and dizziness, tiredness to accompany it. tried to take ibuprofen and Tylenol to help it, it didn't help

983864	1/28/2021	NJ	58	F	12/18/2020	12/18/2020	Headaches daily on an off, specifically left eye, for approximately 10 days starting on 1 day of vaccine Diarrhea approximately 14 days starting on day 1 Dizziness on and off for approximately 10 days starting on day 1 Rheumatoid arthritis flare up, left shoulder 2 days, unable to move shoulder, day 7 & 8 after vaccine Small rash on left chin starting day 10 after vaccine Was seen by my primary care physician on day 11. Was advised to restart my hydroxychloroquin medication 200mg 2x's daily for rheumatoid arthritis (I had not been taking this for several months) Was given Medrol dose pack which was started on day 15 after vaccine All symptoms subsided after finishing Medrol pack. I continue to stay on the Hydroxychloroquin 200mg 2X's daily for rheumatoid arthritis I was advised by my physician not to receive the 2nd dose Was advised to get J&J vaccine when available (I find this questionable)
983855	1/28/2021	MD	37	F	1/1/2021	1/27/2021	Approximately eight hours after receiving the vaccine I started feeling chills and body aches. I then went to bed. I was awoke shaking from being in such significant chills my body hurt all over through the bones something I have experienced in a long time. I continue to try to sleep and rest the best I could but I stood up in the morning I felt tunnel vision and thought I was going to pass out I laid on the ground at a safety and collected myself over the course of five minutes. When I stood up I immediately thought I was going to vomit Splash cold water on my face I force myself to eat and drink and take Tylenol and symptoms lessened but remained over the entire course of the following day another 24 hours. I'm about to go to bed and I will not know how I feel in the morning but this is definitely something I did not expect. My entire doctors office received vaccination on the same day out of a group of 15 people two of us had severe reaction similar to what I described and the other female that felt sick like me had worse symptoms and high fevers with the stores as well she has remained out of work as a result of her symptoms. We are both nurse practitioners so it's not easy to cancel our schedule. I ended up tapping out today despite my leftover post vaccine side effects.

983369	1/28/2021	IL	49	F	1/21/2021	1/21/2021	1/21/21 Vaccine given at 4:30pm CST. By 11:30pm, felt feverish, started chills and headache. 1/22/21-3:30am- body and joint aches started and chills worsened, headache continued 6:30amCST-chills continued, body and joint pain worse. Took 2 Excedrin to help. 10:30am- fever of 100.3 noted. Continued with chills. Arm visibly red and sore. Swelling started in arm at injection site. 12:00pm- dizziness started. Tunnel vision, and almost passed out. 1:30pm- dizziness worsened, and weakness started in legs. 2:30pm unable to stand without assistance. Left work because unable to continue working and called the doctor. Went home, and started to drink electrolyte supplements. 5:30pm- fever went up to 102.5. Unable to stand without assistance and experienced extreme dizziness. Frequent urination at that time. Arm developed a very large swelling about the size of an egg at the injection site, and was very red. Glands under the arm started swelling, and experienced pain if I tried to lower my arm to my side. Chills continued, joint/muscle/bone pain continued. Became nauseated from the dizziness. Took 2 additional Excedrin for fever and pain. Could not sleep due to the pain in my joints and bones, and pain under arm from glands. 1/23/21 3:30am- Frequent urination during the night. Finally regained ability to stand on my legs, and dizziness started to lessen. 8am Remained on the couch all day except to use bathroom. Fever reduced to 100.1. Continued to use Excedrin as needed for joint/muscle/bone pain. Arm too sore to touch, and swelling protruding from muscle size of a large egg. Very red, hot and itchy as well as pain. 1/24/21- A.M.- most of the dizziness subsided, with just occasional issues. Temperature went back to normal. Still severe pain at injection site with swelling, redness, and itching. Some joint/muscle pain still. 1/25/21- Mostly Arm/injection site issues. Still red/painful, swollen, and itching. very mild joint/muscle pain. 1/26/21- Arm/injection site issues more mild. Swelling reducing, pain & itching reducing. Glands under arm reduced, and pain reducing. 1/27/21- Slight redness at injection site. Swelling down to size of a grape. Slight pain & Itching. Glandular swelling & Pain completely gone. 1/28/21- A.M- No symptoms at all. By 9am, started having twitching/muscle spasms on Left side of scalp above ear. Progressed and worsened through day. By 4pm, spasms and twitching lasts bursts

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							of 2-3 minutes. then stop for 15-20 seconds. Consulted with physician, and concerned about vaccine related issues. Muscle relaxer prescribed. **This is when I submitted the report- symptoms are continuing with the scalp spasms.
983270	1/28/2021	IL	36	F	1/6/2021	1/6/2021	1) facial numbness/tingling on L side that occurred about 1 hour after injection and lasted less than 15 minutes. resolved spontaneously. 2) L arm pain started several hours after vaccine and lasted 4-8 hours. resolved spontaneously 3) unsure if related to vaccine, but R eye twitching began 1-2 days after vaccination until present, although less frequently. initially was several times per day x several days. now occurs few times per week and is less intense.
983263	1/28/2021	CA	71	F	1/18/2021	1/18/2021	Fever of 102 followed by facial swelling that looked like she'd been in a fight almost it was so swollen her eyes could barely open. Then her face looked like it was covered in burns and started to scab over. We photographed her over the next 3-days and the burn like marks on her face started to scab over and swelling went down. The doctor believed from looking at the photos that it may have been shingles. Also had major fatigue.
983216	1/28/2021	WA	71	M	1/24/2021	1/28/2021	peri-orbital, non-inflamed, swelling left eye region
983007	1/28/2021	OH	80	F	1/1/2021	1/28/2021	2 hours post vaccination nurse noticed angioedema in 1 eye and puffiness in the other eye. Nursing staff gave 25mg of Benadryl and used a cold compress. Swelling went down quickly and patient is doing well.
983206	1/28/2021		43	F	1/27/2021	1/27/2021	A few hours after the vaccination I started to feel dizzy and my mouth started to feel strange. It continually got worse and around 5pm I was having a hard time swallowing and it kept getting worse. I felt like i was choking. I could breath fine and speak the whole time. Due to the later hour i went to the ER where after examine gave epinefrin. The Dr examined my throat by eye and x-ray. He saw no signs of swelling. He hypothesized this was an anxiety reaction as none of the symptoms indicated allergic reaction

983182	1/28/2021	TX	30	F	1/28/2021	1/28/2021	Patient ambulated to the clinic waiting area for observation immediately after vaccine was administered. Upon entering the room patient stated that she felt dizzy, patient was assisted to sit down, she immediately became verbally unresponsive to questions, her left arm and left leg became rigid, dorsiflexion of the left wrist occurred, she exhibited rapid horizontal eye movements bilaterally, approximately 15 seconds later patient was able to respond appropriately to questions and stated her name. Oxygen was placed via nasal cannula at 2Lpm, vital signs were obtained BP 118/75 pulse 79 oxygen saturation 100% on nasal cannula 2Lpm, patient was given orange juice and peanut butter cookies, blood glucose was checked by ancillary staff. patient was seen by the staff doctor and was cleared to leave. Patient's husband arrived and she left the clinic with him. She reported he would be driving her home. Oxygen was removed by the physician and she reported that the patient was stable on room air. Patient reported that she was feeling good. Patient left the clinic ambulatory without assistance with her husband.
983119	1/28/2021	PA	60	F	1/28/2021	1/28/2021	Approximately 1 hour after receiving the vaccine had facial tingling on the right side of face. Was driving when it happened. One of the physicians were available at vaccine site, was told it was probably neuralgia, possible Bell's palsy, to continue to monitoring it, and to report back if symptoms got worse. If the symptoms were severe enough they will give steroids. She updated him 30 minutes prior to this, it has not gotten any worse, but her right eye is not closing right, advised to get wetting drops like tears, and if she had trouble swallowing, breathing, or any worsening to go to the ER. Told her to report to him in the morning. Works in the same office with the doctor and will see them and continue to have it monitored. Will let them know if she could report to work. Checked with employee health who cleared her for work, but to check in the morning if the symptoms progressed.
983022	1/28/2021	WA	51	F	1/26/2021	1/27/2021	Sore Rt arm, chills, low grade temp, body aches, headache started 12 hours after injection for 36 hrs. Swelling under Rt eye began almost 24 hours after injection and continues to be swollen.

978047	1/27/2021	IN	39	F	1/25/2021	1/26/2021	The next morning after my vaccine I went into work feeling a little achy and a slight headache then by 8:00am I felt like a train hit me, my body was chilling, shaking despite being in front of a heater, I had a low grade fever, my right side of my head hurt so incredibly bad like my right eye was going to explode, I then started vomiting. My boss came to help walk me outside because I didn't even feel like it was me walking. I don't remember walking out of work. I was there but ?not there?. I was not myself. I didn't feel like i was in my body. I had to have my husband come get me from work, I slept most the rest of the day and night. Now I'm on day 2 and my joints still ache, my head hurts so bad, I am so tired I either am asleep on the couch or in bed. I have no energy. It takes everything I have to move just to go to the bathroom.
978077	1/27/2021	OH	76	F	1/21/2021	1/23/2021	1/23/2021 extreme vertigo at 10:00 AM lasting aabout 2 minutes 1/25/2021 at 4:00AM woke out of a sound sleep with strange sensation of spinning. closed eyes tights and fell back asleep That morning upon waking at 6:00 AM and getting out of bed, I could not walk and I was extremely dizzy. I made myself get up and all i could do was stumble. Had to hold on to wall. could not put one foot in front of the other. My head felt very heavy like it wasnt attached right..... after Deep breathing and other calming techniques during the day, I was able to walk straight. Tues 1/26/2021 I contacted my Doctor and told him my story. 1/27/2021 I developed a rash across my nose and cheeks which is today.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
976736	1/27/2021	NY	51	M	1/11/2021	1/1/2021	<p>he had 102.1 temp; he started not feeling well; chills; ringing in ears/ The ringing was in both ears; body aches; joint aches; fatigue; lymphadenopathy/had swollen lymph nodes like the size of an apple; he was uncomfortable; His eyes were also hurting; The light bothered his eyes; This is a spontaneous report from a contactable Other HCP (patient) and a contactable Nurse (patient's wife). A 51-year-old male patient received the 2nd dose of bnt162b2 (BNT162B2, Batch/lot # EL3246, Expiry Date Apr2021) at single dose at left arm on 11Jan2021 18:00 for Covid-19 immunisation, administered at hospital as being a certified registered nurse anesthetist (CRNA). The patient medical history was none. There were no concomitant medications. The patient received the 1st dose of bnt162b2 (BNT162B2, lot # EK5730, expiry: 31Mar2021) at single dose at left arm on 23Dec2020 for Covid-19 immunisation and he has been fine, no adverse effect occurred. No additional vaccines administered on same date of BNT162B2. The patient experienced lymphadenopathy which is a size of tennis ball under my left armpit /had swollen lymph nodes like the size of an apple in his left arm in the axillary area, where he received the vaccine on 12Jan2021, he started not feeling well on 12Jan2021 around 9.00, he had 102.1 temp Fahrenheit on 12Jan2021 17:00, chills on 12Jan2021, ringing in ears/ the ringing was in both ears on 12Jan2021, body aches on 12Jan2021, joint aches on 12Jan2021, fatigue on 12Jan2021, his eyes were also hurting on an unspecified date in Jan2021, the light bothered his eyes on an unspecified date in Jan2021. The patient underwent lab tests and procedures which included body temperature: 102.1 fahrenheit on 12Jan2021, he was uncomfortable on 12Jan2021, body temperature: 100 and something fahrenheit on 13Jan2021. The outcome of lymphadenopathy/had swollen lymph nodes like the size of an apple was worsened, of he had 102.1 temp, ringing in ears/ the ringing was in both ears was not recovered, he started not feeling well, his eyes were also hurting, light bothered his eyes was unknown, chills, body aches, joint aches, fatigue was recovered on 13Jan2021. Course of events: Around 9AM on 12Jan2021 he started not feeling well. By the time he got home from work he had 102.1 temp Fahrenheit around 5PM. Temp was ongoing. His eyes were also hurting. The light bothered his eyes. He can't</p>

							<p>put his arm down. His left arm in the axillary area, where he received the vaccine, had swollen lymph nodes like the size of an apple. He had chills, ringing in ears, body aches and joint aches, and fatigue 12Jan2021. He was uncomfortable. The ringing was in both ears. On 13Jan2021 his temp was one hundred and something. What is concerning was the swelling in the armpit in the arm he received the vaccine in. It was very painful. It was starting to radiate up his arm. He did not go to the doctor, since he was relatively healthy. No event required a visit to Emergency Room or Physician Office. The reporting Nurse assessed the events he had 102.1 temp, His left arm in the axillary area, where he received the vaccine, had swollen lymph nodes like the size of an apple as serious as medically significant. The reporting Nurse assessed the events he had 102.1 temp, His left arm in the axillary area, where he received the vaccine, had swollen lymph nodes like the size of an apple, chills, Ringing in ears, body aches and joint aches, and Fatigue as related to BNT162B2.; Sender's Comments: Based on a compatible temporal association and known product safety profile, causality between events lymphadenopathy and fever and BNT162B2 COVID-19 vaccine cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>
978085	1/27/2021	NC	31	F	1/26/2021	1/27/2021	<p>Within 1-2hrs after vaccine, patient began sneezing repeatedly for the remainder of the day. Sore arm, chills, body aches, HA. Patient is breastfeeding. 24hr later, infant began rubbing bilateral eyes and has redness on skin bilaterally. No conjunctivitis. Eating w/o difficulty and otherwise acting fine. Did sleep longer than usual.</p>

978517	1/27/2021	AL	28	F	1/21/2021	1/21/2021	My arm started to hurt , tingled and then turned into feeling very heavy as soon as injection was admitted. I suddenly became light headed and felt very abnormal. Broke out in hives on my neck and face . They took me to the ER department and by the time they wheeled me down the hall I was white , very disoriented. Couldn't open my eyes and went from slurred speech to I couldn't speak at all and couldn't swallow. My throat and closed and I was having a anaphylactic reaction . They administered epi pen , pepcide and steroids. Since then I have been very weak , running a fever , tired , dizzy . Can hardly walk and I get out of breath from standing or walking .My muscles are very sore and have spasms . Almost last night I went to the ER due to theses symptoms lingering. I have been unable to work since the vaccine was administered to me .
978707	1/27/2021	NY	63	F	1/25/2021	1/25/2021	Double vision started about 10 hours after vaccine. Resolved but continued on and off over next 2 days.
977650	1/27/2021	TX	34	F	1/13/2021	1/21/2021	Initially, arm was sore and inflamed for about 4 days. I did not notice condition afterwards because pain had subsided. Approximately 8 days after shot, arm started to itch and I examined further. It was still very red and inflamed with knots under the skin. An area approximately 2" x6". I started to keep a closer eye on it and when it was not better the next day, I contacted my doctors office in the building where I received the shot. The nurse who responded had me photograph it and continue to monitor until the doctor could look at it on Monday (this being Friday afternoon). Friday evening I outlined the affected area with marker to see if it was worsening or maintaining the same level. By Saturday morning it had grown outside the marked line by about an inch, was warm to the touch, and was starting to hurt. I decided to not wait until Monday and called an urgent care to go doctor to look at. They examined and read temperature (head was 97.2, arm was 99.5). After consideration the doctor advised me to take benadryl that evening to see if it had any effect. If not I was prescribed Cefdinir 300mg antibiotic to take in the morning. Benadryl did nothing so I started taking the antibiotic and noticed marked improvement by day 2. Site is mostly gone now (4 days into 10 day antibiotic cycle).

978850	1/27/2021	IL	56	F	1/11/2021	1/11/2021	headache; fever; L Arm (injection site) pain/severe left arm pain; dizziness; blurred double vision and couldn't function; eyes wouldn't focus, Couldn't function; blurred double vision and couldn't function; eyes wouldn't focus, Couldn't function; This is a spontaneous report from a contactable nurse (patient). A 56-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; batch/lot number and expiration date unknown), via an unspecified route of administration on 11Jan2021 15:00 at a single dose in the left arm for COVID-19 immunization. The patient received the vaccine in a skilled nursing facility or long term care facility. The patient received no other vaccinations recently. Medical history included attention deficit disorder diagnosed at least 5 years ago for which the patient was taking Ritalin; hypothyroidism diagnosed a long time ago, probably 10 years and depression diagnosed a long time ago, probably at least 25 year, she takes a cocktail of anti-depressants for this (no further details provided about her anti-depressants). The patient also had a similar reaction of blurred double vision and couldn't function/eyes could not focus before when her doctor put her on an antibiotic (unspecified). The patient was also very overweight. Concomitant medications included methylphenidate hydrochloride (RITALIN; lot: unknown, expiry: 28Jul2021) for attention deficit disorder and the patient takes a cocktail of anti-depressants (unspecified) for her depression. The patient received the first dose of the covid vaccine on 11Jan2021 at 3 PM and by 5PM she was experiencing bad headache, fever, L arm (injection site) pain that was severe. Later that evening she had blurred double vision and couldn't function. She also got a fever of about 100 degrees Fahrenheit, was dizzy and her eyes could not focus and were almost like double vision but not quite, it was hard to explain. She just remembered that she had a similar reaction with her eyes before, when her doctor put her on an antibiotic. She cannot recall what antibiotic that was. The patient also experienced dizziness on 11Jan2021. The patient treated her side effects with ibuprofen and most of these improved. The injection was given in her left arm, her non-dominate one. She says that the pain was so bad it woke her up, and she doesn't take any pain meds, but that was really bad. She says that she took some Ibuprofen (lot: P113671, exp: Jan2022), about a

*VAERS\_ID RECVDATE STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT*

---

total of 800mg over a few hours. Her fever had started pretty fast, by 05:00PM on the 11th, and it was better after taking the Ibuprofen, as was her arm pain, and headache. She says that the dizziness went away probably around 02:00AM the following day (12Jan2021). She says her eyes can focus again as well. The patient thinks that these effects are medically significant, mostly that her eyes were not able to focus, it was very scary. The patient stated that the purpose of this call is to have this documented, and possibly find out if there are recommendations that she should not get the second dose, since she had to call out of work because she couldn't function. The outcome of the event "blurred double vision and couldn't function; eyes wouldn't focus, couldn't function" was recovered on an unspecified date and dizziness recovered on 12Jan2021 at 02:00. The outcome of the event "she had to call out of work because she couldn't function" was unknown while the other events were recovering. Information on the lot/batch number has been requested.; Sender's Comments: The 56-year-old female patient had medical history included attention deficit disorder; hypothyroidism and depression and she takes a cocktail of anti-depressants for this. The patient also had a similar reaction of blurred double vision and couldn't function/eyes could not focus. Based on information reported, the reported double vision and difficulty focusing eyes were more likely due to pre-existing condition (s); and less likely causally related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE). The rest events fever, headache, vaccination site pain and dizziness were likely causally related to the use of vaccine due to plausible temporal relationship and known safety profile of this product. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

978074	1/27/2021	MA	29	F	1/26/2021	1/26/2021	Within 10 minutes she developed chest tightness, headache and chills which resolved without intervention but did require emergency department evaluation. Within 6 hours she noted drooping of her left eye similar to prior reaction which continues now (day1 after vaccination)
977127	1/27/2021	NC	50	F	1/26/2021	1/26/2021	Arm became sore mid-afternoon, about 8pm in the evening developed aches/tenderness on all skin surface areas. About 10pm developed headache, facial flushing, painful eyes, fever 101.3, rigors, and muscle cramps in feet and legs.
979066	1/27/2021	NC	57	F	12/30/2020	1/3/2021	12/20/20 received first vaccine of Moderna Covid series. Only experience fatigue for first couple of days. 01/03/21 - Around 2pm noticed 3 inch welt across right cheek by 5pm swelling under eyes and random itching around head, neck and face. Headed to doctor 6pm. Saw a PA who said symptoms were not from vaccine when I asked about possibility because of my Hashimotos Thyroiditis. They gave me a steroid shot and called in scrip for Medrol Pack. Later that evening I started also having bad flares of my asthma. Also continued on Benedryl. 01/05/21- started Medrol Pack and continued antihistamines. Very fatigued. 01/10/21-finished Medrol. Still slight welt on right cheek but everything else pretty good. 01/20/21- mid morning noticed welt growing in right cheek and eyes puffing up. By 5pm itching has returned. By 7pm there are now welts and hives on both cheeks and they are red and hot....asthma flaring badly. Took 30mg prednisone from my medication used for asthma. 01/21/21- things have calmed down redness wise but lots of fatigue. Took 20mg Prednisone. 01/22/21- back to doctor, another Medrol pack. 01/27/21- finished second Medrol pack. Still having slight welts and hives.

976758	1/27/2021	CA	60	F	1/4/2021	1/4/2021	like an anaphylactic reaction but not in her throat; itching and inflammation, in eyes as well/eyes were swollen and itchy; itching and inflammation, in eyes as well; swelling on her eyes and itching on her eye lids; swelling on her eyes and itching on her eye lids; welts; whelps on her hip, inflamed and itchy/general arthritis symptoms; Headache dull; shingle like rash on tailbone, genital area / raised itchy rash on the tailbone like shingles; itching on her face that she couldn't see / raised itchy area on her left cheek and eyes; rash / rash down her thighs/rash that was across her body; rash vulva; swelling / vulva was swollen; itching / itching around the genital area, vulva; itching / itching around the genital area, vulva; This is a spontaneous report from a Pfizer-sponsored program. A contactable Nurse (patient) worked in outpatient mental health reported that a 60-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284, Expiry Date: Apr2021) via an unspecified route of administration on 04Jan2021 at 16:20 in the left arm at single dose for COVID-19 vaccination. Vaccine administered at hospital and not military facility. No additional vaccines administered on same date of the Pfizer suspect. Medical history included ongoing Graves' disease (the patient had her thyroid irradiated away for Grave's disease 25 years ago). Family Medical History was none. Concomitant medication included ongoing levothyroxine 1.25 mcg once daily by mouth Graves' disease taking for 25 years. Prior vaccination within 4 weeks was none. The patient received her Pfizer COVID 19 vaccine on 04Jan2021. Since then she started to experience a genital itch immediately; a rash that was across her body; eyes were swollen and itchy; new itchy rash 13Jan2021. She felt okay going home then she started to have itching around the genital area. She thought she might have a yeast infection but she didn't have any other symptoms for a yeast infection. Her vulva became swollen from 05Jan2021 and itchy from 04Jan2021 and she noticed rash around her body. It all started in the genital area. The next day the rash spread down her thighs and she noticed an itchy place on her face, but you couldn't see it. Her thighs were inflamed and she noticed patches of angry whelps on her hips as well as a itchy rash area on her tailbone that seemed more like shingles; size of a quarter; raised, itchy, rash, that felt like it was radiating

----------	-------	-------	---------	-----	----------	------------	--------------

out. Then she noticed the rash on her face on her cheek, general swelling on her eyes and itching on her eye lids. Now the genital itching was less and most of her symptoms were improved but her eye was driving her crazy and it was more swollen on the outside. She tried to treat her eyes with eye drops Dry Eye Relief (manufacturer Similasan; no UPC seen, lot number: 15942; expiration date: Sep2022, ingredients include Belladonna) but it didn't help. They were still itchy and weepy. The eye drops were not working. She also treated the rash and itching with Benadryl at night and it improved the symptoms overall. She took Tylenol (UPC 300043760; lot number: PMA003; expiration date: Aug2022) and Bayer Aspirin (81mg; lot number: NAA93E1; expiration date: Feb2023. No UPC code on bottle) every day for general arthritis symptoms, but they didn't touch her dull headache she has had on and off since the vaccine. Before she got the vaccine, she had a little tag on her vulva, it was tiny. Now after experiencing the itching, swelling, rash on her vulva, the tag was gone. It just took a layer of skin right off. It was not uncomfortable but the whole layer of the skin was gone. It was very uncomfortable while it was happening but now it was okay. When she noticed these symptoms, she tried to call occupational health and a institute but didn't get anyone. She also contacted her HCP but had not heard back. It seemed to her like a lot of side effects and a lot of itching. She didn't have it in her throat, but all that itching seems a lot like an anaphylactic reaction. She was curious whether we would recommend her to take the second dose since they say the reaction to the second dose was worse. She had multiple COVID tests that have all come back negative. A friend tested positive so she had a test; and she had a test when she traveled. The events did not require a visit to physician or emergency room. The patient had reactions: itching, rash, swelling, welts, shingle like rash on tailbone, genital area, hips moving to her face, itching and inflammation, in eyes as well. She wanted to know if the 2nd dose was recommended. It was "like an anaphylactic reaction but not in her throat." itching around the genital area, vulva started from 04Jan2021, vulva was swollen started from 05Jan2021; Rash vulva started from 06Jan2021 to 10Jan2021; rash down her thighs started from 07Jan2021; Raised itchy rash on the tailbone like

shingles started from 06Jan2021, wheals on her hip, inflamed and itchy from 07Jan2021; itching on her face that she couldn't see started from 06Jan2021; raised itchy area on her left cheek and eyes started from 07Jan2021; Headache dull started from 06Jan2021. The events Headache dull, itching on her face that she couldn't see; wheals on her hip, inflamed and itchy and raised itchy rash on the tailbone like shingles were reported as non-serious by the reporter and other events were considered as medical significant by the reporter. Investigation assessment for the events was reported as No. The outcome of the event anaphylactic reaction, inflammation in eye, welts was unknown, outcome of the event Rash vulva was recovered on 10Jan2021; of Headache dull, swelling eye was not recovered, of other events was recovering.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of anaphylaxis cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. Severe allergic reaction is the known risk for the product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

976778	1/27/2021	NJ	42	F	1/12/2021	1/12/2021	heart started to race; tingling sensation from her left arm that radiated to all over her body to the point where she felt paralyzed; tingling sensation from her left arm that radiated to all over her body to the point where she felt paralyzed; heart rate jumped to 160; heart rate jumped to 160 and blood pressure went up; choking sensation on her neck; This is a spontaneous report from a contactable healthcare professional. A 42-year-old non-pregnant female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL1284/expiration date), dose number 2 via an unspecified route of administration on 12Jan2021 at a single dose on the left arm for COVID-19 immunization. Medical history was not reported. The patient did not have COVID prior vaccination. The patient previously took nitroglycerin and experienced drug allergy. Historical vaccine included BNT162B2 (lot number EL0140, dose number 1) for immunization on 22Dec2020 after which the patient experienced mild headache. Concomitant medications were not reported. There were no other vaccines received within 4 weeks. The patient had no adverse reaction other than mild headache after the first dose, so she was very relaxed and she felt comfortable getting the 2nd dose. However, after 10 minutes after the second dose, her heart started to race and she started to feel a tingling sensation from her left arm that radiated to all over her body to the point where she felt paralyzed. Her heart rate jumped to 160 and her blood pressure went up. She couldn't even open her eyes nor speak a word. She was transported to the ER and was given steroids and anti-histamine. She refused to get an epinephrine shot at first, but she started to feel choking sensation on her neck so she asked for an epi shot. The patient had not been tested for COVID post-vaccination. The outcome of the events was recovering.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 cannot be excluded for reported events heart racing, tingling sensation, paralyzed, heart rate high, blood pressure increased and choking sensation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will

be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Shortness of breath; chest was hurting; Headache; Feeling tired; Joint aches; oxygen at the time, and it was 89 to 90; achy; This is a spontaneous report from a contactable nurse (patient). A 59-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Solution for injection, unknown lot number and expiration), via an unspecified route of administration right deltoid on 09Jan2021 at a single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; unknown lot number and expiration) on 21Dec2020 via injection in left deltoid for COVID-19 immunization. The patient reported that she feels fine today (13Jan2021), but she received her second dose of the COVID vaccine on Saturday, 09Jan2021. She experienced side effects including headache, feeling tired, and joint aches on 11Jan2021. She also experienced shortness of breath on 12Jan2021. The shortness of breath started early Tuesday morning in the middle of the night. She would say that it was like her chest was hurting. She measured her oxygen at the time, and it was 89 to 90 (Jan2021). It gradually went up from there. This lasted about 3 hours. She is fine now. She would say these are all not serious as she knew it could be from the vaccine and she was keeping an eye on it. She could get up and do things she was just achy (Jan2021). It took her by surprise. She does not know if this is a known side effect or if it should be expected or if she should report this. The patient recovered from the events "oxygen at the time, and it was 89 to 90" on unspecified date; headache and joint aches on 11Jan2021; shortness of breath and "chest was hurting" on 12Jan2021; feeling tired on 13Jan2021; while unknown outcome for the remaining events. The events shortness of breath, joint aches, feeling tired, and headache were assessed as related to COVID vaccine by the reporter. The event shortness of breath, feeling tired, joint aches, and headache was assessed as non-serious. Information on the lot/batch number has been requested.

A 37-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), (Lot: EK9231) on 13Jan2021 11:45 at a single dose for covid-19 immunization. Medical history included GERD (gastrooesophageal reflux disease), environmental allergies, Penicillin (but not augmentin) allergies and sulfa allergy. Concomitant medications included cetirizine hydrochloride (Zyrtec), esomeprazole, and vitamin d. Historical vaccine included the first dose of BNT162B2 (lot number: EJI685) on 23Dec2020 12:15 in the left arm, for covid-19 immunization. On 13Jan2021 20:00, patient experienced left arm soreness. Then at 21:00, she experienced myalgias in the back and contralateral arm. At 23:00, she had fever/chills (up to 39 C). The next day (14Jan2021) at 2:30, she had frontal headache, eye pain on movement, sensitivity to light, arthralgias (wrists, ankles), persistent fever and nausea. All these symptoms persisted until exactly 11:48 on 14Jan2021, when everything suddenly got better. Still occasional chills but no fever for the rest of the day, left arm pain persists into 15Jan2021. Redness and swelling at injection site are worse. There was also now itching. Lower back pain persists. The outcome of events left arm soreness, "Redness and swelling at injection site" and lower back pain was not recovering. She was recovering from " myalgias in the back and contralateral arm", fever/chills (up to 39 C), frontal headache, eye pain on movement, sensitivity to light, arthralgias (wrists, ankles), nausea, chills Patient did not receive any treatment for the events. No follow-up attempts are possible. No further information is expected. Information on the lot/batch number has been obtained.</p>

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
976864	1/27/2021	NC	46	F	12/28/2020	12/28/2020	tunnel vision; 2 minutes after injection Heart rate went to 138/Hr 110/elevated heart rate.; dizziness; This is a spontaneous report from a contactable nurse reporting for herself. A 46-years-old female patient received the first dose of BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, Lot number Ek9231, via an unspecified route of administration in left arm on 28Dec2020 at 11:45, at 46 years of age, at single dose for COVID-19 immunization. The patient was not pregnant when she was vaccinated and received the vaccine in Hospital. She didn't receive any other vaccine in the previous 4 weeks. Medical history included Meniere's disease with sudden hearing loss in left ear from an unknown date, gastrooesophageal reflux disease from an unknown date and allergy to penicillin and sulfa drugs. Concomitant medication included famotidine (PEPCID), paracetamol (TYLENOL), ergocalciferol (VITAMIN D) supplements and cetirizine hydrochloride (ZYRTEC). On 28Dec2020, 2 minutes after vaccine injection, the patient experienced tunnel vision, assessed as medically significant, her heart rate went to 138 and she experienced dizziness. The same happened again "at the 8 min mark": heart rate at 110 and dizziness. The events resolved on their own. Dizziness and elevated heart rate happened again later that evening. At the time of the report the reported events had resolved without any treatment.; Sender's Comments: Based on the compatible time association, the events tunnel vision, heart rate increased and dizziness are reasonably related to suspect BNT162B2 administration. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

977262	1/27/2021	NY	58	F	12/23/2020	1/7/2021	1st dose December 23, 2020. Arm pain, swelling, raised red 3 inch bump developed within 12 hours. Subsided, and reoccurred about 10 days post vaccine. 10-14 days post vaccine I developed New onset forefoot weakness (foot drop) Right, new onset trigger finger Right middle finger, new onset bladder spasms with immediacy and incontinence - not bladder volume dependent, resurgence of body aches, new bilateral knee pain requiring two arm support for sit to stand, Mental status changes including anxiety, paranoia, mania and depression (personality change!), motion induced nausea and dizziness, visual changes (blurry vision), New intensification of nocturnal muscles spasms - bilateral and progressive and intermittent headache up the Right neck to crown, New onset (01/14/21 - present) burning rubber scent when some food being cooked. The muscle and joint pain were present with February illness, subsided by April, and came back with a vengeance within two weeks of the 1st injection. I also lost three teeth (fracture vertically while flossing), thinned hair, and had intermittent dizziness during the initial illness in February. February Initial loss of taste/smell included metallic taste with artificial flavors, rotten garbage - random, and ?iron taste with meats. I can now taste some fruits but only get bitterness with other fruits and vegetables. I had one sided facial paralysis after tooth extractions in September - resolved in 1 week. I required dental implants to replace the fractured teeth. I am a vaccinator, and have been administering our vaccines and swabbing for Covid testing since we reopened elective procedures. I strongly encourage our staff to get the vaccines - and I am the one who gets the reaction. The constellation of symptoms, temporal proximity to the vaccine with no intervening illness or injury, and commonality of some symptoms with my February illness have prompted further testing and evaluation for central nervous system insult.

977282	1/27/2021	IN	23	M	1/25/2021	1/25/2021	About 12 hours after the vaccination, I felt the "headrush" of a fever in my face behind my nose and eyes. My body was not warm like a fever so I did not take my temperature. However, I had a lot of difficulty sleeping that night because it felt like my body and immune system was revved up. It was impossible for me to get comfortable.
977317	1/27/2021	PR	40	M	1/26/2021	1/27/2021	STARTED 1/27/2021 5AM WITH GENERAL MALAISE, BODYACHE, NAUSEA, EYE REDNESS, PHOTOPHOBIA, FEVER, LEFT ARM AND AXILLARY PAIN ,
977424	1/27/2021	CA	69	M	1/22/2021	1/22/2021	1/22/2021 - Extreme Fatigue, Headache, Nausea, Dizziness 1/23/2021 - Headache, Pain at Injection Site 1/23/2021 - Present - Blurred Vision in Left Eye
977514	1/27/2021	TX	33	F	1/25/2020	1/25/2021	About 8-10 minutes after the injection, my vision got blurry. It was very brief- only a couple minutes long. If it had lasted until the end of my 15 minute post-injection observation period, I would have reported it then, but it didn't. I decided to include it here, because later in the day, I had another reaction. About 12 hours after the dose -around 7PM- I started getting chills and body aches and abnormally fatigued. The chills were intense almost as soon as they come on. The body aches were mild for the first couple hours and progressed to intense. Both symptoms lasted continuously for about 12 hours, then around 7AM they started to wane. I'm not sure if I should list insomnia as a reaction, but despite how exhausted I felt, I could not sleep. It could have also been just general discomfort that kept me from being able to sleep. Through most of the following day I had mild aches and waves of chills. By the time I went to bed that night (last night at the time of writing this), the symptoms had mostly cleared and so far have not returned.
977528	1/27/2021	MA	41	F	1/23/2021	1/24/2021	Woke up on broken blood vessel in left eye: sub conjunctival hematoma

976893	1/27/2021	FL	65	M	1/5/2021	1/6/2021	He has had gout at other times, but he has never had it as hard as this/awaken with pain in the middle of the night; He was awoken with pain in the middle of the night; This is a spontaneous report from a contactable consumer (wife) who reported for her husband (patient) that a 65-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administration on 05Jan2021 08:40, at single dose for COVID-19 immunization. Medical history included gout, using timolol maleate to control the pressure in his eye. Concomitant medication included ongoing timolol maleate (5ml eye drops) to control the pressure in his eye. He uses eye drops that are prescribed. He keeps them on the counter to remember to take them. He has been using it for 3 years. Patient previously had the shingles vaccine on 14Dec2020 for immunization at the age of 65 years old. It said as long as the vaccine was given two weeks prior. The patient received COVID vaccine at outdoor park on 05Jan2021. The wife reported that the next day after the first dose of the vaccine (06Jan2021), her husband developed gout. He got it at the same time she did. He has had gout at other times, but he has never had it as hard as this. He awaked with pain in the middle of the night, it started from 06Jan2021 and is ongoing, slight improvement. She was not sure if that was reportable. Patient did not visit emergency room or physician office for any adverse events. Outcome of the events was recovering.
979934	1/27/2021	CA	85	M	1/27/2021	1/27/2021	Pfizer-BioNTech COVID19 dose #1 given IM LD at 10:30AM 1/27/21. 30 minutes into observation, patient experienced bilateral arm tremor, pallor, eyes rolled back, drooling and unresponsiveness for 2 minutes in seated position. 911 called immediately. Patient became alert and oriented after 2 minutes but experienced nausea and vomiting. While seated, vital signs were taken- BP 148/76, HR 73, O2 98%. No falls or medication administered. EMS arrived around 11:10am and assessed cardiac rhythm and vital signs. Patient initially wanted to go home, but based on EMS assessment, recommendation was to go to the ER. Patient brought to Sharp Memorial Hospital by EMS staff at 11:20am, spouse was present and in agreement.

979829	1/27/2021	PA	26	F	1/27/2021	1/27/2021	After receiving the second dose of the covid 19 vaccine, as I was walking to the elevator, my vision started to become blurred and I began to see stars. I walked over to a nearby chair and as I sat down it felt as if my throat was closing. I began sweating profusely and my whole body was flushed. My heart rate was tachycardic and my blood pressure was hypertensive when checked in the ED. When I got to the ED, my vitals were obtained like I described but my heart rate had slowed down by time I got there. A nurse passing by explained that my heart was tachycardia when he assessed me in the chair. The ED did an EKG of my heart that determined my heart rate was normal sinus rhythm in the 70s. They observed me for roughly an hour and let me go home. My discharge papers explain I had a vagal response.
979942	1/27/2021	CA	25	F	1/22/2021	1/27/2021	Friday- headache 2 hours after injection. Right Eye twitch Saturday- body aches, headache turned into a migraine on the entire right side of my head. I could not lift my right arm, I was exhausted doing everyday things. Sunday- migraine wouldn't go away. I got body chills but it wasn't until later at night. And my body aches became moderate. Monday- my migraine went down to a headache but my body aches wouldn't go away. I did not take any pills. Throughout the day. I was tired. It was hard moving around. I was kind of sluggish but not as much as Tuesday. Tuesday- severe body aches. Both my arms hurt but I thought it was just due to laying in bed after getting home from work at 2:30 on Monday. Severe pain in my shoulders and middle of my back. I did some stretches thinking maybe my body was just sore from laying down. Went to bed at 12 because I couldn't keep warm and my back was killing me. Wednesday- horrible ache though out my back I got up to move but it hurt so much. I'm walking so slow. I need to rest on the walls because it hurts so much to move. My headache is still there. I took midol at 1:30pm; did not do much. I've been trying to move about and stretch but my body does not allow me. Even typing hurts I cannot keep a good grip on things. My arms, entire left side of my back and many thighs are in pain
979965	1/27/2021	WI	48	F	1/21/2021	1/22/2021	My eyelids swelled and my face became red/itchy and burn. It's been a week and I'm still experiencing it all.

980252	1/27/2021	CA	75	M	1/27/2021	1/27/2021	Patient remained in the facility for 20+ minutes with medical support staff keeping a great eye on him. Within first 10 minutes of injection, patient could taste medication. He described it as the taste of alcohol. Support staff took Patient's vitals. Support Staff administered injection of what spouse believes was Benadryl (exact medication and dosage unknown to Spouse). Between 4th through 6th hour after injection (2 p.m. through 4 p.m.), patient experienced nausea. He asked for otc antacid medication. Seven hours after injection (about 5 p.m.), patient requested prescribed medication Pantoprazole 40mg. Patient took 1 Pantoprazole 40mg. At 5:30 p.m., Patient began chills, shaking from head to foot. Warm blankets were given. He covered himself from his head down. This lasted just under 10 minutes.
981945	1/27/2021		96	M	1/8/2021	1/13/2021	weakness and fallsNarrative: 95 yo male w/ a PMH significant for Afib, legal blindness, Hx of CVA, cognitive impairment, GERD, HTN, pseudogout, BPH, chronic knee infection, and DJD who received his first dose of the Moderna COVID-19 vaccine on 01/08/21. The pt's COVID-19 screening questionnaire prior to receiving the vaccine was negative. The pt presented to the ED on 01/13/21 for weakness and m PCR test on ultiple recent falls (since receiving his first dose of the COVID-19 vaccine). The pt's COVID-19 01/13/20 was positive and he was admitted. He was started on treatment with remdesivir + dexamethasone on 1/14. The pt initially required supplemental oxygen via low-flow NC, however his oxygen requirements increased to 100% NRB. On 01/16/21 his MPOA elected for hospice care. The pt passed on 01/17/21. Unclear if the COVID-19 vaccine attributed to the patient's hospitalization and eventual death, or whether these events occurred from COVID-19 itself, however this case is being reported the FDA since this vaccine is under an emergency use authorization (EUA).

978898	1/27/2021		43	F	1/25/2021	1/25/2021	Around 11:30pm 1/25, I muttered "I don't feel good," which reminded me of being a child getting sick. within 30 minutes of then end escalating over the next hour, I had a severe headache, bilateral, occipital, pressure in entire head and neck. The headache as also in my eyes and in my ears. Back was also painful - not as bad as neck, but i can't explain how horribly a hope a massage could fix me. There was no comfortable position to alleviate any of that. I also got the chills, constantly, suddenly switching from shivering cold to so hot i needed to take blankets off - but soon as i took the blankets off I'd be freezing cold again. I was also super nauseous, though i didn't vomit. I pretty much couldn't get out of bed much for 24-36 hours. During that time, i was unable to sleep as well, i think mostly due to the chills, constantly having to move about to keep warm or cool off, but not sure. I did take acetaminophen around 10pm 1/26 (36 hours after injection)- i felt like I knew you're not supposed to, but I couldn't take it any more and it might have less anti-inflammatory impact than ibuprofen. It dulled the pains some, but didn't make it stop. the chills and nausea mostly stopped and was able to sleep more the second night, last night. I'm now up and trying to work today (1/27). Head still has pressure headache throughout. Neck is still sore, like a pressure headache. I feel generally foggy and heavy.

979252	1/27/2021	WI	55	M	1/9/2021	1/15/2021	First episode 01-15-21, started 10am, i was at work, started feeling weak and brain fog so i sat down and another therapist came into the office and told her how i was feeling, they checked my BP 148/92, went to the ER. They took some blood work, CBC panel were negative, thyroid test, normal, anaiongap, normal, glucose reading, normal and an EKG normal. 2nd episode 01-21-2021 started 11:45am, that morning when i woke up i felt really strong feelings of sadness and despair. At 11:45a i was about to eat and i started to feel again brain fog, total body weakness, elevated BP, they took my BP again and it was 144/88 so i went to the ER again. I could not keep my eyes open. They did a EKG again with a CTA and a CT with perfusion both were normal. They gave me fluids, sodium fluids. Agian it was transient my BP slowly went down and went home. Third episode 01-25-2021 started about 9am, i was at home did not have access to a BP cup, symptoms were same but less intense, i could feel my heart pounding, brain fog and body aches and this lingered throughout the day. It felt like I had the flu. No elevated temperature on all three of my episodes.
979326	1/27/2021	MI	35	F	12/29/2020	12/31/2020	I had extreme dry eye (both eyes) and previous ablation right occurred 3-6 months earlier.I went on 12/31 I had to get eye drops. Throughout the evening I started to exp pain left continuously eye drops and ice pack. The next morning 1/1 woke up pain was still there went to urgent care. I was told the tissue was reopened from the ablation given antibiotic drops to take 4 drops, Erythromycin and follow up 2 days. I was told to up dosage to 6 drops due to bacteria,recommended to follow up with Opthamologist in April 2021.

974412	1/26/2021	MA	26	F	1/22/2021	1/24/2021	I am not sure if the event that happened Sunday was directly related to the vaccine at all since it happened two days later, or if it was just a coincidence, or if the vaccine was just a physical stimulus trigger. I just wanted to let you know just in case! But out of nowhere, I had an episode (never had it before) where I can only describe it as what it might feel like to be drugged. I was delirious, confused, disoriented, dizzy. I wasn't able to leave bed without the room spinning. I had chest tightness and headache. When I would close my eyes, I would feel such head pressure that it felt like my body was on a boat during a tsunami. I would feel shaking and spinning inside my head. I never felt anything like it before. I was struggling to stay conscious. In the moment, I remember wondering if it was a brain aneurysm or if I was dying. I was scared, felt like I needed to call for help, but I was unable to. I allowed myself to fall asleep/lose consciousness (not sure which), and when I woke up an hour or so later, I felt a little better. I was still a bit confused on what happened and felt physically weak, but the episode had resolved. Hours later, I called the on-call service at my doctor's office because I couldn't shake the feeling that something wasn't right. She instructed me to go to the emergency room. By the time I got to the emergency room and got seen, this was a good 8-9 hours or so after the episode occurred. The PA-C at the ER ran bloodwork and a uranalysis (I do not know what he tested for since I was not given the results), as well as had me hooked up to a heart monitor. He said everything looked normal and that he would not run a CT scan since he did not think I had an aneurysm or anything indicating the need to expose me to radiation to perform a CT. I asked for an EEG and he said they do not do that at the emergency room. He discharged me to follow up with my PCP. While in the ER, I would have episodes of staring blankly into space at random, uncontrollably, and for an undetermined amount of time. I told the doctor, and he wasn't concerned. Yesterday (01/25/2021) I met with my PCP via telehealth and explained everything. He thinks it could have been my previously-diagnosed conversion disorder; however, I have not had that manifestation of it in the past. I expressed to him that I am very scared to get the second dose of the vaccine since I do not know if this event is related or not, and I do not want to die. I have two cats who need me! He did not think it was

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							related to the vaccine, since it happened two days after the injection. But conversion disorder comes on with physical/mental/emotional trauma/stimuli. For the most part, I was feeling okay mentally. The vaccine was the only change to my normal routine. My previous conversion disorder effect was the loss/difficulty of the ability to swallow. I have not had an episode of that in years. The symptoms I experienced seem to be possible manifestations of the disorder when I did some research, but it does not fully explain what I experienced. I asked for a referral to neurology, just to be safe, and I have the appointment tomorrow (01/27/2021). I still feel residually weak, slight chest tightness, and overall feeling off/weird. Again, I do not know if this is directly related to the vaccine, but I wanted to make you aware just in case!
974298	1/26/2021	CO	53	F	1/22/2021	1/25/2021	Itching on the right knee and both legs below the knees. Swollen spot below right knee that itches. Right eye is swollen. I took allergy eye medicine , a 24 hour tablet of Allegra, and put Cortizone 10 on my legs below the knees. As of 1/26/2021 - the medicine has stopped the itching, but eye is still slightly swollen.
974438	1/26/2021	OH	38	M	1/25/2021	1/26/2021	Patient awoke with shivering at 03:00 AM this morning, later developed diaphoresis, swelling of the eyes, lips, and tongue at 08:00 AM. Patient presented to the emergency department and was treated for allergic reaction; received prednisone and famotidine per patient MAR. Symptoms resolved and the patient was discharged with a prescription for a prednisone taper.

974443	1/26/2021	TN	76	M	12/30/2020	1/2/2021	Patient received Moderna COVID vaccine on 12/30/2020 at a Pharmacy clinic where he was a resident. Nurses at the facility reported that he was responsive and showed no signs of any adverse effects until 1/2/2021 when he was observed slightly unresponsive and staring at the ceiling and trembling. He had a fever of 101F at this time. The facility ordered labs and a rapid COVID test (all of which came back normal) and started IV antibiotics. A few hours later, patient began bleeding from his eyes, nose, and mouth and was sent to the local ER. The patient refused being admitted to the ICU for possible sepsis/hemorrhage and died the following day on 1/3/2021. All healthcare professionals involved agreed that this was not likely due to the vaccine, but needed to be reported nonetheless.

974589	1/26/2021	KY		F	1/8/2021	1/8/2021	<p>5 - 6 bowel movements; A little achy; Passed out; Dizziness; Arm tingling; Shaking; Chest burn; Triggered acid reflux; Stomach rolling around; Vision was blurry; Eyes bloodshot; Weakness; Funny feeling; Felt like a heart attack from the bad heart burn; Headache; Sore arm; Nausea; A spontaneous report was received from a consumer concerning a 55-years-old, female patient who received Moderna's COVID-19 Vaccine, and who experienced passed out, headache, sore arm, dizziness, arm tingling, shaking, chest burn, triggered acid reflux, stomach rolling around, 5 - 6 bowel movements, vision was blurry, eyes bloodshot, a funny feeling, nausea, weakness, achy and felt like a heart attack from bad heartburn. The patient's medical history included acid reflux. Concomitant medication included lansoprazole. On 08 Jan 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number 012L20A) at 13:07 intramuscularly in the deltoid muscle of her left arm for prophylaxis of COVID-19 infection. On 08 Jan 2021, right after the first vaccination, the patient reported that she got a headache and sore arm but over all felt okay. As the day went on, she got dizzy and lightheaded. She went to bed around 22:30 but had to get up to use the bathroom. As she was getting up, she felt bad to the point where her husband asked her if she was okay, which she told him that her head felt funny and dizzy, and a couple of seconds later she couldn't see him anymore as if her vision was going blurry. Her husband took her to the couch, and she blacked out or passed out for a few seconds according to her husband. Shortly after she had aroused, her husband noticed that her eyes were bloodshot, and she said she felt weak, she was shaking, and her arm was tingly. At that time, her husband took her to the emergency room (this was about 12 hours after she got the Moderna COVID-19 shot). On arrival to the emergency room she felt confused and shaky. Shortly after arrival to the emergency room she was better and the worst of it was subsiding. The emergency room (ER) nurse said she could take paracetamol. The patient stated that she felt like she was physically there, but she was not mentally there. That day, the patient was discharged from the emergency room. Once home she had 5-6 bowel movements throughout the night (but not diarrhea), her stomach was rolling around almost as if she had a</p>

							<p>stomach virus, nausea, bad acid reflux to the point where her chest really burned. She felt like she was having a heart attack from the bad heart burn. She ended up taking lansoprazole to help. On 09 Jan 2021, her head was still hurting while eating breakfast, so she took paracetamol, and it helped. She was a little achy but not a whole lot; it wasn't bad. On 10 Jan 2021, she felt a little better but did still feel weak and shaky; however, her headache was gone. On 11 Jan 2021, she had a funny feeling and dizziness. Action taken with mRNA-1273 in response to the events was unknown. The events of passed out and vision was blurry were considered resolved on 08 Jan 2021. The event of arm tingling was considered resolved on 09 Jan 2021. The event of headache was considered resolved on 10 Jan 2021. The event of shaking was considered resolved on 11 Jan 2021. The outcome of the events sore arm, dizziness, chest burn, triggered acid reflux, stomach rolling around, 5 - 6 bowel movements, eyes bloodshot, and funny feeling were unknown.; Reporter's Comments: This case concerns a 55-year-old female patient with medical history acid reflux who experienced a serious event of passed out and non-serious events of dizziness, felt weak, shaking and her arm was tingly, confused, 5-6 bowel movements through the night, nauseous, triggered her acid reflux, felt like she was having a heart attack from the bad heart burn, chest burn, vision blurry, eyes bloodshot, funny feeling, headache, sore arm, little achy and weak, within one day of the administration of the first and only dose of the mRNA-1273 (Lot number 012L20A, Exp. date: unknown). Based on temporal association between the use of the product and the start date of the reported events and the absence of any other etiology factors, a causal association cannot be excluded. The events of headache and sore arm are consistent with the known safety profile of the vaccine.</p>

973238	1/26/2021	NM	67	M	1/11/2021	1/11/2021	transient bilateral blurry vision; This is a spontaneous report from a contactable physician. A 67-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiry date: unknown), via an unspecified route of administration on 11Jan2021 11:00 at single dose for COVID-19 immunization (Patient age and high risk medically). Medical history included ongoing spastic paraplegia. He has a genetic neurological condition, he has it is called spastic paraplegia. He does not have an onset date just that it was years ago and is still an ongoing thing at this time. He believes there is a remote family history of the same neurological condition. Patient is not diabetic. There were no concomitant medications. It was reported that the patient previously took flu vaccine on 18Nov2020, almost 2 months prior. The patient experienced transient bilateral blurry vision on 11Jan2021 11:20. Caller is asking for recommendations regarding the 2nd dose for the patient who experienced blurriness of vision. Caller reporting a patient who received the first dose of the Vaccine yesterday (11Jan2021) and developed transient bilateral blurry vision at 11:00am, 20-30 mins after the dose. He said that it was resolved within 18-24 hrs after. He is asking if there were any reports of this in the clinical trial. It was further reported that caller is calling about the COVID vaccine. He says he was curious, he is a clinical director in (and he was calling to report or see if anyone had reported this. The patient received his first dose of the vaccine yesterday (11Jan2021) and for less than 24 hours had transient bilateral blurry vision. He says by the second day it had totally resolved. It started about 20 minutes after the first dose and resolved within 24 hours. He did not think it met criteria to report but he wondered if they would like to him report that and see if anyone had seen that at all. Event began on 11Jan2021 about 15-20 minutes after the vaccine was given and was resolved completely within 24 hours. For the dose, he believed the patient received 0.3 ml, whatever the standard dose is. He thought the Pfizer one is 0.3 ml. He says the nurses do that he just does the medical screening but he thinks the Pfizer one is 0.3 ml and (name) is 0.5 ml but he is older so he may be wrong. No further information provided. For the anatomical location of administration of Pfizer vaccine considered as suspect, he stated it was on

one of the deltoids, he is not sure which. Vaccination Facility Type was outpatient clinic. There were no additional vaccines administered on same date of the Pfizer suspect, they screen for those and he has not had any other vaccines for at least 2 weeks. It was further reported that vaccine given roughly about 11 AM and the symptoms began 11:20 AM. He called the patient this morning at 9:30 AM and he said the blurry had resolved. He says he spoke with the patient's wife and she asked the patient if it was resolved and he said yes. They did not provide the caller with the time that the blurry vision resolved. Caller says he did send the patient to their in house optometrist for an exam and the exam was unremarkable by the optometrist. There were no prior vaccinations (within 4 weeks). He also wanted to know if they could advise whether or not to give the second dose. The outcome of the event was recovered on 12Jan2021. Information on Lot/Batch number has been requested.

973250	1/26/2021		51	M	1/22/2021	1/23/2021	I received my shot at about 7:30PM Friday Jan 22, about 8 hours after that my shoulder had pain where I received the shot and had started to get a headache. 4 hours later awoke with extreme headache with pain in my joints, also this is when diarrhea started. Took Aleve and tried going back to bed an hour or so later chills started and couldn't sleep with the pain and diarrhea. Kept trying to sleep but was difficult with these problems a couple hours later tried stretching and doing a little stretch and flex to see if this would help but it did not. So approximately 18 hours after the shot the diarrhea was done (nothing left in me) I was dehydrated and consumed water constantly. A couple hours after this I did not have anymore chills but my head felt like a balloon that was being over inflated and was going to pop. By this time my sister was at my house keeping an eye on me, I had called her earlier. I couldn't really feel the pain where I received my shot because of the pain in all my joints (shoulders, knees, hands etc.) but the worst was my neck and head. Slept rough during the night drinking large quantities of water all night. Started feeling a bit better mid morning the next day, got appetite back but was extremely fatigued and pretty much napped in bed until 6pm Sunday the 24th. That's when I started feeling normal again eating like a pig and still couldn't get enough water in me. Now I'm scared about getting the 2nd dose of Moderna in a month. Thank you t

973309	1/26/2021	TN	64	F	1/7/2021	1/1/2021	Has arthritis prior to having the COVID vaccine and after getting it, it went after the over growth bones in her hands; She still has a cough and no taste; She still has a cough and no taste; The doctor didn't know what to tell, they said if they were her, they would not take the second shot; Body aches; Chills; Nausea; Tired; Diarrhea; Had a fever reached 100.0; Joint hurt, all of them; This is a spontaneous report from a contactable nurse (patient). A 64-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration on 07Jan2021 at single dose for COVID-19 immunisation. Medical history included COVID-19 in Nov2020 (8 weeks ago). Concomitant medications were not reported. After getting the vaccine, she got sick as a dog and couldn't work. She had a fever that reached 100.0, she had body aches. It was explained that she has arthritis prior to having the COVID vaccine and after getting it, it went after the over growth bones in her hands. The caller continues that her joint hurt, all of them, but it was throbbing the most where she has visual arthritis. To sum it up, she had chills, nausea, and body aches the first day. The caller took Tylenol regardless of what the paper said; this was on Friday, 08Jan2021. She kept taking the Tylenol. The next day, she was still tired but when she quit taking the Tylenol on the 2nd day the symptoms returned. It was clarified that she took it in the beginning of the second day twice but at the end of the day wanted to see if she was over it all so she stopped the Tylenol. The symptoms all returned so she took again at bed time, the Tylenol, this was Saturday. On Sunday, she had diarrhea but only a couple times and though it was weird, after that is was over. That day she took Tylenol once. She was calling because she was scared about the second dose, this one produced a big immune response and she says that usually happens with the second dose. The caller wants to know if she should take the second shot, she doesn't want to have this happen again or it be worse. She thought since she had already had COVID it wouldn't be as bad, her immune response. The first dose was given on 07Jan2021. It was explained the only thing unresolved was from when she had COVID, she still has a cough and no taste. There are just few thing she can taste and smell now. The patient said that all the

---

symptoms had resolved as of Monday, the 11Jan2021. Actually, she felt pretty good on the 10Jan2021 so let's say Sunday. She explained that most people get this on the second dose and so if she going have a third response she doesn't want the second dose. She was calling to get an answer to her question, the doctor told her to call to see what could be recommended. She has really good doctors, three of them. The doctor didn't know what to tell, they said if they were her, they would not take the second shot. The patient said she really needs to go. No need to continue when there is no one to tell her if she should take the second shot or not. The patient asked to be contacted via email to relay information about people's immune response to the first dose verses the second dose, is it greater or less. Clinical outcome of the events recovered on 11Jan2021. Information on the Batch/Lot number has been requested.

Medical history includes mild asthma, B-Cell Thymoma (Resected), multiple allergies. Diagnosed allergies included Sulfa drugs-swelling; Celebrex-Itchy; Clindamycin- Unknown reaction; Doxycycline- Sick to stomach; Iodinated radiocontrast dyes- Iodinated radiocontrast dyes cause generalized swelling (takes diphenhydramine prior to contrast use when needed); Keflex- Rash; TDAP Vaccine; Levofloxacin- Unknown Reaction; Penicillin; Prednisolone- Itchy; Septra- Eyes get glossy and lips swell. The concomitant medication was not reported. There is no other vaccines within 4 weeks prior to the COVID vaccine. About 4 Hours after receiving 1st (of 2) doses of Pfizer COVID-19 Vaccine (30Dec2020 30Dec2020 08:00 PM), Patient went to Emergency room (ER) with complaints of sensation of "foreign body" in throat and feeling of throat/tongue swelling. Also had intermittent episodes of acute sharp back pain while in ER. Upon arrival in ER, patient received routine precautionary care with peripheral IV placement. She was kept under observation in ER for approximately 5 hours until subjective symptoms resolved. On exam patient did not have objective signs of throat obstruction. Vitals were stable and O2 saturation on Room Air was within normal limits. Patient did not receive any medications, oxygen, fluids, or any interventions other than observation. Once symptoms resolved, patient was discharged from ER in improved condition. The outcome of event was recovered on an unknow date without treatment. There is no covid tested post vaccination.

A 34-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; lot number: EL3284), via an unspecified route of administration in the left arm on 11Jan2021 12:00 at a single dose for COVID-19 immunization. Medical history included ongoing anxiety since she was 13 years old. The patient's concomitant medications were not reported. The patient received the vaccine on Monday at 12 o'clock. She got it for work. She doesn't have a prescribing doctor. She developed the side effect Tuesday at 2 am. The left side of her face started tingling and had numbness, which is the same side she received the vaccine on. She doesn't have weakness. It is not resolving. It is from her lower eyelid to her bottom jaw bone. When asked if it was improving persisting or worsening, she said it depends. Sometimes it gets worse and affects her lips, and sometimes it is on and off. It won't be completely gone. It switched between her cheek and jaw and then her nose and mouth sometimes. If she bends over, it tingles worse. It is just very annoying. It felt like if she had Novocain on the top and bottom of her mouth. It is irritating. She got it because she doesn't want COVID and she works as a nurse. She does have really bad anxiety. She has nothing else medical. She is just really nervous. It is not going away. She is freaking out. She would like more information. The outcome of the event "It is just very annoying/It is irritating" was unknown, while for the other events was not recovered.</p>

973441	1/26/2021	MA	45	U	1/12/2021	1/12/2021	right side of my face was red with a rash; my eyes are very itchy; headache; felt Nausea; my right arm was itchy where i got the shot and sore/noticed from my shoulder to my elbow had rash, swollen and was very itchy; my right arm was itchy where i got the shot and sore; noticed from my shoulder to my elbow had rash, swollen and was very itchy; noticed from my shoulder to my elbow had rash, swollen and was very itchy; i am having allergic reaction; This is a spontaneous report from a contactable healthcare professional (patient). A 45-year-old patient of an unspecified gender started to receive bnt162b2 (BNT162B2 reported as PFIZER COVID VACCINE; unknown lot number and expiration date), intramuscular right arm on 12Jan2021 11:15 at a single dose for covid-19 immunization. Medical history included allergies to latex and cillin family, and seasonal allergy. Concomitant medication included hydroxyzine pamoate (HYDROXYZINE PAMOATE), calcium carbonate, colecalciferol (VITAMIN D 2000), ketotifen fumarate (ZADITOR) for seasonal allergy, azelastine (AZELASTINE) and clarithromycin (CLARITIN). The patient did not receive other vaccines in four weeks and was not diagnosed with Covid prior to vaccination. The patient previously took but had allergies to amoxicillin, oxycodone hydrochloride; oxycodone terephthalate; paracetamol (PERCOCET), fusidate sodium (FUCIDIN) and morphine. The patient received the first dose of bnt162b2 (BNT162B2 reported as PFIZER COVID VACCINE; unknown lot number and expiration date), via unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. The patient reported that she the shot at her job 12Jan2021 11:15am, sat down for 15 minutes and she got up fine. She mentioned that around 04:00 pm, she had headache and felt nausea. Her right arm was itchy where she got the shot and sore, so she took off her sweater to check her right arm where she got vaccine and noticed from her shoulder to her elbow had rash, swollen and was very itchy. She took a Benadryl and put ice on her right arm. She waited an hour after she took the Benadryl. She noticed the rash was not itchy or as red as it was before but was still swollen. These adverse events started at 12Jan2021 15:45. She mentioned that she went to bed woke up at 5:30 am the next day (13Jan2021) and the right side of her face was red with a rash. She mentioned

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							that when she checked her right arm, the rash was still there and was red again. She took her allergy medication and waited an hour and the rash still on her face and arm but not as red. It was mentioned that once her allergy medication wore off, the rash was red on her right arm and face, and her eyes are very itchy. She took allergy medication again and waited 1 hour, the rash was not so itchy. She mentioned that she was having allergic reaction. The patient reported that she was COVID tested post vaccination (nasal swab) on 13Jan2021 with pending results. The outcome of the events was not recovered. The following information on the batch/lot number has been requested.
976027	1/26/2021	MA	47	F	1/26/2021	1/26/2021	mild puffiness under eyes and on lip, mild sore throat, beginning about an hour after the shot and continuing to this writing
975592	1/26/2021	OR	43	F	1/21/2021	1/21/2021	22 minutes after vaccine experienced severe racing palpitations, elevated heart rate over 150 bpm and visual changes. This lasted one hour. Had mild chest pressure and the visual changes the rest of the day.
975668	1/26/2021	OK	42	M	1/26/2021	1/26/2021	Received 1st dose of Pfizer-BioNTech at approx. 10:00. While waiting in observation area for 15 minutes after vaccine, client started to feel dizzy and notified nurse. Client requested EMSA at this time. Client moved to the floor to lay down and legs were elevated. Client then reported numbness of the tongue. No swelling visualized. O2 via nonrebreather mask initiated at 10:21 and EMSA called at 10:25. BP monitored (130/82 at 10:23, 142/78 at 10:27, 130/81 at 10:37). Client reported the numbness in his tongue went away. EMSA arrived at 10:41 and transported by ambulance to hospital for further evaluation.

975692	1/26/2021	NY	51	M	12/29/2020	12/29/2020	Dose 1 -Muscle twitched on injection into R deltoid. Immediately after injection experienced warm and cold sensations through right arm, intermittent pains along arm. Was asked to be observed 30 mins post injection. Sent home. Paresthesias (intermittent warm, cold, tingling sensations) continued with radiation into right axillary, and into neck. Experienced intermittent facial tingling. On day 3 post injection, started with burning eye discomfort in right eye. Went to eye doctor to rule out eye infection. No eye infection, Instructed to use Refresh drops. In 4 days subsided. Day 7 experienced ear flushing and warmth that last 3 days and subsided. Saw a neurologist to rule out nerve damage. EMG was normal. ANA titer was 1:40 with speckled and cytoplasmic pattern. My last ANA was negative when tested for inflammation due to back pain few years prior. Neurologist did not think this was an allergic reaction and since symptoms were gradually improving recommended second dose. Symptoms fully resolved after 2 weeks Dose 2 - Jan 19 , 2021 (21 days post) - Decided to inject left deltoid to avoid trauma to right arm. Was observed 30 mins and released. No symptoms. Moderate arm soreness x 4 days. Day 3 post injection developed burning eye discomfort, intermittent tingling sensation in arm, warm/cold sensations. Pain radiating to shoulder and neck. Day 6 started very mild tingling and warm sensations in cheek and chin area. Also experienced intermittent prickly sensations in throat and sensation of throat tightness predominantly on left side. (but no actual swelling). Today (Jan 26, 2021) is Day 7 and these intermittent sensations are persisting. Arm soreness has resolved. Right eye burning discomfort improving.
975715	1/26/2021	ND	47	F	1/21/2021	1/21/2021	My eyes, nose, throat, and ears started to itch and burn. My eyes swelled to the point that one eye was completely swollen shut. My lower lip started to swell slightly, but not much. I took Cetirizine Hydrochloride 10 mg. I took one pill in the morning and one in the evening until the evening of 1/25. The burning and itching subsided in an hour. The swelling in my eyes was not completely resolved until the morning of 1/26. 1/22 - 1/24, I was extremely fatigued, sleeping most of the time day and night. On 1/26, I felt that my symptoms had completely resolved.

976047	1/26/2021	VA	64	F	1/13/2021	1/21/2021	1/14 and 1/15: mild nausea and diuizziness, mild soreness and hardness as injection site; 11/21: in the evening found myself scratching at my upper right arm and realized I was scatching my injection site so went to look at upper right arm: realized a several inch area above, below and around the injectin site was swollen, hard and hot to the touch and a bit red and itchy. Note I could feel what felt like bumps under the skin vs. above the skin or that they could be seen. Due to providing support services to a disabled brother at his home during this evening, I did not take any benadryl or any related medication. I used cool compress at the site and called my husband to give him an alert. I had both a landline phone and a mobile phone (which has a medical alert service at the push of 1 button that I could talk to/or that would automotically respond) as I was aware to watch for breathing difficulties...I experienced none. I alerted our school system nurse about the issue the next morning and she guided me to contact my PCP which I did. I could not be seen that day, but was no worse regarding symptomes and knew I needed to go to ER or a Urgent Care if anything worsened which it didn't. Around 5 p.m. on Friday evening when I was able to be at my own home I took 1 dose of benadryl (allergen/dye free), drank alots of liquids and rested. During Saturday I still felt effects of benadryl, but vaccine related things cleared up. Monday, 1/25 7:15 a.m. to 7:45 a.m. while at home working on my computer, my left eye vision became very distorted like my vision was jumping around/unfocused...no issues of this before and I am not prone to headaches such as migraines..I was getting concerned that I might need to call work that I could not come as was afraid to drive and it cleared up. Note: I have routinely gotten many types of vaccines due to working in the medical field and needed to care for at risk family members (flu, phenmonia (sp), shingles, hepittitis, tetnus, booster for other preventive illnesses) and have never had adverse reactions. I do plan to get the second dose of the Moderna vaccine as I work for a school system and am primry care giver for a medical and disability comprimised younger brother.

975981	1/26/2021	TX	39	F	1/22/2021	1/22/2021	40 minutes after my injection (as I drove home) on Friday, I began to feel tingling and numbness in my left hand and weakness in my left arm. Within an hour after my injection , I began to feel tingling and numbness on the left side of my face beginning with my jaw and chin area. Over the following hour, the tingling and numbness spread to my lips, nose, eyelid, eyebrow, and the entire left side of my face and head. Around this time, my husband and son came downstairs to check on me noticed a change in my face and asked me "What's wrong with your lip? It's like a different color or something different on one (left) side." Approximately 2 hours and 30 minutes after the injection, the left side of my mouth and tongue were tingling and went numb. The left side of my face was noticeably weaker than my right and it became difficult to control my left eyelid and lips. My injection site became extremely tender as the evening wore on and I took two tylenol before going to bed to help with the pain. By the next morning on Saturday, the tingling had stopped, and my mouth/tongue were no longer numb, however weakness and occasional numbness persisted on the left side of my face, most especially my jawline and chin area. I noticed my left eye felt dry, so I began using eye drops occasionally. My injection site remained extremely painful throughout the day and I took tylenol and ibuprofen periodically to help with the discomfort and to allow me to sleep. By Saturday evening, no outward signs remained of my facial weakness on the left side, although I could still "feel" the difference. By Sunday morning, the numbness was only sporadic around my jawline and chin and I realized that when taking tylenol or ibuprofen, it seemed to improve sensation in my face. My injection site discomfort abated as Sunday wore on, but a slight weakness on the left side of my face persisted, noticeable only to myself. The weakness has persisted through today (Tuesday evening), however, it does seem slightly improved each day and it is mild. I am able to work and function normally. I believe that I experienced a mild episode of Bell's Palsy following my Moderna vaccine, something that I have experienced (much more severely) once before <5 years ago after contracting a strain of antibiotic-resistant strep throat.

975482	1/26/2021	CO	75	F	1/24/2021	1/25/2021	Around 4:00 PM I started feeling achy. As the evening progressed I had chills, burning eyes, aches, fever. I was also having bladder control issues. When I went to bed at midnight my temperature was 103.2. I slept 12 hours and today I am 100%. No symptoms.
975430	1/26/2021	VA	51	M	1/6/2021	1/15/2021	14th of jan i had a pain around my jaw got up the next day i started having water eyes, the right side of face started to droop. went to ER and was diagnosed with Belspaulsy. after that did a follow up appointment with neurology
975432	1/26/2021	CO	75	F	1/24/2021	1/25/2021	I began feeling achy around 4:00 PM. It progressed to chills, headache, burning eyes, fever. My fever was 103.2 when I went to bed at midnight. Between 9:00 PM and midnight I also had difficulty with bladder control. I slept 12 hours and today I fell 100%.
975391	1/26/2021	NC	67	F	1/11/2021	1/11/2021	I received the shot in my left arm and immediatley I felt an odd feeling in my left wrist and hand. I then went outside and in 10 minutes my lips began to tingle and become numb. In several more minutes the left size of my lips were very numb and the right size somewhat numb. In just a couple of more minutes the location under my entire left jaw became somewhat numb and then I felt like I had something small in my throat. I asked my husband to look at my face to notice and swelling, drooping, or was I slurring my words. He said no. I could breath and swallow ok so I sat in the car in case I got worst and needed to go back inside the health department. I waited outside for one hour and 15 minutes (until 5:00) and during that time I improved significantly. The next day a area under my left eye switched several times. Then 10 days later I had pain in my left eye and for the next two days my eye was sore. I need help in knowing if I should take the next shot or can I wait for the Johnson and Johnson vaccine and take it.

970871	1/25/2021	TN	29	F	1/19/2021	1/19/2021	Severe injection site pain that began around 2 hours and went into the evening, severe in the evening and night. Light soreness continued over the next day. 3 hours after receiving the 2nd vaccine, nausea, loss of appetite and general 'unwell' feeling began. Nausea, fatigue, loss of appetite, headache continued the rest of the first day. Symptoms impacted ability to work, went home early from work. Day 2: splitting headache, migraine, sinus pressure, joint pain which began in hips then spread to elbows, ankles, knees; muscle pain began in left calf then spread to shin. Injection site soreness was not severely painful any longer, mild pain. Loss of appetite continued. Nausea decreased, and no longer present by afternoon of day 2. Fatigue, increased sleep, sinus pressure in eyes, and cold chills persisted. Day 3: Migraine was present still upon waking and continued for whole day; loss of appetite remained but improved by late afternoon on day 3. Joint and muscle pain continued for duration of day 3. Fatigue continued. Increased need for sleep most noticeable today. For the first time, ibuprofen was taken for symptoms after receiving the vaccine almost 50 hour prior. Day 4: was able to return to work for the first time. Headache continued throughout day, nausea in the evening. Day 5: Headache continued but went away. Day 6 and Day 7, mild headache.

970678	1/25/2021	CT	78	F	1/13/2021	1/13/2021	Pt received her first dose of COVID19 vaccine on 1/13/2021 at the health department clinic. Pt then called the health department on 1/19/2021 stating once she got home her bottom lip swelled up and so did her eye lids. On 1/19/2021 the pt reported she could not speak with me (RN) further as she was about to go on a zoom meeting with her allergist to discuss the event. RN asked pt to call the LHD back. 1/20/2021 RN called pt to discuss further, pt stated she is in the grocery store and cannot speak. RN asked pt what the allergist recommended. Pt stated the allergist recommended getting the 2nd dose of the vaccine however with additional pre-medications. Pt stated she could not speak with RN further and would call me back. 1/25/2021 - pt did not call clinic back. RN called pt to get more details on the event. Pt reported her allergist would like her to get the 2nd injection in the hospital, while taking Singulair the night before and Zyrtec and Benadryl the day of. RN advised the pt her allergic reaction is a contraindication to receiving the 2nd dose per CDC guidelines. Pt verbalized understanding and will discuss with her allergist further. Pt also mentioned possible allergy to Polysorbate during call on 1/25/2021 however she reports because she tolerates Miralax on a regular basis her allergist does not believe it to be a true allergy. Pt did not mention this in VAMS. I was not the vaccinator.
970666	1/25/2021	NY	29	F	1/24/2021	1/25/2021	I received the COVID Vaccine yesterday (1/24/21) around 12:10pm. I experienced no effects while waiting the allotted 30 minutes. The next morning, January 25th 2021, I started to experience arm soreness and blurry vision. The blurry vision is worse in my left eye. My vision has not improved after waking up, taking a shower and putting saline drops in both eyes. The best way to describe the sensation is hazy, blurry and sometimes double vision.

970631	1/25/2021	GA	30	F	1/6/2021	1/8/2021	2 or 3 days post vaccine noticed gum swelling behind top front tooth. Went to the dentist on 1/13 found no cause of symptoms via x-ray or visual inspection. Messaged Primary Care Doctor on 1/19 explaining symptoms with no resolution. Did explain this happened post vaccine. Treatment recommended was ibuprofen 600mg 3X's a day. I managed symptoms with ibuprofen but returned back to the dentist on 1/22 since I could not go without the ibuprofen. They visually see no immediate cause, but decided to make mouth guards to see if grinding at night is causing the issue, other possible problem would be I still have my wisdom teeth. Primary Care Dr. suggested I report this in case it was vaccine related since there is no real way to know for sure.
970969	1/25/2021	NJ	40	F	1/17/2021	1/24/2021	One week post vaccination, developed angioedema of left eye, experienced hives over entire body, tongue itching, scratchy throat, tachycardia
971564	1/25/2021	NJ	68	F	1/23/2021	1/23/2021	Severe pain in head, and sinuses. My teeth, ears, and eyes were throbbing with pain. Sinuses filled with mucous. Vomiting from 11:00PM to 6:00 AM. My body was wrenching from nothing to vomit from dry heaves. I used hot compresses, cold compresses, boiling water with Vicks vapor rub, Mucinex DM and 2 Aleve at 6AM and finally got some relief from the pain in my head. All mucous was clear. I came off quarantine of Coronavirus on January 20. Onset of virus was January 5, 2021.
970620	1/25/2021	NY	26	M	1/7/2021	1/8/2021	Acute Optic neuritis bilaterally, initial symptoms started 24 hours after injection, became severe a week after injection (lost sight in left eye). I was admitted to the hospital 1/19/21 and given 1000mg of Prednisone daily from 19th to the 22nd.
970603	1/25/2021	NC	85	F	1/20/2021	1/21/2021	Thursday morning at 5:00 started having chills, started running a fever 101 to 102 all day, arm was swollen and real red, shoulder and neck pain, started sneezing, and eyes were watering, had weakness in legs, Friday the fever remained in the 90s. As of today, 01/25/2021 no fever, just arm pain and swelling and red. have taken some Ibuprofen every four hours

971530	1/25/2021	PA	28	F	1/11/2021	1/12/2021	weakness; eye pain; headache/ head pain; back pain; chills; Nauseated; her arm was killing her more than a normal vaccine; She had a fever then; This is a spontaneous report from a contactable nurse. This 28-year-old female nurse (patient) reported that she received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL3246) at single dose at left deltoid for COVID-19 immunisation on 11Jan2021 at 4:30 pm. Relevant history included contraception. Family Medical History Relevant to AE(s) was none. Concomitant drug included ongoing ethinylestradiol, etonogestrel (NUVARING) for contraception for years. The patient experienced a headache, back ache, nausea and was almost passing out. She had the first dose of the vaccine on the 11Jan2021 at 4:30 PM and was in bed around 10:00 that night. She woke up at 5:00 AM on 12Jan2021 and didn't feel great, her arm was killing her more than a normal vaccine and she was nauseated at 5:30, which was not that horrible. She took some Tylenol. Then she got to work and around 9:00 she felt like she was going to get sick. She had horrendous nausea, chills, weakness, eye pain, headache/ head pain, and back pain. Her clothes hurt because the body aches were so bad. She felt like she was going to pass out, like a vasovagal. She went to urgent care because her manager didn't think it was side effect. She went and got swabbed (result unknown), whatever. She had a fever then. They told her it was a reaction to the vaccine. Her temperature was 101.6 degrees Fahrenheit when she went to Urgent care. She would say the fever started at 12:30PM on 12Jan2021. She did not know if fever would be ongoing because she was taking fever reducer and it was working. The events weakness, eye pain, head pain, and back pain were reported as serious since medically significant. The nausea was better around 2:00PM. The outcome of event nausea, Chills was and Weakness was resolved on 12Jan2021. The outcome of events eye pain, head pain, and back pain was resolving. The outcome of event 'her arm was killing her more than a normal vaccine' was recovering. The outcome of fever was unknown. History of all previous immunization with the Pfizer vaccine considered as suspect was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. Prior Vaccinations (within 4 weeks) was none.

A 37-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EK5730), intramuscularly at 0.3ml single injection in the left arm on 22Dec2020 09:00 for covid-19 prophylaxis. Medical history included persimmon fruit allergy from an unknown date and unknown if ongoing. There were no concomitant medications. The patient experienced tingling in the left side of her tongue on 22Dec2020, the event was reported as serious per medically significant, suspect that it may be bell's palsy on an unspecified date. The adverse event was not required a visit to emergency room or physician office. Caller was an employee health nurse that reported that she had an employee that received the first dose Covid-19 vaccine on 22Dec2020 and as they were administering the vaccine, the patient developed tingling in the left side of her tongue. The caller said that the patient reported that the tingling was still there. She said that the patient was concerned that it might cause her to get bell's palsy. Caller wanted to know if this was this common and whether she could move forward with getting the 2nd dose of the vaccine. The caller said that the patient received the vaccine in her left arm. The caller said that the patient reported that the tingling in her tongue was mild and not stopping her from eating and she was not having any respiratory issues. Caller said that the only allergy that the patient has was to Persimmon fruit. The side effect mentioned is not necessarily Bell's palsy since the characteristic eye drooping is not present. The outcome of events for tingling in the left side of her tongue was not resolved, for suspect that it may be bell's palsy was unknown. Vaccination Facility Type was hospital. Vaccine Administered at Military Facility: No. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available) was none. No additional vaccines administered on same date of the Pfizer suspect. No prior vaccinations within 4 weeks. No relevant tests. Drug result was related.; Sender's Comments: The causality between the reported tingling in the left side of her tongue, which was suspected that it may be Bell's Palsy and the</p>

971271	1/25/2021	NY	74	F	1/12/2021	1/12/2021	received 3 shots of COVID vaccine; almost "like fell asleep". She was hardly open her eyes this morning/couldn't eat dinner because people couldn't wake her up; This is a spontaneous report from a contactable consumer (patient's husband). A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 12Jan2021 at SINGLE DOSE for COVID-19 vaccination. The patient's medical history was not reported. Concomitant medications were not specified (reported the patient was taking bunch of medications, but the reporter did not know exactly what they were). Historical vaccine included first dose bnt162b2 on 24Dec2020 and second dose bnt162b2 on 11Jan2021, both for COVID-19 vaccination. She didn't have any side effect from the first shot or the second shot. The patient received 3 shots of COVID vaccine, received 1st dose of vaccine on 24Dec2020, 2nd dose on 11Jan2021. Then inadvertently given another dose yesterday, on 12Jan2021. Immediately after the 3rd dose of vaccine, the patient almost "like fell asleep". She was hardly open her eyes this morning. The patient was in a nursing home. The nursing home staff was finding it difficult to feed her now. The patient couldn't eat dinner because people couldn't wake her up. The patient just had the COVID test, no other lab test. The outcome of the events was unknown. Information of lot/batch number has been requested.

971531	1/25/2021	TN	40	F	1/8/2021	1/8/2021	Itching; headache and body aches; headache and body aches; chest tightness; had hives; Vertigo; Nystagmus in her eyes; passing out; vomiting/puke when vertical; Dizziness; tingling and numbness in throat and lips; tingling and numbness in throat and lips; tingling and numbness in throat and lips; tingling and numbness in throat and lips; heart rate 125; BP of 170/100; throat tightness; This is a spontaneous report from a contactable consumer (patient). A 40-year-old non-pregnant female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number=E11283) via an unspecified route of administration at left arm on 08Jan2021 11:30 at single dose for covid-19 immunization. Vaccine was administered at hospital. Medical history included ongoing autoimmune disorder. The patient had known allergies to Amoxicillin and wasps. No family medical history relevant to events. Ongoing concomitant medication included hydroxychloroquine sulfate (HYDROXYCHLOROQUINE) for autoimmune disorder, celecoxib (CELEBREX) for autoimmune disorder, oral dimenhydrinate (DRAMAMINE), oral fexofenadine hydrochloride (ALLEGRA) and oral famotidine (PEPCID). No other vaccine in four weeks. The patient previously took flu vaccine (Expiry Date: Nov2020), tetanus vaccines for immunization. At 11:40 on 08Jan2021, the patient had tingling and numbness in throat and lips, heart rate was 125. By noon had hives and blood pressure (BP) of 170/100 (normal BP was 96/58 and heart rate was 65), chest tightness and throat tightness, the patient was given Benadryl (50mg) and monitored. No change so walked to emergency room. Given intravenous Benadryl and steroids then released the same day on 08Jan2021. The patient woke up on Saturday and shortly after hives came back, itching, chest tightness, headache and body aches. Saturday night on 09Jan2021 she went back to hospital due to continued reaction from 09Jan2021 06:00 pm until 10Jan2021 04:30 PM. The patient was admitted for heart testing then released on Sunday afternoon simply due because each doctor said they didn't know what to do. The patient slept from late Saturday night to Monday (except testing and eating at hospital), on 11Jan2021 around noon the patient took a shower and hives, itching and tingling all came back. Completely started over with

reaction and started dizziness. On Tuesday 12Jan2021, primary care physician (PCP) for tests. Chest tightness started subsiding but very dizzy, puke when vertical. Wednesday: rheumatoid doctor. The patient had extreme vertigo. Other reported events: passing out, vomiting. Nystagmus in her eyes was very strong so that she got very dizzy. The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care or Hospitalization. Adverse event start time also reported as 11:45 am. The patient underwent lab tests and procedures which included blood pressure 170/100 on 08Jan2021, blood test and electrocardiogram (EKG) with unknown results, heart rate: 125 on 08Jan2021. Normal BP was 96/58 and heart rate was 65. Heart and lungs examination with clear result. The patient had no Covid prior vaccination. Nasal Swab of Covid tested post vaccination on 05Jan2021 with a result of negative. Heart rate 125 recovered on 12Jan2021. BP of 170/100 recovered on 12Jan2021. Chest tightness sometimes she has episodes. She cannot walk without assistance. She stated she currently was 100% dependent on someone else. Throat tightness recovered on 11Jan2021. Outcome of other events was not recovered. She was treated at hospital with Oral and IV Benadryl and IV Steroids on 08Jan2021. On 09Jan2021 she was administered Oral Prednisone, Oral Diphenhydramine HCl (BENADRYL) and Oral Acetaminophen(Tylenol). Steroids switched from prednisone Oral to dexamethasone Oral twice daily. On 13Jan2021 she started on ondansetron (ZOFTRAN) 4mg 3xday Promethazine (Fenagrin) 25 mg once at night. Information on Lot/Batch has been requested.

970061	1/25/2021	MD	63	F	1/6/2021	1/7/2021	lost muscle capacity of her arm/cannot lift a gallon of milk in the fridge/Right arm lost muscle capacity; headache; terrible pain in her right elbow; joint discomfort; feeling achy in her right arm and all over; feeling achy in her right arm and all over; This is a spontaneous report from a contactable consumer. A 63-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number EL1284), via an unspecified route of administration on 06Jan2021 14:30 at single dose for covid-19 immunisation. Medical history included hypothyroidism, cholesterol. Concomitant medication included levothyroxine, atorvastatin. Patient on the line calling about the COVID 19 Vaccine on Wednesday in her right arm. Her right arm lost muscle capacity, she cannot lift, she cannot even lift a gallon of milk in the fridge. This has improved, but she still cannot use it normally. Thursday she was feeling achy; Friday she had a headache. Later that day she had the most terrible pain in her right elbow. It was excruciating pain. The next morning pain subsided. However, she does not have her full arm strength back yet. She confirmed she is a HCP. She also added, she works at the hospital. It is like a centralized monitoring system where she watches monitors connected to the care unit and since she has background as a HCP she alerts the nurses when there is an issue. She clarified her right arm lost muscle capacity was noticed on Friday 08Jan2021. She got the vaccine on 06Jan2021 and was able to drive home and it was fine. The next day, 07Jan2021 she was achy, like flu like, with joint discomfort that she normally does not have even though she is getting older. She was feeling achy in her right arm and all over. The achiness all over resolved Thursday or Friday. She confirmed she has recovered completely. On Friday 08Jan2021 she had a headache that would just not go away. The headache was not in the front, back, or above eyes so she knows it was not sinuses. The headache lasted all day. Stated by the next morning the headache was gone. Her head is fine. She confirmed she has recovered completely. She later added, even though she is getting older and forgets things. No additional details provided. She was supposed to go to work on Friday, but she was not quite miserable, but she just could not bring herself to go into work. She called out because of the headache and the arm pain had started to kick in. The outcome of the event Muscle

							weakness upper limb was resolving, joint discomfort was unknown, while the outcome of the other events was resolved in Jan2021.
970204	1/25/2021	AZ	54	F	1/19/2021	1/19/2021	I stayed for 15 minutes after injection, then when in my car driving home I felt mild swelling in my throat. No other symptoms at that time. Symptoms resolved by that afternoon when I woke up to go to work. The Next day 24 hours after injection I had Severe allergic reaction after eating. Hives, significant throat swelling, sneezing, eyes and face swelling. I took Fexofenadine, Benadryl, Prednisone and went to the doctor where I got an injection on Steroids and more oral Prednisone.
970160	1/25/2021	MO	56	F			Systemic rash all over the back, chest, stomach and thighs; Some spots on arms and legs; This is a spontaneous report from a contactable Nurse (patient). A 56-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number EL3248), via an unspecified route of administration on an unspecified date at single dose for covid-19 immunisation. Medical history was none. The patient's concomitant medications were not reported. The patient stated, "I got my first dose yesterday at 4:30 and then everything was fine and then at about 10:30 that night, I got a systemic rash all over my back, my chest, my stomach and my thighs and there were some spots on my arms and my legs. So, I went ahead and had took some Benadryl and I just monitored the rash and made sure it wasn't going to my face, or my eyes or my throat. I never had any difficulty in breathing or anything but it definitely was a reaction to something that was in the vaccine." Treatment: Consumer stated, "I took Benadryl last night. It was a capsule, 25 mg. Indication: Consumer stated, "I work at a hospital and right now the hospital that I work at is not requiring that we get it but they just advised that we should. But they left it to us if we want to get it or not and they said that they just have the first doses available." The outcome of the events was unknown.

970153	1/25/2021	MA	60	F	1/5/2021	1/1/2021	Pain through whole body and tremoring; Pain through whole body and tremoring/ whole body was sore; Things started looking funny/ Funny feeling in her ears; Deaf and couldn't hear; Leg cramps in both legs and toes curled out/ muscle spasming; Dizzy; nauseous; Threw up twice; Bruise at injection site; This is a spontaneous report from a contactable nurse (patient). A 60-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Batch/lot number: EL3246) via an unspecified route of administration on the arm left on 05Jan2021 around 12:00 PM at single dose for COVID-19 immunization. The patient used to get legs cramps when she was pregnant with her twins, but it was only one leg. The patient stated she delivered six children, was in car accidents, and had surgeries. And the patient stated the pain from the COVID-19 Vaccine was beyond any other pain she has experienced. The patient needed glasses to read patient card. And stated her eyesight was going. The patient was pretty healthy. There were no concomitant medications. The patient had no prior vaccinations within 4 weeks. And the patient did not receive additional vaccines on same date that administered BNT162B2. The patient experienced deaf and couldn't hear on 06Jan2021 09:00, leg cramps in both legs and toes curled out on 05Jan2021 19:00, dizzy on 05Jan2021, nauseous on 05Jan2021, threw up twice on 05Jan2021, things started looking funny on 06Jan2021 09:00, pain through whole body and tremoring on 06Jan2021 10:00, bruise at injection site on Jan2021. All the events (except for event bruise at injection site) were reported as seriousness as life threatening. Clinical course: the patient worked nightshift. Laid down that afternoon to take a nap and got up around 10:00. Around 05Jan2021 19:00 PM had sever leg cramps in both legs where her toes were curled out. Leg cramps after vaccine wouldn't go away and it was in both legs. Just wouldn't go away. Around 05Jan2021 21:00 PM it went away. The patient was dizzy, nauseous, and threw up twice on the night of 05Jan2021, and going into 06Jan2021. The patient went to the couch in the hotel room and started going deaf. She couldn't hear anything on 06Jan2021 around 09: 00 AM. Things started looking funny on 06Jan2021 around 09: 00 AM. Woke up at 09:35. Hour after that there was pain through her whole body and everything was hurting at 10:00 AM on

VAERS_ID	RECVD	STATE	AGE_YRS	SEX	VAX_DATE	ONSET_DATE	SYMPTOM_TEXT
----------	-------	-------	---------	-----	----------	------------	--------------

06Jan2021. The patient was tremoring at 10:00 AM on 06Jan2021. Couldn't reach the phone to dial 9-11. Thought she was going to die. Last until about noon and then started to go away. Doesn't know if it is safe to take the second vaccine. Doesn't know if these are thing that should have happened to her. She started to get real concerned. Went into hotel room and started feeling dizzy again. Stopped haring things. Funny feeling in her ears. Was seeing things, got dizzy, and everything got dark. Everything lasted until 12:00 PM on 06Jan2021. Everything was good now. The patient had a bruise where injection was in Jan2021. Stated it was nothing compared to what she went through. Woke up around 10:00 AM. Then went back to sleep and got up around 18:00 PM. She felt fine. Her whole body was sore from the muscle spasming. The outcome of the event bruise at injection site was unknown, of the event leg cramps in both legs and toes curled out was recovered around 05Jan2021 21:00, the outcome of other remain events was recovered on 06Jan2021 12:00. The reporter considered (method of assessment: Global Introspection) that all the events were related to BNT162B2.; Sender's Comments: All the reported events were possibly related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), due to temporal relationship. However, it is worth noting that the 60-year-old female patient had car accidents history and had surgeries. All the events started when she worked nightshift, including leg cramps in both legs and toes curled out, nauseous, threw up twice, pain through whole body, tremoring and transient deafness. Patient did not get rest after vaccination may a risk factor to the onset of the events. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

970103	1/25/2021	NV	65	F	1/12/2021	1/13/2021	<p>Blurred vision; This is a spontaneous report from a contactable nurse for self. A 65-year-old female patient received second shot of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1283), via an unspecified route of administration on Right deltoid on 12Jan2021 12:00 at single dose for COVID-19 immunization. The patient medical history was not reported. Patient received first bnt162b2 on unknown date. Concomitant medication included apixaban (ELIQUIS). The patient experienced blurred vision on 13Jan2021 morning. Was holding something and couldn't read it. Wears contacts and usually has sharp vision. Had to keep adjusting and holding what she was looking at. Outcome of event was unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported event of blurred vision due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

970036	1/25/2021	WI	47	F	1/7/2021	1/8/2021	right eye shut/she couldn't open the right eye, it was glued shut completely; right eye red/ right Eye being Red; mucus from throat, clear mucus; Right eye weeping; Right eye pink; She was super congested/she couldn't breathe through the nose; barely being able to sleep; Right eye itching/Left eye itching; red and swollen eyes/right eye swollen; itchy throat/itching of the throat/scratching in the throat; runny nose, clear mucous (post nasal drip); This is a spontaneous report from a contactable Other HCP (patient). A 47-years-old female patient received first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) in Left arm, via an unspecified route of administration on 07Jan2021 at SINGLE DOSE for covid-19 immunisation. Medical history included Sinus infection, Kidney stones, pink eye when she was a kid. The patient's concomitant medications were not reported. She reports the following side effects: itchy, red and swollen eyes, itchy throat, runny nose, clear mucous (post nasal drip). The patient experienced Right eye itching, red and swollen eyes/right eye swollen, Right eye pink on 08Jan2021 with outcome recovering, right eye shut on 09Jan2021 with outcome of received on 09Jan2021, itching throat, mucus from throat, clear mucus, Right eye weeping on 08Jan2021 with outcome of recovered/resolved with sequel on 11Jan2021, Left eye itching on 08Jan2021 with outcome of recovered on 09Jan2021, runny nose, clear mucous (post nasal drip) on 08Jan2021 with outcome of recovered on 11Jan2021, right eye red/ right Eye being Red on 09Jan2021 with outcome of recovered on 09Jan2021. The patient got her First shot on Thursday morning at 7:30AM, then on Friday night 08Jan2021 at 7 in the evening her right eye was itching and weeping, it felt like something was in the eye but there wasn't. The right eye was swelling as well on Friday. On Friday the itching of the throat started. She is also having scratchiness in the throat. Her eye is scratchy also. When she woke up Saturday 09Jan2021 she couldn't open the right eye, it was glued shut completely and red. When she was a kid, in the past she has had pink eye, and there was green stuff coming out the eye but this was not like previously. She had to pull the eye lids apart, maybe this is viral. With her throat, she has had sinus infection in the past before in which she couldn't breath out of the nose, but with this she is experiencing Mucus that is

VAERS\_ID RECVD STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT

---

clear and thin from the throat. Her left eye itching started Friday night, but it was only slight itchiness and by Saturday the left eye was normal. She is purely doing this report to help, in case other people have this happen. Early today, she did use a Neti pot and it did help a little, she has had horrible sinus infections in the past but this is not it. In the past, once you get a sinus infection you are prone to getting them, thankfully she has not had one in a few years, she would get thick crap in the sinuses, in this case her eye was draining going into her nose, therefore making her have a runny nose, and she also had scratching in the throat. She is breathing clearly through the nose. Itching in the right eye was ongoing but less intense. Right Eye Swollen: She was looking at mirror hates looking at herself but the eyelid was back to normal, however the white part of eye is still swollen. Right eye being Shut: It is open now, that was a one day occurrence. Itching in the throat: She noticed that today at noon around 1 is when she last had it, it is 5% still there where she feels something. Mucus from Throat: She used the Neti pot a couple hours ago, at about 1:30 PM. Since then she has had some drainage but it is 95% better. Her Right Eye ball is still pink looking like as if she was hung over. The Left eyeball is white. Right Eye Weeping: She left work because her right eye was weeping so much, going into her nose, and she is running at work, she has glasses, goggles, face shield, and so she cant wipe the liquid. She came home and iced her eye which helped. Right Eye Pink: On Saturday the right eye was red. Right now it is pink, like an eye lash is in the eye. The right Eye being Red was only for Saturday, like sclerosis, it was red and swollen. The left eye was swollen, but it is better now from this morning. She was super congested on Friday (08Jan2021), barely being able to sleep, she couldn't breathe through the nose. Weird, she barely slept but it wasn't a sinus infection. She couldn't sleep because of nose running and the eye running then Saturday into Sunday she was able to sleep with eye running. The runny nose got better with the neti pot. She is schedule for the 2nd dose on 28Jan2021. The outcome of other events was unknown. Information on the lot/ batch number has been requested.

969737	1/25/2021	WI	35	M	1/20/2021	1/20/2021	Moderna COVID-19 Vaccine EUA After receiving the vaccine, I felt my throat swell up a bit, which caused me to slightly panic during the 15 minute observational period; however, it went away after approximately 5 minutes. I initially wasn't convinced it had anything to do with the vaccine. Later that day, I went into work for third shift. At approximately 1:30 am (approx 11 hrs. after the vaccine), I began to feel very ill. I developed flu like symptoms and a headache, which caused me to leave work. I continued having flu symptoms, chills, nausea, body aches, and a very severe migraine on and off until I woke up on 01-22-20 at approximately 6:00 am. At this time, the migraine had subsided and I just had some minor body aches,, which over the next 24 hrs. also went away. The migraine should be noted as debilitating to the point I was dizzy, my mind was foggy, but worst of all, the pain was so bad I was constantly nauseous and my eyes were regularly watering. I never was tested for COVID-19; however, I believe my family had potentially had the virus in October. My wife and I exhibited many of the signs and symptoms of the virus, including my wife losing taste and smell for an extended period of time.

969669	1/25/2021	AR	48	F	1/7/2021	1/7/2021	Lightheaded; Dizzy in both eyes; Pressure surrounding left eye; Blood pressure went really high; A spontaneous report was received from a 48-year-old, female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced the events, lightheaded, dizzy in both eyes, pressure surrounding left eye, and blood pressure went really high. The patient's medical history was not provided. Concomitant medications were not reported. On 07 Jan 2021, the patient received their first of two planned doses of mRNA-1273 intramuscularly in her left arm for prophylaxis of COVID-19 infection. On 07 Jan 2021, minutes after vaccination, the patient felt lightheaded, dizzy in both eyes, a pressure surrounding her left eye, and her blood pressure went really high. She was then sent to the emergency room and was advised to see a cardiologist. The patient was discharged from the hospital without any medication. No treatment information was provided. Action taken with mRNA-1273 in response to the events was not reported. The outcome of the events, lightheaded, dizzy in both eyes, pressure surrounding left eye, and blood pressure went really high, was not reported.; Reporter's Comments: This case concerns a 48 year old, female who experienced a serious unexpected event of dizziness, dizzy, ocular discomfort and blood pressure increased. The event occurred same day after first dose of mRNA-1273 (Lot# unknown) administration. The subject concomitant and treatment medications were not provided. Based on the current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded.
970804	1/25/2021	KY	64	F	1/23/2021	1/23/2021	It started out with pressure behind my eyes, then at 9 pm on 1/23/21 I started swelling on the left side of my face and my lips, and inside my mouth with a nodule inside my mouth under the skin right under my upper lip then the swelling started moving up my face onto the cheek on the left side and I started taking Benadryl and then about 6 pm on Sunday night it started to swell as well as the right side of my face and lips. I called the ER and they told me to come to the hospital immediately so that's what I did.

970474	1/25/2021	MI	45	F	12/30/2020	12/30/2020	About 25 min after receiving the vaccine, I noticed a little tingling on my lips and my cheeks and my face felt heavy. I looked myself in the mirror, my face, cheeks and neck became very red like beet red and warm to the touch. I returned to the vaccine site and they observed me but the symptoms worsened, my eyes started getting puffy/ my cheeks started getting purple instead of red, and they sent me to the ER. At the ER they continued to monitor me and gave me IV Benadryl and IV Pepcid and IV steroids and said I had a delayed case of hives. Once I had all the IV medication the swelling went down and the hives on my arms and my back went away, the redness in my face and neck stayed until next day and I noticed after taking a warm shower the next day the redness returned on other parts of my body. I took a Benadryl. About after 2 days it was all resolved.
970238	1/25/2021	MD	62	F	1/14/2021	1/14/2021	Had vaccine at 3:21 pm Started itching at 4:05 pm- eye lids, scalp, bottom of foot, face felt tight- no respiratory issues. Took Benadryl with moderate relief. Area was red and sore about the size of a ping pong ball area. Area cleared on 12/1/2021. On 1/22/2021 area of vaccine became red, hard and itching. I took Benadryl with no change. Called provider on 1/23/2021 and was seen virtually. Area is now between 6-7 cm . Advised to apply ice, topical steroid cream and marked the area,. Prescription for Bactrim was given incase symptoms increased. This helped some on 1/24/2021 in PM area increased , I had general malaise and a stiff neck with joint pain. I started the prescribed Bactrim-for questionable cellulitis. provider recommended I not receive the second dose
970446	1/25/2021	FL	71	F	1/18/2021	1/19/2021	After receiving the first shot on Monday, I developed a headache and double vision on Tuesday night. I consulted an ophthalmologist and I am awaiting the scheduling of an MRI. He could find no physical problem with either eye. The double vision persists. I realize this may be purely coincidental and unrelated to the vaccine, but I felt I should report it.

970398	1/25/2021	FL	65	M	1/4/2021	1/21/2021	Left side of face paralysis. Unable to close left eye or move any muscles on left side of face , and pain behind left ear . Diagnosed by family practitioner as Bells Palsy
970368	1/25/2021	IN	69	F	1/13/2021	1/21/2021	Had slight swelling, rash & feeling of being flushed first three days after receiving the vaccine. On Thursday, January 21 found arm starting to ache with large lump, and a great deal of swelling. Friday, January 22 had large red rash 3 inches in diameter, which became larger hour by hour. Saw my primary physician and she was unsure what was happening. We agreed to monitor the arm and call if it got worse or I had other symptoms. The following two days found the red rash becoming more of a bulls eye. The outer ring was red with the inner bulls eye brown, same coloring as a birthmark. The upper arm continues to ache, but swelling is down and today, Monday, January 25, it is still discolored, but brown rather than red.

970324	1/25/2021	PA	68	F	1/14/2021	1/16/2021	<p>Patient is a 68yo female with a PMH s/f of osteoarthritis, CHF, TIA with right limb weakness and aphasia and HTN presenting with a 1 week history of bilateral upper and lower extremity pain, stiffness and weakness. Patient states that she received the Pfizer COVID vaccine on 1/14 last week at pharmacy. At the time of inoculation, she did not experience any symptoms and went home after the 15 minute waiting period. The next day, she developed a generalized headache that started in her neck and continued over her head. She states that this continued to get worse throughout the day and on Saturday, she woke up and described a constant, 10/10, dull-aching pain that started at her neck/back of head and extended down to her shoulders to the tips of her fingers. She also stated that she had the same pain starting around her groin extending down to her knees and ankles. Patient initially tried taking Tylenol and ibuprofen to treat the pain, and said that those treatments normally work for her osteoarthritis, but that her pain did not improve afterwards. In addition to the pain, she also states that she developed worsening weakness to the point where she could not walk around her home. She stated that she thought moving around and being active had helped her fight through the pain and tolerate it, but that laying down and resting actually seemed to make it worse. With her symptoms worsening and her inability to walk, she decided to come to the hospital to get further treatment. She denied ever having an adverse reaction to other vaccines she has received previously. She receives the flu vaccine every year, and received measles, polio and other childhood vaccinations that she could not recall. She was diagnosed with polymyalgia rheumatica and started on 20mg prednisone daily. She had a remarkable response to the steroids and her symptoms resolved within 24 hours. She was discharged on her 3rd day of admission. On ROS, she denies fevers, chills, night sweats, SOB, changes to vision, eye pain, cough, chest pain, sputum production, nausea, vomiting, diarrhea, dysuria or hematuria. She affirmed weight loss, headache, neck stiffness, dizziness, lightheadedness, muscle stiffness/pain, reduced ROM, and urinary urgency and incontinence.</p>

970307	1/25/2021	NY	43	F	1/22/2021	1/23/2021	Received vaccine at 4pm. Woke at 1:30 on 1/23 with headache . At 4pm aches settled in. At 9am fever of 101 started along with Hyper skin sensitivity and eye sensitivity and chills. Aches turned into actual pain in my thighs and calves. It literally felt like I was hit with a baseball bat in my thighs. Fever kept climbing all day to 103.9 at 3pm. Even though I was alternating Advil and Tylenol. During afternoon and evening I had extreme dizziness. Fever, chills, fatigue, hypersensitive skin and to sunlight with my eyes have persisted for another 24 hours. I am now snd 65 hours post vaccine and I?m still running fever 100-102. With fatigue and body aches.
970587	1/25/2021	CA	46	F	1/9/2021	1/9/2021	Injection site was on left deltoid. Within hours experienced significant soreness on arm, left flank and left breast. Severe swelling and joint pain at left knee and hives down left leg calf. Significant rash and swelling of both eyelids and allover body soreness.
970459	1/25/2021	GA	74	M	1/16/2021	1/16/2021	Labored breathing, numbness, then tingling at left side of face, blurred vision left eye, stabbing pain left ear.
972566	1/25/2021	MI	59	F	1/15/2021	1/15/2021	Left side of my face became numb. Then my eye, tongue and throat began to swell. I stopped and purchased Benadryl. The swelling started to diminish after about 4 hours, but tingling and slight numbness continued for about 3 days.
972700	1/25/2021	WI	27	M	1/17/2021	1/19/2021	Received the first COVID shot on 1-17-21 and began to feel pain in the back of my neck on the right side in the afternoon of 1-19-21. On 1-20-21 I lost part of my taste and neck started to cause headaches. On 1-21-21 symptoms continued to get worse. On 1-22-21 I began to lose control of the right side of my face. Face began to droop and eye was unable to close. I went to the ER on the evening of 1-22-21 and was diagnosed with Bell's Palsy.
972693	1/25/2021	OH	86	F	1/22/2021	1/22/2021	Extreme dizziness. Intense headache behind eyes and down neck Extra strength Tylenol

972663	1/25/2021	MO	53	F	1/25/2021	1/25/2021	became dizzy, clammy diaphoretic and nauseated at the end of her 15 minutes. This was her second dose and had no problems with the first COVID vaccine dose. Continued nausea with lightheadness and started to see visual spots when lifting head. Benadryl 25 mg 1 tab given by mouth at 1258 pm. At 1345 pm attempted to have her stand at stretcher and she continued seeing spots, dizzy. At 1406 transported to the ED for evaluation. She was seen, evaluated and released to home from the ED.
972645	1/25/2021		77	M	1/25/2021	1/25/2021	Approximately 8 hours after shot I suddenly had dizzy feeling, my eyes became crossed, could not focus my eyes, everything was a blur. I could think correct and carry on a conversation. Took 2 Ibuprofen, drank 8oz of water and laid down for a half hour or so. After about 40 minutes my eyes started coming back in focus. My left eye was not seeing some cobweb stands but eventually stopped and became normal. I then ate some food and everything seemed to be ok. As I write this 5 hours after the above incident nothing more has happened. My arm does not hurt either. No other symptoms of any kind are occurring.

972638	1/25/2021	CA	38	F	1/21/2021	1/22/2021	The day following the 2nd vaccination dose, I had zero symptoms other than a slightly sore injection site. Around hour 30 following the vaccination I began to feel warm, and I got up to brush my teeth and cool off in the bathroom. As I was brushing my teeth, I started experiencing an increasing ringing noise in both my ears that I thought was strange and somewhat alarming, but I didn't feel any signs of dizziness or dysphoria. The next thing I remember is waking up the bathroom floor with my husband standing over me. Apparently I experienced a complete lose of consciousness and feel to the floor, hitting my chin on the bathroom vanity as I feel and splitting my chin open, which I have zero recollection of. My husband states that when he found me, that my eyes were open, but I was staring blankly at him with a glazed over look and my whole body was limp and diaphoretic. I came too in about 30 seconds after he found me, but I was very confused, not making a lot of sense, and felt very disoriented and weak. It took about 20 mins for my fever to break, and to have the strength and power to get up and walk to bed. We changed all my clothes because I had soaked through them, and he got me into bed after cleaning/bandaging up my chin. I then slept solidly until noon the next day, which is very unlike me, but since then I have felt relatively fine with no other experiences of fever/chills/disorientation, just some continued mild fatigue off and on. After discussing with my nursing colleagues, they all had similar experiences around hour 24-30 post 2nd vaccine with fevers, chills, restless sleep, or just general malaise, but no one experienced a complete loose of consciousness, so I reached out to my PCP yesterday, and she confirmed today that I should report this to VAERS. I have never experienced any form of loss of consciousness/fainting/black-out/syncope prior to this, which is another reason I thought it was important for me to report this.
972614	1/25/2021	OR	45	F	1/17/2021	1/19/2021	Left was sore on 1/18. 1/19 Woke up very congested. 1/19 went into work, she lost her voice and eyes, face and neck swollen- felt like her throat was swelling

972455	1/25/2021	DE	49	F	1/21/2021	1/22/2021	Patient is 49 yo F presenting with right sided facial nerve paralysis (right eye and eyelid drooping, etc.) consistent with Bell's Palsy. She does have a history of Bell's Palsy in the past (with Botox injections for Migraine HA). Symptoms started 1 day after vaccination (22 JAN 21) and are still present today (4 days post-vaccination). Symptoms are improving and patient will be following up in 1-2 weeks. No treatment indicated.
972567	1/25/2021	MO	46	F	12/22/2020	12/26/2020	Had soreness in the arm for two days. On the 26th, evening, I went to take drink of water and some of spilled down my face and I thought I just had a fat lip. 27th, I went to work and went to lunch at noon, I went to eat food and I noticed that my mouth -right side was numb. I thought something might be wrong and someone told me that my right side of my face looked slack. Saw on Dec 28, Dr. - had already scheduled an appt for follow up for diabetes - and I told her about my symptoms and she looked at my face and had me smile and crinkle my face. She sent me to my doctor downstairs (she had the nurse call downstairs and told them I needed to be seen that day). I went downstairs and I saw my doctor and my doctor scheduled an MRI on 28th at 7 PM and also ordered for me to take Prednisone and Valtrex. MRI result came back fine. I responded well to both of these meds - I started to get muscle control back into my face. It shot my sugar numbers up but solved the other problem in about 15 days I could shut my eyes without delay and I feel like I have muscle control in my face. January 22, I got the second dose and so far I don't notice anything different.
972733	1/25/2021	TX	46	F	1/22/2021	1/22/2021	Individual started to feel her heart begin to race. she said she felt a little light-headed and her vision was "off". She had a headache coming to the clinic which she had taken excedrine for prior to arriving. We took her blood pressure about 10 minutes after vaccination and it was 150/88 HR 130. We moved her into a private room to monitor and attempt to relax her. continued BP monitoring every 5-10 minutes- 148/92 147, 160/90 155. She stated that her left lip felt tingly so at that time we decided to call 911.

972484	1/25/2021	IL	64	F	1/20/2021	1/20/2021	Have written to Health dept no answer-they must be busy. First shot resulted in very sore upper arm 1.5 days, no other effects. Clean injection into deltoid muscle bulk. Second shot, injection shot extremely high above main muscle bulk of the deltoid into area of supraspinatus tendon one finger below acromial shelf. First shot, two sensations: initial puncture then injection. Shot 2 one huge painful bump met with resistance in my tissue. Also Shot 2 not one response except mild fatigue still today, but no pain in upper arm unless I pressed specifically into injection site itself. WAS THIS VARIATION IN INJECTION SITE ACCEPTABLE? WAS IT OK TO DO INJECTION SO VERY HIGH UP? Secondly, had a wonderful, professional nurse, but I question the practice of retrieving a dose for me that comprised of doses left over at bottom(s) of other vial(s). We had a new vial in the office where I was, but she left and came back with a syringe already full, saying that it was important to use up every drop. At first I agreed, but now I question this practice and just want to make sure I don't need to come back for another second dose. Are there no substrates that would settle out of the solution as the vial gets depleted of everything except only a bit of fluid left in it? Is retrieving every last drop from each vial and putting them together to make a dose acceptable practice? if not, from the Pfizer standpoint, then I should get another dose? I am a pediatric physical therapists working within 1-2 feet a children's faces at all times and transmissibility is a real issue both ways in my job. I truly do not want o become a Covid victim. please let me know if both the injection site and the method b y which my dose was put together is acceptable in the eyes of Pfizer. Thank you.
972468	1/25/2021	IN	70	F	1/25/2021	1/25/2021	Patient left the facility after waiting 15 minutes. Returns shortly afterward with flushing and redness on cheeks, the sense of swelling in the eyes. Vitals 166/90 O2 sat 98. Benadryl 25 mg PO given. Monitoring for 30 minutes - patient improved

972463	1/25/2021	NY	19	M	1/24/2021	1/24/2021	Immediately after the vaccine was administered I experienced the usual side effects of mild headache, fatigue and localized redness and swelling. Around 11pm the night the vaccine was administered I developed a migraine that resulted in blurred vision. and when I checked my temperature it was approximately 104.9 degrees Fahrenheit. By the next morning, approximately 7am, I was weak to the point I could not get out of bed myself, I was nauseous that resulted in a single Emesis episode approximately 8am, I had mild swelling of my face since 7am, between 7:30am and 12pm, I had multiple times where I would temporarily lose my vision. Throughout 1/25 I continued to have a fever ranging from 102 degrees Fahrenheit to 103 degrees Fahrenheit. At approximately 8am and 1pm I took two acetaminophen pills each time which alleviated the migraine and to an extent helped with the visual deficit episodes. Throughout 1/24 and 1/25 I suffered with extreme chills resulting in shivering that lasted for several minutes despite a room temperature of approximately 90 degrees Fahrenheit and covered in two blankets. PCP was consulted via telephone and she advised to go to the hospital via EMS given the high grade fever, abnormal vitals and severity of symptoms
972460	1/25/2021	CA	68	F	1/25/2021	1/25/2021	Pt was vaccinated to the right deltoid with the Pfizer vaccine at 1150. At approx. 1208 she began feeling a little dizzy. She had no other complaints. No SOB, No rash, No nausea, No blurred or double vision. Her skins were warm and dry with good color. She has no medical hx. No medications. She is allergic to Iodine. Her initial vitals at 1211 were 132/84, 77 and 99%. At 1218 they were 140/88, 76, 99%. She drank some water and started feeling a bit better. She only drank a cup of coffee with a muffin this morning. At 1228 her BP was 134/82, 74, and 99%. She drank more water and said she felt even better. She refused 911 to be called for any further evaluation. She was advised to call 911 if any further symptoms developed after leaving the facility. Her husband was driving her home and she was advised to eat lunch. She signed our paperwork after being advised of the situation and what had been documented.

972730	1/25/2021	CA	29	F	1/11/2021	1/13/2021	<p>The reason I came to this site to fill out adverse events is for lower right lip numbness that started about 30 hours after the shot, but I also did have other side effects starting the first day that I will list as well. I have never experienced anything like this numbness before in my life, and I am 99% positive it is due to receiving the Moderna vaccine. I did not find facial numbness as a possible side effect of the vaccine listed, so I searched ?facial numbness COVID vaccine? and was able to find that only 4 of the 30,000 participants in the Moderna trials experienced facial numbness, and that only 3/4 received that active vaccine over the placebo, and so was not considered to be a side effect of the vaccine. I also read that they appeared to be cases of Bell?s Palsey, which I do not believe to be what I am experiencing, because I do not seem to have any symptoms of drooping, just a numb sensation. I woke up around 4:30AM on Wednesday (got vaccine on Monday at 2:30pm) with my lower right lip completely numb. The lower left lip had full feeling, as did my entire upper lip. Friday afternoon (2 days later on the 15th) I finally started to get some feeling back on the inside on my lower right lip. Over the next week (it?s been 12 days now since I first woke up with my lip numb), I have slowly regained a little more sensation each day. While I have about 95% of my feeling/sensation back in my lower right lip, there is still some numbness. Also important to note that while this symptom has been annoying, it has not been painful in any way. An adverse side effect that happened immediately after getting the vacccine was that my arm started to itch around the injection site, spanning about 3 inches out in every direction. My arm also got very slightly puffy (only right at the injection site), and moderately pink/red in the same area. They kept me just a little longer than the 15 minutes, but I had no breathing issues, and stated that I felt fine, and was able to leave. Adverse side effects that started day one of getting the vaccine and lasted 2-3 days: -Severe cotton mouth/dry mouth and throat that started on my drive home about 40 minutes after receiving the injection -Severe fatigue that started about 2 hours after receiving the vaccine (could not even keep eyes open the first day, and had to call out of work for the next two days) -Moderately severe arm numbness at the site of injection that I noticed around 6 hours after injection. This symptom bothered me less</p>

							than others due to lifelong chronic pain, but it was still very difficult to raise my arm to grab things (moved slow like a sloth to be able to push past the soreness).
972869	1/25/2021	FL	39	M	1/18/2021	1/19/2021	It's been one week of fatigue, nausea, diarrhea, malodorous belching, joint pain, nuchal rigidity, chills, nasal drainage, sore throat, dry unproductive cough, eye pain, malaise
972843	1/25/2021	CA	55	M	12/26/2020	1/18/2021	Rash to Face, neck, ears, chest & forearms. Swelling to lips, nose and eyes.
972841	1/25/2021		37	F	1/25/2021	1/25/2021	Pt given 2nd Covid vaccine. Stated she had lip tingling/numbness and left sided facial numbness. No SOB, no difficulty breathing or airway issues. 25 mg IM benadryl given at 17:33. Currently at 18:13 pt states it is not getting worse and the numbness is currently over her left eye brow and chin. Pt stated she feels comfortable to leave but pt was advised to wait. Pt stated that after her first vaccine she had some numbness on right side of face that lasted 3 days post injection but no difficulty breathing or with airway. She had read on line that 1% of people may get numbness so felt comfortable getting second dose since she had no airway problems. At 18:29 pt left, refused to go to ER per clinic recommendations.
972821	1/25/2021	VA	47	F	1/25/2021	1/25/2021	Swollen face, eye lids, area below eyes and redness in eyes Water eyes, congested nose, slight headache
972795	1/25/2021		26	F	1/25/2021	1/25/2021	As patient was waiting in waiting area approximately 5 minutes after receiving her 1st COVID vaccine, pt's friend called pharmacist over as patient felt she was about to faint. She had her eyes closed and said she felt faint. Notified incident command to call for provider. We moved her to an exam room so she could lie down. She said she felt warm and dizzy. Pt breathing heavily. Denied chest pain. Had stomach pain and some nausea. Pt was given water. ER provider arrived about 4:30 and listened to lungs, carotids, talked to patient regarding vasovagal reaction. Pt slowly began to feel better and was talking and laughing. Waited with patient until 4:50, able to stand on own, not dizzy anymore, felt okay to leave.

971989	1/25/2021	TX	70	M	1/15/2021	1/16/2021	<p>Following are my symptoms and severe side effects and events after receiving the COVID-19 Vaccine. 1- Receive COVID 19 vaccine at 4.00 PM on 01/15/21. 2- Stay about 20 minutes after Vaccination and observe no reactions and symptoms. Dive back home. take dinner and sleep well whole night. 3- Next day morning when I wake up feel till bit of Nausea/Vomiting. 4- Take breakfast at about 10.00 AM and after that feeling of Nausea got increased and i also start feeling weakness. These symptoms remains all day. 5- At about 5.15 PM I went to take Shower. After about 2 minutes during shower, i feel shortness of Breath,pressure on chest and Dizziness 6- These Symptoms was for about 4 to 5 second and goes off. 7- After about one minute I feel second time shortness of Breath, pressure on chest and Dizziness. It was bit intensive and for a longer period for about 10 second. 8- At this point I realized that this is something serious happening to me. 9- I came out from the Vertical Shower and called my wife that I am not feeling well. She was at this time at first floor. 10- I think it is about 1 minute after when I came from shower, I feel third time shortness of Breath, pressure on chest and Dizziness. I was very severe and within a second or so I passed out and fell down into the Jacuzzi which is beside the Vertical Shower. 11- Within a minute, my wife and my son came to the scene. At this time my wife finds me unconscious with my eyes open. 12- She shouted my name and then I came into my senses and told them to get me out of Jacuzzi. 12- My wife and my son get me out and carried over to the bedroom. I was feeling no shortness of Breath and Dizziness but mild pressure on chest, shivering and chill. 13- Thanks GOD I did not get any body injury except little bit of hit at my Neck and back of the Head. 14- My wife immediately called to my Primary Care Nurse and then I talk to her explain the whole situation and then asking for advise. 15- She advise me to go to any near Hospital Emergency for any urgent Medical care. 16-A about 6.00 PM I went to Emergency. At this time I was feeling Nausea and Shortness of breath. 17- The Nurse immediately check my blood pressure, temperature, oxygen and pulse. These all was normal. Nurse also provide me IV medicine for Nausea. 18- During my stay at Emergency, I again feeling mild tightness/pressure in chest beside shortness of breath and shivering, therefore Emergency</p>

971856	1/25/2021	MI	38	F	1/25/2021	1/25/2021	1307 2nd dose Pfizer COVID-19 vaccine administered. 1327 responded to patient who had been sitting in her car post vaccine. Patient reported that she had noticed anterior chest pain (4/10) as well as a weighted pressure. I assessed the patient while she remained in her car. She has a history of high blood pressure, taking medication and has been under control. She also reported diagnosis of asthma. Lisinopril 5mg daily, she had taken this morning. Albuterol metered dose inhaler (not used today). She denies heartburn nor taking any medication for it. She had eaten a hamburger 30 minutes prior to vaccination. 1335 patient reported that her chest pain turned more into a warmth that spread across the chest and a tingling sensation down only the right arm. 1344 she rates the discomfort in chest as a 2/10 the tingling in right arm is gone. She denies the following symptoms: difficulty breathing, changes to vision/hearing, dizziness/lightheadedness, facial and throat swelling, & nausea. Patient remained very calm during this observation time and spoke in complete sentences. She was comfortable with her mask on. Patient denied these symptoms occurred with her first dose of COVID-19 vaccine nor any other vaccination. Obtained automatic blood pressure device measured 142/91 (63 beats/min) at 1351. Patient was able to teach back when she will seek Emergency care: difficulty breathing, face/throat swelling, persistent and or worsening chest pain/pressure. Patient and I both agreed she was safe to leave the vaccine clinic.
972018	1/25/2021	CA	61	F	1/18/2021	1/18/2021	Left fingers tingling 10 minutes post vaccine. Next day felt it spread to whole left side and left eye felt "weird." Took Advil, got better after no difference with Tylenol. Then stopped the Advil and symptoms persisted. Then had tingling of head and neck. Saw her physician and Carotid flow study was normal. Waiting for MRI approval. Has been working with the symptoms.

971806	1/25/2021	OR	31	F	1/16/2021	1/16/2021	About 15 minutes after receiving vaccine symptoms started. Nauseous, dizziness, chest pain, shortness of breath, body aches (extreme), joint pain especially in hips and knees, extreme fatigue, headaches, ears constantly rang. Rash on my arm where I received it went down to my elbow and up to my shoulder and on to my upper back, about 3 hours for it show up. It red, raised and bumpy and it felt hot. This lasted for 4 days. I was very pale and my eyes were sunken in. I literally felt like I was ran over by a vehicle. I was sleeping for about 15 hours a day. I kept getting chills then I profusely sweats then it switch to freezing cold and back and forth between the two. I took Tylenol and Benadryl to control symptoms but still felt miserable. The symptoms all stayed with me to the end. I still do not feel 100%, I am still having ringing of the ears, moderate body aches and headaches. Someone else said they still see the rash but I cannot really tell. I was also having trouble focusing for a few days after receiving the vaccine, I felt highly medicated not the fun high the bad high.
971949	1/25/2021	MI	49	F	1/14/2021	1/15/2021	I received my second Pfizer covid vaccine at 4:00 p.m. on 1/14/2021 from a co-worker. At 2:30 a.m. on 1/15/2021 I woke up with severe rigors that lasted 2 hours. Over the course of the day 1/15/2021 I had a second 2 hour episode of rigors. They were almost violent and seizure-like. In addition, I had severe nausea, dizziness, decreased vision, fever, myalgia, and exhaustion. My temperature reached 103.4 and lasted over 24 hours. Ibuprofen would bring the fever down 1 degree and helped decrease rigors, but did not help the headache. On 1/16/2021 I developed redness and swelling of entire upper left arm, and edema in arm pit. I spent three days unable to work or sit up in a chair. Symptoms began to decrease after three days, but I was unable to resume full work days until 1/22/2021. Vision returned to 100%, and nausea resolved, on 1/23/2021. Decreased appetite and fatigue are still an issue as of 1/25/2021.
971776	1/25/2021	CA	63	F	1/13/2021	1/15/2021	Nausea 2 days, headache 3 days, aches 5 days, fever one day (100.2), sniffles with clear drainage, rash over right eye across inter canthus to lower lid, redness inner right eye, and slight rash right nose.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
971749	1/25/2021	ME	39	F	1/5/2021	1/12/2021	1 week after receiving the first dose, in the afternoon i had loose stool followed by some mild abdominal cramping for the rest of the day. I took some ibuprofen. The following morning (Wednesday), the pain was on my right abdomen and right flank area only. It was persistent, achy, soreness. My insides felt very tender to put any pressure on my right abdomen or flank. The pain on the right side of my back became more intense as the day went on. I had sharp right flank pain when lifting my right leg after showering to get dressing and use lotion. When I was walking up the stairs I turned to the left and had a sharp pain in the right flank again, taking my breath away for a moment. Around 4pm I took ibuprofen. About an hour later my eyes felt hot and tired. My cheeks were pink. My temp was 99.2. I generally just didn't feel good from this achiness. I took Benadryl and went to bed at 7pm, and slept for about 12 hours, waking once at midnight. The following day (Thursday) I felt 99% better and contacted my doctors office. When putting pressure on the same areas I could feel very slight tenderness if I pushed hard. That evening and into the next morning (Friday) I was mildly achy on my right side but barely at all. I didn't feel any more discomfort until this past week on the 22nd or 23rd. During sexual intercourse I felt that same mild internal tenderness on my right side. At this time, I don't believe I have any pain. My urine seems unusually clear, light colored, and smaller volume but this is very subjective. I have some abdominal swelling but this has been present since my breast reconstruction in January of 2020 and seems to get worse or better depending on the days activities or meals so it's hard to know what causes what. Labs were done on 1/22 showing decreased kidney fuction. Pending tests include an ultrasound of the Right Ovary that remains after the hysterectomy, bladder, and kidney. In addition to a 24 hour urine and some other urine studies.
971737	1/25/2021	IN	55	F	1/25/2021	1/25/2021	This was my 2nd. COVID-19 vaccine. First one on Dec 31 caused a headache and itching at injection site. Today, 1/25, about 10 minutes after shot my eyes, face and neck began to itch. Developed small bumps. This continued to spread to armature torso and legs. Took Benadryl which seems to be helping. No difficulty breathing or swelling of any kind.

972341	1/25/2021	OH	81	M	1/25/2021	1/25/2021	Patient came in to receive his first COVID-19 vaccination at 2:00pm on 1/25/2021. Patient received his vaccine at 2:08pm intramuscularly in his left arm. Patient was asked to remain in the waiting area to be observed. At around 2:34pm, patient started feeling light headed and started yawning. Patient's wife noticed the yawning and said that he does that before experiencing a seizure. After a couple minutes of slow steady breathing, patient started having a seizure and his eyes started rolling back. Patients pulse was steady at the time and soon came out of the seizure. About 45 seconds-1 minute later he started experiencing a second similar seizure that lasted roughly 15 seconds. EMS was called and they came to help him. Patient experienced 1 more quick seizure in the time it took the EMT to get to the store. Patient started having a stronger pulse, breathing better, and looked a lot better. Patient also is a diabetic at the time and his blood sugar was slightly low. EMT assisted patient the rest of the way and they patient and wife left the store to go home.
972043	1/25/2021	CO	91	F	1/21/2021	1/23/2021	Saturday night (4:45) 1-23-21 - swollen right ear, itchy head and some welts on upper body Sunday morning (8am) 1-24-21 - face and eyes swollen, itchy and welts or rash all over upper body
972063	1/25/2021	WA	58	F	12/28/2020	12/29/2020	On the second day on 12/29/2020 in the afternoon I started feeling fatigue, I hade nose bleeding, fevers & headaches. On the third day on 12/30/2020 I had hives I had them in my face they were the size of a dime they are lumping I had them on my eyebrows & on my right cheek, & continued nose bleeding, fever continued, fatigue continued, headaches continued, pain on my arm & I felt with no energy. I had a lot of nose bleeding. On 12/30/2020 I called the doctor and they gave me an appointment for 12/31/2020 & they gave me a zoom meeting. The doctor said every symptom I had was a normal reaction to the covid vaccine except the nose bleeding. The symptoms continued but the nose bleeding is the only thing it has stopped.

968690	1/24/2021	TX	40	M	1/2/2021	1/2/2021	The shot was administered in my left arm. I experienced localized swelling and axillary lymph node tenderness immediately after injection under my left armpit. The right side of my face also became numb for about 5 minutes. The next morning the areas around my eyes were swollen and I had two styes in my right eye. I do not know if these were related. These symptoms lasted approximately 3 days. Some minimal swelling and tenderness seemed to remain, and approximately a week later I experienced a painful resurgence of the swelling at the injection site that was far larger, harder and more painful. I took Benadryl and Ibuprofen. These relieved the symptoms within 48 hours.
969030	1/24/2021	MA	61	F	1/23/2021	1/23/2021	In addition to normal: soreness in left arm, experienced facial numbness on left side of head...cheek, jawline, left lips, ear around left eye.
968471	1/24/2021	NY	33	F	1/12/2021	1/1/2021	Sore arm - started a few hours after the vaccine, lasted about 40 hours. Took Ibuprofen until the pain was gone. Migraine headache - started about 20 hours after the vaccine. Took prescription imitrex, which usually solves the problem, and 3 hours later when I still had the migraine I took another imitrex. A couple hours after that it went away. Eye pain/irritation - left eye - started more than a full week after the vaccine. Left eyeball hurt and also appeared slightly red and irritated. The pain was on and off for two days.
968463	1/24/2021	NY	39	F	1/24/2021	1/24/2021	racing heart rate and throat was itchy. slight blurry vision patient received IM Benadryl 50 mg symptoms resolved 30 minutes later
968770	1/24/2021	MI	71	F	1/21/2021	1/22/2021	Swelling at site,redness at site, mild fever, headache, pain, fatigue,chills, puffy left eye lid.
968713	1/24/2021	WI	35	F	1/20/2021	1/24/2021	I experienced a fever, headache, and body aches on the day after the vaccine and reported them. Now today, four days after the vaccine I woke up with dizziness and blurred vision. I have not sought out treatment for this.

969357	1/24/2021	CO	29	F	12/31/2020	1/1/2021	Beginning when I woke up the following morning, I had a very severe headache. It lasted all day until I went to sleep. Figured it was from the vaccine and would be gone the next day. It was still there when I woke up again... and the severe headache and extreme light sensitivity in my eyes lasted for 20 straight days. It kept me from being able to work fully and had to cancel many of my client bookings. I had 2 days of no headaches- felt great- Jan 21st and 22nd. Then again through today it has been there. I can?t describe it very well as it feels like it?s all over and the pain is almost unbearable at times. Even when the headache is lessened/subdued by darkness or ibuprofen, I still feel it strongly in my left temple/behind left eye at all times. I haven?t experienced headaches like this ever before in my life, even though I?ve had random headaches here and there in the past. They have never been there when I wake up in the AM though and sleep has always made them go away previously. Although I can?t imagine this is specifically from the vaccine, it also seems like the timing is so related that I was advised to file a report here.

969352	1/24/2021	IN	50	F	1/21/2021	1/22/2021	Nausea, fever, chills, headache, severe muscle and joint aches, fatigue, blurry vision. Took Tylenol and Ibuprofen.
969104	1/24/2021	MA	56	F	12/30/2020	1/1/2021	I got my vaccine on 12/30/2020 @ 14pm, on 12/31/ just had pain in my right arm. But on Fri 01/01 I woke up with severe HA ( I have migraine HA, so have tolerability for pain) and had pain in my neck and hands(like arthritic kind of pain). This HA was Migraine like but on both sides of my head and in both eyes. Regular migraine meds didn't help. HA lasted for 3 days. I was ready to go to ER but started feeling better and by the middle of the day HA was gone. I signed myself for 2nd vaccine on 1/27/21, but would like to check before I do it.
969071	1/24/2021	AZ	49	F	1/22/2021	1/22/2021	Extreme dizziness, darkened vision as happens before losing consciousness, feeling of losing consciousness. All symptoms repeated in 5 waves. First wave hit about 10 min after dose and last about 60 seconds. 2nd wave hit a minute later and lasted approximately 30 seconds. 3rd wave hit 2 minutes later and lasted about 60 seconds with some shaking in core/diaphragm area. 4th wave hit 8-10 minutes after that and lasted 5 minutes. 4th wave was precipitated by shaking starting in diaphragm area and branching out to extremities and jawline. Shaking was uncontrollable and made speaking impossible. Shaking passed after about 6 minutes when wave subsided. 5th wave hit about 10 minutes later and was dizziness/darkening vision with disorientation, no shaking. EMS responded to first wave by removing me from my car and having me sit in a chair, removing my mask to breath better, took vitals. Vitals were taken several times, oxygen levels varying from 93 - 98. Oxygen was ready nearby but not used. Blood pressure varied, don't have the readings. EMT gave water immediately and then pretzels about 30 minutes after the episodes began. I was kept for observation for an hour total after inoculation and then released to go home as symptoms had fully subsided.
969335	1/24/2021	NY	41	F	1/24/2021	1/24/2021	After 5 minutes I felt warm come over my body, tingling especially in my hands , I just did not feel right , my body felt weak almost like I may faint. My head was very woozy and I was not able to stand up. I could barely keep my eyes open and I wasn't sure if I should go to the hospital.

967351	1/23/2021	CT	56	F	1/8/2021	1/9/2021	Achy arm at injection site felt on the eve of the injection, but overall moderate- severe muscle fatigue felt with exercise the next morning, specifically burning buttock and thigh muscles while power walking the same route I do 4 x/week and difficulty catching my breath on the usual hills. None of the fatigue was felt the next day on the same route. Also noted on day 7 was a droopy left eyelid that was mostly relieved by using refresh eye wetting drops but that still is present daily. I have had this occur once in my past and had a negative EMG workup. I have a scar on my left eye which may have been the cause and may be what is causing this to happen again. At 14 days I noticed new onset tight achy hips bilaterally, which is funny because one coworker has sudden knee pain/stiffness, and another awoke with back pain and difficulty getting out of bed. They are still achy today
967320	1/23/2021	NJ	48	F	1/20/2021	1/20/2021	Around the 18 minute mark began having an odd facial sensation. There was intermittent tightening feeling at eyebrows and across forehead that would then flutter/spasm, subside, then repeat. The episodes would last 1-3 seconds intermittently for 25-30 mins. No treatment was sought, it did not affect any daily functions.

967361	1/23/2021	IL	36	F	12/30/2020	12/31/2020	Since receiving the Moderna COVID-19 vaccine on 12/30/2020 I have been experiencing what almost feels like brain fog. I have had some trouble staying on task at work, trouble finding words, remembering common last names, etc. Oftentimes I will have this temporarily as a migraine aura, but it typically goes away once the migraine comes and goes. This seems to have come to stay since receiving the vaccine. I did have fatigue for approximately 3 days after the vaccine administration - 2-3 hour naps daily. This has improved some. I also had a dull headache that seemed to be there daily for approximately 2.5 weeks post vaccine- nothing I could not tolerate but it just did not want to go away even with my usual treatment - Excedrin Headache and ice. The best way I can describe it is a dull pain all over the top of my head and forehead. I did have one headache that occurred approximately 5 days after the vaccine, that I would consider a "bad migraine" (Migraine that rendered me incapable of completing my daily routine - having to stay in bed, dizziness, etc). My face on the side with the weakness as a result of my brain tumor has also been a bit more "tired" than usual - facial palsy more pronounced. There have been times in my brain tumor journey where this happens for sometimes a couple of weeks at a time usually due to stress or an impending "bad migraine" coming on or if I have been exposed to or end up developing an illness later - but I never developed an illness an no additional stress. Facial symptoms include smile not as symmetrical (basically more assymetrical than usual - not wanting to move at all so much on the affected side) and more eye watering on the affected side. I do still feel a little lightheaded at times, but otherwise no other neurological symptoms. No upper respiratory symptoms or any other "COVID-like" symptoms. No nausea, vomiting, numbness, or tingling. Symptoms do seem to be improving this week.
968361	1/23/2021	DE	33	M	1/21/2021	1/21/2021	Day 1 was dizziness and haziness, then pain and exhaustion. Night 1 was fever, shakes, chills, uncontrollable bowels. Day 2 was a POUNDING headache in my eyes, sides of my head, swollen lymph nodes, and on my jaw. Night 2 was sweats and nausea. Day 3 was coughing and mucus as well as muscle pain.

Then the following day she had face pain and paralysis and delayed blinking. And then the 4th day she went to the doctor and was diagnosed with Bell's Palsy.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
968021	1/23/2021	NH	70	F	1/15/2021	1/16/2021	<p>Symptoms started on Saturday morning (1/16/2021) following the shot having been administered the previous day (1/15/2021) at 1:00 p.m. in the afternoon. Initially, I had a slight, constant headache and "medium" fatigue. I dismissed it as not important because it was relatively minor. and I am generally fatigued at the end of a work week. The headache lasted all day but was fairly low level. I did not sleep well that night but was able to function during the next day (1/17/2021) without a problem. I don't remember if the headache was present that day. However, on Sunday evening (1/17/2021) (around 6:00 p.m. or so) chills started to go up and down my body and my hands were very cold. I had no fever. I added more garments to keep warm and ignored or was distracted by my activities of the evening. Monday (1/18/2021) during the day the chills continued to go up and down my body intermittently-- not really staying in one place -- but my hands remained very cold. It should be stated that I prefer colder temperatures; i keep my house between 60-62 degrees in winter and I am able to stay comfortable with a shirt and sweater in that environment. So, on Monday, the fact that I had chills was remarkable to me. The chills were intermittent. Tuesday (1/19/2021) I worked from home all day and had an electric heater going focused very closely on my body all day. I was cold but don't remember having chills. Tuesday evening the chills returned, along with a significant headache that circled my head (not focused in one spot), my body ached, my eyeballs ached; I had intestinal cramping .and I simply could not get warm due to the constant "full-body" chills. I went to bed with a heated mattress pad on, flannel sheets, a comforter and a thick wool blanket. I could not get warm. I was not able to sleep at all the entire night due mostly to the (major) physical discomfort and (minor) worry as to what was going on. I DID NOT have a fever. Around 8:30 on Wednesday morning, I was able to fall asleep as the chills had diminished and I was worn out. The body and eyeball aches were still present as was the intestinal cramping. Later that afternoon the symptoms started to diminish and I was able to sleep Wednesday night. I did not eat anything on Wednesday as I was not interested in food due to the discomfort of the intestinal cramping. I was able to smell food and had not lost my sense of taste. Thursday morning (1/21/2021, I finally felt like I</p>

							could eat and had some food which tasted delicious to me. I was able to get warm, had slight headache, cramping was mostly gone, ..I still had (reduced levels) body aches and eyeball aches. I had no chills. I was able to consume and tolerate reduced amounts of food. Friday (1/22/2021) I was tired but able to function and felt as if I was returning to feeling like myself. Today, Saturday(1/23/2021, I am feeling about 95% myself and relieved to have this behind me. I am very concerned about how I might react to the second dose of the vaccine. I am going to consult the local hospital and my PCP there to inquire about the advisability of getting the second dose.
968120	1/23/2021		36	F	1/23/2021	1/23/2021	Patient called after receiving vaccine stating her eyes were swollen and itchy. Said her eyes were not swollen shut. Denied: sore throat, shortness of breath, swelling of the tongue or lips. Advised to take Benadryl and seek medical attention if any of the other symptoms occurred or if she felt it necessary.
968141	1/23/2021	TX	44	F	1/14/2021	1/15/2021	Woke up at 6 am on January 15th feeling extremely fatigued (more than normal). Around 10:30 am I began feeling extremely flushed (no fever although my temperature was elevated for my normal temp - usually 97.6 and it was 98.7) and nauseated. My whole body started to ache around 11 am and I had a hard time staying awake. When I left work around 4:00 pm I went home and slept for the rest of the day and until 11:30 pm that night. I got up and had a snack and then went back to bed. Slept all day January 16th due to a horrible headache and fatigue. Woke up feeling a bit better Sunday although I still had a headache and some fatigue. Monday I was doing better. Later in the day on Monday, January 18th my right eye started hurting and feeling irritated. Then on Tuesday, it started getting a little pink. On Friday I had a puffy red eye. I saw a doctor online on Saturday, January 23rd and I was given eye drops for conjunctivitis.

965563	1/22/2021	NJ	43	M	1/11/2021	1/1/2021	coughing quite a bit; seizure; his whole body feels sore; This is a spontaneous report from a contactable consumer (patient's mother). A 43-year-old male patient received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EL3248) in right deltoid, on 11Jan2021 around 10:30, for COVID-19 immunisation. The patient was in high risk group, was living in senior facility and was disabled. Medical history included also ongoing hydrocephalus diagnosed when he was less than a year old, ongoing shunt (the first one when he was 11 months old, has had multiple revisions since then, the last in 2017), vagal nerve stimulator implantation ongoing from 2003 (for epilepsy; has had multiple since then, last one in 2015), ongoing hemiparesis since he was a baby and epilepsy (he was taking epilepsy drugs but it was well controlled). Concomitant medications included oxcarbazepine (TRILEPTAL) ongoing from 2000, at 1800 mg daily (600 mg in the morning and 1200 mg at night), for epilepsy and levetiracetam (KEPPRA XR) ongoing from 2000, at 1500 mg twice daily (in the morning and at night), for epilepsy. He was on prior medications to these, since he was young. Over the years he has changed to newer and better medications. On 11Jan2021 around 8-9 PM the patient experienced seizure. The patient has not had a grand mal seizure in over 5 years. On an unspecified date in Jan2021, after the vaccine, his whole body felt sore. He was unsure if it was from the seizure or the vaccine. The reporter also noticed that the patient had been coughing quite a bit on 12Jan2021 morning. Events outcomes were unknown.
965833	1/22/2021	KS	55	F	1/19/2021	1/20/2021	Foggy eye site, Migraine. patient took Tylenol Ibuprofen and Advil Cold/Sinus
964487	1/22/2021	NY	26	F	12/29/2020	12/29/2020	26 y/o woman w/ no sig pmhx, c/o left sided facial numbness/tingling s/o covid vaccine. Pt states she received her vaccine at 3pm, approx 1-2 hrs later started to notice left sided lip numbness that radiated to her left ear and left side of head. No difficulty speaking, no facial heaviness, no changes in vision or hearing. No n/v, no fevers. No previous similar episodes. ED states low suspicion for any stroke, states may be an early bell's palsy vs a pre-rash zoster. Unlikely to be reaction to vaccine. Some slight improvement during ED stay.

967095	1/22/2021	NJ	41	F	12/28/2020	12/29/2020	Approximately 36 hours of fever of 101, chills, shivering, sweats, aches and pain in every joint in my body, back pain, headache, pain at the injection site, fatigue, weakness, dizziness, nausea, difficulty completing my daily work duties and household activities due to pain and not feeling well. This was not much helped by Alleve, therefore I took Tylenol which was mildly helpful. After the first 36 hours, the symptoms lessened in severity and lasted for about another 12 hours. After that, I felt well for several days in a row, then about 1 week later I felt sore, weak, tired and nauseous. This resolved in its own in about 2 hours. I have felt well since then. I am choosing to receive my second dose of moderna vaccine tomorrow, because I would rather experience these side effects then catch COVID ever again. I caught COVID19 in March 2020. With my COVID infection, I was sick for about 21 days with fever of 101 and more, bone pain, body aches, chest pain, back pain, headaches, nausea, shaking chills, sweats, trouble breathing, dyspnea, cough, runny nose, sore throat, pink eye, dizziness, tiredness, ?brain fog? and fatigue. I was not hospitalized. After about 21 days I began to recover, but the first week after my recovery began I was very weak and tired, and spent most of my time sleeping. I was 41 years old at the time, with health problems including well controlled asthma and being overweight. I never wish to experience this again and I am grateful that I am receiving the Modena vaccine. Thank you so much for logging my side effects.

963801	1/22/2021		83	F	1/4/2021	1/4/2021	<p>Blooded stools; Eyes are a little bit itchy; Right eye swollen; A spontaneous report was received from a consumer who was an 83-year-old, female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced blooded stools, eyes are a little bit itchy, and right eye swollen. The patient's medical history was not provided. Concomitant medications reported included magnesium. On 04 Jan 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: 025J00/NA) intramuscularly for prophylaxis of COVID-19 infection. On the evening of 04 Jan 2021, the patient experienced blooded stools, eyes are a little bit itchy, and right eye swollen. The patient reported having blooded stools that were not diarrhea, but had occurred three or four times. Treatment for the events included non specified allergy medicine for the eyes. On 06 Jan 2021, the patient reported feeling better in regard to the blooded stools and was unsure if it was actually blood or not in her stools and she had ate spicy and red food. Action taken with mRNA-1273 in response to the events was not provided. The event, blooded stools, was considered resolved. The outcome for the events, eyes are a little bit itchy and right eye swollen was unknown.; Reporter's Comments: This case concerns an 83-year-old female patient with unknown medical history, who received their first of two planned doses of mRNA-1273 (Lot 025J00/NA), and who experienced the unlisted serious event of Haematochezia and the unlisted non-serious events of Eye pruritus and Eye swelling. Based on the current available information and temporal association between the use of the product and the start date of the event on the day of vaccination, a causal relationship cannot be excluded making the events possibly related to the vaccine.</p>

963903	1/22/2021	CA	57	F	1/4/2021	1/1/2021	received the first dose of vaccine/tested positive for COVID-19; received the first dose of vaccine/tested positive for COVID-19; irritable all day; the sun had been bothering her eyes as she was driving, it was some eye sensitivity going on.; eyes were also hurting; This is a spontaneous report from a contactable consumer (patient). A 57-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EL1284; expiration date not provided), via an unspecified route of administration on 04Jan2021 at SINGLE DOSE for COVID-19 immunisation. Medical history included allergies. The patient's concomitant medications were not reported. The patient reported that she received the first dose of the vaccine on 04Jan2021 and yesterday (11Jan2021) she tested positive for COVID-19. Patient would like to know if she should follow-up for the second dose of the vaccine on 25Jan2021. Patient mentioned that maybe she should follow up with the second dose. It was also reported that the patient wanted to know if the vaccine could have given her COVID-19 and tested positive. Patient further clarified it to be the Pfizer BioNTech COVID-19 Vaccine. Patient mentioned she is a caregiver and received the vaccine on last Monday (04Jan2021). On Friday (08Jan2021), the patient started to notice she was getting headaches. The headache started in the morning. Patient realized she was irritable all day and as a caregiver, this is not an attitude to have. Patient did not feel great that day. Patient also realized that the sun had been bothering her eyes as she was driving, it was some eye sensitivity going on. That night patient got home and was able to eat, but the next day on Saturday (09Jan2021), she did not have any sense of taste or smell. Patient had lost her sense of taste and smell. Patient realized this when she woke up at 6 am for coffee and could not taste or smell it. Patient was calling to find out if there was any way one could get Coronavirus only after the first shot and if she still needs to go and get her follow-up vaccine on 25Jan2021. Patient stated she forgot the name of her HCP. Patient also mentioned she has chest pressure. Patient noticed it about an hour ago, later stated it was like 11 something. It comes and goes. Patient mentioned that it was like shortness of breath. Patient would breathe in a little bit and it will bring the chest pressure back down. Patient would also walk around a bit to get the

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							blood pumping back through. Patient also added, that due to these symptoms, she's locked off in a different room away from her husband. Patient stated they are both quarantining since her husband was exposed too and has not had the shot yet. Patient's eyes were also hurting, but that is due to the headache. Patient also stated that her eyes hurting has gone away. Patient will be getting to get a Coronavirus test done later today. When probed for the time of vaccination, patient that she was not sure. She knew she had to wait 30 minutes under observation because she had allergies. Patient initially stated that she would guess she received the vaccine thirty minutes prior to 3:55. Patient later clarified and stated it was possibly 2 something when she got it. Patient tested positive for COVID-19 on 11Jan2021 (COVID-19 virus test positive). Outcome of the event 'eyes were also hurting' was recovered, while unknown for the remaining events.
964065	1/22/2021	WA	63	F	1/19/2021	1/19/2021	As I was sitting at my computer and suddenly I could barely keep my eyes open, I was so tired I couldn't lift my arms and once I closed my eyes, I could not muster the strength to open them. I felt like I was going to faint and then I got nauseated and I knew I was going to throw up. With my husband's help, I did manage to get to the bathroom (about 6 steps away). I threw up and immediately sat down in the nearest chair. I threw up a second time into a vessel after that. I then got a massive headache and chills. I could barely walk with assistance up the stairs to go to bed. I have never been more fatigued. After going to bed, I slept all night and woke the next day still fatigued, but nothing like the night before. I was able to work, even though I felt really tired. I did not have much of an appetite all day and two days later, I still feel fatigued.

964726	1/22/2021	VI	42	F	12/30/2020	1/20/2021	12/30/2020 Four hours after vaccination - left arm soreness, mild headache above right eye. Client improved that evening. 1/20/2021 Four hours after second vaccine dose - Body aches, intense headache over right eye, The evening of the same day - Heaviness to left arm, increased pain to left arm radiating to hands, tightness to the left arm with a feeling of "electricity" in the arm. The pain increased in intensity to the left arm during the night. Unable to sleep due to intense pain to the left arm and axilla. 1/21/2021 In the morning, client experienced abdominal pain and diarrhea once (loose stool). She noted swelling to the left axilla, intense pain, swelling below the left jawline. 1/22/2021 Early morning nausea without emesis, itching of the right forearm and nape of the neck, throbbing pain to left axilla with itching, throbbing to the left ear, which has not been sensitive to pain due to deafness.

964430	1/22/2021	AZ	48	M	1/15/2021	1/21/2021	<p>Some background: I normally react badly to flu/respiratory vaccines in that I generally get sicker after the vaccine than I do when I get the virus. So this isn't entirely unexpected. However, the timing is really strange and Now I wonder if I should get COVID tested. Here is the chronology of events. Day of shot (Friday) - pain in arm lasted about 2 days but wasn't too intense. As the pain in the arm began to fade, I started getting really sleepy. I slept probably 48 hours over the next three days but did not experience any pain except maybe slight muscle aches and a little of the accompanying eye burn that is associated muscle aches and sleepiness. By Tuesday, the sleepiness had passed. Thursday night (last night), I started to experience ALL general symptoms of a respiratory flu/COVID. I developed an intense cough and associated phlem (though it is very sporadic rather than persistent) and the precursors to intense muscle pain. I woke up at around 3am Friday with a fever, the muscle pain, burning eyes (associated with flu-muscle pain and fever), and extreme chills (though my windows was open... a normal practice as my computer makes it hot in my room). I felt oddly rested however, as though the getting sick, while making me tired, was also helping me sleep better. My body is definitely reacting to something. If it wasn't 6 days afterward, I would say it was my normal reaction to virus shots. However, the timing is alarming. I have not knowingly been exposed to anyone with COVID. This morning the chills are gone, the fever is down (though not entirely gone), but I still feel "down for the count." Like I said... it is my normal reaction to virus vaccine except that it is about 6 days late (usually sets in within 24 hours). This morning is the week "anniversary" of the shot.</p>

965001	1/22/2021	IA	32	F	1/12/2021	1/19/2021	Four days after she received the 1st dose, she developed a swollen eye lid that resolved on its own. She really didn't think anything of it and did not report it to anyone or take any medication for it. On 1/12/2021 she received the 2nd dose. On day 7 of her vaccine she developed hives on her lower extremities. She took Benadryl that day and they improved, but did not go away. On day 8 the hives reappeared and she took a dose of Claritin and that got her through working. On day 9 (yesterday) the hives have migrated from just her lower extremities to her arms and shoulders. She took both Zyrtec and Benadryl yesterday, but she is not getting any relief.
964502	1/22/2021	IN	61	F	1/9/2021	1/11/2021	Pt reported she had a Moderna Covid -19 vaccine on 01/09/21 at Hospital at 2: 40 pm. Pt is c/o her eyelids swelling in the last 3 days, sob this morning. Pt has ST pain constantly today that is not worse with swallowing. + fatigue since yesterday.
964504	1/22/2021	MI	39	F	1/19/2021	1/19/2021	I was injected in the right deltoid with an unlabeled 1 mL syringe. I was then injected in the right deltoid with an unlabeled 3mL syringe filled with liquid to the 3 mL fill line. I am unable to validate the dose because it was not administered according to Pfizer's instructions and because there are discrepancies in the documentation of the pharmacy manager's interview with the Registered Nurse who completed the injections and my eyewitness of the injections. These discrepancies include: 1. The order of the injections; and 2. The amount of fluid present in the 3mL syringe.

964696	1/22/2021	IL	34	F	12/26/2020	12/26/2020	<p>The day of my 1st vaccine, about 10 min after I was in the waiting room and I started feeling "weird" in my whole body and lightheaded. I got some juice. Then I started to get hot and was sweating, my whole face and neck were flushed; I also felt mild burning sensation on the R lower lung area. They took me in back and gave me more juice and water and put ice packs on me. It took 30+ minutes to feel better. They called a team to come do my vitals and my HR was in the 100s and they said my eyes were dilated. On my way home I had a weird throbbing pain in my L upper chest just above my boob. When I got home I had chills/felt freezing for a few hours and was fatigued. The next day (Sun) I had moderate joint pain, fatigue, and was very achy; my chest felt tight and I needed my inhaler and some tramadol. On Mon I felt better and went back to work, but then Tues I was achy again and my coworker said I looked pale; I took some tramadol and felt better, just tired. On wed I was having pains in my neck, shoulder, down my arm L arm, and down my scapula- the arm I had the injection. Throughout the day the pain was throbbing and ended up a 7/10 and edema in my neck/shoulder/axillary occurred; I couldnt carry anything heavy and was guarding that arm. Tramadol didn't help the pain and I eventually took 600mg ibuprofen and made a telemedicine visit w/ my MD for the next day. After 3 days the pain was subsiding but the edema took ~ 1 week- it subsided the weekend before my next vaccine. The day of my 2nd dose I did ok after the vaccine at 4pm. While they were injecting it I felt burning down my arm. I felt lightheaded and "weird" afterwards and warm, but no eye dilation or flushing. 3 hours after the vaccine at 7pm I felt tired and a little achy and slept from 7-9pm. At 9pm I woke up very achy, I had 1 itchy hive that popped up on my R inner forearm. The next day I had joint pain in every joint and very achy and fatigued. The joint pain subsided on day 2 after the vaccine but I was very achy and fatigued for a good 72 hrs. Vaccine was wed and saturday the pain in my neck returned and the edema came back and was a little worse than before, and the area where the edema was, was painful to touch. It started subsiding ~ a week after the vaccine, but a little bit is still currently here- but no pain to touch. My allergist has been following up w/ me this whole time.</p>

964735	1/22/2021	MO	73	F	1/20/2021	1/20/2021	11:48. Patient received vaccination at 11:45. In observation area, she reports to RN she has developed Blotchy red spots on her arms and her face feels hot. Patient moved to treatment area. She is exhibiting erythemic macular anular areas to the inner aspects of both forearms measuring approximately 2-4 inches in size. There is no elevation of the reddened area. No hives, rash or itching noted. Denies shortness of breath. Lung sounds are clear bilaterally. Heart rate is 78 BPM, Resp. Rate 16/min. B/P 178/100, Pulse ox 97% on room air. 12:53 Recheck vital signs: B/P 170/96, Pulse 76 BPM, RR 16/min, Pulse ox 94% RA. She denies SOB. Redness and blotchy appearing area's persist. Noted redness to palms of hands. Patient states they do not feel tight or swollen. Will continue to monitor. It does not appear that this reaction is anaphylactic in nature. Continues to have clear breath sounds through all lung fields. Denies any sensations of tightness or swelling to throat, tongue, lips or eye lids. 13:15: B/P 160/96. Pulse 77, RR 16 Pulse ox 97% on Room Air. Patient states she is feeling better. Redness appears to be fading slightly. Will continue to monitor 13:55: B/P 154/86. Pulse 77, RR 16 Pulse ox 97% on Room Air. Blotches faded. Palms of hands returned to flesh tone. Denies any SOB, swelling to face, lips, tongue. 14:00: Patient states she feel fine. She does have a friend here who will driver her home. She will come back later for her car as a matter of precaution. Pt states she will take OTC Benadryl at home. Recommend no more than 25 mg by mouth every 4-6 hours for next 24 hours. If she starts have a return of symptoms or worsening symptoms, she is instructed to call 911 and go to the nearest emergency room. Patient verbalizes agreement. Leaves ambulatory, in satisfactory condition accompanied by friend.

964750	1/22/2021	CA	76	F	1/21/2021	1/22/2021	<p>Pt well until approximately 2:55am when she passed out in bathroom according to her husband. Pt was diaphoretic. Denied dyspnea, chest pain, fever, redness, or difficulty breathing. Patient: Age: 76 Years</p> <p>Additional information for Item 18: Date/Time: 01/22/21 03:19 Time of my initial contact with patient: 0319</p> <p>Mode of Arrival: Ambulance Private Medical Doctor: Triage Narrative: Pt. bib medics from home after near syncopal event in bathroom, lowered herself ot the ground, no LOC/trauma. BP on medic arrival was 86/50 HR in 50s, improved to 100/68 w/ lying down and 250ml bolus. Received 1st covid vax today, has felt weak w/ diarrhea since then. Denies pain, skin pale/w/d, AxAx3, resp e/u. Chief Complaint: Syncope/Near syncope</p> <p>History of Present Illness: This is a 76-year-old female with history of CAD status post remote PCI, previous CVA on Plavix, hysterectomy, migraines who presents ER today for a syncopal event. Patient was given her first dose of Covid vaccine earlier today, per patient's primary doctor found in prior to arrival she had been very hesitant because she was concerned for triggering migraines, this was clear with her neurologist that she was pretreated with Benadryl, she states that she initially felt fine after vaccine administration, she states however later in the evening she developed 4 episodes of loose watery bowel movements and crampy abdominal pain, she states she was feeling tired and so she laid down to go to bed, she states that she woke up feeling as if she had to have another diarrheal episode, she reports that when she stood up and went to the bathroom she was not feeling well, she reports feeling very lightheaded while on the toilet and trying to have a bowel movement, she attempted to stand up however felt acutely lightheaded, she states that she sat back down the toilet and slumped down and woke up on the ground. She denies any pain other than her abdominal pain and a sensation that she has had further bowel movements. Per EMS patient was noted to be hypotensive on arrival 86/50 with heart rate in the 50s, this improved with laying flat on the gurney and given a 250 cc bolus. Patient has been seen in the past for syncopal events with postural changing. She denies any new medication changes, she states that she had been drinking water throughout the day but has had a poor appetite no dysuria frequency urgency no headache head injury neck pain back pain</p>

----------	-------	-------	---------	-----	----------	------------	--------------

treatment. It did not include time spent performing other reported procedures. Medical Decision Making: This is a 76-year-old female who presented ER today for evaluation of syncope. Patient was reportedly mildly hypotensive which improved with IV fluids. I suspect that patient had dehydration given 4 episodes of large watery stools. Patient had no recent antibiotic use and has no C. difficile risk factors, suspect this may be related to her Covid vaccine, she had no evidence to suggest anaphylactic shock, patient felt better after IV fluid bolus was able to ambulate around the emergency department without lightheadedness or near syncope. She had troponins x2 which were negative, her EKG was nonischemic and there was no evidence of ectopy or arrhythmia. Patient did have syncope and fell onto her side, she denies discrete head injury although patient is anticoagulated, CT head was obtained to rule out intracranial hemorrhage given the syncopal event. Patient CT abd/pelvis was negative for obvious cause of patient's abdominal tenderness may be related to her diarrheal illness patient will be prescribed Bentyl. She will call her primary care doctor in the morning to arrange close follow-up. She understands need for aggressive oral hydration at home. She will have low threshold to return should she develop lightheadedness syncope chest pain shortness of breath palpitations worsening abdominal pain bloody or dark stools any new or concerning symptoms. The patient presented to the emergency department with potentially life or limb-threatening symptoms. After my history, examination, and workup have decided that the patient is stable. My impression is that they are safe to go home at this time. I have reviewed ED return precautions with the patient. They understand to return if they are concerned for any reason. They will follow-up with their PCP in 1-2 days. Impression: Syncope, hypotension-improved, dehydration Plan: Discharge Follow Up Within: 1-2 days Comments: Please call your doctor in the morning to arrange follow-up with your primary care doctor in the next 24 hours. Please stay well-hydrated and eat regular meals. Please take Bentyl as needed for abdominal cramping with diarrhea. Please return to the ER if you develop worsening abdominal pain, feelings of lightheadedness passing out any new or concerning symptoms. Patient Education Syncope, Easy-to-Read

964787	1/22/2021	PA	39	F	12/30/2020	1/1/2021	Legs extremely weak and felt like muscles were not functioning well. Knees were buckling while standing. Started about 4 hours after vaccination. Resolved by morning but fatigue continued. It was the exact same sensation felt last March and led to me not being able to get off couch for three weeks. Couldn't get covid testing until weeks after symptoms started and tested negative in March. Numbness in lips. Lower lip>upper. Started 2 days later. Resolved after gradually improving after 10 days. Fyi had lip injection/filler within the last 2 years. Moderate burning in Rt leg that started the Friday after the vaccine. No redness or edema. Resolved after 10 days. Severe brain fog and fatigue and buzzing sensation in head. Much worse than baseline. Buzzing sensation was new. Slept all weekend. Improved to baseline after 14 or so days. Had sharp stabbing pains in the back of my head 7 days after the vaccine. Resolved after 3 to 5 days. Never had these sensations before. No history of headaches. Went to PCP regarding leg pain, worsening brain fog and fatigue from baseline and unequal pupils that had previously resolved about 2 years prior. Pupils were unequal sizes when I woke up on 1/2. Pupils now back to frequently being different sizes. No diagnosis made with previous episodes that had resolved. Maybe it was reactivated? Also had visual distortions in left eye that were new on 1/3 that lasted two minutes. No pain associated with this. Resolved. Feel close to baseline now but hesitant to get second dose for these reasons.
964863	1/22/2021	IL	46	F	1/22/2021	1/22/2021	pt stated she had aurora with her vision and after that aurora subsided she developed a migraine.
964867	1/22/2021	IL	42	F	1/20/2021	1/21/2021	I woke up with a throbbing eye that was burning. I had hives on my eyelid which was halfway swollen shut yesterday. Today the hives are still there but its not swollen shut, the throbbing is gone, the itching is gone its just the hives.

964353	1/22/2021	VA	19	M	1/20/2021	1/21/2021	I got the injection at 3:35pm on 1/20 in my left arm. Within the first 30 minutes, my shoulder around the injection site was incredibly sore, my left elbow had a lot of joint pain, and my left thumb and index fingers went numb within the first 30 minutes, I woke up at 8:00am on 1/21 and noticed that I had a light headache, felt extremely groggy, and was experiencing an uncomfortable amount of muscular and joint pain. I went to work at 9:00 and on the drive there, I began to feel dizzy and I felt as if when I turned my head, my vision would lag behind and take a second to process my surroundings. By 10:00, my muscular and joint pains were significantly amplified, my headaches were increasing in frequency and amplitude. I also began to have the chills, followed by periods of radiating heat from my body. Coworkers told me I looked very flushed, however, I never developed a fever. By 11:00, the muscular and joint pains, coupled with the headaches forced me to sit down and I almost broke down into tears. There were three sperate times where I began to get very lightheaded and thought I was going to pass out ( I did not). I went home at noon and noticed that my muscles felt like they were on fire. I took Tylenol and Advil whenever I could, which helped to reduce the symptoms. we had dinner at 7:00, however, I had no appetite, without eating since noon. On 1/22, I woke up at 8:30 with a pounding headache, muscular and joint pains still there, however reduced, and the same groggy feeling. This morning, I also noticed that I had a very sharp stomach pain in my abdomen. I also woke up with a severe nosebleed, which is extremely uncommon for me.

966526	1/22/2021	FL	43	F	12/28/2020	1/4/2021	Sunday, six days after I received the vaccine, my left arm began hurting a lot. On Monday morning, 7 days after the vaccine, I had swollen, a large painful palpable bump near the anterior part of my armpit. The bump could easily be visualized. The pain was moderate and did affect my activity of daily living. The discomfort could be felt at rest, and took about 5 days to improve. Three and a half weeks later I can still palpate the bump. I am not getting the second vaccine. I did have a mammogram two months ago, which was normal. If the bump does not go away within the next two weeks I will go see my primary care physician.

966771	1/22/2021	LA	85	F	1/9/2021	1/9/2021	Right eye became slightly numb as well as right side of face apprx. 5 or 10 min after shot. Lasted about a day and a half. Also felt very bad. No fever. But congested second night. Each day felt better. As of Jan 22, 2021. Due to take second injection Jan 30, 2021. Is it ok? I feel alright.
966789	1/22/2021	OH	40	M	1/19/2021	1/19/2021	Sore shoulder started after a couple of hours and was moderate by evening. A general unusual feeling started within a couple hours of the shot. By 7pm I started to experience chills and joint fatigue in legs (knees, toes). Chills became severe and a low grade fever of 100.6 developed. Chills lasted about 1.5hrs. Fever broke overnight. By morning all previous issues were resolved and the only issue was a problem with equilibrium and balance (and sore shoulder) It was a general feeling similar to drunkenness. This issue persisted throughout the day and by evening I was experiencing mild vertigo when I closed my eyes. I went to bed feeling somewhat improved relative to all the symptoms but woke having experienced a cold sweat. My shirt was completely soaked. I noted several less significant sweating issues throughout this day with no other side effects. This was the final day with notable symptoms. At the time of this report I have minor shoulder pain as the only symptom that persisted throughout. The equilibrium symptoms were severe enough that I missed a day of work.
966806	1/22/2021	NY	66	F	1/14/2021	1/15/2021	I had a very sore arm and malaise with a temperature as high as 101.5-101.8 the day after. The next two days just moderately sore arm. On Tuesday January 19 I developed a cough. By next day I was very ill (fatigue, aches and pains, burning eyes, fever up to 103, headache, flu-like). Today I developed hives.

Vasovagal syncope episode Emt and nurses came right over gave me oxygen and water.....felt better after approximately 25 minutes of treatment....drank 3 bottles of water was able to walk and leave without going to hospital around 12:15pm Arm severely sore for 48 hours.
966498	1/22/2021	TX	63	F	1/16/2021	1/16/2021	Patient is another women who has h/o allergies to food and medications. She came prepared with her own Benadryl and EpiPen. I watched her for almost 45 minutes and only thing she C/O was some itching in her head at 25-30 minutes after the shot. So I advised to take her own 25 mg po of Benadryl. When she left she was not itching. She had no other problems like hives, SOB, swollen eyes, chest pain, stridor, nausea, vomiting. She was alert and oriented X3 throughout her visit in post vaccination area. I was talking to her throughout her stay on and off. Her O2 sat was also good. I informed her on skin care, told her to drink enough fluids, take Benadryl po Q6-8 hours for the next 1-2 days. If any problems go to ER. She informed me that she was very anxious and she gets itching every time when she becomes hyperactive with lots of people.

966959	1/22/2021	AZ	34	F	1/22/2021	1/22/2021	Moderna COVID-19 Vaccine I began feeling an increase in heart rate about 5-8 minutes after injection. I reported symptoms and site began to monitor my pulse, which was 160. I then drank 32oz of water and took 400mg ibuprofen. I then began to feel dizziness. Blood pressure was normal. My chair was reclined and I was given about 2oz of orange juice. I was then moved to a stretcher and my legs were elevated on a chair. I took a restroom break. I began by walking, but started to see spots in my vision and sat in a wheelchair. I was able to use the restroom and return to stretcher and elevation of my legs. I was then taken to the ER. I used the restroom once more independently. Blood sample was taken. Heart rate was 160, blood pressure was normal. EKG was abnormal and I was given dosage of adenosine. First dose did not show necessary improvement and I was given a second dose, which dropped my heart rate to the 90s. I used the restroom independently and was given an additional EKG, which was normal. During this time my Physician contacted a Cardiologist, for consultation. I was then discharged with recommendation to follow up with cardiologist in 2-4 days.
967248	1/22/2021	TX	50	F	1/19/2021	1/20/2021	Staff reported had fever of 102F 24 hours after receiving the 2nd COVID vaccine dose along with chills and pain, rash and hardness to injection site. Today (72hrs after) staff reported left eye and left cheek swelling - noted swelling observed.
967055	1/22/2021	NY	50	F	1/21/2021	1/21/2021	About a half hour after the dose, the area around my mouth went numb. It spread to the area under my left eye. It lasted a few hours and went away. It recurred twice that day and was accompanied by decrease in taste.

967142	1/22/2021	TX	37	F	1/22/2021	1/22/2021	About 12-13 minutes into my wait after getting the vaccination... my throat had a tickle in it... like I needed to clear my throat. So I did... and then again.... and again. Then I felt dizzy and disoriented... foggy headed kind of drunk feeling. Then within what seemed like seconds... my mouth felt full so I opened my mouth and looked in the mirror. My tongue seemed bigger than usual and lighter in color. But what was most noticeable was that I had Ripples along the whole outer edge and side of my tongue. pulse ox reading was an 89 so they administered a prescription strength Benadryl shot and told me they would need to monitor me and keep an eye on me. Another woman drove me from the vaccination site to the clinic where they checked my oxygen levels again and i was already back up to 99. They monitored me and checked on me for about 15-20 minutes before releasing me. My tongue finally felt normal again about 2 hours later while resting at home.

967200	1/22/2021	IA	37	M	12/31/2020	1/5/2021	Spontaneous bleeding from the mucosa of the underside of superior left eyelid at approximately 130 am. I awoke from sleep at that time with mattering in my left eye making it difficult to open. Upon examination in the mirror it was obvious the mattering was due to blood. The blood was obviously coming from my left eye. There was no bleeding from my nose. I had apparently been bleeding for sometime as pooled and clotted blood was also present on my face, arm, pillow, and sheets. Uncertain exactly how much blood total but I would estimate 20 ml of blood. The bleeding stopped spontaneously a few minutes after I awoke. There as an additional scant bleeding the following morning. I was later evaluated by an ophthalmologist who did identify a small punctuate superficial capillary on the mucosal side of my left eyelid which was thought to be the source of bleeding. I have not had further events since.
967205	1/22/2021		46	F	1/21/2021	1/21/2021	About 20 minutes after vaccine my tongue swelled about 1 and 1/2 times it's normal size. My eyes became slightly swollen, I developed a (non-itchy) rash on my cheeks and across my nose, and a fever. My tongue also was partially numb. After about 1 hour, the tongue swelling significantly decreased and the rash began to calm. About 3 hours after the vaccine I developed severe nausea (no vomiting), body aches, and a headache. My face was also partially numb. Today I woke up with severe body aches, fever, headache, nausea, diarrhea, very sore arm.
967206	1/22/2021	WI	56	F	1/6/2021	1/13/2021	One week following my first dose of Moderna I developed shingles on my right eye and forehead. It was treated within 48 hours of onset of the classic type symptoms of shingles with valacyclovir for 7 days. The condition improved over the one week course of treatment with lesions almost gone by 8th day after onset.

966073	1/22/2021	CA	40	F	1/21/2021	1/21/2021	Twelve minutes after receiving the vaccine injection, patient reported tingling in both arms and across her upper back. She had taken a dose of Benadryl, 50 mg p.o. prior to coming to the clinic, due to her prior history of allergies. Her blood pressure was checked in left arm, 134/94. She denied chest pain, SOB or feeling of swelling in tongue or face. After the tingling sensation, she began to experience pruritus of her arms, back and scalp. Visual inspection revealed no visible rash or hives. When she began rubbing on her left arm to relieve the itchy sensation, the area of rubbing became erythematous. She was observed for 45 minutes after the injection. Symptoms did not progress and she was discharged from the clinic. Phone follow-up 24 hours later: pruritus has resolved. She took 2 more doses of Benadryl 50 mg p.o. yesterday, at 2 p.m. and 11 p.m. Only symptom reported today is sleepiness.
966131	1/22/2021	NC	34	F	12/16/2020	12/17/2020	The Patient is a 34 year old female. The patient is a 34 yo female with a history of hypothyroidism who received Pfizer Covid vaccine on 16 DEC (lot #EK5730) after work. She experienced no immediate adverse effects other than about 5 minutes after vaccine receipt she experienced a sensation of ' blood rushed to my ears.' No dizziness or syncope occurred. She had no oral/face/throat/tongue swelling, no urticaria, pruritis, SOB, Wheezing, dyspnea, cough, CP, n/v/d. The following morning she awoke with pruritus to eyes, face, and urticaria to arms, thighs, chest, face and head. She was treated with 8 mgs of decadron and a dose pack. The symptoms abated. The following morning she experienced recurrence which improved with next steroid dose. She took benadryl that night. Symptoms have continued to recur as steroid wanes.
966148	1/22/2021	MO	69	M	1/21/2021	1/21/2021	Received Pfizer COVID-19 vaccine on the afternoon of 1/21/2021 at 2:12 pm. Patient was monitored for 15 minutes at Center and went home. A few hours after going home the individual started to experience edema and itching of the skin at his inner left eye. The individual treated himself at home with hydrocortisone cream, Benadryl and ice. The individuals symptoms improved later on that day.

966164	1/22/2021	AZ	37	F	1/20/2021	1/20/2021	I received the vaccine at 11am on Wednesday morning, and by about 830pm Wednesday night, I could sense something was off. I couldn't focus on work, and I felt my eyesight starting to get fuzzy. I realized there was an issue, and decided to go to bed. As soon as I laid in bed, the chills started, and for the next hour I couldn't stop shaking. I couldn't get comfortable, hot/cold, hot/cold, the chills were incessant and I couldn't will myself to sleep. I finally fell asleep and proceeded to toss and turn. I woke up at 5am on Thursday and could barely move. My body was so sore and my head was pounding with a migraine. I was trying to take care of the kids, unsuccessfully, while battling all the symptoms. The day progressed slowly, and I started to feel better mid day after a few more hours of sleep. Around 6pm is when the fever kicked in, hovering right about 99.5. I drank Pedialyte and went to bed not long after I got the kids in bed. At 2am I woke up with another headache and took more Tylenol. By 6am today, Friday, the fever broke and I am back to normal.
966180	1/22/2021	UT	42	F	1/19/2021	1/19/2021	Got the covid 19 vaccine January 19th (Tuesday) at 1:00pm. Started having lip and eye swelling around 6pm and by 9pm she went to the ER after her throat started swelling and she was having difficulty breathing. Says the ER MD gave her a shot benadryl. Also got a prescription of prednisone 20mg 2 tablets daily for 5 days which she has been taking. Swelling resolved but then her eye started to swell last night as well as her lips so she went to the Instacare. Said the doctor told her to stop all her medications but the metformin. reports the last dose of humira was Sunday January 17th and she gets a dose every 3 weeks. Also had covid disease in November the week of Thanksgiving. Spanish speaker. Had an official translator for this infomation.

966227	1/22/2021	MN	67	M	1/20/2021	1/20/2021	Patient was in waiting area after vaccination and after a few minutes it was noted that his head had hyperextended and his eyes rolled. Laid on floor as he was unresponsive. Mask removed and gurgling noise and saliva noticed in his airway. Vitals assessed and it was detected in both his carotid and radial arteries that there was not pulse. CPR initiated. After only two compressions patient opened his eyes and started breathing on his own. He was awake, not oriented with a weak pulse. Patient provided juice sitting up in case this was diabetic reaction. EMS arrived. They did an EKG. Patient denied being transported to ER. Patient was released to care of wife at 12:30 who was instructed to bring him to ER if any symptoms reappeared.
966228	1/22/2021	MO	58	F	1/7/2021	1/17/2021	Post-Vaccination Paresthesia course: About Sunday, 1/17/2021, I began to feel a numbing sensation spreading on the top of my head. Since I was recovering from a severe allergic reaction to the Covid vaccine (numb, swollen lips, face, tongue), I initially thought it may be a recurrence. However, by the morning of Tuesday, 1/19/2021, the numbness was complete from the tops of my eyebrows, over my scalp, my ears and down the center of my back to my buttocks. The numbness was bilateral. Alarmed, I went to the Emergency Room. (I am a hospital pharmacist there.) The ER consulted Neurologist. After MRI results, diagnosis was Post-Vaccination Paresthesia. I was released from work by the ER through 1/21/2021. The height of the paresthesia was 1/21/2021. This included some auditory buzzing and mild blurred vision. Today, 1/22/2021, I am beginning to regain feeling on my back and forehead. I estimate that I have regained about 50% feeling on my scalp.

966477	1/22/2021	NC	41	M	1/20/2020	1/21/2021	Pt was driving down the road 18-24 hours after receiving vaccine when all of a sudden he experienced dizziness, rapid heartrate, headache, blurred vision, hives to chest and arms, edema and redness at injection site. Pt went to Hospital via EMS on 1-21-20 and was given 50mg Benadryl on ambulance. Pt states that he was diagnosed with a "reaction to the vaccine and I was given prednisone, pepcid and Tylenol in ED." Pt was called on 1-22-21 by Public Health nurse and states that he was feeling much better today but still had the redness and swelling at injection site.
966015	1/22/2021	IL	33	F	1/21/2021	1/21/2021	Patient felt severe pain at injection site immediately after receiving vaccine. Within 15 min her arm was hot, red and mildly swollen and severely painful. During observation period patient felt "high" lightheaded, with blurry vision. She stated she had not eaten anything since breakfast. She was given a granola bar and orange juice. Her symptoms seemed to improve after snack. After a short persio (10 min) she stated her symptoms returned (lightheaded, "high" ) we called 911 and gave epinephrine 0.5mg IM, diphenhydramine 50mg IM, and diphenhydramine 25mg orally. Ambulance transported her to ER for assessment.

966451	1/22/2021	TX	81	F	1/16/2021	1/16/2021	Patient c/o headache. She was an older women in a wheel chair and the temperature in the stadium was extremely cold and most of the people were shivering even if they had no other problems. The patient complained of headache after 12-15 minutes. She was alert and oriented X3 in NAD. Vital signs: BP-118/82 HR-86 O2 Sat-98%. She did not have any visual problems, nausea, vomiting ,chest pain ,stridor, SOB , or rash. I listened to her with the stethoscope. Her lungs were clear . No rales or wheezing and heart rate was normal. She was watched for almost 40-45 minutes .She had headache but it improved somewhat. I informed her to drink enough fluids, take pain killer either Tylenol or Advil whatever her MD recommends- to take when she has pain. I also informed her daughter to keep a close watch on her for 2 days and if any problems call her MD and take her to ER. I watched her very closely in the post vaccination area before she left.
966444	1/22/2021	PA	57	M	1/6/2021	1/8/2021	Sores in mouth for 2+ weeks Night sweats for 2 weeks Low grade fevers for 1 week Frontal headache behind eyes x 2 days (occurring at end week one post vaccine) Fatigue
966401	1/22/2021	GA	64	F	1/21/2021	1/21/2021	With 10 min of vaccination, Heaviness and numbness in arm, cool tingling going from top of both legs down to toes, warm rush and tingling starting at lower back and going up back and chest, nausea. The feeling in chest and back would last about 10 seconds, subside for a little while and then start again. This happened off and on for about an hour. The tingling in legs continued for about 2 hours. About 1 hour after I received vaccine I started having vision problems, blurriness, strange spots /lights , had trouble focusingnmyneeyes. Then a terrible headache set in. I have had similar vision problems with a migraine headache in the past. Felt like it triggered a migraine. Vitals were normal. Checked out by EMS and went to local ER.

961684	1/21/2021	ID	35	F	1/9/2021	1/9/2021	I started to feel rundown/fatigued in the evening on the day I got the vaccine and my arm was very sore. I woke up very early the next morning with a fever of 101-102, body aches, severe headache, nausea, chills, severe fatigue, dizziness, difficulty concentrating, I would get tunnel vision, my eyes ached and felt very strained, sinus congestion and pressure. My fever spiked at 103.6 that evening and then stayed below 100 after that. For the following 7 days I still had the severe fatigue, nausea, headaches, chills, dizziness, difficult concentrating, tunnel vision that was especially bad when I had to drive, eye aches, sinus congestion and pressure, and my head felt very strange. The best way to describe it is that I felt like someone had drugged me. The only time I would leave my house was to take my daughter to school and when I would drive my head would feel super tight, my eye ache would intensify and they would feel super strained, I would get the tunnel vision and I would have trouble making it to the school and back home. Then I would go back to sleep for several hours, get up and drink some fluids and go back to bed. On day 7 or 8 I was able to stay up for periods of time and either watch movies or just lay in bed. I went back to work on 1/20 and am doing desk work. I am doing a lot better but still have daily headaches, moderate fatigue that is worse in the morning, mild intermittent nausea, my head still feels weird like I've been taking some kind of pain med or mild sedative, and I'm easily exhausted. I have trouble going grocery shopping because I get exhausted. I had a rapid COVID test done on 1/06/20 due to a headache and temp of 99.6-100.2, it was negative and we thought the temp was due to the Trokendi as that is a side effect of it. I also had a PCR done on 1/12 that came back negative.
961609	1/21/2021	CT	79	F	1/21/2021	1/21/2021	Approximately 15 minutes following the administration of first dose vaccination the patient began complaining of sudden onset bilateral blurred vision at distance. Patient denies any additional neurological complaints. Patient brought to the emergency department.

961604	1/21/2021	NJ	21	F	1/14/2021	1/14/2021	Upon arrival to observation room, just after vaccination, patient c/o decreased vision, feeling hot and as though she was going to pass out. Pt. appeared anxious stated she did not like needles. Removed face mask to take slow deep breaths, sipped water. BP 81/51, pulse 84, pulse ox 98%, skin mildly diaphoretic. Did not lose consciousness, answered questions appropriately. Continued to drink water and take slow deep breaths, felt better after 4-5 minutes. Felt well enough to walk to the first aid room for additional observation (30 minutes). Sitting in the first aid room she continued to drink water (16 oz) and ate several crackers; symptoms continued to improve and patient she felt much better, ready to leave the clinic. Patient was calm, conversant, BP improved to 97/57, skin was warm and dry, pulse 74-78 and pulse ox 100%.
961420	1/21/2021	VA	64	F	1/15/2021	1/16/2021	I woke up Saturday morning and both eyeballs were hurting. I had sensitivity to all light. Hurting felt like a migraine in the front of my forehead. Pain with touch when washing my face or applying a cool compress. Took Tylenol and it did not improve the pain.
961583	1/21/2021	GA	49	M	1/13/2021	1/17/2021	Developed double vision 4 days after 2nd Pfizer Covid vaccine. Saw neurologist who diagnosed me with 6th nerve palsy. Brain MRI was normal.
961562	1/21/2021	AZ	31	F	1/17/2021	1/17/2021	Within minutes and almost instantaneously, as the shot was being injected, my arm tingled. Then it moved to my mouth and tongue. The roof of my mouth, and tongue became numb. I needed to think really hard how to swallow. It was like I could not figure out how to work that muscle. I took benadryl, to ease symptoms. It helped but did not take it away. Next day, mouth and tongue still numb, and my ears, eyes, nose and throat were itchy. My external skin was also itchy. My doctor put me on a steroid pack. 4 days later, I am doing much better still not 100% percent myself, but very close to being back to normal. Still have slight sensation in tongue.

961839	1/21/2021	NY	41	F	1/5/2021	1/11/2021	tingling in her right arm; I woke up on Monday very tired; she had symptoms of bells palsy; This is a spontaneous report from a contactable consumer (patient). This 41-year-old female (no pregnant) patient received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EJ1686) on 05Jan2021 10:15AM at Upper Left Arm for COVID-19 immunization. Medical history and concomitant drug were not reported. She said she got Botox injections in her forehead, as well as, a little bit by each eye, a little less than 3 weeks prior to receiving the COVID-19 Vaccine. She clarified she believes she was injected with only 50cc's of a Botox 100mg vial. She said she does not have the Botox NDC, Lot, and Expiration Date from the Botox that was injected into her forehead and eye areas approximately 3 weeks earlier. Patient got the 1st shot of covid vaccine on 05Jan2021. On Monday she had symptoms of bells palsy and wanted clinic trials result for it. Reported her Bell's Palsy symptoms started on Monday, 11Jan2021, and she was formally diagnosed with Bell's Palsy in the right side of her face in the Emergency Room on 12Jan2021 was reported as worsened. She said the doctor told her the Bells Palsy could worsen before it improves. She said the doctors ruled out a stroke and diagnosed her with Bells Palsy. Stated she has tingling in her right arm that comes and goes on 12Jan2021. She doesn't have the right arm tingling all the time. Event details: On Saturday, 09Jan and Sunday 10Jan my right eye began to twitch from time to time. I woke up on Monday very tired and my eyes were swollen and I had bags under my eyes. I felt a little off but went to work. In the middle of the day my right eye began hurting with a burning sensation. I thought I needed to change my contact lenses. The following day, Tuesday 12Jan. I woke up and noticed that I can't fully close my right eye. I felt tired again and my eyes had bags under them. I went to work and felt like not myself. Around 10am, I ate cereal and noticed that I was chewing funny. At 1:30 pm I felt tingling around my right lip and at 4pm I noticed that smile is off and that I was not able to smile fully with my right side. That was when I went to the Emergency Room. She said she was given 3 Prednisone 20mg pills while she was at the hospital yesterday, as well as, a prescription for Prednisone 20mg tablets. She said she is to take 3 Prednisone 20mg tablets per day for 6 days. She clarified once she finishes the Prednisone

962250	1/21/2021	VA	49	F	1/7/2021	1/1/2021	Hives; legs were feeling itchy; red blotches to back of thighs/red blotches to both inner arms/red blotches mostly to both calves; redness to right leg/redness to right thigh/she had redness, flushed and warmth of face; stated that all the flushed areas were hot to touch; redness to face (flushed)/she had redness, flushed and warmth of face; she had redness, flushed and warmth of face; moderate allergic reaction to the vaccine; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number: EL1284; expiry date: unknown) via an unspecified route of administration in the right arm, on 07Jan2021 at a single dose, for COVID-19 immunization. Relevant medical history included right eye surgery on 06Jan2021, severe allergies, environmental and drug allergies. The patient has no concomitant medications. The patient stated that she had first dose of COVID vaccine on Thursday. Stated that she has sent V-safe reporting updates. Stated that she had a moderate allergic reaction to the vaccine on an unspecified date in Jan2021. She had noticed hives when she woke up on Friday morning (08Jan2021) that her legs were feeling itchy. She stated that she has hives, red blotches on back of thighs, arms and mostly on calves. The area was hot to touch. She then clarified that all the flushed areas were hot to touch. She was feeling a little better. She stated that they looked like they were trying to dry up and she has new ones. She had redness, flushed and warmth of face that started the day of vaccine that night (07Jan2021). She had red blotches to back of thighs Friday evening and they were starting to fade. Stated that the blotches to her left leg started Friday and that evening redness started to right leg and thighs. The blotches to both calves are still warm but starting to improve. The redness to her right thigh is more pink than red now. The patient was Benadryl around the clock and using Aveeno cream as treatment for the events. She has always had severe allergies but has not had an allergic reaction in over year. She also has history of environmental and drug allergies. Patient was trying to determine if should go back for second vaccine due to the reaction. She had asked for a consult from the immunization doctor before receiving the vaccine because she has history of severe allergies. Outcome of

962284	1/21/2021	OH	75	F	1/8/2021	1/8/2021	Severe headache; Nausea; Throwing up; I got so sick; Body ache; I was in pain everywhere; This is a spontaneous report from a contactable consumer (patient). A 75-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: EK5730), via an unspecified route of administration on 08Jan2021 at a single dose for COVID-19 immunisation. Medical history included migraine, depression, AFib, COVID-19 in Jun2020, and sleep disorder. Concomitant medications included prednisolone, ciprofloxacin, warfarin, timolol, sleep medications (unspecified), and eye drop (unspecified). The patient experienced body ache; stated that she was in pain everywhere on ; severe headache, nausea, throwing up, The patient stated that she felt like she had COVID all over again. She got so sick. It was reported that she worked for a clinic (also reported as a hospital) and on Friday (08Jan2021), she got the COVID shot. By Friday evening, she had body ache, and by Saturday, she was in pain everywhere. She also had severe headache, nausea, and was throwing up on 09Jan2021. According to her, the whole thing felt like she had COVID all over again and this went on through yesterday, she still had the headache today and some nausea. She stated that they were supposed to report this. When further clarified, the patient stated that she was tested yesterday again, just because it felt like COVID and because she had COVID way back in June last year. Stated that it felt like that all over again. She went to the [unclear statement], after hours to urgent care yesterday, they tested her again for COVID. She did not have COVID, she was clear, she was negative for COVID. Stated that she now knows that's what she has was just a result to the shot. When probed to clarify if it was the first dose or the second dose, the patient stated that she was just calling to ask. According to her, she was due to have it, the 29 (not clarified). She doesn't know if she should do it, she got so sick, she had been throwing up and everything. The patient was inquiring if she should do the second dose. The patient stated that she was about 150 lbs. and she does get her INR checked. As treatment, the patient took Tylenol and then took Zofran for the nausea. Outcome of the events 'Severe headache' and 'Nausea' was not recovered, while for the other events was unknown.

960340	1/21/2021	FL	66	F	1/10/2021	1/10/2021	Swelling in face at temples where I had filler a year ago; right eye area swelled up more until eye was almost closed; This is a spontaneous report from a contactable consumer (patient). A 66-year-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EI3246), via an unspecified route of administration on 10Jan2021 12:30 at single dose in left arm for covid-19 immunization. Illness at vaccine included urinary tract infection from Jan2021 and ongoing. Medical history included face at temples where she had filler a year before (in 2019). Concomitant medication included nitrofurantoin for urinary tract infection from 04Jan2021 to 11Jan2021. The patient had historically gotten shingles vaccine, flu vaccine and pneumonia vaccine and never had any problems. The patient experienced swelling in face at temples where she had filler a year before (in 2019) and right eye area swelled up more until eye was almost closed on 10Jan2020 17:00. This consumer had the bnt162b2 on 10Jan2021 at about 12:30pm. On 10Jan2021 around 4:00 pm (reported as "10Jan2020 05:00 pm") she noticed the areas around her temples and under eyes where she had filler placed last year swelled up quite a bit. She read up on this and saw to take antihistamines or oral steroids for this, so she took antihistamines and the event improved, was much better through during the day yesterday (11Jan2021). Last night (11Jan2021) her right eye area swelled up more until eye was almost closed; in response to that event she has been icing the area and the event has improved, swelling come down quite a bit but still ongoing. She called her primary care physician about this event and is waiting for a callback from them about getting a steroid pack. She already reported this information on an unknown Pfizer website online, and also on the VAERS reporting online site today (12Jan2021); but does not have any reference numbers from those reports to provide at this time. She called to ask for information on how to proceed regarding this event; if this has been reported with bnt162b2; if there would be problems with her getting the second dose of bnt162b2 as scheduled on 31Jan2021 because she heard the second dose would be worse. She also noted during this report that she was still taking nitrofurantoin for urinary tract infection when she received that first dose of bnt162b2; she asked if that could have

960447	1/21/2021	IL	36	F	1/7/2021	1/1/2021	Shoulder pain; Body hurting; Headache; Area around my neck hurts really "bad"; My eye hurts; This is a spontaneous report from a contactable consumer (a Certified Nurse Assistant) reporting for herself. A 36-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 07Jan2021 at 07:30 at single dose for covid-19 immunisation. Medical history and concomitant medication were none. Patient received the vaccine on 07Jan2021 at around 7:30 in the morning. On an unspecified date in Jan2021, she started developing like really bad shoulder pain and like her body was hurting, and she had like a severe headache and area around her neck hurt really 'bad' (not clarified). She had been taking Tylenol but did not work, nothing seemed improving and what else she could can take for it. Patient stated it was really bad. It didn't even help that much but she was taking. Patient further added she was taking '550 mg' (not clarified) per tablet and it was not working. When probed if still having the problems the patient stated they was just getting worst, and her eye hurt too (Jan2021). Final outcome of the events was reported as not recovered. Second dose of the vaccine was scheduled on 28Jan2021. Information on the Lot/Batch number has been requested.

960454	1/21/2021	CA		F			<p>Weird feeling; Never had a temperature; temperature went up to 102.2; Chills; Eyes started getting hot aches and pains; Eyes started getting hot aches and pains; Back ache; hot, flush cheek; hot, flush cheek; This is a spontaneous report from a contactable nurse (patient). A 64-year-old female patient received the second dose of BNT162B2, intramuscularly on an unspecified date at single dose for COVID-19 immunization. Medical history included primary biliary cholangitis (PBC). Concomitant medication included riboflavin/thiamine hydrochloride/ursodeoxycholic acid (URSO). Patient previously received first dose of BNT162B2 for COVID-19 immunization. The second shot she got around 1:30 on Friday and came home and a kind of feel weird an hour later about she figured it out whatever. She came home, she went, took rest, what happened was around 1:30 was it the same day she was losing track. She got this temperature and it started going up pretty fast and she was one of those people who had normal temperature was like 97 it went up to 102.2 and she called the "(company name)" (not clarified) advisor just to ask recommending paracetamol (TYLENOL) or acetylsalicylic acid (ASPIRIN) because she didn't want to take the wrong one. She said paracetamol wasn't recommending it was very pretty common that was for having no symptoms but the ones that were 24-36 hours afterwards. So, she was having the temperature she took the paracetamol which helped but she had chills, her eyes were like hot, flush cheek, she pushed fluids. Next day she felt it came again after 8 hours her eyes started getting hot, eyes got hot again so she kept pushing fluids and then she started getting aches and pains and then she just took more paracetamol and been resting the whole time. She took the Pfizer one just an "FYI" (not clarified) everyone at work saying you should have waited work for "Mondera" (not clarified). They said it had less side effects it started protecting you immediately after the injection where Pfizer took 3 weeks to second one to protect you. From the second vaccine, she didn't want to really tell anybody at work any one about her high temperature, her flush cheeks, her chills, her all the above right because she was scared that wouldn't take the second vaccine. Patient never had a (temperature) she was one of those people that "sudden" normal "Fumida" (not clarified) send bed for 2 day and just drink</p>

							water and some "jellies" you know it was something that was why she was calling. Patient got vaccine on Friday and came home about 11:50 in the morning. She started experiencing around 10 am and I got this shot the second vaccine around 1:30 ish-1:15-1:30 in the afternoon till the next day. Patient felt better at the time of the report. She only felt like aches in her back she didn't know what that was and that was about it and obviously she felt better because she was talking on the phone, she couldn't have done that yesterday if she wanted. Yesterday all she wanted to do was sleep, rest and try to get the fever down. Outcome of the events was resolving. Information about batch/lot number has been requested.
960458	1/21/2021			U	12/21/2020	12/27/2020	Broken blood vessel in eye; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received the 1st dose of bnt162b2 (BNT162B2) at single dose on 21Dec2020 for Covid-19 immunisation. The patient medical history and concomitant medications were not reported. The patient experienced broken blood vessel in eye on 27Dec2020. The outcome of events was unknown. The reporter considered there was not a reasonable possibility that the event broken blood vessel in eye was related to the vaccine. He was supposed to get second dose, but he did not know whether to get it or not. Information on the lot/ batch number has been requested.; Sender's Comments: There is not a reasonable possibility that event broken blood vessel in eye is related to BNT162B2. The event is most likely intercurrent medical condition.

961327	1/21/2021	TN	84	F	1/11/2021	1/11/2021	Given shot on Monday, January 11, 2021 at 10:15 am . Was fine until 7:30 pm that night. Felt like I was drugged and couldn't keep my eyes open. Slept (except for bathroom stops) until 7:30 pm on Tuesday night. Very red and large knot on shot arm. Lasted many days. Very sleepy for days, Dull headaches. Stomach upset. Very foggy thought processes for more than a week. Blurry vision for a few days. Joint pain. Spoke with Moderna and they suggested I talk to my doctor. Doctor told me the side effects would go away within ten days. Most of they did.

960852	1/21/2021	PA	52	M	1/1/2021	1/15/2021	So basically I believe I have Bell's palsy . After about an hour after receiving the vaccine I noticed I was having a weird taste in my mouth. Sort of a metallic taste. As the weekend went on it seemed to get worse. Then Monday morning I noticed when brushing my teeth that I wasn't able to gurgle my mouth wash. And saw that my mouth and eye seemed to be drooping slightly. Now Thursday the 21st and it seems to be effecting my speech to were I now have a lisp. Can definitely see it when I'm speaking to someone. Which people have commented on. Not sure what can be done . But at this point I'm hoping it doesn't get worse. Thanks

961083	1/21/2021	TX	41	M	1/14/2021	1/14/2021	I received the vaccine at 11:50 am. First my arm started hurting and felt warm to the touch shortly after the injection. My arm started hurting more and more until I could barely lift it to the side more than like 20 degrees from my side. Then I got the worst headache of my life. I tried taking ibuprofen, but it barely seemed to make any difference. I also tried taking Bayer aspirin and it seemed to help a little bit. Plus the whole time I was feeling nauseas, and it was all I could do to eat a few crackers so the medicine wouldn't upset my stomach as much. By this time the muscle/body aches, and fatigue started setting in so I just tried to go to sleep around 8pm or so. I was able to sleep, but it wasn't a restful sleep. I was tossing and turning for a few hours. Then the chills set in around 10pm and I didn't want to get out from under the covers because I was shaking so bad. But I managed to pile enough blankets on to get warm, and I was able to get some sleep. Then next day, all of the previous symptoms seemed to get worse except for the chills seemed come and go. But my arm was hurting more in a larger area and up my shoulder. The muscle/body aches were more intense and the fatigue increased. Taking ibuprofen every few hours only marginally seemed to help. My head was hurting so bad it hurt to open my eyes. And I felt like I was going to throw up all day. Plus I started taking my temp sometime in the morning of over 101. Sorry about to run out of time
961085	1/21/2021	MD	62	F	1/7/2021	1/7/2021	Since shortly after the injection she has experienced a low grade headache over her eyes and on the top of her head, similar to a sinus headache.

961179	1/21/2021	TX	82	F	1/5/2021	1/12/2021	Seizure like episode on 1/12/21, one week after vaccine, last 1.5 hours, consisting of both eyes twitching and clenching/spasm of right hand and arm. EMS called. BP normal. Continuing weakness of right arm and right leg, which was side weakened by stroke. Could no longer stand or walk on right leg. Some slurring of speech. Some confusion. Went to hospital 1/14. No evidence of stroke or current seizure. Considered problem to be mild UTI, started antibiotics, rapid improvement. Discharged 1/17. Woke up 1/18 with aphasia. Went to urgent care, sent immediately to hospital. Doctors found no evidence of stroke or seizure. Consider problem to be due to inflammation, caused by mild UTI (which was cleared by antibiotics) or perhaps due to inflammation caused by Covid vaccination. The inflammation reinitiated the symptoms of her stroke, although she never had expressive aphasia prior to this, only word-finding problems, which had been resolved.
961294	1/21/2021	IA	32	F	1/18/2021	1/20/2021	Monday 4pm was vaccinated. Left arm. Tuesday morning felt ?icky? but went to work. My left arm was sore at the injection site but no rash. Wednesday morning I woke up with slight shortness of breathe, and felt some wheezing, horrible headache right behind my eyes, hot flashes, I felt like the inside of my body was on fire. No temperature. My body all around ached. My stomach was extremely upset. I had loose stools multiple times through out the day. When I tried to drink anything my stomach felt like it was also ?on fire? it was just not happy with anything being in there. Thursday same way. Headache, muscle aches, I am so tired. I feel drained of energy. My stomach is extremely upset. I have not ate anything since Tuesday afternoon. I have drank a lot of water. My body still ?aches? I have had loose stools.

960552	1/21/2021		78	F	1/18/2021	1/18/2021	<p>At approximately 930am I arrived at Memory Care. I met with the director of the facility and she directed me to where my team would be setting up. My team consisted of (technician), (nurse) and I. As we were setting up, the director asked how she can help. I explained to her that we would need a designated area for patients to be monitored after vaccination for 15 minutes and maybe even longer . I also explained that we would need one of her staff monitoring while we vaccinate. She agreed, and proceeded to designate her staff and the cafeteria area, facing the vaccination station,the monitoring station. Throughout the day, nurse and I were both vaccinating,while the staff of the facility would monitor the vaccinated patients. I would also stop occasionally to mix the vaccine and check the temperature of the aero safe.</p> <p>At approximately 12:50pm, the director rushed in and stated that a patient is not responding, and that she had been vaccinated. At that point, I grabbed epipens and a thermometer and I also instructed nurse to grab an Epipen and come with me. We followed the director to pt's room. Once we got to the room, the patient was in bed and there were 4 staff members standing bedside and one of them turned and stated the patient has passed. At that point I asked the staff how long ago did the patient get the vaccine, they stated about 30 minutes ago. They also stated that the patient was a hospice patient and that the patient had declined, and was rapidly deteriorating and had not eaten or drank anything all day . They also stated that the patient had been monitored for 15 minutes post vaccination. I then left the room and grabbed the patients COVID Vaccine intake consent form. I looked at the answered questionnaire and all the responses were circled NO. Patient had a temp of 96.5 at the time of vaccination.The vaccine administration information for Immunizer Section was filled out by Nurse. I then proceeded to ask the director once again if there were staff that was monitoring her for 15 minutes, the director stated they had staff monitoring her. She also stated the Hospice nurse has to announce her death, so they waited for the Hospice Nurse to come. I then called Corporate and explained the situation. After speaking to corporate, I also asked nurse, if she remembered the patient. She stated that she did and at the time of the vaccination the patient was not alert, there were two staff members with the patient. She was non oriented and she</p>

							kept closing her eyes. At that point, Nurse stated that she asked the two staff members with her if this is how she usually is and if its ok to vaccinate her. Both Staff members stated that it its ok,this is how she is. The Nurse then proceeded to vaccinate. At approximately 3:10pm, as I was leaving I spoke to the director, and one of her Staff members. Staff that the patient has actually not eaten/ or drank anything for the past several days, including today(01/18/21). Staff also stated that on Friday, Jan 15th,2021, they had informed the family that the patient was rapidly deteriorating. Staff also stated that the family knowingly gave the consent to vaccinate her. She also stated that the hospice Nurse believes that the death was primarily caused by her deteriorating state. She also stated that the hospice Nurse informed that the death was not due to the Vaccine. Per Lead Pharmacist at the clinic.
963295	1/21/2021	TX	39	F	12/26/2020	12/26/2020	Received the vaccine and waited for 15 min within 10 minutes left arm had a warm heat through to chest to her neck , head and throat . 963114	1/21/2021	MO	45	F	1/20/2021	1/20/2021	Got it yesterday at noon, totally fine until 10pm. Worsening chills until midnight, then complete body ache, muscles, joints, everything, terrible headache. Was on couch and walked upstairs. By the time I got there, I was nearly vomiting and on the verge of losing consciousness. I laid down on the cold tiles and tried to stay conscious. I couldn't even talk. Saliva was pouring out of my mouth uncontrollably. After awhile it let up enough to scoot into the bedroom and climb into bed. Then an entire night of worsening chills, fever, aches, eye pain, sore throat, pulsating ringing in my ears. Little if any sleep. I tried to get up and sit in a chair this morning at 3am and within minutes was so nauseated and light headed I had to lay back down flat. Tried to drink some hot tea and Gatorade at 5am. Thought I heard someone walking around the house and then realized it was heartbeat pounding in my ears. This morning my feet are super sensitive, I have urinary frequency and urgency, and the pulsatile tinnitus is back. Later today had episode of sharp chest pains front to back that resolved after about five minutes. Treatment has been rest today.
963158	1/21/2021	ME	50	F	1/20/2021	1/20/2021	Immediately nauseated. Hypertensive event, redness on neck and upper chest and hands, moment of visual disturbance. Initial BP 157/100 . Diphenhydramine 50mg IM administered and symptoms resolved within 15 min. BP 144/79 which is patients normal reading O2 sat 100 throughout episode. Patient had no further symptoms over the next 24 hours
963170	1/21/2021	AK	36	F	1/14/2021	1/14/2021	About an hour after the vaccine, a migraine started that has been unrelieved day and night with max doses of Tylenol. Bilateral eye twitching and freezing mid-twitch has worsened to every few mins with a peak 6 days post-vaccine. 7th day post-vaccine intermittent eye twitching throughout the day with less frequency, however continued migraines without relief. 14 hrs post-vaccine awoke from sleep with excruciating 10/10 pain in my already bothersome hips. Felt like I was in labor, awoke crying in my sleep and screaming out in pain. Hip pain returned to baseline the following day with no return of increased pain.

963176	1/21/2021	WA	42	F	1/8/2021	1/12/2021	I did not have an office visit, I SHOULD have went to the walk-in clinic Wednesday. I did notify my provider through our patient portal. Tuesday night my stomach was a bit itchy and my back. I didn't think anything of it. Wednesday morning I woke up with a rash on my chest, back and stomach. I came to work (not listed on the symptom checker) called health clinic; spoke with an employee; he said that is too far out after the vaccination to have had a reaction to it. He told me to watch the rash and then call my PCP if it gets worse. I know 2 other people who also got a rash; however, 1 was just at the injection site and the other 1 was down the same arm as the injection site (all not my family). I'm not sure I want to receive the 2nd vaccine. An itchy rash over my body; if associated with the vaccine, seems fairly mild/moderate. I continue to hear that patients have increased symptoms after their 2nd dose. I'm not sure, at this point, what is related to Chronic Fatigue Syndrome or if the vaccine just heightened some of my CFS symptoms (Dizziness, nausea and eye focus). I did have some increased dizziness and nausea about 20 minutes after the vaccine but they didn't bother me too much at the time. I have not changed soap, ate anything out of the ordinary or purchased any clothes or sheets or anything that would touch my skin to cause this type of reaction. That afternoon (Wednesday Jan 13th) I was itching much worse. Mostly my stomach and chest. I left work a bit early to get some Benadryl and Cortisone cream. I took the Benadryl right away and rubbed cortisone on my chest and stomach. This did not help much at all. I was very itchy and uncomfortable. I decided to shower (that was awful), went back to a store and then got Brand Name Cortisone cream (just in case). This also did not help. I was up until, at lease, 2 am trying not to scratch. I rubbed cortisone on over and over and just couldn't lay still. I was bruised on my chest and stomach from scratching and rubbing. I was going to go to the walk in clinic Thursday morning. I woke up and the rash was a little better. However, it was still itchy (not as bad as the night before) and having clothes touching my skin hurt. I did not go to the walk in clinic. I did some work from home. Thursday night the rash had traveled down onto my thighs, though my legs didn't severely itch; just my chest and stomach. I still couldn't put on clothes Friday either and my legs were sensitive to things rubbing on

<u>VAERS_ID</u>	<u>RECVD</u>	<u>STATE</u>	<u>AGE_YRS</u>	<u>SEX</u>	<u>VAX_DATE</u>	<u>ONSET_DATE</u>	<u>SYMPTOM_TEXT</u>
							them but not itchy. Saturday was normal and normal life. Sunday, I woke up and was still tired. I took a nap for about an hour; then another nap a few hours later for 2 hours; and then I was falling asleep sitting up in my chair so I went to bed around 8:30 pm and woke up late today (Monday Jan 18th) at about 7:45 am. I am super exhausted today. I didn't get to work until 9 and I am going to leave here shortly. I'm just not very productive and my body is lethargic. My rash is gone. I have just a couple dots on my chest.
963178	1/21/2021	NY	49	F	12/22/2020	1/17/2021	Patient started to feel dizzy, blurred vision and pounded headache from 1/17/21 to now.
963251	1/21/2021	TX	25	F	1/19/2021	1/19/2021	Patient reported she felt tired when she got home 5 hours after vaccination. She also reported feeling "hot" but had no fever 9 hours later and 11 hours later had a temperature 100.8F and 102F was the highest temperature. She also reported body aches and arm soreness and elevated heart rate with the highest noted rate at 119 bpm. She also reported chills and also feeling hot. She also reported eye swelling but has history of severe dry eye and has had this symptom before. Today she reported only soreness to her arm. On examination her injection site appears to have a small bruise with no redness, swelling or heat noted.

963538	1/21/2021	AZ	74	F	1/21/2021	1/21/2021	Patient had a syncopal episode immediately after injection of the vaccine. Patient had brief LOC in her vehicle. Had a strong pulse and normal respirations. She opened her eyes and could follow commands approximately 2minutes later but had persistent altered mental status for 15-30min afterward. She was transported to the Emergency Department where she was monitored for approximately 1hr. Vital signs were notable only for baseline hypertension but otherwise normal pulse and oxygenation. She was back to baseline within about 30minutes and discharged from the ED after about 1hr.
963570	1/21/2021	IN	38	F	1/19/2021	1/19/2021	I got the vaccine at 11am on 1/19/21 by 8pm of 1/19/21 I had a low grade temp and was tired so I went to bed. By 1am I woke up with uncontrollable shivering and had an alarming temperature of 104. I then took alternating Tylenol and ibuprofen and for the next 24 hours and I had a continuous fever for the entirety of 1/20/21 that would range from 101-103 with taking the constant Tylenol and ibuprofen. In addition I had shooting nerve pain down my legs, I was so weak I felt like I could not move, terrible body aches, and had what felt like dizziness and blurred vision at the same time. By 1/21/21 I started to improve but still had an increased temp of 99 and body aches but not as bad as the day prior. I am a healthy 38 year old with a good BMI no medical history and am very concerned about the temperature of 103-104 in regards to those with underlying heart or health conditions which may not be able to withstand that high of a temperature or a continuous temperature like I had for an extended period of time . I would have gone to the emergency room but I am a healthcare professional with the education and experience to know what to do in this situation

963607	1/21/2021	SD	40	F	1/4/2021	1/6/2021	1-5: fever, chills, aches,fatigue. Started tylenol/ibuprofen 1-6: facial and throat swelling, continued side effects. Started benadryl. Continued through 1-7 with some improvement in swelling and general side effects. 1-8: swelling and numbness with droop to left eye and numbness to lips. IC visit. Received steroid injection and started pepcid and allegra in addition to benadryl. 1-9: swelling and most general side effects resolved. Left eye numbness/droop and numb lips still present. 1-10 : Droop resolved, numbness remained. 1-12: Numbness resolved.
964004	1/21/2021	WI	31	F	1/7/2021	1/7/2021	Had to wait longer immediately post vaccine due to nausea and flushing. About 7 pm that even slight soreness in arm. Woke next morning with swollen lips, face, eyes, and extremities. This seemed to go away on its own around 1pm on Friday but the. Developed severe headache and vertigo and extreme fatigue. This lasted for the next 40 hours. By Sunday mid day I felt great.
963469	1/21/2021	NY	25	F	1/11/2021	1/11/2021	I went into work on 01/11/2021, received my first dose of Pfizer I came home after and around the noon hours of 1- 2 p.m started having metal like taste in my mouth On 1/12/2021 I started having an extreme ear pain around 4 p.m which progressed into 1/13/2021, furthering resulting in headache. On 1/14/2021 the ear pain continued with numbness and tingling on the left side of my face. I woke up on the morning of 1/15/2021 and the tingling sensations were very strong, the left side of my eye became very weak and I lost all control of the left side of my facial muscles. My left eye lid could not blink at a normal rate, my smile started to become slanted
962385	1/21/2021	NJ	68	F	12/28/2020	1/6/2021	Took a nap and woke up with a black eye, left side. Occurred approximately 1430 on 01 January 2021. Black Eye continued to spread downward to the cheek bone. Visited Urgent Care on 1/11/2021 and they said it was due to a broken blood vein. I have never had this incident in the past.

963279	1/21/2021	FL	49	F	1/13/2021	1/19/2021	1/19/2021 - Right arm around injection sight was itchy. I thought it was an insect bite. Did not correlate it with the vaccine. 1/20/2021 - Right arm around injection continued to be itchy and red. It was getting my attention more in the evening after I got home from work. At this point, I realized it must be related to the vaccine. 1/21/2021 - Right arm around injection site was itching more to the point where I am constantly aware of it. Area is red & hot to the touch. Late morning, a coworker notice my right eye (white part) was red. It was like that when I was getting ready for work that morning. By 1:00 my eye was burning & watery. I don't know if it's an allergic reaction or pink eye or if it's even related to COVID-19 Vaccine. It is now 5:45p and my left eye is feeling irritated, but not visibly red. I am at high risk of exposure. I decided to get the COVID-19 test (the throat swab) this afternoon, around 3:30p. I should receive my results 2-5 days. I also bought Benadryl 25mg. I will be taking it this evening.
962472	1/21/2021	AZ	26	F	1/17/2021	1/17/2021	Pfizer COVID Vaccine; ADR developed after 5 min. Patient became lightheaded and developed tunnel vision. Had a witnessed syncopal event in her car. Unconscious x1 min, had urinary incontinence, and vomited; Not postictal; developed episode of tunnel vision few hours after 1st dose as well
964720	1/21/2021	IA	35	F	1/18/2021	1/18/2021	Started with immediate facial flushing, progressed to light-headed, headache, severe fatigue. Following day had brain fog, dizziness, nausea, slight blurred vision, headache, severe fatigue, body aches. Symptoms mostly resolved after 48 hours post vaccine.

962510	1/21/2021	CT	72	M	1/5/2021	1/5/2021	Acute Covid--diagnosed april 2020--Hospitalized about 1 week Day of the vaccination--severe rigors, chills, muscle pains lasting about 10 hours--very similar to about 5 other people in my office 2-3 days later acute facial rash, involving eyes, conjunctiva on both sides--not responsive famvir, neomycin, eye drops for conjunctivitis. The pictures are much more dramatic than the description----lasted about 5 days.
962570	1/21/2021	NJ	27	F	1/14/2021	1/14/2021	The night of my second covid 19 Pfizer shot, I began experiencing a strange sensation on the right side of my face near my mouth, cheek, under my eye and on my forehead. It started as a burning sensation and then turned into a dull tingling. It was consistent for 3 days and then began to become intermittent and I still have it today 1 week post vaccine. On day 4 it progressed to tinnitus right more than left ear. Day 4 evening to day 5 was all the above plus ear pain and fullness in my right ear and just pain in the left. I contacted my PCP at this point twice ( once about the initial face symptoms day 1 and to tell her about the ears day 6) and she prescribed me amoxicillin. That night I began having sinus pressure and pain, headache, and malaise. I followed up with an ENT this morning who said everything looked structurally well and could not find a reason for the tingling. She also covid tested me which was negative. Advised me to submit this form at this time due to ongoing symptoms. I will be following up with them within the next few days for further examination.
962632	1/21/2021	MD	51	F	1/13/2021	1/16/2021	Herpes zoster on right eye and bridge of nose. Also has rash on back of head on left side radiating up
962643	1/21/2021	KY	38	F	1/8/2021	1/21/2021	13 days post vaccination, I have an raised, red rash over the injection site and symptoms of fever (approx 100.2), asthma increase, red and itchy eyes, and fatigue.

962743	1/21/2021	WA	40	F	1/14/2021	1/14/2021	Shingles: Redness and tenderness in right eye area at 7:00 PM on 1/14/21, later that nigh (approximately 11:00 PM) experienced sharp pain behind right eye. On 1/15/21 bumps in right eyebrow and itchiness on right side of scalp. on 1/16/21 developed redness in right eye. Pain behind right eye and itchiness persisted for >5 days. Went to Urgent Care on 1/20/21 and shingles suspected. Referred to confirm diagnosis. Antiviral pills and drops prescribed, as well as steroid drops.
963003	1/21/2021	OR	42	F	12/28/2020	1/16/2021	Acute Bell's Palsy right side occurring on 1/16/2021, total right sides facial palsy involving eyelid, mouth, decreased salivary secretion, facial, ear, mastoid pain. Started prednisone 60mg daily and Acyclovir 400mg po 5x/day on 1/17/2020 x 1 week course. No improvement since onset.
963015	1/21/2021	MI	89	M	1/14/2021	1/14/2021	MEDICATION REACTION (Pt got his covid shot and immediately had a reaction to it. Diaphoretic, nauseous, dizzy. Was given 4 of zofran in route.). Comes to the emergency department today after getting his 1st Monday and a COVID-19 vaccine at 7:30 p.m. and about 5 minutes after while sitting down developing significant diaphoresis, nausea, dizziness and feeling very warm. The symptoms lasted for about 15 minutes and then resolved. Since then the patient has felt a little off in his stomach but has not had any difficulty breathing, difficulty swallowing, difficulty speaking, chest pain, diarrhea, rash or itchiness. With this episode the patient did not have any changes to his vision or feel like he was going to pass out. Patient will be given 25 of Benadryl, 125 of Solu-Medrol, 20 of famotidine of concern for possible allergic reaction. Additionally the patient will be given a small bolus of normal saline. Given the patient's reassuring vitals and reassuring physical exam he will simply be monitored here were sure. I do not feel any lab workup is necessary this point this is resolved episode seems either like a mild allergic reaction or a vasovagal episode.

962819	1/21/2021	CT	81	F	1/21/2021	1/21/2021	Vaccinator reported she injected the pt with 0.5 mL of air instead of the vaccine. reports she had prefilled her syringes with 0.5 mL of vaccine ahead of time and inadvertently drew up air in the syringe instead of the vaccine. recognized immediately after administration that it did not feel right and the pt confirmed she did not feel the vaccine administered. further inspected the syringe which visually appeared dry, no left over vaccine, no droplets. EMS and paramedic called to vaccination station (they were on site), they evaluated pt. VSS, pt felt well other than some bruising and soreness at the injection site. Per paramedic 0.5 mL of air into deltoid will not cause an adverse reaction. But pt may experience bruising. Pt and family verbalized understanding. (me) called who recommended calling Moderna and our medical advisor. called Dr. and also Moderna. Dr. states the decision to revaccinate the pt is at (vaccinator) discretion if she feels the syringe truly did not contain vaccine. Dr. confirmed 0.5 mL of air into the deltoid will not hurt the pt. Called Moderna ? they advised management of invalid doses of the vaccine is at the medical advisor and vaccinators discretion. There is no information available on adverse reactions with double dose. Standard 0.5 mL dose contains 100 mcg. In a phase 1 study 250 mcg doses were injected into participants, the only information from the trial that is available is related to efficacy and not adverse reactions per Moderna. vaccinator, pt, and her family consented to receiving re-vaccination as they all strongly felt the original syringe did not contain vaccine. Pt was vaccinated successfully, all questions answered, pt sat in observation and tolerated the vaccination well. Director of Health was present and spoke with the pt and family about results of Modera information, DPH information, and discussion with Dr.

958371	1/20/2021	CT	41	F	1/14/2021	1/16/2021	Severe headache, nausea and cold sensation occurred within a few hours of receiving the vaccine. Arm discomfort and fatigue quickly followed. Low grade fever noted approximately 8 hours post vaccine. I took acetaminophen. Headache, fatigue, and fever/chills resolved within about 48 hours. Nausea and arm discomfort persisted for about 5 days. After approximately 48 hours, I noted vision changes, blurry up-close vision. This change might have occurred sooner, but it was not until this time that I felt well enough to really read. The change in vision led me to seek further evaluation in the emergency room on 1/16/2021.
958666	1/20/2021	MO	65	M	1/15/2021	1/15/2021	STARTED 1.5 HOURS AFTER VACCINATION. BURNING AT SITE. TRAVELED UP SHOULDER, NECK, CHECK, AROUND EAR, SIDE OF HEAD, AND EYE. 958737	1/20/2021	PA	37	F	1/5/2021	1/14/2021	Moderna Vaccine. No immediate reaction. 1/13/21 I noticed there was still a sizable lump at the injection site. Called our Employee Health hotline and they advised to apply heat and massage the area. 1/14/21, I applied heat and massaged the area and within a few hours the injection site started to get red and increase in size, and my eyes began to itch and swell. Took a Benadryl and in the morning there was more swelling in my face. Went to the dr, they couldn't confirm if was or wasn't vaccine related, and advised to continue taking Benadryl and apply cool compress if arm was painful. Swelling continued on 1/15 and 1/16. Arm still has a large spot, it is less red in color now, there is still slight heat at the injection site. I have been taking at least 1 Benadryl for the last 7 days now.
958955	1/20/2021	GA	53	F	1/17/2021	1/18/2021	Started having some blurry vision on the night of 01/17/2021 which lasted for 45 mins to 1 hour. The next day on 01/18/2021 at about 1445 started having some itchiness on the face[ cheeks, forehead and around lips] with chills on and off. My face became little puffy and swollen with redness. By the evening, I also ended up with high temperature 100 degree and started having body pain , mainly on the lower back . Took 600 mg Ibuprofen along with Vitamin C 1000 mg and Zinc 1 tablet at night. All my symptoms resolved by 01/19/2021 noon.

958843	1/20/2021	WA	58	F	1/9/2021	1/10/2021	I began to pass out and yelled for my husband, he said when he came in I was sitting on the toilet with my head back, eyes rolling back not responsive.; I had my 2nd vaccine at work early Sat the 9th and felt increasingly worse all day; I woke up at midnight and felt extreme malaise; I was covered in sweat; vomited; I checked my temp and it was 99.7°F; sore; I think I had either a seizure or a vasovagal response.; This is a spontaneous report from a contactable nurse (patient). This 58-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot EJ1685 or FJ1685), intramuscular at single dose in the left arm on 09Jan2021 06:00 for Covid-19 immunisation. Medical history included atrial fibrillation on unknown date (1 episode), allergic to Keflex. There were no concomitant medications. The patient previously received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot EJ1685 or FJ1685), intramuscular in the left arm on 22Dec2020 for Covid-19 immunisation. On 10Jan2021 01:00 AM, the patient experienced: I began to pass out and yelled for my husband, he said when he came in i was sitting on the toilet with my head back, eyes rolling back not responsive (loss of consciousness) (medically significant), I had my 2nd vaccine at work early sat the 9th and felt increasingly worse all day (feeling abnormal), I woke up at midnight and felt extreme malaise (malaise), I was covered in sweat (hyperhidrosis), vomited (vomiting), I checked my temp and it was 99.7°F (pyrexia), sore (pain), I think I had either a seizure or a vasovagal response (seizure). No treatment required. The outcome of the events was recovered. The events were described as follows: I am healthy RN with no active medical problems. I had my 2nd vaccine at work early Sat the 9th and felt increasingly worse all day, I expected this so was not alarmed and went to bed around 10pm. I woke up at midnight and felt extreme malaise and went to the bathroom in case I might vomit, etc. and I tried to have a BM. I began to pass out and yelled for my husband, he said when he came in I was sitting on the toilet with my head back, eyes rolling back not responsive. He yelled at me for about 10 seconds and I came to, I was covered in sweat. I asked him to walk me back to the bedroom where I again passed out, fell to the floor and hit the bed, then was unresponsive

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							again for about 10 seconds then came to again and vomited. After this I felt completely relieved of my malaise. I checked my temp and it was 99.7°F. After this I was sore but otherwise completely okay, the next day I had a temp of 99.5°F. Today I am back to normal. I think I had either a seizure or a vasovagal response. The vaccine was administered at Hospital Facility. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. The patient had not been tested for COVID-19 since the vaccination. The patient was not pregnant at the time of vaccination.; Sender's Comments: Based on the close temporal relationship, the association between the event "began to pass out" with BNT162b2 can not be fully excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.
958868	1/20/2021	AL	74	F	1/11/2021	1/12/2021	Typical expected side effects but were very SEVERE and UNable to function normally- headache, fatigue, nausea, vomiting, diarrhea, Dizziness, Chills, Cold Sweats, Pain and soreness especially in lower back, and throat hurt when swallow. These persisted for 7+ days. The abnormal side effects included Yellow Vision that persisted for around 2 days, eyes felt hot, and heart rate shot up to 175 and then would drop to 70's. Went to doctor on 1/14/2021 and was found to have A-fib. had previously received a heart evaluation in 8/2020 and did not show any signs of this nor any signs on reading prior with an Apple watch. A-Fib is persisting and heart rate continues to be elevated and shoot up often even with Metapropol. As of this report on 1/20/2021 the heart rate is still varying from 80-150 and it normally runs around 50-60, has always been low. Blood pressure also dropped precipitously during this event and was as low as 80/50 so blood pressure medicines were discontinued to try and stabilize.

958921	1/20/2021	CO	48	F	1/13/2021	1/13/2021	This may be a duplicate report, as primary care notes state the process has been initiated. However, out of an abundance of caution, and as the facility the event was reported to, I wanted to enter this report for completeness due to the unusual events. Patient received 1st dose of moderna covid vaccine at an outside facility and (per patient) had a seizure at that site immediately following the injection (history of seizures due to past meningitis, no seizures in past 3 months per patient). No medications were given, 911 was not called, patient not instructed to go to ED (per patient). Patient went home. Once home, patient reported "stroke like symptoms" on her right side (weakness and inability to close right eye for 30 minutes, numbness in R thigh and heel). Then weakness moved to left side (numbness/tingling in L hand and eye, numbness in L lower leg) along with some swelling to face/tongue. Had back pain but no chest pain or difficulty breathing. Extreme dizziness. No additional seizures. The next day she called our nursing line to report these symptoms and was instructed to go to the ED and also scheduled a visit with primary care provider the next morning. Patient stated she was feeling better and apparently did not go to the ED, instead choosing to see PCP next morning. On presentation to PCP, injection site was red and swollen, itching and swelling in hands, itching in bottom of feet, widespread joint pain. No visible rash, no dysphagia, no difficulty breathing. Other symptoms had largely resolved. Patient was prescribed benadryl (no steroids due to allergy to prednisone), cold compresses for injection site and sent home with instructions to go to ED if symptoms reappeared. Also recommended making an appointment with a neurologist for additional follow up as patient currently does not see a neurologist for seizures and is treating with CBD/THC only.

958932	1/20/2021	NY	61	F	1/20/2021	1/20/2021	Due to hx of allergic reactions, pt was told to wait for 30 minutes in observation prior to vaccination. At 1208 on 1/20/2021 pt received 2nd dose of COVID Pfizer vaccine. Immediately after vaccination, pt experienced unusual taste in mouth, flushing, and feeling of heat in chest. At 1232, pt noticed flushing on arms and feelings of heat and pins and needles in both arms, hands, chest, both feet, and back. Sensation was persistent, so at 1301, 50 mg of IM Benadryl administered to RD by NP. By 1320 flushing on arms and chest subsided, feeling of pins and needles persisted but was not as severe as initial reaction. By 1345 flushing on arms returned, pins and needles sensation worsened again in all locations noted prior, spread to scalp, and tingling sensation occurred on lips. Pt communicated with Dr advised to stay under observation, but transfer to ED not medically necessary. At 1415, pt was advised to go home with supervision of partner and monitor symptoms from there.
958938	1/20/2021	PA	71	F	1/15/2021	1/15/2021	After 15 minutes I had tightness in my chest, headache, and felt my senses were hypersensitive (visual, focus); felt "speedy". I checked my pulse and it was normal (80)
958348	1/20/2021	FL	22	F	1/19/2021	1/19/2021	Systemic: Nausea-Mild, Systemic: Vomiting-Mild, Systemic: Fainting-Mild, Systemic: Visual disturbance ("blue spots," "dark visual waves")
957776	1/20/2021	CT	42	F	1/19/2021	1/19/2021	About 20 min after receiving my Covid 19 vaccine, I left Hospital and began to feel numb in my throat, my lower face, and the tops of my shoulders. I had reduced sensation, but also felt as though I had no muscle control with movement. Examples of this are when I tried to flex my head forward as if in a nodding motion, or to elevate my shoulders like a shrug, or clench my jaw like when chewing. These were all extremely difficult and I felt as though I had no awareness of if I was even moving these parts of my body whatsoever when I tried to voluntarily do so. It was very strange and also upsetting. I also began to have blurred vision; it was difficult to focus or see properly, such as when you visit the eye doctor and they dilate your pupils and everything seems blurry and out of focus for a period of time afterwards. This all lasted for about exactly 1 hour post. I did not seek medical attention for this as it did not worsen. I never had any difficulty breathing. It then completely went away.

958743	1/20/2021	NC	69	F	1/20/2021	1/20/2021	Patient is a 69 y.o. female with history of multiple medical problems as indicated below including rheumatoid arthritis. She is a non-smoker. She tells me she has "a heart condition" and is followed by a cardiologist. She tells me she was in her usual state of health and took her COVID-19 first vaccine today. Approximately 30 seconds later she noted chest tightness/burning that has been constant. It is rated 9/10 at maximum and improved to 5/10 after about 10 to 15 minutes. She also states, "my eyes feel funny. I feel cold. I am dizzy." She endorses palpitations and dyspnea. She denies any abdominal pain, nausea, vomiting, fevers, diaphoresis, headache, cough, rash, or syncope. She does have a history of seafood allergies and had similar reactions after eating seafood. She tells me 3 years ago after a flu shot she fainted. She tells me the past 2 years after her flu shot she had nausea or vomiting. She tells me she fell yesterday and hurt her hip but she did not hit her head. No LOC. She tells me she takes baby aspirin nightly. Family history: Mom and dad both died at age 82 from lung cancer. They both had heart disease. She was sent back from the vaccination area to urgent care to be evaluated after her reaction to the COVID-19 vaccine.

958960	1/20/2021	CA	46	F	1/6/2021	1/13/2021	One week post-vaccine injection, sharp pains began on and off on the left side of my face. These moved from cheek to jaw to lip to left eye and at the nasal base. There was also stabbing pain in the left eye. I thought this was due to just being tired from long days at work, but I was also aware it might have been related to the vaccine. Therefore, I took 1600 mg of acyclovir I had on hand to prevent occasional cold sores and went to sleep. The following day, unfortunately, these sharp pains persisted on and off throughout the day. I retook acyclovir and went to work. I reported this to my PCP, and she thought it was unrelated to the vaccine. I spoke with surgeons in my office, and after examination, they both clearly said it was a reaction in my 5th cranial nerve. They both recommended prednisone or methylprednisolone, but my PCP didn't agree, and therefore, I did not receive a prescription for prednisone. I retook acyclovir, and by the following afternoon of Friday, January 15, I was no longer experiencing sharp pains on the left side of my face.
958987	1/20/2021	NJ	41	F	1/13/2021	1/16/2021	My right eyelid drops for a second or two and then normalizes. This happens multiple times a day.

957457	1/20/2021	VA	47	F	1/9/2021	1/1/2021	Mild headache; Weakness; Loose stools/diarrhea; it was hard for me to walk; stomach ache/stomach cramping; Fatigue; Some sweating in the middle of the night; some pain behind her eyes; Shoulder area is sore; This is a spontaneous report from a contactable consumer (patient herself). A 47-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# EK4176), via an unspecified route of administration on 09Jan2021 11:00 in left arm at single dose for COVID-19 immunization. Patient take medications for mood and sleep with were very low doses. But she didn't have any medical problem. She took 10 mg of fluoxetine hydrochloride (PROZAC), 150 mg of bupropion hydrochloride (WELLBUTRIN) and 10 mg of doxepin for sleep. Yesterday after the vaccination towards the end of the day (09Jan2021 approximately 11 o' clock am), she developed a stomach ache about 5 pm and it went on throughout the night and she normally didn't have issues with her stomach. Maybe it was because she was hungry because she went ice skating with her son where they wore mask in the afternoon yesterday and she was feeling perfectly fine. But when she came home, she noticed her stomach started hurting at 5 pm and she wondered maybe it is because she was hungry. And after she ate it was still bothering her and then it got progressively worst in the middle of the night where it would wake her up periodically. But she was so fatigue that she was able to sleep still. But she noticed in the middle of the night that her stomach would wake her up because it was aching and cramping in the middle of the night. And then she also had some sweating in the middle of the night as well as some pain behind her eyes. And today (10Jan2021) she had some fatigue which she noticed was not usual, she had mild headache which she saw was a common side effect. And then in the morning (10Jan2021) some fatigue and weakness like when she walked to the bathroom it was hard for her to walk. And when she went to use the bathroom she had some loose stools which was not common for her unless at all she was sick or have eaten something that makes her stomach really sick which was very unusual for her. Her stomach was still hurting her, if she walked it will start getting cramped so she was sitting down. The only thing she took this morning was 2 acetaminophen medicine tablets because she was having pain behind her eyes

957459	1/20/2021	TN	82	F	1/8/2021		<p>when she woke up. She was just going to say she had influenza type A and type B on several occasions. And these symptoms are similar to when she had type B influenza, which was not as difficult as type A. So this is, they seemed to be like a mild version of type B influenza which she had terrible stomach issues, diarrhea and fatigue and pain behind the eyes from type B influenza. She had not any sickness because she work from home and she had limited field contact. So, she hadn't had illness from past year now. Because she worked from home. She provided mental health counselling remotely. So, she didn't think it could be attributed from anything else. The left on arm which was up toward like shoulder area and it was sore but it was tolerable in Jan2021. Outcome of stomach ache/stomach cramping was not recovered, and outcome of other events were unknown.</p> <p>I have felt horrible; Every bone in my body ached except my eyebrows and eyelashes; I am so weak I have no energy; I can hardly walk; This is a spontaneous report from a contactable consumer (patient). An 82-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 08Jan2021 at single dose for COVID-19 immunization. The patient medical history included autoimmune disease and "bad back", both from an unknown date and ongoing. The patient's concomitant medication included prednisone for autoimmune disease and tramadol 75 mg daily for back pain. On an unspecified date, the patient reported that: "I felt horrible, every bone in my body ached except my eyebrows and eyelashes, I am just wiped out when does this go away, I am so weak I have no energy, I can hardly walk". The patient underwent lab tests and procedures which included blood test: unknown result, on an unspecified date. The patient outcome of the events was unknown. The information on the batch number has been requested.</p>

957836	1/20/2021	DE	26	F	1/18/2021	1/19/2021	1/19 4:30 PM- extreme body soreness (especially injection site/left arm), headache, chills, and felt like I had a fever (with no fever). 1/19 8:00 PM- Hallucinations began (with eyes closed and open) - started seeing unfamiliar people (faces and outlines), black and white strobing along with seeing pure red light at certain points, I could not control the hallucinations, extreme paranoia (like I was being controlled and watched), physical symptoms magically went away; however, I had pressure in my head that did not hurt like a headache. I was talking to people that were not there. I felt completely out of control. The only thing that helped was forcing myself to focus on the TV, which was extremely difficult. Symptoms started to die down around 3 AM, but did not go away. I slept for 4 hours. 1/20 8 AM- felt like and still feel like I am not in reality, I feel disassociated with my body (like its not mine), slightly out of control of my thoughts, I see subtle black and white flashing like last night but not as intense, paranoia like last night/not as intense, cant concentrate.
957840	1/20/2021	NY	45	F	1/12/2021	1/15/2021	swelling of left eye on Friday 1/15/21 took Benadryl and came down by next morning. Sunday 1/17/21 swelling of upper lip took Benadryl and it went away on its own a few hours later. Random hives all over body all weekend From 1/15/21 to 1/18/21. Generalized itchy feeling of skin.
957876	1/20/2021	PA	43	F	1/11/2021	1/20/2021	Swelling, redness and pain in the left arm, started 1/20/21, 9 days post-injection. Nausea, stomach pain started 1/20/21. Sty in eye plus sinus pressure and drainage started 1/19/2021 in the afternoon.
957910	1/20/2021	CA	71	F	1/17/2021	1/18/2021	Day 2 woke up very sore arm & generally felt like I had the flu. Stayed in bed all day. Day two very swollen eyes and one side of my mouth was very swollen. Again felt like the flu. Eyes hurt if I blinked hard. Day 3 eyes still swollen but getting better. one side of mouth very swollen. Less achy

959750	1/20/2021	NC	43	F	12/29/2020	12/30/2020	24 hours after vaccination I had tingling and numbness on right side of face, heavy eyelids, "pulling sensation" in neck. Unable to lay flat. Tingling and numbness would switch from right side to entire face but mostly on right side. Headaches and noticed increased heart rate two days after vaccine. One week after vaccine numbness and weakness extended down right arm and leg, able to move leg just felt "weak". I thought I was having a stroke or TIA. Made an appt. with the NP and she did full neuro exam and everything came back normal. Also, made an appt. with my PCP. Still continued to have headaches and weakness improved. Did get a COVID test since was still having headaches and it so long since vaccine, received test 1/12/2021 and it was negative. This past weekend was the 1st time I felt "pre vaccine" 17 days post vaccination. I am truly hesitant to take my 2nd dose scheduled on 1/26/2021.
959759	1/20/2021		59	F	1/6/2021	1/6/2021	Experienced weakness and dizziness immediately after the injection, which subsided in about 20 minutes. Two hours later, itching began on left leg and arms. Noted red blotches to these areas. Face began to feel very prickly and flushed, felt lower lip swelling and left eye began to feel funny. Observed one hive to cheek. Was able to take a Benadryl 25mg capsule within about 10-15 minutes after this developed. Symptoms began to subside after this. Felt back to normal the next day. Just moderate injection site pain for 1-2 days.
959771	1/20/2021	CT	76	F	1/18/2021	1/18/2021	Lowered body temperature 30 min after dose, left hand began to itch approx. 45 minutes, both hands itching & swelling, then feet within hour. Total lose of vision within 90 min followed by fainting approx 10 minutes later. Fainted at check-in desk of emergency room

959919	1/20/2021	CA	39	M	12/22/2020	12/26/2020	received the vaccine on 12/22/2020. Took a nap on 12/26/2020 around 1400 and woke up and noticed that left eye had blurry vision. He washed it and it was still blurry. After 1 hour, he decided to go to the ED- was worried about possible stroke in his eye or retinal detachment. No retinal detachment found in ED; was discharged from the ED, not admitted into the hospital. Followed up with ophthalmologist as instructed on 12/27/2020. Retinal scan done and found no retinal detachment but the doctor found fluid found behind the retina. MD recommends rest, less stress at work. Unknown if related to vaccine per MD - mentioned no data is available to compare.
959928	1/20/2021		50	F	1/20/2021		Agitation, BlurredVision, Confusion, Anaphylaxis, UrticariaPruritus, Syncope, Pt experienced reaction three days PRIOR to first vaccine - event documentation only. Narrative: Pt has history of likely environmental allergies resulting in 4-5 mild reactions annually. Has seen allergist-immunologist in the community and has epi-pens, ranitidine and diphenhydramine. Had reaction three days PRIOR to first covid vaccine dose. She did NOT experience any untoward reaction to either dose of vaccine.
959972	1/20/2021	MO	90	F	1/12/2021	1/14/2021	Pt is alert and oriented with a GCS of 15. Pt able to answer questions appropriately, name, DOB and any complaints, which pt stated no complaints. Staff stated pt wasn't speaking to them prior to arrival and pt's strength and ability to move from her bed to her wheel chair and vice versa has been compromised since she received first dose of COVID vaccination on the 12th. 911 was called when it appeared she could not speak and noted her left eye was no longer staying open. Pt able to speak clearly with EMS, but noted left eye continued to stay shut. No recent trauma, no ocular hx and no changes to recent medications. Assessment documented above, stroke scale negative. Speech was excellent, symmetrical smile, negative on arm drift, good grip strength and good push and pull with feet. BG of 103. Pt is wheelchair bound but independent for transferring from chair to bed but has been on a steady decline in terms of independence and needed 1-2 person assist for a week.

959981	1/20/2021	MI	50	F	1/18/2021	1/19/2021	Delayed Localized allergic reaction. Approximately 24 hours after shot, I developed hives and swelling on cheeks, chin and swelling of lips. Immediately took 25mg of Benadryl. Sought treatment at an UTC for evaluation. I did not have trouble breathing and oxygen saturation was good, always above 97%. Upon reaching clinic 1 hour later, swelling and redness had gone down. Doctor diagnosed it as a localized allergic reaction to vaccine. I was given another 25mg of Benadryl and prescribed prednisone 20mg for 3 days. Swelling and redness has been intermittent since yesterday. All swelling and hives are confined to the face. I have been taking 50mg pf Benadry every 6-8 hours continuing this evening. It should be noted that I pre medicated with Benadryl the 2 nights before vaccination, the morning of, 1 hour after the shot and late evening the day I received the vaccine. I knew with my history of allergies I was at higher risk of allergic reaction. Please note the facial, eye and lip swelling began the following morning, 12 hours AFTER my last dose of Benadryl.

960015	1/20/2021	VA	64	F	1/19/2021	1/19/2021	Adverse event: Face swelling especially the eyes (eye lids, tissue between nose and eyes and below eyes), lips and outside the lips (left upper lip and into cheek and lower right lip into chin). Note: I was not having any trouble breathing and I did not think my throat was closing up. Treatment: Benadryl 50 mg immediately and again 4 hours later, Allegra 180mg once daily for 7-10 days, Methylprednisolone 4mg Dospak 21S, Famotidine 20mg 1 twice/day for 10 days. Outcome: Spoke to MD about 8PM on 1/19/21; took first dose of Benadryl and Allegra about 8:20PM; MD called in other Rx's and I had to pick them up, so first doses of methylprednisolone and famotidine were taken around 9:05PM; around 10PM or a bit after MD checked on me and I said I thought the lip swelling was improving but it was hard to tell with the eyes; MD had previously instructed me to stay up to 12:30PM in order to take the second dose of Benadryl 50mg, which I did and then I went to bed. In the morning around 9AM, I thought the face swelling had gone down 40-50%. MD called me around 9:16AM and I reported to her that the swelling had gone down 40-50%. At 10:36PM tonight as I make this report, my swelling as gone down more maybe by an additional 10 or 15%.
960031	1/20/2021		71	M	1/10/2021	1/11/2021	Pt Rec'd Covid vaccine and injection in Lt eye for macular degeneration. Monday 1/11 slurring speech/jumbled words since dinner, went to bed, wife states improved from last night but still difficult clearly communicating. Also reports difficulty writing. Came to ED and admitted for stroke evaluation. Stable for discharge home 1/13 with neurology follow up visits.

958997	1/20/2021	MO	52	F	12/23/2020	12/24/2020	12:00 noon my arm was super sore and swollen and I could barely raise it. By the evening on the 24th I was super tired. Christmas , the 25th,I was really fatigued. 26th, I was very fatigued and no energy - like I almost had the flu. 27th - the same - couldn't get out of bed. 28th - started getting a dry, hacky cough and then it went away. 29th - tried to go to work and I didn't feel good at all and I just wasn't feeling myself. Had brain fog. Went to work - things that I know that Know wasn't there because of brain fog. Felt really like flu symptoms that night. 30th - body aches; headache and eyes felt like pressure behind them. Sent me to COVID and it was positive - was out 2 weeks from work. Went to back to work last week - but I still had shortness of breath, brain fog and fatigue and cough on Monday the 11th; super tired still and I kept pushing myself to try to work and by Friday, 15th, I was just done. Exhausted. 16th - still having fatigue and 17th I thought I felt better when I woke up but still had my shortness of breath, cough and brain fog. At 2:00 pm I started feeling dizzy and faint like. I ate and within 20-30 min after food started throwing up, pounding headache. Every time I started trying to drink I would throw up. Monday, 18th, I went to work and I noticed whenever I moved around I was dizzy and short of breath and I couldn't eat or I would throw up. So slept the rest of the day. About 4:pm on Monday I thought I was going to pass out. O2 level at 86. Heartrate - Palpitations at 130. It was bouncing. Hving chest pressure, dizzy, pounding heart - O2 86 and Heartrate145. ER at 5:00 pm at Medical Ctr. Nausea medicine: Phenergan and Zofran. Did IV to hydrate me as I was dehydrated. Gave me Pepsid. I was a direct admit. They kept giving me hydration and nausea med and med for headaches and cardio workup - cardio came back normal. Severe lung inflammation. Was in the hospital until evening of 19th.

958998	1/20/2021	SC	35	F	1/19/2021	1/20/2021	Felt okay upon awakening at 06:30am. Got a shower before work. Shortly after getting out of the shower I became weak, ears started blocking, and started to have tunnel vision. Progressively got worse and was able to sit with head between legs. Took about 1 minute before I didn't feel like I was going to pass out. Shaky and weak after. Pulse 78 and oxygen level ok. Completed virtual visit and no further medical treatment advised unless symptoms got worse, but advised it was likely a vaccine reaction. Shortly after a bad headache and body aches developed (expected side effects).
959883	1/20/2021	MA	41	F	1/6/2021	1/8/2021	On 1/8/21 I had pain in my left ear and a feeling of fluid like an earache, also had a pressure type headache behind my eyes and felt fatigued. I stayed home from work and reported it and was told I could return to work on 1/11 (my next scheduled day) by workplace health. I felt fatigue and eye pressure headaches on and off since. I also felt like I was having vision changes. On 1/14/21 I noticed a small, raised, red area at the injection site. Over the weekend it continued to spread over my arm. It is warm and very mild tenderness to palpation but does not itch. I am also feeling tight muscle pain in my left shoulder and left side of my neck.
959539	1/20/2021	FL	72	F	1/15/2021	1/19/2021	4 am on Tuesday, January 19 awoke to find the top half of vision in my left eye was grayish/black

959476	1/20/2021	NY	35	F	1/15/2021	1/15/2021	Around 30 minutes after vaccine, I started to feel dizzy and light headed. As the day went on, I started to get a headache and get very tired. Then around 5 I started to feel intense: Headache Chills/cold Dizzy/light headed/almost fell over several times. Muscle weakness, could not carry anything or lift. Muscles in face felt like they were melting down/stroke sensation. Exhaustion. Sore/achy everywhere. Tender left arm where shot was. Could not think/memory was gone/could not put together a sentence. Tightness chest/hard to breath. Could not keep eyes open. Had to lay down and sleep with long pants long sweater, jacket and 3 blankets. I woke up the next morning and some of my symptoms were gone except I still felt tired and had some achy ness, pain and left arm hurt and had shooting pain in joints. Shooting severe pain in each joint, lasted for 3 days, most severe in joints where I received vaccine but also in wrists, shoulder, elbows, hips, knees, ankles. At day 5 my left arm is still sore including muscles around injection site.
959086	1/20/2021	MN	25	F	1/13/2021	1/13/2021	Within 30 -40 mins of administration of Pfizer EK9231 started developing slight numbness on right side of the face, mainly right cheek and under right eye. Took Ibuprofen 400mg still was feeling the numbness and took another Ibuprofen 200mg around 1400 for the still felt slight numbness. Took 25 mg of Benadryl around 1700 because I still was feeling the slight numbness on right side of face. In the morning was not noting any improvement in the facial numbness and was feeling that the cheek muscles were tighter on the right side and causing subtle facial asymmetry. I got worried and went to the ED. I was assessed, diagnosed with facial paresthesia. I was offered an MRI, I declined as I did not feel that I needed it at the time. Provider prescribed 40 mg of prednisone daily for 5 days, valacyclovir 1000mg 3 times a day for 7 days. After starting prednisone facial muscle tightness I was feeling improved, still felt slight numbness more so in the mornings the next 2 days. I took the full course of prednisone, I am no longer feeling the facial symptoms. I stopped taking valacyclovir on day 3, since I felt that the prednisone was what is helping and it was harder to evenly take it 3 times a day.

959414	1/20/2021	NY	53	F	1/14/2021	1/15/2021	Left work early Friday (4pm) and went to bed. In bed for the following 5 days, including now. Muscle and bone aches through my spine and hips, nausea with some vomiting, chills, severe weakness, no recordable fever but felt feverish, skin hurt. Woke up Tuesday drenched in sweat but the bone pain had subsided. Still very weak, nauseous, continued in bed. Woke up today feeling on fire, eyes burning hot, skin no longer hurt but felt hot. Injection site hurt through Sunday-no redness, no rash or swelling. I took Tylenol and Advil throughout. My previous trunk rash completely disappeared. I began taking the prednisone last night. 50mg BID. I have a 5 day supply. Took a Covid test on Monday-results pending. Tried to see my doctor today giving them the above information-there were no appts til Friday and I was referred to the ED. I will not go to the ED where I could actually catch Covid. I was unable to get past phone triage with the doctors office.

959468	1/20/2021	AR	45	F	1/17/2021	1/17/2021	<p>1/17/2021 2:00pm Vaccine administered, abiding by the CDC and ADH guidelines for safe distancing and masks. Looked at injection site and it looked normal, just a little red dot where the needle was directed to administer the vaccine. 7:00pm arm started to itch at injection site. Looked at site and it was a large red spot, warm to touch and had a large knot under the red injection site. Itching continued through the night isolated primarily to my upper extremities (arms, chest, face) region. Did not take Xyzal that night for fear of some type of interaction. 1/18/2021 6:00am awoke to more facial itching and took a shower. Noticed red splotches in the T zone of the face. More isolated around my eye lids, a section on my forehead, on the right side of the bridge of my nose, and my laugh lines on my face from the bottom of the nostrils down both sides of my mouth to my chin. Arm was sore, which I had expected and the spot was more red than the previous day, still warm to touch, and knot was still present. 7:30am Got to work and my took a 1/2 tablet of Xyzal since I can't function on a whole dose of that or Benadryl for a work day. Itching subsided for about 4 hours. 1:00pm Took another 1/2 tablet of Xyzal. Lasted another 4 hours. 6:00pm Itching was back bad enough I took my normal nightly dose of 1 Xyzal table. It seemed to help until morning. Massaged knot on arm and tried to help lessen the soreness of the area. It was tender to touch, but not painful. 1/19/2021 5:30am Awoke to itching, spot still red, knot gone down compared to previous day. Took shower. Noticed that heat seems to bring out the redness in my face and makes the itching start again. Hot showers were not helping apparently. 7:00am Took 1/2 Xyzal, since itching was continuing. Lasted again for about 4 hours. 12:00pm Took 1/2 Xyzal and lasted an additional 4 hours. Thought the itching should be going away. 6:30pm Took normal dosage of Xyzal. Knot still present but not as prominent as previous days. Injection site still red. 1/20/2021 7:30am Went to local PCP for medical opinion and assistance. He gave me a steroid shot and gave me a Prednisne DosPak with a total of 21 steroid tablets to start administering on 1/21/2021. Was advised to not take the second booster of the Moderna Vaccine and to see advice as to the recommend course for vaccination of Covid-19 since I had an allergic reaction to the vaccine.</p>

955247	1/19/2021	NY	74	F	1/14/2021	1/15/2021	About 22 hours after the shot, I had a mini stroke that required going to the emergency room by ambulance. I was transported that evening to the stroke division that same evening for further evaluation, tests and care. I have never had a mini stroke before this. The doctors said it may have been from the vaccination, or it may not have been precipitated by it. They said they don't have enough information on the Moderna vaccine to make that call.
955220	1/19/2021	CO	59	F	12/28/2020	12/29/2020	Day 1: sore left arm muscle, day 2: upper back/shoulders/neck aches, headache. Day 3: felt allergies were worsening, started to take claritin twice per day to help, worst over next few days so that was taking 2 claritin twice per day. Day 7, bilat. Eyes super itchy. Day 8, vaginal itching, tried estradiol with no relief. Day 9, anal itching. Day 10 all over body hives/itching. Day 11 started bid allegra and 20 mg prednisone. S/s slowly abated over many days. Extreme fatigue often. By 1/15/31, felt mostly normal.
955150	1/19/2021	CA	25	F	1/18/2021	1/19/2021	Fever up to 102, migraine, vomiting, body aches, eye pain
955054	1/19/2021	NY	47	F	1/12/2021	1/13/2021	fever of 102 the morning after receiving the vaccine, severe headache, severe eye pain, diarrhea, weakness, bone pain, abdominal cramps, loose stool--that had mucous and blood in it. Also had a small amount of vaginal bleeding/spotting not associated with her period. Multiple days of these symptoms.
955019	1/19/2021	IN	25	F	12/30/2020	1/5/2021	transient ischemic attack. I was working and felt unusually exhausted, lost vision in my right eye for over an hour, and called my boyfriend to tell him I wasn't feeling well and that I would try to make it through my work shift. I then called him back 4 minutes later and failed to form words, and also could not type words. I felt like I was going to faint and have no recollection of 10 minutes during that time. I had to leave work to go to the emergency room. I had a massive headache for 3 days following my TIA.

955352	1/19/2021	CA	49	F	1/8/2021	1/8/2021	About 20 minutes after injection I felt lightheaded and full body weakness. This continued for the next 1 1/2 hours. My vitals were stable the entire time. My neck was sore and I had no energy. My arm of course sore at injection site. This was on a Friday. Saturday residual soreness, and low energy. Sunday overall ok but neck was very sore. Monday same. By Tuesday afternoon (1/12/21) my joints ached severely (ankles, knees, elbows), I could not keep my eyes open, my neck continued to be sore and I had extreme fatigue and mild occasional nausea and loss of appetite. I had to stay out of work the rest of the week. 11 days later I still feel some fatigue and neck soreness but otherwise okay.
955038	1/19/2021	TX	53	F	1/18/2021	1/18/2021	I received my second dose of the COVID Vaccine at 9:10am. On or about 7pm that same day I started having pain and occasional itching around injection site. Upon assessing area I noticed a 1/2 dollar sized redness, warm to touch that was raised and very tender to touch. Later that night around about 2:40am I was awakened with a headache that has been constant since then. Around or about 5am I started feeling generalized malaise and aching joints including eye sockets. Aching is mild to moderate about a 4-5 on pain scale. Low grade temperature of 99.7F
955100	1/19/2021	IL	60	F	1/12/2021	1/13/2021	Tues 1100 injection. 20 hours after: temp 100.6, all over body muscle aches, bone aches, ( duration of 24 hours), redness 1" diameter warm and soreness to injection site, and fatigue, (duration of 3 days). Starting 28 hours after: lymph edema and pain under arm of injected arm (duration Wed PM-Sat.PM). Thursday AM woke with eyeball pain and headache. (lasted 2 hours).

954288	1/19/2021	AZ	56	F	12/31/2020	12/31/2020	Felt hot and cold on and off; 10 minutes after I felt a little lightheaded/dizzy.; entire left side from neck, down back into hip and leg in severe pain(muscles tense); entire left side from neck, down back into hip and leg in severe pain(muscles tense); felt ill; felt extreme weakness; sneezed about 20-25 times; eyes turned red; The spinning and unable to focus continued for about 6 hours; The spinning and unable to focus continued for about 6 hours; Headache was coming and going; This is a spontaneous report from a contactable other health professional (other HCP) (patient). A 56-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; brand: Pfizer, lot number: EH9899) via an unspecified route of administration at left arm on 31Dec2020 at 08:30 AM at a single dose for COVID-19 immunization. Medical history included known allergies (allergies to medications, food, or other products), and no other medical history. The patient was not pregnant. Concomitant medications the patient received within 2 weeks of vaccination included vitamins/supplements. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Facility where the most recent COVID-19 vaccine was administered was at facility. 10 minutes after the patient felt a little lightheaded/dizzy. At 20 minutes after her entire left side from neck, down back into hip and leg in severe pain (muscles tense), at 30 minutes she sneezed about 20-25 times, felt extreme weakness and her eyes turned red. She felt ill. The spinning and unable to focus continued for about 6 hours. Headache was coming and going. She felt hot and cold on and off. All events with start date on 31Dec2020 at 08:45 AM. The events were reported as non-serious. No treatment received for events. The outcome of events was resolving. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19.

955869	1/19/2021	NC	63	F	1/4/2021	1/9/2021	Bell's Palsy; This is a spontaneous report from a contactable consumer. A 63-years-old female patient received the first dose of BNT162B2 Pfizer-BioNTech COVID-19 Vaccine, Batch/lot number: ELD14D, via an unspecified route of administration, in left side of arm, on 04Jan2021 at single dose for COVID-19 immunization. Medical history included early breast cancer from 2017 and ongoing. Concomitant medication included tamoxifen citrate 20 mg tablet by mouth once daily from 2017 and ongoing for breast cancer (cancer pill, she has to be on it for 5 years). The patient received the vaccine as she is "with fire department, thought she needed to take it, she had early breast cancer, is around lots of people". On 09Jan2021 the patient was diagnosed with Bell's palsy, assessed as medically significant and in Jan2021 she experienced earache (she thought it was an earache, but it was more than that, but it made her ear hurt, and she has no infection), her mouth was drawled a little, further detailed as numbness and "the eye, it is messing with it, when she is trying to see out of it, she can see, but it's blurry like" and, "where the ear thing is", on the back of the lymph node was real sore and her face was kind of puffy, which is the reason she went to the doctor. The patient had to go to her doctor, he told her she had a reaction to the shot, he called it Bell's Palsy, and said to let Pfizer know. Her doctor gave her something to take for mouth drawled/numbness, which is supposed to help, and she has to go back in a week. The event Bell's palsy outcome was unknown at the time of the report.
955616	1/19/2021	CA	56	F	1/11/2021	1/12/2021	Red raised rash all the way around neck, also near eyes

955761	1/19/2021	PA	35	F	12/24/2020	1/2/2021	<p>started having a lot of left eye pain/he diagnosed her with Scleritis; This is a spontaneous report from a contactable other healthcare professional (HCP) a Nurse Practitioner, who reported for herself. A 35-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Batch/lot number: EJ1685 also reported as ES1685), intramuscular in left deltoid on 24Dec2020 at single dose for COVID-19 immunization. Medical history included ongoing anxiety diagnosed years ago, maybe when she was 23. Concomitant medication included ongoing celecoxib (CELEXA) for anxiety started about a year, or year and a half ago. She did not take other vaccines on the same day as the COVID vaccine. She had no recent labs. On 02Jan2021 the patient experienced scleritis. Event was described as follows: patient got her first COVID vaccine on 24Dec2020 and on 02Jan2021 she started having a lot of left eye pain. She went to her Ophthalmologist and he diagnosed her with Scleritis. She had no history of anything with her eyes or any vascular or autoimmune issues; no eye disorder history or rheumatology history. Patient is due to get her second dose of the vaccine on 14Jan2021, and she spoke with her primary care doctor and her ophthalmologist, and neither of them have any answer on if she should get the second dose or not, they did not have much guidance for her as this was such a new product. Patient reported that scleritis was persisting, but it has improved and she was on Prednisone eye drops. Event scleritis was considered serious as Medically significant because of what it is and what it can do, but this was not a severe case (as reported). Final outcome of scleritis was recovering.; Sender's Comments: The reported scleritis was more likely an intercurrent disease, and less likely causally related to the use of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE). The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics committees and Investigators, as appropriate.</p>

955561	1/19/2021	IN	81	F	1/18/2021	1/18/2021	after 15 minute obs pt still complaining of lightheaded, dizzy blurry vision
955369	1/19/2021	WI	30	M	1/14/2021	1/16/2021	2021/01/16 10:00 AM - Numbness in face (lips, jaw, gums) similar to the feeling from localized anesthesia. Also numbness and tingling in left hand. Vision is blurred and spotted vision loss. 2021/01/16 10:45 AM - Numbness in face and hands diminishing. Head ache on right temple. Vision issues persist. 2021/01/16 11:15 - Muscle pain on right abdomen and numbness beginning in feet. Vision issues cease. Headache persists. 2021/01/16 2:15 - All symptoms cease
955523	1/19/2021	NH	38	F	1/15/2021	1/15/2021	Received dose at 1205 noon on January 15, 2021. I completed the 30 minutes after vaccination due to history of food allergies/medication allergies/intolerances and is prescribed epinephrine. After 30 minutes no reaction was seen in return to work, as a healthcare, CMA. At 1500 hrs. became incredibly dizzy, flushed, hot sweats. Sat down with cool window open, facecloth. Legs became tingling and numb, blood pressure was taken at over 130/90, nausea increasing, could not keep eyes open due to dizziness and light, with headache developing. After 30 to 45 minutes of observation from healthcare staff/coworkers became incredibly weak in arms and legs, head became incredibly faint, nausea increased, headache, dizziness, extreme fatigue in regards to wanting to sleep. At which time clinical lead nurse/supervisor brought myself to emergency room department for further evaluation. Was brought into emergency room for further evaluation developed at this time a lump in throat feeling, and was given an IV of Benadryl 25mg and Pepcid 20mg with an hours of observation. Within an hour of observation extreme fatigue tingling numbness and dizziness head decreased. And was discharged from emergency room for vaccine reaction around 20:00. Home with Benadryl 25 mg and Pepcid 20 mg, 3 times daily to treat reaction. After reaction been dealing with headaches and nausea.

955469	1/19/2021	GA	40	F	1/7/2021	1/7/2021	Had Moderna 1st shot on Jan 7. Eye infection that night and the next day. Then, Saturday the 16th, a tickle in my chest.. soon produced a dry cough in relief/response to the tickle. Next day, I was hoarse (Sunday the 17th). Still hoarse. Sore throat off and on. Headache. Body aches. Incredible arthritis-like ache at the tops of my shoulders, upper back, and neck. Runny nose. Spitting mucous - was clear, now some thick solid white. Chest pain in the middle that comes and goes. Chest pain on left center side - it feels like in the area of my heart. Ache in my lower left side. Today, aching in my jaws mostly left side, but both. Ache on upper right front (lung area?). INCREDIBLY tired. It's so hard to stay awake.
955453	1/19/2021	IL	89	F	1/15/2021	1/17/2021	Patient developed left sided facial droop and left eye droop/paralysis on 1/17/21. No medical treatment was necessary. Hospice and family were notified. Symptoms continued on 1/19/21 and the nurse practitioner ordered Refresh tears to left eye three times a day x 14 days, tape eye shut at night as tolerated and start Prednisone 40mg orally x 4 days then 20mg orally x 3 days.
955442	1/19/2021	FL	29	F	1/4/2021	1/15/2021	On January 15, I developed urticaria to my face and neck, with a faint papular rash on my forearms also. On Jan 16, I developed facial edema with continued rash which worsened throughout the day despite Benadryl. On Jan 17, the rash was improving, but the facial and neck edema had worsened to the extent that my eyes were nearly fully closed. I presented to the ED and received treatment for allergic reaction, including Epinephrine, steroids, and histamine blockers. I have no known allergies.

954559	1/19/2021	NV	33	F	1/7/2021	1/9/2021	Received Thursday 1/7. Sore arm and numbness at injection site day of vaccine. Numbness resolved on Friday 1/8, arm still sore. Saturday 1/9 increased salivation bilaterally left greater than right. Left sided jaw and eye facial stiffness, left tongue and cheek swollen. Excess saliva coming from corners of mouth, left jaw and eye stiffness, harder to open and close left side of face, jaw and eye. Able to move face but harder to do, takes several tries to get a smile or close eye fully. No drooping noted. Facial symmetry preserved. Completed video visit Saturday evening, prescribed prednisone 80 mg x 7 days and acyclovir 400 mg 5x's/day for 7 days. Took first dose on Saturday night 1/9. Sunday morning swelling of tongue resolved and cheek swelling improved. Since Sunday 1/10, symptoms remain similar. Stiffness left side of face in jaw and eye. Mild excess saliva produced bilaterally left greater than right and mild excess tear production left sided only. Ear pressure started around 1/10 and continues, feel pressure and clogged ears, left greater than right. Started using left arm at work more on Wednesday 1/13 and Thursday 1/14, and after this could no longer use left arm due to pain at 8-9/10. Could not hold laptop or dragon mic. Called out of work on Friday 1/15 due to arm pain and facial issues. Job involves patient care, talking with patients in office. Thursday 1/13, pain of left arm also felt into the left shoulder. Pain also remained in area of injection site. Second Video Visit Friday 1/17 as follow up. Today 1/18, arm pain 4-5/10 with rest, 6-7/10 with use. Jaw, eye stiffness are similar.

The vaccine was administered in a hospital. Medical history was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Other medications the patient received within 2 weeks of vaccination included birth control. On 09Jan2021, the patient experienced persistent headache migraine over 60 hours post-vaccine: one side of the head, left sinus, left eye, and wrapping along the left side of her head to occipital lobe. No treatment was received for the event. The patient was not diagnosed with COVID-19 prior to vaccination and she was not tested for COVID-19 since the vaccination. The outcome of the event was not recovered. The event was assessed as non-serious.
954617	1/19/2021	TX	45	F	1/6/2021	1/6/2021	headache that would not go away, like her head would explode; pressure behind her eyes; This is a spontaneous report from a contactable consumer (patient). A 45-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE lot number: EJ685), intramuscular in her right arm on 06Jan2021 at a single dose for covid-19 immunisation. Medical history and concomitant medications were reported as none. On 06Jan2021, the patient experienced headache that would not go away, like her head would explode and pressure behind her eyes. Stated that both events started 30 minutes after the shot on 06Jan2021. Therapeutic measures were taken as a result of headache that would not go away, like her head would explode and pressure behind her eyes which included ibuprofen 800 and switched it out with TYLENOL. Outcome of the events headache that would not go away, like her head would explode and pressure behind her eyes was recovered on 09Jan2021.

954398	1/19/2021	NY	39	F	1/5/2021	1/5/2021	severe headache behind the eyes; Initially extreme fatigue; started to have shortness of breath; muscle aches; cough; second dose on 05Jan2021 08:30; This is a spontaneous report from a contactable physician (patient). A 39-year-old female patient received second dose of BNT162B2 (Lot number: EL3246), intramuscularly on 05Jan2021 08:30 in left arm at single dose for COVID-19 immunization. Medical history included known allergies: latex and asthma. Patient did not have COVID prior vaccination. Concomitant medications included sertraline hydrochloride (ZOLOFT), drospirenone/ethinylestradiol (YASMIN), melatonin, and ibuprofen (MOTRIN). Patient previously took montelukast sodium (SINGULAIR) and experienced allergy. Patient received first dose of BNT162B2 (Lot number: EK5730), intramuscularly on 18Dec2020 09:00 in left arm at single dose for COVID-19 immunization. Patient experienced initially extreme fatigue, then muscle ached all within 12-24 hours, severe headache behind the eyes. Then when thought was getting better, she started to have shortness of breath, worsening fatigue, and cough; all on 05Jan2021 12:00. These events were resulted in emergency room/department or urgent care. COVID was tested post vaccination. COVID test type post vaccination was nasal swab. COVID test name post vaccination was COVID 19 nasopharyngeal swab. COVID test date was on 08Jan2021. Test result was pending. Treatment received included nebulizer treatment, and steroid course. Patient was not recovered from these events.; Sender's Comments: Based on a compatible temporal relationship and known product safety profile, causality between events severe headache and extreme fatigue and BNT162B2 vaccine cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

954688	1/19/2021		47	F	1/14/2021	1/17/2021	i was vaccinated at the 15th of january in the evening! Everything was perfect and i was happy, just my legs itched, but on Sunday I suddenly noticed the beginning of an allergie which i normally get just in summer if I swim in standing waters with reef inside. I got a rash on my neck and my tongue felt bit swollen and as my eyes. In the evening i took a cortisone tablet and ointment and it was much better. The ointment i still take, but no tablets anymore. I still do have rash but it is much better. now I am concerned about the second vacine, can you give me a recommendation?
954972	1/19/2021	VA	63	F	1/16/2021	1/16/2021	Per patient severe internal itching all over including eyes. No visible rash/hives/whelps. 2:02 administered 50 mg IM Benadryl , blood pressure 148/98, 78 pulse, 22 respirations, lungs clear. 2:24 no relief from 50mg Benadryl IM, blood pressure 160/94, 88 pulse, 20 respirations, lungs left crackles. No angioedema or difficulty breathing . Instructed patient and her husband to go to free ER for further evaluation and to also follow up with primary care physician.

954925	1/19/2021	FL	41	F	1/12/2021	1/13/2021	22 hours after the second dose started to have an allergic reaction, hives all over back and chest and neck. Took benedryl and pepcid at home OTC. The next morning woke up with hives, flushed feeling, and chest/throat tightening. Went to the ER was administered iv medications. Went home. 4 Hours later started again with chest and throat tightening and swelling of the eyes. Kept having break through reactions when medications were wearing off. The ER md that I saw called in some home medications that I started taking. Pepcid and Prednisone. 7 days later still having to take benedryl and pepcid due to eye itchiness and swelling.
954954	1/19/2021	TX	38	F	12/28/2020	12/28/2020	A few hours after the vaccin I became aware of numbness on the left forearm that extended from the left forearm down the side of the arm near the thumb and forefinger area down to the wrist area. I had no weakness or loss of function but it was numb. I was seen in the ER where they did a visual check and was advised to monitor and if it worsened to contact my PCP. And after about 3 days I noticed it had resolved with no new symptoms since. I also had really intense joint and muscle pain also.
954969	1/19/2021	PA	46	F	1/18/2021	1/18/2021	10 minutes after receiving the first dose of moderna vaccine, patient started to not feel well. She received 50 mg of benadryl, which she then threw up. After that, her throat broke out into hives, and her eyes swelled shut. Then she received 2 doses of epinephrine via auto injector, and she was able to breath after that. An ambulance came and took her to the emergency room

954652	1/19/2021			U			frontal headache; Tired; Achy; Flushed face; Glassy eyes; Joint pain all over the body and feet; dry cough; having hard time getting out of the car; Shortness of breath; Felt like had an elephant on chest; Night sweats; wheezes; felt punky/felt like she had been hit by a baseball bat; up most of the night; This is a spontaneous report from a contactable consumer. A patient of unspecified age and gender received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on an unspecified date at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The reporter stated, "It's about a question about whether somebody should get another COVID-19 Vaccine. There's somebody with a vaccine reaction that is not typical and I want to make sure if it is safe for her to get the second vaccine. Actually 2 people that I want to ask about." The consumer stated, "She had the vaccine, she had a sudden onset of the frontal headache for 5 to 10 minutes that subsided after about 15 minutes. And then she felt punky, I don't know what she meant tired, achy, flushed face, glassy eyes, having sit down every few minutes. An hour to an hour and a half later she had those symptoms. Then two and a half hours later, she said she had joint pain all over her body, and her feet. And intermittent dry cough. Then she drove home, it took 45 minutes to get home and then she said it was hard to get out of the car when she got home. She felt like she had been hit by a baseball bat. She tried to lie down with two pillows and she developed shortness of breath. Her pulse was 95 to 97 percent, her heartrate was 92 to 94, she didn't have a temp. She drank '2 gallons' (not clarified) of water which would certainly make me sick. She sat upright on the couch. And after 5 hours, she felt like she had an elephant on her chest and she took a Medrol Dosepak. She was up most of the night with 4 pillows. She had like night sweats, drenched multiple times. And she had tight expiratory wheezes in the morning. She took DuoNeb and continued to hydrate. And then, her other symptoms resolved except for fatigue and facial flushing. She had no hives or rash". The outcome of the events tired and flushed face was not recovered. The outcome of the remaining events was recovered on unspecified date. Information on lot/batch number has been requested.

956773	1/19/2021	MS	48	F	1/10/2021	1/11/2021	I woke up the next morning (about 6am) with nausea/chills/fever (100.9)/headache/eyes were burning. I had to go to ED after getting to work(at 7:30am) due to SOB/elevated heart rate of 145-150bpm/101.6 temp (upon arrival to ED)/chills/nausea/headache. I was given IV fluids (2 liters), Zofran for nausea, Toradol for pain/headache, Tylenol for fever. I was in the ED for about 4-4 1/2 hours. My right eye has a large "blood shot" area that wasn't there until I took the vaccine also. I was found to still have a count of "34" on my Covid antibody blood test. The ED physician stated that was probably the reason I had the reaction was because I still had antibodies. I tested positive for Covid on Sept 19, 2020 and took the vaccine #1 1/11/2021 (almost 120 days from positive Covid test). If I had known I was going to have any type of reaction because I still had antibodies, I would have waited a few more weeks/months to get the vaccine. This should really be looked into. I am now very scared to receive the 2nd vaccine because of the side effects that has been reported after the 2nd vaccine. I really need good advice about what to do about 2nd vaccine.
956797	1/19/2021	MO	47	F	1/19/2021	1/19/2021	pt developed facial redness, eyes feeling like fire, itching, burning and itching on her head. 956825	1/19/2021	WI	34	F	12/28/2020	12/28/2020	Initially, I had severe arm and back pain that lasted 3-4 days. On day 1-2, I was extremely exhausted, so exhausted that I actually wet the bed and I have NEVER wet the bed as an adult, which was extremely embarrassing. The worst part is, since the shot, day 1, my eye has been twitching. I have been reporting it. I do not think it is just a coincidence anymore like I originally thought. I have had eye twitches in the past but they have never lasted this long! It has been 3 weeks and there is no end in sight. The time between twitches is sometimes less, but the severity of the twitching is getting more intense, sometimes causing my eye to blink (although usually its a lateral upper eyelid twitch) and I have had 1-2 instances of my upper lip twitching along with it (within the last couple of days). The eye is driving me crazy. I can't fall asleep at night because it keeps me awake and it twitches when I'm trying to fall asleep. There has been nothing that has changed in terms of increased stress, increased caffeine consumption, decreased sleep, etc. to have explained this persistent eye twitching. I did have my annual eye exam on 1/15/2021 and talked to him about it and he said we will continue to watch it. It was just annoying at first but it will not go away and like I said, the intensity and pulsating of the twitch is getting progressively worse.

957030	1/19/2021	WI	31	F	1/7/2021	1/7/2021	Moderna COVID-19 Vaccine: Symptoms after vaccination: Intense pain to my affected arm started around 5-6:00pm the day I received the vaccine. A little while after that I noted terrible body aches and intense chills. I took Meloxicam and Tylenol for the pain to my arm and the body aches. This helped a little. I ended up going to bed at 7:00pm (same date) due to not feeling well. The chills were pretty intense going up and down my spine and I could not get comfortable in bed or sleep because I was freezing and aching all over. I am not sure if I had a fever at the time because I felt so weak and chilled that I couldn't get out of bed but my eyes felt like they were burning. My husband said I was sweating and my skin was burning hot despite the fact that I felt extremely cold. I developed a headache around midnight that lasted until the afternoon the day after my vaccination. I took more tylenol , meloxicam, and benadryl for the pain/headache and I took a mid morning nap. I felt better and more myself by about 4:00pm the next day. I did not need to receive any medical attention for these symptoms.

957105	1/19/2021	IL	22	F	1/14/2021	1/15/2021	1/14/21- 10:30am Noticed some fullness/swelling in throat. Was still able to breath fine, but definitely noticed a difference. This lasted a few hours. 1/15/21- 3:45am I got up to use bathroom and noticed I was very lightheaded. I thought maybe I just stood up too fast. I got back in bed and my arm was 8/10 pain so I also thought faintness could possibly due to pain. 7:15am I got up to go to work and quickly felt very warm and my vision started to go black. I laid back down for a few minutes until this resolved. I took my temperature and it was 99.0. I got up again and started to get ready but began feeling light headed again. I ended up getting ready while sitting down because I kept feeling too much like I was going to pass out. I ate breakfast and felt fine. 8:00am I left for work and after driving for about 5 minutes I felt myself getting very warm again and light-headed. I ended up pulling over and calling for someone to come pick me up. 9:00am My temperature was 99.5. My blood pressure laying down was 110/74 and HR was 74. After standing for 5 minutes my BP was 90/70 and my HR was 92. During this 5 minutes of standing I felt myself getting warm again but my vision did not start to go black and I was able to stand for the full 5 minutes. At various times throughout the day I would feel faint if I was standing or sitting upright for too long. The last time I felt this was was probably 11:30pm on 1/15/21. 1/16/21 - No light-headedness or warmth. Did feel some slight chest pressure, but nothing crazy and it only lasted maybe half of the day.
957114	1/19/2021	PA	41	F	1/11/2021	1/13/2021	Decided to get second vaccine 1/11/21 even though she was still getting hives from 1st dose. Developed swelling on inner canthus L eye. Saw Dr. 1/14/21 and famotidine was ordered. This reduced hives. In 1/16/21 developed swelling of R inner canthus. Took Benadryl and famotidine hs on 1/17/21. Took famotidine 1/18/21 before work, but developed hives under arms and tongue began to swell that evening. Took another dose of famotidine. Tongue improved within 40 minutes but L side of face began to swell. Took Benadryl 50mg. Facial swelling improved but did not go away. Called Dr. this am and was ordered a Medrol dose pack. If this is not effective then she will be referred to Dr., allergist.

957158	1/19/2021	WI	49	F	1/11/2021	1/12/2021	Had severe chills and body aches and fatigue about 12 hours after vaccine, lasted about 8-10hrs fatigue and mild aches lasted another 8-10 hrs. Then 2 days after the shot I got a herpes simplex virus in my eye.
957168	1/19/2021	CA	32	M	1/8/2021	1/11/2021	presents with itching and urticarial rash all over his torso arms and legs. He received a second Covid vaccine 3 days ago. He denies any other exposures to new foods or other medications. He did start having some eyelid swelling as well as some shortness of breath while going upstairs and therefore came to the ER for evaluation. Patient denies any tongue or lip swelling. He has no wheezing. He states that the shortness of breath is improved without any intervention or treatment. Patient does have Covid exposures on a regular basis as he is respiratory therapist and takes care of Covid patients. No symptoms of cough or fevers. No vomiting or diarrhea.
957205	1/19/2021	CA	47	M	1/5/2021	1/5/2021	Day 1: first hour slight euphoria -- hours 2-8 felt like a surge of epinephrine, speedy when speaking, stammering occasionally Day 2 - 4: felt like final day of having flu, achy, weak, overall off Day 5-8: extreme fatigue Day 10-11: slight fatigue, brain slow Day 12-14: strange subtle brain sensations, flow of blood to the head shifting, occasional lightheadedness, vision worse, nervous system a bit jerky
957268	1/19/2021	CA	35	F	1/16/2021	1/17/2021	The day after I got my shot, I woke up to my right eye being significantly bigger than my left. It was swollen and extremely itchy. It was swollen for a few hours until I remembered to take allergy medicine. It subsided. Then today, January 19, 2021, it happened again. It didn't swell as much, but was extremely itchy. My neck area and stomach area is itchy as well.
957301	1/19/2021	MD	61	F	1/13/2021	1/13/2021	Vaccine at 0900; itchy eyes by 0950; lips swelling than face. Got hives on face and rest of body itchy. Took 25 mg Benadryl at 1015. By 1130 hives were gone but itching continued. Used eye allergy relief. Lips swollen for 24 hours. No shortness of breath. At 2100 got rapid heart rate till about 2130. Resolved. Continued having itchy skin and eyes for 4 days. On 01/14/2021 started fexofenadine 180 mg one per day and used eye drops as needed for itchy eyes

956053	1/19/2021	OH	53	F		1/15/2021	At 1715 I experienced numbness on the left side of my back, burning sensation with tingling. About 20 minutes later that sensation moved up to my shoulder. 10 minutes later moved up the left side of my neck. It continued to move up and stayed in face, especially lips. That lasted 30 minutes. It then moved to include my right nostril, it became stuffy and started to run. No respiratory distress. About 45 minutes later the sensation went in my right eye and made it difficult to move it, at this time I also experienced a lot of pain in upper front teeth. I took Tylenol for the pain. Sensation continued in lips, R nostril, and R eye; along with teeth pain until 6 hours later. After which the numbness in lips lingered for 15 hours total.

956166	1/19/2021	MN	90	F	1/19/2021	1/19/2021	10:10 am received Moderna vaccine; observation time 30 min due to previous allergies stated (shrimp-throat closure); 10:37 am RN was observing/talking to pt & mid-sentence pt. reported "I'm feeling funny." Resident's eyes appeared glazed over and she reported "feeling out of it. Like I'm in another world." Resident unable to provide any further specific descriptions of how she felt. Resident's radial pulse felt regular. No loss of consciousness. Resident remained in seated position. 10:39 am Resident reported no improvement & stated, "I feel weak". RN paged for assistance. 10:45 am another staff member arrived with bp cuff. L upper arm blood pressure was 136/72. Heart rate remains regular. Lungs sounded clear. Resident was able to drink a 1/2 glass of orange juice. 10:49 Resident reported feeling "a little better." 10:51 am We noted resident's face appeared flush. No baseline observation of what her cheeks looked like prior to vaccination due to mask, but questionable mild facial swelling present. 10:53 asked resident if she was able to swallow normally. Resident wasn't sure, so RN asked if she felt like she had a lump in her throat or like she needed to clear her throat, but couldn't and she confirmed that her throat felt different than normal. 10:55 am Epi pen administered to L outer thigh by RN. Call placed to EMS. Discussed expected side effects of Epi administration. 10:57 am Resident started to feel anxious and visible shaking present. 11:05 am Resident reported feeling slightly better, perked up a bit. 11:08am EMS arrived. 11:10 Ambulance crew arrived. Resident was able to walk to stretcher with assist of 1. 11:17 am Ambulance left with resident. Resident was still reporting "feeling weak".
956172	1/19/2021	FL	83	F	1/17/2021	1/17/2021	At approximately 11:09 am, patient began complaining of dizziness, headache, blurry vision and nausea. Patient states that she had a headache on arrival and took her bp meds this morning. Patient released by EMS to home with friend on site.

956572	1/19/2021	MA	39	F	12/23/2020	12/23/2020	Immediately following vaccine my entire chest began very hot. I was having hard time breathing. I started trembling a little and my vision became blurry. Doctors told me I had bad panic attack.
955983	1/19/2021	NE	57	F	1/15/2021	1/17/2021	Woke up at 6am (40.5 hours after injection) with severe vertigo, room spinning fast. Spent first two hours sitting on bed with eyes closed avoiding any movement of any kind. Along with dizziness I was Sweating profusely with intermittent chills which lasted all day. By 8:00am I was vomiting and dry heaving off & on for 8 hours straight. Slight relief came after taking a Bonine pill for motion sickness. Multiple temperature checks ranged between 94.1 -98.5. Headache became more prominent throughout the afternoon & evening. I ate 1 soda cracker by 6:00pm and tried to drink water throughout the day to stay hydrated but constant vomiting made it difficult. By 10:30pm I was able to keep down a 1/2 cup chicken soup.
956263	1/19/2021	TX	30	F	1/14/2021	1/14/2021	I received the vaccination on 1/14 and started to get an itching sensation that night - nothing noticeably or concern and was able to go to sleep. The next morning I was very itchy and red and started to break out in hives that started to get worse and spread through my body. I took Benadryl throughout the day and at night to help my sleep. On Saturday morning my eyes were swollen and red, I had severe hives all over my body and had to go to the ER for some type of relief. This was immediately after I woke up, the right side of my body was extremely hot and I went to the restroom and looked in the mirror and didn't recognize myself. At the ER, they put me on Prednisone - to take 2 tablets for 3 days, Famotidine - taking 1 tab, 2 times a day for 5 days, and Benadryl, 1 tab, 3X a day until the symptoms subside - It is currently 1/19 and my skin will start to heat up, primarily in my hands and start to itch, but no more hives or anything severe. I am currently pregnant with my first child, due date 7/7/2021. I have had no previous pregnancies, miscarriages, or abortions.
956524	1/19/2021	TN	51	M	1/19/2021	1/19/2021	He said within a minute of receiving the vaccine he experienced bilateral ear ringing and a dimness to his vision. Since he has developed dizziness with ambulation, he has slight blurriness to his right eye, general achiness, and his injection site is sore.

953077	1/18/2021	IL	42	F	12/23/2020	12/23/2020	<p>couldn't differentiate the tingling in hands and feet from shot or from that; sharp pain jolt behind eyes/eyes hurt; icreamed; Her hand eye coordination was off as well and she wasn't able to be accurate on keyboard and her cursive was off; Whole body still weak; sharp pain jolt behind eyes, left one in particular so bad she screamed and the nerves went all the way to finger tips; Twitching of face when do certain movements; brain zaps and brain buzzing began; numbness to right side of face to neck/made its way to left side; Horrible headache; fatigue; felt pressure behind her right eye; felt in a fog; forgetful mid conversation; This is a spontaneous report from a contactable other health professional (patient). A 42-year-old female patient (not pregnant at the time of vaccination) received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, EL0140), intramuscular on 23Dec2020 08:00 at single dose at right arm for COVID-19 immunization; prednisone via an unspecified route of administration from an unspecified date to an unspecified date (for 4 days) at 50 mg for an unspecified indication. Medical history included Known allergis: latex, contrast dye. Concomitant medication included the first dose of influenza vaccine (FLU) on 30Nov2020 at single dose at right arm for immunization. Facility where the most recent COVID-19 vaccine was administered at Hospital. The patient received other vaccines within 4 weeks prior to the COVID vaccine. It was reported that Day 1: on 23Dec2020 08:15, the patient felt pressure behind her right eye after shot, felt in a fog, forgetful mid conversation. Day 2. (24Dec2020) Horrible headache started, fatigue. Day 3 (25Dec2020) brain zaps and brain buzzing began, headache, fatigue, numbness to right side of face to neck. By day 5 (27Dec2020) made its way to left side. Twitching of face when do certain movements. Her Dr gave her Prednisone and she took 50 mg for 4 days and stopped because she couldn't differentiate the tingling in hands and feet from shot or from that. Still brain zaps, newest issue sharp pain jolt behind eyes, left one in particular so bad she screamed and the nerves went all the way to finger tips. Her hand eye coordination was off as well and she wasn't able to be accurate on keyboard and her cursive was off. Whole body still weak, eyes hurt. Head a lot better than a day ago but still having buzzing and twitching. Today was day</p>

							18. She was awaiting an MRI with contrast on Friday hoping it got moved sooner as she was scared to what was going on. The adverse events result in Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. Treatment received for the adverse events included CT/MRI/Optic Nerve Scan/Pain Shot/Meds for Zaps. The events were non-serious per the reporter. Prior to vaccination, the patient wasn't diagnosed with COVID-19. Since the vaccination, the patient had been tested for COVID-19. The patient underwent lab tests and procedures which included Nasal Swab: negative on 28Dec2020. The action taken in response to the events for prednisone was permanently withdrawn on an unspecified date. The outcome of the events reported as not recovered.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of all these reported serious events might not be fully excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

Arrived home 30 mins after shot, used the restroom, felt pressure in my throat and jaw line by ears, ringing in my ears. I?m scared 45 mins after shot, freezing and shaking, feel tired, pain in both arms/muscle, pain on side of neck/muscle Ringing in ears Called out of work remainder of the day 3:00pm- Slept for 2.5 hrs from 3-5 Woke to flu like symptoms Woke at 5pm to aches in joints. My hands, knuckles, and elbow on my left arm- same arm as shot sore throat Headache Muscle aches in neck and both arms Diarrhea nasal pressure - face Jaw pain by ears Very tired Switching between hot and freezing Took Tylenol 6:15pm Still suffering flu symptoms Ringing in ears Strong urge to vomit Weak Bottom of feet ache Eyes watering 7:34pm Ate a little and feel a little better, coming in waves 9:30pm Feeling better Flu symptoms and nausea is gone Just very tired and very sore at injecting site. About a 6 on a 1-10 scale for pain when touched. Hoping for a better tomorrow *1/5/21 Day-2 7am Called out of work for a late start Could not sleep due to pain at injection site as well as achy joints/muscle in hands and arms. Any movement would shock me awake Arthritis in hands seemed inflamed Nightmares Very tired/fatigued 10am Called out of work for the remainder of the day. Very tired/fatigued difficulty getting out of bed. Pain at injection site about an 8 when touched even by a blanket Took more Tylenol 4:30 Feeling okay... just sluggish and soreness at injection site. About a 5 Curious if maybe I already had the virus and so this first shot was like a booster which caused the flu like symptoms?? Or maybe my autoimmune disorders? 8:30pm Feeling so much better!! Still some soreness at injection site but tolerable. Feeling better about being protected! *1/6/21 Day-3 Generally feel okay but fatigued Slept an unusual amount 8pm This Evening had shooting pain down my right arm (injection site) and also pain on my right in chest, heart area. Had lots of palpitations and was concerned about having a heart attack My Apple watch recoded spikes in blood pressure over 107 while being inactive *1/7/21 Feel</p>

							okay today Light soreness at injection site.. like a bruise when touched *1/8/21 Better but hesitant to receive the second dose scheduled Feb 1st
952672	1/18/2021		61	F	1/12/2021	1/15/2021	61 y.o. female who arrived by Home presented to the emergency department for Evaluation of syncopal episode. Patient reports earlier this morning at 330 she awoke to go get a glass of water, states that she felt significantly weak and felt that she would drop the glass of water she was going to get it. She describes mild associated lightheadedness but denies vertigo, visual disturbance, chest pain, dyspnea. She that went to ambulate to the living room so she lied on the couch, but does not exactly remember what happened after this. She remembers that there is a chair and she thinks she may have fallen forward and hit her head against a chair and fell down to the ground. She notes that she had currently has a fat lip and feels slight abrasions on her knees bilaterally. History is notable for hypertension, dyslipidemia, states has been compliant with her medications. No recent illnesses, cough, colds. She underwent vaccination 3 days ago for COVID with the majority of vaccine and reported 2 days ago she had mild body aches and myalgias, however at present states she feels largely asymptomatic. She was encouraged to present to the emergency department at the request of her coworkers Laboratory work-up largely unremarkable. CT head no acute process. EKG my read sinus rhythm, normal PR, QRS, QTc, no ST segment changes or T wave inversions concerning for ischemia. Discussed the work with the patient recommended that she follow-up as an outpatient with her primary care provider, also provided with a Zio patch and recommend to follow-up with cardiology. Patient extravascular fat study with plan felt comfortable for discharge home. Discharged in stable condition

952658	1/18/2021	NY	50	F	1/16/2021	1/16/2021	about two minutes after standing up to go to the waiting room, I became incredibly dizzy. I sat down and closed my eyes. I had an instant sensation in my forehead, right side -- not pain, more like a tightness, like the beginning of the headache. I couldn't move my eyes left and right without dizziness. It felt like I was on a pain pill. That kind of lightheadedness. and the tightness moved around my forehead about every 10 minutes to different spots. Was also present in back of my head at bottom left pressure point. At one point my forehead was very tender and within the next few minutes it had gone numb. a doctor and EMS checked my vitals. All were normal. I've recently lost 25 pounds and the doctor thought maybe my thyroid function had improved and that potentially my medication dosage now makes me hyperthyrodic. I'm not dizzy on a regular basis, but am still going to check with my personal doctor. They checked my vitals every 15 minutes and it was about an hour and 15 min before I felt comfortable standing and walking. I went home and went to sleep (it was 3 pm), which is not normal for me. I was wrecked. The next day, all was normal, except for the pain in the injection site, arm, which I expected.

952803	1/18/2021	FL	47	F	1/15/2021	1/15/2021	I was vaccinated at 3:30pm . At 5:27pm while driving home i felt a cold sensation in the back of my neck and back of my throat which began spreading to the back of my head . My heart felt as if I was startled by something. I looked at my smart watch and my heart rate was 145. I began trembling and having abdominal cramping . The back of my head felt like I had swelling or collection of fluid. I opened my windows and began taking slow deep breaths to bring down my heart rate . It took quite a while to get it below 100. I felt as if I was going to pass out. After deep breathing for what felt like atleast 15 to 20 minutes , my pulse came down and I closed my windows . As soon as my body warmed back up in the car , the symptoms returned and my heart rate went back up to 130s , 140s . I had to keep my windows down and deep breathe the entire way home which took an hour . My body was trembling. When I got home I felt as if I was too weak to get out of the car . I still felt that startled feeling in my heart and was afraid of what could happen next . My lips and face were swollen. My lips were also slightly itchy. I called 911 for help . By the time they arrived my vital signs had stabilized but I still had swelling in my face and lips . My EKG , vital signs and oxygen levels checked out normal so I did not go to the ER. That night I took benadryl and Tylenol. Day 2 post vaccine the collection of fluid or swelling in the back of my head had now spread to the top . That night I had the feeling that my throat was swelling do I took benadryl and Tylenol and my face and lips were still slightly swollen . Day 3 post vaccine I woke up with slightly blurry vision. The swelling in my head now feels like it has encompassed my entire head and have a slight headache. I went to the urgent care requesting an MRI of the head and an epi pen . I was given Medrol dose pack , an RX for epi pen for emergencies and advised to continue benadryl and Tylenol. Day 4 post vaccine, slight headache continues. Slightly blurry vision

953092	1/18/2021	WY	48	F	12/23/2020	12/23/2020	tingling sensation in right eye and mid cheek area,Unable to wink, or scrunch right eye; muscles on the right side of my face were noticeably weaker; This is a spontaneous report from a contactable nurse (patient). This 48-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot # EH9899), via an unspecified route of administration, on 23Dec2020 at 04:00 PM at single dose for COVID-19 immunisation. Vaccine location was right arm. The patient was vaccinated at Public Health Clinic/Veterans Administration facility, age at vaccination was 48-years-old. No other vaccine was received in four weeks. Medical history included gastrooesophageal reflux disease (GERD). Known allergies included levofloxacin (LEVOFLOXACIN), pethidine hydrochloride (DEMEROL), phenobarbital, cefalexin monohydrate (KEFLEX), clarithromycin (BIAXIN). Concomitant medications included dexlansoprazole (DEXILANT), estradiol, phentermine, ergocalciferol (VIT D), calcium. The patient was not tested for covid prior or post vaccination. On 23Dec2020 at 04:45 PM, after leaving the clinic, the patient felt tingling sensation in right eye and mid cheek area. Within 1.5 hours, muscles on the right side of her face were noticeably weaker. Unable to wink, or scrunch right eye. The events resulted in doctor or other healthcare professional office/clinic visit, and emergency room/department or urgent care. The patient was treated with prednisone. Outcome was recovering.; Sender's Comments: Based on a close temporal relationship causality between events "tingling sensation in right eye and mid cheek area" and "muscles on the right side of her face were noticeably weaker" and BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

951980	1/18/2021	CA	51	F	1/6/2021	1/6/2021	BNT162B2 first dose 18Dec2020, second dose 06Jan2021; Severe sharp headache behind left eye; Severe nausea (but could be from headache); Possible migraine; Mild photophobia; Mild photophobia; This is a spontaneous report from a contactable Physician who reported for herself. A 51-year-old female patient received her second single dose of BNT162B2 (Pfizer/BioNTech Covid-19 vaccine, lot number EL3249) at left arm at 17:30 06Jan2021 for Covid-19 immunization in a hospital. She had her first injection at 07:15 PM 18Dec2020 and experienced mild photophobia within 5-10 min. The patient had a medical history of allergic rhinitis and was allergic to cashews. Concomitant medications included fexofenadine, colecalciferol (VITAMIN D), cyanocobalamin (VITAMIN B12). The patient did not receive any other vaccines within 4 weeks prior to her first COVID vaccine. Within 5-10 minutes of 2nd injection, the patient had mild photophobia (also after 1st injection but patient did not recognize the symptom at that time). About 20 hours after 2nd injection, the patient developed severe sharp headache behind left eye, severe nausea (but could be from headache/ possible migraine). The patient stated that she had no prior history of migraines or frequent headaches. Three days after 2nd dose, the patient's lingering intermittent mild left-sided headache persisted. The patient self-administered OTC oral analgesics. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. Outcome of the events headache, nausea, migraine, photophobia at the time of last observation was resolving. The patient considered that the events were non-serious.

952007	1/18/2021			F	1/7/2021	1/8/2021	Tired; Headache; Feverish; Eyes felt allergy like; Lips felt chapped; This is a spontaneous report from a contactable consumer (patient herself). A female patient of an unspecified age received a second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported), via an unspecified route of administration on 07Jan2021 at a single dose for COVID-19 immunisation. Medical history and concomitant medications were not reported. The patient previously took first dose of bnt162b2 (lot number and expiry date not reported) at single dose for COVID-19 immunisation. On 08Jan2021, the patient was tired, had headache, was feverish (but not elevated temp), eyes felt allergy like, and lips felt chapped. All were mild. Clinical outcome of the events was unknown. Information on the lot/batch number has been requested.
952163	1/18/2021	ME	41	F	12/29/2020	12/30/2020	swelling of the left arm, lymph nodes in arm and neck on the left side started within 60 mins. Woke up in the middle of the first night with extreme arthritis type pain in all of my upper joints. such as shoulders, elbows, wrists, neck, back and hips. The arthritis like pain continued in all of my upper joints in different locations for the next 6 days. On Monday Jan 4th when I woke up I had extreme vision issues in my right eye for about 6 hours.
952190	1/18/2021	GA	51	F	1/13/2021	1/14/2021	Got my second dose of Pfizer, 12 hrs later developed fever (103 F), chills, myalgia, headache. Fatigue, bilateral orbital pain. No visual problems. Took Tylenol every 4 hrs and fever (101. 5)returns in 1-2 hrs. Pulse ox remained normal, 98%, but pulse was 99/min. Usually my resting pulse ox is 55/minutes. Was unable to go to work and see patients. Had these symptoms for 48 hrs even though stayed in bed, took Tylenol around the clock and drank plenty of fluids (2-3 liters of water in addition to natural orange and apple juices). Never lost appetite either, do eating my vegetables and fish diet. Ice cream help between Tylenol?s. Completely resolved after 72 hrs. Now still have LEFT injection site tender deltoid and left axillary tender nodes, improving as well. All along breathing fine, no cough or congestion or sore throat. No anosmia or dysgeusia. This was after my second Pfizer dose. After the First dose only had tenderness on the RIGHT deltoid muscle injection site and tender axillary node, resolved by now.

952435	1/18/2021	TX	37	F	1/14/2021	1/14/2021	Patient received 1st Dose of Moderna COVID vaccine at 1304. At 1345, patient reported that she was feeling tingling in her limbs and her eyes appeared to be blood shot red. Patient was placed in a wheel chair and a rapid response was called. Patient was transferred to a stretcher and an IV was started; patient stated that she felt that she "was falling and very cold." Vitals were obtained BP 117/72, O2 sat 88% on Room Air. O2 placed via nasal canula and O2 sat read 99%. Given 12.5mg Benadryl IV and 20mg Pepcid IV. Patient was advised to go to Emergency Room for further evaluation, however patient and husband felt they wanted to go home and not go to emergency room. Patient eye color returned to normal and patient was able to stand without difficulty.
952489	1/18/2021	MI	39	M	1/13/2021	1/13/2021	Patient is 39-year-old male with no significant past medical history who works at long-term care facility. He received COVID-19 vaccine on 1/13/2021 and immediately developed numbness and tingling in the area of injection which was the left shoulder. Over the next 15 to 30 minutes numbness and tingling expanded to the left side of his body including face arm and leg and the left side of his trunk. He began to feel foggy and had some slurred speech. He presented to the Emergency Room and tests were performed to rule out a stroke. The patient denies any other symptoms such as fever chills myalgias. He did not have any weakness of the extremities. He did not have any speech disturbances or visual disturbances. This morning on examination he states his symptoms are much better. He still has some residual numbness in his leg and arm. Facial numbness is almost all gone. As of 1/18/2021, residual numbness and tingling is only in his left ring and pinky finger.
952504	1/18/2021	OH	29	F	12/18/2020	12/19/2020	Twelve hours after receiving vaccine patient began experiencing chills & body aches. The next morning (24 hours post-vaccine) the patient had a very bad migraine, chills, and body aches. Upon standing felt nauseous & dizzy, then saw black dots and vision went black for several minutes and fell to floor. Relative called 911 and vision had returned by the time medics arrived. Vitals were normal, except for low blood pressure. She took Advil and felt better by the evening.

952519	1/18/2021	TN	48	F	1/2/2021	1/2/2021	<p>Body aches; Fever 99.8F; Chills; Entire left arm muscle is in pain on movement; Choking in the throat; Facial Flush; Blurred vision; Dizziness; Confusion; I had no emotions; A spontaneous report was received from a pharmacist concerning a 48-years old, female patient who received Moderna's Covid-19 vaccine (mRNA-1273) and experienced choking, flushing, vision blurred, dizziness, confusional state, emotional disorder, body aches, pyrexia, chills and limb discomfort. The patient's medical history included migraines and a hysterectomy. Products known to have been used by the patient, within two weeks prior to the event, included sumatriptan, naratriptan hydrochloride, and galcanezumab. On 02 Jan 2021, prior to the onset of events, the patient received their first of two planned doses of mRNA-1273 (Lot number: 025L20A) in the left deltoid intramuscularly for prophylaxis of COVID-19 infection. A pharmacist called stating she received the Moderna COVID-19 vaccine on 02 Jan 2021 at 9:45am in her left deltoid. Immediately after receiving the vaccine, she had facial flushing, blurred vision, dizziness, confusion and choking in the throat that lasted 20 minutes. After a few hours, she stated confusion would come and go, and she had no emotions. The next morning, the confusion was gone. On 03 Jan 2021, she reported having body aches and a fever of 99.8 degrees Fahrenheit. She reported chills, body aches, and a lot of pain in the left arm. If she tried to move her left arm, the entire muscle in the left arm hurt. Treatment for the events included acetaminophen and an antihistamine. Action taken with mRNA-1273 in response to the events was withdrawn. The events, choking, flushing, vision blurred, were considered resolved on 02 Jan 2021. The events, confusional state, emotional disorder, and dizziness, were considered resolved on 03 Jan 2021. The events, body aches, pyrexia, chills, and limb discomfort, were not considered resolved.; Reporter's Comments: This case concerns a 48 year old female patient with medical history of migraines, who experienced a serious unexpected event of Choking, non-serious unexpected events of Flushing, Vision blurred, Dizziness, Confusional state, Emotional disorder, Pain, and Limb discomfort, and non-serious expected events of Pyrexia and Chills. The events of Choking, Flushing, Vision blurred, Dizziness, and Confusional state occurred immediately after</p>

							administration of their first of two planned doses of mRNA-1273 (Lot number: 025L20A). The event of Emotional disorder occurred on the same day when the patient received mRNA-1273. The events of Pain, Pyrexia, Chills, and Limb discomfort occurred on the next day of mRNA-1273 administration. Very limited information regarding the events has been provided at this time. Based on temporal association between the use of the product and the onset of the events, a causal relationship cannot be excluded.

954215	1/18/2021	MI	43	F	1/12/2021	1/12/2021	<p>Within 30 minutes of shot-Fleeting itching in both ears, fingertips, and soles of feet. Blurred peripheral vision in left eye only. Dizziness, wooziness. All resolved with 35 minutes of injection, initially. Within 4 hours of shot-Exponential increase in pain from waist down, including lower back pain. Took Motrin 600 mgs which resolved pain within 1 hour of taking it. Felt off/not myself-Felt foggy-headed-pressure in head and ears was not normal. 2100-0000 (Evening of shot)-Moderate sporadic dizziness that became moderate constant dizziness-Took 1 25 mg chewable Meclizine with 1 cup of water. Pain increased and Motrin wore off. Fatigue grew worse. 1/13/21-1/14/21-SEVERE back pain. Intense pain in legs and hips. Upper respiratory symptoms-Nasal congestion, ear pressure, sinus pain/pressure, chest and upper back discomfort, chest congestion, irritation, and aching. Cheeks and nose looked puffy/swollen. Eye pain, headache on and off. Fatigue, dragging. Felt feverish but no actual fever. Body aches-sides, legs-front, back, and sides, lower back, and glutes. Felt like arthritis from waist down, including lower back. Took nighttime cold syrup, etc. to be able to sleep and/or at least dull the pain. Also used heating massage pad to assist with pain relief. 1/15/21-1/16/21-Pain lessened in terms of intensity. Had longer spells of less intense pain. Also less pain with movement after resting/lying down. However, pain still intense at this point. Meds more helpful with the pain at this point as well. On Sat, felt dizzy and unwell all day, including extra tired. Hot, sweaty on Sat. Racing heart, chest tightness. Used inhaler and Metoprolol. 1/17/21-Felt unwell-intense pain still, dizziness, fatigue. Took Meclizine 25 mg that morning. Also took another 25 mg Meclizine later that afternoon. Nausea, dry heaving to the point I almost vomited 2x. After napping, nausea returned slightly but immediately went away. Felt very tired remainder of the evening. 1/18/21-Went to MD to get clearance to return to work. Dizziness prior to visit and took 1/2 25 mg Meclizine. Felt better until I got to doctor's office. While waiting to be called back, dizziness started up again and got severe. While waiting on MD to come in and talk to me, I got nauseated and felt like I might dry heave/vomit. I took another 1/2 Meclizine 25 mg and sucked on a mentholated cough drop to help with nausea, which did subside. Dizziness continued to be severe. MD took</p>

-----------------	--------------	--------------	----------------	------------	-----------------	-------------------	---------------------

blood pressure, pulse ox, checked my ears, checked my pupils, listened to me breathe, asked me about my symptoms, return to work, and advised on safety of taking 2nd COVID injection when it is time but leaving it up to me in terms of if I feel benefits outweigh possible side effects of 2nd injection. He prescribed anti-nausea meds, pain meds, and stated he wants to see me for a follow-up visit in 1 week. He also prescribed steroid and pain med injections to be administered in office immediately, steroid injection sometimes contains Benadryl and based on how I felt after the shot, there may have been Benadryl in this one. He also requested I message him later in the day to let him know how I was feeling. Injections did GREATLY assist with pain and dizziness/foggy-headed feeling, once they kicked in. I did message him letting him know how I was feeling after napping. 1/18/21 evening-I am still feeling weak and tired and having stinging like pain in both legs along with minor lower back pain. Some chest and throat irritation as well as stomach discomfort. Going to take a gentle laxative as well as some of the nighttime cold medicine I purchased. Still also having dizziness on and off. I plan to return to work tentatively, on 1/19/21, per my return to work note from MD. I will keep my MD notified of how I feel between now and next Monday's follow-up.

952001	1/18/2021	VA	27	F	1/9/2021	1/10/2021	profound headache; resembling meningitis: could not turn neck from side to side; resembling meningitis: could not turn neck from side to side; pressure behind eyes when moving eyes quickly; profound body aches, primarily in the lower back; profound body aches, primarily in the lower back; 100.2-101.0 fever; chills; lethargy; This is a spontaneous report from a contactable Nurse reported for self. A 27-year-old female patient received second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot#: EL1284), via an unspecified route of administration in left arm on 09Jan2021 18:30 at single dose for covid-19 immunisation. Medical history was not reported. Concomitant medication included influenza vaccine inact split 4v (AFLURIA QUAD), desogestrel, ethinylestradiol (APRI). The patient experienced profound headache, resembling meningitis: could not turn neck from side to side, pressure behind eyes when moving eyes quickly. -profound body aches, primarily in the lower back. -100.2-101.0 fever -chills - lethargy on 10Jan2021 12:00. Patient had Rapid nasal swab with negative result on 26Oct2020. Outcome of events was recovering.
954229	1/18/2021	FL	29	F	1/2/2021	1/9/2021	A week after receiving my first dose of the vaccine, I was watching television and noticed that my left arm was itching. As I started to scratch, I noticed that I had a large bump or wheal over the spot where my vaccine had been administered. It was about an inch in length and width. I applied topical OTC cortisone cream as needed on it for the itching. Within a few days, the area subsided to normal.
954247	1/18/2021	CT	34	F	1/15/2021	1/16/2021	Pfizer vaccine. Around 6pm the following day, left eye swelling noted. Did not decrease in swelling until next day (after 4 doses of antihistamines).

954264	1/18/2021	IN	70	F	1/18/2021	1/18/2021	Patient received COVID pfizer vaccine at 0801PM. Patient left after 20 minutes after observation. Patient was travelling with husband at the car when she experienced warm/hot cheeks, flushing and concerned with history of previous reaction. When patient arrived ( approximately 835pm), patient sat down on the chair. The redness started to extend to her neck and it was then decided to place the patient to the stretcher. Vitals signs were done in which the BP was 183/104 and 174/101 (845pm). The redness spreaded to her forehead and neck. Benadryl 50mg PO was then given (847pm). Patient BP was taken again which was 182/122 , pulse 80, RR 24 (855pm). Patient then complained about pressure in her throat, eyes (right eyes slightly swollen ) and face. It was then decided that epinephrine (859PM) be used but unfortunately the trainer box was removed so the epinephrine was not actually given. The BP documented was then 193/112 (0859PM). EMS was then called as the epinephrine was administered per protocol. EMS arrived (0910 PM) and BP at that time was 230/112, pulse 70. Patient was started with heart monitor and IV. EMS then took her to the Emergency across the street with husband.

953203	1/18/2021	FL	73	F	1/8/2021	1/9/2021	A rash started developing about within a day or two of the vaccination. By day 4 or 5, the rash was spreading and appearing in other areas including scalp. By day 6, I was in complete distress. Saw Dermatologist on Day 6 and was prescribed Prednisone and increased antihistamines up to the day of the second injection scheduled for Feb 5, 2021. By today, Day 10, the rash has mostly receded while I continue meds prescribed. I believe that I had Covid early on starting March 28 accompanied by sudden fatigue, nausea, fever, chills, body aches, no appetite, for the first few days, then developed hives all over face and head until my eyes were swollen shut. My doctors, both derm and primary, didn't want me to be tested or come in or go to the hospital, perhaps because so early on in the pandemic, little was known and they feared if it wasn't Covid, I would contract it in those circumstances. They again prescribed creams and antibiotics and prednisone. I don't remember how the rash side effects lasted but I continue to have scalp problems since. I did not have a cough, but did experience instances of shortness of breath 7 to 10 days after the onset. The fatigue, body aches and brain fog continued for months. I was feeling much better by the time I got the vaccine and then returned to the rash symptoms I had had before.
954115	1/18/2021	MI	27	F	1/13/2021	1/15/2021	Vaccination was on Wednesday: about a half hour after vaccine, I experiences increased heart rate, vision going black like I was going to pass out, it passed in about 5-10minutes of laying down; also had metallic taste in mouth the rest of that day. Thursday I just felt red, itchy, swollen L arm due to vaccination site. Friday morning my bottom lip was severely swollen with numbness and tingling. It went down by the next day and after taking Benadryl. I have not had an allergic reaction to anything in my life before. Was instructed to not get second vaccine as I may have a more increased reaction to it.

953191	1/18/2021	NY	44	F	1/13/2021	1/15/2021	on 1/15/21 woke with a rash all over my face and very itchy, took Benadryl and went on with my day around 9pm that night my face was swollen and left eye was swollen shut. Went to ER and was told a possible reaction to the Covid vaccine and was given a oral steroid in the er that night and sent home with a script for a steroid for 3 days. Went home and woke up (1/16/21 that morning 3 times as I had to change my clothes as I was soaking wet in sweat. Changed my clothes and took my meds and as the night went on the swollen in my face got worse and took more Benadryl. Sunday 1/17/21 swollen no better and the rash is worse. I took it easy and took meds.. Monday 1/18/2021 woke up with a very swollen face and very itchy. Face very warm to the touch (No fever 97.9) Called my primary Doctor and she told me to come over asap as the I was feeling any better and getting worse. Both eyes are almost swollen shut and my face is very hot to the touch. Doctor extended my dose of steroids and gave me a script for Pepcidfor 7 days.
953848	1/18/2021	NY	43	F	1/10/2021	1/11/2021	I had a swelling and my arm got hot at injection site ( small allergic reaction- a red line). It felt like when I used to get allergy shots for cats. It got better by that Wednesday (01/13/2021). I had taken a Benadryl that date for my itchy nose and dry eyes (I thought it was seasonal allergies.) Today one week and a day after injection my arm swelled up again and is hot . A large red bump appears at the injection site. Again it feels like when I used to get my allergy shots. My throat feels itchy as well, breathing is normal.
953215	1/18/2021	CA	69	F	1/14/2021	1/17/2021	3 days later had an episode of faintness, as if I stood up quickly. Vision darkened but I never passed out. I was sitting and reading after eating about an hour after exercise. No further episodes.

953228	1/18/2021	MA	51	F	12/28/2020	12/29/2020	The day of the vaccine I just felt a little tired but the next morning I felt extremely tired, joint/body aches and chills. I also had fever and called my PCP and told them what was going on they suggested me to take Tylenol (100.2F) 500mg my doctor told me to take 600mg. The fever started going down. At night I took 1000mg and the fever went away I still felt very drained, tired and the next day as well. I did not go to work because of that. I have a mild pain on my neck, close to my spine cord and also I have a sore throat now. I also don't have sense of smell and my face is painful/sore - my doctor told me that my sinus cavities are all inflamed and that is why it is painful. Not sure if the vaccine made it worse or not, but it is happening. I also am having dry eyes for about a week and a half and it feels like I have "light" coming out of my eyes. Specially when I am in front of a computer for a long time. It is not double vision, it is like a "hologram light(?)" a colorful light coming from my eyes. It is also painful. About ten min after I took the vaccine I felt a "medicine taste" in my mouth, and in the back of my throat/tongue and that is when my throat started feeling scratchy/sore. I had Covid on 05/18/2020 (positive)
953235	1/18/2021	MO	40	F	1/16/2021	1/17/2021	employee reports LOC for approx. 10-15seconds witnessed by family member who states her eyes rolled back and she began to drool. she has a history of passing out when not feeling well or vaccine. Eval in ED, treated with benadryl IV and fluids. D/c home.
953240	1/18/2021	MA	51	F	12/28/2020	12/29/2020	The moment I took the vaccine I felt a strange taste in my mouth, and the back of my tongue/throat felt scratchy. I also felt tired that day. The next day I woke up extremely tired, felt like I had dry eyes and some weird color/light coming out of them. I had fever (102F) that is when I called my PCP for a televisit consultation. They told me to take Tylenol. I took it and by night after taking 1000mg dose I started feeling better. I still felt extremely tired when I woke up the next day and that is why I did not go to work. I had covid in 05/2020 ( positive on 05/18/20).

953585	1/18/2021	SC	41	F	1/6/2021	1/6/2021	<p>tightness in my chest; sob/shortness of breathe; headache; chills; body aches; extreme fatigue; bloating; shakes; blurred vision and couldn't focus on my cell phone; tachycardia/heart rate went up; dizziness/ felt dizzy; This is a spontaneous report from a contactable nurse (patient). A 41-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: ER9231), via an unspecified route of administration in the right arm on 06Jan2021 at 10:00 AM at a single dose as COVID-19 vaccine. Medical history included anaemia and anaphylactic reaction to shellfish. The patient was not pregnant at the time of vaccination, did not receive any other vaccine within 4 weeks prior to the COVID vaccine, and had no other medications within 2 weeks of vaccination. The patient was not diagnosed with COVID-19 prior to the vaccination and was not tested for COVID-19 post vaccination. There were no concomitant medications. On 06Jan2021, within 2 hours (at 12:00 PM), the patient experienced blurred vision, within 4 hours tachycardia and dizziness, within 8 hours headache, chills, body aches, and extreme fatigue, and within 12 hours, tightness in her chest, SOB, extreme fatigue, and body aches. As treatment, the patient received ibuprofen. The patient stated that she had a pretty severe reaction. She also informed her employer but nobody helped. They observed her 15 mins. post-vaccination. She was fine within 15 minutes. It was also reported that within 2 hours, she had blurry vision, tachycardia, and felt dizzy. In the middle of the day, she felt chills, shivers, dizziness, bloating, and headache. The patient also stated that she experienced shakes and taking a shower hurt, also, chest was tight all day. It was further reported that when she was sent back home from work, she started having a severe body ache, fatigue, chills, and shivers. She experienced tightness in her chest , shortness of breath, and she could barely get out of bed. This lasted all day. She still had the blurred vision and couldn't focus on her cell phone. She felt a little bit better today but was still not 100%. She contacted her MD who advised her to report this to Pfizer. The patient wanted to know if it was safe to receive the second dose of COVID-19 vaccine. It was reported that the events resulted in a doctor or other healthcare professional office/clinic visit. Outcome of the event 'Vision blurred' was not recovered, for the event</p>

951165	1/17/2021	WV	48	F	1/14/2021	1/15/2021	Approximately 28 hours after vaccine, I began to feel tingling in my right eye. Approximately 12 hours after that, my face started drooping and was numb so I went to ER. Today is Sunday, and the numbness and drooping was called Bells Palsy at the hospital.
951341	1/17/2021	WI		F	1/12/2021	1/12/2021	I has a bilateral attack of narrow angle glaucoma, seeing colored halos around lights. Had a headache and mild nausea, but attributed that to known vaccine side effects. I had never experienced anything like that. Went to ophthalmologist the next morning and pressures were elevated with some reduced visual acuity. Was given drops, sent home, returned for a check that afternoon, which were in acceptable range.
951196	1/17/2021	WI	37	F	1/6/2021	1/9/2021	Day 1 to 2---Left arm tenderness at the site for 2 days, no redness/rash/lump. Day 3---no side effects. Day 4 to Day 5---At about 8 pm, I noticed slight swelling underneath my left eye, that looked like a bag. My face was also red. The sides of my face, jaw line, & both sides of my neck were itchy. I went to bed since I was supposed to work the next morning at 6 AM (OB Nurse). I work up at 4:15 AM & my face was quite swollen, specifically my left side, my face & neck was warm to the touch & itchy. I immediately took 50mg of Benadryl & called my internal medicine doctor. Day 5---I was to be seen in the clinic at 7:00 AM. The Benadryl helped some. I was not having any breathing difficulty. I was prescribed 5 days of Prednisone. By about 1:00 PM, the swelling was worsening & my lips were tingling. I called the doctor again & they told me to go to the ER. I never had issues with my airway. The swelling was always worse on my left side of my face. I received IV fluids & SoluMedrol & was discharged with an epi pen, & told to continue the Benadryl, Prednisone, & Pepcid bid. CoVid test done in ER was negative. Day 6---The facial swelling/redness/itching remained but was improved. I was very tired. Day 7---Same as Day 6, but less swelling. Day 8---Facial swelling/redness/itching gone, but tiredness remained. Started to notice a chest heaviness/feeling of constant excitement in the center of my chest, even when at rest. Day 9-10---Tiredness remained. Intermittent Chest heaviness/feeling of excitement in the center of my chest remained. Day 11---Feeling more normal.

951227	1/17/2021	NY	65	F	1/15/2021	1/15/2021	<p>Within 10 minutes of getting the shot I noticed a progression of symptoms that increased and got worse. I got very hot. I was sweating. I was very light headed. I got a headache. I was nauseous. I believed I was going to faint. My blood pressure spiked. I noticed getting hotter and hotter within 5 or 10 minutes of the shot. I removed some outer clothing, but I still kept getting hotter. Then I noticed I was very light headed. Then I noticed I was sweating. I was very clammy and later on, a woman attendant said she could see the sweat on my. The headache began in the back of my neck. I thought I was going to faint. I became nauseous. My thinking became unclear. After about 15 minutes of this continuing to get worse, I called over the paramedics. They took my blood pressure and said it was very high. They checked my heart beat, oxygen level, lungs, and blood pressure. They checked my blood pressure again, and then again maybe 15 or so minutes after the second time and they reported to me that it was going down. I continued to not feel well and the worst of it lasted for about an hour and now, 2 full days later I still do not feel well. Yesterday, 1 day after the shot, I barely got off the couch. Today, my vision is blurry, I am still light headed, and still feel dizzy. My headache has diminished. My thinking is still foggy. I do not feel safe to drive. As far as treatment, I just sat still. I had eaten breakfast and lunch (ate lunch within an hour of the shot, but was given a ginger all and 2 cookies, which I ate. After I felt well enough to get up, I walked around the facility for a few minutes, then I went outside in the cold fresh air and continued to walk for a bit. I then drove home and stayed on the couch. I do want to state (and no where on here does it ask about this) so I am putting it here: I have only ever gotten a small pox and polio vaccination as a child, a Hep B shot four decades ago, and tetanus/whooping cough shots. I also take no medications and throughout my lifetime I have only taken a few. So, when the early pre-vaccine assessments ask about allergic reactions to injections of vaccines, I answered no because I barely ever had any. No pre-vaccination assessments also said that no adverse reactions to oral medications were a problem. And there was no where in the early assessments to give u that info. I did say, yes, about having immune system issues on the online assessment, and I told the attendant at the time of check in. It is</p>

							unidentified as far as it having a name, but I have seen a Rheumatologist last spring and she ruled out Lupis. I get sick easily with colds, so I believe I have a weak immune system.
951147	1/17/2021	DC	71	F	1/14/2021	1/14/2021	On the first day of the injection (1/14/2021) the left arm was sore and I felt tired. Towards evening and during the night I felt cold and hot at the same time - an intense burning/freezing sensation, but no sweating. On the first day after the injection (1/15/2021) the arm was still sore and I still felt tired - burning/freezing sensation had ceased. On the second day after the injection (1/16/2021) the left arm was not sore and I felt better, but at 11:00 a.m. the vein in the left temple burst and bled until about 6:00 p.m. Continuous throbbing pain across the forehead the entire day. The middle of the forehead is covered with red dots; the area near the left eye has a number of open, bloody lesions; the area below the temple (left cheek) is black and blue. There are also two bright red spots on my left knee - but no bleeding. Nausea was slight, but present during the entire day on Saturday and Sunday. Since the hospitals have Covid 19 patients and I do not have a car, I stayed home and rested in bed. Today on Sunday (1/17/2021) I can sit up and walk around somewhat; the throbbing pain in the head has ceased. The lesions are still vivid red , but slowly forming a crust. Will make contact with my doctor on Monday, when the office is open.
950998	1/17/2021	IA	28	F	1/11/2021	1/12/2021	Hot flashes, sweat out breaks, body aches, joint aches, fatigue, nasal congestion, sore throat, pink eye

951242	1/17/2021	CA	46	F	1/6/2021	1/13/2021	One week post-vaccine injection, sharp pains began on and off on the left side of my face. These moved from cheek to jaw to lip to left eye and at the nasal base. There was also stabbing pain in the left eye. I thought this was due to just being tired from long days at work, but I was also aware it might have been related to the vaccine. Therefore, I took 1600 mg of acyclovir I had on hand to prevent occasional cold sores and went to sleep. The following day, unfortunately, these sharp pains persisted on and off throughout the day. I retook acyclovir and went to work. I reported this to my PCP, and she thought it was unrelated to the vaccine. I spoke with surgeons in my office, and after examination, they both clearly said it was a reaction in my 5th cranial nerve. They both recommended prednisone or methylprednisolone, but my PCP didn't agree, and therefore, I did not receive a prescription for prednisone. I retook acyclovir, and by the following afternoon of Friday, January 15, I was no longer experiencing sharp pains on the left side of my face.
951121	1/17/2021	TX	48	F	1/4/2021	1/10/2021	Day 2,3. Mild soreness, headache; day 8, large bump in arm, hot to touch, itchy; day 9 worsening arm symptoms (injection Arm), fatigue, headache, achey; day 10 facial puffiness, left arm very achey/painful at wrist and thumb area, could not open a jar, elbow achey; left eye swelling, headache and neck achey, chills, no fever. Began steroid dose day 12, started steroids, symptoms resolving within 8 hours, day 13, awoke with puffy face, mild pain in same spots but much better.

951120	1/17/2021	IA	48	F	12/30/2020	1/9/2021	Normal tenderness, and aches. A couple days after the injection the site about 2 inches below the injection site became very bright red, hot to the touch and very itchy. It was a fairly large circle about 2 inches. It went away after about 24 hours. THEN on day 12 my arm started itching again and when I looked at my arm the circle was back...but much more red and very large, about 2 inches below injection site. I went to the dr a day or so later, was put on antibiotics - Cephalexin 500mg 3x day - Believe me when everyone saw the rash their eyes popped out! It was huge. Finally about a few days later it has finally faded. Took about 5 days or so. Also, very very fatigued. I slept alot. I am now hearing more and more of the rashes among fellow health care professionals.
951118	1/17/2021	NY	51	F	1/16/2021	1/16/2021	About 45 minutes after the shot, my eyes started to swell. Then my knees got red, hot and slightly swollen. I took Benadryl and my knees were better within an hour and the swelling slowly decreased in my eyes. It is now the next day and my eyes are just slightly puffy.
951109	1/17/2021	IN	62	F	1/15/2021	1/15/2021	Left sided facial numbness mildly affecting left lip, cheek and area around left eye. Lasted less than an hour. Continued symptoms 48 hours after vaccine are moderate persistent headache, moderate fatigue. Feeling of not well. taking tylenol.
951097	1/17/2021	FL	80	M	1/15/2021	1/15/2021	Patient complained of severe left eye itching. He self treated with OTC Benadryl and said it subsided. Saw patient today and the itch has resolved.
951039	1/17/2021	FL	32	F	1/14/2021	1/16/2021	This was the second dose given 2 weeks after the first dose. Itchy rash and hives and swollen eyes 2 days after vaccine.
950967	1/17/2021	VT	60	F	1/6/2021	1/6/2021	Within 15 mins of receiving the vaccine I had slight tingling in my R cheek. Within 2 hrs of the vaccine I had R facial numbness from maxillary to ear and lower jaw. Within 6 1/2 hrs from the vaccine, I had R lateral calf numbness. Within 8 hrs of the vaccine, I had R hand and arm numbness, R side of mouth and tip of tongue numb, R orbital swelling, scratchy R eye, maxillary tenderness. Advil was taken 9 1/2 hrs after the vaccine. Symptoms improved by next am, and gone by 24 hrs post vaccine.

950945	1/17/2021	OR	28	F	1/11/2021	1/11/2021	2 hours after the administration of the vaccine, the left side of my face briefly started to tingle. I slept for 6 hours, and when I woke up, the left side of my face was noticeably having pins and needles. I took 25 mg of oral Benadryl and slept for another 7 hours, and when I woke up, my left arm and leg were experiencing pins and needles. The left side of my face was completely numb, and I felt like that side was being pulled down toward the floor. The left, posterior side of my head felt very tingly, and I had a pounding headache behind the left eye that worsened with light. My boyfriend noticed my smile being different, and after looking in the mirror, I decided to go to ED. They were concerned about Bell's Palsy, but with the extremity involvement, they changed my plan of care to a migraine response from the vaccine. I received an MRI, IV Compazine and IV Toradol. My headache went from a 6/10 to a 2/10 after that treatment, but it came back soon after my discharge.
950939	1/17/2021	FL	47	F	12/24/2020	12/28/2020	I felt hot within 15-30 minutes after receiving the vaccine. Then 5 days later, I noticed hives on my back, swelling of my eyelids, and lips.
951618	1/17/2021	AZ	57	F	1/17/2021	1/17/2021	I had the same reaction with the first dose on 12/27/20, and it resolved, I received the 2nd dose today and about 40 minutes after dose I had some tingling in lips, and then left sided facial pain, along cheek behind eye. hurts to smile and use that side of face. have taken a Benadryl I haven't read about this as a side effect. With the first dose this did resolved after 24 hours
951345	1/17/2021	IN	31	M	1/7/2021	1/8/2021	Symptoms started approx. 24 hours later. Reports ?severe rash? along throat and chest, and swelling in face along cheekbones and under they eyes. Rash started to dissipate on its own after 1-2 days. Swelling continued so he started Benedryl on his own. Swelling decreased but has not completely subsided. Went to his PCP, she provided an Rx (wasn?t sure what it was at this time). Patient states PCP reports not worried about him getting a second dose

951446	1/17/2021	WI	41	F	1/13/2021	1/13/2021	Within 25 minutes of receiving the vaccine, my left arm became very heavy and there was a tingling/neuro sensation in left wrist/hand. A pressure began in the anterior of my throat which increased gradually. I sought treatment in our Urgent Care just after noon that same day. The Provider monitored my vitals which were good and administered liquid Pepcid. Said Provider chose not to give Benadryl as I had taken Zyrtec that morning for my allergies. I was discharged from the Urgent Care and went back to work at 1245. At 1730 hours, I had a slight headache above my right eye and extreme right-sided jaw pain with tooth sensitivity. These lasted for only 10 minutes. At 1830, the anterior and bilateral portions of my throat began to feel "prickly" and I developed a wheeze. I used an albuterol inhaler to relieve the wheeze successfully. At this time I also developed an itchiness throughout my whole body, worse on left side than right side. I took 100mg of Benadryl with no relief. At 0300, I took another dose of 100mg of Benadryl with no relief. I also took an itch pill/antihistamine of my husband's which provided no relief. At 0800, I took 20 mg of Zyrtec. At 1030, I took 100mg of Benadryl. I continued to use Benadryl throughout the day, every 4-5 hours. At 1800, I had a fullness in my throat, a tightness in my chest and my left shoulder blade felt almost numb. I also had a hoarse voice which passed by the next morning. The chest tightness was intermittent over the next day or two. On Friday, the itchiness had improved some but was still prominent. I continued to use Zyrtec and Benadryl throughout the day. My Primary Doctor called in Prednisone if needed. By Saturday morning, I felt MUCH better. Today is Sunday and I am no longer itching and I feel so much better today.
951710	1/17/2021	CT	47	F	1/15/2021	1/15/2021	15 minutes after injection started to feel numbness and pressure in left nostril/sinuses. Then progressed to numbness on left side of mouth, cheek, and eye. Lasted about 1 hour, then had slight headache rest of the day. Swelling and soreness at injection site for a day or 2.
951690	1/17/2021	OH	55	F	12/23/2020	12/30/2020	On day 7, my arm became itchy and pulsating. On day 9, I had muscle aches and fatigue. On day 10, I was extremely fatigued and had fever of 102-105 for the following 6 days. I also had diarrhea and could not keep my eyes open.

951604	1/17/2021	MN	63	F	1/11/2021	1/11/2021	2.5 hours after receiving vaccine, I started getting dizzy and vomiting. I vomited 6 or 7 times. I was so dizzy I couldn't open my eyes without getting sick. We called ER and explained that we thought I was having a reaction to the vaccine, and their response was they had never heard of that type of reaction. I was sick all night, called my primary Dr in the am and they told me to go to ER. We had to call ambulance to take me there because I was so sick and couldn't open my eyes without having to vomit. Room spun in circles. My arrival at ER, they did MRI, EKG, blood work. My blood pressure was very high, so they connected me to a heart monitor. I had low Magnesium due to vomiting so much. I was treated with Valium and anti-vert medication and fluids. I stayed overnight in hospital- had PT Jan 13th for DX of Vertigo. Then referred to Outpatient PT for Vertigo. Dr's felt it was a "coincident" that I got Vertigo shortly after vaccine, and strongly felt it was not related. . Today is Jan 17th, and I am still dizzy, but feeling better. I have an appointment with my primary Jan 18th and not sure if I should take the 2nd dose. That is the question.

951511	1/17/2021	WI	46	M	12/24/2020	12/30/2020	Patient woke up on the sixth day following vaccination unable to move head. He complained of stiffness/tightness from the injection in left deltoid up the trapezius muscle to the back of the neck. He told his wife he could not move his neck & she began to massage the neck muscle. The muscle gradually loosened up with continued massage. He also applied topical muscle rub (Tiger Balm) to the area and took some ibuprofen. When he reported to work later that morning he continued to complain of tightness and some discomfort in the left arm leading to the back of his neck, although from visual observation he did not appear to be in any pain or discomfort or have any trouble moving his neck. Symptoms persisted for apx. two more days and was treated with topical rub, massage, and ibuprofen.
951786	1/17/2021	FL	50	F	1/6/2021	1/7/2021	On 01/07/21, I woke up around 4 a.m. with a fever, headache, and severe body aches. I felt the same as I felt when I had COVID-19 on 11/01/20. I remained achy all day with a fever up to 103.4. I was fever free by the morning of 01/08/21 and returned to work but still not feeling well, still a little achy. On 01/10/21, I woke at around 5 a.m. with hives, a rash, and severe itching. The rash and hives were migrating from one part of my body to another. It started on my torso and buttocks and then migrated to my arms and legs. I took Benadryl with some relief. My feet were itching most of the night even after taking more Benadryl. On 01/11/21, I went to work and continued to have itching with a rash and hives on my legs and arms and then on my neck and face. My eyelids and lips began to swell. I was seen by provider and given Benadryl IM as well as a steroid IM (I think Depo-Medrol). They also gave me a Rx for famotidine and loratadine. I continued to have some itching all over and severe itching and swelling of my fingers that evening. I took Benadryl later that evening and loratadine and famotidine at bedtime I felt much better by the next morning with only slight swelling of my eyelids and slight itchiness. It took a couple of days for my eyelids to return to normal with no swelling.

950067	1/16/2021	WV		F	1/7/2021	1/7/2021	She did not have any problems immediately after the shot or waiting period. She went back to work and all was normal until she went to meeting. It was a little less than 4 hours after the shot. She asked to have her temperature checked, then fell on the floor and collapsed. Her BP was 190/110, and her HR was very high, beating out of her throat and throat swelled up – she could barely breathe. Normally, her BP is 120/80 and HR is usually around 68 BPM. She could not move her legs or arms, but she could move fingers. This is an anaphylactic seizure that acts like a stroke – severe slurring of speech, cannot close eyes (but vision blurred), throat swells up and constricts airway, and she yells out uncontrollably. She shivered like she was very cold, but she did not have any convulsions. It lasted around 20 minutes. EMT who took care of her. She could hear everything going on, but her vision was very blurry (could not see). She was taken to Hospital. They checked her for stroke, did a CAT scan, and took her blood. Everything came out normal. She felt fine after it was over. She was released at 8 pm to go home, and she walked out on her own. She feels that the 1,2-distearoyl-sn-glycero-3-phosphocholine [DSPC] in the vaccine may be what triggered her reaction as she thinks it may be closely related to steroids. She will NOT take the 2nd shot on advice of doctor. Dr. has been her physician for 10 years. Previous History: Seizure reaction to steroids – happened 4 hours after took the steroid – this same anaphylactic like seizure happened with the steroid, exactly. Present at that event were several people. Patient says that this is the exact same reaction she had both when she took the steroid and following the COVID vaccine.

949824	1/16/2021	CA	32	F	1/15/2021	1/15/2021	Patient had her first Moderna COVID vaccination at 4:00 PM today and 5 min later felt dizziness, worsening, associated with headache, nausea, sore throat, hot flashes, and dizziness is from side to side when she looks at her phone, no dizziness when she does not look at it. Patient primary complaint is headache on bilateral temples. All other symptoms resolved, and no dizziness if not looking at phone. Patient has history of headaches, similar in quality, but this is more intense (6/10 intensity, less than her scoliosis pains, but more than usual headache pain), but otherwise the same, pounding sensation, and she can feel throbbing. Headache is about the same currently. Started simultaneously as dizziness, immediately, unchanged. No changes in vision. Peak intensity of headache around 30 min after onset, peak at 4:30 or so. Patient notified the vaccine clinic staff and was instructed to be observed in another area, and did not improve. Patient remembered that her initial blood pressure was low and it fluctuated. Patient was then sent to the ED. Upon initial assessment in the Emergency Department 2 hours after her initial injection, the assessment is likely vasovagal near syncope with tension headache, rather than true allergic reaction. Given metoclopramide, diphenhydramine, normal saline, and obtained labs.
949828	1/16/2021	AK	32	F	1/15/2021	1/15/2021	Lightheadedness in the 5 minutes following the SARS Cove 2 vaccine #1 that rapidly progressed to lower abdominal cramping, AMS, eyes rolling upwards, and hypotension with systolic blood pressures in the 70s/80s/40s that promptly improved following IM epinephrine. Diphenhydramine, famotidine, methylprednisolone, and a LR bolus was administered. Following IM epinephrine administration, the patient's hemodynamic instability promptly improved along with her mentation. Patient was monitored for 4.5 hours before being discharged home under the care of her partner with a EpiPen autoinjector kit.

950171	1/16/2021	AZ	29	F	1/1/2021	1/8/2021	After receiving the vaccination the same day I was nauseous all day. The very next day my face was slightly swollen in areas where I've had fillers in my lips and around my lips. Three days after the vaccination I woke up with my face completely swollen one eye was swollen shut and my upper lip was extremely heave and yet icing my face the swelling went down a lot about two weeks after the vaccination I started slowly losing taste but ONLY with salty foods.
949916	1/16/2021	OH	37	F	1/15/2021	1/15/2021	Within 2 minutes post vaccination i started feeling loss of sense of myself. I could not pinpoint if i felt dizzy or vertiginous. Felt like i was off balance and i was super vernous to walk. Vertiginous episodes come and go with peaks for at least 10 times. The whole episode lasted 4 hours until i felt going back to myself. I was provided water, 1 L and orange juice, there was epi available. No anaphylactic symptoms, no shortness of breath. I drank 1,5 L of fluids and then my BP was checked 120/80, HR 80s. I note that i never felt syncopal, no diaphoresis, nausea, nor darkened vision and i was fully interactive with the bystanders. Note, i am a critical care intensivist so i had full grasp of the issue but i could now quite describe the sensation of this acute loss of instability. The best way to describe this was vertigo. Similar episode occured at the first vaccine with COVID, occurred after 10 minutes and lasted no more than 30 seconds. I didnt report that then because i thought it was just dehydration.
950818	1/16/2021	VA	33	F	1/14/2021	1/15/2021	I drank two sips of crystal light and immediately my eyes started burning and itching. A red rash developed around both eyes. I took Benadryl and applied cream and it went away 20-30 minutes later. I drink this every week and have never had a reaction.

950200	1/16/2021	OH	60	F	1/5/2021	1/8/2021	I had the vaccine on January 5 and I was fine the whole day. For the next two days my arm was sore from my elbow to my shoulder. the third day my whole upper right side was crippled were as my shoulder neck and arm was almost paralyzed and I couldn't really move without severe pain. A few hours later, my legs felt like noodles like I would fall over; I ended up leaving work early that day incase I couldn't get home. The next morning I went to work. the pain moved to my left side, same areas and creaped around my left rib cage. This has been going on since. I had off January 11 and 12 for my weekend. I haven't been back to work since January 13. I have had severe pain in my left neck, shoulder, rib cage, elbow, and now my left wrist and at times, my left hand feels numb. Also, the within the last 24-48 hours my breasts have been tender. I've been lethargic since yesterday and now my vision is blurry. My nurse keeps telling me to rotate between ibuprofen and tylenol, it's not helping at all, I am extremely uncomfortable and in pain. In fact, when I take the ibuprofen, it causes more pain. I've been trying to reach the on call doctor for pain medication and no one is calling me back. The only relief I have is when i hold my arm above my head. I am groggy and I am feeling emotional. I've missed a week of work and I'm nervous about getting my second vaccine, but I will get it. Oh, and I'm not sleeping well.

950873	1/16/2021	IL	24	F	12/31/2020	12/31/2020	?Within the first 15 minutes - injection site felt hot (right arm). ?Within the first hour - right arm felt heavy with some numbness/tingling that lasted less than 10 minutes. ?3 hours post vaccine - mild arm soreness with ROM, but not to the touch. ?7 hours post vaccine - I felt very fatigued. I could have gone to bed at 1600. I could barely keep my eyes open. ?8 hours post vaccine - fatigue was still very much present, moderate arm soreness with ROM and now to the touch. I felt very feverish, but was afebrile. ?10 hours post vaccine - fatigue was a little better because I had taken an hour nap. Body aches and headache had set in, and I still felt feverish without a fever. I couldn't stop shivering. I needed to be under multiple blankets with long sleeves, pants and thick socks on to feel even a little bit warm. ?13.5 hours post vaccine - fatigue and body aches had worsened. It's a struggle to go from laying to sitting and sitting to standing. I even fell back down to the couch a few times because I didn't have the strength to stand up all the way. Right arm soreness has progressed enough that lifting up a water bottle was a struggle, and I could not lay on my right side. My temp is now 101.4°. ?I tossed and turned between 0200-0630 shivering and aching all over. I slept with my entire body (even my head) under the blankets to try to stay warm. My head was throbbing. I got up at 0630 to take some Tylenol and woke up sometime between 0630 and 1030 drenched in sweat, so I'm assuming I had another fever. ?30.5 hours post vaccine - it's now January 1st. Body aches/stiffness, headache, fatigue, right arm soreness still very present. Switching any type of body position was a struggle. Temp is 101.2° now. I got out of bed at 1045 and got back in bed at 1200. I stayed in bed until 1845. ?48 hours post vaccine - slight headache and right arm soreness. Right arm ROM is very doable again. My neck, shoulders and hips are sore, but much better. Fatigue is gone. I'm able to move around fine without any struggle. I still have SOB from March, but I feel like over the last 24 hours it's worsened a bit.

950832	1/16/2021	IL	39	F	1/8/2021	1/15/2021	6 days after vaccination, I started to feel ill. Throat slightly scratching, almost like I was getting a cold. Then it went away. 7 days after vaccination, same thing, started to feel a little ill. Developed an itch at injection site. Nothing could be visually seen at the injection site. Within a few hours, half dollar sized round red spot appeared, with knot under it. Warm to the touch. Felt like a sunburn, with a knot under it. Day 8 after vaccination, woke up with double the size of circle at injection site. By end of day, pounding headache on left side, felt nauseous and unwell. Injection site itchy, warm to touch and began to grow in size. Went to urgent care. Once there, injection site was about the size of a baseball. Dr stated it was a reaction and prescribed an antibiotic and oral steroids. He noted how hard the knot was and was worried about cellulitis and infection. He told me to report this delayed reaction and advised me to not get a second dose. Since being there, about an hour ago, I feel worse. Ears are ringing loudly, increased headache, and almost a wet feeling at swollen injection site.
950815	1/16/2021	AK	35	M	1/7/2021	1/8/2021	First dose of vaccine received on 12/18/20: no adverse reaction, felt great Second dose of vaccine received Thursday night, 1/7/21: no adverse reaction that night but woke up with sore L arm in the morning. So, no unusual side effect for 24h, then experienced on Friday night: headaches, chills, body ache, fatigue. Took 650 mg of acetaminophen. Same symptoms on Saturday with increase in intensity, plus mild fever in the evening at 99.6 F (instead of 97.4 F which is "my normal"), nausea, painful eye balls, sensitivity to light and noise, loss of appetite. Took 650 mg tabs of acetaminophen throughout the day per bottle instruction. Extreme fatigue Saturday night and severe headaches, fever at 100.2 F that night, treated with acetaminophen. By Sunday night temperature was 100.9 F, extreme fatigue and severe headaches and painful eye balls, heart rate racing up to 120 BPM when moving from bathroom to living room. Went back down to 65 BPM after about 1min at rest. Tried massages of upper body to loosen muscle, seemed to help with bodyache. Spent Saturday through Tuesday at home. Rapid covid 19 test negative. Back to work on Wednesday.

950389	1/16/2021	MN	63	F	1/11/2021	1/15/2021	On Friday, January 15 at approximately 6 PM while seated in a reclining chair watching television I started to develop hives below my right gluteal fold. Over the next six hours approximately 300 hives appeared on my skin. They were very itchy. At approximately midnight my lip began to swell and being a certified registered nurse anesthetist, who lives alone, I knew it was time to head to the ER. Prior to going to the ER I cleaned the lesions With alcohol, took prednisone 10 mg PO, and applied hydrocortisone cream. In the ER, I was given Benadryl 50 mg PO and Pepcid 20 mg and observed for one hour. The hives remained but there was no respiratory compromise. Approximately six hours later the hives were still increasing in size and number, were unbearably itchy and my swollen lips had not subsided. I took Claritin 10 mg PO and returned to the same ER and was given Epinephrine 0.3 mg IM, prednisone 20 mg po and observed for three hours. The hives did not decrease and again there was no respiratory compromise so I was sent home on prednisone And a H-1 blocker. Of note, both my palms and lips have been bright cherry red. I finished a five day course of Macrobid on January 13 at 10 AM. Final diagnosis: Allergic reaction

947011	1/15/2021	CA	69	M	1/8/2021	1/8/2021	My reaction occurred approximately 12 hrs. following the injection. I awoke on the night of Jan. 8 after rolling over on my right arm where the injection site was. I immediately awakened with sharp burning pain and as I became more awake, I realized that I was confused, slightly disoriented and very diaphoretic. I alternated between having a chill to sweating profusely. My head was throbbing as in a migraine and the orbits around my eyes hurt as well. I was extremely nauseated to the point of gagging but I had not eaten anything so I did not throw up. Later that night I also had watery diarrhea. All of my joints ached and my pelvic region seemed to hurt more than the rest of my body and joints. When I got up, I found that my equilibrium was off and that I was dizzy. My temperature 100.2 but over the next 2 days it went as high as 102, but continued around 100.8 for several hours. Early in the a.m. I called my PCP service and later spoke with the physician on call. We discussed in depth. At that point, my panic had subsided somewhat and he told me to take Tylenol for my fever and I also had Benadryl available and I took 50 mg. I hydrated myself (I did not have an appetite) but forced myself to drink fluids and eat a serving of fresh fruit. By mid-day on 1/9 I was feeling less anxious and was able to sit and watch t.v. I continued to take Tylenol and Benadryl and slept for almost 16 hours. On Sunday I was more improved. Since then, I have continued to feel dizziness and tire very easily. Today, my equilibrium is still off and I have difficulty focusing. I have spoken with my PCP twice this week and I will be going into the Covid research clinic next week as they want to examine me and draw blood samples close to the two week period after the first injection.
947103	1/15/2021	TX	52	F	1/14/2021	1/14/2021	Blurred vision, Generalized body aches. Treatment- Ibuprofen and Tylenol. Outcome: blurred vision resolved, no improvement in generalized body aches.
948170	1/15/2021	WY	70	F	1/6/2021	1/7/2021	Several hours after the vaccine I experienced the usual side effects: sore arm, fatigue, muscle aches; which have passed. My big concern is that I also suddenly developed dark, stringy images and blurry vision in my left eye. The eye symptoms are still present.

947110	1/15/2021	CA	48	F	1/9/2021	1/12/2021	Patient states she noticed a welt on her arm 3 days after receiving the 2nd dose of the vaccine. She tried applying ice on the most red part on the arm but the swelling continued to grow. Then she started applying heat in addition to applying HPR+ cream that she uses for urticaria. The only thing that the patient stated that helped a little was the ice pack. The patient ended up going to the emergency department on 1/14/2020 for the rash / welt that developed beyond her arm and to the neck and eyelid area which she described as itchy. The patient was prescribed a 4 day prednisone 50mg daily course along with Benadryl as needed and Pepcid 40mg daily which she states have helped alleviate the itchiness but has not completely resolved yet as of today 1/15/2020. Per ED note, patient presented with mild erythema around the injection site and non-specific rash to the neck. Patient has clear speech and no oral swelling and no signs of anaphylaxis. Patient discharged home in stable condition and advised to follow up with primary care doctor in 2-3 days.
947017	1/15/2021	TX	43	F	1/14/2021	1/14/2021	HA, eye puffiness and redness, generalized body aches, malaise. Treatment - Ibuprofen. Outcome- does not interfere with ADL's continue to work. No improvement in symptoms will continue to monitor.
946998	1/15/2021	WI	44	F	1/15/2021	1/15/2021	Pt reported feeling itchy "all over" 19 minutes post vaccination. She denied any other sxs such as SOB, throat tightness, difficulty swelling, lightheadedness, nausea, vision change. I checked her BP and pulse @ 1117 and again @ 1122. Her BP and pulse remained stable and in normal range. Her lungs were clear, no wheezing. There was no visible rash. I administered 25 mg of benadryl @ 1125. She left the clinic 35 minutes post vaccine in good condition without evidence of significant reaction.

946901	1/15/2021	ME	47	M	1/13/2021	1/13/2021	1/13/21 0740 Received second dose of COVID-19 vaccine, which was scheduled for that morning. Did not experience anaphylaxis or other symptoms of vaccine injury. I took 1gram of Tylenol PO when I got back to my motel by 0830. By 0924 I noted that my left deltoid (injection site) and arm were very sore/achy. I fell asleep until 1740. I noted that I was experiencing more body aches at this time (joint and muscle, especially in my bilateral shoulders, lower back, knees and pelvis). Calf muscles were quite sore. I made pasta with red sauce and made a pot of blueberry tea, ate and went back to bed. 2327 I woke again with weird fever dreams and my right bicep was intermittently twitching. I think I was starting to run a low grade fever at this time (my ears felt hot, and my stomach was queasy but was not nauseous), no diaphoresis, shortness of breath or airway constriction. I remained awake until 0200, 1/14/21. By 0400 I was experiencing mild chills, face was flushed, headache on the right, with pressure behind my right eye, parietal and occipital areas of my skull. The pain extended into the right muscles of my neck (trapezius, levator scapulae and sternocleidomastoid muscles). Bilateral upper arm muscles and joints were 5:10 pain. I was also experiencing mild photophobia, but not migraine related, and a mild non-productive cough and pressure behind my facial and ethmoid sinuses with scant viscous secretions at the back of my throat. 0433 I forced myself to get out of bed and head to the bathroom. My temp was 101. I took a very hot shower and am back in bed. Experiencing a lot of malaise and lethargy. 1/15/21 0830 temp is currently 99.1, headache is present, 3:10. Joint aches have mostly subsided. Injection site is warm and tender, but no erythema is present.

947189	1/15/2021	CT	30	F	1/12/2021	1/13/2021	Approximately 24 hours after the shot I experienced muscle aches, and pain at the injection site. A general feeling of lethargy became progressively worse throughout the day. from morning to noon i felt off but thought i was just psyching myself out. My noon I realized i was experiencing side effects. Around 2pm i began to experience mild chills. While cooking dinner at around 5pm I felt like my muscle aches in my back were on the threshold of feeling likes spasms. around 8-9pm before going to bed the symptoms were at there worst and comparable to a moderate illness. By the next morning I felt about 80% better but got headaches between my eyes whenever i stood up or moved too fast. As of today I feel about 95% better but still somewhat lethargic.

A 38-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at site of left deltoid (anatomical location: reported as left shoulder) at 10:30 on 06Jan2021 at single dose for COVID-19 immunization. Medical history included COVID symptoms from 12Mar2020 and COVID tested positive by swab from 24Mar2020. There were no concomitant medications. Clinical course: patient was fine on the 06Jan2021, when he got the vaccine. He did not feel well on 07Jan2021, He had soreness in left shoulder from injection site. In the morning, when he woke up, he felt dizzy and had severe muscle aches and pain all over his body, felt like a sunburn all over his back. His skin and arm were very sore. He took a shower and lost his balance twice in the shower because he was dizzy. He was able to make it to work. At work, he started having a headache. It started to get worse. The burning in his back and skin got worse. He took some paracetamol (TYLENOL) in the morning and the headache started to go down. It came back again worse, so he took paracetamol again. He took two tablets of 500mg paracetamol and he tried to go rest on his break. He took a nap on his break for 15 minutes. When he got up from his nap, he found his achiness was much better. The burning was still there. It was getting less but still there. The headache was less when he woke up from the nap. Headache came back worse and he couldn't open eyes. He took paracetamol. He took two 500mg tablets again. He didn't have any energy sitting at his desk doing nothing. He was not able to look at his computer because of the headache. He could not work on 08Jan2021. He left work and got home and was having headache on the ride home. When he got home, he didn't have appetite.         </p>

---

He ate a banana and an orange. He felt like his body was getting warm and had heat over his eye. His temp was 100.8. last night on 07Jan2021. Headache started on 07Jan2021 and he continued to have headache. Fever was coming down, but he was still warm today. He didn't feel that like a sunburn all over his back today. Severe muscle aches and pain all over his body were still there, but less than 07Jan2021. He took ibuprofen (ADVIL) last night on 07Jan2021 and another dose of paracetamol this morning on 08Jan2021. He saw the medical team at the nursing home where he works which were nurses and doctors. They suggested he go home and rest. It was mentioned that patient developed COVID symptoms on 12Mar2020 and tested positive for COVID by swab on 24Mar2020. Could he take the second dose? He didn't know if it is an allergic reaction. He thought that burning over the skin is an allergic reaction. He knew they didn't know a lot about the vaccine. He didn't think he should take the second dose because it would make him miss more work and he already missed work today. Is the second dose recommended if it is an allergic reaction such as burning over the skin? Will Pfizer reimburse him for missing work? Vaccination Facility Type in nursing Home. No history of all previous immunization with the Pfizer vaccine considered as suspect. No additional vaccines administered on same date of the Pfizer suspect. No adverse events required a visit to Emergency Room or Physician Office. No prior vaccinations within 4 weeks. No adverse events following prior vaccinations. The outcome of event did not feel well, soreness in left shoulder from injection site, Dizzy, lost his balance twice, didn't have any energy /doing nothing/could not work, didn't have appetite and felt like his body was getting warm and had heat over his eye was unknown; of event headache was not recovered; while of other events was recovering. Information on the Lot/Batch number has been requested.

946874	1/15/2021	MA	24	U	1/13/2021	1/13/2021	reported onset of mild headache and bilateral visual field defects (black spots) that got worse with sitting and standing vs. lying down, started at 4:30pm. Phone call at 5:30pm with Dr. She had gotten her covid vaccine earlier that day at 9am. She was feeling better by the time I had called her, and we tested her vision over the phone and she denied any black spots at the time, so I advised Tylenol 1000mg and call me at any point if things get worse. Plan to follow up with eye doctor on Saturday 1/16/2021.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
947506	1/15/2021	PA	44	F	1/5/2021	1/1/2021	Dizzy; headaches; flu feeling; side effects she had were like the COVID symptoms she had, like the chills and everything; lethargic feeling; weak; Nausea; the whole left side of her body went numb including even her vagina; left side of her body was so numb and weird and tingly feeling/left leg went numb; whole left side of face swelled up; left eye turned red; pressure in head; felt like someone squeezing her eyeball out; eye went black/left eye looked bruised/blackness around the eyes; whole face went numb/left side of face slightly numb; bells palsy; allergic reaction; This is a spontaneous report from a contactable consumer (patient). A 44-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration in arm left on 05Jan2021 at single dose for COVID-19 immunization. Medical history included cutaneous t-cell lymphoma from 2017 and ongoing, ongoing cholesterol, ongoing thyroid, covid-19 from Nov2020 to an unknown date not ongoing (lasted about 1-1.5 months; she did not have any breathing problems) and blood cancer. Concomitant medication included bexarotene ongoing for cutaneous T-cell lymphoma, rosuvastatin ongoing for cholesterol, levothyroxine ongoing for thyroid. The patient underwent lab tests and procedures which included COVID 19: positive in Nov2020, found out tested positive around holiday. Clinical course: onset about 26 hours after administered the first dose; onset as soon as she got back to work next day: 06Jan2021. The side effects were at their worst for at least 24-48 hours. Further described as all side effects occurred only on left side of her body: whole left side of face swelled up on 06Jan2021; left eye turned red on 06Jan2021; whole face went numb/left side of face slightly numb on 05Jan2021; eye went black/left eye looked bruised on 05Jan2021; pressure in head on 06Jan2021; felt like someone squeezing her eyeball out on 06Jan2021, within the first 24-48 hours, her 'left leg went numb'. She called to talk to physician and nurse who advised her to take Benadryl; which she did take and the Benadryl stopped the side effects; but she could not take a lot of Benadryl or anything because she was at work. She stayed at work because at least there were healthcare professionals, adults in case she passed out; at home she has 7 young children and is also raising her grandchild. The side effects did not completely go away.

							<p>The arm thing was normal; The next day she was at work and had the swelling on left side of face; blackness around the eyes; arriving home she had headaches on 07Jan2021 and then her leg went numb for like 20 mins; the whole left side of her body went numb including even her vagina; left side of her body was so numb and weird and tingly feeling that she started panicking because she was driving on 06Jan2021. She calmed herself down thinking it's only the left side; you can drive with your right side to get home and be fine. It was more like left side of her body was asleep, tingling, she has never had that happen before. Everything else like the headache, flu feeling was about 48 hours later (on 07Jan2021). She had COVID already back in Nov2020 for about 1-1.5 months; the next side effects she had were like the COVID symptoms she had, like the chills and everything on 06Jan2021. She had the lethargic feeling again, her head was hurting, she felt extremely weak on 06Jan2021. Patient also felt nausea on 06Jan2021, Dizzy on 08Jan2021. Another doctor said it sounded like the side effects she experienced with the vaccine sounded like allergic reaction or Bell's palsy. Patient was asking the doctor if she could get like an Epi-pen or prescription Benadryl or something because she is afraid to get the second dose of Pfizer COVID-19 Vaccine and not have something to respond to side effects with. The outcome of event whole face went numb/left side of face slightly numb was recovered on 07Jan2021, for headaches was recovering, chills and nausea was recovered on 08Jan2021. Outcome of other events was unknown. Information about lot/batch number has been requested.</p>

947518	1/15/2021	OR	34	F	1/5/2021	1/5/2021	tunnel vision; experienced a sudden onset of vertigo; presyncope; My hands became cold and numb; My hands became cold and numb; fatigue; sore arm, leg/thigh aching; sniffles; sore throat; brief dry cough; slight headache; neck ache; This is a spontaneous report from a contactable Nurse (patient). A 34-year-old non-pregnant female patient received the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 05Jan2021 at 12:30 at single dose in left arm for covid-19 immunization. Medical history included Mild ADHD/ADD. The patient's concomitant medications were not reported. Approximately 5 minutes after receiving vaccination, she was standing in the observation room (where they had all of them stay for at least 15 minutes to ensure no severe reactions) and experienced a sudden onset of vertigo, tunnel vision and pre-syncope. Her hands became cold and numb and she was trying to talk to another staff member who was arranging/scheduling her second vaccination dose at the same time when this event occurred, but it subsided quickly and she started to feel normal again. All these events occurred at 12:45 on 05Jan2021. She reported this event right away and they had her stay in the room longer. She was stable at that point but experienced these symptoms again but very mildly twice more while she walked back to her car to go home. Other side effects on 05Jan2021 that started in the evening and for the following 2-3 days included fatigue, sore arm, leg/thigh aching, sniffles/sore throat, brief dry cough and slight headache/neck ache. Very mild and tolerable symptoms. All events were reported as non-serious by reporter. The patient did not receive treatment for the events. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination, and the patient has not been tested for COVID-19 since the vaccination. The outcome of all events was resolved in Jan2021. Information on the lot/batch number has been requested.; Sender's Comments: Based on temporal association, a possible contributory role of BNT162B2 cannot be excluded for reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern

A 59-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection) via an unspecified route of administration on 16Dec2020, 12:00PM for the first dose (lot number: EH9899) and on 06Jan2021, 12:00PM for the second dose (lot number: EH1284), both in the left arm at a single dose for COVID-19 immunization. The patient's medical history included beta thalassaemia trait and BPH (benign prostatic hyperplasia), both from an unknown date. The patient had no known allergies. Concomitant medications included tadalafil, fluticasone propionate (FLONASE), ketotifen (ZADITOR), and fexofenadine hydrochloride (ALLEGRA); these medications were also received within 2 weeks of vaccination. The patient did not receive any other vaccines within 4 weeks prior to BNT162B2. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. On 07Jan2021, 08:00AM, the patient experienced swelling of upper left eyelid without redness, heat, or pain; onset was in morning after 2nd dose and c/w (consistent with) blepharochalasis. There was no evidence of hordeolum or conjunctivitis. Four days after dose, there was no change in swelling which is not responding to Allegra or Tobradex eye drops. There is short-lived relief with cold compresses. Tobradex was suggested in curbside consult with an ophthalmologist colleague. The event resulted in doctor or other healthcare professional office/clinic visit. Outcome of the event at the time of last observation was not recovered. The report was considered as non-serious; the events did not result in death, were not life threatening, did not caused/prolonged hospitalization, were not disabling/incapacitating, and did not caused any congenital anomaly/birth defect.</p>

947498	1/15/2021			F	1/5/2021	1/1/2021	sharp spams on the right side on the bottom/back of my head; some puffiness and swelling under my eye; some puffiness and swelling under my eye; swelling and pain in my arm; swelling and pain in my arm; sharp pain; This is a spontaneous report from a contactable Other Health Professional (patient) reported that a (44 unknown unit) female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot/Batch Number and Expiration Date unknown) via an unspecified route of administration on 05Jan2021 at single dose for COVID-19 immunisation. The patient's medical history included had fillers or Botox under eyes as it was injected with that 5 months before Jan2021. The concomitant medications were not reported. Patient experienced normal side effects like swelling and pain in arm, but (about 2 days before 08Jan2021) on 06Jan2021 she experienced some puffiness and swelling under eye. This Saturday (09Jan2021) patient started experiencing sharp spams on the right side on the bottom/back of my head. Persistent for 3 days. The sharp pain lasts for a few seconds then goes away and then randomly comes again. Patient was experiencing symptoms and wanted to see if others have been reporting this as well. The outcome of events was unknown. Information about lot/batch number has been requested.

946542	1/15/2021	NY	26	F	1/10/2021	1/13/2021	Patient developed angioedema of her eyelids after COVID-19 vaccination. She received her Covid vaccine on 1/10/2021 at 11:30 AM. She received the Pfizer vaccine. She works at a nursing home. She had some fatigue and tiredness during the day but woke up on the second day without any symptoms. On 1/30/2021, she developed bilateral eyelid swelling. The swelling is mild to moderate intensity involving the upper and lower eyelids bilaterally with a prickly burning sensation associated with pruritus. The reaction lasted less than a day and resolved without any skin desquamation, scarring or bruising. She denies any hives anywhere else. She does not have a large local reaction at the injection site. She denies respiratory complaints, GI symptoms, lightheadedness, loss of consciousness, wheezing, swelling of her throat or other symptoms consistent with anaphylaxis. She used Benadryl with significant improvement. She had a significant reaction after influenza vaccination consisting of swelling of her face and her eyelids with development of dry patches bilaterally within 2 days, resolving with skin desquamation. The reaction lasted for 1 week. She received her influenza vaccination in October 20, 2020. She was seen in our office in 2012 for bilateral eyelid angioedema with associated urticaria shortly after swimming in the pool. She was given oral antihistamines ?Zyrtec once daily? with significant improvement as well as prevention of this reaction. She has not had this reaction for more than 6 years.
946585	1/15/2021	WI	56	F	1/15/2021	1/15/2021	She reports symptoms of dizziness. Patient rates her dizziness at 1 (1-10 scale), her dizziness does not change with position or activity. She reports "I only have a little dizziness, nothing else". She reports she her contacts are in place and her vision is unchanged. She questioned if this was in her head because someone she knows had dizziness after her COVID vaccine". Speech and behavior normal. ? Injection time 0814 Observation time 0814-0853 ? Treatment/intervention - Patient stayed in observation area >30 minutes, drank 480 ml of water while resting. Patient denied need for further evaluation. Husband is driving her home (this was pre-planned prior to injection).

948336	1/15/2021		54	F	1/4/2021	1/6/2021	Pain in left arm. Joint pain, I immediately had nausea and a metallic taste in my mouth for 2 hours. Mysugar climbed to 250 by dinner time. By bed tme my sugar was 300. I did not eat dinner. I had no appectite. I increased my insulin and metformin dose. I had chills and fevery thru the night and the next day. High fever 101. I treated this with tylenol and showers. I was really sleepy all day. I had little to eat and still my sugar was 300 most of the day. on Jan 6. I woke up and had a hemmorrhage in my right eye. I called my retinol specialist and and received an injection of Eylea on Jan 7, 2021
948389	1/15/2021	NE	43	F	1/13/2021	1/13/2021	Patient to ED for evaluation of symptoms after a Covid vaccine earlier today. She had her second Covid vaccine here at the hospital where she works about 8:30 AM. About 10:00 she started having shakes and a headache and just not feeling right. She has had some periods of palpitations and feeling like her heart is racing as well. She called employee health and was referred in to see us. At this time she says she still has some headache and overall feels weird but no other new symptoms. No chest pain or shortness of breath or palpitations at this time. No trouble breathing. No fever. No visual changes but the light does bother her eyes. She does have a history of migraine headaches that are like this at times. The pain is in her forehead, not globally or in her neck. She has no neck pain or stiffness. She did not have much of reaction after her first vaccination. She does have a history of hypertension but has been taken off her medication because her blood pressures have been well controlled. She states that she does check them regularly at home and they have been okay. She denies any other recent sick symptoms. No other significant chronic underlying medical problems. Medications administered in the ED included ibuprofen 600mg and diphenhydramine 25mg orally at 1415, and acetaminophen 1000mg orally at 1000mg. Headache was better at 1540, blood pressure was lower at 139/90, no shaking. Pt discharged home.

<i>VAERS_ID</i>	<i>RECVDATE</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
948396	1/15/2021	AZ	32	F	1/12/2021	1/12/2021	Symptoms started to occur roughly an hour and a half after the injection. Symptoms included tingling of pins and needles throughout my body. A weird overwhelming feeling that something was wrong with my body but I did not know what and that my body was going to shut down. I would go through phases where my body would get overwhelmed flushed and hot and I would be confused or dazed in that moment until it passed. I started to have vision problems in my right eye with it going blurry and pain behind my left eye almost as if it was swollen. It felt like there was something in the back of my thought and I had to cough to get it out and it felt like that my bottom lip was swollen. When I got to the ER because I did not know what was going on when waiting in the waiting room my symptoms worsened. In the ER lobby I started having issues with my speech with not being able to say what I wanted to say and repeating the somethings over and over again. The tingling starting going into my throat, neck, and head area and I started getting sharp pain in my head. When everything started to intensify the knot in my throat got worse and I started coughing more. Before I knew it I was unable to swallow, I was unable to breath, it felt like my throat was closing shut and I had to tell medical staff due to still being in the ER lobbing and not having any type of medication. I felt like I was going to pass out and was seeing flying dots due to having a hard time breathing, it felt like I was going to choke on my tongue and my throat was completely impeded. After being taken back in the ER they provided me with the following medications. diphenhydraAMINE 50 MG/ML, dexAMETHasone sodium phos, famotidine 20 mg/2 mL ink, EPINEPHrine 1 mg/mL. 1 mL inj. And was monitored until my vitals were stable to go home.

948410	1/15/2021	NC	40	F	1/14/2021	1/14/2021	<p>This facility staff member received her first dose of the MODERNA COVID-19 vaccine (Lot037K20A/EXP 6/22/21) at clinic at approximately 9:15AM on 1/14/21. She initially answered "no" to any allergies on the VAR but revealed to the pharmacist reviewing the VAR that she had experienced an allergy to food and contrast dye that required an epi-pen and hospital attention. She did not offer additional details and explained that she had tolerated other shots (including the 2020 flu shot) without incident. I advised patient to remain for a 30 minute monitoring period post-vaccination due to history of allergic reaction. Patient presented with some anxiety before the shot and immediately started to complain of feeling "sick" and said she was having trouble breathing due to chest pressure. We advised patient to remove her mask and provided her with water and a trash can though no vomiting occurred. After 15-20 minutes, patient still complained of chest pressure and difficulty breathing. When asked if she was experiencing any itchiness or throat swelling, patient said she did feel some throat swelling so she was given 25MG of Benadryl. After an additional 15 minutes, patient's condition seemed unchanged (not worsening, not improving) so the facility's nursing team was called to evaluate patient. Patient said she was still experiencing difficulty breathing and throat swelling so nursing advised use of EPI-PEN and patient consented. I administered a dose of 0.3MG (LOT0FM4066/EXP 02/2022) to the right lateral thigh and nurse called for EMS. Immediately after injection, patient's eyes fluttered and she seemed to be on the verge of fainting. Nursing checked her oxygen saturation which was 100%. Patient reported no improvement after 5 minutes so another EPI-PEN 0.3MG was administered to the left lateral thigh. Nursing also gave the patient 81MG chewable aspirin due to the patient experiencing a stroke last month. EMS arrived a few minutes after the second EPI-PEN dose and patient was transported to the hospital for evaluation. Facility reported that patient went home that afternoon but did not provide details. Based on my assessment of patient's symptoms and behavior, I feel it is likely that she experienced either an acute panic attack or anaphylaxis due to vaccine administration. I called the patient today (the day after the incident) and she confirms that she received treatment for an anaphylactic reaction to the Moderna COVID shot and is</p>

948287	1/15/2021	OR	50	F	1/11/2021	1/11/2021	Swelling around both eyes, itching around eyes, progressing to general facial itching. Swelling worsening over the 5 days after injection leading to Urgent Care visit.
948458	1/15/2021	CT	32	F	1/13/2021	1/14/2021	Severe arm pain at injection site night of. At 5:15 AM the following morning (1/14/21) I experienced lightheadedness and fainted off the toilet hitting my face on the wall/radiator in front of me. My husband (who witnessed the fainting episode) stated I began convulsing and my eyes were rolled to the back of my head for 5-10 seconds. Upon regaining consciousness I was covered in sweat. After being assisted back to bed, I had nausea and headache with continued severe pain at injection site. I went to the ER around 6:45 AM since my severe headache, dizziness and nausea continued and to examine if I broke my nose in the fall. While in triage at the ER I experienced severe nausea and a second episode of fainting.
948499	1/15/2021	KY	55	F	1/14/2021	1/15/2021	PT C/O WAKING UP WITH BAD MIGRAINE AND OCULAR AURA THIS MORNING, MAINLY IN RIGHT EYE, ALONG WITH SORENESS IN ARM WHERE VACCINATED; ALSO C/O EXTREME ITCHING IN HER FEET.
949532	1/15/2021	WA	63	F	1/15/2021	1/15/2021	She states that she felt lightheaded and that her vision "went black" for about 10 seconds, during which time she was standing and holding on to her husband, and then quickly recovered spontaneously and subsequently felt fine. Has had a previous history of this adverse event with previous injections. Namely the allergy shots she gets from her allergist.
949555	1/15/2021	NY	71	M	1/13/2021	1/14/2021	Received Pfizer vaccine, first dose on Wed. 01/13/21 between 12 and 1 P.M. Thurs. 01/14/21 in the afternoon he began to note that he had difficulty walking. Went to bed when he woke up at 5:48 A.M. he reported he had ataxia. Patient reported having to walk in tiny steps to stay upright. He went to the emergency room. Had CT scan of head and found blood clots. MRI performed. Stroke found in right PCA territory, but no loss in strength in left lower extremity. Sensation and vision intact. Strength in all four extremities is 5 out of 5.

949566	1/15/2021	KS	29	F	1/13/2021	1/13/2021	Jan.13th- Diarrhea, extreme fatigue, extreme nausea, body aches, congestion, rash under eyes and on nose (itchy and burning). Jan14- extreme fatigue, nausea, loss of appetite, rash continues but no itching, light on burning, body aches, cold, could not get warm, temp stayed around 96.0-97.0 Jan 15- fatigue, nausea, extreme congestion, sweats, symptoms of a fever over night and during day. Cold sweats, shakes, cold then hot, body aches, fatigue. These happened off and on through the day. When started feeling crappy took temp and it was 99.6-99.8. When feeling cold temper drops down to 97.0 scratchy voice voice congestion, runny nose, little sore throat, when swallowing pills or hard texture foods, sometimes drinking something. Overall feeling of a cold. I think it?s important to note that I had Covid-19 in the month of November and received my first vaccine December 22nd. I had side effects after the first shot but not nearly as bad as this time. I am nurse in a doctors office if that matters at all. I am still feeling under the weather but wanted to get these down before I forgot them.
949567	1/15/2021	CA	28	F	1/8/2021	1/9/2021	Facial swelling, especially around the eyes (no history of facial injections or fillers). Symptom was present upon waking the day after vaccine administration, remained for a couple hours and dissipated on its own
949632	1/15/2021	PA	59	F	1/14/2021	1/14/2021	Five to seven minutes after injection felt dizziness, chest tightness, flash, pressure in eyes, nausea. Blood pressure was measured by a medical technician, first measurement 178/92 mmHg, ten minutes later systolic 147, after another 10 minutes 141 mm Hg. Was no treatment offered at that time, had a choice to be escorted to an emergency department, or leave. Left with BP 141/75 mmHg, took Benicar 20 mg at 11am. At 2 pm BP was 136/72 mmHg, at 4 pm 104/72 mmHg. The rest of the day had a light headache .
949633	1/15/2021	WA	61	F	1/10/2021	1/13/2021	Increased fatigue with dizziness. On the 3rd day at around 2130 I walked into my home and woke up on the floor. EMS was called and I was sent to the emergency room. Bruising to my left eye with a short LOC.
949771	1/15/2021	CA	28	F	1/14/2021	1/15/2021	Body aches, headache, fatigue. But the one concerning me is my right eye is swelling and is very painful.

947596	1/15/2021	FL		F	1/5/2021	1/8/2021	numbness in her mouth and shoulder; numbness in her mouth and shoulder; blurry vision; elevated pressure; her arm became painful; sharp pain in the middle of the chest; This is a spontaneous report from a contactable consumer reported for self. This female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 05Jan2021 15:30 pm at single dose for covid-19 immunisation. Medical history included rib surgery last Sep2020. She had an episode on Friday morning 08Jan2021 with a sharp pain in the middle of the chest that was so bad she had to take Ibuprofen and lie down with a heating pad to her chest. After that, she had numbness in her mouth and shoulder, and had blurry vision to which she had her son call 911. As the EMTs arrived they recorded her with elevated pressure and took a cardiogram which reported everything was 'perfect', no stroke, no heart attack. She mentioned that she had a rib surgery last Sep2020 and was still healing and took pressure medication for it, She mentioned that the EMTs told her to take the medication in the morning and not in the afternoon and that the episode was not related to the vaccine. She also reported that her arm became painful for a day after the injection but it did not cause her anything else. She knows that other ladies who received the vaccine in her building had flu-like symptoms and was asking if her symptoms were reported for the vaccine. Patient mentioned that she was calling to report her side effects and that she will receive the 2nd dose on 26Jan2021. Outcome of the events was unknown. Information about lot/batch number has been requested.

947951	1/15/2021	NJ	28	F	1/8/2021	1/9/2021	I received the vaccine around 10:40 am on January 8th, 2021. My arm was a little sore that night, but nothing too bad. I took some ibuprofen before I went to bed (400mg, I think). I felt fine the morning of January 9th; I went and bought some groceries and then took a walk in the neighborhood. I did get pretty chilled while walking since it was so cold. When I got back to my apartment around 2:00 I took a nap, then took a very hot shower trying to get warm again. Around 3:00 pm my arm started to become noticeably more sore so I took ibuprofen (600mg). Between 3:15 pm and 3:30 pm I suddenly started to feel warm and nauseous. I felt light-headed and while I was upright (standing or moving around) I would get some black spots in my vision. I went and lay down around 4:00 pm. I stayed in bed that whole evening with a fever (at its highest, 102), I was pretty nauseous, my arm hurt to the point where I couldn't move it and my wrist and hand felt very weak. I took some more ibuprofen (maybe another 600mg?) sometime after 8:00pm. The next day, Sunday January 10th, I mostly stayed in bed and ran a light fever (99.9) and was very fatigued. Arm was very sore and I had limited use of it until the latter part of the day. Monday, January 11th, I felt mostly fine, I could use my arm with no issue, but I stayed home from work due to the fatigue. By Tuesday I was fairly normal, just tired.

947949	1/15/2021	CO	51	F	1/4/2021	1/5/2021	Shortness of breath; Joint pain; fatigue; headache; ribs pain; chest pressure; burning feeling of my eyes; This is a spontaneous report from a contactable healthcare professional reporting for herself. A 51-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number/expiration date: not provided), via an unspecified route of administration, on 04Jan2021 03:45 PM (at the age of 51 years old) as a single dose in the left arm for COVID-19 vaccination. Relevant medical history included prior to the vaccination, the patient was diagnosed with COVID-19 on an unknown date. The patient did not have any known allergies to medications, food, or other products. Concomitant medication (other medications taken in two weeks) were none. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 05Jan2021, at 05:00 AM, the patient experienced shortness of breath, joint pain, headache, fatigue, ribs pain, chest pressure and burning feeling of her eyes. Treatment received for the events included an inhaler and acetaminophen (TYLENOL). The outcome of the events shortness of breath, joint pain, headache, fatigue, ribs pain, chest pressure and burning feeling of her eyes was recovering. Since the vaccination, the patient had not been tested for COVID-19. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow-up.
947904	1/15/2021	SC	40	F	1/13/2021	1/14/2021	Patient had regular soreness, redness of injection site. Fever, chills, fatigue hours after vaccine. Patient experienced syncope the morning after vaccination for about 15 minutes. Having bruised head and left eye.

947893	1/15/2021			F	12/30/2020	12/30/2020	occasional twitching on the left eye; she had a pain on the eye in a split of a second; This is a spontaneous report from a contactable healthcare professional via the Medical Information Team. A female patient of an unspecified age started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration from 30Dec2020 to 30Dec2020 at a single dose for an unspecified indication. The patient's medical history and concomitant medications were not reported. It was reported that the patient received the first dose of the COVID-19 vaccine on 30Dec2020 and she noticed occasional twitching on the left eye and has been fading away because it has been 10 days now after having her first dose. When she had the COVID-19 vaccine, after a minute or so, she had a pain on the eye in a split of a second. The outcome of the event occasional twitching on the left eye was recovering while unknown for the other event. Information on the lot/batch number has been requested.
947892	1/15/2021	TN		M	1/4/2021	1/1/2021	left upper shoulder, it was little sore; my face was itching; My eyes puffed up; This is a spontaneous report from a contactable consumer via the Medical Information Team. A 76-year-old male patient started to receive bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration from 04Jan2021 to 04Jan2021 at a single dose for an unspecified indication. Medical history included allergy to sweat Bees. The patient's concomitant medications were not reported. It was reported by the patient that after administration on his left upper shoulder, it was a little sore. On the 2nd or 3rd day after that, his face was itching so he took a Benadryl to keep from scratching and itching. The outcome of the events was unknown. He also reported that his eyes puffed up. Information on the Lot/Batch number has been requested.
948107	1/15/2021	IL	60	M	1/8/2021	1/15/2021	One week of the vaccine, while having some coffee and cookies. About tens of consuming them, I felt like I was getting a cold and had to keep clearing my throat. I told my wife I feel wired and she mentioned my right eye looked different. In about two more minutes my right was swollen closed and speaking became difficult due to the swelling. My wife drove me to Hospital and I received Epinephrine and Benadryl and fluids.

A 59-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL0142), via an unspecified route of administration on 02Jan2021 at a single dose in left arm for COVID-19 protection. Medical history included ongoing type 2 diabetes mellitus (diagnosed about 18 or 19 years ago), COVID-19 previously and did not have side effects like this (the patient had COVID 19 last month and did not feel this bad at all. Patient was asymptomatic). Concomitant medication included ongoing liraglutide (VICTOZA), ongoing insulin detemir (LEVEMIR), both started about 2 or 3 years ago for diabetes Type 2. She received the product vial workplace policy, so it was not specifically prescribed to her. The patient received the first dose of the vaccine on 02Jan2021, and starting on 06Jan2021, she started with headaches, and muscle spasms all over her abdomen and back. Headaches was reported as worsened. The headache will not go away and even with Tylenol it still lingers. Muscle spasms all over her abdomen and back was reported as worsened. Her eyes were weak and hurting, started on 08Jan2021. She was so tired, she wanted to sleep. The tiredness, started on 06Jan2021, and it is like in the morning she is okay, but then during the day she just got worse and worse and worse. Her sore throat starting 07Jan2021 night, and this morning it was really bad. Throat was very sore was reported as worsened. She received no other vaccines on the same day at the COVID vaccine. The patient was wondering if those are side effects of the vaccine, because the patient had COVID-19 previously and did not have side effects like this. This is a non-serious report. The outcome of event eyes being weak and hurting, and wanted to sleep was unknown, outcome of the other events was not resolved.

943034	1/14/2021	FL	33	F	1/13/2021	1/13/2021	about 10 hours after administration, I developed SOB, mild chest pain, hoarseness, and right sided wheezes. I self treated with albuterol (2 puffs) inhaler that I have on hand in case of environmental allergy triggers (I rarely have to use it- last use 3 years ago). The wheezing resolved and chest pain improved but the hoarseness remained. Over the next 2-3 hours I developed headache, malaise, mild dizziness, arthralgia, myalgia, and eventually fevers and chills (by 13 hours after vaccine administration). When fever reached 101 I self treated with naproxen 250mg. I slept for 4 hours and awoke diaphoretic, but the fever had resolved and I felt much better. However, I developed urticaria that started on my flexor surfaces of the elbows, hips, and knees, and spread to my abdomen, thighs, and face, with swelling about my right eye. I self treated with 25mg benadryl and itching and urticaria improved to the point that I was able to sleep. When I awoke the next morning my symptoms had largely resolved with the exception of mild headache, body aches, hoarseness, slight chest tightness, and mild residual swelling of the right eyelid.

942630	1/14/2021	IL	43	F	12/23/2020	1/1/2021	She does feel she is getting sleep; annoyed; left eye twitching; both eyes feel as if she has cried for a long time; This is a spontaneous report from a contactable nurse (patient). A 43-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot# either GL0140 or EL0140, Expiry date and NDC number were not written), via an unspecified route of administration in left arm on 23Dec2020 at single dose for COVID-19 immunization. There were no medical history and concomitant medications. Patient pregnant: No. She has had No positive test for covid before the vaccine, and No Antibody test before the vaccine either. She has had No issues with vaccines in the past. The patient had the vaccine on 23Dec2020 and then on 01Jan2021 she began to experience eye twitching and it hasn't gone away and it's very bothersome. It's still happening. Her first dose was on 23Dec2020. The eye twitching began on 01Jan2021, it's just the left eye, she can see the eye lid moving when it twitches, she felt it, like the eyeball itself was twitching or spasming. There were no issues with the vision in that eye. She did feel she was getting sleep, she was conscious about seeing if she was tired, both eyes felt as if she had cried for a long time but she had not cried at all and the eye that was twitching she felt it more in. She thought it was getting better in the morning because at that time she didn't feel it, but by mid-afternoon it was consistent. The twitching happened often sporadically every couple of minutes, and she was annoyed of it. Investigation Assessment: No. The outcome of the event left eye twitching was not recovered, outcome of other events was unknown.

943349	1/14/2021	TX	64	F	1/13/2021	1/13/2021	Due to lack of data for Asian-descent - I hope this data is helpful to Moderna and CDC. Light adverse side effects right after the vaccine was administered. Remained under supervision for 45 minutes longer instead of 15 min. Within 5 mins, heat rose up to my head causing dizziness & head spin. Then loss of smell lasting for 10 min or a bit longer, then tongue tied hard / swollen for 3 hrs and lasting mildly 1 day after. Severe dehydration. Did not monitor heart beat due to severe fatigue. Took blood pressure rising and falling like roller coaster 2x. I stop and learned to relax and sleep throughout the day to calm the nervous system and the slight fever. Other normal aching pains as pre-described side effects. No nausea, vomiting, no rash as of 1 day after and no difficult breathing. Occasional and short loss of smell carried after 1st day.
943518	1/14/2021	NC	28	F	12/19/2020	1/3/2021	Developed a rash around my neck and swollen eyes (thought to be poison ivy) on 1/3/2021. Since that time, the rash has spread to my back, abdomen, chest, neck, ears. It appears to be urticaria and is extremely itchy. I completed a steroid taper early on and the rash is no longer affecting my face. I am taking daily antihistamines and using hydrocortisone cream for the itching. The rash continues to spread and is made worse with scratching. I am unsure if this is related to the vaccine, but this has never happened before and I have no known allergies. I got the second vaccine on 1/8/2021 (at the time the rash was improving and I thought it to be poison ivy).
943498	1/14/2021	WA	68	F	1/13/2021	1/13/2021	.3After receiving the vaccine, being monitored for 15 minutes the patient returned home. At approximately 1530 she called clinic concerned about a rash, redness and itching on left arm. On arrival to the clinic she was found to have erythematous macules on her upper inner arm staring to extend down her left arm. She also had a large red macule on upper inner right arm and some small areas under her eyes, all that were itchy. There was no throat swelling, wheezing, SOB or chest pain. She was given 60 mg of prednisone and 50 mg of diphenhydramine orally and observed for 30 minutes. Her rash intensity reduced and the itching stopped. Advised she should not receive second dose of vaccine

943068	1/14/2021	IA	32	F	1/13/2021	1/13/2021	<p>Around 8 minutes post-vaccination patient started complaining of itching in her eyes and legs. RN in room with patient, vitals obtained immediately. While obtaining patients vitals, patient started to feel tingling on her face starting at her cheeks and going down towards her mouth, but no itching or swelling of mouth, throat, or tongue. NP brought into room to evaluate patient and Benadryl 50 mg given at 1125. Patient expressed that tingling was spreading to jaw and down into neck. 911 called at 1127 per recommendation from NP. While waiting for EMT's to arrive, patient complained of tingling down to her chest at 1133, and the tingling progressed down to her legs at 1136. Patient still denied any difficulty breathing, trouble swallowing, shortness of breath, swelling of mouth, lips, and/or tongue. Patient was able to talk without any difficulty during the entire event. EMT's arrived at 1139 and patient walked out to ambulance without assistance and was transported to ER for evaluation. At ED, pt reports she started getting tingling sensation all over her body, fullness sensation in her throat, feeling flushed, itching eyes and all over her body within 10 minutes of receiving vaccine. Pt notes she has had antibiotic allergies in the past that are very similar to this experience. Pt also endorses numbness/tingling sensation stretched from head to just below abdomen. Pt received famotidine 20 mg IV x 1, methylprednisolone 125 mg IV x 1, 1L NS IV x 1 (in addition to diphenhydramine 50 mg PO x 1 she received at clinic). Pt states she felt no improvement so diphenhydramine 50 mg IV x 1 ordered. Half hour later pt felt she was not getting worse, but not better and she stated her throat felt full and she had tingling all over. Pt received albuterol 2.5 mg nebs x 1 and epinephrine 0.3 mg IM x 1. Discharged to home with prescriptions for Medrol Dosepak 4 mg PO tabs x 6 days, famotidine 40 mg PO QHS x 5 days, hydroxyzine 25 mg PO QID PRN x 5 days. Instructed to return to ED with worsening condition and to discuss 2nd dose of vaccine with PCP.</p>

943614	1/14/2021	AR	51	F	12/21/2020	12/28/2020	Day 7 post vaccine, woke with vertigo, nausea and double vision prior to my alarm going off at 5:30am, told my husband that I did not feel right and it felt like something was wrong with me. I asked him to send a message to work that I was not feeling well and would not be in. I was not able to see my phone clearly as I had double vision. I went back to sleep to try to get relief, woke up and called out to husband for help and he said I was just making groaning noises but I know in my head I was saying please help me as I could not move my right side and I was not sleeping or having a dream. At approximately 9:30am my husband kept telling me someone was trying to text me and needed a response. I tried to get up and still could not move my right side. He helped me sit up and I could not use my right arm and hand. He helped me get some clothes on and took me to the ED. When we arrived I still could not use my right hand and my arm still felt weak. The weakness resolved within a couple of hours and I got the strength back in my hand. I did have some concern that my TIA type symptoms could possibly be related to vaccine but it was just a thought until I received my second dose. 3 hours post vaccine my face became numb and tingly. It remained that way until I went to sleep. This is why I am reporting this incident.
943347	1/14/2021	PA	49	F	1/11/2021	1/11/2021	blurry vision 1st day. asthma attack 1st night inhaler worked. next morning. Massive severe headache (almost as bad as the spinal headache from my 1st child) , chills, fatigue, nausea. Called PCP and he gave me Tylenol with codeine for the headache and a prednisone for the asthma even though it was under control.

Patient checked that she is allergic to peanuts with a reaction of mouth swelling and rash. Patient reports she takes gabapentin for neuropathy. Medical provider MD onsite, reviewed risks with patient, she made an educated decision to receive the vaccine. Patient received Moderna Lot # O11J20A in left deltoid administered by, RN at 0935. Patient observed in clinic for 15 minutes after vaccine given. No reactions reported at that time. Patient left clinic with husband but returned to clinic at 1030, reporting she had a hoarse cough and her throat felt tingly. MD assessed patient's airway, and lung sounds. RN obtained vital signs at 1045: temp 99.1 tympanic, BP 147/87, respiratory rate of 23, heart rate 72, O2 sats 100% on RA. Per MD verbal order with supervision and guidance from pharmacist, RN administered diphenhydramine 50mg/ml 1 ml in L. deltoid at 1050. Patient takes carvedilol for hypertension, reports she did not take this medication today. Pharmacist, RN, and MD in agreement to give medication closest to region of where reaction may have started from. Vital signs at 1103: 98.9F, 142/93, heart rate 72, O2 sats 100% and resp rate 22, slightly shallow breaths, though patient reports she is feeling some slight relief. 1109 per pharmacist request and with Drs approval/agreement, RN gave patient famotidine 20 mg tabs (2 tabs) oral. Patient tolerated well. 1120 vitals signs: 98.6F tympanic, BP 138/76, heart rate 74, O2 sats 98% and Respiratory rate 19. Patient reports she is feeling better at that time, RN observed patient's shallow breathing getting to be less frequent and seemingly patient looked more comfortable. Patient having a conversation with pharmacist, no difficulty speaking, breathing, but voice does sound hoarse. Vital signs at 1140: 21 respiratory rate, 99.1 F tympanic, BP 123/88, 72 heart rate, and 98% O2 on RA. PHN listened to lungs and assessed breathing, lung sounds clear, patient reports she feels better though not completely back to normal. MD came in to assess patient, reports her exam is normal, cleared patient to go home and rest with strict instructions to go to the ER if symptoms of allergic reaction come back, get worse, or change. MD encouraged patient to reach out to allergist for further guidance on getting the 2nd dose of the vaccine. Patient</p>

							escorted out of clinic by husband and RN.
945399	1/14/2021	IN	81	F	1/14/2021	1/14/2021	After the vaccine was administered , she stared and said "I feel really tired." Then she looked at this vaccinator and said "You better keep an eye on me." She continued to ask if she should feel tired, ask questions, speak coherently, move all extremities. BP 110/80. No respiratory distress noted. Skin dry. No diaphoresis. Color pale. Patient's daughter was present. She stated that her mother sometimes liked to seek attention. Patient taken to medical area for monitoring. Monitored by nursing staff for 30 minutes. symptoms resolved per patient and family member.
945397	1/14/2021	GA	49	F	1/11/2021	1/11/2021	1st dose 12/21/20 with no reported side effects. 3:00pm c/o blurred vision BP 180/110 neck and chest tightness headache 5:30pm BP 172/109 tachycardia and SOB nausea BP still 185/107 so went to prompt care who sent via ambulance to ER. Given nitro, fluids and morphine. Sent home. Next morning BP 188/118 and 213/122. C/o body aches temp 99 and loss of smell and taste. Saw primary care provider 1/14/21. Added Lisinopril and increased current betablocker and said was vaccine reaction. BP there 209/122 pulse 126. PCP did not test for COVID. Reports she did Binax test herself after visit and was negative
945359	1/14/2021	CA	69	F	1/11/2021	1/12/2021	After the initial injection (1/11), there was just soreness at the site and no other problems. The next morning (1/12), I woke with severe vertigo and ensuing nausea. I couldn't focus my eyes on any one point because everything seemed to quiver. The nausea was like motion sickness. I couldn't walk without stumbling. Since this was the first time I've ever experienced vertigo, it was concerning. I consulted my sister who is an RN who recommended the Epley Maneuver. It helped only a little, but I resigned to returning to bed to sleep to avoid the symptoms. The next day (1/13), I woke with vertigo again. It was not as bad as the first day, but prevented my activities (walking around the house, driving, working). Today (1/14) I woke feeling slightly queasy, but can function, but not work. If the resolution continues on this trajectory, I should be okay tomorrow, I hope.

945592	1/14/2021	AK	42	F	1/14/2021	1/14/2021	<p>Patient came into Public Health Clinic for 1st dose of COVID-19 Vaccine. Patient completed COVID-19 vaccine screening checklist for contraindications. Patient reported that she had a penicillin allergy-hives and had a reaction to an unknown agent that caused eye and lip swelling. Form reviewed by Dr who verbally screened risks for patient. Patient made educated decision to get vaccine knowing risks of allergic response. Patient received Moderna Lot # O11J20A in left deltoid administered by Indigo RN. Patient observed in clinic for 15 minutes after vaccine given. No reactions reported at that time. Patient waited longer due to significant other also receiving the vaccine and having to wait for observation. At 1054 patient reported to pharmacist of her lips feeling tingly and her tongue feeling heavy. She reported to, RN and informed Dr. of patient's status. Upon physical assessment of oral mucosa, no tongue swelling, throat soreness, redness or swelling noted on physical exam, vessels under bottom lip looked slightly dilated. Patients lips also within normal limits, no swelling noted. Vital signs of 98.3F tympanic, O2 sats 100% on room air, heart rate 91, respiratory rate 16. BP R. arm 164/104, L. arm 165/112, manual on R. arm 164/98. Patient states she took hydrochlorothiazide for BP at 12:30, right before coming into clinic. Patient still feeling like her lips are tingly and tongue is heavy, Per Dr. would prefer to assess patient in the ER. Instructed patient to go to Health Center ER with husband for further assessment. Per chart review from ED, Pt monitored in ED for 1 hr. without recurrence or development of symptoms. She states that she feels normal and is ok with going home. Return precautions discussed. No interventions.</p>

944507	1/14/2021	NV	46	M	12/23/2020	12/27/2020	Loss of vision; Possible lowgrade central retinal occlusion; retinal venous dilation; Decreased vision; Unexplained Retinal Hemorrhages; A spontaneous report was received from an ophthalmologist retinal specialist concerning a 46-year-old, male patient who received Moderna's COVID-19 Vaccine and developed loss of vision, decreased vision, unexplained retinal hemorrhages, retinal venous dilation, and possible low grade central retinal occlusion. The patient's medical history was not provided. Concomitant product use was not provided by the reporter. On 23 Dec 2020, approximately four days prior to the onset of the symptoms, the patient received their first of two planned doses of mRNA-1273 (Lot number: 025J20-2A) intramuscularly in the arm for prophylaxis of COVID-19 infection. On 27 Dec 2020, the patient experienced decreased vision. On 29 Dec 2020, the physician examined the patient. There was some retinal hemorrhage, venous dilation, and possible low grade central retinal occlusion. Lab work was requested by the physician and results were pending. Treatment information was not provided. Action taken with mRNA-1273 in response to the events was not provided. The outcome of the events, loss of vision, decreased vision, unexplained retinal hemorrhages, retinal venous dilation, and possible low grade central retinal occlusion were unknown.; Reporter's Comments: This case concerns a 46 year old male patient. The patient's medical history is not provided. The patient experienced a serious, unexpected event of loss of vision, unexplained retinal hemorrhages, retinal venous dilation, and possible low grade central retinal occlusion. The event occurred 4 days after first dose of the mRNA-1273. Very limited information regarding this event has been provided at this time. Based on temporal association between the use of mRNA-1273 and the event, a causal relationship cannot be excluded. Additional information are required for further assessment.

945504	1/14/2021	CA	36	F	1/11/2021	1/12/2021	After first vaccine i experienced fatigue, body aches, headache and nausea for 2 days and injection site pain for two weeks. After second Vaccine given at 9:55am. tingling of feet for about 20 mins, 30 mins after the vaccine. Two hours later fatigue, body aches, headache and nausea began. At 0030 1/12/2021 I woke up with severe chills and left chest pain, temp was 101.6 and heart rate was 160. I began to see black and chest pain was severe feeling like i was having a heart attack and was going to pass out so i called 911. I then began to get short of breath and got numbess on my legs, left arm and left side of neck. Chest pressure/pain radiated to left arm and neck. I was taken by the ambulance to hospital. Arrived around 0130. My heart rate sustained at 140s in the ER so I was admitted at 0530 am. My D Dimer was a bit elevated as well as my lactic so I was given a bolus of fluids plus maintenance. I had a CXR done, CTA chest(negative for PE), UA, Labs, entire cardiac workup including an ECHO during my admission. I also began to have loose stools and wrist joint pain. MY heart rate sustained at 125-147 for about 30 hours. Fevers on and off. After everthing was negative we determined this was secondary to the covid 19 vaccine. I was discharged 1/13/2021 at around 1:30 pm. My heart rate is still not at baseline which is 87-90. I'm 100-130 and still get very fatigued with a simple slow walking. Still having tachycardia, fevers, body aches, joint wrist pain, chest discomfort and headaches. My potassium was 3.0 at discharge so will be needing labs in a week. Also bruised a little different than I usually do with lab draws so keeping an eye on them and will be checking my platelets again in a week. Ive been taking tylenol for my fever and pain and ativan for any anxiety when my heart rate goes up. (treatment during hospital stay was normal saline bolus, nomal saline maintenance fluids at 150 cc/hr, tylenol, ativan, ice packs, rest)

945493	1/14/2021	OR	29	M	1/13/2021	1/14/2021	At around 1:30 in the morning, i became really weak, achey, had the chills, some nausea, a minor headache, a slight sore throat, and minor eye pain like they were dry. Though i felt terrible, the most concerning side effect was that my skin felt like it was extremely raw in patches all over my body where if my sheets lightly touched one of those ?patches?, it would be very painful. However, there was no rash or discoloration from what I could tell. I also had strange painful sensations at the ends of my toes but were different in quality relative to the hypersensitive/raw painful sensations on my skin. The adverse events kept me awake for hours but when I finally got to sleep and woke up the next morning. I only had chills, weakness, and acheyness which were much less in severity than those early morning hours. It is now 4:45 pm and the only adverse effect I am still feeling is the fatigue. Also, I forgot to mention it on the medication portion but I had taken 400 mg of ibuprofen about 15 minutes before receiving that second dose.

944673	1/14/2021	LA	35	M	1/13/2021	1/13/2021	Started with tingling of the tongue and itchiness of the arms. I took 50mg of Benadryl immediately, but then progressed to hives all over on my, arms, trunk, eyes, ears, and scalp, and legs. Went to the emergency room in case it got worse or obstructed my breathing. In the ER continued to have itching and extreme redness of my arms, with some swelling of my arms as well. About an hour later the Benadryl began working and received prednisone and Pepcid. Stayed in the ER for another hour and my symptoms mostly resolved. Was prescribed 3 days of 40mg prednisone and given an epipen. Have not had issues since then.
944656	1/14/2021	ME	37	M	1/13/2021	1/13/2021	Severe sweating, rapid heart rate, blurring vision, dizziness, shortness of breath, near syncope
944645	1/14/2021	MO	55	F	1/13/2021	1/13/2021	I began to experience a dry throat about 10 minutes after injection - I attributed it to needing a drink. My throat then felt a bit warm and I thought this was due to thirst as well. I left the monitoring area. I was walking to my vehicle and began to feel more of a warm sensation in my throat and not into my upper chest. About 5 minutes after this took place my face became flush and began tingling and feeling sunburned and tight - I looked in the mirror and my cheeks and nose and chin were red and felt extremely warm - I did not have facial swelling that i noticed but my face felt tingly and like it was sunburned - my eye felt puffy but did not look puffy enough to notice in the mirror. Approximately 30-35 minutes after the immunization, I took 50mg of Benadryl and 1300mg of Tylenol. I felt my symptoms begin to improve about 25-30 minutes after taking the medication - my throat and chest were not as warm. the facial flushing lasted about an hour or hour and a half. The morning after my immunization I did have a scratchy throat - I did not take any further medication - by the afternoon - this is almost gone - still just a little scratchy.

944535	1/14/2021	CA	36	M	1/4/2021	1/4/2021	<p>pain on eye movement; high fever; joint/muscle ache; joint/muscle ache; headache; nausea; unable to sleep; shivered most of the night unable to feel warm; shivered most of the night unable to feel warm; First dose: 18Dec2020 10:00 AM; second dose: 04Jan2021 11:45 AM; First dose: 18Dec2020 10:00 AM; second dose: 04Jan2021 11:45 AM; This is a spontaneous report from a contactable physician (patient himself). A 36-year-old male patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot: EH9899), via intramuscular on 04Jan2021 11:45 at single dose in left arm for covid-19 immunization. Medical history included allergies: allergy to certain sunblock. There were no concomitant medications. The patient previously took the first dose of BNT162B2 (lot number EH9899) for covid-19 immunization on 18Dec2020 10:00 AM in left arm via intramuscular. The most recent COVID-19 vaccine was administered was in hospital. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No other medications the patient received within 2 weeks of vaccination. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. Roughly 12hrs after second vaccine (05Jan2021), patient had high fever, and accompanying symptoms such as joint/muscle ache, headache, nausea. Fever was severe enough, patient was unable to sleep and shivered most of the night unable to feel warm, patient was also unable to check temperature due to status of severe symptoms. Upon waking in the early morning, fever was better, symptoms of headache/nausea/joint/muscle ache persisted rest of day. Fever was around 101 rest of day time. By second day (05Jan2021 12:00 am), fever subsided, residual mild headache and pain on eye movement remained for another day. Eye pain on movement persisted for 4 days after fever. The patient took ibuprofen 200mg for high fever, joint/muscle ache, headache. Events were assessed as non-serious. Outcome of these events were recovering.</p>

944992	1/14/2021		38	M	1/4/2021	1/4/2021	Received vaccine on 1/4/2021 at 15:15 hours. A few minutes after the shot, I felt a warm wave come over me , kind of felt like passing out but didn't, heart started racing and hands became clammy/shaky. I sat down and after a few minutes it passed so I went back to work. On 1/5/2021 I started to become slightly dizzy with a mild headache lasting all day. On 1/6/2021 dizziness and slight headache persisted with slightly blurred vision. On 1/7/2021 I felt slightly better in the morning but as the day went on the dizziness returned with slight headache and blurry vision. At approximately 16:00 hours I was speaking with my NP, and went over my symptoms. She suggested getting my blood pressure taken. It registered at 154/115. I called my PCP and I was able to be seen the same day. I was given clonidine and it came down but on morning of 1/8/2021 it was back up getting as high as 160/120. Called my PCP back and he prescribed Olmesartan. It seems to have stabilized my BP but he is unsure why the vaccine has caused this and why it is persisting.

940809	1/13/2021	NY	61	M	12/26/2020	12/31/2020	<p>left side will blur; Left side of face was sagging/ water leaking out of mouth/Progressive weakness on left side of face/ Swelling on lower left mandible/ diagnosed with Bell's Palsy.; Eye tearing; This is a spontaneous report from a contactable nurse who reported for himself. A 61-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Batch/lot number: EK5780) in left arm on 26Dec2020 at 08:30 at single dose for covid-19 immunisation (worked in surgical ICU and was over 61 years old). Medical history included Pre-diabetic. Family history included: mother died; mother's side had colon cancer and grandparents and uncles had cardiovascular diseases. Concomitant medication included exenatide (BYDUREON), amlodipine besilate (NORVASC), omeprazole (PROTONIX), hydrochlorothiazide, lisinopril and pneumococcal vaccine on 08Dec2020 and tetanus vaccine on 08Dec2020. It was reported that on 31Dec2020 at 07:30, the patient had eye tearing and water leaking out of mouth, left side of face was sagging, swelling on lower left mandible (eye tearing was first, as reported); on 31Dec2020 he also experienced progressive weakness on left side of face; on 02Jan2021 the patient was diagnosed with Bell's Palsy. Then on an unknown date, left side will blur occurred. All events required emergency room visit and physician office visit. Diagnosis of Bell's Palsy and event eye tearing were serious per disability; left side will blur was non serious. Patient described the events as follows: on 31Dec2020 he was brushing teeth and noticed the water was going everywhere. Left side of face was sagging, noticed some swelling and thought it was from a bug bite. He wasn't sure if it was a stroke or not. In the morning of 01Jan2021 noticed it was progressively causing a problem. Days before noticed tearing of left eye (as reported). On 31Dec2020 before midnight, something felt wrong. He saw four cases on clinical trial with similar side effects (he clarified he had no patient information for the four patients mentioned with similar side effects from Pfizer Clinical trial. He saw this information from a article; stated four from Pfizer and Moderna). In the morning of 02Jan202, he went to Emergency Room (ER) and was diagnosed with Bells Palsy. He was given prednisone 20mg to take 3 times by mouth every day for 5 days, tetracycline 100mg, at 1 capsule by mouth twice a day for 10 days and</p>

methylprednisolone (SOLU MEDROL; Lot: 9945776; Exp: Nov2021) 4mg dose pack, started with 6 tablets first day. It was told by doctor it might cause tick problems. He was waiting for results. On 04Jan2021 went to family doctor and more blood work was taken. Because he was taking prednisone, noticed his sugar was up a little bit (date unspecified). It was prescribed Glitizide extended release, 2.5mg one tablet twice a day with breakfast. Patient was checking sugar every 6 hours. It was also prescribed Acyclovir 400mg one tablet orally five times per day for 10 days. 08Jan2021 is last day of prednisone 5 day dose and will follow up with methylprednisolone tablets. Patient had an appointment with a neurologist on 13Jan2021. Patient was still having symptoms. It was really hard for him. Not hard to swallow. Face was still drooping. Eyes were still tearing. Could not work with eyes tearing all of the time. Needed to be alert. When driving, had to focus on the right side because his left side will blur. He had to chew only on the right side because food will be left behind in between his cheeks and gums. If he drank through a straw, he had to cover the left side of his lips so he was able to suck out fluids. He thought symptoms were progressively getting worse, he didn't see much improvement. He clarified swelling was on lower part of mandible on left side. It was slightly bigger than right. When looking at face, the lines on his forehead on the left side were down. If he smiled he cannot raise his left eye brow, when before the COVID-19 vaccine he could. Noticed left side of nose was lower than the right. Cannot raise left side of lips. Outcome of the event Eyes tearing and Bell's Palsy was not recovered; outcome of the other event was unknown. Information on the batch number has been requested.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of Bell's palsy, Lacrimation increased and vision blurred due to temporal relationship. However, the Bell's palsy may likely possibly represent concurrent medical condition in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including head CT/MRI and viral serologies, counteractive treatment measures and concomitant medications. This case will be reassessed

940207	1/13/2021	MN	61	F	1/6/2021	1/6/2021	that evening experienced on her face especially her ears the next day the itching increased but facial edema started appearing along with drainage from her ears on Saturday Jan 9th, eyelids edematous plus increased facial edema and increased ear drainage seen in the clinic on Saturday Jan 9th and was prescribed medications
939781	1/13/2021	NY	70	F	1/8/2021	1/10/2021	I felt fine until the morning of Jan. 10 (except for very painful arm). I was awakened early in the morning by severe vertigo (my eyes were blinking rapidly and the room was spinning violently); I was nauseous and couldn't lie down without the violent spinning re-occurring. I was very dizzy and exhausted the whole day, unable to function. The next day I continued to be very dizzy and off-balance, couldn't work but better than prior day. Each day, same symptoms have continued but milder. I called my PCP on Monday, Jan 11. He told me it sounded like an inner ear problem, probably unrelated to the vaccine and to call him the next day and report my symptoms. I did (Tues. Jan 12) and reported dizziness was milder but still there. He suggested I see an ENT doctor.
940765	1/13/2021	PA	26	F	1/8/2021	1/8/2021	Pt received COVID19 Vaccine (Moderna) on 1/8/2021 at 1:52PM. -Pt felt fine immediately after the vaccine. -10 min later was reporting dizziness and that her tongue felt numb for 1 minute. -Also reported dry (but not itchy) throat. -I evaluated patient. -Denies itchy/sore throat, itchy/watery eyes, rash, difficulty breathing, shortness of breath, N/V, chest pain, numbness/tingling, swelling. -Pt's symptoms subsided within 10 minutes after she rested and was given water. -She was observed for ~30 minutes total and discharged.
939835	1/13/2021	TX	42	F	1/11/2021	1/12/2021	The day after the second dose just before noon I suddenly had eye floaties in my right eye. Unlike a usual floatie that might come and go these have a shape that changes as I move my eye. There is no pain, they are a sudden annoyance that I hope will go away but I wanted to make sure I reported it.

939476	1/13/2021		67	F	1/6/2021	1/6/2021	<p>arm is sore; Fatigue; eyes are still heavy; a metallic taste in her mouth; sleepy/eyes are still heavy/she is yawning a lot more; This is a spontaneous report from a contactable consumer (patient). A 67-year-old female patient received her first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL1284), via an unspecified route of administration on 06Jan2021 at single dose in her left arm for covid-19 immunization. The patient had no medical history. There were no concomitant medications. The patient had no investigation assessment. It was reported that it had been 24 hours, she received her first bnt162b2 (reported as Pfizer COVID vaccine), yesterday (on 06Jan2021), and she was wondering, her arm was sore on 07Jan2021, which she thought was normal and fatigue on 06Jan2021, she got right away, she didn't know if that was normal, but she got a metallic taste in her mouth on 06Jan2021. It felt like a metallic taste when she swallows, a little metallic taste, yesterday (on 06Jan2021) was more than today, it was after the vaccine, about 7 hours after. She thought in her head, like the aluminum chewing gum, when kids chew it, it had a metallic taste, like the (company name withheld) wrapper she used to chew on it. Provides she was shrinking. Provide she was wearing stretch pants when providing weight. She Googled and didn't see the metallic taste, the only thing she saw with metallic taste is if you have the actual virus, she didn't have it, she was fine. Maybe it was all in her head. Arm was sore not right away, it built up, like when you stretch like with the flu shot, she lifted and it's sore, and she felt sleepy. It was like with the flu shot, it took a few days to go away. Last night on 06Jan2021, she was very sleepy, she was kind of sleepy, but it could be watching the Capitol and insanity, but she was yawning a lot more, her eyes felt heavy, she was ok, she had an appetite and is fine, she would drink (company name withheld) now. Thought she was peaking with it, she would go to sleep early today (07Jan2021), her eyes were still heavy, she wanted to close them and took a nap, but couldn't. It was like her saliva has a metallic taste in her mouth, it may be in her head, she googled to see side effects and when they start, it may be going soon, who knows, she was just wondering. The taste was worse yesterday (06Jan2021), and it wasn't IV or anything like that, the patient wanted to know how can</p>

939660	1/13/2021	IL	32	F	1/9/2021	1/9/2021	Numbness and tingling down left arm into fingers (worst is pinkie and ring fingers), dizziness with blurred vision, hearing sounded like underwater, felt like I had trouble talking. Notified nurse that gave me vaccine, several other nurses came over and helped me into recliner and laid me back and took vitals. Vitals are stable. I quickly began to feel better (within 5 minutes of being reclined). Still had the numbness and tingling. I laid in recliner for 30 minutes, then sat up for 10 minutes before leaving. I drank water and ate 2 rice krispies while in recliner. Numbness and tingling improved, but lingered throughout the day and was gone next morning.
939664	1/13/2021		56	F	12/22/2020	12/31/2020	Congestion, loss of taste/smell, diarrhea, ear pain, eye irritation
939719	1/13/2021	MN	41	F	12/18/2020	1/5/2021	24 hours after the injection I had a sore arm, developed slight body aches and headache. Since the injection I had been getting headaches almost daily, mostly on my right side of my head. On Dec. 5, 2021 I noticed I was getting a sore eyebrow. Later that evening ok noticed swollen lymph nodes throughout my scalp, face, ear, jaw, neck and chest. My eyebrow also started to swell and was slightly pink. When the swelling was worse the next day - I went to urgent care and saw A doctor that diagnosed me with facial cellulitis. After a couple days my eye was not getting any better and started to itch severely. Called to urgent care over the weekend and takes to one of the providers who said to use cold compresses and elevate my head as much as I could. On Dec. 11, 2021 I called back to the provider I had seen on Dec. 6 - he told me he believed I had developed shingles and to go to the eye doctor that day. I saw a doctor on Dec. 11 & was diagnosed with shingles. They started me on antivirals along with the antibiotics they had prescribed on Dec. 6.

940042	1/13/2021	OH	53	F	1/6/2021	1/6/2021	within 30 seconds I had a cooling sensation rush across the tip of my tongue, then a sweet taste, then more identifiable as bubble gum flavored. By 12:45 I noticed I was scratching several areas of my body. Arms, legs, chest, neck, back and scalp and kept clearing my throat. I looked down at my arm and seen a red welt from my elbow to my wrist in my left arm and a fine red rash beneath skin on right arm. I looked up at the pharmacist and he said at 12:40 he had already placed a call to have another pharmacist come to look me over. I then noticed that my heart seemed to be racing and feeling winded. I figured this was my anxiety and just tried to relax. The second pharmacist arrived and we walked to the ER. I was very winded. They took me to a room and checked stats. after 3 attempts taking my BP and using two different cuffs, she said my BP was 190/90 where it is typically 120/70. I drank lots of water and they monitored me for almost an hour and gave me another Benadryl. My BP came down to 180/82, breathing was easier and itching was decreasing so I chose to return to my station and I took one more Benadryl. The following day: woke up with head ache in rt eye and fuzzy vision all day, mild sore throat, mild body aches, queasy stomach, fatigue and runny nose. Took a Pepcid for stomach, Tylenol/Advil duo for sore throat, headache/body aches, drank lots of water and rested. Following day most symptoms resided, still slight sore throat, rt eye blurred vision, coughing, sneezing and runny nose. everyday since, symptoms continue to decrease.
940078	1/13/2021	OH	45	F	1/13/2021	1/13/2021	08:50AM Upon standing to leave pt stated she was lightheaded & dizzy. Instructed to sit. 939384	1/13/2021	MI	27	F	12/29/2020	1/1/2021	left eyelid swollen; she sweat a lot; rash on head around bump on her left; swollen lymph nodes on neck left side/right side/swollen lymph node on collar bone right side; pain in left side of her face; Fever; feel tired; felt like her body was hot; bump on head on left side; face was numb on left side; pimples to left eyebrows; possibly has shingles; This is a spontaneous report from a contactable consumer (patient). A 27 years old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EL0140) at her right arm at single dose for COVID-19 immunization on 29Dec2020. Relevant history included she had UTI, acne and dandruff which she had before the vaccine. Concomitant drug included clomifene citrate (CLOMID) since 30Dec2020 (5 days regimen). Past drug included she was taking Ampicillin 25mg prior to vaccine (last dose 2 days before vaccine). The patient experienced face was numb on left side since 02Jan2021. The patient also experienced pain in left side of her face, swollen lymph node on neck left side/neck right side, feel tired, felt like her body was hot, bump on head on left side, rash on head around bump on her left and fever since 03Jan2020. She took medication for fever. She felt good when take Motrin or Tylenol and then it came back again being tired. Then, the patient stated she sweat a lot since 04Jan2021, she had swollen lymph node on collar bone right side since 05Jan2021. The had left eyelid swollen since 06Jan2021. The patient also experienced pimples to left eyebrows that started Saturday or Sunday and possibly had shingles since unknown date in Jan2021. The patient went to the doctor because the doctor suggested that she had shingles and she had the shingles test on 06Jan2021, while she had not gotten the results back yet. The outcome of event Fever was recovered with sequel on 06Jan2021. Outcome of event possibly had shingles was unknown. The outcome of event she sweat a lot was Resolving. The outcome of other events was not resolved. The events pain in left side of her face, swollen lymph node on neck left side, rash on head around bump on her left, left eyelid swollen and pimples to left eyebrows was worsened.

WHICH HAD MINIMAL CHANGES AT 0600 AM THE FOLLOWING MORNING. DENIES: REDNESS, THROAT ITCHING, SOB, UPPER EYELID SWELLING, TOOTH PAIN OR DENTAL ABSCESS, LYPMHNODE SWELLING
940180	1/13/2021	NY	53	F	1/8/2021	1/9/2021	The patient received her COVID19 vaccination, the Moderna mRNA vaccine, on Friday, January 8, 2020 at 10 AM. She developed some low-grade fevers and fatigue over the next 24 hours, treated with ibuprofen. However, by Saturday evening, as her fever was slowly improving, she developed some puffiness of her eyes. The swelling progressed further on Sunday accompanied by low-grade fever and by Monday affecting both eyelids, upper as well as lower, with a burning sensation and some pruritus. She has noted some desquamation of her skin in that area. She comes into the office today because of persistent swelling. She denies any respiratory or throat complaints. She also states that she has a dry spot on the right side of her mouth, started on Sunday afternoon. She has not used any fillers and has not had any cosmetic procedures done on her face. She did develop chondrodermatitis to retinol-A in 2018. She states that she does have sensitive skin and has used hypoallergenic items intermittently. She prefers not to place cosmetics on her skin. She is currently using Victoria's secret Eau so sexy lotion once every other week, typically on her cheeks. She did use this cosmetic on Sunday on her cheeks, after she developed the swelling of her eyelids. She does not receive further vaccinations due to personal preferences. She did receive a Kenalog injection 2018 in her first MTP. That ingestion contained polysorbital 80. She did not have an adverse reaction to the injection. She was sick with Covid November 2020, diagnosed via positive PCR swab at the urgent care as per patient.

939723	1/13/2021	NY	42	F	1/6/2021	1/6/2021	With in the first hour I got a major headache on the left side of my face, mainly behind the eyes. By that evening my headache was still there and I had the chills and felt exhausted. For next three days after I had a normal headache on and off accompanied by nausea. Tylenol slightly relieved the headache. The last few days I have been feeling "under the weather" but the headache is gone. I noticed my lymph nodes were a little swollen which I am thinking is what caused the headaches.
942244	1/13/2021	TX	51	F	1/7/2021	1/7/2021	11:00PM very tired and fatigued day of vaccination, left eyebrow 3 large bumps, 1 bump on forehead felt like pimples resolved in the AM arm pain to hand tongue was numb in AM and voice hoarse during the day to evening tongue numbness began to resolve and. Injection site was red and swollen welt at site where injection puncture 3-4 day rash on neck resolved later in day. All symptoms have resolved today
941855	1/13/2021	NY	38	M	1/9/2021	1/13/2021	2 days after vaccine, started to feel lightheadedness and tunnel vision almost leaving him to fall. Weak legs. Sent to urgent care for further workup.

941892	1/13/2021	KS	35	F	12/31/2020	1/7/2021	<p>On 01/12/2021, I was notified that the patient stated she had a rash on her left arm near the immunization site. I examined this site on 01/12/2021. Noted 2 in diameter area where vaccine was injected, that showed a faded induration, but no redness now. The patient states this was red at the site for several days but then faded to the current appearance. She states one week after administration of the vaccine, she developed a rash trailing to inner aspect of her left arm. Rash was blotchy in appearance, in small clusters. No induration or erythema noted. Patient reports mild pruritis. States she has been taking her allegra since the immunization, has not taken any benadryl or other new medications for this rash. Denies any systemic symptoms. No shortness of breath, angioedema, wheezing, chest pain, or GI/GU symptoms. She states earlier in the day on 01/12/2021, she had site examined by her primary care provider, PA and was told to put hydrocortisone cream on site and to monitor. Patient denies taking any new medications since vaccine administration. On 01/13/2021, patient was examined by another provider at clinic, APRN. She noted, the arm is erythematous, mildly raised and with no induration or fluctuance at site. The patient complains of slight burning and significant pruritus. There are no excoriations. She has been using hydrocortisone and taking claritin. She encouraged patient to start taking benadryl as directed and continue hydrocortisone. Edges of erythema were marked and advised patient to monitor for progression today. If progression occurred within a few hours she planned to send RX for treatment of acute delayed reaction to vaccine. Patient was examined at 3:18PM by RN and she reported that it looked like the erythema had improved and had gotten smaller, it had not progressed beyond the pen markings. Pt complains of some itching still but had not been able to take benadryl yet today. She will keep an eye on it and will check back in with us tomorrow.</p>

941963	1/13/2021	UT	24	M	1/5/2021	1/5/2021	Patient started developing throat swelling, shortness of breath, and paresthesia of the left upper extremity and neck approximately 10-15 minutes after receiving the first dose of the Pfizer Covid Vaccine. Visual examination detected slight facial and periorbital swelling but no posterior oropharyngeal edema. Patient was slightly hypertensive (150/93) and tachycardic (105 bpm) upon arrival in the ED. Patient had no rash or urticaria. Diphenhydramine 50 mg, famotidine 20 mg, and lactated ringers administered IV. Patient was observed for several hours in the ED, and discharged in stable condition.
942025	1/13/2021	IA	57	F	1/13/2021	1/13/2021	1:45 pm she received the vaccine. 2:10 pm she started to have the following signs and symptoms; red swollen arms, dizziness, blurred vision, gastrointestinal symptoms, blood sugar 143, blood pressure 86/40, pulse 87, oxygen 88. We gave diphenhydramine 50mg at 2:16 pm. Then at 2:35 pm her symptoms were not improved her blood pressure was 80/40 so we gave one dose of 0.3mg epinephrine by auto-injector and called an ambulance. Post epinephrine her vision improved but her skin was still red and starting to itch. She was talking and said she was feeling a little better. She was taken by ambulance to the hospital for additional treatment. There was not reaction visible at the injection site it appeared to be all systemic.

942035	1/13/2021	NM	37	M	1/10/2021	1/10/2021	<p>Pfizer-BioNTech COVID-19 Vaccine EUA? 1st vaccine 12/21/2020, 2nd vaccine 1/10/2021 ED visit 1/11/2021: Chief Complaint: Pt. reports facial droop that started at 1200 yesterday. Pt. reports that he is unable to raise left eyebrow or control left side of face/lips. Pt. states that symptoms began approx. 4 hours after his COVID booster was administered Patient, 37 y.o male with hx DM, presents with left sided tongue numbness that began 2 days ago and left sided facial droop that began yesterday around noon. He reports difficulty raising his left eye brow and controlling the left side of his face. Pt also reports slight hearing and visual changes on the left side and tearing from the left eye. He denies any extremity weakness, rashes, and any other concerns at this time. Clinical Impression: Final diagnoses: Bell's palsy (Primary) Patient's history, physical exam and clinical work-up are consistent with Bells Palsy. Patient's symptoms of unilateral facial weakness with forehead involvement of relatively sudden onset are c/w peripheral seventh nerve palsy (lack of nasolabial folds, unfurrowing of the forehead and drooping corner of the mouth). Patient has not had recent rashes, arthralgias, or fevers or exposure to ticks. The ear canal, mouth and parotid gland are otherwise normal. The patient has been instructed to complete a 7 day course of oral steroids and anti-virals, and to use copious amounts of re-wetting eye drops, tape the affected eyelid while sleeping and follow up a primary care physician. The patient is to return to the ER immediately if symptoms progress or the patient becomes concerned for any reason.</p>

942083	1/13/2021	WA	34	F	1/13/2021	1/13/2021	Patient reports to clinic after receiving the COVID-19 Vaccine at today. Patient states that she was given the vaccine at 0915 today and about 5 mins after started to have symptoms of a hot sensation from head to toe, heart racing, ears burning, and chest tightness, no breathing difficulty. Patient notified staff and was given O2 and allowed to drink her water. Her symptoms did improve and she was sent to the waiting area again. After about 10 mins her chest tightness came back. Patient states she can feel her blood flowing, "kinda like when your limb is numb". Patient also had symptoms of chills, body shakes, loss of smell, and a metallic taste in mouth. Patient states that she was seen again by staff and laid on a cot for 20 mins, and was then cleared to head back to work around 1000. Patient was seen in the clinic at 1157, and her symptoms since it started have improved. Currently she has the following symptoms: can't taste/smell, (L) arm is sore, H/A, with constant ache, localized to back of neck up to behind the both eyes. Body feels worn out, everything feels heavy, takes a few second to focus when she looks around "like there is a delay". Patient was sent home to recover and to let medical staff know if her symptoms return.

942107	1/13/2021	NE	41	F	1/6/2021	1/9/2021	Received the vaccine on a Wednesday afternoon. That evening I developed body aches, which got progressively worse over the course of the following day. I developed a persistent headache on Thursday that stuck around until Sunday. On Saturday morning I woke up feeling ok, still had the dull headache, but was ok enough to be up and around. At approximately 10:30 Saturday morning I was hit with stroke symptoms. I had weakness in my left hand, tunnel vision, couldn't understand words that were spoke to me and was aphasic with garbled speech. Went to local ER and was worked up for stroke. Symptoms resolved Within approximately 45 minutes. All tests, lab results ok.

942160	1/13/2021	CA	26	F	12/17/2020	12/17/2020	Vaccine Dose 1 12/17/2020: I received the vaccine and within 5 minutes I experienced dizziness, sweating and was flushed. After 15 minutes the dizziness did not go away and my vitals were checked. My BP was elevated 136/106 and HR 105, I was taken to the ED after repeated BP readings continued to show increased diastolic pressure. I was observed in ED for a period of almost 6 hours. Within an 1.5 hours after receiving vaccine, I had right neck stiffness, headache, and some weakness to the right side as well along with the dizziness and high BP. I received a 1L bolus of NS, 2 doses of antivert, Toradol, Zofran and Lidocaine patches. 24 hours after receiving vaccines, I was having pain at the insertion site, headache, neck stiffness and occasional dizziness. After 36 hours my symptoms subsided and I felt back to baseline. Vaccine Dose 2 01/07/2020: I received my second dose of the COVID vaccine and within the first 15 minutes I experienced dizziness, nausea, flashing spots in vision, right sided weakness, increased BP & HR, redness and sweating. After 30 minutes the symptoms did not subside and I was taken to the ED. An hour after receiving the vaccine, I had right sided weakness to arm and legs with no numbness, dizziness, R. sided neck stiffness, right sided headache, nausea and flashing spots. I received Ativan, Reglan, Tylenol, Toradol and Benadryl in the ED. I was in ED for 3.5 hours after vaccines was administered and was able to ambulate to the car independently. 16 hours after receiving vaccine, I had muscle weakness to bilateral lower extremities and was unable to ambulate independently along with dizziness, headache, arm soreness, cough, congestion, neck stiffness and fatigue. 36 hours after vaccine I regained movement to bilateral lower extremities however still was experiencing fatigue, occasional dizziness, intermittent neck stiffness and headache, body aches and some shakiness to lower extremities. 55 hours after receiving vaccine I was still fatigued and experiencing intermittent headache and neck stiffness. 72 hours after vaccine I was still fatigued and having occasional headaches but feeling much much better from initial reaction. 96 hours after receiving vaccine I experienced occasional headache, woke up with neck stiffness and was finally able to drive a car without any dizziness or nausea. 144 hours after vaccine I am not completely back to baseline still fatigued with

942313	1/13/2021	MI	57	F	12/23/2020	1/11/2021	Bell's palsy HISTORY OF PRESENT ILLNESS Patient is a 57 y.o. female with a history of glaucoma, pre-diabetes, and osteoporosis s/p recent fibular fracture who presents for facial weakness. Patient is a research MD in the neurology department. Patient reports that she woke up this morning with weakness of the right face and inability to close the right eye. She reports mild discomfort in the area of her right jaw, but no ear pain. Denies any change in hearing or taste. She denies any difficulty chewing or swallowing, but has noticed that water will come out the side of her mouth when she tries to drink. She reports mild dry eye on the right. No history of similar symptoms. Today is day 18 after her first COVID vaccination. No recent URI symptoms. No unilateral numbness or weakness. No autoimmune history.
942359	1/13/2021	TX	30	F	1/7/2021	1/7/2021	Moderna COVID-19 Vaccine I spoke with the nurses regarding previous vaccine reactions, and we all agreed that I would take Benadryl first, and then get the vaccine. However, about 5-10 minutes after I got the vaccine, I began feeling very itchy, which is usually a precursor to when I develop hives. The nurses kept a close eye on me and got my vitals. They said my pulse was a little high, but that I was ok to go, since I had stayed my 30 minutes afterward and my vitals were ok. Throughout the day, I became even more itchy, and that night, I had hives everywhere, a low grade fever, and a migraine like headache. Because I did not have an itchy throat, and I have developed these symptoms before with the flu vaccine (and other allergies), I did not go to the doctor. The side effects took about a day to a day and a half to go away.
942386	1/13/2021	CA	42	F	1/11/2021	1/13/2021	after vaccine felt flush with throat tightness, quickly resolved then repeat episode at 30 minutes, given Benadryl 25mg PO and observed for another 30 minutes, at 4pm eyes were swollen, given another 25mg PO and paramedics were called, sent to Hospital.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
942452	1/13/2021		24	F	1/13/2021	1/13/2021	Patient received Moderna COVID19 vaccination. She was sitting in our waiting room for her 15 min observation and 5-8 minutes after being vaccinated patient began to feel lightheaded and faint. She said her vision was blurred and felt very faint. 911 was called and paramedics assessed her. She quickly began to feel better and mentioned she got this way when she got her ears pierced. Patient stayed for another 15 minutes, drank water and was 100% better.
942465	1/13/2021	MA	63	F	1/7/2021	1/7/2021	instant severe nausea lasting until mid morning on 1/8 1 hr later swelling of the eye lids and lips 25mg Benadryl taken before the shot and after the onset of the swelling of eyes and lips
942481	1/13/2021	NJ	36	F	12/29/2020	12/29/2020	After 4 hours of receiving the vaccine, I developed pain to vaccine site, chills, burning to both eyes, and weakness to bilateral legs when cold hit my feet. This lasted about 30hrs and was relieved by 2 doses of dayquil.
942485	1/13/2021	MA	27	F	1/10/2021	1/10/2021	This may not be related to the vaccine, but is strange enough that I'm reporting it. I got my vaccine at around 3, and didn't have any immediate reaction. I have an exercise bike at home, and tried to work out but had to stop after only half an hour of very low effort biking because I couldn't get a deep breathe. usually I can bike for an hour at high intensity no problem and have never had to stop because I felt like I couldn't breathe. I woke up in the middle of the night feeling achy and unwell. When I woke up in the morning I was extremely fatigued and my eyes were itchy and puffy.

942879	1/13/2021	HI	53	M	1/11/2021	1/12/2021	Received 2nd vaccination in series on 11 JAN 21. By next morning started to experience some muscle and joint symptoms. By afternoon of 12 JAN 21 experienced sudden onset loss of bladder control for first time in his life, followed a few hours later by blurry vision, vertigo, motion sickness, emesis and cold sweats that drenched his clothes. Taken to ER by paramedics, and admitted for further observation and evaluation for underlying neurologic vs. cardiogenic problems. Given positional treatments by PT for possible otoliths. Feels much improved on afternoon of 13 JAN 21, but symptoms not fully resolved. Will likely be discharged from hospital on 14 JAN 21 if problems continue to resolve.
944492	1/13/2021	AL	27	M	1/8/2021	1/8/2021	A few hours after my second dose on 1/08/2021, I had some adverse reactions that worried me, including arm numbness, tingling around my mouth and cheeks, a splitting headache/blurry vision, joint and muscle pain and dizziness. I called e-medicine and had a video call with a E-Medicine provider who told me to keep monitoring my symptoms and go to the ER if they got worse (fortunately they didn't); however there are some lingering effects. Currently I still am experiencing headaches (around my ears and temple area) with joint pain/body aches and occasional tingling/burning sensations in my fingers and feet.

937427	1/12/2021	KY	43	M	1/8/2021	1/8/2021	Initial shot did not even feel it. then a coldness in my shoulder. down my arm to wrist and up to my cheek behind my left eye, then over my sinus cavity to the right side behind my eye and to my ear. Got home from work and noticed my left side was kind of swollen. chest and back. It felt a bit like a bee sting. I slept on my left side. Woke up with numbness on my whole left side. face was numb. My wife said it was kind of like bells palsy. Face kind of twitched a bit. Hip was numb walking was slow and I was careful as I went to the grocery store . It kind of leveled out but stayed numb all of work. I was still swollen after work. Woke up on Sunday and my arm was hurting bad. numbness had dissipated. ate then suddenly felt flush and hot. fetal position on the bed for a half hour then I had to drag myself to work. felt bad the first few hours but as the night went on I felt better. I could always feel it behind my eyes. early on it felt like I was discharging a bunch of stuff from them. My body was literally numb on the left half. I could feel the middle of myself from my scalp to my toes.
937425	1/12/2021	IL	45	F	1/9/2021	1/9/2021	Right after shot my eyes were feeling dry and my head was slowly hurting (headache). In the afternoon around 4 or 5 got really hot and then in the evening around 9 got really cold and face started to itch. chin was bumpy and face was itching, eyes were still hurting with slight headache. I did have vivid dreams at night and slept not well. in the am my face was itchy red eyelids and under eye, patch like rash on face and itch . Ankles hurt to walk (joints hurt) and arm site was painful and hurt. was cold on and off during day and monday it was hard to wake up, v ery drosy and exhausted. Later that day the face cleared up and i could walk fine and headache was gone . I did feel a little cold monday night. Tuesday everything gone except a slight itch here and there on my face. I feel fine and arm pain is gone as well.

937378	1/12/2021	IL	45	F	1/9/2021	1/9/2021	A few hours after the vaccine I got hot. About 2 hours later I got really cold. At night when I was sleeping I had very vivid dreams. I was cold all night. When I woke up my arm was sore to touch , to move and both ankles hurt to walk and I started itching on my face. Started Saturday in the evening( chin, nose) Eyelid and underneath was red and I also had a headache. I had blotches on my cheek. Next day I woke up and no change but I was extremely fatigued.. Monday 10am it started going away. By evening majority of pain was gone. About 98% recovered. I still have some itching and chills.
937402	1/12/2021	PA	39	F	1/7/2021	1/7/2021	Pt. started having tachycardia immediately after vaccination and hives developed two hour after vaccination was given. Pt. took propranolol for tachycardia(already prescribed this medication by pcp) and bendryl for hives along with cold water. Pt. still experiencing hives today and just took loratadine and zaditor eye drops for crusty/itching eyes.
937381	1/12/2021	NY	38	M	1/8/2021	1/8/2021	7 hours after vaccine, felt fatigued with muscle aches. 15 hours after vaccine, worsening muscle aches with nausea. 20 hours, peak of muscle pain, nerve pain, nausea, and pressure in eyes. at 20 hours, Tylenol and Benadryl were taken. At 40 hours post vaccine, reaction subsided with new symptom of left axillary lymph node enlargement and tenderness. Axillary lymph nodes normal 72 hours post vaccine.
937336	1/12/2021	MN	41	F	1/11/2021	1/11/2021	Onset of "kaleidoscope vision" at 10:50 AM, followed by headache, nausea, light sensitivity, and difficulty focusing eyes (symptoms of ocular migraine). Severe symptoms lasted 5 hours, mild symptoms lasted through the evening and next day (today I still have a mild headache and nausea). I have previously had 1 migraine (~5 yrs prior) in the setting of repeated fume exposure during a renovation at my workplace, no other history of migraine.

937372	1/12/2021	MN	82	M	12/30/2020	12/31/2020	The day following vaccination, 12/31/2020 at 1230, the patient had an acute onset of shortness of breath, tachypnea (rate 34)wheezing, tachycardia (rate 130s and irregular), oxygen desaturation (89 to 91% on room air), and clear rhinorrhea, non-productive cough. Earlier in the day he complained of not feeling well, but non-specific. He was assessed and given an albuterol nebulizer treatment. In the coming hour, his wheezing resolved, work of breathing improved, heart rate and respirations decreased. He was ambulating around without signs of activity intolerance. It was felt that he was stable and back to baseline, so he was monitored by the nursing staff. A chest x-ray was ordered but not completed. On 1/1/2021 at approximately 0925, a nursing assistant described loss of consciousness for 20-25 seconds. It appeared that he was not breathing, slumped over in the chair at the breakfast table eating cream of wheat, eyes rolled back in his head. He regained consciousness, breathing normally after coughing. He did not appear to be choking. His heart rate was recorded as irregular, rate 32 by the nursing staff. He was transported to the Emergency Department at Hospital for evaluation. No concerning findings.

937935	1/12/2021	ID	41	F	12/18/2020	1/8/2021	41-year-old woman who presents to the office on 1/12/2021 for fatigue, congestion of nose and eyes and lack of taste and smell. Patient's initial symptoms started on 1/8/2021 with some rhinorrhea. The following day on 1/9/2021 she went to the gym feeling fine. That evening she felt fatigued and attributed to her workout earlier in the day. The next day she developed a severe headache with fever, sweats, chills and body aches. Yesterday on 1/10/2021 she developed nasal congestion and eye symptoms. Patient presented to the office today on 1/12/2021 for testing and was Covid positive. Patient had a positive Covid test on 11/11/2020 with mild symptoms of headache, fatigue without congestion or loss of taste and smell. At that time the duration of her symptoms was 3 days. She had the first Pfizer Covid vaccine on 12/18/2020 with minimal muscle soreness. She had the second Pfizer Covid vaccine on 1/8/2021. Patient works in administration of a medical facility. She has minimal contact with clinical staff and patients. No one in her office has had Covid symptoms or infection. Patient's other contacts are at home and the gym. She does attend a gym class with 10 other participants. She does not know whether anyone in the gym class has had symptoms.

938052	1/12/2021	TX	43	F	12/31/2020	1/1/2021	lost the sense of smell and taste; lost the sense of smell and taste; nasal congestion/stuffy nose; runny nose; tiredness/felt tired; eye pain; pain in the muscles; chills; sore pain in the arm; This is a spontaneous report from a contactable Other HCP (Dentist) reporting for herself. A 43-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose on 31Dec2020 at 10:00AM in the left arm for COVID-19 immunization. Lot number was EJ1685. Medical history and concomitant medications were none. On 01Jan2021 in the morning, she had a sore pain in her arm, and by nighttime she had chills. On 02Jan2021 and on 03Jan2021, Saturday and Sunday she had pain in her muscles, felt tired, and had some pain around her eye every time she moved her eyes. On 04Jan2021, Monday everything went away but she had stuffy nose and runny nose. Her stuffy and runny nose was better but she still had some congestion, but she could not blow anything out of her nose. On 05Jan2021, Tuesday she noticed she could not smell and she still could not smell. On 06Jan2021, she had no smell and no taste either. Stated everything was good at the time of report but she still could not smell or taste anything. She treated herself with Tylenol for the muscle aches. She took one 500mg Tylenol by mouth on 02Jan2021 at bedtime and then one Tylenol 500mg by mouth again on 03Jan2021. She was scheduled for the next dose 19Jan2021. Mention she was planning to get a COVID 19 test to see if she had the disease. The patient recovered from fatigue, eye pain, pain in muscles on 03Jan2021, the patient recovered from chills on 02Jan2021, the patient recovered from sore pain in the arm on 01Jan2021, the patient was recovering from nasal congestion/stuffy nose, the patient did not recover from runny nose and loss the sense of smell and taste. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported pain in her muscles, felt tired,had some pain around her eye every time she moved her eyes, had no smell and no taste, and the administration of the COVID-19 vaccine, BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of

936743	1/12/2021	OH	34	F	1/7/2021	1/9/2021	I had dizziness/lightheaded 10 minutes after dose. Dizziness went away 40 minutes later. 24 hours after dose had body aches. 2 days after dose I had blurred vision in Rt eye and then noticed that Rt eye was fully dilated and Lt eye was normal. Rt eye not responding to light. Went to ED and had 2 CT scans that were normal. They sent me where I had a third CT scan which was normal. I saw ophthalmology and my optic nerve was normal and eyes looked good, but Rt eye still didn't react to light. they ruled out pharmacological and said that it is something neurological. They still don't know exactly what is going on. While at the hospital, I started having urinary retention and now have a foley placed. I have follow ups with neurology, urology and ophthalmology and have orders for MRI of brain and neck.
936587	1/12/2021	AZ	23	F	12/30/2020	1/1/2021	I woke up in the morning feeling some mild body aches. When I tried to stand up I became dizzy and immediately sat down. I started sweating, my vision started to turn black and I felt that like I was going to faint. I then became extremely nauseated and threw up. after about ten minutes the symptoms started mildly passing. I then began sweating again, feeling like I was going to faint, and I threw up a second time. These symptoms lasted for about an hour where I felt nauseous and faint. Then flowing these symptoms I felt dizzy for another 3 hours and continued having body aches for another 2 days.

936568	1/12/2021	CA	70	M	1/2/2021	1/2/2021	Headache; Chills; tension around the chest/ heart; Nausea; felt uncomfortable; Confused; This is a spontaneous report from a contactable consumer (patient). A 70-year-old male patient received the first dose bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular on 02Jan2021 at 13:02 at single dose in left arm for covid-19 immunization. Medical history included ongoing prostate disorder, ongoing blood pressure abnormal, ongoing cholesterol abnormal. Concomitant medication included tamsulosin 4mg tablet once a day by mouth for prostate disorder, losartan 50mg tablet once a day by mouth for blood pressure abnormal, atorvastatin 20mg tablet once a day by mouth for cholesterol abnormal; all ongoing. The patient experienced headache, chills, tension around the chest/ heart, nausea, felt uncomfortable, and confused on 02Jan2021. Event details: The patient reported that he took the vaccine a few days ago, on 02Jan2021, he felt uncomfortable and a lot of things were going on. He clarified that he experienced headaches, light chills, tension around the chest/heart, nausea and disconnect. He felt like something was going on with his brain. He felt uncomfortable with himself. He asked himself if these were his eyes and states he was confused. He put his car in reverse when he was supposed to be driving forward, stated the curb stopped him. He did not feel totally like himself. His lady said he was normally like that but he felt there was something heavy, totally different. He did take a covid test about 3 weeks prior to getting the vaccine, the result was negative. The patient underwent lab tests and procedures which included covid test: negative in Dec2020, weight: 190 to 192 pounds on an unspecified date. The outcome of the events was unknown. Information on the lot/batch number has been requested.

A 35-year-old female patient (not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899), intramuscular at arm left on 31Dec2020 at single dose for covid-19 immunization. The vaccine was administered at other (as reported). Medical history included asthma (Allergy induced asthma). Concomitant medication within 2 weeks of vaccination included cetirizine hydrochloride (ZYRTEC) from Dec2020 at 10mg daily. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 31Dec2020, the patient experienced Left Bell's palsy, numbness and paresthesia of tongue, left side of face, inability to raise left eyebrow, pain in left upper arm between elbow and shoulder, tachycardia, elevated blood pressure. The adverse events result in emergency room/department or urgent care. The patient received treatment for the adverse events which included Prednisone 20mg daily, Valacyclovir 1000mg twice a day. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of events was not recovered.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the Bell's palsy and other reported events due to temporal relationship. However, the Bell's palsy may possibly represent a concurrent medical condition. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including viral serologies, and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and</p>

936786	1/12/2021	MA	36	F	1/6/2021	1/6/2021	<p>Shortly after receiving the vaccination, I was sitting in the observation area looking down at my phone when I felt a strange tingle in my throat. When I picked my head up, it went away quickly and did not happen again so I did not think it was a big deal. The RN monitoring the group approached me a few moments later and asked if I was OK because my chest was a little flushed. My complexion is very fair and I get red pretty easily just by clothing rubbing against my skin so I thought nothing of it but asked her to keep an eye on me. She came back around a couple more times and said it looked better. Thinking about my anxiety to get the vaccine, I assumed that was what it was and that everything was OK. I sat a bit longer, about 20 or so minutes after getting the vaccine and I seemed OK. Before leaving I had a brief conversation with a colleague while standing and I still felt OK. I left the facility and while driving home, my face started to feel hot and it was red. I was fairly close to my mother's house who is an RN so I called her and headed towards her house. She gave me 1 Benadryl and checked around my body for other blotchy red spots which seemed to be around my chest, torso, arms and face. She also noted my face was swollen, red and hot to the touch. I was able to eat dinner and drink 2 seltzers without issue then headed home about 6:30p. I took 1 Zyrtec at about 7:00-7:30p. Additionally, when I woke up on 1/7/2021, I felt tired, a mild sore throat and mild stuffy nose. My right arm was sore and heavy below the injection site. My face has been warm, slightly puffy and on and off red throughout the day. I had a headache in the morning when I first woke up and I have been parched all day. I took 2 - Ibuprofen when I woke up. Also throughout the day, at times I feel my chest get a little heavy.</p>

936299	1/12/2021	MI	41	F	12/30/2020	12/1/2020	The left side of her face, it didn't go completely numb, but mostly; still can't chew on the side of the mouth; difficulty speaking; her eye socket, it didn't feel like her eye was there; This is a spontaneous report from a contactable consumer (patient). A 41-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK923, expiration date: Apr2021), via unknown route of administration on 30Dec2020 at single dose (first dose by injection once to left upper arm, by the shoulder, a little down) for COVID-19 immunization. Medical history included ongoing high blood pressure. Concomitant medications were reported none. Her blood pressure was diagnosed years prior to the report, like 10+ years prior to the report, but she did not know if it had anything to do with it. The left side of her face, it didn't go completely numb on 30Dec2020, but mostly: stated her eye socket, it didn't feel like her eye was there, and her mouth, she had difficulty speaking, she still could not chew on the side of the mouth in Dec2020. Stated it felt like pulling, like something pulling, like a rope was tied and pulling backwards to the back of head and downward. States this lasted 2 days thankfully, and she did not regret getting it. She Provided weight as a lot of pounds, said she was joking. The vaccine was not prescribed by a doctor, her job offered it, she worked at a hospital, so it was voluntary and she took it. The event started maybe 6 hours after getting the vaccine, it was while she was sleeping, she woke up, she had slept, it was in the middle of the night, and was gone by Saturday for sure. This was her first dose. States site of administration was where she typically gets flu shots. The outcome of the event The left side of her face, it didn't go completely numb was recovered on 02Jan2021. The outcome of other events was unknown.

936232	1/12/2021	FL		F			itching at injection site; half of my face was swollen (right side); Chalazion on my right eye; This is a spontaneous report from a non-contactable consumer. A 71-years-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date were not reported), via an unspecified route of administration on an unspecified date at a single dose for covid-19 immunization. The patient's medical history and concomitant medications were not reported. The patient received the first dose at 10am: she felt okay, no issue. The next day, she had itching at injection site that was on and off not continuous, and that evening after dinner she walked past a mirror and noticed that half of her face was swollen (right side), not a lot swollen, but enough where she could tell it was swollen. The swelling was not going away and she called my internist, and the internist wanted the patient to see someone. The patient went down to the street to a neighbor who was a dermatologist and she looked at the patient and saw that the patient had a Chalazion on right eye and thought the swelling could be from applying heat to the chalazion. The patient called her Internist and told her to take Benadryl and put her on antibiotic; The dermatologist didn't know if it was from the chalazion or a reaction to the vaccine. The patient's lymph nodes were fine and glands were fine. No mass found by the dermatologist yesterday. The dermatologist recommended the patient to see another doctor, if it doesn't go away and to get imaged. The outcome of the event itching was unknown while the outcome of the remaining events was not recovered. No follow-up attempts are possible. Information on Lot/Batch number cannot be obtained.

936909	1/12/2021	TX	48	F	12/23/2020	12/23/2020	I got the vaccine and had a headache that lasted 2-3 minutes. I then got in my car and I felt little bit sick and I picked up food and I started to feel sick. I went to work and my symptoms got worse and I sat in my desk and I felt like fainting. I just felt so sick and I thought it was my diabetes. A coworker saw me and told me i looked deathly pale and felt fainting and they took me to a ER room. They gave me Benadryl and IV fluids. I started seeing the floor and ceiling warped out, I was hallucinating. My legs felt numb as well. My eyes were twitching constantly. My blood pressure 147/95 and pulse was 112. I went home, ate and went to sleep. On Saturday I felt better and went back to work 12-28-2020, I felt weak and stayed working at my shift. On Tuesday I worked 1 hour and still felt super weak. Today I am starting to feel like myself again. I will not get my second dosage due to my symptoms I have experienced.
937128	1/12/2021	FL	68	F	1/4/2021	1/5/2021	MODERNA COVID-19 Vaccine EUA I took the vaccine on Monday Jan 4 at around 9 AM. During the day only pain in the left arm. On Tuesday I felt tired all day long. At 7 PM, I took a Coke inside the fridge and I noticed and told my husband I was not feeling well. I put the coke in the glass, after I took the glass in my hand and then I fainted. Never in my life I have fainted before. I hit my head in the floor. Now I have some bruise in my face, mainly around my left eye. Feeling a little dizzy, I am in quarantine I and my husband are staying home all the time. I have my doctor scheduled for next Thursday.
937114	1/12/2021	GA	42	F	12/29/2020	12/29/2020	Within approximately 20 minutes of receiving the vaccine, numbness and tingling was felt in the face, burning of the eyes, and a metallic taste was noticed in the mouth. However, all of these sensations went away on their own within five minutes of onset, without any intervention.

936903	1/12/2021	NH	42	F	1/8/2021	1/8/2021	While patient was receiving her second dose of the Pfizer brand Covid-19 vaccination (at 14:50), she mentioned to me that she had a sustained local reaction to her first dose. Her arm had a hard, red, hot spot for approximately a week. At this time I told her we would like her to stay under observation for 30 Min instead of the normal 15 min. At approximately 25 min post vaccination, the pt reported the following: "arm felt heavy, both arms did, but more so the affected arm, instant headache, sore neck, vision went fuzzy, breathing wasn't difficult but felt labored, throat felt like it was closing/congested, rash on the inside of the affected arm". Pt stated that her heart felt like it was "pounding". VS: 162/96, 99% RA, HR in the 70's. Patient was administered 50ml IM diphenhydramine and monitored for 90 minutes in the clinic area. Dr. was consulted and also spoke with the pt, advising her to continue with OTC diphenhydramine once at home. The symptoms resolved after approximately 40 minutes. By 17:00 the patient was deemed stable to go home with the instructions to go immediately to ED should any further Sx present. It was verified that she did not live alone and would have someone with her that could assist. Pt was subsequently followed up with a phone call on the next day by RN who relayed that she was very tired, but no other complications.

936950	1/12/2021	OK	54	F	12/21/2020	12/21/2020	I had four visual migraines followed by a migraine headache and my PCP prescribed me some meds that helped. A little soreness at the injection site nothing extraordinary. I had the vax on a Monday and the last migraine I had was maybe on Friday the same week. I received the second dose yesterday and now I have a headache, low grade fever (99.9F about 8AM this morning) and body aches. Just treating myself at home. The headaches I have now are different, in a difference place in my head, they are lighter, it feels more like the headache you have when you have the flu.
938805	1/12/2021	TN	46	M	12/30/2020	1/3/2021	Sun 10pm change in taste. Taste continued all day Tuesday. Had COVID test done. It was negative. That evening his eye started blinking.... Bells Palsy. Difficulty with face movement. Today still persisting. Now taking a steroid. He is a MD.
938885	1/12/2021	WA	58	F	1/12/2021	1/12/2021	Dose provided 9am, then 9:25am pt developed bilateral eye swelling and slight shortness of breath. She has a history of severe allergy to medication/bees so she was already being closely monitored for the full 30 minutes. Her shortness of breath became better after 25mg Benadryl administered orally with water. Patient was monitored another 20 minutes, no other issues. Second dose for home provided. Pt was escorted to the car by RN where sister drove her home to continue to monitor. Nurse called pt to follow up at 2pm same day, no answer, voicemail left.
938877	1/12/2021	NJ	59	F	1/2/2021	1/5/2021	1/5/2021 at 3am I woke up feeling very lightheaded and dizzy. Went back to sleep and At 7am woke feeling same. I took routine vitamins and 2 extra strength Tylenol. Symptoms lasted all day with difficulty walking due to the dizziness. Also had difficulty focusing, blurry vision. 1/6/2021 still a little lightheaded just a little dizzy. Headache (I have routine headaches). lightheaded and dizziness decreased with each day.
938866	1/12/2021	AK	38	F	1/7/2021	1/9/2021	Two days after receiving 2nd dose of COVID19 vaccine, red itchy areas to upper legs and arms. Progressed next day. Today 1/12/21 employee showed me additional red areas to arms, face, outer eyes and states red areas to abdomen. Otherwise feels well.

938860	1/12/2021	CA	42	F	1/8/2021	1/9/2021	1/8 - Within 12 hrs had body, eye, and headache. Overall tired. Could not do normal daily things without feeling wiped out . 3 Advil did nothing- sat 1/9. Next day felt better.- sun 1/10. That evening low grade fever 99.6 and achy again., mostly eyes and head. Went to bed. Monday okay. But noticed right armpit a pit puffy.- same side as injection. Tuesday 1/12 woke up at 6:00am and had dull joint/bone pain bilaterally. Ranging from neck ache, to sternum/upper back, shoulders, triceps. Injection site still sore- slightly red off to the side. Did some stretches in bed and eventually got up. I am very in tune with my body- something is off. I never wake up feeling ?bad?. Fit, healthy and active normally. Almost like a bad nights sleep with a poor mattress but only affected my upper body. Took two Advil and hot shower- feel better but can tell something doesn?t feel right.
938848	1/12/2021	CA	43	F	1/12/2021	1/12/2021	Tingling, numbness of forehead, left ear, left eye, tingling throughout arms, fingers & thighs. Received Benadryl 50 mg IM, monitored in the ED x 2 hours, EKG done.

938830	1/12/2021	UT	50	F	12/28/2020	12/30/2020	Pain on left side of neck starting 2 days after first dose of Pfizer-BioNTech COVID-19 vaccine 0.3 mL IM in right deltoid. Pain progressed over the next 5 days to arm and left eye. Dizziness, mouth drooping, and numbness developed. Went to ED and diagnosed with Bell's Palsy. Evaluated in ED for possible causes. Vital signs stable. CVA ruled out. Patient given ketorolac, droperidol, and IV fluids for her headache. Prescribed steroids and acyclovir for Bell's Palsy treatment. Prescriber instructed patient to return to ED immediately if symptoms worsen or additional symptoms develop. Follow up with patient on 1/5/21 with patient reporting some improvement in symptoms. Patient reported having a headache for 2 weeks straight prior to presenting to the ED on 1/3/21. Vaccine was administered on 12/28/21. Unsure if the Bell's Palsy was a result of the vaccine or some other inciting factor.

938063	1/12/2021	AZ	45	M	12/21/2020	12/22/2020	Burst blood vessel in left eye 24 hours after vaccine was given.; This is a spontaneous report from a contactable other-HCP. A 45-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number not available, via an unspecified route of administration on 21Dec2020 07:45 AM at single dose for covid-19 immunization. Vaccine location was left deltoid. The patient did not received any other vaccines within 4 weeks prior to the COVID vaccine. Medical history included morbid obesity and blood pressure high. No known allergies. Patient didn't do relevant test. Concomitant medication included amlodipine (AMLODIPINE) at 5mg daily. The patient experienced burst blood vessel in left eye 24 hours after vaccine was given (eye haemorrhage) on 22Dec2020 08:30 with outcome of recovered. No treatment received. The action taken in response to the event for BNT162B2 was not applicable. Information on the lot/batch number has been requested.; Sender's Comments: Based on the available information, the company considers that a causal relationship between the eye haemorrhage and vaccination with BNT162B2 cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.
939282	1/12/2021	FL	42	M	1/8/2021	1/9/2021	Woke up at 2 am the morning after the injection with my arm extremely sore, swollen, red, and feverish to the touch that has continued for 4 days now. I also experienced a fever for 2 days after the injection along with dizziness, weakness, fatigue, headache, body aches, vision changes, and ringing in both ears. As of today 1/12/21 I am still experiencing symptoms even while using Benadryl allergy tablets by mouth and anti-itch cream applied to the injection site.

939262	1/12/2021	PA	35	F	1/4/2021	1/6/2021	A little over 2 days after the vaccine, I had a horrible headache. Thought nothing of it, took Excederin migraine and went to bed. Woke up Thursday feeling fine, then by 5 pm, was very run down, had a mild headache, and had an intense sinus pressure under my eyes. My neck hurt and was sore to the touch in the front. When I bent over, it felt like my head was going to explode from pressure. No other symptoms or anything to be alert about. Took a Mucinex before bed, hoping that it would move anything that might be clogging my sinuses, went to sleep. Woke up Friday feeling okay, with just a tiny remnant of a headache. Around 1 pm, intense sinus pressure returned, worse than the previous day. Decided to go to local healthcare clinic around 3:30 pm. PA looked at ears, throat, all looked okay. Only symptom was swollen lymph nodes in neck, same side as the vaccine was administered. Covid tested (subsequent results were negative). Saturday, had less pressure, and spent the day laying around. By Sunday, was feeling back to normal. Peak of incident was definitely Friday.
939220	1/12/2021	FL	37	F	1/11/2021	1/12/2021	16 hours post vaccine, I awoke to chills/feeling of fever. I suddenly felt nauseous. I went and sat on the floor of my bathroom and went unresponsive. Per my husband. My eyes rolled back in my head, my body went limp, and I was moaning. I did not come to for 30-60 seconds despite shaking, calling my name, and sticking his finger in my throat. I came to and was alert and oriented but have no recollection of the incident. EMS was called.
939217	1/12/2021	NY	24	F	1/12/2021	1/12/2021	Vaccine administered at 8:10PM Reported feeling dizzy and a slight tingling sensation in mouth at 8:22PM Vital Signs: BP 115/71 POx 98% HR 72 No issues swallowing, no facial swelling or other symptoms. Gave 50 mg PO Benadryl at 8:30 and continued to monitor. At 9PM reports symptoms gone. Feeling well and wished to go home, did not want to go to ER for further evaluation. Lives with her family at home who will keep an eye on her tonight. Escorted out to her ride home.
939216	1/12/2021	NY	22	M	1/8/2021	1/12/2021	Blurred vision, difficulty breathing (pale skin/blue lips), profuse sweating, muscle fatigue, headache. This lasted about 15 minutes. Until severity went down. Followed by 20 minutes of profuse sweating and headache. I thought I was going to die

939213	1/12/2021	OH	35	F	1/8/2021	1/8/2021	I received the vaccine at 12:30pm and by 8:00pm my face began to feel swollen, hot to the touch and itchy. By day 4 the symptoms did not subside but grew worse with a swollen red rash around my eyes and upper face.
939194	1/12/2021	MN	32	F	1/7/2021	1/11/2021	within 1 hr post-vaccine on 1/7 I had a mild headache that resolved with Tylenol. At about 12 hours post-vaccine I developed nausea, fever (100.4) and chills and secondary to this had poor sleep. The next day I took scheduled alternating Tylenol & ibuprofen during the day and then overnight 1 episode of chills that woke me up. no events Saturday or Sunday. Then Monday 1/11 in the early morning I started to develop a rash on my b/l elbow and right foot 3rd toe. I applied mometasone topical cream to these locations. while at work the rash extended down both forearms then by 5pm it was on both hips and extending along both legs. I applied Benadryl cream to the most irritated sites and took PO Benadryl 50mg at bedtime and again at 1am when the itching woke me up. I repeated Benadryl 25mg at 8am. The rash seems to be getting better on the arms but then by noon I had a new breakout on my neck and face. I took Benadryl 50mg at 1pm. The rash continued to have a rapid progression over the next hour and resulted in angioedema with my throat swelling, lips puffed and numb and eye swelling. I was injected with an epi pen and sent to the ED where I received PO prednisone, famotidine, and Benadryl. The face/neck rash then greatly improved and I was sent home on prednisone 40mg daily for 3 days.
938970	1/12/2021	AZ	62	F	1/12/2021	1/12/2021	20 mins later numbness in face a head. Blood vessel popped in right eye. Dizziness feeling out of sorts. Feels like flu shot.

939153	1/12/2021	NJ	58	F	1/4/2021	1/6/2021	Received vaccine on Monday by Wed afternoon lower abdominal cramping and feeling very unwell. By Wed evening had chills and low grade fever 99.4. Called out of work Thursday. Felt terrible. Thursday morning lower abdominal cramping consistent and pain scale between 4-5 with occasional spikes to 8. Also felt terrible. Had body aches, could only lay on couch. Called my gastroenterologist. Office returned call late afternoon and stated probably from vaccine and if it worsens or fever to call primary and to fill out VAERS form. Thursday evening had temp of 100.4 and started with a cough where it felt I couldn't take deep breaths. Only lasted a few hours. Abdominal pain persisted. Friday morning woke up and now have headache, but abdominal pain is now down to a 2 and I feel achy, but feeling a bit better. Had to call out of work still too sick to go in. No cough. No fever. Since I was feeling better my hope was since it was vaccine related that I would wake on Saturday and be totally fine, unfortunately, not the case. Saturday morning abdominal pain same at a 2 and headache was on and off through the day into the night. Still pretty much rested all day into the night. Sunday morning much better. Headache gone and abdominal pain down to a 1 and sometimes just vague. Although I'm feeling better my head feels out of sorts, kind of like my brain can't keep up with my eyes? And new symptoms? right ear crackling and teeth on right side feel sensitive also, pain under left armpit. It's tender and lasts through the day. Monday still feeling a bit lightheaded and fatigued and armpit pain still there but not worse and feel able to go to work to see if I can. Tooth sensitivity also still there but ear pain gone. Called primary doctor she suggests getting Covid test and have appointment for phone conference for Tuesday with doctor, also had Covid test today at work (was Covid tested last Monday also for work and negative) into Monday night head is still feeling "off". Tuesday armpit pain still same and dizzy head feeling same, mild abdominal pain comes and goes - Not bad enough to stop daily activity. Spoke with primary doctor and she said side effects could possibly last this long and let her know when yesterday's Covid test comes in.....

she thought it was important that she report what she was experiencing to Pfizer. She stated she has psoriatic arthritis, too. Reported after receiving the COVID-19 Vaccine on 02Jan2021, she had left upper shoulder pain. She clarified that she had a previous history of paralysis in her left trapezius muscle and had surgery in 1998 on her left shoulder. She said she had a weird feeling that went around where her scar was from the surgery on the back of her left shoulder. She said maybe the left shoulder pain had to do with how she held her left shoulder. She said on Monday, 04Jan2021, she had a little bit of pain in her left shoulder and by yesterday night, 05Jan2021, there was not much pain at all. Clarified her joint pain was in her ankles, wrists, hips, neck, back, and knees. She said the joint pain felt like "flu" joint pain. She stated she normally has joint pain with the other issues she has, but this joint pain felt different. She said the joint pain she experienced after taking the COVID-19 Vaccine was all over her body. She said yesterday (05Jan2021) her joint pain felt so much better, but later in the afternoon she didn't feel right. She said she has pernicious anemia, and thought maybe she needs her B-12 shot. She said yesterday (05Jan2021) she experienced a lot more symptoms. She said she had numbness in her face, felt extremely exhausted, had a foggy feeling, and felt exasperated. She said the symptoms didn't start until late in the afternoon into the evening of 05Jan2021. She said she did not feel well and went to bed at 8:45PM, which is early for her. She said she did give herself a B-12 1mcg/ml shot intramuscularly yesterday. She provided the B-12 1mcg/ml NDC Number: 7006900510, Lot Number: C0495, and Expiration Date: Aug2022. She said the name (company name) was listed on the B-12 1mcg/ml packaging. She said she gives herself a B-12 shot every 10 days. She said she still has some joint pain, but the joint pain is not like it was on 03Jan2021. She said she still has a tiny bit of heaviness in her joints with a constant throbbing pain, which is a different joint pain from her normal. Reported last night (05Jan2021) she didn't feel good at all. She said she felt horrible, and had to go to bed. She said she felt shaky inside all night, and still feels that way now. She said she was sweating like crazy, and then would get chills. She clarified she is used to being hot and cold in her normal life because of her thyroid problems, but stated what she

VAERS_ID	RECVD	STATE	AGE_YRS	SEX	VAX_DATE	ONSET_DATE	SYMPTOM_TEXT
----------	-------	-------	---------	-----	----------	------------	--------------

experienced last night was beyond that. She said her hot and cold issue was bumped up several levels last night. She said she was chilled or sweating all the time last night, but did not have a temperature. She clarified her normal body temperature is 96.7, and when she checked her temperature at one point, her temperature was 98 degrees. Reported the hot and cold with sweating and chills, and nausea come and go. She said if she has nausea, it is a mild feeling of nausea. Clarified if Sunday, 03Jan2021. was a work day, she would have called out sick. She said Monday (04Jan2021) and Tuesday (05Jan2021) she did go to work. Reported she has low potassium and made herself an electrolyte cocktail. Reported if her system feels off, she said her electrolytes maybe off. She said her heart felt like it may be shaky, so she ate a banana to get potassium in her system. She said she does her little routine before she would call her doctor to get blood work done. She said she had her blood work done not too long ago. She said she wasn't feeling this way before she had the COVID-19 Vaccine, and is feeling rundown now. She said she was feeling good before she had the COVID-19 Vaccine. She said she feels like something is going on with her body now. Reported her last blood work was done on 04Dec2020 and everything was kind of normal. She clarified her thyroid was a little off, and her doctor adjusted her medication. She said her potassium was a little down. Reported she was told when she got the COVID-19 Vaccine shot she has to be a little more careful, and she might not be as protected as some people. She said she was told there have not been enough studies on the COVID-19 Vaccine. She clarified she was told that information by a person at the site where she received the COVID-19 Vaccination, saying the person was helping her with the COVID-19 Vaccination authorization form. Reported she thought she was doing OK after she received the COVID-19 Vaccine, until after last night and yesterday afternoon. She said if she continues feeling the way she is, she will see her doctor. She said her system seems off. She said she normally tries everything she knows first, like drinking a lot of water, and drinking electrolytes, and will take potassium to see if that is the issue. She said those are her own things that she does before she calls her doctor. Clarified sometimes she has numbness in her face due to not having her B-12. She

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							said she still has a little numbness in face. She said on 05Jan2021, the numbness went across her face from the bridge of her nose down through to her mouth. She said the numbness was nothing like paralysis in her face, but her face was really hot at the same time she had the numbness. Reported she took Tylenol (clarified as (company) brand Tylenol, stating she doesn't have the UPC, Lot and Expiration Date). She said the Tylenol wasn't kicking in, so she took Ibuprofen (clarified as (company)brand Ibuprofen, and she doesn't have the Ibuprofen NDC, Lot and Expiration date). She said she took her normal medications. Outcome of events "She clarified she had some injection site pain" "and the injection site was a little itchy" and Shoulder pain were recovered on an unspecified date, "Chills" and "feels shaky inside" were not recovered, "Joint pain" "Nausea" "Numbness facial" were recovering, while outcome of other events was unknown.

938376	1/12/2021	NC	49	F	12/22/2020	12/28/2020	Immediately after vaccine, there was redness, swelling and soreness to the site. This resolved within 3 days. Then, 6 days after vaccination, area became hot, red, swollen, indurated and extremely pruritic, interfering with sleep, mobility and usual routine. Affected area was approximately 15cm x 10 cm. These symptoms remained until January 2, 2021. On January 2, 2021, the redness and swelling dissipated except for the edges, where there remained a red, irregular ring marking the edge of the affected area. Area continues to be pruritic. All visual abnormalities have resolved.
938365	1/12/2021	SD	42	F	12/30/2020	12/31/2020	When I woke up on Dec 31 (the day after my shot), my face was swollen and my the area around my eyes was very swollen. I began taking Benedryl and continued to take Benedryl every 4-6 hours over approximately the next 48 hours. Also, I originally had no injection site reaction, however, on Jan 9th, my right arm began to itch. Upon assessment, I noted a 1.5" diameter red, warm area where the vaccine had been administered. This lasted for three days, and now, January 12th it no longer itches, and looks more like a bullseye that is approximately 2.5" in diameter around where the redness was. I have also noticed that since the vaccine I feel cloudy or like I have a constant mild headache.

938284	1/12/2021	IL	26	F	1/5/2021	1/5/2021	Patient is a 26-year-old female who presents today with symptoms including migraine, "brain fog", fatigue, low grade fevers, and dizziness that began 6 days ago following receiving her first dose of COVID-19 vaccine. Pt. States she was tested for COVID 3 days prior to vaccine and this was negative. Pt. Says she had been sick for 6-7 days prior to taking vaccine and believes her immune system might of been weak from this. She received Moderna COVID vaccine at hospital. Her symptoms were more persistent and with more intensity for the first 3-4 days but now the symptoms are more "off and on." Her headache is posterior and the dizziness is also "more intermittent than before." Her headache is rated 4/10 at this time. She has taken OTC NSAIDS without much relief. The "dizziness" seems to occur randomly and is not aggravated by rapid positional changes. She does ingest moderate amounts of caffeine to boost her energy level while at work. She denies visual changes/focal weakness/discoordination/nausea/vomiting/abd pain/shortness of breath/wheezing. Pt. Reports that she has been very concerned about making sure she takes the right measures to help prevent getting COVID infection. She has researched the COVID vaccines, how they are made, and which are "more potent.~~

933988	1/11/2021	IL	56	F	1/8/2021	1/9/2021	Moderna COVID-19 Vaccine EUA. After receiving the vaccine on 01/08/2021, started to experience pain in left arm which increased in intensity as the day progressed. Took 800mg Motrin with minimal relief. Took an additional 800 mg of Motrin again at bedtime. Woke up on 01/09/2021 with headache, muscle and joint pain, pain in left arm and shoulder, and fatigue. Took Tylenol and Motrin through out the day. Woke up on 01/10/2021 with red swollen eyes and face, and a rash (hives) on neck, stomach, back, and antecubital spaces. Experienced nausea during day. Took Benadryl and Tylenol through out the day. Hives and swelling decreased with second dose of Benadryl. Today, still some fatigue and pain in left arm.
934382	1/11/2021	WI	33	F	1/5/2021	1/8/2021	After receiving the vaccine on 1/5/2021 I had no symptoms initially and for then next 2 days. On 1/8/21 at around 10:00am I got a headache of moderate severity behind my right eye and at right temple. It was associated with nausea and fatigue. I took 800mg ibuprofen and 4mg zofran. At 12:00 I left work and went home and slept for 4.5 hours between 12:30 and 5pm. I woke up at 5pm and had minimal residual headache in the right temple. After going to sleep from 8pm to 6am, I awoke on 1/9/21 and my headache was completely resolved. I do have a history of migraine headaches. This headache and associated nausea felt like my previous migraine headaches and the course was similar to my previous headaches.
934400	1/11/2021	WI	33	F	1/5/2021	1/8/2021	Immediately and for 2 days after receiving the vaccine, I had no symptoms. 1/8/2021 at 10:00am I developed a headache of moderate severity at right temple and behind right eye with associated nausea and fatigue. I took ibuprofen 800mg, zofran 4mg, and left work at 12:00pm. I was able to sleep from 12:30pm to 5:00pm and when I awoke, symptoms were improved with mild residual headache in left temple. After sleeping through the night, I awoke 1/9/21 and the headache and nausea had completely resolved. This headache was similar in quality and course to previous migraines that I have had and may get 1-2 times per year and have had since about age 12.

934950	1/11/2021	TX	59	F	12/30/2020	12/30/2020	<p>She is having an allergic reaction; Itching was reported as worsened/Swelling was reported as worsened/loss of appetite was reported as worsened; From the time she got the vaccine to now, she has lost 20 lbs; shake/shaking; swelling in the lips, throat, and eye lids; swelling in the lips, throat, and eye lids; swelling in the lips, throat, and eye lids; She has been sick since Wednesday; itching all over from head to toe; loss of appetite; This is a spontaneous report from a contactable consumer (patient). A 59-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration at left arm on 30Dec2020 at single dose for COVID-19 immunization. Medical history included hypertension and allergic to ace inhibitors. There were no concomitant medications. Patient was calling about the Covid Vaccine. She was having an allergic reaction. She did not know what to do to stop it. She went to the ER yesterday (04Jan2021). She had been sick since Wednesday (30Dec2020), she was itching all over from head to toe since 30Dec2020, she got a prescription for Prednisone, she took 2 doses yesterday, 1 dose today, and would take another this evening. She took Benadryl, an hour ago and had an episode, and so she had to jump in the shower and let the cold water run to stop itching, the itching did not stop but it has minimized. She put Benadryl gel and she was still itching, she had taken enough Benadryl. Patient asked what is the best way and if she needed an IV of something, she went to ER on Sunday, she was not seen by doctor, it was a nurse practitioner, she didn't do anything but just listen to her and she only looked at ankles to check for swelling. Patient stated that she had been drinking water and urinating, she had no appetite and lost 20 lbs. Patient confirmed that she got her first dose of the Covid vaccine on 30Dec2020 at 1 o'clock, the itching started the same day at 5 o'clock, the itching was from head to toe. She experienced swelling in the lips, throat, and eye lids, which started 02Jan2021. She began losing her appetite on 30Dec2020. From the time she got the vaccine to now (05Jan2021), she has lost 20 lbs. An hour ago (05Jan2020) she had an episode, which made her shake, and she did not have the shakes before, this was the first date she started shaking. Itching was reported as worsened/Swelling was reported as worsened/loss of</p>

							appetite was reported as worsened. Her 2nd dose was scheduled in 21 Days. However, she may not get the second dose, patient stated that she could not get through this no more. She had no positive test for Covid prior to vaccine. She had no antibody test prior to the vaccine. She had not any issues with vaccines in the past. Patient stated that if she was still feeling this way, she would go to a different hospital. When she went to the ER, she was not hospitalized, they sent her back home the same day. Patient would like to know if there was anything that can remove the vaccine from the body. The outcome of the events itching all over from head to toe, loss of appetite, swelling in the lips, throat, and eye lids was not recovered, of the other events was unknown. Information about lot/batch number has been requested.
934660	1/11/2021	AZ	47	F	1/7/2021	1/8/2021	Patient experienced mild puffy eyes. She reported developing a red bumpy rash on her forearms, stomach and back of knees. Symptoms started one day after vaccination on 01/08/2021. To my knowledge, patient did not use anything for treatment.
933217	1/11/2021	MP	35	F	1/11/2021	1/11/2021	30 minutes of blurred vision with flashes of light.

933275	1/11/2021	OH	47	F	12/24/2020	12/27/2020	<p>ball palsy, facial drooping; painful shingles; This is spontaneous report from a contactable consumer reported for herself. A 47-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; batch/lot number: EK5730; dosage form: injection) via an unspecified route of administration as injection to left arm on 24Dec2020 at 7:30 am at a single dose for COVID-19 immunization. Relevant medical history and concurrent conditions included slight hypertension from Jul2020 and ongoing. Concomitant medications included lisinopril from Jul2020 and ongoing for slight hypertension. The patient developed ball palsy, facial drooping which did not lasted long but she still had the painful shingles on 27Dec2020, after the first dose. She wanted to know the recommendations for taking the second dose which is due in 10 days. The patient wanted to know if she should receive the shingles vaccine. This caller was a lab tech who works in the healthcare industry and manages a medical office; but clarified she did not call on behalf of a healthcare professional. She was the patient who received her first dose of Pfizer SARS-CoV-2 Vaccine on 24Dec2020. She reported onset of what the Urgent Care Physician believed was Shingles on 27Dec2020. She called to ask if she should or should not receive the second dose of Pfizer SARS-CoV-2 Vaccine on 14Jan2021 as scheduled due to the Shingles. The Urgent Care Physician advised her to still get the second dose, as there was about a 1:10,000 chance of developing shingles with the vaccine. She reported shingles as a reaction subsequent to the Pfizer SARS-CoV-2 Vaccine. Initially on 27Dec2020 she developed sites of what she thought were canker sores or fever blisters in her mouth which had gotten pretty large and stopped her from being able to eat on 29Dec2020. Then on 30Dec2020 she developed sites on her face which have gotten scarily large; and was causing some deep nerve pain going to her eye and down her chin; the sites felt like lesions on her face with roots. The sites in her mouth were now completely gone; but the sites on her face are ongoing. Now it has kind of taken over her face. She saw the Urgent Care Physician regarding this who believed the sites to be shingles. She had never had fever blisters or shingles before this event. She was still kind of reeling. The report was reported as non-serious.</p>

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
933277	1/11/2021	NV	39	F	1/2/2021	1/2/2021	<p>The outcome of event ball palsy/facial drooping was resolved and of shingles was unknown.</p> <p>developed UTI very quickly; Puffy face and eyes; Puffy face and eyes; Burning inside digestive tract; Diarrhea; Dehydrated; arm pain; Headache; At bedtime neck stiffness began and worsened; This is a spontaneous report from a contactable healthcare professional. A 39-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number EL3246/expiration date unknown), dose number 1, via an unspecified route of administration on 02Jan2021 10:30 at a single dose on the left arm for COVID-19 immunization. The patient had no relevant medical history. Concomitant medications included alprazolam (XANAX). The patient experienced arm pain and headache 4 hours post injection requiring Excedrin. At bedtime, neck stiffness began and worsened. She was treated with lidocaine patches and Aleve. She developed diarrhea 33 hours post injection. She went ER because she was dehydrated. She developed UTI very quickly by hour 35 post injection. She had puffy face and eyes, and burning inside her digestive tract. She was treated with Benedryl at home for allergic reaction, Toradol for pain, IV fluids for dehydration and Keflex for infection. The patient was not diagnosed with COVID-19 prior vaccination and was not tested for COVID-19 since vaccination. The outcome of the events was recovering.; Sender's Comments: Based on the current available information and the plausible drug-event temporal association, a possible contributory role of the suspect product BNT162B2 to the development of event Dehydration cannot be totally excluded. The case will be reassessed if additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p>

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
933288	1/11/2021	NJ	65	M	1/2/2021	1/2/2021	Cheek swelling; Periorbital swelling/swelling around his eyes; feeling wiped out; Muscle pain; Joint pain; Chills; Fever; General malaise; low grade headache; Sweating; injection site pain; This is a spontaneous report from a contactable physician (patient). A 65-year-old male patient received bnt162b2 (BNT162B2) at single dose at left deltoid on 02Jan2021 17:00 for covid-19 immunisation, administered an injection team that is part of the local hospital system. Medical history included controlled hypertension and he has been taking the blood pressure medicine for a long time. The concomitant medications included unspecified medicines for controlled hypertension. History of all previous immunization with the Pfizer vaccine was none. The patient had not received any other vaccines within 4 weeks prior to the BNT162B2 vaccine. No additional vaccines administered on same date of the BNT162B2 vaccine. On 02Jan2021 the patient experienced injection site pain. On 03Jan2021 the patient experienced cheek swelling, periorbital swelling/swelling around his eyes, feeling wiped out, muscle pain, joint pain, chills, fever, general malaise, low grade headache, sweating. No event did require a visit to Emergency Room or Physician Office. No relevant tests performed. Therapeutic measures were taken as a result of chills, fever, general malaise, low grade headache, sweating. Course of events: He said initially he had no adverse events after receiving the COVID-19 Vaccine, except injection site pain. He said he thought the injection site pain could be from the COVID-19 Vaccine being viscous, and didn't think anything else about the injection site pain. On 03Jan2021 he started to experience some. He stated he did not normally take vaccines, like the flu vaccine. He said he has been a podiatrist for 39 years, and realized the importance of getting the vaccine to protect his patients. He then developed chills, muscle pain, fever, and general malaise. He said he experienced every side effect listed on the received COVID-19 Vaccine paperwork, except he had no lymphadenopathy. He said all the side effects he experienced appeared 24 hours to the minute from when he received the COVID-19 Vaccine. On 03Jan2021, he had swelling in his cheeks and around his eyes. He did not get sick often. He said he had a rough night on 03Jan2021 and on 03Jan2021 he still felt wiped out. Treatment: he took 2 Tylenol

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							325mg at the start of the side effects, and then took another 2 Tylenol 325mg at 2:00AM. He said he woke up soaking wet with chills and sweats. He said his fever broke, but he did not know how high his fever was. He took from a fresh bottle of Tylenol 325mg. The outcome of injection site pain, cheek swelling, periorbital swelling/swelling around his eyes, feeling wiped out, muscle pain, joint pain, general malaise was recovering, of chills, fever, sweating was recovered in Jan2021, of low grade headache was not recovered. The reporter considered there was a reasonable possibility that all events were related to bnt162b2 vaccine. He was scheduled to receive another COVID-19 Vaccine injection in 3 weeks. Information about lot/batch number has been requested.
933327	1/11/2021	IN	38	F	1/8/2021	1/9/2021	Extreme headache causing inability to keep eyes open, extreme body aches all over, hot/cold flashes, bed ridden for 30 hours, extremely sore arm, had to use ice packs and IBprofrin for head and arm pain.
933415	1/11/2021	GA	64	F	1/6/2021	1/7/2021	Felt fine the first 24 hours other than the arm soreness, moderate pain at site of injection. After 24 hours, my right eye lid started to catch when I started to blink. I call it lid lag. It has persisted longer than 24 hours. My eye lid does not blink the same as my left eye. It's like a brief before it returns to my regular eye lid. There has been no worsening, and no improvement, it has remained the same.
933417	1/11/2021	FL	48	M	1/7/2021	1/7/2021	AE - severe vertigo. The effect came on suddenly (7pm) and the room started spinning. I closed my eyes and lied back on the couch. I could not open my eye (room stopped spinning) until 3am the next morning. I could not stand without losing my balance until 12 noon. Treatment - I took meclizine 25mg at 12 midnight, 2am and 7am. Outcome - vertigo stopped around 3am, equilibrium returned at 12 noon and i was able to stand and walk slowly at that time.

933496	1/11/2021	MN	31	F	1/6/2021	1/6/2021	I felt flushed and light headed after receiving the vaccine but as the day went on I felt worse. By 2030 I had severe full body chills and could not stop shaking. I had a severe headache/migraine. Every muscle in my body hurt. This continued on for the entire night. Got tested for COVID the next morning with the rapid results and the symptoms continued with the muscle aches and severe headache. Vision became blurry and I became very dizzy. Slept for 8 hours during the day on 1/7/2021 and then slept another 12 hours that night. The body aches and headaches continued until 1/8/2021 at which the symptoms finally subsided
933566	1/11/2021	ME	50	F	12/22/2020	12/24/2020	histamine response - watery, red, itchy eyes, nasal congestion, runny nose, itchy skin
933534	1/11/2021	WI	29	F	1/7/2021	1/8/2021	Friday morning 1/8/21 at 0645 when awaking it felt like my right nostril was congested and it was hard to breath, also the tip of my nose was bright red, swollen and tender to touch. throughout the day the swelling, redness and pain increased with the right side of my nose. breathing did get easier. Saturday 1/9/21 the right side of my nose was still presenting with symptoms listed above and continued to grow toward my right eye. Sunday 1/10/21 the swelling increased but redness and pain stayed the same as the previous day. Ice was applied with mild improvement. No medication was taken. Monday 1/11/21 swelling on the right side of the nose has slightly gone down, minimal swelling (puffiness) under the right eye had started.
933576	1/11/2021	WI	53	F	1/7/2021	1/8/2021	1/8/21 AM headache over the eye, injection site sore arm; PM body aches, chills and shivering, fever 107., joint pain --over the counter ibuprofen no relief, weakness in legs. 1/9/2021 body aches and fever resolved. Fatigue, weakness and joint pain, Tylenol -- some relief. Swollen lymph nodes in left armpit and soreness; low back pain, shooting hip pain.

933679	1/11/2021	FL	50	F	1/6/2021	1/6/2021	about 10 min after the injection as I was sitting in the waiting area I got a hot feeling come over me and I felt the color drain from my face and I felt like I was going to "pass out" it passed after about 15 seconds and I felt fine. I waited 30 min from vaccine time to make sure I was going to be ok. At 5:30 pm on 1/6/21 I noticed I started itching my right arm around the inside of the elbow. I noticed my vision blurring and I had a sudden onset of a Horrific headache. By 6 pm I was itching very severely. It was as if I was clawing at my skin. I called one of the dr's I work with and he called me in a medrol dose pack. I started the dose pack at 8:30 pm on the 6th. The headache continued, I tried motrin, fiorcet, and oxycodone with no relief. I still have the headache but it is not as intense as it was. I was up all night itching and dealing with the headache by the am , my jaw was visibly swollen and it felt like I had been in a fight. I was not able to go to work on 1/7/21 and could only work 1/2 day on 1/8/21. the itching did not subside much till sat 1/9 but is coming back as I taper down off the steroids. My last pill was this am. The jaw pain and swelling lasted till sat night and is subsiding daily. I may have to call my pcip and be seen this week.

935445	1/11/2021	OH	38	F	1/11/2021	1/11/2021	01/11/21 Observation RN, the nurse in the Observation Room , called Occupational Health RN because patient after 11 minutes in the room developed right sided head pain that radiated to right eye. She also c/o tingling in right arm from the elbow to the finger tips. AT 1348, on my arrival, caregiver c/o right hand numbness and tingling from the elbow to the fingers. Injection site in right deltoid inspected, bandaid intact; no swelling or redness noted and bandaid in an appropriate placement. Right hand with strong grasp and brisk cap refill. Arm strength strong with resistance. C/o head pain but denies shortness of breath, chest pain or swelling. Some anxiousness noted. Reassurance given. AT 1351 vital signs: BP: 101/68, HR: 69, RR: 16, Sao2 99% on room air. Headache rated 3/10 and tingling in hand/arm rated 6/10. Occupational Health RN left the observation room and Observation RN in charge of patient observation. Observation RN states at 1405 the vital signs were 102/63, 74, 16 and 98% on room air and assessed head pain at 3/10 described as dull. Observation RN stated at 14:10, patient c/o tingling in left leg as well as right arm and head pain (2/10). Observation RN states at 14:14 patient developed swelling in tongue but she noted that swelling was not visible. Observation RN states there was no difficulty breathing but with the tingling in leg and arm and now swelling feeling in tongue, she administered 60mg Fexofenadine PO. Per Observation RN BP: 123/68, HR:74, RR:16, Sao2: 99% on room air.. Observation RN called for Occupational Health nurse to come to observation room. Occupational Health RN arrived at 1429 and found the caregiver slightly anxious. States headache is gone and right hand tingling is rated 2/10, leg tingling is gone, numbness/swelling in tongue is rated 4/10 and denies throat swelling or tightness. Occupational Health manager aware of situation and present with Occupational Health RN. AT 14:33 Sao2: 98% on room air and heart rate: 82. AT 1448, Caregiver ambulated to restroom per her request by Observation RN. Gait is steady. When they returned at 1451, patient states the headache was gone as well as the tingling in the leg. She states the tongue numbness/swelling was rated 2/10 and right arm tingling rated 1/10. BP: 106/68, 74, 14, 100% room air. Advised patient to go to the emergency room for evaluation but she refused at this time. After letting her rest, at 15:06, patient states the

935521	1/11/2021	ME	37	F	1/8/2021	1/8/2021	<p>Patient is an employee at Health Center. She was given the vaccine approx 3:30 pm on 1/28/2021 in the left deltoid. Patient was monitored for 15 minutes after receiving the vaccine without incident. The following is a written statement from patient describing events: "About 30 minutes after vaccine, I felt like I had hit my elbow on something. Discomfort radiated from left elbow to wrist- I did have pain around injection site. About 8:30pm on 1/8/21, area around injection site became more painful. Gradually pain increased radiating down to finger tips and up to left side of neck, stopped right below ear. Neck and shoulder muscles felt really tight- uncomfortable ache. Also got extremely tired- left side of face felt numb- left eye slightly blurry- I fell asleep about 10pm. Woke up a few hours later drenched in sweat. Face numbness gone, eyesight normal.? Patient reports the following day 1/9/2021 @ 2pm: ?All of a sudden I started to sweat all over. I didn?t feel hot, only last about 30 minutes.? Patient reports on Sunday 1/10/2021: ?Woke up feeling okay. Left arm and neck still ached but not as bad. Got fatigued around 10am. I got a headache that became really bad. Dizzy, nauseous- no relief from OTC meds. Headache went away after a few hours.? Patient reports today 1/11/2021: ?Today I am still very tired. My left arm, fingertips, shoulders and neck still ache. Face is flushed.? Patient does state previous reactions to prior vaccines: ?TdaP about 7 years ago made me have joint pain for months. Last flu shot received was about 9 years ago, had flu like symptoms x12 hours.? Patient did not seek any medical care for the reaction described above. Patient?s PCP has been also been made aware of her reaction.</p>
935577	1/11/2021	TX	28	F	12/21/2020	12/28/2020	<p>Patient reported a tender lump on the left side of neck that was tender to the touch. The lump presented exactly 1 week after the 1st vaccine dose, and it was noticeably swollen. At the time of 2nd dose, the lump was no longer visually noticeable, but could still be felt to the touch. The residual lump is no longer tender to the touch.</p>

935611	1/11/2021	CA	41	M	1/11/2021	1/11/2021	Approximately 15 minutes after receipt of the vaccine, I experienced tachycardia and mild throat swelling. I was placed in the Immunizations Clinic treatment room, had my airway assessed, and vital signs taken. My initial vital signs at 0950 were BP 197/99, HR 106, O2 sat 99%, temp 98.3 F, and 0/10 pain. Over the course of the next 2 hours, I repeatedly had my vital signs taken, was monitored, was provided with water, and remained hypertensive and tachycardic, although down-trending. I also experienced cottonmouth and bilateral blurred vision/dry eye. At the end of the 2 hour monitoring, the throat swelling seemed to subside, my systolic BP in the mid 140s and diastolic BP was in the mid 90s. At time of release from monitoring, I felt better, but dry eyes and dry mouth continued without difficulty swallowing. I was instructed to report to the ER if my symptoms worsened and to consult by primary care manager about the incident. Upon walking back to my office, I realized I was experiencing dizziness as well and a mild headache. I attempted to submit this form online but I received an error message, so I completed the fillable version to upload, in case a partial duplicate record appears.

935690	1/11/2021	CA	64	F	1/2/2021	1/2/2021	. Patient had been monitored for 30 minutes with fleeting headache that patient did not report, then left and went to car, and drove for a few minutes. Then noticed that she had R eyelid swelling and facial swelling. Did have some sore throat and nausea. Then got diarrhea later that same day. No hives, wheezing, SOB, chest tightness, lightheadedness Patient went back to clinic and was treated with IM benadryl 50mg with improvement of symptoms. Then took oral benadryl for the next 2 days.
935444	1/11/2021	CA	34	F	1/8/2021	1/8/2021	Patient arrived at clinic around 16:00. Pt reports that she received the vaccination at 14:48 (L-deltoid), temperature 97.2 and waited the 15 minutes to see if she had a reaction, she felt fine while sitting down. She reports that as she was walking down the hallway at clinic (approximately 20 min after receiving the COVID Vaccine) she started to get numbness on R-side of her face and then her R-leg. She did not go back to report symptoms to the RN that had given her the vaccination and she decided to drive back to clinic. She adds that she started to lose sensation on her L-arm, becoming nauseous, producing a lot of saliva, headache (5 of 10) back and front of head, pain constant and chills. We sat her in a room and administered O2 at 2L, she was very pale and cold. 16:08 DO was called to notify of employee adverse event and EMS was called. Pt called her MD and reported what happened. States she ate a small meal this am and nothing else. 16:15 she feels like her eyes are twitching, numbness to the R (arm and face) continues and still minimal sensation on her L-arm, has no problem swallowing, no rash. 16:18 EMS arrived, O2 98%, BP 120/70, Temp 98.4. EMS decided not to transport Pt. Advise that she did not drive, to go home and rested. If her symptoms worsen so seek medical attention. 17:05 numbness of whole face continues, extra production of saliva has stopped, loss of sensation of L-arm is improving, R-arm and face feeling better, headache continues. Given Acetaminophen 325mg X2. 17:07 slightly nauseous, chills went away. 17:35 R and L side feel better but continues with face numbness, headache still the same no chills but reports feeling cold. 17:40 She went home. 19:53 Reports feeling better, laying down and resting.

935780	1/11/2021	OH	61	F	1/5/2021	1/5/2021	Extremely tired went to bed at 8:30. At 11:00, tossed and turned until 12:16 a.m. Did not think she could stand up. Walked in the bathroom had pain in stomach, was very hot and freezing at the same time, was shaking. Head hurt was hurting so bad. Tried standing up from toilet, was passed out. Eye, half of face is bruised and swollen , eye shut for two days. More than forty minutes passed before she could call her husband. Does not remember anything because she was passed out. Husband came in and grabbed her, to get her back into bed. she could not stand. Went to ER at Hospital. Had CT scan, blood work , EKG, chest xray. Was still kind of out of it but was able to communicate with nurses. Face is still black and blue. Last night got up at 4:00 a.m. something was wrong with her throat. Felt like a walnut was in her throat. Went to doctor this morning. They said it was a reaction from the shot. Got an EpiPen, prednisone. Call them in 2 days to let them know how she's doing and also wear a heart monitor because they do not know how to take care of her, Has had vision blurriness in both eyes. Has not felt well at all.
935851	1/11/2021	SD	40	F	1/11/2021	1/11/2021	approximately 10 minutes after Covid vaccine the patient was starting to have right sided facial tingling then she started to have tingling in her throat. I sat with her and she had progressive tingling, worsening throat tightness and some facial swelling under her eye. We then moved her to a room and laid her down. I discussed the use of the EpiPen and a dose was given at approximately 400PM. We also called 911 at that time. Vitals were taken and EMS arrived and by the time they were taking her away her symptoms were improving.

934947	1/11/2021	NY	31	F	1/3/2021	1/3/2021	<p>it was debilitating for her at work; It even hurts to move the right eye in one direction and hurts to speak, the pain was so bad.; pain in right leg and bottom sole of right foot; hurts to speak; numbness right upper side of lip; pins and needle feeling right upper quadrant of face; pain and dull aching right upper side of face; right hand numbness, wasn't able to feel anything; generalized headache; generalized muscle weakness and pain; generalized muscle weakness and pain; This is a spontaneous report from a contactable other hcp (patient). A 31-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 03Jan2021 at single dose in deltoid right for covid-19 immunization. There were no medical history or concomitant medications. The patient received the vaccine on 03Jan2021 and within 15 minutes had a generalized headache. Later that night she had generalized muscle weakness and pain, but really didn't think too much about it. The next day at work (04Jan2021), she had numbness on the right upper side of her lip and a pins and needle feeling in the right upper quadrant of the face. Had a lot of pain in the area as well on the right upper side of the face as well as a dull aching pain that lasted for hours. Later that day when using the computer and she was trying to reach for her mouse she noticed her right hand wasn't able to feel anything and that lasted about 20-25 minutes. Kept slapping the mouse with her hand, but could not feel anything, her hand went numb. Yesterday (05Jan2021), she had the same pins and needle feeling in the same area of the face and that dull achy feeling and it occurred for hours and it was very kind of debilitating for her at work. Later that night she had pain in her right leg and felt the same way, that very severe achiness, which was the pins and needles feeling up and down the leg and underneath the right foot. All these symptoms tend to be on her right side and it definitely lasted for hours. It started about 1 and didn't end until 6-7pm. It even hurts to move the right eye in one direction and hurts to speak, the pain was so bad. This morning (06Jan2021) she had to call out of work because at 3am the generalized headache, pain was unbearable. She was still experiencing the pain in right leg and bottom sole of right foot. She did not receive any vaccines the same day or 4 weeks prior. No problems with vaccines in</p>

934906	1/11/2021	PA	57	F	12/22/2020	1/4/2021	experienced symptoms of TIA; Severe aphasia; blurred vision; confusion; short term memory loss; elevated blood pressure; This is a spontaneous report from a contactable Other-HCP(Patient). A 57-year-old female patient received first dose of BNT162B2(PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration at right arm, on 22Dec2020 08:15 at single dose for COVID-19 immunization. The patient was not pregnant. Medical history included herpes simplex on lips, post menopause, elevated cholesterol w/lifestyle changes. Known allergies reported as no. Concomitant medication included varicella zoster vaccine rge (cho) (SHINGRIX) for immunization. On 04Jan2021 08:30, the patient experienced symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure. The patient admitted to (Hospital name) (still here, hospitalization days reported as 2). Symptoms resolved except very mild aphasia. The patient had very few risk factors for TIA but did have family history of cardiovascular(CV) disease at young age, low density lipoprotein(LDL) was 192. The patient did not have diabetes, HTN, or known heart disease. She did not have severe anxiety. She did not smoke or use any substances. She walked about five miles 4x a week. Weigh reported as 157. Events reported as serious due to hospitalization. The patient had no Covid prior vaccination. Covid(nasal swab) was tested post vaccination on 04Jan2021, Covid test result was Negative. The event resulted in emergency room/department or urgent care. Treatment received for the adverse event included clopidogrel bisulfate(PLAVIX), acetylsalicylic acid (ASPIRIN), statin; potassium, CT, MRI, "telemet". The outcome of the events was recovering. Information on the lot/batch number has been requested.; Sender's Comments: The Company cannot completely exclude the possible causality between the reported symptoms of transient ischaemic attack(TIA), severe aphasia, blurred vision, confusion, short term memory loss, elevated blood pressure and the administration of BNT162B2, based on the reasonable temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of

Wednesday 1/6: I had welts on my eye lid to the back of my scalp. I thought it was bug bite or rash. It didn't itch just sensitive to touch. I took some Tylenol. By 1/10/21, it still didn't go away and I took a Zyrtec and Tylenol. It was stinging and sensitive to touch. When I got up from my nap, I took a Valtrex before I went to work and the welts are seemed to be going down. I believe it is a shingles-like reaction to vaccine.

935417	1/11/2021	OH	38	F	1/11/2021	1/11/2021	01/11/21 RN, the nurse in the Observation Room , called this RN (Occupational Health RN) because patient after 11 minutes in the room developed right sided head pain that radiated to right eye. She also c/o tingling in right arm from the elbow to the finger tips. AT 1348, on my arrival, caregiver c/o right hand numbness and tingling from the elbow to the fingers. Injection site in right deltoid inspected, bandaid intact; no swelling or redness noted and bandaid in an appropriate placement. Right hand with strong grasp and brisk cap refill. Arm strength strong with resistance. C/o head pain but denies shortness of breath, chest pain or swelling. Some anxiousness noted. Reassurance given. AT 1351 vital signs: BP: 101/68, HR: 69, RR: 16, Sao2 99% on room air. Headache rated 3/10 and tingling in hand/arm rated 6/10. RN left the observation room and RN in charge of patient observation. RN states at 1405 the vital signs were 102/63, 74, 16 and 98% on room air and assessed head pain at 3/10 described as dull. RN stated at 14:10, patient c/o tingling in left leg as well as right arm and head pain (2/10). RN states at 14:14 patient developed swelling in tongue but she noted that swelling was not visible. RN states there was no difficulty breathing but with the tingling in leg and arm and now swelling feeling in tongue, she administered 60mg Fexofenadine PO. Per RN BP: 123/68, HR:74, RR:16, Sao2: 99% on room air.. RN called for Occupational Health nurse to come to observation room. RN arrived at 1429 and found the caregiver slightly anxious. States headache is gone and right hand tingling is rated 2/10, leg tingling is gone, numbness/swelling in tongue is rated 4/10 and denies throat swelling or tightness. Occupational Health manager aware of situation and present with RN. AT 14:33 Sao2: 98% on room air and heart rate: 82. AT 1448, Caregiver ambulated to restroom per her request by RN. Gait is steady. When they returned at 1451, patient states the headache was gone as well as the tingling in the leg. She states the tongue numbness/swelling was rated 2/10 and right arm tingling rated 1/10. BP: 106/68, 74, 14, 100% room air. Advised patient to go to the emergency room for evaluation but she refused at this time. After letting her rest, at 15:06, patient states the tongue swelling/numbness is almost gone and the right hand tingling is almost gone. Vital signs 98/59, 68, 16, 100% on room air. Water given.

932573	1/10/2021	NY	49	F	1/8/2021	1/8/2021	Approx 35minutes after vaccine i experienced sneezing ,scratchy throat and itchy yes, took Allegra with good effect. Arm soreness developed about 8 hours after vaccine, woke next morning with fever 100.9, severe body aches, headache, nausea, weakness and fatigue, decreased appetite. In addition, as the day went on I experienced a shallow cough, high pulse rate (130), tongue twitching and just felt awful. Slept on and off all day, sx lasted the entire day. Took Tylenol throughout the day for the the fever. I awoke 3:30 am today, 1/10/21 with fever 101.5, took more Tylenol, still headache and feel tongue twitchiness however muscle aches, body aches, nausea, decreased appetite and fatigue have subsided. I took 600mg Advil around 9am today and have been gradually feeling much better as of now 1:30pm. As a side note, I did have COVID 19 illness mildly in March 2020. It was dx'd with PCR testing and my sx were loss of taste/smell, nausea, weight loss, bursted eye vessel, slight respiratory sx, I recovered well and had a follow up negative test 2 weeks after. Thank you.
932590	1/10/2021	FL	49	F	12/31/2020	1/7/2021	7 days after vaccine administration, I noted a red area a couple of inches below the injection site that was itchy and warm to the touch. I kept an eye on it. When I awoke the following morning, the reddened area was larger, still warm to the touch, slightly swollen and itchy. On the 3 morning, the area was larger (roughly 10cm wide x 7-8cm tall), still reddened, swollen, warm to the touch and itching. Today is day 4 of the reaction. It seems to be about the same size or slightly larger than yesterday, and it is still reddened, swollen, warm to the touch and itching. I have applied topical diphenhydramine over the last couple of days as needed.
932611	1/10/2021	TX	75	F	1/4/2021	1/5/2021	Swelling of lower lip; itching; severe, red, swollen welts all over body; tongue itching, then some swelling; swelling of lips and chin area; eye lids swelling almost completely closed. 933061	1/10/2021	AK	40	F	1/6/2021	1/7/2021	I received my 2nd dose around 11:15am on Wednesday. Approximately 6 hours after getting the shot I started feeling tired and a couple hours after that I felt crummy and the chills started. Mine weren't nearly as bad as some others have experienced. I didn't sleep well that night and woke up with a mild headache and body aches. Approximately 10AM on Thursday I noticed I had swelling in my upper lip and later my jawline with slight numbness. My eyes started feeling puffy that evening, approximately 6:30pm, and the symptoms began to improve after taking a Benadryl around 7:15pm. The swelling and numbness didn't seem to move down towards my throat nor did I experience any difficulty breathing or swallowing. I sl
933060	1/10/2021	MD	42	F	1/8/2021	1/8/2021	At 12:35 patient complained of feeling dizzy, light headed, nauseated and of having difficulty moving her arms or opening her eyes. She was diaphoretic at the onset of symptoms she was able to follow commands and answer questions but that became increasingly difficult. Symptoms worsen and patient started to vomit. Ambulance was called but patient refused to go with them. Felt better approximately 40 minutes after being vaccinated. Left accompanied by her husband.
933045	1/10/2021		25	F	12/30/2020	12/30/2020	(Written next day) Patient stated that shortly after receiving the vaccine approximately 30-60 min minutes later she started to feel swelling in her face as well as her lips. She took a photo of this and showed it to me today and well. The swelling around the eyes seemed minimal. Her lips were swollen. She also notes that she felt tired and had a mild shortness of breath where she felt more comfortable sitting up. She states these symptoms have somewhat improved, though she has been experiencing increasing nausea since yesterday and continues to feel that way. She states that she does not believe she is pregnant, she has an IUD. She also noticed some body aches yesterday, continuing this morning, but they seem to be improving. They do improve greatly with ibuprofen at home.

931432	1/9/2021	FL	34	F	1/5/2021	1/5/2021	At around 11:45pm tingling started in my left eyebrow. I thought there was something in my eyebrow and after time of wiping it a few times I went to look into the mirror and realized that nothing was there. about an hour later I got a drink and a snack to eat and I realized I had a numb sensation in the left corner of my lip. As a nurse I went though the signs of a stroke with 2 other nurses I called. Everything was normal other than that sensation. Thinking I was just overly tired I went to bed. When I woke up the next day I felt okay until I went to drink some coffee and the numb sensation in my corner lip was still there. Now I was concerned and called employee health and was instructed to go to the ER to rule out a stroke. I followed employee health's instructions and went to the ER. I was diagnosed with facial paresthesia and discharged with instructions to come back if symptoms got worse. Symptoms persisted all day and around 7 I called my mom on video chat to show a visual facial twitch on the left side of my face. right after I got off the phone with her the left side of my face drooped and my fiancé immediately drove me to the closest ER. I was seen immediately and they decided to admit me. They did labs and head CT. They admitted me to labor and delivery because there were no other rooms. The next day I was seen by a neurologist and many doctors.
931437	1/9/2021	CA	53	M	12/30/2020	12/30/2020	Complaint of racing HR, no other symptoms, no SOB. Verbalized feeling nervous/anxious with some vision changes. PMH: HIV+ and hyperlipidemia. 0735: HR 110, BP 125/80 L arm, RR 17. 0740: HR 98. Did not take am medications, no breakfast or water, only 2 sips of coffee. Gave him water and he stated feeling better at 0800 and left site and stated partner would drive him home. No treatments administered.

931602	1/9/2021	PA	31	F	1/8/2021	1/8/2021	10:47a went into a room to wait for 15 minutes directly after the injection. Began to feel somewhat dizzy right afterwards. Continued back to my office. Informed my supervisor that I was feeling dizzy but informed him that I had a couple bites of oatmeal, and a few cups of coffee and was going to try and eat something and hydrate and I?m sure I would feel better. I went back to work for about an hour (I work at a desk). For about an hour I continued to feel dizzy and noticed I was cloudy and was staring off. After an hour I really became dizzy and walked to my supervisors office and informed him. It felt as though I was walking on the moon to get to his office. I also felt like I had a uti. I sat down in his office and informed him of what happened. As I was talking to him I began to pass out. I did not go out the whole way but he began speaking to me more. After feeling a little better I walked back over to my office. I felt waves of dizziness and being hot and cold. My husband came and picked me up around 1:30p from work. I felt better after getting in the car and going home. Once I was home I ate and had began to feel better. Around 6:00p I began to go through another wave and was experiencing body aches, hot and cold sweats, loss of appetite, tingling all over my body but mostly in my legs and feet. At that point I went in and laid down in bed for the rest of the night. Probably around 9:00p I began to feel better. I attempted to fall asleep around 11:00p but when I closed my eyes I felt like they were racing back and forth. So I got back up and watched something in tv until I fell asleep maybe about 30 minutes later. I woke up the next morning around 8:45a. I tossed and turned most of the night, however I felt better. It was like I had the flu for a few days and on the last day I felt better but was under the weather. At this point in the morning I was fatigued. I was able to perform some tasks around the house. I then laid back down in bed for a few hours because I was beginning to feel dizzy and was experiencing hot and cold sweats. After a few hours I got up from bed and performed a few more tasks around the house. Then was able to sit down on the couch and watch some tv. At this point I?m still expediting tingling in my body at times. Still a little dizzy but able to focus and hot and cold sweats.

931919	1/9/2021	PA	58	F	12/30/2020	12/31/2020	On the day of taking the vaccines had joint pains all over mainly involving the arms but they subsided. On the next day noticed redness and pain in the left eye. On 1/6/21 noticed diminished vision and blurriness in the left eye. Called ophthalmology ED and was seen the next day on 1/7/2021 morning . Was diagnosed with left uveitis. I was seen by the on call doctor. There are many doctors involved in my care. My previous episodes of uveitis have been mostly in the right eye and the vision was not affected, The doctors involved in my care are not sure if this was just a coincidence, was an exacerbation of the preexisting pathology or was something new. I have asked to put the eye drops every hourly but the vision has not completely improved. I don't use the eye drops in the night and when I get up in the morning it is still very hard to read. It is an unusual episode of uveitis as typically my left eye is not involved and I have never had this much diminished vision , I am supposed to put the drops every one hourly until 1/11/2021. I have informed my PCP, Rheumatologist, regular eye doctor. I will inform my ID doctor Dr .
931936	1/9/2021	CO	41	M	1/8/2021	1/8/2021	Developed minor stabbing pain in L temporal/occipital region. Intermittent within first ten minutes. Also felt slight sharp pain in meatus of L hand within first 30 minutes. Also intermittent and resolved within a few hours. Slight headache the following day that would come and go. Developed L side abdominal sharp pain (4/10) within one hour. Pain persisted for more than 24 hours, is tender to palpation. Developed stuffiness and slightly itchy eyes in first 30 minutes. Had some minor skin itching in various places with no discernible hives. I developed a brief hive 12 hours later on my leg but it is not uncommon for me to get an occasional hive on my skin as I have sensitivities to various fabrics, etc.

932008	1/9/2021	NY	39	F	1/8/2021	1/8/2021	About 3-5 minutes after I felt so out of it. I felt like I was under the influence of something. I tried to read my email and the words were there but didn't have meaning. I had to drive home after my 15 minute observation and plugged my home address into my gps so I wouldn't get lost even though I drove home from Medical Center for years. I got home and laid down and slept for a couple hours and woke up fine. I felt ok the following day and was doing laundry around 6 pm and my arm stopped being sore and I got really dizzy and nauseated and my vision had shadows (reminded me of an ocular migraine) and drank 2 x 16 oz glasses of water and laid down and felt better in about 20-30 minutes.
932060	1/9/2021	VA	33	F	1/9/2021	1/9/2021	Very bad injection site pain Lymph nodes pain Muscle pain Very blurry eyes
931835	1/9/2021	CO	36	F	1/7/2021	1/8/2021	Developed acute onset eyelid swelling, lip swelling, dyspnea with wheezing and hive like swelling at vaccine site. I self administered 8 puffs of albuterol (my prescription) and took 50 mg of oral Benadryl with improvement in wheezing and swelling at injection site. I continue with some mild unilateral right upper eyelid swelling but much improved.
932034	1/9/2021	CA	32	F	1/8/2021	1/8/2021	15-20 minutes after injection, my left arm and the left side of my face went numb. Numbness intensified over the next 2-3 hours then subsided. Lack of taste was also noticed. The following day I woke up with tingling and numbness in my left jaw and slight drooping of left eye and left corner of mouth.
931940	1/9/2021	CO	41	M	1/8/2021	1/8/2021	Developed minor stabbing pain in L temporal/occipital region. Intermittent within first ten minutes. 931989	1/9/2021		56	F	1/6/2021	1/7/2021	Fever 103.9 , headache, body aches, eye pain, fatigue Symptoms lasted for 48 hours. Fever responded to Tylenol but returned as Tylenol wore off.
931976	1/9/2021	AK	65	F	1/8/2021	1/9/2021	Expected: low grade tenderness at vaccine site, identified at 10 hours post injection, slightly worse on awaking 22 hours post injection. 0700 (22 hours post injection) visual swelling of left supraclavicular lymph node, Node is palpable, slightly tender, mild swelling around the node.
931972	1/9/2021	WA	61	F	1/7/2021	1/8/2021	First dose given 12/18/20 with expected muscle stiffness soreness later that evening and the next day. Dose two given on 01/07/21 with onset of shaking chills on 01/08/21 at 2:00am, ensuing fever max 101.7 degrees Fahrenheit, at 4:00 am noticed redness of eyes, face flushed with burning feeling, headache, dizziness, blood pressure of 184/96 and heart rate of 153. This required medical evaluation and treatment with IV fluids and Toradol for resulting headache. Patient also self administered 1000mg oral Tylenol prior to ER evaluation.
931959	1/9/2021	TX	45	F	1/8/2021	1/8/2021	I waited 30 minutes after the vaccine. No issues and went back to work. At 70 minutes after shot administration, felt itchy on limbs, then trunk and neck, then ears, eyes and into scalp. Symptoms progressed over the next 2 hours (flushed neck and then lips felt tingly and numb). At 7:30 my soft palate started to feel numb and I started to have some difficulty swallowing. Went to ER. Symptoms continued. After IV meds given swallowing difficulty continued to worsen so I was given a low dose shot of Epi. Swallowing improved (not to normal but not as severe) over the next hour but itchiness returned. It is now 8:00pm on 1/9/2021 and I continue to have itchiness, my tongue and soft palate are still numb but I am able to swallow fairly well and my entire face has decreased sensation to touch.
931943	1/9/2021	IA	34	F	1/8/2021	1/9/2021	Developed rash on back and chest/stomach approx 19 hours after injection . Itchy all over Eye itchiness developed 4 hrs after injection Other symptoms were Muscle and body aches Slight cough Sore throat Face puffy Fatigue Chest heaviness (o2 levels stayed 100 percent )

							deficit. Gait: Gait normal. Psychiatric: Behavior: Behavior normal. Thought Content: Thought content normal. Judgment: Judgment normal. Assessment/Plan Treatment included: avoidance measures and talking with the patient.. Follow up response to treatment: excellent. Patient discharge: Stable to go home and follow up with PCP. Patient was thought to have a mild muscle spasm from the injection that may have cause a mild anxiety attack. Patient was fully cooperative the whole time and appreciative for team of medical staff. Patient's symptoms quickly resolved and she was able to leave without assistance. Patient declined assistance to her car.
928705	1/8/2021	IL	30	F	1/6/2021	1/7/2021	I developed nausea the night of the vaccine, the next morning I woke up with a headache behind my eyes, and fainted while getting ready for work that morning. I then had a really bad headache and slept the entire day. I was unable to go to work or care for my house or children.
928698	1/8/2021	VA	45	F	12/29/2020	1/5/2021	I have developed an itchy rash a week after my injection with raised papules on my hands, wrists, arms and upper legs. The site of my injection has a large (half-dollar size) red rash that is itchy and slightly raised. A visual examination by 2 providers that I work with (Family Practice office) today due to extreme itching. I was instructed to take Ranitidine and Zyrtec at approximately 9am. It is now 12pm and the itchiness is a little better.
928694	1/8/2021	NE	98	F	1/5/2021	1/5/2021	AT 10:50 AM (5 MINUTES POST VACCINATION), FELT LIKE 'HEAD IS FILLING UP, MY LIPS ARE PUFFY, AND I HAVE NUMBNESS UNDER MY EYES AND NOSE'. RECEIVED BENADRYL 12.5MG AT 10:59AM. CONDITION RESOLVED BY 11:15AM. MD WAS NOTIFIED.

929391	1/8/2021	NY	37	F	1/6/2021	1/6/2021	1/6/21 Pt received vaccine and complained of difficulty swallowing and rapid heart rate. Pt received methylprednisolone 125mg IVP, diphenhydramine 25mg IVP, & famotidine 20mg IVP. Pt reported improvement and was discharged. Sent home on diphenhydramine and oral prednisone. 1/7/21 Pt unable to swallow her own secretions and experienced eyelid swelling. Pt vomitted. Pt received epinephrine and Benadryl X 1 dose each. Pt then transported to hospital via ambulance. Reason for admission - acute respiratory failure secondary to anaphylactic reaction. Decision was made to emergently intubate the patient for airway protection despite aggressive intervention. Pt successfully extubated 1/8/21. Plan to discharge home and start Medrol Dose Pack 1/9/21.
928542	1/8/2021	TN	49	F	12/29/2020	12/29/2020	EE received vaccine, waited in room for about 20 minutes. About 10 minutes after receiving vaccine, she felt warm but she had a coat on and her eyes started to hurt and she felt tired but she works night shift. She felt this was normal for working the night before and having stayed up to get the vaccine. After her wait period she went to her car and remembers feeling warm for having to walk in the cold. Her right side of face became reddish purple and warm. She sat in car for a few minutes. As she drove her face started to swell and turn all red. When she arrived home she had heavy pressure middle of face-nose area. Her face continued to turn reddish purple with a rash on right side of face and down to her neck. She felt her sinuses and throat swell with irritation and in throat and wheezing. Her mom is a nurse and they waited to see if it worsen or got better. She decided since she could breath she would not go to hospital. After about 5 hours she felt much better. She continued to have a headache for 4 days. She had swelling and soreness of left arm for a couple of days. She continued to go to work.

							resulted in a doctor or other healthcare professional office visit. Therapeutic measures were taken for all of the events which included antihistamines and valaciclovir; and for the trigeminal neuritis only, methylprednisolone pack. The clinical outcome of the event trigeminal neuritis was recovering (lasted longer than 48 hours after vaccination); for headache, stomatitis, throat irritation, oropharyngeal pain, ageusia, tongue discomfort and paraesthesia oral was recovered (at 48 hours after vaccination).
927360	1/8/2021	TX	21	M	1/5/2021	1/5/2021	Symptoms started during bedtime and woke me up. Began with severe full body chills and full body muscle shaking and weakness during the night of 1/5 and early morning of 1/6, around 1000 to 0200. Slight headache began during that time as well. Upon waking at 0900 on 1/6, chills and shaking decreased to mild severity, muscles still felt moderately weak and shaky, headache had increased in severity to a severe throbbing pain that worsened upon standing and walking, and moderate visual photosensitivity began. The headache persisted until I took 2 tablets of ibuprofen 200 mg, which is when the severity decreased to moderate after a few hours and then mild by bedtime. The photosensitivity persisted through the day and did not decrease much by bedtime. Upon waking 1/7, there was only a mild headache and mild photosensitivity that faded completely within a few hours, no medication required. No more symptoms in the afternoon.

927554	1/8/2021	NY	27	F	1/4/2021	1/4/2021	Got 1st shot at 1430 1/4/21. Was sent back to my unit (OR). At 1455 got full body flush followed by tingling lips, tight throat, trouble swallowing and SOB. No obvious signs of swelling of the lips. Used inhaler for SOB which helped marginally. After 1.5 hrs tingling in lips and flushed skin went away. Throat tightness and SOB still remained but weren't progressing so went home after my shift. Later that night around 2100 took 1 25mg Benadryl. Tightness in throat and SOB improved. The next morning 1/5/21, I reported to work for my shift. Tightness and SOB was manageable at this point. At 0800 the tightness in my throat, trouble swallowing and SOB got significantly worse. I was scrubbed into a surgery and had to call for a replacement so I could take Benadryl. I took 1 25mg tablet and 2 puffs of my inhaler and went back to my case. After the Benadryl and inhaler, the tightness in my throat and SOB became slightly more manageable. At 1240 the symptoms came back and I took another Benadryl and 2 puffs of my inhaler with slight relief of symptoms. Stayed the rest of my shift continuing my inhaler as needed and a Benadryl every 4 hrs. At 1600 I developed a headache at the front of my head above my eyes like a weight was sitting there. The next day when I woke up 1/6/21, the tightness in my throat, SOB and headache were worse so I had to call into work. The headache that morning had progressed to 7 out of 10 pain and the pain then included my neck where it attaches to the skull. At 0830 I called employee health and they advised my to go to an urgent care. I was checked over by a PA and was prescribed prednisone 40 mg for 5 days along with Benadryl every 4 hrs and inhaler as needed. I was also nasal swabbed for Covid. After taking the steroid, the headache and neck pain, tightness in throat went away. The SOB also improved. Currently taking the steroid, Benadryl (every 4 hrs) and inhaler 2 puffs as needed. Symptoms are mostly controlled. 1/7/21 tried to cut back the Benadryl to every 6 hrs. Noticed a huge difference in my breathing and had an increase in SOB so went back to every 4 hrs. 1/8/21 still taking steroid and Benadryl every 4 hrs and inhaler. SOB is worse today even with taking Benadryl. Have an appointment with my PCP to talk about getting the 2nd shot.

927517	1/8/2021	NJ	62	M	12/30/2020	12/1/2020	Felt pinched when the vaccine was administered; soreness at the muscle site; little muscle soreness from the vaccine; Postnasal drip in throat; Feeling warm then really hot; Feeling weak; Clammy; sweaty; As if he was going to pass out; almost like a vagal reaction if you got a needle or were scared; vagal reaction but delayed; Heart might have been beating fast; Experience is like the dizziness related in the signs of a severe allergic reaction; Experience is like the dizziness related in the signs of a severe allergic reaction; Anxiety; anxious; This is a spontaneous report from a contactable physician (patient). A 62-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot Number and Expiration Date were not reported), intramuscular in left deltoid, on 30Dec2020 10:30, at a single dose, for COVID-19 immunization. The patient's medical history included ongoing mild intraocular pressure. The patient's concomitant medication included unspecified eye drops for a mild intraocular pressure. The patient previously took tetanus vaccine and experienced vagal reaction and passed out (in his childhood). The patient's past COVID tests were always negative. On 30Dec2020, the patient received it at a facility where he is a physician on staff, and they started giving it that day. It was administered by a pharmacist who was very clean and professional, and everything was fine. The patient received the COVID-19 vaccine in the left deltoid and felt pinched when the vaccine was administered, and he felt fine. He did not have any immediate reaction. He sat down, then got up and was standing talking to some colleagues, and about 10 to 15 minutes later, they were talking and felt a little postnasal drip in throat. His colleagues said that is what they felt as well. About 10 minutes later, the patient was feeling warm then really hot to the point where he felt the need for cool air. He added feeling weak and clammy as if he was going to pass out. He started to feel weak and warm and almost like a vagal reaction if you got a needle or were scared. It was almost like he felt hot, sweaty, and weak and feeling like he needed to get to a cool place and sit down. The patient's heart might have been beating fast, but he did not check his pulse. The patient went outside where the temperature was in the thirties and cold. The patient broke out in sweat and felt weak. The patient sat down, and it was cold outside, and he felt

VAERS\_ID RECVD STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT

---

better. It passed and he felt fine after that. The symptoms lasted 10-15 minutes top, and it was resolved after the peak. The patient had soreness at the muscle site which got better overnight; little muscle soreness from the vaccine. The patient then got better and felt no other symptoms. He looked up the side effects and talked to the pharmacist. He spoke with a pharmacist, who provided the information on the reported adverse reaction of the COVID-19 vaccines and the signs of a severe allergic reaction included in the PI. He is not an allergic type person. He is familiar with those reactions and never had any trouble. He wasn't quite sure if it was related but then said it is probably somewhat related. The patient explained that he doesn't have any of the reported adverse reactions in the PI; but his experience is like the dizziness related in the signs of a severe allergic reaction in the PI, and he did feel that his heartbeat was fast. He is fine now though. The patient asked if his event is related to the vaccine and what is the impact on getting the second dose when reacting to the first. The patient was thinking that this event is a vagal reaction but delayed. He also explained that he was speaking with his colleagues, right after receiving the COVID-19 vaccine, regarding postnasal drip reaction. The patient also wondered if anxiety related to this discussion could have triggered his symptoms. Originally, he thought it was just him. But after talking to colleagues, maybe he was just a little anxious. He did not feel anxious going in. He did not need any intervention. He did not take any diphenhydramine hydrochloride (BENADRYL) or anything. He sat and rested, and it passed. He has been fine since. He needs a second dose in 3 weeks. There is not a lot of information about the side effects. It was not like he got a rash. He did not have any swelling of the tongue or throat. He just wanted to find out about if he should get the second dose. He really wanted to get the second dose. He just wanted to know if this was common or a concern and should he take the second dose. There were a lot of people getting the vaccine and this was not anything that stopped anyone from getting it. He is just trying to make sure and see how likely it was that it was related to the vaccine and how does it affect him getting the second dose. The patient was recovering from "Felt pinched when the vaccine was administered; soreness at the muscle site;

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							little muscle soreness from the vaccine". The outcome of "Postnasal drip in throat" and "Anxiety; anxious" was unknown. The patient recovered from the other events on 30Dec2020. Information about lot number and expiration date for the suspect product will be requested in follow-up attempts.
927415	1/8/2021	CT	28	M	12/28/2020	1/2/2021	4 days later after the vaccine my left eye turned really red with crust and mucus coming out. I went to walk in clinic and was being treated for pink eye. I was started on an antibiotic eye drop. A day later my right eye started to have the same problem. I scheduled an appt with a eye specialist where he examined both eyes and said I had a major infection. I was started on steroid eye drops which I am still taking but seems my eyes are not getting better. I have a follow up with another specialist next week for further testing. I have been out of work due to this matter.
927403	1/8/2021	NY	65	F	1/7/2021	1/7/2021	Approximately 20 to 30 minutes after receiving the vaccine, I had what appeared to be a seasonal allergic reaction, in which I could not stop sneezing and my eye tearing. This continued throughout the evening and night but not as intense as when it first began. I awoke at 1:00 AM to a very intense sneezing and eye tearing, but on only the left side of my face and eventually both sides. I took Allegra D and did get relief. The sneezing (allergic rhinitis) reaction continued but after almost an hour of taking the Allegra D , it was not as intense. My face also appeared swollen but only with respect of atypical allergic rhinitis intense reaction.

929157	1/8/2021	TN	31	F	12/20/2020	12/1/2020	<p>blurriness on the right eye with consistent optic neuritis; read up on transverse myelitis that may be related to her condition; blurriness on the right eye with consistent optic neuritis; This is a spontaneous report from a contactable physician. This physician (patient) reported for self that the 31-year-old female patient received bnt162b2 (BNT162B2, PFIZER-BIONTECH COVID-19 VACCINE, lot: EK5730), via an unspecified route of administration on Deltoid, Left on 20Dec2020 13:00 at single dose for covid-19 immunisation. Medical history and concomitant medications were none. Reported she has a flu vaccine in Sep2020, and had no reaction to the flu vaccine. She clarified she has never had a reaction to a vaccination before. The patient received the vaccine last 20Dec2020 and has reported to have blurriness on the right eye with consistent optic neuritis since 24Dec2020. She has already consulted with an ophthalmologist who said her case was interesting and referred her to Pfizer. She is scheduled to have her second dose on 10Jan2021 and is asking if she should still take it. She also mentioned that she read up on transverse myelitis that may be related to her condition and is asking for any information we may have on this. Doctor reporting she is having a possible adverse event to the COVID-19 Vaccine. The patient clarified she received the COVID-19 Vaccine on Sunday, 20Dec2020 at approximately 1:00PM. Reported the COVID-19 Vaccine was administered at her employer. Doctor reported she is experiencing blurry vision in her right eye only, consistent with optic neuritis in Dec2020 (Medically significant). She said her right eye blurry vision gets worse after working out or showering. She said she has read some medical information that states some kind of autoimmune reaction, like transfer myelitis, may occur after receiving the COVID-19 Vaccine. The patient asked if she should get the second COVID-19 Vaccine, clarifying she is scheduled to receive her second dose on 10Jan2021. Clarified she started experiencing the right eye blurry vision on either 24Dec2020 or 25Dec2020. Treatment: Reported she saw an ophthalmologist, and the ophthalmologist said he didn't see anything concerning or not normal. She said the ophthalmologist referred her to see a neurologist, and to get a MRI of her head. She clarified her MRI appointment is on 19Jan2021. She clarified her ophthalmologist called her back 2 hours after she left her appointment. She said the</p>

ophthalmologist told her he found what she was experiencing to be interesting, as to when she received the COVID-19 Vaccine, and the start of her right eye blurry vision, and that he wanted her to get further evaluation. She said the ophthalmologist performed visual field testing, and took a fancy picture of her retina. No further details provided. Vaccination Facility Type was hospital. No Vaccine Administered at Military Facility. History of all previous immunization with the Pfizer vaccine considered as suspect (or patient age at first and subsequent immunizations if dates of birth or immunizations are not available) was none. Additional Vaccines Administered on Same Date of the Pfizer Suspect was none. No AE(s) required a visit to Emergency Room but AE(s) required a visit to Physician Office. Prior Vaccinations (within 4 weeks) was none. Patient's Medical History(including any illness at time of vaccination) was none. Family Medical History Relevant to AE(s) was not provided. Relevant Tests included Visual field test, and picture of her retina. The outcome of the events was not recovered.; Sender's Comments: Based on temporal association, the causal relationship between bnt162b2 and the events optic neuritis, vision blurred and myelitis transverse cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate.

928395	1/8/2021	MA	25	F	1/5/2021	1/5/2021	Nausea immediately following injection that continued for 24 hours, Stoke like symptoms that began six hours after injection that persist currently (48 hours +) including severe headache (resolved after 24 hours with 800mg ibuprofen Q3, Benadryl 25mg Q3 ), confusion, cognitive impairment, vision changes (L), drift in the upper extremity (L), dizziness, lack of coordination, and difficulty with depth perception. Neck stiffness from 12 hours post injection to 48 hours post injection. Negative for fever, vomiting, hemiparesis, difficulty with speech or word finding, facial droop,
928379	1/8/2021	IN	38	F	12/26/2020	12/26/2020	1150 Post injection my tongue started to feel numb and tingling. Tongue started to swell. Over the next 20 minutes the numbness and tingling progressed to the roof of my mouth, my gums, my lower lip, underneath my tongue, up my cheeks, and underneath my eyes on both sides. Because it kept slowly progressing I took 25 mg oral Benadryl. About 20 minutes after the Benadryl I noticed that my tongue didn't feel or look as swollen. Within an hour I would say 95% better. I just had some trace numbness on my cheeks bilaterally. Symptoms returned again about 12 hours later. Again took Benadryl, this time 50 mg. All symptoms have resolved
928369	1/8/2021	FL	51	F	1/7/2021	1/7/2021	Patient started experience burning in the eyes and bilateral tinnitus. She denied any rash, hives, swelling, facial edema, or pharyngeal edema, wheezing, shortness of breath, or chest pain. She was given Benadryl at the time and observed.

927856	1/8/2021	NJ	61	F	1/6/2021	1/7/2021	At approximately 3:30 pm the next day (27 hours later), I noticed significant tearing from both eyes, while outside walking. When I returned home, and checked in the mirror, I noticed significant puffiness around the eyes (though not to the point of closure or impaired vision), especially in the inner corners (L>R). I contacted my PCP at 4:45 pm and was instructed to go to the Urgent Care. I was seen there and evaluated, then was discharged without any treatment plan. I had no other symptoms and felt great, and even felt the puffiness had subsided a little bit by the time I left the clinic. Today, 1/8/2021, at 7:30 am awakening, the eyes are quite puffy again, and my nose actually appears a bit swollen on the sides near the eyes. I hear clicking sounds in my sinuses and have a small amount of sinus pressure. I applied ice packs to the eye lids in an effort to reduce swelling, which seems to help a little. Please note that I had botox in my forehead and around the outside corners of the eyes, and dermal filler under the eyes (12/7/2021), this being the first time for the filler.
928230	1/8/2021	PA	30	F	1/7/2021	1/7/2021	Approximately 5 minutes after receiving vaccine her right eye became blurry. No other symptoms. No headache. BP 137/82 Pulse 92. Within 5 more minutes her right eye went dark. She was taken to ED. They did a CT scan and diagnosed her with ocular migraine. She was given benadryl, compazine and IV fluids. Symptoms resolved.

927888	1/8/2021	MD	52	F	12/28/2020	12/29/2020	Following day (Wed) my right eye was irritated and became itchy later on. Had Dr look at it and she started me on hot compresses with orders to start eye drops with antihistamine if this did not help. Did hot compresses felt a bit better on Thurs. Fri eyes were worse, started Eye drops. Saturday ears were itchy and sore with drainage--thought infected. Sunday both eyes were red, itchy oozing,, ears still oozing and sore--went to Urgent care. They said no ear infection and started me on Eye drops with steroids but could not get them until Monday around 5pm. Corners of mouth started cracking open as well. Monday started steroid drops. Wednesday eyes were much worse and felt like glass in them. called Dr. She said to stop steroid drops and go back to antihistamine drops and start Claritin. Started immediately and I started putting Ivarest in my ears. Eyes have stopped oozing but are still red. Ears are clearing up and not as sore. Mouth is starting to clear up
928358	1/8/2021	WV	21	F	12/28/2020	12/28/2020	Pfizer 1st dose- Not even five minutes after receiving the vaccine I started sweating, dizziness, headache, nausea and getting hives on both arms. They made my crew take me to the ER. When they took my vitals my O2 was 88% and they put me on 4lpm, HR was upper 110s and my BP was 160s/100s... The next day I couldn?t walk, keep my eyes open, had a headache, my whole body was aching and sore. I ended up sleeping for over 20 hours that day, couldn?t eat my husband had to actually help me walk to the shower and bathe me because I kept almost passing out.
930552	1/8/2021	WA	44	F	1/6/2021	1/8/2021	I am a physician and received 2 doses of the Pfizer COVID vaccine. First dose 12/20/20. Second dose 1/6/2021. Forty- eight hours after second dose I had moderate to severe under eye swelling at site of dermal fillers I received May 20,2020 requiring steroids and antihistamine. I also had severe myalgias and fever 12 - 36 hours after my second dose.
930407	1/8/2021	IA	53	F	1/8/2021	1/8/2021	Nauseous for 30 minutes after vaccine, then reported itchy eyes that felt "tight" and stated she had this same reaction with latex allergy. Usually takes Benadryl for it. Treated by NP with po Zofran and po Benadryl

930581	1/8/2021	OR	62	F	1/4/2021	1/5/2021	Pfizer-BioTech COVID-19 Vaccine EUA 24 hrs post vaccination I started feeling fatigued, muscle and headaches which seemed to move around my body for about 24 hrs. At one point it seemed to settle into my hand. Knuckles swelled arthritis like. When walking up stairs I had significant muscle weakness in my legs and exertional dyspnea. Eyes felt "feverish" but had no fever. The next morning while trying to do a routine workout the same thing happened. It was a significant change to my normal condition. The dyspnea was the most concerning. The body aches settled into my lower back. Fatigue was moderate-moderately severe. As the day went on things waxed and waned. By the end of 72 hrs. most symptoms subsided. Friday 01/08/2021 I had a completely normal workout, no exertional dyspnea, fatigue subsided, no body aches. Back to normal. I would consider the symptoms to have been Moderate+.
930662	1/8/2021	WA	47	F	1/6/2021	1/6/2021	Reported itchy throat, tongue, face apprx 10 mins after vaccine. Later that night she had all over body itching with no rash and mouth swelling, eye swelling. No SOB, or difficulty swallowing.
930574	1/8/2021	FL	34	F	1/7/2021	1/8/2021	Severe nausea, fatigue Tunnel vision, and delayed speech. Lasting 15 min.
930664	1/8/2021	TX	26	F	12/24/2020	12/25/2020	DPH (after the Lot number); I started with a very severe pounding tension headache - 6:00 am; very severe fatigue; very severe arm pain at injection site. And then unable to complete daily functions: do to headache; suffered from headache - took one gram tylenol to address a low grade fever that day and the headache, too. fever subsided with tylenol. Headache was relentless; I tried 600 mg of ibuprofen as well to treat headache with no success; Started to suffer severe pain; couldn't open eyes from pressure of headache. Went to ER due to never having such a severe headache before. Tests did not show pathology that would cause headache. Was given one liter of IV fluids. Was given 25 mg of benydryl ; 10 mg of compazine. Along with toradol. And 20 meq of potassium. Discharged home with two prescription migraine medications. Resolution of symptoms by 27th. COVID Test was negative result.

929604	1/8/2021	FL	86	F	12/30/2020	1/1/2021	I have 2-3 good beats and then kind of has like 2 or 3 slower beats, missing beats, they are not as strong/ Heartbeat seems to be a little erratic; I have 2-3 good beats and then kind of has like 2 or 3 slower beats, missing beats, they are not as strong; Woke me last night, at 3 o' clock this morning; This is a spontaneous report from a contactable consumer (patient himself). An 86-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 30Dec2020 at single dose for COVID-19 immunization. Medical history included atrial fibrillation (Afib), gastroesophageal reflux disease (Reflux), macular degeneration, ongoing It's for heart, ongoing bleeding disorder. Concomitant medication included metoprolol for heart; ascorbic acid, betacarotene, cupric oxide, tocopheryl acetate, zinc oxide (PRESERVISION) for macular degeneration; fish oil for Omega 3; Vitamins. Clinical course: She had a bleeding disorder, she was on a blood thinner (unspecified medication), they didn't know she took a blood thinner. She had noticed with her heartbeat seems to be a little erratic, but she also had AFib. So, it seems like she had 2-3 good beats and then kind of has like 2 or 3 slower beats, missing beats, they are not as strong. But she thought that would have been AFib but seems to be a little bit different. It woke her last night, at 3 o' clock this morning on 01Jan2021. She wanted to know if it would have an effect on her heartbeat by taking the blood thinner. The outcome of events was unknown. Information about Batch/Lot number has been requested.

929519	1/8/2021	TX	74	M	1/4/2021	1/4/2021	<p>Caller took his temperature under his tongue and the reading was 99.5°F last night/his temperature is usually 98 or 97°F/ he maintains his temperature around 96 or 97; some injection site pain; some body pains/ a lot of body pain; he could not sleep much states it was intermittent/He woke up every hour; his vision is not really good; He was experiencing an uncomfortable feeling in his body; This is a spontaneous report from a contactable consumer (patient). A 74-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number: EK5730, Expiration date: Mar2021, at single dose on 17Dec2020, and second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) Lot number EK9231, expiration date Apr2021, Intramuscular at single dose in left shoulder on 04Jan2021 for prevention of covid. Medical history included ongoing Diabetes which was controlled with medication, blood pressure abnormal, microalbumin level that was high in urine, TSH was low. Concomitant medications included metformin for two or three years for Diabetes, lisinopril for blood pressure and kidney albumin control (he was found to have a microalbumin level that was high in urine and it was prescribed by his doctor several months ago. It was a kidney albumin control), and ongoing levothyroxine since TSH was low (now his TSH was normal and he was taking it per his doctor). The patient received his second dose of Covid vaccine yesterday (04Jan2021). He took his temperature under his tongue and the reading was 99.5°F last night. His temperature was usually 98 or 97°F. He took two Tylenol tablets last night and he did not go to work today. He also had some injection site pain. He had some body pains. He did not have these side effects with the first dose and understood this vaccine was more than the flu vaccine but he was concerned with the side effects. He received the second dose yesterday at 9:30 am. He did not have any problems with the first dose, absolutely nothing. Since last night he could not sleep much states it was intermittent, a lot of body pain, his temperature under the tongue is 99.5 degrees F and most of the time he checks his temperature with a frontal scan and he maintains his temperature around 96 or 97. He was calling to ask if the vaccine can cause covid infection. He did not have any problems yesterday at all prior to the vaccine being administered. When querying outcome of his body pain</p>

930396	1/8/2021	TX	61	F	1/7/2021	1/7/2021	After patient observed for 45 min. and left the site, driving away felt she could not swallow. This lasted about a minute. Also, felt as if left side of face was going to become numb and felt pain in back of left knee. Left eye felt dry. These symptoms lasted about a minute. She put eye drops in eye when she got home and ate with no difficulty. She spoke with her doctor today.
951306	1/8/2021		43	F	12/23/2020	12/23/2020	Dizziness, NauseaVomiting, Tachycardia, Pt reported feeling "heaviness" in legs "can't move" and "left eye feels funny, like twitching and my blood pressure feels high" Narrative: Pt reports high anxiety along with stated symptoms.
929729	1/8/2021	CT	83	M	1/5/2021	1/6/2021	Rash on forehead and left eye swollen shut started the day after injection
930164	1/8/2021	NM	60	M	1/6/2021	1/6/2021	Approximately 2 hours after receiving the vaccine I felt a heat flash, people setting in the area asked if I was OK as my face was red. It cleared in approximately a minute. The 2nd heat flash came on about 5 to 10 minutes later and cleared about a minute later. The 3rd heat flash came on about another 5 to 10 minutes, again clearing at about 1 minute. Next I felt like my head was in a fog, found it very hard to focus, and was forgetting what I was doing. I walked over to the office, my supervisor asked if I was ok as she said it looked like my eyes were glazed over, my head was still in a fog. This cleared by 2:30 p.m.

930384	1/8/2021	WI	32	F	1/8/2021	1/8/2021	Patient presented for her first vaccination. Patient stated she was very nervous and scared of needles. Patient's skin felt warm. RN talked with patient for close to 5 min and worked through deep breathing exercises to assist in calming her. After the dose, the patient stood up, walked to the opposite corner of the room, and put her long sleeved shirt back on under her scrub top. As the patient began to walk out the door. RN met patient and went to walk with her to the sitting/monitoring room. The patient said she felt dizzy. RN helped the patient to the floor, on her knees, and then to a laying down position. A pillow was placed under her head, cool cloth was placed on her neck. Patient's eyes were rolled back in her head. Patient's skin was warm to the touch. Patient was assisted from the floor to a chair. Patient was pivot transferred to a wheelchair, and transferred to the monitoring room for further monitoring. At this time, the patient stated she felt cold and her hands were very cold to the touch. Patient was monitored by RN. Patient was then transferred to the ED via wheelchair for further monitoring.
930288	1/8/2021	MT	58	F	1/7/2021	1/7/2021	Bad headache, dizzy, very tired, nausea, blurred vision.
929650	1/8/2021	NY	40	F	12/30/2020	12/30/2020	Low grade fever with chills, headache, neck stiffness, pain behind eyes, sensitive skin (from fever), muscle aches and cramping, severe fatigue. Pain in arm and stiffness. Started 5 hours post injection and continued to intensify despite tylenol over the course of 36 hours. After 36 hours the symptoms began to subside.
929873	1/8/2021	TX	32	F	1/6/2021	1/6/2021	Approximately 13-14 hours after 2nd vaccine dose, developed generalized fatigue, myalgias, chills, and low grade fever (100.6F oral temp). Symptoms largely resolved within 24 hours; however, had persistent eye soreness (pain with lateral movement) through 72 hours post-vaccination for which additional evaluation was sought.
930262	1/8/2021	ME	54	F	12/23/2020	1/6/2021	I went to bed with a headache 1/5/2021. Woke the next am with a red eye. No drainage, vision loss or pain. I sent photos to my PCP and eye doctor who both said it was conjunctiva hemorrhage. I feel a bit of pressure behind that eye. It is not consistent with conjunctivitis. I have never had this before. .

930002	1/8/2021	NY	33	F	1/8/2021	1/8/2021	9:30 AM - Recipient sent to observation area post administration- tolerated well. In observation area 5 min. later recipient began stating she feels dizzy, screaming she does not feel well, began shaking upper torso and extremities, eyes shut - placed on ground floor with elevated legs, applied 10L/min oxygen via mask, v/s taken (HR/PR/ Pupil reaction), EPIPEN 0.3mg administered @ 9:38 am, with good response as recipient seemed to calm down, no screaming, no shaking. At 9:52am EMS arrived and took over.
930133	1/8/2021	NE	33	F	12/23/2020	12/24/2020	She reports not having any symptoms other than a tender deltoid area after her vaccination. She reports feeling fine the morning of 12/24/2020 when she went to work. Pt. reports approx. 4 hours after being at work that she became dizzy, clammy, noted head pressure and spots in front of her eyes as if she were going to pass out. She reports that she did have breakfast prior to coming to work. Noted her blood pressures to be elevated 141/102. She was monitored for 45 mins. taking BP every 15 mins. ranging from 155/112 with the lowest obtained being 150/90. With the drinking of fluids at the end of the 45 mins. she did feel like she was getting back to her normal self. She was instructed due to elevated BP to seek care at her clinic with her PCP. She did return to work on 12/25/2020 reports that she felt much better.
929877	1/8/2021	LA	67	F	1/8/2021	1/8/2021	Patient appeared nervous upon receiving vaccine. Patient reported trouble swallowing ( has a history of radiation therapy on throat). When asked if breathing was restricted, patient was able to take long breaths with minimal additional effort. Shortly after, patient appeared to be close to passing out (not completely awake and alert), eyes dilated. The pharmacist who administered the vaccine then administered one dose of the epinephrine (Epi-pen LOT:0FM353/eEXP:NOC 21) while the staff member kept the patient stable in her chair. The facility was instructed to call 911. At 11:49 AM (7 minutes later), symptoms began to improve and the patient became more alert. EMS arrived around 12:00PM to take patient to hospital--patient refused and was back walking around the facility 5 minutes later. No further issues were reported with this patient (pharmacist administering the vaccine left the facility around 1:15PM)

925908	1/7/2021	NY	61	F	12/31/2020	12/31/2020	6-8 minutes after the shot felt a sensation from left shoulder slowly sweeping across body, going into face and neck to the inside of left eye. Face had a weird feeling also. Headache, tonged tingling. Left and went to the car. Face was red and swollen all over. Skin looked like she was skiing in the middle of winter. She went back inside the hospital to her department on the 5th floor and stayed about 30 minutes. Then she went home. Half bottom lip was swollen, Both eyes got itchy, glassy, watery. Behind sinuses hurt really bad. Next day pain in hips both knees. Took 2 full days for the redness to go away from face. Had dark circles under eyes. Took Claritin. Hair has been shedding, sever brain fog at work. Her employer told her to take some time off from work. Upper teeth hurt.
925893	1/7/2021	FL	70	F	12/21/2020	12/22/2020	Was referred by Dr for evaluation of reaction to first COVID vaccine. First vaccine on 12/21/2020 Pfizer-BioNTech. Administered by her place of work. Vaccine was administered in left arm. Had same symptoms as when she had COVID in 10/2020 these symptoms lasted for 12 hours. Started the following day 24 hours after vaccine administration. Symptoms include injection site redness for 6 days, tiredness, headache, muscle pain, chills, joint pain, fever, nausea, and overall feeling of un wellness lasting 12 hours. First symptoms was eyelid heaviness and weakness. No treatment, symptoms resolved on their own. Second vaccine due 1/11/2021. Was covid positive 10/2020- no appetite, aches, chills, sweating, weakness, heavy eyelids, fatigue, ongoing for 3 weeks. Has had difficulty in the past to flu vaccines with local injection site reactions. 09/2020 flu vaccine no symptoms. Has had pneumonia vaccine with no difficulties. Has not received shines vaccine yet.

<i>VAERS_ID</i>	<i>RECVDATE</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
925746	1/7/2021		35	F	12/21/2020	12/21/2020	it hits a nerve; perceived it along the face still and the arm; Bell's Palsy; numbness in a small area of her tongue; right eye was irritated a little dry; right eye was irritated a little dry; right sided ear pain; fluid in the ear but no infection; This is a spontaneous report from a contactable health care professional (nurse practitioner). A 35-year-old female patient received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) at single dose via an unknown route on the right side on 21Dec2020 for Covid-19 immunization. Medical history included intermittent hives. Concomitant drug included ongoing cetirizine hydrochloride (ZYRTEC) 5 mg for intermittent hives. The reporting nurse practitioner saw a patient on 31Dec2020 who was vaccinated on 21Dec2020 and had a Bell's Palsy reaction (reported as not serious). She did some research and saw no more incidents in the general population but she wanted to report this. She also wanted to get more information on if the patient should proceed with dose number 2 of the vaccine. The patient developed the Bell's Palsy within 5 minutes after getting the vaccine. She thought it was because she was anxious to get the vaccine, so she brushed it off. The Bell's Palsy was still occurring but per the patient it had improved. On exam she did not have any weakness, facial droop or dumbness with sharp or dull testing. The patient perceived it along the face still and the arm. The reporting nurse practitioner said that the arm was probably not Bell's Palsy, but more related to getting the vaccine in the arm and it hits a nerve. Patient stated that her smile was also unequal and it was difficult for her to close her right eye, although now (as of 31Dec2020) she can. Her right eye was irritated a little dry. Regarding treatment, the patient was started on steroids on 31Dec2020. She did not start her on an anti-viral as she did not want it to impact her immunity to the vaccine. The patient also complained of right sided ear pain. She was unsure if that was related to the Bell's Palsy, but it was also on the right side. There was fluid in the ear but no infection. The pain was still ongoing. The patient also mentioned numbness in a small area of her tongue when she first got the vaccine. This was still ongoing. Outcome of Bell's Palsy was resolving. Outcome of the event numbness in a small area of her tongue, right sided ear pain was not resolved. Outcome of the other events was unknown. The reporting nurse

*VAERS\_ID RECVDATE STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT*

---

practitioner stated that this was not serious as this was a mild case and was thankfully resolving. The reporting nurse practitioner comment that nothing of history was relevant besides for the last several months (as of 31Dec2020) the patient had been taking 5mg of cetirizine hydrochloride for intermittent hives. She wondered if she had not been taking it how she would have reacted or if the reaction would have been more severe. Information on the lot/Batch number has been requested.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of Bell's Palsy cannot be excluded, considering the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
925633	1/7/2021	TN	54	F	12/30/2020	12/30/2020	her face started to go numb/felt like a dental block you would get with Lidocaine; She got on her left side, a cold spike feeling up her shoulder and neck and up to her face; upper esophageal sphincter got tight and felt funny like she was going to throw up; her whole body was shaking- her head, hands, and legs; feeling giddy; blood pressure was up; being stressed; was going to throw up/transient nausea; felt a little funny; This is a spontaneous report from a contactable Nurse(patient). A 54-year-old female patient received BNT162B2 (lot number EL0140), via an unspecified route of administration at left deltoid on 30Dec2020 14:28 at the 54 years old at 0.3 mL single for where she works she was exposed to patients who need rehab that were exposed and getting COVID. The patient medical history included Primary Essential Tremors and ongoing (had these for about 10-11 years. Her mother and grandmother also had them. Normally they were very fine, small tremors that people didn't notice. She can hold and turn her head and hide it) and Sulfa drug allergy (would get shortness of breath). The concomitant product was none. The patient previously took flu vaccine and experienced preservative made neck twitch and joint sores. Yesterday the patient got the COVID Vaccine and had a pretty significant adverse event. She was calling to report it and to see if she should get the second dose of the vaccine. The patient was also a licensed speech pathologist. She received the vaccine yesterday at 2:28 PM. She was allergic to Sulfa drugs and would get shortness of breath, so they wanted her to wait 30 minutes for monitoring. She was feeling giddy on 30Dec2020, but she ran into a friend that she had not seen before quarantine, so they were talking. It was exciting. After her 30 minutes she went to her car and felt a little funny. She thought she was hungry so she ate half a banana and had some water. She had an appointment to get to so she started to drive off, and by the time she got to the interstate she was feeling funny. She got on her left side, a cold spike feeling up her shoulder and neck and up to her face on 30Dec2020. This was like the precursor. Then on 30Dec2020 her face started to go numb. It felt like a dental block you would get with Lidocaine. It went from her temple area, below her eye all the way to her lips. It was midline on the left side. She was breathing fine. She was trying to figure out if she

VAERS\_ID RECVD STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT

---

should pull over or call(Number), but her airway did not close up. Her upper esophageal sphincter got tight and felt funny like she was going to throw up. She drove to the hospital close to her house which is affiliated with where she got the vaccine. She normally had primary tremors, small to where people do not notice. But her whole body was shaking- her head, hands, and legs on 30Dec2020. She looked like a bobble head. But she could still breath. They took her right in and they did an EKG to make sure it was not her heart. Her blood pressure was up on 30Dec2020, she assumes for being stressed. They monitored her. They gave her Pepcid and Benadryl. She did not want any nausea medications. She stayed for about 2 hours and slept some from the Benadryl. Her face slowly became less numb. The numbness went away started from her lips and outward to her cheek and temple area. Then it just felt funny. When she touched it, which she never lost sensation, it was like, whose face is this? It was strange. She is not numb anymore. It took a while for it to go away, and it still felt weird. When she woke up this morning it was completely gone. She had recovered completely from all of these things. The only thing she has now was some transient nausea. It was very mild. It comes and goes. It had improved. She had not taken anything for it. The events Feeling funny, her face started to go numb, upper esophageal sphincter got tight, a cold spike feeling up her shoulder and neck and up to her face, Her whole body was shaking- her head, hands, and legs, were all assessed as Medically significant. The outcome of the event Nausea was recovering, the events Felt giddy, blood pressure was up, Stress was recovered on 31Dec2020, the other events were recovered on 30Dec2020. The reporter considered there was a reasonable possibility that the events Feeling funny, a cold spike feeling up her shoulder and neck and up to her face, Face started to go numb from her temple area, below her eye all the way to her lips, upper esophageal sphincter got tight , whole body was shaking- her head, hands, and legs, Nausea, were related to the product BNT162B2.; Sender's Comments: Based on the compatible temporal association, the vaccination with BNT162B2 might play a contributory role in triggering the onset of the events. The impacts of this report on the benefit/risk profile of the product is evaluated as part of

925742	1/7/2021	TN	23	F	12/29/2020	12/29/2020	Fatigue and overall lethargic feeling/Sore throat; Dark colored urine despite pushing fluids; Frequent urination; Migraine; Swollen joints and could not move arm that received vaccine in; Swollen joints and could not move arm that received vaccine in; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Stomach pains, nausea, diarrhea, swollen lymph nodes; Chills, body aches, spiked fever of 102.; Chills, body aches, spiked fever of 102.; Chills, body aches, spiked fever of 102.; Fatigue and overall lethargic feeling; Fatigue and overall lethargic feeling; Sore throat; The initial case was missing the following minimum criteria: Invalid for no adverse effect. Upon receipt of follow-up information on (31Dec2020), this case now contains all required information to be considered valid. This is a spontaneous report from a contactable Nurse. A female patient of an unspecified age received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, batch/lot number EH9899, Expiry Date: Mar2021), intramuscular at Deltoid Left on 29Dec2020 07:20 at single dose for COVID-19 immunization. Medical history included covid-19 from Nov2020 to an unknown date (had covid in the middle of November), surgeries from an unknown date and unknown if ongoing (She also had previous surgeries and has foreign objects in her body. Those areas were super hot. Those antibodies were like rejecting those foreign bodies because they were super hot.) There were no concomitant medications. Received call from RN calling about the Pfizer COVID vaccine. She got the vaccine on Tuesday and had a terrible reaction to it and she called a couple of different hotlines and spoke with the people who administered it. She confirmed that she did not report to Pfizer though. The people at her work that she spoke with told her to go to an Urgent care. They told her she should not get it within 90 days of having COVID. She had COVID in the middle of Nov2020. She went ahead and got it on Tuesday and had this terrible reaction. She would like to know if she should get the second dose or wait until 90 days after she had COVID and start again. There was no prescriber. She received it as part of the (hospital name withheld) front line health worker precaution. She thought that this was a normal reaction, but was told it was not. Fatigue and overall

----------	-------	-------	---------	-----	----------	------------	--------------

lethargic feeling happened exactly 12 hours after receiving. She works night shift and that is her base line. Pretty much everything hit after that within an hour. She was told low grade fever was normal, but not 102. She never spikes fevers, so it is medically significant. It persisted for 24 hours and is better today. She is on the 48 hour mark now. Stomach pains, nausea, diarrhea, lymph node swelling all over, including swelled armpits and groin area, Migraine, Frequent urination, were also listed as side effects. She was trying to push more fluids but her urine was dark color more than normal, despite pushing fluids. Swollen lymph nodes in her groin and armpits were concerning. Her head is lumpy. Meaning, she can feel swollen lymph nodes in back of neck area. Migraine was consistent through 24 hours and now has improved. Urine color remains dark and she will keep an eye on color. She had swollen joints, but really terrible swollen joints, and she could not move the arm that she got the vaccine in. She could not lift to above shoulder height. AE Details and time of onset: Sore Throat 12:00 on 29 Fatigue and overall lethargic feeling 20:00 Chills, body aches, spiked fever of 102: 21:00 Stomach pains, nausea, diarrhea, swollen lymph nodes- 21:00 Migraine- 21:00 Frequent Urination 23:00 Dark colored urine despite pushing fluids 23:00 Swollen joints and could not move arm that received vaccine in: 21:00. ER or physician's office required: Went to urgent care 36 hours after administration. No treatment given. She just wanted to make sure no additional infection was causing anything weird. All test were negative. Prior Vaccinations (within 4 weeks): none. Events Swollen joints and could not move arm that received vaccine in, Stomach pains, nausea, diarrhea, swollen lymph nodes, Chills, body aches, spiked fever of 102 were serious with criteria of medically significant, while the other events were non-serious. The outcome of the event Fatigue and overall lethargic feeling/Sore throat (Condition worsened) was unknown, the outcome of the events Swollen joints and could not move arm that received vaccine in, Chills, body aches, spiked fever of 102., Migraine, Dark colored urine despite pushing fluids, Frequent urination was recovering, while the outcome of the other events was not resolved.; Sender's Comments: Based on the information available, a possible contributory role of the suspect products cannot be excluded for the reported

12/16/2020

12/16/2020

The patient is a 50 yo female with a history of IBS who reports concerns about Covid vaccine AE. (Pfizer EK5730) receipt 16 DEC 2020. She reports no immediate reaction except experienced a dry throat which she noted after her 30 minute wait, but no urticaria, SOB, wheezing, oral/face/throat/tongue edema, flushing, pruritic, CP n/v/d. She states about 3 hours later she developed a dermatitis initially to her legs. The lesions were raised, pink, initially nonpruritic, fixed but no vesicles, pustules or bruising. She took a shower which exacerbated the symptoms with erythematous patches and severe burning sensation. She reports she was seen in ER and her spouse noted lesions to her neck and ears. Her eyes felt swollen. She left ER due to the wait and obtained Benadryl OTC. She saw her PCP in the morning. She received IM dexamethasone and oral prednisone dose pack. She continued to not feel well. She experienced heart palpitations, feeling hot and flushed, fatigue and headache which she treated with Tylenol. She treated the dermatitis with Zyrtec 10-20 mgs q1-2 x daily, but sometimes took Benadryl. Last dose was Benadryl at midnight, Zyrtec 10 at 0600 and has one day of prednisone left. She also experienced bilat tingling in her feet starting day 5. which the left resolved but her right foot continued. She has no paresis, paralysis, altered gait, tripping or fall, difficulty emptying her bladder. She saw PCP on 05 January. ESR was normal . Overall symptoms improved but continued r foot numbness, pain to her legs. She reports PCP ordered CXR and abdominal series which were normal.

925646	1/7/2021			U	12/18/2020	12/1/2020	diabetes was high; seeing double vision; Headache on the right side; This is a spontaneous report from a contactable nurse. A patient of an unspecified age and gender received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number/expiration date unknown) dose number 1, via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient had the vaccine in a hospital on a Friday (18Dec2020). No side effect was noted over the weekend. On 21Dec2020, when the patient woke up, s/he was seeing double vision, so s/he went to the doctor; they ran some test (unknown result). Because the patient was having headache on the right side in Dec2020, s/he went back to the doctor on 23Dec2020; the patient was sent to the eye doctor and they ran all kind of test. On 24Dec2020, the only thing they could find was that the patient's diabetes was high, so they kind of felt that what that could have been was kind of coincidental. The outcome of the events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: The mentioned "diabetes was high" is likely an intercurrent disease, unlikely related to the administration of BNT162B2, the COVID-19 immunization. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RA, IEC, as appropriate.

926239	1/7/2021	GA	37	F	1/7/2021	1/7/2021	Pfizer BioNTech COVID-19 Vaccine EUA; when patient was in 15 minute observation she reported feely dizzy and getting "tunnel vision." Patient sat down on the floor of her own accord without injury or difficulty. Had patient elevate her legs above heart level. Checked patients vitals, her blood pressure was low, but O2, respiration and pulse were within normal range. Patient was shaking and reported her tongue felt "tingly" and "heavy on my chest." Patient reported she had a smoothie prior to coming in for her appointment. She was given sprite. Patient felt better, but approximately 7 minutes later reported her stomach felt queezy. Blood pressure had improved and other vitals were still stable. Patient still reported her tongue felt "tingly," but no swelling, trouble breathing, or throat tightness. Patient was picked up by her father 45 minutes later and was able to ambulate to the car (with supervision) of her own accord without assistance.
926248	1/7/2021	MD	43	F	1/7/2021	1/7/2021	Known allergic reactions-requesting vaccine. Had personal EpiPen with her. Itchy throat, watering eyes.
926287	1/7/2021	NY	64	F	1/7/2021	1/7/2021	Patient received vaccine at 1130 and immediately felt dizzy per patient. She did not state this to registered nurse at the time. Patient waited the 15 mandatory minutes and then reported back to work which is upstairs. At 1400 patient reported back down stating she had blurry vision. She was asked to sit and be monitored again and writer did this form. Patient stated her vision is blurry on and off and has not improved. Patient was evaluated and vital signs normal which patient concurred with. She was advised to follow up with primary or emergency care. Patients daughter works here as well and was agreeable to have patient be evaluated by HCP in ED to rule out any other causes.

927013	1/7/2021	ID	30	F	12/28/2020	12/28/2020	The vaccinator reported: He administered the vaccine to the patient and as he withdrew the needle from patient's arm, there appeared to be liquid "running down" the patient's arm the vaccinator believed was vaccine. The patient reported this is very normal for her and confirmed this happens every time she receives a vaccination. Clinic staff were unsure if immediate re-doses was appropriate. Staff did not immediately re-dose and contacted Moderna via phone for further instruction/recommendation. Initial Moderna representative indicated he would be unable to answer question regarding re-dose, and stated he would advance the question/situation to company patient safety division. Representative did explain it would most likely be some time before patient safety division returned contact. As of the time of this report, staff still has not heard back yet from Moderna. Staff explained the situation to the patient, advised her to monitor for any adverse reactions, and recommended contacting her PCP and staff is things worsened. Decision was made to maintain the patient's schedule for her 2nd dose until Moderna contacts staff to advise them of any other best next steps. Staff follow up with patient several times via phone call to inquire about any adverse reactions. The patient describes redness/soreness/warm to the touch at injection site, however states this is also normal following any vaccination administration. The patient did confirm she will follow up with her PCP after staff's last check-in phone call.

927174	1/7/2021	CA	35	F	1/7/2021	1/7/2021	Three minutes after receiving the first dose of the Pfizer\BioNTech COVID19 vaccine today (time 11:34 am), this vaccine study participant developed swelling of both cheeks and "was able to bite on both cheeks" as well as vague flushing of the cheeks. She did not immediately report these symptoms but returned to the site of her injection (research study site) and reported the cheek swelling and facial flushing to our study nurse. She denied lip/tongue/airway swelling, difficulty breathing, nausea or vomiting, diarrhea, cough, wheezing, shortness of breath, rapid breathing, fever, headache, paresthesias, rapid heart rate, chest pain, or other symptoms at that time. I am a sub-I for Pfizer\BioNTech vaccine study and authorized an immediate dose of Benadryl 50 mg orally which she received. I examined her at 12:40 pm and she had a reassuring physical exam as follows: Constitutional: Appearance: Normal appearance; well-hydrated and alert; no retractions, tachypnea, nasal flaring, or audible wheezing/ breath sounds. No pallor. HEENT: Head: Normocephalic and atraumatic. Nose: Nose normal without visible discharge. Mouth: Mucous membranes are moist. Cheeks: Minimal edema of both cheeks is present; no visible erythema on exam. Eyes: Conjunctiva/sclera: Conjunctivae normal. Pupils: Pupils are equally round and symmetric. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm, HR 80-90. Pulses: Normal pulses in left wrist 2+/2+; warm hands. Pulmonary: Effort: Pulmonary effort is normal; RR 12-14. Breath sounds: Normal breath sounds. Abdominal: General: Abdomen is flat. Neurological: Mental Status: She is alert; speech and comprehension are normal. The patient still felt unusual by 2:00 pm and was referred to our Emergency Room for further evaluation. In our ER, she had the following vital signs and exam findings: BP 140/87   Pulse 73   Temp 98.1 °F (36.7 °C)   Resp 16   SpO2 100% Gen: well appearing, no apparent distress, speaking in full sentences, no dysphonia Head: normocephalic, atraumatic, no hematoma Eyes: pupils equal reactive to light, extraocular movements intact ENT: hearing grossly normal, oral mucosa moist without edema/angioedema Resp: speaking in full sentences, clear to auscultation bilaterally, no rubs/crackles/wheeze, normal effort Abd: normoactive bowel sounds, nontender

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							nondistended, no rebound/guarding, no organomegaly, faint/resolving urticaria abd x2 Ext: no deformities, no joint swelling, no edema, faint patchy erythema bilateral upper arms Neuro: alert, nonfocal Psych: AAOX3, normal affect/mood I walked to our emergency room and reexamined her, and the only new finding were some pink small nonraised popular lesions on her abdomen and proximal arms, but she had no urticaria. Her lungs remained CTA and she was otherwise as before. The emergency room only gave famotidine 20 mg to her and discharged her with an EpiPen to use at home (they specifically felt she did not need it in the ER), but gave her oral cetirizine 10 mg to take daily for the next few days. I asked her how she felt upon discharge from the ER and she felt fine/normal.

926787	1/7/2021	MN	53	F	12/30/2020	12/31/2020	<p>Resident had the COVID vaccine 12/30/2020. 12/31/20, resident has been in bed all shift. Staff became concerned when resident was not easily aroused. Resident displayed signs of tremors, twitching, confusion, in and out of consciousness, low O2 sats, elevated pulse and fever, fatigue and weakness. Writer called NP. NP stated this is most likely a reaction d/t the COVID vaccine. She gave orders for Benadryl 25mg IM x1 now and Tylenol 1000 mg now. NP also stated resident will not be getting the second dose of vaccine. Will continue to monitor and update NP if worsening symptoms. After receiving Benadryl and Tylenol at 145pm, resident began to appear as though she was feeling better and was talking to talk, fever had gone down. Tonight resident is not easily aroused, lethargic, continues to have tremors and twitches, almost appearing as convulsions. When asked if she knows where she is or what day it is, resident can properly answer. Resident denies SOB but staff has noted loud squeals while breathing. NP was updated and gave new orders to give Benadryl 25 mg IM x1 if needed and Ok to send resident to ED. Resident currently refuses to go to the hospital. Will continue to monitor. BP 152/112, P 116, T 99.1, O2 87-91. Resident's O2 at 1205am was 80% on 3LPM. Resident unable to be aroused from sleep by writer. NAR called to assist. NAR could not arouse resident. Writer and NAR attempted to reposition resident and resident's breathing became more labored. Resident turned back to previous position and writer called on call MD at approx. 1220am. MD returned call approx. 1235am with orders to send resident to ED. 911 called and ambulance arrived about 1245am. History of present condition given to EMTs and they stated resident would be going to Hospital. Writer has attempted to contact Hospital ED x3 but have been unable to get through. An EMT did just call to clarify when vaccine was given, what symptoms have been present and when they started. She said she has everything she should need and she will let Hospital ED staff know to call if they need anything else. Writer will again attempt to contact them though. Resident's temp was 97.5 and BG 128. When EMTs arrived they got an O2 reading of 60%. Resident did open her eyes a couple times during transfer from bed to stretcher and while stretcher was going outside but no responses from resident were made.</p>

923324	1/6/2021	MN	64	M	12/18/2020	12/19/2020	Bell's palsy on the left side of his face; Headaches; Overall was not feeling well; This is a spontaneous report from contactable consumers (including the patient). A 64-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EH9899), via an unspecified route of administration in right arm on 18Dec2020 04:00 at a single dose for covid-19 vaccination. There were no relevant medical history and concomitant medications. On, 19Dec2020, the patient had headaches and overall was not feeling well. On 28Dec2020, the patient experienced bell's palsy on the left side of his face. He said it was a little hard to talk as his mouth was not working at the moment. The provider he saw gave him steroids- Prednisone, and Valaciclovir. He was also told to get some eyedrops as one eye does not close very well. He laughed and said it was a little hard to drink his coffee. The outcome of the events headache and not feeling well was recovered on 21Dec2020 while the outcome of bell's palsy was not recovered. The information on the batch/lot number and expiration date has been requested.

923487	1/6/2021	GA	28	F	1/4/2021	1/5/2021	~~I received my first dose of the covid vaccine yesterday, January 4th around 3pm. I have not felt any major symptoms or side effects aside from pain at the injection site. This afternoon I noticed how sore my arm was and started looking up potential side effects of the vaccine to see how long I should expect pain. I was trying to practice lifting my sore arm and then started feeling light headed. My vision went blurry, my hearing was muffled, and I started to feel like I was going to faint and/or vomit. I tried drinking water to see if that would help and when it didn't I called over to my coworker to tell her I felt like I was going to pass out. She informed our boss, who called Employee Health. They both walked me downstairs to Employee Health.~~
923496	1/6/2021	IL	49	F	12/19/2020	1/1/2021	Day of next day after vaccine administration-only had mild headache, thirst and fatigued. I did have a hematoma and bruising, No fever On Jan 1st, I started feeling fatigued again and noticed round reddening approximately 2 inch in diameter appear about a inch under vaccination location which is still bruised. There is no pain or itching at reddened site. Jan 2, 3 and 4th- Fatigue worsened and developed low grade temp never surpassing 100. My throat developed allergy reaction feeling, same reaction I get with nuts. Throat did not swell and benedryl managed the reaction on Jan 3rd. My eyes began swelling and I could not stop sneezing. Developed laryngitis from the post nasal drainage. I was up whole night but still went into work as normal on Jan 4th. Struggled through the days but swelling and itching subsided. I experienced the muscle aches on the 3rd and 4th. On Jan 5th, started feeling better and rested. Still have reddened reaction on arm but is fading. It is faintly visible today on Jan 6th, I feel better, just have the sneezing currently and a mild headache. Benedryl is the only medication besides daily meds I took during the past several days. I did not want to interrupt the immune system's work.

923569	1/6/2021	MN	58	F	12/21/2020	12/29/2020	injection site tenderness/it is a little tender; swollen at injection site/It is swollen at the injection site; itchiness at injection site; This is a spontaneous report from a contactable consumer. A 58-year-old female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: unknown), via an unspecified route of administration (upper left arm) on 21Dec2020 (between 9:00AM and 9:30AM) at single dose for Covid-19 immunization. Medical history included allergic to dust mites and grass, summertime allergies (haven't been diagnosed but she has sneezing and watery eyes during the summer), obese at 190, and flu vaccine in Oct2020, and smoker. Her mother passed from COPD and stated that more than likely she has that because she is a smoker. Her father had congestive heart failure. Concomitant medications were not reported. The patient previously took flu vaccine vii and experienced migraine; also, previously took Novocaine (probably 10 to 15 years ago) out of the blue she had a reaction. "Eons ago" when she was probably 25 she had a reaction to the very first flu shot that she got. The reaction was a migraine and she could not get out of bed. The patient wanted to know if it was normal to have side effects a week later after receiving Covid vaccine. She received vaccine on 21Dec2020 and today (29Dec2020 5AM) she was experiencing injection site tenderness, appearing swollen at injection site, and itchiness at injection site. It was further reported that she woke up this morning and her arm is itchy. It is swollen at the injection site. It is about the size of a fifty-cent piece. It is itchy and it is a little tender. The patient added, "It is a little tender": it was a little sore the first day like a flu shot. It is annoying like a bug bite itch. The swelling has been the same throughout the day. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of events was not recovered. Information on the Lot/batch number has been requested.

923605	1/6/2021	MO	51	F	12/28/2020	12/28/2020	Eyes started swelling, around my eye the left one, it is more around the eyes it's worse; Eyes started swelling, around my eye the left one, it is more around the eyes it's worse; Swelling around mouth; Aching in my mid back; I have been extremely tired too. I was sitting at my desk at work yesterday and I was nodding of; I have been extremely tired too. I was sitting at my desk at work yesterday and I was nodding of; This is a spontaneous report from a contactable nurse (patient). A 51-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Batch/Lot number: EL1284), via an unspecified route of administration on 28Dec2020 at a single dose for COVID-19 vaccination. The patient's medical history was not reported. Concomitant medications included montelukast, fluticasone furoate, umecclidinium bromide, vilanterol trifrenatate (TRELEGY); colecalciferol (vitamin D), and bumetanide (BUMEX). The nurse stated that she got the Pfizer COVID Vaccine yesterday (28Dec2020) and she didn't know if she should report the side effects but she didn't yesterday and she was going to today (29Dec2020). It didn't happen right away, it was like throughout the day, her eyes started swelling around them, she had swelling around her mouth, she still has it actually. She didn't have any breathing issues but there was a lot of aching in her mid back which was gone now, the aching part, but it was the swelling that concerned her. They were around her eye, the left one. She had a question herself though because this was just her first vaccine. She meant it wasn't bad enough that she had breathing issues because she monitored it and it's already in there now. She asks if it would it be okay to get the next one. As treatment, the patient took Tylenol and a Benadryl. The patient also mentioned that she has been extremely tired too. What she meant was she was sitting at her desk at work yesterday and she was nodding off. According to her, it was just offered through work and they went to a hospital to get it. The patient said that she did not have to seek medical treatment for it, so it was not like life threatening. When clarified if the swelling around eyes was still there, the patient stated that it was not as prominent, it was more around the eyes it's worse. She further stated that it has improved, she was still tired but the swelling had improved. The patient was also asked regarding the route of administration and she

922715	1/6/2021	OH	38	F	12/23/2020	12/23/2020	Received Vaccine 12/23/20 (Weds) at 12:30pm, in left upper arm. Severe (Vice-Like) headache in back of head 5 minutes after, lasted til next morning. Lots of Sneezing over weekend on days 2-4; Monday 12/28- woke at 4a and was extremely dizzy and almost lost balance-went back to bed. Again at 5a and 10am but added vomiting along with any movement, could only lie flat on back, any movement of head caused reaction. No taste when vomiting, minimal smell; came back later in day. Advised to go to ER for Covid Test, since I had worked closely with someone else positive the previous week. Husband had to call an ambulance when I couldn?t make it out of the bedroom due to weakness, true vertigo-room was completely spinning and couldn?t keep my balance, and severe vomiting with any upright movement. Covid test negative. ER diagnosed as BPPvertigo because no other outright viral symptoms; only sneezing before; but they noted fluid in my left ear- said wasn?t infected. Told them of headache in back left rear of head, behind ear, and pressure behind left eye. Positive Dix-Hallpike;nystagmus. Vertigo continued, even with medication through Thursday 12/31/20 and turned to dizziness that subsided by Saturday 1/2/21. Weds 12/30/20- severe left ear pressure, feeling of fullness; focal pain/headache in bone behind left ear began, and pressure behind left eye increased. Low grade fever 1/2/21-1/4/21 (99.9). Seen by ENT on 1/4/21 due to continuing symptoms; and was misdiagnosed originally by ER- diagnosed by ENT as Acute Viral Labyrinthitis and Vestibular Neuritis. As of 1/6/2021- symptoms continue. *suspected recovered from Covid March 2020
923100	1/6/2021	MI	20	F	1/4/2021	1/5/2021	She became light headed, nauseated,pupils dilated, pale and narrowed vision. Nursing staff assisted her to lay on floor with feet elevated. Vital signs with in normal limits. She did not lose conciousness.

922393	1/6/2021	CA	58	F	12/18/2020	12/1/2020	Initial reaction: rash on chest; muscle, joint pain; muscle, joint pain; urge to run; inability to sleep; Irritable mood; Muscle spasms; dry eyes; Dry mouth; brain fog, inability to multitask; This is a spontaneous report from a contactable nurse. A 58-years-old non-pregnant female patient started to receive BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), Lot number: EJ1685; intramuscular in left arm on 18Dec2020 at 14:45 (at the age of 58 years-old) as a single dose for COVID-19 immunization. The vaccine was given in a hospital. The patient did not receive any other vaccines in the past 4 weeks. Medical history included asthma, mitral valve prolapse and an allergy to latex. Concomitant medication included calcium (CALCIUM), metoprolol (METOPROLOL), magnesium (MG [MAGNESIUM]), ergocalciferol (VIT D). The patient previously took penicillin and experienced an allergy. The patient did not receive any other vaccines in the past 4 weeks. She did take other medications (concomitant) in the past 2 weeks. Prior to vaccination, the patient was not diagnosed with COVID-19. In Dec2020, at 14:45, the patient experienced rash on chest followed by muscle, joint pain, urge to run, inability to sleep, irritable mood, muscle spasms, dry eyes, dry mouth, brain fog, and an inability to multitask after 1 week following COVID-19 vaccine. The patient was not hospitalized for the events and no treatment was administered. The outcome of the events: rash on chest followed by muscle, joint pain, urge to run, inability to sleep, irritable mood, muscle spasms, dry eyes, dry mouth. brain fog, inability to multitask, was recovering. Since the vaccination, the patient had not been tested for COVID-19.

922640	1/6/2021	MN	64	M	12/18/2020	12/29/2020	64-year-old male who presented to the clinic with complaints of left-sided weakness on his face. He stated when he woke up this morning he noticed that the left side of his mouth drooped and that he could not close his left eye all the way. Yesterday he felt fine. Today he went to work. Patient stated that on 12/18 he got the COVID vaccine. It was on a Friday. The following day he had a headache and he felt flu-like. He stated that those symptoms resolved quickly. He then had the facial weakness today (11 days after the vaccination). He has not had any fever, sweats, or chills. Patient stated that he had called ask a nurse, and he was advised to hang up and call 911 and go to the emergency room. However, he stated he was an EMT and did not feel that was necessary. He denies headache. He has not had any vision change. He has been eating and drinking well without any difficulty. PHYSICAL EXAMINATION: General appearance - patient was not in any distress. He was conversant, pleasant and appropriate. HEENT - normal conjunctivae and lids. Sclerae anicteric. Pupils equal and reactive to light. Patient was not able to close his left eyelid. Normal ear canals. TMs are pearly gray with bright light reflex. Neck - supple. No lymphadenopathy. Skin - pink, warm and dry. Neuro - alert and oriented. Deep tendon reflexes 2+ upper and lower extremities with no focal weakness. Normal range of motion. Patient can raise his right eyebrow. Could not raise his left eyebrow. There was impaired eyelid closure on the left; tight closure on the right. Smiling of the face revealed lateralization to the right side. When frowning, he had upper and lower facial paralysis on the left with flattening of the forehead. The patient could not tighten the left side of his mouth. ASSESSMENT: Bell's palsy. PLAN: Discussed pathophysiology of Bell's palsy. Advised patient I recommended him to call the number that he got with the information when he received his COVID vaccine. Advised patient that I could not definitively correlate the Bell's palsy with the COVID immunization, but that he can call the number he has to let them know of his symptoms. Discussed treatment options. Since patient woke up with his symptoms this morning, I advised patient that he would have hopefully the best outcome because he would be able to get on the steroid and antiviral soon after developing the symptoms. He is to wear an eye patch to prevent corneal drying or

922753	1/6/2021	AL	47	F	12/31/2020	12/31/2020	Had a "histamine reaction" - Nose, mouth, eyes started itching and watery - all within 1.5 hours of receiving the vaccine. This resolved the next day except itching in sensitive areas (lips, nose, eyes, folds of skins, behind ears, inside ears). Patient started taking Pepcid and Zyrtec twice a day. The symptoms resolved with this treatment through 2/4/21. All symptoms resolved as of 2/6/21. She is taking Pepcid once a day. Never had any redness, rash, bumps at all - just itching.
922854	1/6/2021	GA	54	F	12/21/2020	12/29/2020	One week after the vaccine I was find until....I got out of my car after driving and started staggering and could not function. Severe dizziness, heavy headedness , nausea and vomiting and a horrible headache. My husband had to physically muscle me back to my car. He wanted to take me to the ER and I would not let him because of the waiting room is full of COVID positive patients. I threw up along the way home and multiple times to the point I had drive heaves. I am a Registered Nurse and felt the symptoms I were experiencing were Vertigo. I had one bout with Vertigo in 2015 and it was extreme. I had Meclizine on hand and and took one tablet and slept. The severity of this was so bad I could not walk unassisted or sit up without falling over. After 6 hours of sleeping I got up, dizziness continued, and vision a little off. I still do not feel 100% I have had a headache since. It never dawned on me this could be from the vaccine I had taken a week before.
922904	1/6/2021	NJ	36	M	1/6/2021	1/6/2021	Patient A&Ox3. After patient received Pfizer 0.3mL COVID-19 vaccination on left deltoid, patient reported 7 minutes post vaccination, itchy burning on left eye spreading to right eye, minor headache. Patient denies SOB, chest pain, trouble breathing. Upon assessment, noted of left deltoid was warmth, swelling, and redness. Swelling also noted on left eye with slight redness at conjunctiva Patient was medicated with 50 mg benadryl right deltoid.

924549	1/6/2021	OR	52	F	12/31/2020	1/5/2021	On 1/5/2021- Pt. noticed left eye lid was starting to swell in the corner of her eye at 1 pm. It then became bigger and started to shut her eye. Her right eye then started to swell around 2 pm and she began to have difficulty talking and swallowing. She was not short of breath but felt like her throat was tightening. She arrived to work at 2:50 pm and informed her boss who sent her to the employee health department. She reported having oral Benadryl and was going to take that. Anesthesiology evaluated her, felt it was a progressive allergic reaction, and recommended evaluation at an urgent care or ED. She later developed hives, her lower lip became swollen. She was later evaluated at Emergency Department. She will be able to provide you with information on the doctor, treatment. She was prescribed a course of prednisone and will have allergy testing scheduled. MD indicated uncertain if caused by vaccine. She missed work on 1/6 due to the ongoing reaction which had improved.
924576	1/6/2021	MA	53	M	12/30/2020	12/30/2020	Fairly rapid onset of excess fatigue, difficulty keeping eyes open associated with oscillating vision, near simultaneous distortion of sound (at the time was watching a show using my phone, and the actors no longer sounded like themselves), sense of subtle disequilibrium, and a sense of intense heat involving my upper abdomen and lower chest, centered around my xiphoid process as if being pressed up against a space heater, the latter symptom was non-painful, perhaps the best example is the feeling one has after receiving intravenous contrast dye for CT imaging although more the "warmth" was more intense. Lasted 90-120 minutes before going to sleep, then gone by morning.
924307	1/6/2021	CA	44	M	1/6/2020	1/6/2021	Patient received 2nd dose of Pfizer COVID-19 vaccine at our COVID-19 vaccination area. During the 15 minute observation period, patient reported feeling his tongue swelling and eye getting puffy. No SOB notes. Patient is an ICU physician in our med center. After 30 minutes of observation, he was discharged without any other issues. Follow-up call done after 2 hours and he was fine. He went back to work.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
924590	1/6/2021	VA	32	F	12/26/2020	1/5/2021	Recieved the Pfizer-Biontech Covid-19 vaccination on Dec 26th 2020, and had no major adverse reaction to vaccine except for mild soreness and heat around injection site and intense fatigue for three days after. Symptoms went away after the 4th day. Two weeks later on Jan 5th 2021, i began to notice an intense itching, burning, and swelling at the injection site. Pain and soreness in arm made it difficult to do my job and seem to just get worse. Upon the next morning of Jan 6th 2021, pain remained but itching had gone down, but intense burning, soreness and massive redness around injection site remained and seemed to be getting worse. Pain remains and redness has not gone down, arm is very tender near site and lifting and moving arm is very stiff and sore. Feeling of lump or stiffness on injection site comes and goes and feeling of heavy and sore muscles move from upper left arm down to elbow and extend to hand; making movement and function slowed or slightly numb. Stiffness in arm and intense heat at injection site makes it uncomfortable to move or use arm. Cold tingling sensation on occasion and stiffness in elbow joint. Slight dizziness and fatigue follow with pain in arm. Was informed to see a physician on Jan 6th, 2021 who said to fill out vaccination adverse event report and to keep an eye on arm. If pain or symptoms become worse to return.
924579	1/6/2021	MA	52	F	12/20/2020	12/20/2020	Immediate after injection- tingling, numbness, dizziness, confusion, vision disturbance (dilated pupils), loss of BP, rapid heart rate, uncontrollable rigors/trembling. Rushed down hall to ED via stretcher. Received IV fluids, IV steroids, IV benedryl, IV pepcid, IV ativan.

924636	1/6/2021	AR	28	F	12/31/2020	12/31/2020	I received my vaccine at 1215 on 12/31/20. At 1800 on 12/31/20 I began to feel mild shortness of breath. I then became dizzy at 1805. At 1815 I developed blurred vision. The dizziness and blurred vision prevented me from standing. I was able to walk with assistance at 1915. The blurred vision lasted until 1915. The dizziness lasted until 2230. At 2000 I had muscle aches and joint pain and could not get comfortable. Muscle aches and joint pain lasted until 1-1-21 at 1930. I did not seek medical treatment. (I working in the ER and did not feel it was severe enough to check in because the shortness of breath was mild and went away shortly after the dizziness began at 1815). I took Benadryl 50 mg at 1930 and 1000mg of Tylenol.
924640	1/6/2021	MD	36	F	12/18/2020	12/23/2020	I suffered an ocular migraine 5 days post vaccine. Never had one before. Very scary. Zigzag spot in both fields of visions for 10 minutes followed by kaleidoscope vision in the left field for 5 mins. No headache after.

924662	1/6/2021		46	F	1/4/2021	1/5/2021	Redness and burning in eyes, followed by shaking chills and fever with headache and fatigue. Lasted 24 hours
924672	1/6/2021	MT	57	F	1/5/2021	1/5/2021	Patient had redness and flushing around the neck and sweaty palms. Patient reported pain in left eye and left forehead above the eye. The patient reported feeling ?out of sorts? with a tingling or numbness from her shoulder to her neck and tingling in the left side of her face. She felt light headed when standing and her feet hurt. She was given diphenhydramine 25 mg and observed for an hour and a half at which time she reported feeling better. Her temperature was 97.5 F at 13:23 and 97.9 at 13:45. She left work early and went to the walk-in clinic later that evening. She reported that the clinic said all of he vital signs were normal and they did not note any specific problems. She took second diphenhydramine 25 mg. She was contacted at around 8:30 AM on 1/6/2021 and reported that she was feeling better.

923697	1/6/2021	MN	49	F	12/30/2020	12/30/2020	Eyes were red; Tiredness and needed to sleep extra; Tiredness and needed to sleep extra; Heartbeat was fast; Felt like she had to throw up; Pain in right arm; Does not feel good; It felt like there was oil in her mouth; This is a spontaneous report from a contactable consumer (patient). A 49-year-old female patient received first dose of BNT162B2 via an unspecified route of administration on 30Dec2020 10:45 at single dose in right arm for COVID-19 immunization. The vaccination was given in hospital, not a military facility, at 10:45 and left hospital at 11:05 on 30Dec2020. Prior vaccinations within 4 weeks was none. Additional vaccines administered on same date of the Pfizer suspect was none. Medical history included ongoing migraine and family medical history included mother has high blood pressure and father has diabetes. Concomitant medication included verapamil from Oct2020 at 40 mg twice daily by mouth for migraine. Additional Information for concomitant products Verapamil included 1 for one week, 2 for second week 3rd week 3 and after 3 months, then came back down to 2. The patient experienced does not feel good at 11:30 on 30Dec2020. She was driving and did not feel good. She felt like she had to throw up at 12:00 on 30Dec2020 and had it all night until she went to bed. Eyes were red when she woke up at 23:30 on 30Dec2020, that's when she first noticed. Heartbeat was fast around 12:30 on 30Dec2020. Tiredness and needed to sleep extra at 17:00 on 30Dec2020. Pain in right arm at 12:00 on 30Dec2020. When she went to drink something, she noticed her arm was painful. No ER or physician's office required. Received call from patient regarding the COVID vaccine. She received it on 30Dec2020 (yesterday) and was a healthcare worker. She later stated she works in patient transportation in a hospital. She did not feel good. Yesterday, she felt like she had to throw up. When she slept, she felt very tired and when she woke up, her eyes were red. She washed her face when she woke up around 11. Then she noticed her heart beat was kind of fast. She took another medication she takes all the time. Her doctor said that she can take it with it but she was not sure. She did not feel herself. Yesterday after she took it, she had to wait there for 15 minutes. It felt like there was oil in her mouth. She just drank water and came home. When she came home, her heart beat was fast. She had to sit down. She liked to eat spicy food, and

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
							she needed to sleep. Her kids said she never slept like this. Both eyes were red, red like blood. Her daughter told her to go look at them in the mirror. There was no pain or nothing in her eyes, they were just red and they improved today. If she goes to bed now, she can sleep, but she just wakes up and drinks tea and wants to wake up. She didn't want to sleep, but she felt like she could. Regarding the pain in her right arm, she had to hold her shoulder when she first woke up. It was worse then, but it's better now that she keeps moving it. She has 3 more weeks to get the next dose of the COVID Vaccine. Hopefully it will be this shot only and she can go back to work. She planned on going back to work on Saturday. She would like to know if she can continue to take Verapamil. She will call her pharmacy to find out. The outcome of the events does not feel good and tiredness and needed to sleep extra was not recovered. The outcome of the events felt like she had to throw up, eyes were red, heartbeat was fast and pain in right arm was recovering. The outcome of the other event was unknown. Information on Lot/Batch Number has been requested.

923831	1/6/2021	ND	26	F	1/5/2021	1/5/2021	Injection site became itchy, and then around the entire area, shoulder area, down arm. Would lessen, then become worse again, Injection site ice packed, hydrocortisone cream applied to area at 5:45pm and 6:10pm with some relief. Small welts noted at times, but decreased with treatments. Benadryl 25mg PO at 5:15pm, Benadryl 12.5mg PO Chewable at 5:45pm and Benadryl 25mg PO at 6:10pm, all on 1/5 Repeated 25 mg PO at 8:30 on 1/6 for slight itchy HR regular, no swelling in face or tongue, no shortness of breath, no headache or visual disturbances. No nausea or vomiting, or diarrhea. Drove to home, took bath and slept well that night. Still reports general itchiness throughout body on 01/06 with some relief from benadryl.
923842	1/6/2021	GA	19	F	12/29/2020	1/6/2021	Pt. reports that she noticed her left arm where she received Moderna COVID- 19 Vaccine EUA was red, swollen and itching this morning (01/06/2021) at approximately 7:45 AM. Pt. also states that she started taking Bactrim on 01/05/2021 for a UTI and she took only one dose prior to the event. Reports taking Amoxicillian for stye last week and was switched to Bactrim on Monday for a UTI but did not take first dose of Bactrim until Tuesday 01/05/2021. Pt. also reports all over itching including legs and face it red and blotchy on both cheeks that also began today. Pt. came into clinic on 01/06/2021 at 1:54 PM for visual evaluation of arm. Upper outer left arm (left deltoid area) has red rash 55MM Length & 30 MM Wide Area is also warm to touch. Pt. used cool compress for the redness, swelling and Benadryl for the itching.Pt. reports that swelling and redness has improved but itching continues along with aching. Reports a numb feeling in the area of the shot on left deltoid. Pt. also reports left axillary tenderness but states that started shortly after vaccination. Patient's mother notified primary care provider due to current use of Bactrim but no actual visit to doctor was made. Pt. instructed to continue to monitor for side effects and to contact HD and primary healthcare provider if symptoms worsen.

920707	1/5/2021	OH	40	F	12/28/2020	12/28/2020	I took the Moderna Covid vaccine on 12-28-2020 at 1420. After getting the shot, I had a metallic taste in my mouth and drank some water then waited 20 mins. When I left to go back to my department, I started getting dizzy and coughing. I sat down in my department and could not stop coughing so I went to the ER department. My eyes were swollen, I had a rash from my arms and legs all the way down my body. I had hives on my face and my eyes were swollen. I was coughing and wheezing. the ER RN started an IV and I was given steroids, diphenhydramine, ondansetron and IV fluids. I was also given some cough medicine. I was monitored for a few hours and before I left - they gave me hydroxyzine for the hives and itching. The PA also ordered meds for me to take at home. - per patient report

920839	1/5/2021	MN	40	M	12/31/2020	12/31/2020	Pleasant 40-year-old male comes in the emergency room with concern related to allergic reaction. Patient had received his COVID-19 vaccination approximate 60 minutes ago, at approximate 45 minutes after vaccination he developed flank pain left greater than right rated a 3 out of 10 extending down to his thighs he also noted a scratchy type sensation in the back of his throat feeling as if he needed to frequently clear his throat. The symptoms have been ongoing now for the past 15 to 30 minutes with no increasing or change in symptoms. Has never had allergic reaction in the past, unsure of previous Covid 19 infection though he describes in February of last year having upper respiratory illness which time he lost his sense of taste and smell. Currently denies any fevers, chills, nausea or vomiting. Denies any diarrhea. Denies cough or shortness of breath. Denies any swelling of the lips, face, eyes or nose. Denies any rash. Upon presentation emergency room patient was seen, evaluated, treated following standards of care given. Given patient's presenting symptoms and the recent COVID-19 vaccination will treat patient as adverse allergic reaction. Patient was given 50 mg of Benadryl IV, 20 mg of Pepcid IV, 10 mg of Zyrtec p.o. and 125 Solu-Medrol IV. Patient was observed in the emergency room for minimum of 2 hours, with complete resolution of symptoms. Patient was discharged home on Zyrtec to take 10 mg by mouth daily as well as Pepcid 20 mg by mouth twice daily for minimum of next 14 days, prednisone 20 mg 1 by mouth daily x5 days. Patient was given a prescription for EpiPen should his symptoms return or progress, recommend he call 911 and return immediately. Risks and warnings were discussed in detail, all questions were answered, patient verbalized understanding agreement plan of care.

920967	1/5/2021	NY	65	F	12/23/2020	12/23/2020	I had a temperature of 103.8; nauseated and dizzy; eyes hurting; headache; chills; tired; nauseated and dizzy; pain at the site; This is a spontaneous report from a contactable nurse (patient). A 65-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), intramuscular on 23Dec2020 at 10:30 as single dose for covid-19 immunization. Medical history included covid-19 from May2020. The patient's concomitant medications were not reported. The patient reported that " I had a temperature of 103.8 " on an unspecified date with outcome of unknown; pain at the site on 23Dec2020 with outcome of unknown; tired on 24Dec2020 with outcome of unknown; nauseated and dizzy on 24Dec2020 with outcome of unknown; chills on 24Dec2020 with outcome of unknown; eyes hurting on an unspecified date with outcome of unknown; headache on 24Dec2020 with outcome of unknown. The patient underwent lab tests and procedures which included body temperature: 101.8 Fahrenheit; temperature: 102.4 Fahrenheit; temperature: 101.3 Fahrenheit; temperature: 100.6 Fahrenheit; temperature: 99.2 Fahrenheit; temperature: 103.8 Fahrenheit on 24Dec2020; sars-cov-2 test: positive in May2020, sars-cov-2 test: negative in 23Dec2020. Therapeutic measures were taken as a result of " I had a temperature of 103.8 ". Details were as follows: the nurse received the vaccine on a Wednesday 23Dec2020 at 10:30am. That night at her night shift, she had pain at the site. After midnight, the patient felt tiredness and felt like she had to lay down. At 6:00 she felt nauseated and dizzy. She had a temperature of 103.8. Thursday night, she went home at 7:10 and called her private doctor. The temperature was 101.8 and then it went down. The nurse had been administered the first of 2 dose series of Pfizer BioNTech COVID-19 Vaccine on 23Dec2020. She had received mandatory COVID-19 testing on 23Dec2020, prior to being administered the vaccine; she received the negative results of that COVID-19 testing on 25Dec2020. After being administered the vaccine she was monitored for 15 minutes and then went home. She was fine, had no allergy or anything. She reported that after she was administered the vaccine, she had pain, was really tired, nauseous, chills, high temperature, and her eyes hurting. She mentioned history of COVID-19 in May2020. She works as nightshift nurse at a rehab facility. She woke up that night of

VAERS_ID	RECVD	STATE	AGE_YRS	SEX	VAX_DATE	ONSET_DATE	SYMPTOM_TEXT

23Dec2020 around 9:00pm-10:30pm and had onset of pain in right arm at injection site which she did not take too seriously because when you get a shot you get pain. Around midnight that night 24Dec2020, she went to work and had onset of being really tired like she just wanted to sit or lay down; she felt like she had to sit down and could not stand well. She continued working that shift on 24Dec2020 but kept getting so tired and had onset of chills and was supporting herself with her med cart. She drank a little sip of ginger tea she brought to work think maybe that would help her feel better. She felt that if she drank more ginger tea she would throw up because she felt nauseous. She was really busy at work 24Dec2020 so she did not check her temperature until after 6:00am which was 103.8 degrees Fahrenheit; and thought no wonder she feels like throwing up. She finished her shift at like 7:00am. For 2 days her temperature was turning high temperature so every 6 hours she was taking Motrin 2-200mg and that would make her temperature go down. Then temperature would go back up to like 102.4 degrees Fahrenheit, she would take ibuprofen (MOTRIN) again, temperature would come down to like 101.3 degrees Fahrenheit. She continued feeling nauseated, having chills, headache and feeling nauseous which she felt all of which could be related to the temperature. She reported to her employee health at work. She thinks it's better. Saturday morning of 26Dec2020, she woke up with temperature of 100.6 degrees Fahrenheit at 7:00am which was the first time her temperature had gone down like that so she did not take the ibuprofen. She checked it again later at like 1:00 pm and temperature was 101.8 degrees Fahrenheit so she took 2 Motrin again. After that her temperature did not go up like that anymore, it was like 99.2 degrees Fahrenheit. As soon as she came from work on 24Dec2020 she called her doctor's office and was seen by Nurse Practitioner who let her out of work for like 2 days. She reported her eyes also have been hurting, mostly her right eye is still hurting, the top is hurting like when you have a small pimple so she keeps checking but does not see anything with her eye. She couldn't even put a cold compress on for the temperature because of her headache and her eyes hurting. She could not even put cold compress to bring her temperature down. Seriousness criteria of all events was unknown. The patient has had no rash, no breathing

problems, no coughing, no sore throat or other serious events. She was scared because she wondered if she had COVID-19 again with these events. She mentioned if people do not know these are side effects they would be scared, but she knows from the information she got with the Pfizer BioNTech COVID-19 Vaccine that these are normal for everyone. The only thing she wondered about is if the tiredness she is having is serious or not. She reported prior to getting the COVID-19 vaccine she tested positive for COVID-19 in May2020 and was very sick at that time because she works in a health field with COVID-19 patients. Pfizer BioNTech COVID-19 Vaccine. The patient indicated that she was fine before she got the vaccine; she had no cold, no coughing, no sore throat. The ibuprofen tablet was administered as 200 mg, 2 of the tablets at a time. : The outcome of all the events was unknown. The relatedness of the event, pain to the suspect drug was reported as related from the reporter using the assessment; relatedness of the event, really tired to the suspect drug was reported as related from the reporter using the assessment; relatedness of the event, nauseous to the suspect drug was reported as related from the reporter using the assessment; relatedness of the event, chills to the suspect drug was reported as related from the reporter using the assessment; relatedness of the event, high temperature to the suspect drug was reported as related from the reporter using the assessment; relatedness of the event, eyes hurting to the suspect drug was reported as related from the reporter using the assessment. 920975	1/5/2021	OK	53	F	12/18/2020	12/1/2020	<p>blurred vision; little spots on the inside of her eyelids; This is a spontaneous report from a contactable nurse (patient). A 53-year-old female patient received first dose of BNT162B2 (Pfizer-BioNTech COVID-19 mRNA vaccine; batch/lot number and expiry date were unknown), via an unspecified route of administration on 18Dec2020 at a single dose for COVID-19 immunization. Medical history included eyeglasses wearer (reported as with her glasses). The patient's concomitant medications were not reported. The patient is experiencing symptoms from the COVID-19 vaccine received on 18Dec2020. She began to have blurred vision that night, and it worsened over the following weekend. She saw the eye doctor on 22Dec2020, and they stated her vision had changed even with her glasses. Now she has little spots on the inside of her eyelids that were also noticed on the eye examination in Dec2020. She has already reported these symptoms to the V-safe program. She mentioned that she is not the only nurse in the workplace that has experienced blurry vision. She asked if she should receive the second dose on 08Jan2021. It was still blurry, but it was better than it was a week ago. It still affected her reading and seeing at a distance. It scared her to get the second one because she doesn't want to go blind. She went to the eye doctor for visit on Tuesday. The outcome of the event blurred vision was recovering, while for the other event was unknown. The reporter considered blurred vision as serious due to being medically significant. Information about lot/batch number has been requested.; Sender's Comments: There is not a reasonable possibility that the reported event vision blurred and eyelid disorder related to the suspect product event most likely due to patient underlying contributory factors</p>

921057	1/5/2021	AZ	48	M	12/28/2020	12/28/2020	Hypertensive crisis; Numbness to my left ear; progressively it went down to my mandible, my face and my left shoulder numbness; Radial blood pressure cough; This is a spontaneous report from a contactable nurse reporting for himself. A 48-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EH9899), via an unspecified route of administration on 28Dec2020 at single dose for covid-19 immunization. Medical history reported as none. There were no concomitant medications. During the administration the patient did experience some types of reaction where it wanted medical supervision. So, basically when he did get the injection he was waiting for his 15 minute prolapse. But within probably he would say 7 to 8 minutes he started to experiencing some numbness to his left ear and usually he thought it was secondary to the that he had (not clarified) but progressively it went down to his mandible, his face and his left shoulder numbness and he was experiencing some numbness that radiate towards his fingertips only to the left side. At that time he waived to the Nurse to supervise and at that time he wait again and a Physician came over. He checked his pulse and noted that he had normal rhythm during the pulse check and at that time and he had Emergency medical technician (EMT) come over. The EMT checked his blood pressure he thought multiple times through the left and to the right brachial. He was having what they would consider a hypertensive crisis where systolic were in 170's, 180's, diastolic numbers were between like 120's and 130's and his heart rate was in 70's. So, initially it was not anxiety induced. But he do not have no blood pressure. They wanted he to go to the hospital to treat the hypertensive crisis that was in. The patient opted not to. So he went home in a quieter environment he did have a radial blood pressure cough that he had been checking his blood pressure rigorously, tried different techniques and now he was back to normal state to 120-130 systolic and his diastolic was 70-80. This instance was weird that he did not see as a part of one of the side effects listed with Pfizer BioNTech Vaccine. No treatment received for the events, because he had no history of hypertension it was just more of decreasing the ambient around he. At that time he wanted to go to a quiet environment, took a shower and check his blood pressure. He did orthostatic while laying

							down sitting up, standing up and he was not hypertensive. For the causality, the nurse stated, "I think it did. This is a fact I mean I was doing fine prior to administration and then this event is slowly subsiding." The outcome of the events was recovering.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on reported hypertensive crisis cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.

920624	1/5/2021	TX	41	F	12/21/2020	12/27/2020	41-year-old female HCW who received Pfizer BioNTech vaccine (Lot # EK5730) on 21 Dec 2020 in her left upper arm. No other vaccines were received that day. She reports a sensation of warmth and tenderness locally right after vaccination. On the evening of vaccination, she noted a small area of redness and swelling at the vaccination site. She denied anything out of the ordinary with regard to vaccine administration, except the vaccine might have been given "a little lower" than usual. She did not experience any respiratory, CV, dermatologic, or gastrointestinal signs/symptoms during observation post-vaccination or during the next several days. Post-vaccination day (PVD) one, patient noted some tenderness, warmth, redness, and some bruising surrounding the vaccination site. (SEE PVD 1 Photo); local reaction gradually resolved (SEE PVD 7 Photo) and currently, all that remains is a big bruise. On the evening of 26 Dec, patient reported having some "congestion" and took some Nyquil. She reports a good night's sleep, but upon awakening, she noted mild shortness of breath and she "couldn't open" her eyes due to swelling. She also noted her bottom lip and tongue were swollen and she experienced a tight feeling in her throat and chest. She also reports mild swelling of her hands. She denies hives/urticaria, wheezing, stridor, dysphagia, loss of consciousness, or gastrointestinal-related symptoms. Patient self-treated with oral Benadryl, Pepcid, and Zyrtec, as well as using her Albuterol inhaler. After 2 hours, her symptoms had not improved, so her spouse took her to the Emergency Room. In the ER, she was placed on a cardiac monitor, and shortly after arrival, she received IM Epinephrine (x2), followed by IV Solumedrol. She was observed for 8-10 hours and discharged home with a 5-day course of oral steroids. She was diagnosed with "anaphylaxis" and instructed to follow-up with her Primary Care Provider. Since discharge, she has continued to note some facial swelling, and on 29 Dec, she was having problems breathing for which she used her inhalers, and symptoms resolved. On the day of vaccine receipt, patient reports feeling well prior to vaccination. She denies previous vaccine reactions. She denies any exposures that might have been potential triggers to her reaction on 27 Dec – "the only thing different was the vaccine~~

920120	1/5/2021	OK	46	F	12/16/2020	12/16/2020	ringing in the ears; slight headache; This is a spontaneous report from a contactable nurse (patient). A 46-year-old female patient received the first dose of bnt162b2 (Batch/lot number: EH9899), via an unspecified route of administration (reported as one injection to left arm) on 16Dec2020 at a single dose for COVID-19 vaccination. Medical history included allergy. Concomitant medication included prednisolone acetate (PREDNISOLONE ACETATE, Manufacturer: Pacific Pharma. NDC: 60758119-05, Lot: E88990, Exp. date: Feb2023) 1%, four eyedrops a day until she is out, 7 days at most or a week for allergy. The nurse called as a patient about the Pfizer COVID-19 vaccine, which she received on 16Dec and had a headache - only a slight headache, the day after and ringing in her ears that has not gone away. She says it was her first injection of the vaccine. The patient says she was given the vaccine through her work, and says she had a headache that evening and then a slight headache the next day. She says that the ringing in the ear, she noticed the next day in the morning. She says it is hard to tell if the ringing is just one ear or not, the ringing is staying about the same, and is more in her right ear. She says she has not had treatment for either the headache or the ringing in her ears, and the headache improved on its own. She had no new medications and didn't receive any other vaccines when she got this one. She says that she went to the eye doctor in the past week and he started her on eye drops, she has never been on prednisone for allergies, and for her eyes he gave her prednisone drops and allergy drops. She says she started that medication on the evening she got it, Monday 21Dec. She would like to know if there could be some type of allergy, she doesn't know if she should take the second dose of the vaccine. She says she doesn't know if there is something she should do for the ringing in her ears, like a common treatment or anything, or if others have been reporting this. She says she saw on the website that one side effect said ringing in ears, but she isn't sure if the website was either of those provided by call handler for further information. The outcome of the events slight headache was resolving while ringing in the ears had not resolved.

920090	1/5/2021	FL	58	M	12/16/2020	12/17/2020	sinus issues; positive COVID-19 test with symptoms; positive COVID-19 test with symptoms; right arm sore; This is a spontaneous report from a Pfizer Sponsored Program. A contactable consumer (patient) reported that a 58-year-old male patient received the first dose of BNT162B2 (lot number: EH9899; Expire Date: 31Mar2021), via an unspecified route of administration, in arm, right upper, on 16Dec2020 11:10 AM at single dose for COVID-19 immunization. The vaccination facility type was hospital. The vaccine was not administered at military facility. Patient's medical history (including any illness at time of vaccination) was none. The patient got ill from all pain medications- from prescription strength pain killers to OTC products such as tylenol, ibuprofen and aspirin. All of them make him sick- experienced hot flashes and nausea. No additional vaccines administered on same date of the Pfizer suspect vaccine. Prior vaccinations (within 4 weeks) was none. The concomitant medication included 2 different blood pressure pills, mentioning Lisinopril, but stated he did not think his blood pressure pills were relevant to what he was experiencing with the COVID-19 Vaccine. A MRI tech (clarified by caller as MRI technologist) at a hospital who received the COVID-19 Vaccine on 16Dec2020 (caller clarified he received the vaccine at 11:10 AM on 16Dec2020). Caller stated on 17Dec2020 he had signs of aches and pains all over, a sore arm (clarified as his right arm), no fever. He also experienced sinus issues and a loss of sense of smell. Clarified his right arm was sore for only a day, his sinus issues started on 20Dec2020, and his loss of the sense of smell gradually started on 22Dec2020. He stated on 23Dec2020 he had a COVID-19 test performed and the test result was positive for the COVID-19 virus. Caller asked since he had the first COVID-19 Vaccine dose, and has now tested positive for the COVID-19 virus, should he get the second COVID-19 Vaccine dose scheduled for 06Jan2021. Patient's Height: 5' 8" as provided by caller, who stated he has shrunk 1". No further details provided. Patient's Weight: 169 lbs. as provided by caller, who stated his weight was as of today. Reported he worked an overnight shift, clarifying he was injected with the COVID-19 Vaccine after his overnight shift was finished on the morning of 16Dec2020. He stated he came back to work later in the day on 16Dec2020 to work another overnight shift from 9:00 PM

VAERS_ID	RECVD	STATE	AGE_YRS	SEX	VAX_DATE	ONSET_DATE	SYMPTOM_TEXT
----------	-------	-------	---------	-----	----------	------------	--------------

to 7:30AM. He said after he finished his overnight shift on the morning of 17Dec2020, he went home to bed, and woke up around 12:00 PM on 17Dec2020. He said when he woke up, he started to feel aches and pains all over, and after that noticed he was getting chills periodically. Clarified he experienced the aches and pains all over for a couple of days, and then the aches and pains went away. He said he then started to get the feeling a sinus infection was coming on, but he never got a sinus infection. He said the aches, pains, and chills came back. Reported his co-worker received the COVID-19 Vaccine on Saturday, 19Dec2020, clarifying his co-worker did well with the COVID-19 Vaccine. He clarified his employer was concerned that he may have exposed his co-worker to COVID-19 when the two worked together on the overnight shift of 22Dec2020. He said both he and his coworker kept their PPE on the whole time they worked except when the two ate dinner. He said the two of them sat at a round table about 6 feet apart, and took off their masks to eat. He said his partner agreed that the two of them were right at 6 feet apart when they sat at the table to eat dinner, so their employer deemed his coworker as low risk. Reported on 22Dec2020 he had to go back to work, so he was asked for his temperature at the time, which was 98.8 degrees. He did have a flu shot previously. He was instructed as long as he doesn't have a fever over 100 degrees, he can work. The caller said he went to work on 22Dec2020, and read an email from his employer's wellness office. He said the wellness office email spoke about the COVID-19 Vaccine side effects, and instructed employees to contact the wellness office with any COVID-19 Vaccine side effects experienced. He said he left a voicemail with his employer's wellness office explaining exactly what his COVID-19 Vaccine side effects were. He said he instructed his employer's wellness office to call him in the afternoon because he was going to go home, go to bed, and wake up at noon on 23Dec2020. He stated he spoke with his employer's wellness office at around 11:30 AM on 23Dec2020, and the wellness office asked for him to go to the hospital, and have a COVID-19 test. Caller stated his employer performed a COVID-19 nasal swab test, and on 24Dec2020, he was told he was COVID-19 positive. He said his employer backed up his quarantine start date to 17Dec2020 (the first day he experienced

*VAERS\_ID RECVDATE STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT*

---

symptoms), and had him follow a 10-day quarantine until 27Dec2020. He stated today, 28Dec2020, was the first day he has been off quarantine. Reported he was not saying he got COVID-19 from receiving the COVID-19 Vaccine, but should he have the second COVID-19 Vaccine injection. Clarified his symptoms were intermittent, and started coming back around 20Dec2020. Reported he was not experiencing any scratchiness in his throat, and his eyes were not watering. He said he has had no cough, no sneezing, and no trouble breathing. He said in general, it felt like something was coming on, saying it was building up, but not getting out. Clarified he had gone back to work on 23Dec2020 to have his COVID-19 nasal swab test performed, and was told by his employer on 24Dec2020 that the COVID-19 nasal swab test was positive. No AE required a visit to emergency room or physician office. The outcome of the event right arm sore was recovered on 18Dec2020 and the other events was unknown.

919928	1/5/2021	TX	46	F	12/22/2020	12/22/2020	Dizziness; Shortness of breath; Tightness in throat; Blurred vision; Tingling in hands and face; This is a spontaneous report from a contactable consumer who reported for herself. A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) via an unspecified route of administration on 22Dec2020 at 06:40 (at the age of 46-years-old) as a single dose in the left arm for COVID-19 vaccination. Medical history and family medical history were both reported as none. Concomitant medications were reported as none. It was reported that history of all previous immunizations was unknown and that the patient had no previous adverse events following prior vaccinations. The patient did not receive any other vaccines within four weeks prior to the vaccination and did not receive any additional vaccines on the same date as BNT162B2. On 22Dec2020 the patient experienced "dizziness", "shortness of breath", "tightness in throat", "blurred vision" and "tingling in hands and face". The adverse events required a visit to the Emergency Room; however, the patient was not admitted to the hospital and was discharged from the Emergency Room. The patient stated that she had a reaction to the COVID-19 vaccine. She reported that she was in the Emergency Room and was still feeling dizzy after being released. The clinical course was reported as follows: "Started off with dizziness, shortness of breath, and then tightness in her throat. Also had blurred vision, and tingling in hands and face. Occurred 25 to 30 minutes after receiving the COVID-19 vaccine. Continuing to experience dizziness that comes in waves after being released from emergency room." The patient stated that she received the vaccine to protect herself and her family. She called to inquire what she could expect, and what her next steps were in terms of the dizziness. She was advised to follow-up with her healthcare provider. It was reported that there were no relevant tests. The clinical outcome of the event "dizziness" was not recovered/not resolved, while the clinical outcomes of the events "shortness of breath", "tightness in throat", "blurred vision" and "tingling in hands and face" were all unknown. The lot number for the vaccine, BNT162B2, was not provided and will be requested during follow up.

921114	1/5/2021	TN	34	F	12/28/2020	12/31/2020	No issue on date of vaccine. Minor muscle soreness in left arm the following day. No further issues following days. On 01/31/2020 at approximately 2130hrs, numbness and tingling of right side of face began while on work duty. Completed shift, drove home and went to bed. The following morning lips were covered in blisters, right cheek and under eye was extremely swollen. Attempted to drive to work and began experiencing brain fog and blurred vision. Returned home and facial swelling worsened along with severe headache and itchy dry skin. Took a bath and was unable to determine water temperature by touch. Intense leg muscle aches and nerve pain in right side of face. Remained calm and slept the following two days. Went to PCP as soon as possible on 01-04-2020 and was advised symptoms to be delayed adverse reaction to Moderna Vaccine. Patient was prescribed Alegra, Tylenol and methylprednisolone at this time. PCP advised inability to receive secondary dose on 01/28/2021 due to steroid treatment for allergic reaction to Moderna Vaccine. Swelling retreats and returns throughout the day following Dr visit. Voice changes occur during swelling (gurgled). The patient has no appetite but maintains a scheduled healthy diet. The patient has been unable to sleep for 24 hrs straight even after taking melatonin. There has been no shortness of breath however the patient experiences muscle spasms, dizziness and blurred vision while reading. The patient's right side of face has slower reaction timing than the left, the right eye closes frequently (not in tandem with the left) and is unable to smile. The patient has not experienced vomiting nor stool issues. The patient is unable to return to work until 01-11-2021 or until symptoms remain undetected for 48 hrs.

920025	1/5/2021	IN	38	F	12/26/2020	12/26/2020	tongue started to get a little bit of numbness and tingling/the numbness and tingling progressed to the roof of my mouth, my gums, my lower lip, underneath my tongue; tongue started to get a little bit of numbness and tingling/the numbness and tingling progressed to the roof of my mouth, my gums, my lower lip, underneath my tongue; numbness and tingling progressed up my cheeks and up underneath my eyes on both sides; numbness and tingling progressed up my cheeks and up underneath my eyes on both sides; This is a spontaneous report from a contactable nurse (patient). A 38-year-old female patient (not pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscular in right arm on 26Dec2020 11:30 AM at single dose for covid-19 immunization. The COVID-19 vaccine was given at nurse's hospital vaccine clinic. Medical history included narcolepsy with cataplexy. Concomitant medication in two weeks included venlafaxine hydrochloride (EFFEXOR SR), amphetamine aspartate, amphetamine sulfate, dexamphetamine saccharate, dexamphetamine sulfate (ADDERALL). The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient previously took naproxen and erythromycin; and experienced drug allergy. On 26Dec2020, the patient stated "At about 1150 my tongue started to get a little bit of numbness and tingling. I didn't really feel nervous but I thought maybe some type of anxious reaction. So I thought I'd give it just a little time and over the next 20 minutes the numbness and tingling progressed to the roof of my mouth, my gums, my lower lip, underneath my tongue, up my cheeks and up underneath my eyes on both sides. I was not feeling anxious about the vaccination. I didn't have any trouble breathing or difficulty swallowing. It felt like Novocain that was wearing off like after you have dental work done. I decided to take 25mg Benadryl to see if it went away. And it definitely got better about 25 minutes after I took the Benadryl. Within an hour I would say it was 95% gone. Still just like a trace numbness on my cheeks. When I woke up this morning (27Dec2020) I noticed the facial numbness had completely resolved." The adverse event start time also reported as 11:45 AM. Prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient was not been tested for COVID-19. The outcome of the events

919945	1/5/2021	CA	49	F	12/21/2020	12/1/2020	left eye swelling; there is a sensation to touch like a little bit of pain; left eye there is some puffiness; harsh soreness around her both temples and her face; Neck pain; Headache/harsh soreness around her both temples; Feverish; Nausea; Joint pain; fatigue; This is a spontaneous report from a contactable consumer (patient). A 49-Year-Old Female patient received BNT162B2 (lot number: EH9899, expiration date: Mar2021) on the 21Dec2020 on deltoid left at single dose to prevent COVID 19. Medical history included Hypertension and Rheumatoid arthritis. Concomitant medications included losartan for Hypertension and hydroxychloroquine sulfate (PLAQUENIL) for Rheumatoid arthritis. She was experiencing a few side effects that are on the list. However, the one that is not on there and she have never had them before. She think that it is something with her left eye there is some puffiness and there is a little bit of swelling and there is a sensation to touch like a little bit of pain when you touch it. It actually started yesterday (22Dec2020) and she took the vaccine two days ago (21Dec2020) and it is on the same side as her injection. So it is on her left side on her left eye and the injection was given on her left Deltoid. It seems to be getting a little better now though the sensation by touch is not as much as it was this morning or yesterday. So she think like it is like going away but it is just something that she think may be should be looked at as one of the possible side effect. She did get neck pain, headache, and bit of headache. She think she was a little bit feverish and nausea and joint pain and a lot of fatigue. She had a harsh soreness around her both temples and her face was like when smile or laugh it was sore. Patient took Ibuprofen to help with the soreness and the pain. It was 800mg. The outcome of the events was unknown.

920109	1/5/2021	PA	25	F	12/23/2020	12/23/2020	My eyes were glassy; Lightheadedness and dizziness; Fatigue; Low-grade temperature of 99.0 F with chills; Low-grade temperature of 99.0 F with chills; This is a spontaneous report from a contactable nurse (patient herself). This 25-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number EL0140), via intramuscular, on 23Dec2020 at 13:45 at single dose for COVID-19 immunisation Vaccine location was left arm. The patient was not pregnant. The patient was vaccinated at hospital, age at vaccination was 25-year-old. Relevant medical history included ongoing irritable bowel syndrome, ongoing allergies tree nuts and peanuts. Past drug history included allergy to penicillin. Relevant concomitant medications included famotidine, sertraline, and ethinylestradiol, ferrous fumarate, norethisterone acetate (JUNEL FE) for birth control. No other vaccine was received in four weeks At approximately 16:00 on 23Dec2020, she had sudden onset of fatigue, a low-grade temperature of 99.0 F with chills. By 17:30, she was also bringing to experience lightheadedness and dizziness. That night at approximately 22:00, she had temperature of 99.1. On 24Dec2020, she experienced lightheadedness and dizziness the entire day, from waking up to going to bed later that night. Her eyes were glassy and she would feel an impulse of dizziness go distinctly from the right side of her head to the left, and then felt more dizzy after that. It was constant throughout the entire day and would occur while she was sitting, standing, or moving around. On 25Dec2020, she was tired but the dizziness had gone away. Pre-vaccination and post-vaccination COVID tests were not performed. No therapeutic measures were taken as result of the events. The patient had recovered from the events in Dec2020.

920127	1/5/2021	PA	36	F	12/23/2020	12/23/2020	<p>Angioedema of lips, throat, eyes, hands. Flushing of hands; Angioedema of lips, throat, eyes, hands. Flushing of hands; Dizziness; Fatigue; Legs became heavy; Joint stiffness of hands; This is a spontaneous report from a contactable healthcare professional (patient). A 36-year-old female patient received the first dose of BNT162B2 (Pfizer-BIONTECH Covid-19 Vaccine; Lot number: EJ 1685), intramuscular on the left arm on 23Dec2020 at 06:30 AM in a hospital at a single dose for COVID-19 immunization. Medical history included known allergies of seasonal allergies, cats, and metals; migraines, chronic idiopathic urticaria, and angioedema. The patient was not pregnant and did not have any other vaccine in four weeks. The patient did not have COVID prior to the vaccination and did not test positive to COVID post vaccination (also reported as not been tested for COVID-19 after the vaccination). Concomitant medication included propranolol, cetirizine hydrochloride (ZYRTEC), and sertraline (reported as other medications in two weeks). On 23Dec2020 at 06:45 AM, the patient experienced immediate symptoms of angioedema of lips, throat, eyes, hands; flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands. She was monitored by colleagues for an hour, prescription for Epi pen refilled, and available angioedema and fatigue persisted for three days. It was reported that the patient was not treated for the adverse events but it was also reported that the AE treatment also included X-ray and antibiotic. Outcome of the events was recovered in Dec2020.; Sender's Comments: A possible causal association between administration of BNT162B2 and the onset of immediate symptoms of angioedema of lips, throat, eyes, hands, flushing of hands, dizziness, fatigue, legs became heavy, and joint stiffness of hands cannot be excluded, considering the plausible temporal relationship and the known adverse event profile of the suspect product. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate</p>

920130	1/5/2021	CA	40	F	12/22/2020	12/24/2020	<p>Angioedema; This is a spontaneous report from a contactable Other Health Professional (patient). A 40-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) lot number: EL1284, intramuscular in the right arm (also reported as right shoulder), first dose on 22Dec2020 00:30 at a single dose for Covid-19 immunization. The patient's relevant medical history included severe reaction to some animal dander and pollen, severe reactions to poison oak, possible drug induced reactions (unspecified) post C-section, mild rash with influenza vaccine this year (2020) (with no other hx of adverse reaction to a vaccine); had allergies to pollen, mold, some animals. The patient previously took influenza vaccine (split virion, inactivated) and experienced rash. The patient had no covid prior vaccination nor was she tested post vaccination. Adverse event reported was angioedema on 24Dec2020 with outcome of recovering. Systems started appearing on 23Dec2020 evening with slight rash and fluid collection under right eye. Developed more rash on 24Dec2020. In the evening to early morning of 25Dec2020, symptoms worsened significantly. Rapid swelling to face occurred. Swelling was concentrated around eyes and cheeks the most. Both right and left side of the face and neck were affected. However, the right side face had a more pronounced reaction. MD ordered oral prednisone and Benadryl as treatment plan. Also, ordered episode-pen for a worst case scenario. Symptoms have been improving under treatment but still persist some. The events were reported as non-serious. The adverse event start date was 24Dec2020 (as reported). The event resulted in doctor or other healthcare professional office/clinic visit.; Sender's Comments: There is a reasonable possibility that the event angioedema was related to BNT162b2 based on known drug safety profile and temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>

920231	1/5/2021	PA	72	F	12/28/2020	12/28/2020	arms hurting; Lymph nodes hurting on the left side; chills in which she is hot and cold and she couldn't get warm at first and then she is cold; high blood pressure/blood pressure was high 190/116; big toes hurting; nausea; dizziness; feeling weakness legs/Leg feeling weak; This is a spontaneous report from a contactable other HCP reporting for herself. A 72-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: CJ1686), via an unspecified route of administration in the right arm on 28Dec2020 15:00 at single dose for COVID-19 immunisation. Medical history included breast cancer on the left side, hypertension, hiatal hernia, glaucoma, heart disease, hypertension, lymphadenectomy (lymph nodes being taken out was about 20 years before) and headache from 27Dec2020. She was working Sunday into Monday morning and she went to the Director of Nursing, and said she has a Headache on the left side of the temple, and so she went to eye doctor, and he had a test order ESR and so she has a hemorrhage in the left eye, and show she doesn't know if this could be bringing on some of the side effects she was speaking about, like the nausea and the migraine. She has had No positive test for COVID prior to the vaccine, she must have had about 20 tests and all were negative. She has not had any Antibody tests. She had pneumonia vaccine maybe in the last 5-3 years and flu vaccine in Oct2020 and she experienced achy arm. On 28Dec2020 the patient experienced leg feeling weak (about 15 minutes after injection), nauseous at 21:00, dizziness. On 29Dec2020 the patient experienced arm hurting (in the morning), lymph nodes hurting on the left side, chills, blood pressure was high 190/116, big toes hurting. The patient was calling to ask if these side effects she was experiencing were normal. On 29Dec2020 the patient underwent ESR with unknown results. The patient reported that her arm hurting began on 29Dec2020 in the morning. The breast cancer diagnosis was prior to the vaccine as well as her lymph nodes being taken out was about 20 years ago. Her Lymph nodes hurting on the left side started on 29Dec2020 in the morning. Her Leg feeling weak started right after the injection, about 15 minutes after on 28Dec2020. The chills started on 29Dec2020 in the morning in which she couldn't get warm. Her feeling nauseous started on 28Dec2020 in the

920062	1/5/2021	NV	57	F	12/22/2020	12/24/2020	allergic reactions; rash on all my chest and in abdomen; Itchiness; Eyes got red; eyes got red and itch; Chills; This is a spontaneous report from a contactable nurse (patient). A 57-year-old female patient received BNT162B2 (Lot: EH9899), via an unspecified route of administration on deltoid right on 22Dec2020 at single dose for COVID-19 immunization. Medical history included blood pressure high, hypothyroidism, and environmental allergies. Concomitant medications included amlodipine besilate (NORVASC) at 10 mg, daily for blood pressure high, and levothyroxine sodium (TIROSINT) at 112 mcg (ug) for hypothyroidism. Patient got Covid Vaccine on Tuesday (22Dec2020) night and was fine on Wednesday (23Dec2020). She expected the normal side effects like maybe a little fever like that but she believed she was having allergic reactions. It started from 24Dec2020 and she got a rash on all her chest and in abdomen and also just like itchiness feeling all over. So she took some diphenhydramine hydrochloride (BENADRYL) and a PPI 'a cup of' them on 24Dec2020 and she thought that she only had to do that one's today (25Dec2020) and the only thing she noticed when she got the shot (Covid Vaccine) they kept her there for like 15 minutes and her eyes got red and itch. She didn't scratch them but they felt like itchy and she never had that before. She never had a problem with the vaccine before. She didn't know if that was the true allergic reaction to the vaccines or if it just something she had internal allergies and she just didn't know what it was. But she was okay at the time of the report. She took some diphenhydramine hydrochloride a little while before and a PPI (unspecified medication). She was still itchy but it was not that bad and she seemed to be doing fine. Her arm was fine. She was not having any (unspecified), except sometimes. 24Dec2020 she had chills which she expected and she was all good but the side effects whatever happened that way was not the allergic portion. She tried to contact the doctor. The doctor just switched his clinic only for geriatric patients. She had to find another doctor. She knew a Doctor whom she could try and call and she actually went to the infectious disease physician and he said she should go to get the vaccine, now she was trying with that too. She got allergic to anything. Covid Shot was the only thing new that she had in her life but like she was not sure if it was triggered by

<u>VAERS_ID</u>	<u>RECVD</u>	<u>STATE</u>	<u>AGE_YRS</u>	<u>SEX</u>	<u>VAX_DATE</u>	<u>ONSET_DATE</u>	<u>SYMPTOM_TEXT</u>
							something out like (unspecified) because she had always environmental allergies too. She didn't know because she was going to consult the Physician on Monday. She was just going to see the regular doctor. She was just seeing that first that anything because she knew it didn't happen very often but the Covid vaccine she just wanted to make report. She was going to the Physician on Monday because right now she thought she didn't know how long it lasted like. Outcome of the events was unknown.
921901	1/5/2021	IL	54	F	12/17/2020	12/19/2020	About 49 hours after receiving the Pfizer mRNA COVID-19 vaccine, patient developed chest tightness, itchy throat, upper and lower eyelid swelling, lip swelling, difficult swallowing. Self-treated with prednisone 40mg, fexofenadine 1 tablet, famotidine 40mg, albuterol breathing treatment. Felt better, but then 6-8 hours later, felt chest tightness again that did not resolve with breathing treatment. Went to the Hospital Emergency Department. No epinephrine was administered. But received IV corticosteroids, diphenhydramine and famotidine, and was discharged with 6 days of oral corticosteroids
921744	1/5/2021	KY	57	F	12/30/2020	12/30/2020	Received the vaccine during break at work at approx 11:00 am. Sudden onset blinding headache with visual disturbance at 15:30 pm while working. Fifteen minutes after that the headache started to subside and I suddenly became very dizzy and was rolled to a stretcher and assisted to lie down ,associated diaphoresis and pale clammy skin. The following day, experienced significant joint pain and lethargy. I continue to have joint pain but otherwise feel relatively normal.
921764	1/5/2021	AL	28	F	1/4/2021	1/4/2021	About 1 hour after the vaccine, I developed watery eyes, itchy, runny nose, sneezing, itchy throat. This lasted throughout the day and required 50mg of Benadryl before symptoms finally subsided around 9pm that night.

921864	1/5/2021	NC	29	F	12/31/2020	12/31/2020	Within 10 minutes following vaccine administration, patient had vomiting, lightheadedness, weakness, and verbalized feelings of being cold along with a very flushed appearance. Skin was slightly moist and very warm to touch. Complained she felt the same as when she was diagnosed with the coronavirus infection in March of 2020. Patient continued to experience ongoing weakness in all extremities, dizziness followed by complaints of some changes in her sense of the light with her eyes closed. Shortly thereafter patient began complaining of her heart "speeding" up. Medic arrived and transported patient to the local emergency room. On 1-2-2021 patient provided additional information including that later on the evening of the adverse event the arm where the injection was given became painful and itchy. Patient stated the pain and itching extended into Friday 1-1-2021 and then on into Saturday, 1-2-2021 she developed a sore throat, and some difficulty swallowing (described it as feeling something "stuck" in her throat) along with hoarseness. The patient also verbalized she remained weak, with a very sore arm and some small blisters which had formed on the same arm as where the injection had been given. A couple of the blisters the patient described where on the thumb of her hand as well her arm.
921865	1/5/2021	PA	43	M	1/5/2021	1/5/2021	Felt weak, dizzy, blurred vision and nausea Vitals normal except for several episodes of O2 stat 89-90. No wheezing . One dose of Diphenhydramine 25 mg dose. Back to normal in 1 hr.
921741	1/5/2021	NJ	25	F	12/23/2020	1/4/2021	On 1/4/21 at around 1:30 pm, I was getting ready for work when all of a sudden I started to feel really terrible. My heart was racing, body and face was sweating, externally nauseous, dizzy, blurred/fuzzy vision, body shaking, the room was spinning, and I was unable to stand up. This would happen every time I got out of bed and stood up. Lasted about 2 hours.

921504	1/5/2021	ME	24	F	12/29/2020	12/29/2020	Patient experienced "something wrong with her throat", life side of neck and face were numb, left eye was dropping, tongue felt thick. Patient was referred to the ER but was not seen in the ER. Symptoms resolved overnight.
921426	1/5/2021	GA	58	M	12/29/2020	12/30/2020	blurred vision, elevated BP Went to PCP. Given BP med and advised not to take second dose of vaccine
921389	1/5/2021	SC	38	F	1/1/2021	1/5/2021	5 minutes after receiving vaccine: Itchy throat Mouth numb Runny nose 30 minutes Eyes watering Headache
918530	1/4/2021		58	M	12/29/2020	12/29/2020	30 minutes after receiving the vaccine the patient developed hives, scratchy eyes, and a scratchy throat. He reported to the ED and was given Benadryl, methylprednisolone, and famotidine. His symptoms resolved and he was shortly thereafter discharged.
918834	1/4/2021	IL	27	F	12/22/2020	12/28/2020	After the shot I was very light headed , and was taken to the side. Ate some candy , and felt better after. About 6 days later is when I woke up with really puffy eyes. Then next day I noticed swelling on the bottom of my mouth , on both sides. Also , my whole right side of my face is swollen with a lot of pressure in it.
918637	1/4/2021	VA	43	F	12/18/2020	12/21/2020	Right sided jaw pain started 12/22/20 in the am progressed through the evening. When I woke up I had numbness and weakness in the right of my tongue which I quickly realized included the right portion of my face. Included tongue was numb and I couldn't move it. An Er trip and CT scan confirmed it was Bells Palsy. Today, My symptoms continue. Top of my head all the way to the way to bottom of neck is experiencing paralysis. Can move tongue now and it's partly numb but it's cooperating a bit more now. Nerve pain has worsened all over all the right side of face. Feels like someone has kicked face and I have a deep bruise. It's a deep ache. Nothing will take away the ache away. My eye doesn't lubricate like it should. So I have to either manually close it and wet it manually or tape it closed.
918499	1/4/2021	WI	27	F	12/29/2020	12/29/2020	lightheaded, dizzy, tunnel vision, sweaty, felt like passing out within minutes of receiving vaccine.

918759	1/4/2021	NC	35	F	12/23/2020	12/24/2020	<p>burst blood vessel in left eye/blood in her eye; This is a spontaneous report from a contactable physician (patient). A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number EH9899, expiry date 01Mar2021), via an unspecified route of administration on 23Dec2020 at single dose for covid-19 immunization. Vaccine location was left deltoid. The facility type vaccine was hospital. Medical history included ongoing rheumatoid arthritis for about 8 years. No known allergies. Patient didn't do relevant test. Concomitant medication included duloxetine hydrochloride (CYMBALTA) for rheumatoid arthritis for 2 years, sulfasalazine for rheumatoid arthritis for 4 months, it's unknown if they were ongoing. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient received the vaccine yesterday (23Dec2020), which she was very excited about, but today (24Dec2020) she woke up with a burst blood vessel in her left eye, she appears to have blood in her eye. This has never happened to her before. She knows this can occur with patients that have COVID but didn't know if it was a side effect to receiving the vaccine. Patient didn't receive treatment for the adverse event. The action taken in response to the event for BNT162B2 was not applicable. The outcome of event was not recovered. The relatedness between COVID vaccine and event "burst blood vessel in left eye" was related by reporter. Pfizer is a marketing authorization holder of [BNT162B2] in the country of incidence or the country where the product was purchased (if different). This may be a duplicate report if another marketing authorization holder of [BNT162B2] has submitted the same report to the regulatory authorities.; Sender's Comments: "Burst blood vessel in eye" is not uncommon in general population, and there are many causes of the event. Considering temporal relationship, a contribution role of the injection of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) to the reported Eye haemorrhage cannot be excluded. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any</p>

918861	1/4/2021	MO	41	F	12/31/2020	12/31/2020	12/31/20 10:30a Vaccine given 10:48a Left the vaccine observation room 11:30a Started feeling warm like maybe my temp was increasing, face was red 12:00p had what felt like an adrenaline spike through my body became hot and jittery feeling. 12:30p The spikes started coming in waves, like a full body hot flash. Was very shaky and my tongue felt itchy and tight; not swollen just tight 12:40p made it home and took Benadryl 1:00p symptoms dissipated, ate a chicken salad sandwich thinking that would help with the jittery feeling. 1:25p The whole body flash came back and the tightness in the tongue increased. 1:27p Called employee health for information on this type of reaction. Wanted to call me an ambulance, I declined. After much discussion they suggested I come back to the vaccination observation room where they have epi, then decided it best that I go to Urgent Care. 1:40 on the way to town I told my husband to take me to the ED instead as my bottom lip felt swollen and tight, and my tongue felt thick like it was a bit swollen too. Was not short of breath, airway did not feel compromised, breathing normal, and heart rate normal. 3:01 Was given 40mg Methylprednisone (solumedrol) & 20mg famotidine (Pepcid) given-immediate improvement in tongue thickness and swollen lips. 440p 50mg Diphenhydramine (Benadryl), 10mg loratadine (Claritin), & 40mg prednisone given prior to discharge 8:20p Top lip started to swell just before my next dose of Benadryl 8:30p Took next dose of Benadryl, once it kicked in had quick resolution of lip swelling 9:00p joint pain started setting in, was uncomfortable but not too painful 1/121 Joint pain is still present but not uncomfortable. Injection arm a little sore, no redness or swelling at site of injection. Swelling of mouth, face and tongue is persistent as it nears the 4-hour mark for 50mg of Benadryl. 1p ate a couple of bites of chicken fried steak, face is increasing in redness and swelling, and mild tongue swelling. At max dose of Benadryl per box states to only take 6 doses in a 24 hour period. 2p Mouth and face swelling not relieved with Benadryl 2:52p checked into ED for 2nd time. 4:08 Given 10mg dexamethasone (decadron), 20mg famotidine (Pepcid), 10mg montelukast (singular) Swelling improved. 5:54p Potassium low on lab work given 40 mEq of potassium chloride 6:00p discharge with scripts for famotidine, epi pen, montelukast 7:00p taken 25mg of Benadryl 8:20p

<u>VAERS_ID</u>	<u>RECVD</u>	<u>STATE</u>	<u>AGE_YRS</u>	<u>SEX</u>	<u>VAX_DATE</u>	<u>ONSET_DATE</u>	<u>SYMPTOM_TEXT</u>
							lips feel mildly swollen again. 8:45p next dose of 25mg Benadryl. Did not have complete resolution of swelling but did improve. Mild hives, swelling of hands and feet. 1/2/21 All joint pain is gone, and injection site pain is only noticeable if someone bumps into my arm. 6a 25mg Benadryl & Pepcid 10a 25mg Benadryl 2p 25mg of Benadryl 3:30pm felt fine all day with only mild swelling and redness to hands, ate chicken nachos. Face became very hot (like my face was too close to the oven when I open it), redness from eyes down, lips swollen, mild itchiness too the tongue but nothing too concerning. 4p 25mg Benadryl I strongly believe the exacerbating factor is eating as all times the symptoms increased in intensity I had just eaten. After discussion with Dr. will be cutting out chicken (chicken was eaten before all 3 instances) and all other meats until complete resolution of symptoms and will avoid any inflammatory foods such as nuts, berries and shellfish. 7p 25mg Benadryl & Claritin taken 7:30p ate a banana, no reaction 8p Singular taken 9:30p put Vaseline on my lips, face & ears flamed hot and swelling and redness followed. 9:45p took 25mg Benadryl 10:25p tongue thick feeling 11p took 25mg Benadryl tongue still feels thick 1/3/21 Fevers 101.6 and chills started in the night Face and lips are permanently swollen and red despite all the meds I'm taking. Lymph nodes are all swollen. I'm too afraid to eat for fear of more swelling while my face is already so swollen.
918866	1/4/2021	KS	40	F	12/31/2020	12/31/2020	Chest started tightening then started having a hard time swallowing. Felt dizzy, faint, and as though I was going to pass out. Epi pen was administered when I wasn't able to swallow. Was taken to ER on a stretcher, however they said on the way, I wasn't responding and couldn't open my eyes. Muscles began cramping and loss sensation in limbs. Hands wouldn't open up as they cramped. Blood pressure kept going up and down.
918868	1/4/2021	OH	33	M	12/23/2020	12/25/2020	2 days after vaccination, patient had upper lip swelling, swelling of the top gums in mouth, itchiness, and a rash on both wrists. He took prednisone, Benadryl, and Pepcid and this resolved. Then, 3 days after this (5 days after vaccination), the patient had right eye swelling. He took prednisone and Claritin and this resolved.

918899	1/4/2021	IL	48	M	12/28/2020	12/29/2020	I had right sided headache for the first two days, then resolved. The right sided headaches recurred along with right tongue numbness initially on 12/29/2020. The symptoms worsen on 12/31/2020 and severe on 1/1/2021. I was initially started on Valtrex thinking it maybe due to shingles but soon with the right sided facial paralysis, it was obvious it was Bell's Palsy and was started on steroids on 1/1/21 and also received acupuncture treatment on 1/2/21 which significant help improve the symptoms. I still have some residual weakness of the right eye with some tearing and mouth weakness.
919022	1/4/2021	MD	28	M	9/2/2020	9/2/2020	Complete loss of vision in the left eye 12 hours after receiving second dose (Moderna mRNA-1273) while having a fever of 102 F for 6 hours. Loss of vision lasted for 1 minute. Loss of vision occurred while standing. Referral to primary care and ophthalmology specialist found normal eye exam and MRI of orbits but presence of tachycardia especially while standing (fluctuations between 60 beats at rest/laying down to 130 beats per minute standing). Postural tachycardia syndrome (POTS) is suspected. Currently pursuing cardiac workup with cardiologist and Covid POTS specialist. POTS specialist believes autoantibody development after vaccination could be suspected as recovering covid patients similarly present to clinic with POTS like symptoms.

918074	1/4/2021	LA	47	F	12/14/2020	12/14/2020	Migraine with nausea and dizziness preceded by visual aura, severe left arm pain (could not raise arm without significant pain), left wrist pain
918078	1/4/2021	KY	44	M	12/31/2020	12/31/2020	4 hours after vaccine, sore arm, fatigue, headache, blurred vision 12 hours after vaccine, full body tremors, fever of 102, extreme muscle weakness, fatigue, deep chest cough, shortness of breath. fatigue, weakness and cough continued for three days after vaccine before subsiding
918081	1/4/2021	NY	26	M	12/30/2020	12/31/2020	I received the shot around 0730 on 12/30/2020. Went home and got ready for work. Around 12am 12/31/2020 my arm started to radiate at the injection site and was very tense. I placed a heat pack on the right arm but the pain did not dissipate. My arm continued to be in pain for the rest of the night. Around 0240 I ate dinner, had water and still had some arm pain. Around 0345 my arm started to flare up and sent pain sensations throughout my body. My right arm was increasingly discomforting, I could barely move it. The sensations spread to my legs, numbing them and my throat had felt as if it were closing up. I got up to get the attention of the nurse and was able to flag her down. She said I was pale as a ghost. My vision was very blurry, I could not hear anything because my ears had filled up and everything was muffled. My head had begun to ring and I was on the brink of fainting when a chair was given to me. My eyes had become extremely sensitive to the light, I was given water and spoken to about what had happened leading up to the event. I was greeted by the paramedics who drew my blood, placed an IV and transferred me to the Acute Care portion of the Emergency Department. My vitals were 76/49, 80/50, 90/56, 100/60 before being brought to the ER. On 1/1/2021 My thighs have been sore/tense, my knees and ankles have been stiff and just feeling sickly. On 1/2/2021 much of the same symptoms are present. The soreness in the muscles isn't as prevalent, however joints still are stiff On 1/3/2021, congestion and runny nose are still present, stiffness in ankles and now shins are prevalent.

918285	1/4/2021	IA	40	F	12/29/2020	12/29/2020	I got the shot, didn't feel it at all so it went good. I went to the bathroom and went pee and got my arm back in my long sleeve shirt under my scrub top. I wasn't anxious about getting the vaccine. Then I went to sit down and be monitored. After about another minute I felt very weird like a warm feeling going all over my body. I started pulling my mask away from my face to get a deep breath. Then I broke out in a sweat from head to toe. I think I became pale (I apparently didn't look good). I started feeling more 'weird' as I had never felt this way before and I stood up to walk because the nurse there wanted me upstairs near the ED but I was weak so I sat down and had tunnel vision. After that it's a bit of a blur. After I stopped sweating I got very cold and shaky but vitals were ok. It scared me because I have never had a reaction before to a vaccine.
918298	1/4/2021	MO	36	F	12/31/2020	12/31/2020	Injection received at 0815. At 0900 I started getting diaphoretic, clammy, nauseas and my face was flushed. At 0930, I developed hives on my neck, chest and arms. I immediately went back to the vaccination site (I was still in the hospital at work) and was administered 25mg oral Benadryl and monitored for 30 minutes. The hives resolved, but I still felt unwell. At 1600 I noticed a swelling in my right upper thigh about the size of my hand. It was about 2 inches inferior to my inguinal crease and was the width of my thigh. It was mildly painful to the touch. My injection site was red, inflamed and itchy. I continued taking 25-50mg Benadryl Q4 and took 100 mg at night due to itchiness on my eyes, face, neck, chest and arms. This is still present, although less each day, as of Monday 1/4/21 morning. I have felt feverish but have not had a recorded fever. I took some Ibuprofen for the pain in my arm at the injection site. The redness, swelling and itchiness has decreased each day at the injection site, but is also still present as of Monday 1/4/21 morning. I still feel unwell and have continued diarrhea throughout the weekend.

918351	1/4/2021	OK	41	F	12/18/2020	12/21/2020	12/19/2020-12/20/2020 only experiences soreness of left arm where vaccine received. Woke up early morning 12/21/2020 with moderate swelling of eyelids, face, lips that progressed over several hours before seeking care at Hospital ED. Received IV Benadryl and IV solumedrol. Prescribed oral prednisone dose pack to start next day. Symptoms mostly resolved by that evening.
918361	1/4/2021	TX	58	F	12/29/2020	12/29/2020	A few hours after vaccination, I began to feel like I was getting ill, with fatigue and headache. I also experienced swelling at site of injection, along with hives on my face and neck on the same side as the injection. I had swelling in my neck, throat, tongue, lips, ears and eyes with some tingling. There was a red pallor on both of my cheeks. I also had slightly labored breathing. I took antihistamines and tylenol which helped reduce the symptoms within an hour. If I did not continue to take these round the clock for the next 4 days, the symptoms would get worse. Toward the end of the day, symptoms worsened regardless of antihistamine or tylenol and continue to do so as of yesterday, 1/3/2021. Symptoms have gotten better over the last 4 days. Its hard to say if I am fully recovered as in the evenings when I'm more fatigued, I still have the tingling and mild swelling although the redness and hives have abated.

918235	1/4/2021	NH	37	F	12/29/2020	12/29/2020	Patinet is a 37 y.o. female ER nurse who received her Covid vaccine just prior to arrival. While being observed at the vaccine site, she developed itching and a rash. She was brought down to the ER for evaluation. Mainly she is itchy all over. She notes a rash across her chest. But she has no cough shortness of breath wheezing. There is no problem swallowing there is no facial swelling. She does not have a history of anaphylaxis, or medication allergies. Review of Systems Constitutional: Negative for chills, diaphoresis and fever. HENT: Negative for congestion, trouble swallowing and voice change. Eyes: Negative for redness and itching. Respiratory: Negative for cough, shortness of breath, wheezing and stridor. Musculoskeletal: Negative for myalgias. Skin: Positive for rash. Pruritus Allergic/Immunologic: Negative for environmental allergies, food allergies and immunocompromised state. Neurological: Negative for headaches. 01/04/2021- Speaking with the patient she states noticed "hives" accross chest, right lower extremity, and left upper extremity.
919675	1/4/2021	TX	26	F	12/30/2020	1/4/2021	Bell?s Palsy. Right-sided facial drooping. Numbness to right face. Excessive tearing of right eye associated with inability to blink right eye.
919469	1/4/2021	TX	64	F	12/30/2020	12/30/2020	By evening of the same day I read the vaccine my right side got numb my cheek and eye hurt to the touch, my eye socket was very sore, like if I was getting Bells Palsy. I took Vitamin B12 sublingual and went to bed and the next day it was still sore but I took the vitamins again and later on it subsided. By the first of the month those symptoms were a lot less and now I am fine.
919485	1/4/2021	TX	49	F	12/29/2020	12/29/2020	My Arm is swollen, angry, red and fever. I am having double, vision, when I walk I feel weird.

919154	1/4/2021	IA	38	F	12/29/2020	12/29/2020	Patients adverse reactions started day of vaccination with right arm pain up to right ear as well as complete tongue numbness. On 1-1-21 patient had increased Bell's Palsy symptoms including; inability to raise left eyebrow, inability to close left eye in its entirety, teeth being numb on left side, and numbness and tingling in left foot and left hand (from palm to fingers). ER physician prescribed on 1-1 Prednisone, Keflex and Valtrex. Patient went to ER again on 1-2-21 with lower extremity numbness on left side that is moving proximally toward her hip. Patient went home on 1-3-21 with an RX for Prednisone as well as Valtrex. Symptoms have improved but have not fully resolved at this time.
919608	1/4/2021	MD	53	M	12/1/2020	12/30/2020	Left side of face below eye and goes to the Botox. Of my lips has a numbing feeling.
919622	1/4/2021	CO	50	M	1/4/2021	1/4/2021	i was driving and my left eye stopped tracking with my right eye. I had to pull over and let my daughter drive this lasted maybe 3 minutes . I have never had this happen before. I don't get sick or have issues I have never taken a sick day in 20 plus years and I am fairly healthy
919467	1/4/2021	OK	33	F	1/2/2021	1/4/2021	Patient got the shot on Saturday, Jan 2nd at around 11am. Woke up Jan 4th at 2:13am feeling the place of injection swollen, itchy and with a single hive like a bug bite, felt another on torso on the right side. Felt rapid pulse, got up to check the mirror, eyes swollen and itchy, tongue beginning to swell. Within minutes, started feeling itchy all over my body, specially mucosae, and scalp. Took 360mg of fexofenadine and 20mg famotidine, reaction started to subside. Was up monitoring until 3:45am. Still feeling itchy but significantly less at the before medication. Plan to continue with 180mg fexofenadine a day until all itchiness goes away.

919638	1/4/2021	LA	49	M	12/23/2020	12/24/2020	On December 23, 2020 she had the Pfizer COVID-19 vaccination at 7:30 p.m. She then worked her shift as a dialysis nurse and went home the following morning. She did not have any symptoms until 5:00 p.m. the following afternoon when she woke up. She developed itching of her back and a mild erythematous rash across her chest. That evening around 7:00 p.m. she noticed a rash on her arms that was itching. At 7:30 p.m. she had tightness in her chest and a nonproductive cough. She attributed the symptoms to her asthma. Her symptoms improved throughout the night. She went home on Christmas morning and went to bed. She woke up at around 5:00 p.m. She had swelling of her eyelids and an urticarial rash across her face and chest. She did have some mild throat itching. She reported to work at 7:00 p.m. but continued to have symptoms with increasing shortness of breath. She reported to the emergency department and was evaluated. She was given famotidine, Methylprednisolone, and hydroxyzine. She was also given ipratropium/albuterol nebulized. Her respiratory symptoms did improve, and she was discharged around midnight. She continued to have a slight erythematous rash that was present until she went to bed the following morning. When she woke up it had resolved.
919565	1/4/2021	TX	43	F	12/21/2020	12/22/2020	My arm was sore the 1st day, by noon the next day my HR was 160s, I was referred to go to the ER but I didnt and took benedryl went to sleep, woke up and I felt a little SOB but more like something was tied around my ribs preventing me from breathing. I saw the cardiologist who believed it to be sinus tackycardia as a result as an AE to vaccine. Felt as if my face and lips were swelling so I took benedry and laid down again and the next morning when I woke up and my face and lips were super swollen. But by the 3rd day the symptoms began to subside a little. By the 24th my HR had balanced out and I only had residual swelling around the eye area.
919678	1/4/2021	CA	48	F	12/31/2020	12/31/2020	Patient reports soreness in the arm, headache onset, sneezing, runny nose and itchy in throat, itchiness in eyes and on ears. Patient states she has allergies and also asthma, all itchiness is related to her allergies.

919688	1/4/2021	WA	30	F	12/22/2020	12/29/2020	For 2 days after the vaccinations, my left deltoid/ upper arm was sore. Approximately 7-8 days after my vaccination, my left armpit started feeling sore. This has continued to today where I have left armpit swelling and what feels to be a swollen, hardened lymph node in my armpit. It feels like a hardened lump that is not fixed and is tender when I palpate it. On visual inspection, I can tell that my left armpit is more swollen than my right armpit (which is normal). It hurts to have my arm at my side and it hurts to lay on my left side at night when I am sleeping.
919715	1/4/2021	NJ	66	F	1/2/2021	1/3/2021	Nausea, vertigo, slightly blurred vision, imbalance walking, fatigue, heartburn, malaise. Initial vertigo and dizziness lasted 3 hrs. GI symptoms and malaise are still present, 48 hrs later
919744	1/4/2021	TX	40	F	12/22/2020	12/22/2020	Approx. 3 hours after being vaccinated. Developed confusion, dizziness, and blurred vision. Went to ER. BP noted to be 163/100. After one hour and a half, BP in the 120's systolic and 90's diastolic. Continued to have blurred vision. Blood pressure became labile and continued to be in the range of 160's over 100's to 130/90's. After 48 hours, vision no longer blurred, Blood pressure returned to normal baseline and maintained. Took BP for over one week after, morning, noon, and night on the Left arm and Right arm. My BP stayed in the 117/70-120/80 range. Wanted to make sure I had no underlying hypertension. No other adverse issues.
919767	1/4/2021	SC	39	F	12/29/2020	12/31/2020	Severe hives all over body- trunk of body fully covered in raised, red, blotchy, "firey" patches of hives; also, under armpits, over the shoulders, panty lines, behind knees, on and under breasts, back, onto neck and face (chin, lip area, eye brow area)

919008	1/4/2021	IN	45	F	12/29/2020	12/29/2020	Around 6pm I started with a slight headache and by 8pm i had trouble keeping my eyes open. (headache is not uncommon for me but the extreme drowsiness is). I slept solid through the night (unusual) and the puppy woke me around 5am. (usual) I felt that i had a heavy? head. My thoughts seemed clear but my head had a fullness to it. Its difficult to describe. I was not stuffy. I had trouble staying awake, to the point I was nodding off at times I should have been able to stay awake. I did not feel safe to work and felt obligated to call in. I slept solidly for the next 5 hours. Later in the day, my affected arm began to have pain radiate from the injection site to my wrist. (probably not unusual). 600mg of Ibuprofen did not seem to help much. By the time I went to bed last night (24+ hrs after receiving the vaccine) I noticed my axillary lymph nodes were extremely tender to the touch and remain so this morning. The pain in my arm still continues to radiate to my wrist but not as intense.
919636	1/4/2021	TX	45	M	1/4/2021	1/4/2021	Sweating Deep cough Eyes burning Body aches
919271	1/4/2021	TX	57	F	12/30/2020	12/31/2020	Day 1 after vaccination, left arm achy, sore, left wrist/left hand swelling, deep ache to left hand wrist, left eye floater, blurry vision. Day 2 after vaccination, continued with same symptoms, left eye "puffiness". 1/4/2021Today continues with left eye floater and constant blurry vision. Left hand soreness to and left shoulder
919234	1/4/2021	SC	49	F	12/18/2020	1/3/2021	On 1/3 around 2 am , I got up to get something to eat and drink. The taste of food , feels/ taste like cotton on the left side of my mouth/ tongue. As the day progress, I noticed I am having numbness left side of my face and mouth, unable to sip from a straw on the left side of my mouth, I am having facial droop that prompted me to to the ER . At ER same day my left eye is not blinking as my right eye. I was prescribed to take antiviral , steroids and eye meds. TODAY- 1/4/21, I am still having same symptoms and my left eye , feels grainy/ needle pricking inside. Left eye vision more blurry.

919236	1/4/2021	OH	61	F	12/20/2020	12/31/2020	Day 1 post: muscle pain in arm. Day 2 post:Muscle pain in arm, unable to raise arm vertically. Excessive pain in upper part of arm. (injection given very close to the top of arm near joint). Also pain in shoulder & right side of neck. Headache behind right eye. Day 3 post: muscle pain in arm. massive diarrhea in late PM. Headache behind right eye all day, mild arm pain.
919597	1/4/2021	PA	47	F	12/26/2020	1/7/2021	I felt like passing out tunnel vision . everything was black except center of vision. Unable to focus or stay attentive while driving "zoned out" multiple times. Felt like my head was detached from my body unable to shake it for 2 and a half days.
919262	1/4/2021	KS	46	F	12/30/2020	12/31/2020	Red blotches on neck, itching, dizzy, arm "flaming red," trouble breathing, blisters on lips, eyes swollen.
919464	1/4/2021	IN	53	F	12/31/2020	1/1/2021	I developed a raised rash on my left arm at injection site , had chills and nausea and lots of tenderness at injection site at 3 am (1/1/21) following injection. The nausea had resolved when I woke up, the rash subsided throughout the day as did the chills. The most distressing event began on 1/1/2021 , that being sneezing, runny nose and watery eyes which continued and got much worse over the next two days, despite taking sudafed as often as possible. No other cold or flu symptoms were present and it felt like allergies although I have never had any sort of seasonal allergies. I finally took Zyrtec for it the evening of 1/3/21 and the symptoms stopped. Congestion, light sensitivity remain. I am reluctant to take another dose due to drowsiness side effect. Hoping symptoms will all be gone by tomorrow.
919294	1/4/2021	NY	61	M	12/30/2020	12/30/2020	I felt light headed, sore arm, head ache and fever at first and that evening. Then woke up the next morning I felt fine but had swelling to the face more swelling to the left side then the right with a heavy feeling to my left side of my face along with pain to the eye. I feel very lethargic and very tired I could not go to work. I feel to bad to work.

917745	1/3/2021	CA	50	F	1/3/2021	1/3/2021	S: Patient, RN from TCC/CCU came to Covid vaccine clinic on 1/3/2020 for Covid vaccine. She received vaccine at 7:23 am. Received injection on left arm. At 8:12am, she reported heaviness on left arm, tingling sensation on left 3rd and 4th fingers, and metallic taste. She denies motor weakness, SOB, N/V, chest discomfort, palpitation, difficulty breathing, dizziness, headaches, blurry vision. Hx of HTN, mitral valve prolapse, asthma, migraine. Currently taking labetalol 400 mg bid, hctz/losartan 100/50 mg bid. Have not taken her BP medications this morning. She took benadryl 25 mg and tylenol 1000 mg at 6:35 am prior to coming to clinic. She is allergic to multiple medications. O: At 8:12, VS: 177/104, 97%, HR 66. Reports paresthesia to L arm, metallic taste At 8:25, VS: 157/102, 98%, HR 62. Continues to experience paresthesia and heaviness, but it has gradually improved, metallic taste resolved At 8:37, VS: 149/92, 98%, HR 64. Paresthesia and heaviness improved. AAOx 4, follows command, speech clear, lung sounds clear, heart sounds normal, normal rate and rhythm. Motor strength +5/5 bilaterally. No facial weakness/facial drooping. Subjective paresthesia on left 3rd and 4th fingers that gradually resolved. Subjective heaviness on left upper arm. No angioedema. No respiratory distress. A: Reaction to Covid-19 vaccine. P: Employee was closely observed in clinic. Provided fluids. VSS. Symptoms gradually improved. Employee was advised to closely monitor her symptoms, if she experience any worsening symptoms, she need to call 911 or go to the nearest emergency room. She states that she has epi pen and benadryl in her purse, and understand signs and symptoms to monitor for and when to use it if needed. Employee left to return home at 8:45 am in stable condition.

917726	1/3/2021	FL	44	F	12/29/2020	1/1/2021	Facial swelling, orbital edema, blurred vision in right eye, red rash in neck, malaise, fatigue, and headache I took Benadryl 25mg Q6hrs on 1/1 and 1/2/21. When my vision became blurry I went to an urgent care clinic on 1/3/21
917719	1/3/2021	WI	35	F	12/28/2020	1/1/2021	Woke up Friday, 1/01, with sinus pain. Specifically burning pain in my sinuses and pain when I moved my eyes from right to left. Also had a generalized headache and body aches. On Saturday, 1/02, did have a fever of 100.2 but this has resolved. This morning, 1/03, the sinus pain has improved, still a slight headache and now major complaint is lower back pain. Also have general malaise. No fever today either.
917641	1/3/2021	HI	54	F	1/2/2021	1/2/2021	About 30 minutes after immunization, pt's eyes were red and slight swelling under the eyes. No reports of swelling of tongue/lips/or trouble breathing. Pt states she was feeling ok. Administered Benadryl to patient.
917858	1/3/2021	OH	45	F	12/30/2020	12/30/2020	Day 1: within 30 min - severe sharp temporal headache (worst of my life); developed within a couple hours in this sequence: cold hands/feet, chills (no fever), much worsened vision, slight confusion/dizziness, weakness (had to lay down), both knee joint pain, swollen neck glands, moderate nausea and intestinal cramps, complete loss of smell/taste; all night - severe acidic stomach pain (barely relieved with anti-acids). Day 2: residual headache (50%), tiredness, weakness, sweating if doing things, residual knee joint pain, sense of smell/taste returned and heightened. Day 3: residual headache (25%), still not 100%, residual knee joint pain. Day 4 (today): residual knee joint pain (comes and goes). I realize that these are not symptoms of an allergic reaction, but severe side effects.

917887	1/3/2021	MD	23	F	12/31/2020	1/2/2021	About 5:45 pm on Saturday, January 2, 2021 my inner left eye began to feel itchy and irritated like there was something in it. I touched my eye and rubbed it for approximately 30 minutes, but it still felt like I had something poking my inner eyelid. I looked in the mirror and saw my inner, upper, left eyelid was swollen and slowly getting worse. I tried applying a warm compress for 10 minutes, but it did not seem to help. I was getting ready for a shower and saw hives on my hips and inner thighs. I felt itchy in other places of my body as well. I saw hives on both of my upper arms, my back, and my neck. I took one 25 mg Benadryl and got in the shower. As I was showering, I felt my left upper lip begin to tingle and swell. I rushed to the ER immediately. I arrived around 7:25 pm. As I was waiting for the ER doctor, I noticed my lip and eye swelling were almost back to normal, but I still had hives and they were spreading. The ER doctor gave me Benedryl and Solumedrol in an IV around 9 pm. I left the ER around 10 pm. I had no more swelling on my eye and lip and my hives were slowly diminishing.

917503	1/2/2021	IN	23	F	1/2/2021	1/2/2021	Vomiting, nausea, neck muscle tightness, throat tightness and muscle soreness of back of tongue, severe disorientation, blurred vision, neck soreness, diarrhea

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
917513	1/2/2021	NY	41	F	12/29/2020	12/30/2020	Vaccine was given at 10:30 am on 12/29/20. The injection caused mild discomfort at the site (right deltoid) followed by swelling, redness, warmth, and soreness. The swelling, redness, warmth, and tenderness to touch worsened by 24 hours, peaked at 48 hours, and has since improved (but continued well over 120 hours post vaccination). Other than the arm discomfort, I felt well the rest of the first day however I woke at 1:30 am (15 hours post-vaccine) with severe muscle cramps in my lower legs and feet. I was freezing and had significant chills. PJs, a robe, and 3 blankets weren't cutting it. I took Ibuprofen 600 mg and a robaxin 750 mg because the cramps were severe and unrelenting. Tmax was 100.5. Sleep was poor and intermittent. I got out of bed around 24 hours post vaccination and was extremely nauseous and weak. I took Zofran 4 mg and Tylenol 500mg and laid around the rest of the day. I forced some food down at hour 29 (had not eaten in 20-21 hours). My eyes and the injection site were itchy prompting me to take Benadryl 25 mg at hour 22. I got a second round of shaking chills, nausea, and worsened myalgias at hour 32. I also felt as though the injection site pain migrated towards my right axilla. Took a second dose of Ibuprofen 400 mg, Zofran 4 mg, and robaxin 750 mg and fell asleep by 7:30 pm (unheard of for me). When I woke to go to work at 6:30 am (44 hours post vaccine) I was still very achey and fatigued. My right axilla was very sore and tender to touch, moreso than the injection site. This same discomfort migrated to the right side of my neck and behind my right ear (which was worse by hour 55 and brought on a headache). Thank goodness it was a short shift due to the holiday! While caffeine and a third dose of ibuprofen and Zofran help me through the 6.5 hour shift I was still not myself. The fatigue and achiness did not let up until a little after 96 hours. I really didn't feel like myself until day 5 (118 hours post vaccination) and the injection site and my right axilla are still sore and tender to touch. There is still redness and occasional itchiness at the injection site. I took my usual doses of Advair and Claritin despite the nausea all 5 days. I should also mention, that while on shift (hour 48-ish), I felt a very brief, unprovoked heaviness in my chest similar to the sensation I felt after I recovered from COVID in March. Sensation lasted seconds and came a few times throughout the day. No SOB, diaphoresis, or

<u>VAERS_ID</u>	<u>RECVD</u>	<u>STATE</u>	<u>AGE_YRS</u>	<u>SEX</u>	<u>VAX_DATE</u>	<u>ONSET_DATE</u>	<u>SYMPTOM_TEXT</u>
							wheezing. That same discomfort started 2.5 weeks after I was diagnosis with COVID and about 5 days after feeling "fully recovered" from the fever, body ache, fatigue and nausea I had experienced with COVID. That chest sensation would come and go with decreased frequency over 6 weeks post COVID. I've had a total of 5 episodes of the chest heaviness but none today (day 5). I wonder if that's what will happen with the vaccine. I also wonder if the side effects I'm feeling have anything to do with having had COVID 9 months ago. My husband and other ED colleagues who did not have COVID had no side effects with the first dose of the vaccine but the few colleagues that had COVID all had some degree of an adverse reaction to the vaccine. I never want to feel as bad as I did in March but I'm dreading my second dose of the vaccine. Is it recommended in my case? I should also mention, I had an adverse reaction to the pneumonia vaccine 1.5 years ago - arm blew up, no respiratory symptoms. Needed Benadryl and Prednisone. I've had a MMR booster and flu shot since with no adverse reaction. Not sure if it is relevant.
917563	1/2/2021	IA	69	F	12/23/2020	12/23/2020	Metallic taste in mouth as it was being administered. I told them I could taste it. Eyes started hurting with burning sensation, pressure in both ears and slight numbness across face from ear to ear and under nose. Uncomfortable tightness in chest and a lot of pressure on face feeling like it was hot. I felt a little better after 15 minutes while waiting but never told anyone about symptoms. I walked out and drove home but monitored my symptoms. The symptoms gradually became less and were gone after 1 hour and 45 minutes. I took a dose of benadryl at that time. I slept well that night and woke up with no symptoms and none since.

916849	1/1/2021	NC	33	F	12/23/2020	12/24/2020	I received the vaccine in the left arm on 12/23 with no immediate symptoms. On 12/24 I had body aches mostly on my left side. On 12/25, I started having a strong headache, focused mostly on the left side. On 12/26 the headache continued and I also noticed swollen lymph nodes on both sides of my neck, and behind my ears. Also, it felt like someone had broken my nose and when I would try to bite down or chew I would have a sharp pain and pressure in my nose and sinuses. On 12/27, the headache continued, and I had severe left eye pain, as well as pain chewing and the swollen nodes, that became painful to touch. On 12/28, I went to my PCP and was tested for covid, which was negative. She diagnosed me with a sinus infection and prescribed amoxicillin. On 12/29, I noticed my scalp had lumps on it that were painful and I had a very itchy spot on my forehead, which became swollen as well to about a quarter size lump. I also had other painful spots on my scalp all over and a continued severe headache and left eye pain. I tried to follow up with my PCP on 12/31, but their office was closed, and the on call nurse referred me to urgent care. More painful, swollen lymph nodes have appeared on my face and neck. I wasn't able to be seen at urgent care until today (1/1), and was then diagnosed with Shingles. I was told to continue amoxicillin and to start taking Valtrex. I am very itchy, mostly on my face, scalp, and left side of my body.
916641	1/1/2021	MI	44	F	12/28/2020	12/28/2020	Vertigo every evening when lying down and every morning when getting up. I have been lying in bed for 5-10 minutes with eyes open, then sitting up slowly. Next, I sit on the side of the bed for a few minutes. When I get up, I need to hold onto something so I don't fall down.
916985	1/1/2021	DC	27	F	12/31/2020	1/1/2021	I woke up with significant right-sided facial and eye swelling currently still present although improved in severity. Other symptoms included pain/heat at injection site, myalgias, fatigue.

916891	1/1/2021	IL	26	F	12/28/2020	12/28/2020	12/28/2020 around 5:30 PM she started getting itchy. Progressing as night went on. On 12/29/2020 around 5-6:00 AM you woke with hives, hoarse voice and eyes swollen. A little SOB with talking. Also had weakness and tingling. Tingling was "everywhere".. Went to ER. Treated in the ER and released. Also on this day she had additional reaction to prednisone and she found out she is allergic to this. On 12/31/2020 she had to return to ER. She was at work and not feeling the greatest. Feeling light headed on and off. Continued to work and while driving home felt confused and light headed and called co workers. Felt weak again.. Called co workers who work for ambulance service They came and checked her out and her B/P was high and having PVC's per the heart monitor Transported to ER per the ambulance. 1/1/2021 she is feeling better. Received fluids last night. ER felt it was due to receiving vaccine and then additional allergic reaction to prednisone.
916902	1/1/2021	GA	44	F	12/30/2020	1/1/2021	I Woke up about 36 hours post vaccine administration with swelling and tenderness mainly under my left eye. I have a previous history of fillers in my tear trough areas and cheeks, last filler injection was January 2020. I have some swelling under the right eye too. I have read about that being caused by an immune reaction to the filler after vaccine administration. I have not treated the swelling , as I want to see how long it persists.

915166	12/31/2020	GA	54	F	12/23/2020	12/24/2020	Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; Bones and joints pain, chills and fever, bad headache, eyes pain. Cough.; This is a spontaneous report from a contactable nurse (patient). A 54-year-old female patient (not pregnant) received first dose of BNT162B2 (Lot number: Pcj1685), intramuscularly in left arm on 23Dec2020 18:30 at single dose for COVID-19 immunization. Medical history included anxiety, depression, seasonal allergy all from an unknown date and unknown if ongoing. Concomitant medication included celecoxib (CELEXA), biotin, curcuma longa (TURMERIC), calcium, doxylamine. The patient previously took Levofloxacin (LEVAQUIN) and experienced allergies. The patient experienced bones and joints pain, chills and fever, bad headache, eyes pain, cough all on 24Dec2020 05:00. Treatment (Around the clock Motrin) was received for events. All events were reported as non-serious. Facility type vaccine was administered in hospital. The patient didn't receive any other vaccines within 4 weeks prior to the COVID vaccine. The outcome of events was not resolved.
915766	12/31/2020	WI	47	F	12/28/2020	12/29/2020	Pfizer-BioNTech COVID-19 Vaccine EUA. Received vaccine at 6:00 p.m. on 12/28/20. States initially had a metallic taste in mouth after receiving vaccine, however felt fine until she woke up the next morning at 08:00 on 12/29/20 with headache, body aches and dizziness. Describes the dizziness as "lightheaded, in a fog, vision seemed a little blurry like a fog around everything". States began experiencing diarrhea at noon, then at 2:00 p.m. she began to experience chills and "racing heart". States she thought the racing heart was due to anxiety. States she rested, took Immodium & drank fluids. Did not require medical care. States when she woke up on 12/30/20 her heart was no longer racing, and headache & dizziness were improved. States today 12/31/20 she feels completely fine.

So code assist called and taken to ED. allergist on duty provided consultation and follow-up, confirming symptoms resolved same day.</p>

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
916544	12/31/2020	AK	58	F	12/30/2020	12/30/2020	<p>Patient reports first noticing that her back was itchy around 8pm on 12/30/2020, approximately 9hrs post vaccination. She asked her husband to scratch her back and when doing so, he noticed red and raised welts on her back. Upon waking this morning, the red, raised, and itchy rash had spread from her back to the rest of her body and is now on her back, chest, abdomen, arms, hands, neck, face, legs, and feet. No rash on palms or soles. Skin lesions examined and are consistent with urticaria. She has taken a total of 3 doses of hydroxyzine 25mg without any improvement. Patient also applied OTC 1% hydrocortisone cream which provided some slight, temporary relief. The only other treatment tried was a cool compress with witch hazel and this was also soothing. Patient's husband informed her that he noted "red splotches" on her back the morning of 12/30/2020 prior to vaccination but didn't think much of it. Her symptoms obviously significantly worsened later that day. However, given that she had atypical symptoms prior to vaccination she is questioning whether this is truly related to the vaccine. She denies any other new exposures prior to symptom onset. No new soaps, lotions, detergents, foods, etc. The only thing she can think of is that in the past she has developed puffiness under her eyes and a runny nose when in the vicinity of marijuana. She inadvertently came in contact with a parcel that likely contained marijuana at work the night before she was vaccinated. Patient denies any previous skin rash due to marijuana exposure but wonders if this could have contributed to her current symptoms. She denies shortness of breath, wheezing, tachycardia, dizziness, nausea, vomiting, diarrhea, or swelling of face/lips. Patient states that other than the diffuse itchy rash, "I feel fine." June does have a history of significant oral swelling and breathing difficulty following bee sting in the past. For this reason, she does carry an EpiPen with her at all times. She has never been evaluated by an allergy specialist but has history of severe reactive airway disease when exposed to perfume. Will refer to allergy specialist for further allergy testing. Today in clinic, patient was administered 50mg IM Benadryl and she was prescribed famotidine 20mg BID to take at home in addition to Benadryl 25mg TID prn. She felt the witch-hazel provided more relief than the hydrocortisone cream so she will continue this with cool compress or cool</p>

Overnight chills become worse and constant throughout the night. Woke up with sweat on chest and arm pits. Off and on low grade fever. Through out today, more off and on chills, headache, nausea, and low grade fever. Also experiencing burning sensation of eyes off and on along with fatigue.
916568	12/31/2020	IL	30	F	12/29/2020	12/29/2020	Per the patient, patient received COVID-19 vaccination and was observed for 15 to 20 minutes after injection. About 20-25 minutes after vaccination, however, patient became short of breath, felt throat closing, and had tongue swelling, facial flushing, itching around her neck, and nausea. Patient used a rescue inhaler, took Benadryl, and called EMS. Other meds included Zyrtec which was taken the evening prior to the vaccination, and Allegra and Tylenol which was taken the morning of and prior to vaccination. Per patient, EMS was called but patient did not wish to go to their affiliated hospital. Once it was safe to be released from EMS, patient drove to an urgent care center. Per patient, urgent care provider observed eye redness and puffiness. Patient states vital signs were normal upon arrival at urgent care except for BP which was higher than normal. Patient received famotidine and prednisone at urgent care, and is taking these medications at home. The day after the injection, patient noted a significant swelling of the injection arm from the elbow upwards; swelling is still present but subsiding. Body aches and injection site pain are also present.

916574	12/31/2020	AK	23	F	12/31/2020	12/31/2020	Several minutes after the vaccine was given the patient started to experience pruritis, initially at the site of the injection, but it began to become more generalized. She started to feel warm and flushed, and observed that her skin was starting to become red and flushed (no hives or other rash was apparent). She then noticed that her throat was itchy, and she was having difficulty swallowing. She denied cough, dyspnea, chest tightness. She said she felt "funny", but did not have any near syncopal events. She denied GI symptoms. On observation, there was obvious flushing of her skin and her right eye was hyperemic (she said that the sensation of itching was more prominent on the right side). She was initially hypertensive, with a BP of 171/97, HR of 133, respiratory rate of 18 and SaO2 99%. She was treated with 0.3mg epinephrine IM, and was transferred to the ER. She states that several minutes after receiving the EpiPen, she began to feel better with regards to her throat globus and pruritis. Patient was nonetheless transferred to the ER for further evaluation and observation.
916454	12/31/2020	NC	52	F	12/30/2020	12/30/2020	Within one hour of vaccine administration, the left side of my face from throat up to me eye began to tingle, then became numb. The left side of my face became swollen. The left side of my mouth began to droop. My tongue began to swell, my throat felt like there was something in it and it became increasingly difficult to breathe. I called the Hotline provided by Hospital. I was directed to Urgent Care. At the urgent care, an IV was placed. Solumedrol, Benadryl, and epi pen were administered. I was transferred by EMS to Hospital. In EMS, an additional IV was placed. I was given IVFluids. I was also given additional Benadryl and Pepcid.
915884	12/31/2020	PA	35	M	12/21/2020	12/21/2020	Pt presented after receiving vaccine on 12/21/2020 on 12/31/2020 with Bell's palsy. Right sided facial perceived numbness and numbness of right arm distal from site of vaccine. No weakness on exam, +weakness perceived by patient. Reported by patient these symptoms improved from date of vaccination. Able to fully open and close right eye. No facial droop. She states these symptoms occurred 5 minutes after having vaccine, but initially dismissed as her anxiety about getting vaccinated.

916510	12/31/2020	FL	40	F	12/23/2020	12/30/2020	Around 6 pm on 12/30/20 I began to have a visual aura to both eyes, though it seemed to be primarily to the left. It lasted about 20 minutes. About 30 minutes later it started again, this time primarily to the R eye. This again lasted about 20 minutes and was followed by a mild-moderate frontal headache. It seemed to be an ocular migraine, but I have never had them before. It resolved while I was sleeping and I did well today.
916271	12/31/2020	TN	34	F	12/31/2020	12/31/2020	Patient got the vaccine and shortly afterwards started feeling different with sweating and redness/rash developing at injection site. She sat down and then noticed rash spreading to chest, arms and neck areas. She took two Benadryl capsules and remained seated. Then her eyes began watering and turning red followed by subtle eyelids swelling. She notified her dr and was told if no improvement, go to ER. She needed to finish her shift and decided to wait it out. I called to check in at 4pm and she still felt bad with intermittent chest pain. Her shift ended at 6 and she was going to still wait it out. She was able to drink water and informed me that her mouth/throat felt a little puffy. I advised to go to ER and she said she would if it didn't go away. We ended our phone call at that point.

916139	12/31/2020	CA	43	F	12/29/2020	12/29/2020	On 12/29/20 at approx. 21:00, I felt lightheaded, pressure in my chest and left arm pain at the injection site. I stood up and walked towards bedroom and started feeling weak in my legs. I fell to my knees and woke up, on my knees with my head on the floor. I was unconscious for about 30 seconds (unsure exactly) and felt like I was shaking. I stood up slowly and walked to the bedroom. I laid down and called for my husband. He took my blood pressure and heart rate, and both were very low (BP 65/43 and 40 heart rate). I continued to lay down while left arm was throbbing, feeling wiped out, pale and weak. My eyes were very heavy with pressure behind my eyes. I tried to sit up slowly about 5 minutes later and I felt lightheaded again. So, I laid back down. Then, about 10 minutes later, I sat up slowly and felt ok, walked to restroom with family help. Went to lay back down and my blood pressure was coming back up. I went to sleep for the night and didn't feel any other side effects, except very tired and left arm pain.
916039	12/31/2020	OH	39	M	12/24/2020	12/26/2020	Had dizziness, blurred vision and tunnel vision while driving 2 days after vaccine. He pulled over and called 911 who took him to the hospital. Dx was near syncope/vasovagal episode, but supposedly had a prolonged QT interval on his EKG. Received IV fluids and has been fine.
916051	12/31/2020	TX	42	F	10/27/1978	12/29/2020	About 20 minutes after receiving the vaccine was complaining of swollen lips and tongue. EMS was called immediately. MD present and upon examination lips swollen, oral pharynx red, tongue thick, unable to visualize posterior pharynx. 1 Dose of Epi 0.5ml was administered Sub Q to the pts L upper arm. Patient c/o difficulty breathing. Vitals were taken and WNL besides an elevated Blood Pressure. Patient became cool and clammy right before EMS arrival. After about 10 minutes EMS arrived and took over care of the pt. Started IV benadryl and solumedrol. She was then taken to the Hospital.

916258	12/31/2020	CO	29	M	12/30/2020	12/30/2020	The reaction occurred within 5 minutes of administration. I started to feel my face tingling, the top of my head was numb feeling, fingers tingling, my blood pressure was taken 150/90s and another time it was 140s/100s. The doctor on staff had me lie on the floor with my feet up and it seemed to help slightly, I also sipped on some water and Gatorade. My HR went up to about 125 or so at one point. I felt dizzy, slightly confused and was finding it hard to find the words to describe what was happening at some times. I felt like my vision had a change like it was slightly more blurry. I would go from feeling better one second to feeling horrible the next in 2-5 minute intervals. After about 15 minutes I become more anxious and nauseous, but did not vomit. I also felt very weak during the entire time and I am still feeling some of the weakness and fuzzy thinking at times. On route to the hospital I was given Zofran for nausea and they started a NS IV. I was given another bag of NS, Solumedrol, diphenhydramine, and Pepcid as well as another dose of Zofran once I was in the emergency room. They held me for about 2 hours and I did not have any worsening symptoms. My BP on release was 138/90s HR was in the 90s.

913398	12/30/2020	GA	32	M	12/28/2020	12/28/2020	About 2 minutes after receiving the vaccine, while sitting upright in a chair, patient stated he felt like he might pass out and proceeded to become more limp, pale, and sweaty. His hands rhythmically twitched back and forth, and he dropped his phone. His eyes began to close, and his head leaned back. He remained upright in the chair. I elevated his feet in another chair, legs bent. I fanned his face/upper body and put wet papertowels on the back of his neck. After about 2 minutes, his LOC had returned to baseline. His color returned, and he stated he felt better after 5 minutes. He remained seated and sipped water for 30 minutes before going back to his office.
913369	12/30/2020	VA	73	M	12/22/2020	12/27/2020	Light flashes lasting less than 30 sec in right eye only: honing on for 2 day now
913350	12/30/2020	NY	44	F	12/29/2020	12/31/2020	I woke up from sleep and developed tachycardia, tachypnea, feeling cannot breathe, excessive sweating, pain and numbness on the left arm where I received the vaccine, then I lost consciousness for unknown time. When I woke up I felt my legs and arm were shaking not sure if it is seizure or not as there is no witness. I walked a couple steps to the next room to wake up my husband and then I lost consciousness again after I heard ringing sound in my ears and black in front of my eyes. My husband found me on the floor and I fell on my left hand with small injury on the dorsum of my left hand that I am not sure how it happened. After drinking fluid I felt little bit better. I received 600 mg of Motrin and continues to have headache and muscle ache but no other symptoms at this time.
913283	12/30/2020	PA	45	F	12/23/2020	12/24/2020	called clinic and stated she woke up on 12/24 with numbness to her right lip, cheek and chin. She is an RN - denies any wheezing, SOB, lightheadedness. Denies any swelling of lips, tongue or throat; no trouble swallowing; Denies any facial drooping or eye symptoms; denies any slurred speech Spoke to her on 12/26 and 12/28 and encouraged her to come here to empl health or to ED or to her PCP; She declined to do so and was working ; Will followup with her today

915072	12/30/2020	CA	28	F	12/20/2020	12/23/2020	On 12/23/20 I noticed some blurred vision in my left eye. My pupil was fixed and dilated, nonreactive. I went to the ER and had a thorough workup-eye exam normal, labs normal, CT head and angiogram normal- the ER doctor along with the neurologist and ophthalmologist diagnosed me with Adie's pupil. I had a follow up eye doctor appointment 12/29/20. I still have a little blurred vision but improving and my pupils are almost and same size and my left eye is reactive to light. Everything else with my eye exam was normal. All the doctors I saw were not sure if the vaccine could have contributed to Adie's pupil. Not sure if it is related - with my work up there were no other indications of what could have caused this. to item 20- I am recovering from Adie's pupil- everything is improved but I still have some blurred vision. Pupil size is almost normal and my left pupil reacts normally to light.
915061	12/30/2020	AZ	60	M	12/30/2020	12/30/2020	Burning sensation in left eye for about 1 minute. Felt like "wind blowing in my eye".
915046	12/30/2020	NY	47	F	12/23/2020	12/28/2020	Enlarged supraclavicular lymph node. Received vaccination 12/21/20, developed 12/28/20 a 3cmx2cm palpable and visual enlarged lymph node on the left mid clavicle.
915000	12/30/2020	CT	27	F	12/28/2020	12/28/2020	Normal side effects of nausea, headache, fatigue, and injection site pain followed vaccination in hours 3-8 following vaccination. Approximately 9 hours after the vaccine, the left eyelid started to swell. Benadryl, an extra Zyrtec dose, and Advil was taken and by the morning time the swelling had not decreased but actually increased on the left eyelid and swelling appeared on the right eyelid. I called up occupational health Covid hotline and since the vaccine was given at my job and the occ health doctor suggested I go to a doctor or urgent care. I went to a local urgent care, associated with my hospital, and they diagnosed me with a delayed allergic reaction to the covid vaccine and prescribed me steroids

914675	12/30/2020		25	F	12/18/2020	12/19/2020	These are the comments received directly from the patient: "On Friday I received the vaccine at 11:30 a.m. I woke up Saturday and felt fine, just sore at the injection sight. Later in the afternoon I had a slight headache, but very minimal. Later in the evening my right eye was red and hurt to touch, did not think much about it. When I woke up on Sunday both my eyes were bloodshot, again did not think much about it, added some visine and went on about my day. Later in the evening they were bloodshot and watery. I called a nurse friend and talk to her she advised me to call my doctor on Monday morning. I also talked to my optometrist and she advised me if not better by Monday to call her and make an appointment for her to look. I called my primary doctor office on Monday morning and spoke to the nurse. She took my symptoms and talked to my doctor. The nurse called me back to let me know that maybe my headache caused my blood pressure to spike making my eyes irritated and watery. My vision on Monday was very foggy so I decided to call my optometrist to have her look. Her diagnosis was Primary iridocyclitis, bilateral. This is caused from inflammation. She put me on steroids drops every 2 hours and wants me to keep my eyes dilated for at least a week so that the iris does not attach to the lens again. (it had attached but come unattached) she was concerned because my eyes are always healthy. She saw me again today, Tuesday December 22nd. My eyes are responding well to the steroids. She wants me to continue to use the steroids and dilation drops and follow up with her on Monday unless I have any complications. She also talked to Dr. for his advice on it and he also was concerned about it. Dr. said normally it affects one eye, both of my iris in each eye had attached to the lens from the inflammation. I will follow up on Monday.~~

914521	12/30/2020	ID	39	F	12/28/2020	12/29/2020	<p>Patient presents with ? Altered Mental Status ? Headache HPI Patient presents to ER by EMS ambulance after family called 911 as patient was incomprehensible with slurred speech and moaning on the phone this evening. On arrival of EMS patient was asleep in bed and reportedly unresponsive other than to localize to pain. EMS transferred patient to ER. On arrival to ER patient had GCS 7. Reportedly patient is locum nurse who works in a Nursing Home and patient reportedly received COVID vaccination 2 days ago and that night reportedly began complaining to family on the phone of headache, nasal congestion, sore throat, cough, fever, chills, nausea, emesis, myalgias, and lethargy. Per the medical record patient has history of seizures, migraines, and sciatica. No other information is known on patient arrival to ER. 1. Peripheral IV right dorsal hand placed by EMS in route to ER. 2. On arrival to ER GCS 7 (E1M5V1) and roving eye movements with episodic lateral conjugate and at times disconjugate gaze concerning for seizure activity. Arms and legs with moderately increased tone but no clonic movements and patient able to localize bilaterally. 3. Ativan 1 mg IVP for seizure, then further 2 mg IVP for persistent seizure. 4. Fosphenytoin 1,000 mg IVPB in ER for loading dose of antiseizure medication. 5. Patient had significant improvement following completion of Ativan 3 mg IVP and GCS improved to 14 (E3M6V5) from GCS of 7 (E1M5V1). 6. Patient able to communicate after improvement as above and reports she has had headache or migraine for past several days as well as dysuria with bilateral CVA pain and has significant pain on percussion of bilateral CVA and moderate pain on palpation of bilateral flanks. No nuchal rigidity or pain with ROM of neck. Additionally, she complains of severe headache and diffuse pain of back and abdomen/pelvis. She reports a history of seizures in the past and reports she had one last month and was treated at a hospital in her home state. She denies antiseizure medications. Additionally, patient reports nonproductive cough, sore throat, nasal congestion, fever, chills, myalgias, lethargy, nausea, and episodic emesis over the past 2 days. She has anterograde amnesia following seizure and does not recall events. 7. Normal saline 1,000 mL IV bolus, then 100 mL/hour in ER. 8. CT of head with and without contrast performed and negative for intracranial</p>

914008	12/30/2020	AL	40	F	12/23/2020	12/23/2020	I was fine immediately after the vaccine. At around 9:00 pm on the night of December 23rd I noted that my eyes started to swell. I had no difficulty breathing, shortness of breath, closing of the throat at this time. My husband and I decided to just take a Benadryl 25 mg by mouth and keep the EpiPen close by. I went to bed. At around 2:30 am on December 24th I woke up to excruciating pain but with the urge to urinate. However, I was in so much pain at the time I did not want to get up so I tried to go back to sleep. At 4:30 am on December 24h in the morning, I decided I needed to get up to go to the bathroom. I went to ambulate and instantly felt weak in my knees and extremely dizzy. I made it my bathroom and looked in the mirrors- my face was extremely pale like a sheet of paper white, I was really nauseous, dizzy, felt the urge to have a bowel movement. I walked to the bathroom. I was able to void at that time, but the nausea did not go away. I crawled to my bed and laid back down. I then still felt intensely nauseous to the point that I was going to pass out and the room was spinning. I made it back to the bathroom where I threw bile up in the bathroom. I still had the urge for a bowel movement but was unable to go ( I imagine I was having a vasovagal response). I went back to my bed and laid down. I stayed in bed until my husband came down around 8:30. He told me to drink some fluids and take another benadryl with some tylenol. I did both. I went back to sleep and I woke up about 2.5 hours later. I was able to go out of the house to get a few things for Christmas, but then about 6 pm went and laid down for bed for the night. I took another benadryl and more tylenol. On 12/25/2020 I woke up and was able to do a few things thanks to tylenol and benadryl. My eyes were still swollen and now my hands and feet were noticeably swollen. I continued with benadryl, tylenol and started taking pepcid 10 mg PO. By Saturday 12/26/2020, I was able to be more mobile- I was able to walk the dog and clean my car. However, I still went to bed rather early. I took another benadryl and tylenol as I still felt swollen and puffy all over. Up until Monday 12/28/2020 I had a constant headache and felt nauseous with some swelling. I have not went to a physician to be seen. I have talked to several physicians, as I am an RN and my husband is an ER phycian. Yesterday 12/29/2020 was the first time I felt normal since the vaccine.

915199	12/30/2020	HI	38	M	12/30/2020	12/30/2020	Itchy throat, red eyes after 30 minutes. EMS on site gave IV Benadryl, epi pen shot and took to ER for monitoring. Vitals were good so he was discharged.
915103	12/30/2020	CA	46	M	12/28/2020	12/29/2020	left shoulder soreness (1/2 of a day), mild headache (1 day), fever 101.8 (3 hours), tachycardia 100-130 beats per minute (1 day so far), left eye conjunctivitis (just started an hour ago)
914070	12/30/2020	NC	57	F	12/29/2020	12/30/2020	Patient reported that eye, jaw on right side of face feels weird. Itching since 6 am on face and chest. Patient took benadryl and advil and denies need to be seen by physician.
914096	12/30/2020	PA	31	F	12/29/2020	12/29/2020	About 40 minutes after the injection, I experienced numbness in the left side of my face from lower eyelid to upper lip. The skin was numb to the touch and I had the sensation that my face was drooping, although visually it did not appear to be. The sensation dissipated within about 20 minutes and has not returned. I am 9.5 weeks pregnant. Estimated due date 7/13/2021. As far as I know at this point, there are no pregnancy complications.
914291	12/30/2020	NV	35	F	12/21/2020	12/23/2020	46 hours post vaccine administration woke from nap to very painful right eye. Slightly red sclera, eye very tender to touch through eyelid, sensitive to light, deep pain with eye movements, no drainage or discharge, vision intact. After holiday weekend in to see optometrist on Monday 12/28, as symptoms still persisting, thorough eye exam with dilation and retinal optimap scan, given eye muscle paralytic and assumed to be ciliary muscle spasm, follow-up call the next morning 12/29 - light sensitivity improved but still intermittent pain with eye movements, treat with Ibuprofen for now and follow-up for increased pain or visual changes. 12/29 visit to primary care to rule other causes, no ear or sinus infection suspected, PA believes this should be reported to VAERS due to time frame of onset and new and never experienced ailment.
914364	12/30/2020	MN	32	F	12/29/2020	12/29/2020	Severe headache on only left side of head (behind left eye, affecting left ear and back of left side head) within hours of vaccine. Did respond to Tylenol. Within first 18 hours of vaccine, intermittent dizziness where need to lay down required 2 times so far. Scared to drive at this time. Currently nasal pressure.

914354	12/30/2020	ID	53	F	12/18/2020	12/18/2020	5 minutes after injection patient started to feel warm and stated that her eyes were itching. When she stood up she then started to feel dizzy. Took her to urgent care room and V/S were 134/69, 74, 98.0, 18. O2 SAT WAS 95%. Patient then stated that her lips were itchy and felt swollen. She also stated she was not having any trouble breathing. Provider ordered 50mg of Benedryl given PO to be administered. Patient stated 10 minutes later that her eyes no longer felt itchy and she wasn't warm or dizzy anymore. Continued to watch patient for 40 more minutes and when no signs or symptoms were present, provider cleared patient to leave facility
914350	12/30/2020	TN	39	M	12/28/2020	12/29/2020	I got the vaccine on Monday for first responders. Everything was fine besides the routine ape was in my left arm. About 1030 last night, I was standing at my fireplace and started to rub my arm where I got the vaccine. That?s the last thing I remember. My wife said as I was walking towards the bed and went completely stiff and fell backwards on our floor. She said my eyes were wide open and I wasn?t breathing. I started to come too while she was on the phone with 911. My body felt very heavy and I couldn?t really feel anything. Cotton mouth and shaking very badly. I was taken to the hospital and spent the night there. All test came back good. Today I feel really lethargic and foggy. I find it very suspicious that immediately after I rubbed my arm that I passed out. My wife thought I was dead, I didn?t know what happened. I?m in shape and workout 4-5 days a week and am very active. I feel it is important to report this adverse reaction. This has never happened before to any other vaccines.

914219	12/30/2020	CA	41	F	12/18/2020	12/22/2020	dizzy; insane vertigo/could barely sit up in bed and the whole room was spinning/I woke up at 6 AM and it was awful/ bad terrible vertigo; bad headache/My head hurt really, really bad; nausea/Nauseous; tachycardia/rapid heart beat; anxiety; This is a spontaneous report from a contactable nurse (patient). A 41-year-old female patient received first dose of BNT162B2 (Lot number: EH9899), via an unspecified route of administration in left arm on 18Dec2020 at single dose for COVID-19 immunization. There is no past medical history. The concomitant medication included vitamins. The patient took maybe couple times a week. The nurse received her first dose on Friday 18Dec2020. On Tuesday 22Dec2020 she started feeling dizzy, which then led to "insane vertigo, bad headache with nausea, could barely sit up in bed and the whole room was spinning." She also reported tachycardia/rapid heart beat and anxiety. She stated that this lasted for 4 days. She did go to Urgent Care but she had not yet spoken with her Primary Care Provider. She wanted to know if she should get the second dose, "booster shot" that was scheduled for 08Jan2021. The nurse was calling to report a possible side effects on the vaccine that received on 18Dec2020, then on 22Dec2020 night she started feeling a bit dizzy, it kind a little bit worse started maybe like 7 and went better around 10 like the room kind of like a spinning so she went to bed just a little and then she woke up at 2 AM and it was worse and then she woke up at 6 AM and it was awful. She couldn't open her eyes without, the whole room spinning she felt terrible, she was really nauseous and her head hurt really, really bad and then whole day she couldn't open her eyes and she couldn't get out of her bed because it was really bad terrible vertigo and since then every day she went to urgent care and they said just kind of wait. She had been taking meclizine and Tylenol and everyday slowly getting better just little by little so now waiting for Monday for, she was finally able to sit up and text on her phone but she still feel significantly dizzy, so her concern was that it was from the vaccine but the doctor said that was there was really no way to know and her other concern was about getting the second shot because it was really awful experience and she didn't know if it was the vaccine, it was like if she got the booster or how much worse it would be and this a little bit apprehensive getting the second shot, so she just

Patient had taken zyzal and benadryl (both antihistamines) which probably caused the blurred vision. Heart rate was checked and was normal. She has a history of anaphylaxis.
914155	12/30/2020	CT	51	F	12/30/2020	12/30/2020	Metallic taste, face flush, redness on cheeks, above eyes/forehead. Dizziness and stomach upset. Gave 25 mg Benadryl and observed for 45 minutes. Pt felt better, clearing of symptoms, returned to work.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
914179	12/30/2020	NY	48	F	12/22/2020	12/22/2020	lips were tingly and swollen; lips were tingly and swollen; fatigued; allergic reaction; passed out; breathing fast; her brain felt like a rock, like she was there but not there; head was so heavy, wouldn't open her eyes; her throat started to tighten up; chest pain; nauseous; headache; felt a little lightheaded, a little wobbly; palpitations; sweaty; This is a spontaneous report from a contactable consumer (patient) via Pfizer Sponsored Program. A 48-year-old female patient (no pregnant at the time of vaccination) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/lot number: EH9899) via an unspecified route of administration on 22Dec2020 on left shoulder at single dose for COVID-19 immunization. The patient's medical history included pernicious anemia and She had problems with B12 and Vitamin D like 10 years ago, she had none in her body, everyone said she was deficient and this year with her new primary care, they sent her to do some antibody tests, and found out she has pernicious anemia, allergy to MRI and CT contrast. MRI and CT contrast NDC, lot, expiry unknown. Her CT contrast allergy happened when she was 9 and 12 years old. It turns out to be her dad has an allergy the same way, his airways close. Whenever she needs a CT, they do without contrast, if she does need, they prep and give her Benadryl and keep an eye on her. This only happened once, that she needed with contrast, and with prep she was ok. With the MRI, this happened 4 or more years ago, maybe like 5 years ago. She needed an MRI, they said she would be fine, they injected contrast, she felt pretty hot, then she doesn't know, 20 minutes into it, she couldn't handle her gown, she looked at her chest, her whole chest was red like a burn. They gave her the IV Benadryl, she guesses, and it went away, now she knows, she doesn't know if her dad is allergic to MRI dye, but she knows she got the allergy from him for the CT contrast. The concomitant drugs was not reported. The patient was taken to ER with a severe allergic reaction. She had an allergic reaction on 22Dec2020: she passed out, said her brain felt like a rock, like she was there but not there, she then received an Epi Pen shot, when she got to the ER, her throat started to tighten up, lips were tingly and swollen, she was breathing fast, she had chest pain, she scaled it from a scale of 1-10, as about a 3 to 4 for chest pain, she felt nauseous, sweaty, and had a

VAERS\_ID RECVD STATE AGE\_YRS SEX VAX\_DATE ONSET\_DATE SYMPTOM\_TEXT

---

headache. She went to bed last night, and woke up, feeling better but a little fatigued on 23Dec2020. She is wondering if she should take the second dose, and wants to be in the clinical trial for this type of reaction. She needs transfer to Regulatory Authority. Caller confirmed details. Caller states she works in a hospital, and all this happened at the hospital, and her doctor was not involved. Outcome of allergic reaction: asks what does lasting effects mean? Right now she has a little fatigue and headache, but she knows they are regular symptoms she can have with the vaccine, are those lasting effects? She was discharged from the ER to home. She mentioned to the nurse she has, she went to get the shot, she told the registration nurse, she said she has a severe allergic reaction to CT contrast, her airway closes and she has a severe reaction to MRI contrast, her skin burns, it turns red and feels like a horrible burn, she cannot handle anything to contact her skin, it burns, and she mentioned that to the nurse, she said, instead of staying 15 minutes, said to stay 30 minutes there to observe just in case. She got the vaccine, and 10 minutes after the vaccine, she felt a little lightheaded, a little wobbly, but she didn't think much, it was mild, and on the mark at 30 minutes, the nurse asked her to stand, and that is when she started feeling, like her head was so heavy, the only way to describe, was like her brain was like a rock, she had to lay down, and when they laid her down, she wasn't there, she was there but wasn't, and they didn't wait at all to give her the Epi Pen, she had a feeling of heaviness that got worse, she wouldn't open her eyes, she was able to answer questions, but it was not her there, it was weird, then she didn't have. she breathed fast, had palpitations, chest pain, so they called a Rapid Response team, they were keeping an eye on her breathing, which was super fast, and they rushed her to the ED, and the doctor did what they were doing, giving her IV of whatever medication, and she was also very nauseous, then at one point in the ED, she started feeling, like imagine if fists were on throat, pushing her throat, a little bit, and she tried to tell to the ED doctor, but guessed she was calling everyone to give her things, and didn't catch it, but it didn't last long, at the same time, she started to feel her lips tingly, so she thinks that, because they gave the Epi Pen so quickly, they wasted no time, she didn't have the airways closing like she does

when she gets the CT contrast, they were quick. NDC/lot/expiry: She reads from the card they gave her: states first dose COVID-19 EH9899, states it doesn't specify lot, but she can find that out, they just gave her a vaccine record card. Epi Pen: NDC, lot, expiry unknown, states everything happened so quickly, she didn't think to get this information before calling, but she can get it. There at the hospital, she went to see the occupational health doctor, and based on guidelines from the CDC, he read supposedly she cannot get the second dose, but the doctor said because it is so new, and she has to wait the 3 weeks she guesses, things can change, and she wanted to be proactive. The outcome of the events, allergic reaction, passed out, throat started to tighten up, lips were tingly and swollen, chest pain, nauseous, headache, lightheaded, palpitations, sweaty was recovering. The outcome of other events was unknown.

911153	12/29/2020	CA	42	F	12/18/2020	12/18/2020	About 30 minutes after injection I suddenly felt a rush of heat throughout my body; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; felt dizzy, weak and a bit nauseated; tired/ fatigue; have some minor injection site pain; This is a spontaneous report from a contactable nurse reporting for herself. A 42-years-old non-pregnant female patient the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE): lot number: EJ1675, intramuscular, in the left arm on 18Dec2020 at 13:15 (at the age of 42 years-old) as a single dose for COVID-19 immunization. The patient received the vaccine at a hospital. Medical history included an allergy to cilantro. Concomitant medication included colecalciferol (VITAMIN D), zinc (ZINC) intermittently, and paracetamol (TYLENOL) once, all within 2 weeks of vaccination. The patient previously took amitriptyline and experienced swelling of eyelid and palmar erythema. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 18Dec2020, the patient experienced a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain. The clinical course as follows: At 13:45, about 30 minutes after injection she suddenly felt a rush of heat throughout her body, felt dizzy, weak, nauseated. This lasted about 30 minutes and then the warm feeling went away. She still felt a little dizzy, weak, nauseated and very tired. The dizziness lasted about 1.5 hours and the weakness, fatigue and mild nausea lasted about 6 hours. She reported that It felt as though she had taken diphenhydramine (BENADRYL). She stated that had she not been working (RN in an Emergency Department), she just would have taken a nap and it would have been ok. Having to work through it was not pleasant she said. She never had a fever during this but had some minor injection site pain. She reported that she never experienced an immune response to any vaccine (has had 6 in a day before and was fine). The patient was not hospitalized for the events. The patient was treated with 600 mg of naproxen sodium. The clinical outcome for the events of a rush of heat throughout her body, felt dizzy, weak and a bit nauseated and minor injection site pain, was recovered on an unspecified date in Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.

911334	12/29/2020	NC	38	F	12/21/2020	12/1/2020	Hives; felt itching to her scalp; This is a spontaneous report from a contactable other hcp (patient). This 38-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (lot number: EK5730), intramuscularly on 21Dec2020 06:40 at single dose on left deltoid for COVID Prevention. Medical history included Polycystic ovarian syndrome, was diagnosed with this in her early 20's and ongoing, Hypothyroidism from 2015 and ongoing, Corneal abrasion from 2020 and ongoing (Patient got a corneal abrasion to her right eye, about a week ago and is currently using eye drops for prophylaxis against infection), and anaphylaxis. Concomitant medication included metformin tablet oral at 750mg, once daily for Polycystic ovarian syndrome, she has been taking the product on and off since being diagnosed with PCOS and ongoing, thyroid (ARMOUR THYROID) oral at 60 (unsure if the product is MG or MCG) once daily for Hypothyroidism, started product four or five years ago and ongoing, moxifloxacin hydrochloride (VIGAMOX) at 1 drop to right eye, three times daily for Infection prophylaxis from Dec2020 and ongoing, patient got a right corneal abrasion last week and is using the product as infection prophylaxis. The patient was a Physician Assistant, who works in the ER, who just received the COVID vaccine at work. The patient stated that she got hives after her injection. The patient received the vaccine today at about 6:40AM. She stated that she was instructed to wait 30 minutes after receiving the vaccine because she does have a history of anaphylaxis, but not to vaccines. So it was about 5 to 10 minutes before her 30 minute wait time was up, that she started getting the hives on 21Dec2020. She stated that the hives she got started on her left wrist, and then they worked to bilateral upper arms, and then she also felt itching to her scalp but states she did not feel a rash on her scalp. She took 50mg of Benadryl orally for treatment. It was stated that the hives have resolved at this time, but patient was unsure as far as outcome goes, because she took Benadryl and the hives are gone now, but she does not know if they will return or not. She stated that she only had to take Benadryl and she declined checking in to the ER, so she considers this, not serious. The outcome of hives was recovered, of felt itching to her scalp was unknown.

912788	12/29/2020	IN		U	12/20/2020	12/20/2020	Pt presented to receive 1st dose of Pfizer COVID Vaccine, which she received at 1130. She emailed hospital leadership to describe a reaction which is as follows: I feel the need to inform you about a likely reaction I had to the COVID vaccine I received yesterday around 11:30 am. I was feeling fine after the immunization, drove home and took some Tylenol in case of any arm pain (of which I have had none). I ate some lunch, was on the phone talking with a friend and developed sudden onset of lightheadedness, slurred speech and extreme sleepiness. No other focal deficit. I actually got up and walked around to try to shake it off. But I suddenly felt so tired that I could not keep my eyes open. I called my husband and asked him to come home immediately. I laid down and tried to reassure my kids that I was fine. I don't remember much thereafter. Just bits and pieces. It felt like I was under general anesthesia, trying to wake up but not able to open my eyes or move my arms/legs. I could hear some things going on but could not talk. There were times I would "wake up" in my mind and I would check to make sure I could swallow and I was breathing ok. I remember mumbling to my husband that I could breathe. He says he was checking my vitals throughout this time and monitoring things. He said my Blood pressure was initially 80/60, pulse 50, and as he keep checking it gradually improved. This lasted about 2 hours and then finally I was able to wake up. I felt a little lightheaded and tired for the rest of the day, but I feel essentially normal today. Please note: age not provided in internal system report; unsure of person's age

912902	12/29/2020	IA	26	F	12/29/2020	12/29/2020	Patient felt a migraine aura that started about 8-10 min post-vaccination. She was experiencing pain around her left eye and some vision disturbance although no nausea which she stated she usually has. Patient was still at clinic waiting since it had not been past her 15 min time yet. We gave her some tylenol and had her move to a room that was a little darker and quieter and kept her for another 30 min (45 min total). Patient said she still felt like it was the "beginning of a migraine" and not feeling well. We called someone to come drive her home and sent her home for the rest of the day.

912912	12/29/2020	MA	59	F	12/18/2020	12/18/2020	I got the shot at 115PM I waited and within a couple of mins I tasted metal on the left side of my tongue. the back of my tongue and my left cheek started to go numb and I was taken to the ER, my vitals were taken and was normal and was monitored for a couple hours, triptase was taken and they did bloodwork, the numbness climbed to the left side of my face from my eye to my jaw, they gave me antihistamines for the next 48 hours and was sent home. Saturday morning I went to the gym and felt fine and 24 hours later I felt complete fatigue like I had been hit by a bus, Sunday I had congestion and still numbness on my face. On Monday I got a call from an allergist, they couldn't figure out if it was an allergic or adverse reaction. I was put on a high dose of Allegra to see what it could be. Tuesday the congestion went into my lungs and was out of breath and was having trouble breathing. My PCM called me and asked me to video call and said I looked terrible. my pulse oximeter was 99. Wednesday when I woke up my difficulty breathing was starting to get better. I was tested for covid twice on Wednesday and both were negative. Wednesday to 12/28 I continued to have serious fatigue and I'm very active I feel much better 12/28 and 12/29 I feel better but I've had the numbness on my left side of my face this whole time and it feels like I've had Novocain I can't get rid of it.

912936	12/29/2020	OH	53	F	12/29/2020	12/29/2020	Within 1-2 minutes: left hand felt numb and my body became very warm. Within 5-10 minutes: a huge headache. Within 30 to 45 minutes: Blood Pressure fluctuated, headache became worse, and chills started to occur. Within 1 hour to 1.5 hours: the headache became a huge migraine and my head felt like a bowling ball (I was still at work at this time.) Eventually, I could not lift my head off the desk. About 2 hours to 2.5 hours later, I felt so bad that I could not continue to work and head to leave work and go home. Upon arrival at home, the chills, aches, pains, migraine, some fever, eyes could barely stay open, and diarrhea started. About 7 hours later, a full blown Lupus flareup seemed to have started and/or it seemed to feel like a full blown case of the flu (if that makes any sense at all.) By the time I wrote this, all the symptoms have remained the same. I have had chicken soup, Gatorade, and bananas and treating this like the flu. I have continued to take my medication except for the Prednisone because I was told not to take the prednisone at the time that I was given the COVID19 shot at 9am this morning. I have stayed at home since I arrived at home around 1:30 or so...

913081	12/29/2020	PA	45	F	12/29/2020	12/29/2020	Patient received her Pfizer COVID vaccine at approximately 11:40 a.m.. She stated immediately after she received her shot she had headache and felt shaky. She waited afterwards felt ok and so drove back to work (about 45 min drive). Approximately 1 hour after shot she developed generalized itching especially around the head neck and arms. She developed a red fine rash of her bilateral upper arms and blotchy rash on her chest and neck, similar to her prior reaction to Sulfa drugs in past. She called employee health and was directed to be seen in clinic. Pt walked down and notified me and she was immediately placed in room and was evaluated. She did take PO Benadryl 50mg about 145pm. Patient feels a little nauseous. A little jittery. No fever no chills no chest pain or shortness of breath no lip swelling or tongue swelling no difficulty breathing. She had some loose stool yesterday. Headache is improved no vision changes. No prior history of anaphylaxis. No other new exposures (lotions, foods, pets, meds etc) other than COVID 19 vaccine today. She appeared uncomfortable. Solumedrol 125mg IM was given in office. patient was observed > 1 hour. no change in symptoms. vitals stable. discharged home with prednisone taper.

912383	12/29/2020	KS	61	F	12/22/2020	12/23/2020	her upper face was swollen, clarifying more on the left side, and mostly around her eyes.; her upper face was swollen, clarifying more on the left side, and mostly around her eyes.; her eyes are a little red; This is a spontaneous report from a contactable consumer(patient). A 61-year-old female patient received BNT162B2 via an unspecified route of administration at Deltoid Right on 22Dec2020 14:00 at the 61 years old at single dose for COVID-19 immunization. The medical history included Type 2 diabetes mellitus from 1995 and ongoing(diagnosed about 25 years ago, controlled diabetic with a Hemoglobin A1C of 5) and Blood pressure high from 1995 and ongoing (diagnosed with high blood pressure about the same time as her diabetes, clarified as 25 years ago. She stated she has controlled blood pressure). The concomitant medications were not reported. The patient previously received a flu shot in Oct2020. On 23Dec2020 the patient reported her upper face was swollen, clarifying more on the left side, and mostly around her eyes. She said her eyes were a little red, too. She said she does not have any swelling around her mouth. The patient reported the facial swelling had slightly improved. She said she keeps looking at her face, so it was hard for her to tell, but her boss said her face was swollen. The patient reported she took a generic Benadryl 30 mg tablet this morning. She said she normally takes a Benadryl 30 mg tablet every night along with Melatonin for sleep. She said she has a big bottle of the generic Benadryl 30 mg at home and the bottle is almost empty. She said she rather take the Benadryl and Melatonin. The outcome of the events upper face was swollen and mostly around her eyes was Recovering, the event eyes were a little red was Not Recovered. Information about batch/lot number has been requested.

912251	12/29/2020	MS	50	F	12/21/2020	12/21/2020	she was freezing one minute, and then she was hot the next minute; dizzy; soreness throughout body/achy; stated her eyes feel heavy; Chills; This is a spontaneous report from a contactable consumer (patient herself). A 50-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), lot number: EK5730, expiration date: Mar2021, intramuscular in left upper arm from 21Dec2020 10:00 to 21Dec2020 10:00 at 0.3 mL for Covid-19 immunization. Medical history included COVID-19 in Jul2020. She said she had a real bad case of COVID-19, and didn't get over it until Oct2020. The patient's concomitant medications were not reported. The patient stated she received the COVID-19 Vaccine yesterday at her employer, which is a hospital. She said she got the COVID-19 Vaccine at around 10:00AM on 21Dec2020. She said she had a few chills not too long after receiving the COVID-19 Vaccine. She said last night the chills got worse, saying she had chills all night. She said the chills are not as bad now. Reported she is sore and achy, clarifying she has more of a soreness throughout her body. She stated her eyes feel heavy too. Caller asked if what she was experiencing were side effects of the COVID-19 Vaccine and how long were the symptoms going to last. The reporter stated she is not a healthcare professional. She said she works in the surgery area at the hospital, and the hospital was offering the COVID-19 Vaccine yesterday, so she got the vaccine. Reported after receiving the COVID-19 Vaccine, she noticed she felt cool at work. She said last night she felt like she was freezing one minute, and then she was hot the next minute, and kept going back and forth between freezing and hot. She said she woke up at 1:00AM and felt really hot. She said she wished she had a thermometer at the time to check her temperature because she thought she had a fever. She said her husband told her what she was experiencing was part of having the chills. She said when she woke at 1:00AM, she got out of bed to go to the bathroom, and her eyes felt heavy, and she thought she may have been a little dizzy. She said now she doesn't think she was dizzy at the time, but maybe it was because she just woke up and got out of bed. She said she hasn't had any dizziness today. Treatment: Reported she took an Ibuprofen 200mg at 2:00AM and another Ibuprofen 200mg at 8:30AM. She clarified it was Equate Brand Ibuprofen

							200mg. The event chills with outcome of recovering; the rest of the events was unknown. Therapeutic measure has been given as a result of the events. Information about the lot/batch number and expiration date has been requested.
910130	12/28/2020	TX	35	F	12/24/2020	12/25/2020	On 12/24/20 I received the vaccine at Pharmacy, later that night I woke up feeling very cold. My temperature for the first 2 days of 103.1, chills, body aches, veins in my eyes busted. The fever has continued, today 12/28/20, 100.8, I feel dizzy, tired. Due to the holiday, will be seeing my PCP today.
910222	12/28/2020	PA	25	F	12/23/2020	12/23/2020	Pfizer-BioNTech COVID-19 Vaccine At approximately 4 pm on December 23 (day of vaccine) I experienced sudden onset of fatigue. I also had a low-grade temperature of 99.0 F with chills. By 5:30 pm, I was also bringing to experience lightheadedness and dizziness. That night at approximately 10 pm I had a temperature of 99.1. On December 24, I experienced lightheadedness and dizziness the entire day, from waking up to going to bed later that night. My eyes were glassy and I would feel an impulse of dizziness go distinctly from the right side of my head to the left, and then feel more dizzy after that. It was constant throughout the entire day and would occur while I was sitting, standing, or moving around. On December 25, I was tired but the dizziness had gone away.
910182	12/28/2020	OR	41	F	12/28/2020	12/28/2020	15 minutes after vaccine, patient starting having itchiness and eye pain, looks like starting to develop hives. Benadryl 50mg IM given x 1 dose.

910924	12/28/2020	IL	60	F	12/28/2020	12/28/2020	Patient is a 60yoF who is presenting to ED on 12/28/20 complaining of decreased sensation and itching on left side of face as well as darkening of peripheral vision on the left side. She received her initial COVID vaccine today at 11am, first began noticing symptoms at 1230 and took 2 benadryl around 1pm. In addition, she is reporting some light headedness. She states that her face feels swollen, but knows that it is not. Itching improved after benadryl but face continues to feel numb on left side.
910814	12/28/2020	CA	40	F	12/22/2020	12/23/2020	Patient received the Covid 19 vaccine on 12/22/2020. On 12/23/2020 she noticed a single, blister-like rash on her right eye. The rash got worse and spread to her face bilaterally and neck. Denies any tingling or numbness of the face. No swelling of the lips noted. Denies respiratory issue or fever, chills, HAs, or fatigue. Denies taking new medications, using new soaps, detergents, fragrance, or lotion, and food allergies. No outdoor activities. She has contacted her PCP and started prednisone 60 mg x 1 on 12/23/2020 - taper to 10 mg Total of 6 days treatment. Also, taking Benadryl 25 mp po q 4-6 hours per pcp. Her facial swelling is improving but not completely resolved. Has a FU appt with PCP .
910818	12/28/2020	TN	71	M	12/28/2020	12/28/2020	c/o cold sweats, difficulty swallowing, numbness in left eye, weird taste in mouth, difficulty breathing. Contacted PCP.
910840	12/28/2020	LA	59	M	12/26/2020	12/27/2020	Eye hurt with pressure Headache body aches Chills Freezing
910850	12/28/2020	KS	42	F	12/17/2020	12/18/2020	the night of the 18th my right eye was bothering me so I was itching it in my sleep, when I woke up on the 19th my eye was red and I thought I had injured it in the night and it bothered me all day but I didn't get it checked, I went to urgent care the 20th because I noticed there were vesicles on my right eye. they gave me eye drops and diagnosed me with HSV keratitis, Valtrex was also prescribed trifluridine. I feel almost completely recovered
910853	12/28/2020	MI	53	F	12/28/2020	12/28/2020	Patient felt a sudden severe headache around her forehead, around her eye sockets. When she stood up, the pain worsened. She also felt very weak, but not dizzy or feeling like she was going to pass out.

911554	12/28/2020	CA	63	F	12/1/2020	12/28/2020	Burning eyes bilateral one hour after injection. Sore throat 4hours after injection.
911549	12/28/2020	CA	33	F	12/22/2020	12/22/2020	1 hour after vaccination, itchy eyes, swollen lip, tickle/scratchy throat. Went to ED. Took 25mg benadryl. Observed x 5 hours. Symptoms improved.
911119	12/28/2020	NY	44	M	12/28/2020	12/28/2020	About 1 hour after getting vaccinated i noticed that my left eye got puffier and I could feel the tingling on my eye. Being little confused and not knowing the cause after reading online I noted that this could be possible from Covid-19 vaccine. At this time few hours later my puffiness is slowly going away . I do have pictures taken at the time of being vaccinated and also when I noticed the possible reaction .
911085	12/28/2020	KS	32	F	12/28/2020	12/28/2020	Vaccination was given at 8:25 and she began itching at 8:32. Itching that progressed from bilateral arms to trunk, bilateral legs and back. She felt wheezes starting. Given 50 mg. Benadryl po at 8:35. Symptoms were getting worse and RN gave Methprednisolone 125 mg. IM at 8:45. Albuterol Inhaler 2 puffs was given at 8:50. At 9:00 patient C/O upper lip tingling. Visual swelling observed. She was transported to ED by WC. ED administered Pepcid po and observed her for an hour. She was then discharged.
911064	12/28/2020	WA	60	F	12/28/2020	12/28/2020	patient started having dizziness when she got up to leave from the waiting room 15 minutes post vaccination, she also mentioned headache behind her right eye. She was taken to an exam room in a wheel chair as she was unsteady on her feet. She was laid down on an exam table and vitals checked. She states no previous vaccine reactions, has history of seizures and has had them with increased frequency recently. Patient was released to her friend to be driven back to work 1 hour and 27 minutes post vaccination
911061	12/28/2020	CA	47	F	12/23/2020	12/23/2020	Patient stated had some minor tickle in throat and slight heaviness in chest. Eyes than began swell bilaterally after 25 minutes after vaccine was given.

911035	12/28/2020	AL	47	F	12/22/2020	12/22/2020	Approximately 7 hours after receiving the vaccine patient who is a L&D Nurse return to work in her area. She describes that after finishing with a C-section she felt burning in both of her eyes (she thought this feels like an allergic reaction, but I am not sweating and haven't rubbed my eyes). She went to the restroom to get a cloth to wash her eyes; afterwards she reports her vision went totally black in both eyes. She reports feeling frustrated that no one came to help and some panic in trying to figure out how to get out of the restroom. She did make it out of the bathroom. Her Staff reports she postured and turned arms inward, head going to one side and passed out. They also report ~ 10 minutes of incoherent conversation and stating "I got the vaccine, maybe I was given the wrong thing and now I'm blind". Upon waking, patient vision fully restored and patient does not remember incoherent conversation. Differential diagnosis- TIA vs. CVA > seizure disorder>>> complex migraine
910734	12/28/2020	WA	41	F	12/28/2020	12/28/2020	generalized itching that started in her left hand then spread to the rest of her body. Itchy ears, throat, eyes. Slight coughing and runny nose
910688	12/28/2020	NY	62	F	12/18/2020	12/19/2020	I went to ER exp redness around the right eyebrow, rash, cheek was swollen. I was placed on Steroids and Benadryl finished the treatment on 12/26. The rash kind of came and went cheeks was swollen and I felt jittery. I started to feel better on 12/27 and placed a call to my PCP to make sure receiving the second vaccine. My PCP is reaching out to a allergist and contacted Phizer about concerns of the second vaccine. I haven't be able to wear makeup due to my fair skin complexion and don't want to irritate the rash on my face. I have missed 2 days of work

910270	12/28/2020	TX	66	F	12/16/2020	12/16/2020	12/17/2020 at About 2pm pt complained of some blurry vision, slight jitteriness and some queasiness; pt requested water. Nurse assisted pt to Overflow Observation Room. Pt A/O x4, Nurse provided pt water, crackers. Nurse continued to monitor pt: Continuous monitoring; and asked if she need anything periodically/ every 8-10 minutes. Pt refused any further care or assistance from Nurse; Pt stated she is feeling better and will continue to be in observation ; pt continued to be monitored by Nurse. Pt talked on phone during observation time; A/O x4. Pt monitored for about 40 minutes. Pt stated she feels better and fine; pt stated she was going to leave. A/O X4, denies chest pain, SOB, has steady gait.
910337	12/28/2020	IL	28	F	12/18/2020	12/18/2020	vaccine at 11:30 am on 12/18/20 and after 15 mins she felt the room started to spin, dizzy and tunnel vision. nausea and dry heaves also 2-3 mins after. persistent dizziness. pruritic rash and was taken to the ER by wheel chair. About an hour after the vaccine, she felt something in the back of her throat, speech ok, able to swallow. No sob. She was treated with benadryl, pepcid, zofran and fluid. She felt very hot and shaking. In the ER, she noticed that the rash had progressed to her back. Notes chest redness, back with erythematous, raised pruritic bumps on back and arm (smaller size of dime) Within 4 hours of treatment, she had improved. That night at 2am she had a rash -not as pruritic. She took more benadryl. No rash after. No new meds, no nsoids. She has never had any medical problems or rashes before. Her symptoms are concerning for anaphylaxis but it is reassuring that her vitals were ok and that she did not progress and improved with benadryl and pepcid - advised to not get 2nd vaccine dose - will plan on skin testing her in the future
910341	12/28/2020	IA	33	F	12/23/2020	12/28/2020	Approx. 3-5 minutes after receiving vaccine became lightheaded with blurry vision, tongue became thick and numb. About 10 minutes after vaccine pain in right arm and burning down my throat. My hands and arms became numb and tingly and were heavy to move. Symptoms got better with IV Benadryl and Solu-Medrol. Approximate 4 hours after vaccine developed vomiting and diarrhea.

910558	12/28/2020	IL		F	12/17/2020	12/1/2020	lightheadedness/feeling lightheaded/felt herself going backwards and caught herself; disappointed and upset; This is a spontaneous report from a contactable consumer (patient) who reported that a female patient of unspecified age received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, on 17Dec2020 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. Patient was allergic to aspirin, if she takes it her eyes will come out of her head and quite a few other things will happen to her. Patient reported that she got the COVID-19 Vaccine on 17Dec2020 and it was like 1 hour after (also reported within 1 hour) she got the vaccine that she started feeling lightheaded which she had never experienced before, even today. Patient is an environmental service worker, she had so many discharges and so many COVID rooms to wipe down that she just kept pushing herself because they are just short staffed; but at one point she felt herself going backwards and caught herself, she decided to sit down and drink a water and continued to feel lightheaded. No one was available to relieve her yesterday (17Dec2020), she had to stay at the hospital until midnight and continue her activities with lightheadedness (pending clarification). Patient said, almost a day later, lightheadedness persists, she was still feeling the lightheadedness today (18Dec2020). Her concern is it's like 3-4 days afterwards that you will feel some effects. She wanted to know if this is what they are talking about, if this is expected. Patient initially reported being a healthcare professional (HCP), but clarified her profession is Environmental Service, working at (Institution name). Patient is allergic to aspirin, she wondered if the COVID-19 vaccine contains aspirin. Patient was suggested contacting her doctor to find out if she is allergic to any of the components in the vaccine. Patient was reminded it is possible to consult the ingredients as part of the Vaccine Fact Sheet on (Website name). Patient was disappointed and upset for experiencing lightheadedness after receiving the vaccine (Dec2020). She wishes she hadn't received it. As indicated in previous requests, was referred to an HCP for guidance after experiencing lightheadedness. Outcome of lightheadedness was not recovered, outcome of disappointed and upset was unknown.

910567	12/28/2020	GA	35	F	12/18/2020	12/19/2020	Eyelid and nasal bridge swelling; Eyelid and nasal bridge swelling; Swelling of hands and wrists; Swelling of hands and wrists; This is a spontaneous report from a contactable physician. A 35-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Batch/lot number: EJ1685), via intramuscular route of administration (right arm) on 18Dec2020 18:15 at a single dose for COVID-19 immunisation. Relevant medical history included depression, hay fever and acne. Concomitant medication included escitalopram, fexofenadine hydrochloride (ALLEGRA) and doxycycline. The patient was allergic to nickel and fragrance. On 19Dec2020 07:00, patient experienced eyelid and nasal bridge swelling; and swelling of hands and wrists. Patient received allegra due to the event. Outcome of the events was reported as recovering/resolving. Follow-up attempts are completed. The following information on the batch number has been requested.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
910592	12/28/2020	TX	36	F	12/16/2020	12/16/2020	lost vision and had intense cold sweats for about 2 minutes; Vasovagal response; had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body; This is a spontaneous report from a contactable healthcare professional, the patient. A 36-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EK5730), via an unspecified route of administration in the right arm on 16Dec2020 at 09:30 as a single dose for COVID-19 immunization. Medical history included polycystic ovaries syndrome with diabetes, depression, anxiety, attention deficit hyperactivity disorder, iron deficiency anaemia, and vasovagal issues. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient's received unspecified concomitant medications within 2 weeks of the vaccination. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 16Dec2020 at 10:00 AM, the patient lost vision and had vasovagal response and intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The clinical course was as follows: The patient had a vasovagal response 30 minutes after the vaccine and had to lie down. She lost vision and had intense cold sweats for about 2 minutes until blood flow returned to normal in upper body. The entire episode lasted approximately 30 minutes. She felt it coming and knew to sit down so she would not "black out." She was unable to elevate her feet above her heart at the time; however, she was able to walk and stand afterward without dizziness. The patient did not receive any treatment. The clinical outcome of the vasovagal response, lost vision, and cold sweats were recovered on 16Dec2020. It was also reported that since the vaccination, the patient had not been tested for COVID-19.; Sender's Comments: The reported vasovagal response with cold sweats and transient visual loss was possibly related to the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) due to temporal relationship. However, it is worth noting that the patient had medical history including vasovagal issues. The case will be reassessed should additional information become available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety

10:30am - Received the Vaccine Shot 11:30am- Warmth throughout face, then right had went all tingly, then numb and swollen. The numbness crept up the arm to the elbow. Then the nose started to get tingly and numb followed by the lips and gums. 12:00pm - Started to not be able to speak a sentence. The words were coming out of my moth very jumbled even though in my mind I knew what I was trying to say. Still numb in right hand, and on right side of face. 12:10 pm- Could not see fully out of the right peripheral of my eye as well to the other symptoms of not being able to speak a full sentence. I was able to speak less words than I had about 10 min prior. Numbness in my hand went away at this time. 1:15pm- I was able to speak mostly full sentences again. I got a pounding headache on the front to left side of my head and felt fatigues. 1:40pm- Finally able to speak full sentences again, I could feel my hand and all the parts of my face. Felt weak, still had headache and felt nauseous and dizzy. 2:15pm- Took 1 advil, fell asleep 4:00pm- Woke up, felt weak, disoriented, still had a headache. 8:00pm- Only a small headache left and a sore arm

910608	12/28/2020	MI	62	F	12/21/2020	12/21/2020	<p>left eye is getting puffy after receiving COVID-19 Vaccine today; left eye is getting itchy after receiving COVID-19 Vaccine today; This is a spontaneous report from a contactable healthcare professional (patient). A 62-year-old female patient received BNT162B2 (COVID-19 mRNA Vaccine BNT162B2), via an unspecified route of administration on 21Dec2020 at a single dose for COVID-19 immunization. The patient's medical history included allergies to a lot of antibiotics. The patient's concomitant medication included Non-specified anti-inflammatory. The patient's left eye was getting puffy and left eye was getting itchy after receiving COVID-19 Vaccine on 21Dec2020. The events were reported as serious, medically significant. She said she is wondering if her left eye getting puffy and itchy is an allergic reaction and if she needs to seek treatment. Reported she did not have a prescription for the COVID-19 Vaccine. Reported her left eye being puffy and itchy has not gotten worse, but her left eye has not improved. Declined any treatment as she thought if she called Pfizer, Pfizer could tell her if she should get treatment. Reported she took an anti-inflammatory twice in the past 2 weeks, clarifying the last time she took the anti-inflammatory was over 4 days ago. The outcome of the events was not recovered. Information on the Batch/Lot number has been requested.; Sender's Comments: The reported information is limited. Based on the close temporal relationship, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p>

910634	12/28/2020	OK	47	F	12/18/2020	12/19/2020	A day after having the vaccine, I experienced eye soreness in my right eye. The next morning both my eyes were blood shot. I administered eye drops and went on about my day. Late that evening they were really red and watery and my vision was blurred. I went to the optometrist on Monday morning and was diagnosed with Primary iridocyclitis, bilateral. My iris had been attached to my lens from the inflammation, but had detached it self. I was put on steroid drops and made to keep my eyes dilated until my follow up appointment. Went to my follow up appointment today December 28, 2020. My eyes are looking better, but not back to normal yet. Advised to keep administering my steroids drops and only use the dilation drops every other day. I will follow up on Thursday.

Employee was instructed to sit in clinic for observation. At 1445, employee reported nausea, lightheaded, a "floating" sensation and sore throat. The floating sensation was also described as a "oozing sensation". States that she ate noodle soup for lunch at approximately 1pm. Took Tylenol at 2pm prior to arriving to clinic for vaccine. She denies chest discomfort, palpitation, shortness of breath, wheezing, or blurry vision. History of craniotomy in 2017 and pulmonary embolism in 2016. No history of HTN or GI conditions. O: VS at 1445: BP 126/75, HR 75, temp 98.3, O2 sat 96% room air, RR 18, pain 0/10. Reports symptoms onset. At 1455: BP 123/76, HR 72, temp 98.3, O2 97% room air, RR 18, pain 0/10. Nausea resolved. Continue to have mild sore throat, lightheaded, and "floating sensation." At 1510: BP: 132/80, HR 69, temp 98.3, O2 96%, RR 18, pain 0/10. Sore throat improved. Denies lightheaded, floating sensation. AAO4, follow commands, lung sounds clear, heart sounds normal. No angioedema. No acute respiratory distress. A: Adverse reaction to Covid-19 vaccine P: Employee was closely monitored in clinic for additional 30 minutes. Employee was provided fluids. Employee states that her symptoms has gradually resolved. Employee was advised to monitor her symptoms. If symptoms worsen or persist, she needs to notify her manager and go to urgent care/ED for further evaluation. She stated understanding. Employee returned to work, left clinic in stable condition. No acute distress.
909704	12/27/2020	TX	39	M	12/21/2020	12/24/2020	Received the vaccine on 12/21/20 without a reaction 15-30 minutes after administered. On 12/24/20 experienced flush, and rash on my face with swelling of the eyes and face. The swelling has progressed since then getting larger even after treating with Benadryl and cold compresses. It is now 12/27/20, and swelling is not decreasing. Am not experiencing difficulty breathing or any other symptoms.

909095	12/25/2020	CO	66	M	12/23/2020	12/25/2020	on 12/24/2020 the resident was sleepy and stayed in bed most of the shift. He stated he was doing okay but requested pain medication for his legs at 250PM. At 255AM on 12/25/2020 the resident was observed in bed lying still, pale, eyes half open and foam coming from mouth and unresponsive. He was not breathing and with no pulse
909111	12/25/2020	OH	28	F	12/23/2020	12/24/2020	The evening of the 24th, I felt lightheaded, sore, and extremely fatigued. Waking up on the 25th, I had diarrhea, vomiting, headache, coarse cough, asthma exacerbation, chest pain. Chest pain subsided but other symptoms remained. Around 11am, I developed cervical neck pain in the back of neck, and lower back pain. I started to experience loss of vision upon standing, tachycardia, tactile fevers, chills, and loss of appetite with extreme fatigue.
909123	12/25/2020	TN	46	F	12/20/2020	12/21/2020	Began just as sudden sharp headache on 12/21/20 at 6:00 pm, noticed after shift after showering, left upper extremity was slightly red, and slightly tender to touch. Not unbearable. 12/22/20 noticed redness was continuing to spread and arm was beginning to ache, still not unbearable. On 12/23/20 during shift, the redness in my left upper arm had spread from elbow to below injection site, arm was increasingly aching as well as new noticeable left sided facial swelling from directly underneath the left eye throughout the cheek area. and slightly tender. This is when I checked into the urgent care and was examined. At first the mid-level reported she thought I had experienced vaccine induced bellspalsey; however, after consulting with the MD, this was dismissed. Left upper extremity was diagnosed as cellulitis and treated with bactrim and informed to take zyrtec or benadryl for facial swelling. If symptoms worsened, visit nearest ER. Also informed to report symptoms to CDC for tracking. Today I have been treated with 2 full days of antibiotics and the redness and swelling has reduced. left sided facial swelling remains present.

908975	12/24/2020	CA	32	F	12/23/2020	12/23/2020	6/23/2020 6:25 AM: got Pfizer Covid 19 vaccine in left arm, nearly immediate soreness in arm within a couple minutes which progressively got more sore throughout the AM. 2:30 PM: body aching all over, feeling very tired and low energy, took 600 mg Ibuprofen to help with pain. 2:45 PM: applied ice to Left shoulder x 10 min. to help with soreness (didn't help) 3:45 PM: seemed like Ibuprofen helped some but for less than 30 min, now pain already as bad as before I took the medication. Eyes burning, headache increasing 5:45 PM: sensitivity to light when driving home, found myself squinting and watching the white line on the side of the road more than usual because lights of oncoming traffic was bothering my eyes. Eyes burning. Still have headaches and moderate level of body aches all over. 7:30 PM: tired, just went to bed early. Fell asleep around 8 PM. 9:15 PM: woke up with severe pain, could barely move my left arm. Took 600 mg Ibuprofen. Body shaking and tears running down my face due to severe pain in my entire body especially in back, arms, neck and headache 9:45 PM: no improvement with Ibuprofen, constant body shakes from pain since 9:15. Took a Norco (which I had left over from a knee surgery > 2 years ago), in attempt to decrease the pain and also took Melatonin (which I don't normally take) to try to get some sleep. About 20 min. after taking Norco body shaking stopped and pain was more bearable but still severe all over body. 10:30- after midnight: off and on applied ice packs to back, head, arms, neck to attempt to help or numb the pain. Barely got any sleep, waking up frequently due to pain. 6/24/2020: 6 AM: got up to get ready for work but was very sensitive to light, watery eyes, very puffy eyelids and under eye area to the point I was unable to fully open either eye. Eyes burning. Called my boss at work to let her know I wasn't sure how I was going to handle bright lights at work could barely keep my eyes open in a room with the light on. She told me to stay home and contact Employee Health. I followed instruction and left message with Employee Health. I also tried taking 1 tablet generic version of Sudafed PE to see if that would help with watery eyes and headache. 10 AM: Employee health representative, (a nurse) spoke with me & said it sounded like a systemic response to vaccine. Recommended I inform my PCP, continue taking Ibuprofen and try Benadryl for puffy, watery eyes.

							Followed instruction called PCP office which was closed and only had an option to leave a message for the doctor in case of emergency. Thinking it was not an Emergency I didn't leave a message. Called employee health back. They recommended going to Urgent Care if symptoms worsened. Told me I should ask PCP about taking the 2nd dose of the vaccine or not before taking it. 2 PM: took 400 mg Ibuprofen again about 1 hour ago and 1 tablet of Benadryl, less puffy eyes but still some sensitivity to light. Back and arm pain 3/10 or so with medication. Eye less puffy and watery. Decreased swelling of eyelids. Feeling like I'm starting to improve. Still pretty tired and low energy. Laid in bed most of the AM but moving around more this PM and can tolerate being in room with lights on. Mild eye burning persists.
908960	12/24/2020	VA	53	F	12/19/2020	12/19/2020	12/19-12/20 a fever ( 100 to 100.5) , nausea, HA, diarrhea, fatigue , severe body aches ( mostly upper back and left foot and hand. Like I'd been stepped on by a horse) and mild dizziness 12/22-Facial rash. Painful and raw. I took 2 Benadryl last night , but woke with worse facial swelling then yesterday. I did have a rash during covid. 12/23-Right peripheral vision loss and gorgeous prism pulsating colors. Have resolved.
908946	12/24/2020	WA	32	F	12/22/2020	12/22/2020	32 y.o pregnant female (8weeks) receive covid 19 vaccine in left deltoid at 6:45 pm. Around 7:10 pm patient developed tingling/pins/needles feeling and decreased motor coordination of left arm. Tingling/pins/needles sensation progressed to left eye lid, mouth, face, neck, throat, left lower leg and right hand. Pt was monitored in ER for an hour and sensation gradually dissipated

908925	12/24/2020	NY	41	F	12/24/2020	12/24/2020	Five minutes after receiving the vaccine I started feeling slight nausea, which got progressively worse, started feeling lightheaded and had to sit down at about minute 6, at 7 minutes a clinical assessment team was called because I was feeling like I was about to pass out. Everything seemed far away and removed and sound distorted/muffled , I was extremely nauseated, lightheaded and extremely thirsty and was seeing ?spots? in my vision. When the team arrived only a minute or so later, they checked my vital signs and found that my blood pressure was low, at 89 for systolic, with my normal systolic being 120-130.. I got very pale all over and my arms and especially fingers became weak, numb and tingly, the left arm more than the right. I was told I had a vasovagal response and also that I was expelling too much CO 2 because I had been hyperventilating. I was monitored and given po fluids for about half hour at which point I felt recovered enough to leave. I was offered/recommended being checked out at the emergency room but declined

908744	12/24/2020	ME	56	F	12/24/2020	12/24/2020	at 8:40 am patient felt dizzy and flushed, she asked for extra attention and indicated she felt embarrassed, but denied difficulty breathing, no trouble speaking in full sentences, no rash, no change of vision; BP was 158/108 with pulse of 95 and then patient was brought to a more quiet area and seated in a wheelchair. She was able to ambulate, and speak normally, but she said she felt very strange and shaky. she was visibly tremulous. She was seated, and vitals reassessed and her shakiness increased and she felt panicky. She was taken by stretcher to the Emergency room for further observation. in the emergency room, her symptoms gradually subsided. She was able to return to work after an hour of observation.
908735	12/24/2020	NY	32	F	12/23/2020	12/23/2020	45 mins post vaccination patient experienced severe dizziness, nausea, extreme vomiting, headache behind eyes, tachycardia (bpm 120), elevated BP (190/120), PVCs. Patient was an on-duty EMT and received Zofran and Benadryl in the ambulance. Patient presented to Emergency Room and received fluid bolus, acetaminophen, and metoclopramide. Symptoms resolved within an hour but some residual nausea existed 24 hours later.
908649	12/24/2020	NY	44	F	12/23/2020	12/23/2020	Eye dryness progressing to neuropathic type pain localized to the face (left upper face with clear demarcation, same side as injection). At the worst, felt neuropathic pain plus ear pain. Not improved with 1g tylenol and advil. 3 hours later with no improvement, took 10mg prednisone finally offering relief.
908418	12/24/2020	NJ	33	M			Adverse events initially began with chills the night of injection. There is significant bodyaches malaise and severe headache as well as our palpitations. And aura was associated with the headache specifically difficulty visualizing through the right eye the following day for several hours. Symptoms continue through the following day and night. There was also nausea and loss of appetite. Symptoms started to prove two days after injection at the time of this report

908861	12/24/2020	AL	47	F	12/18/2020	12/19/2020	The morning after the vaccine I had a sore arm, severe headache, 120 HR and felt achy all over. I took tylenol and felt a little better. Sunday my eye irritation began in the right eye. The right eye was hurting, had a little drainage and was severely swollen. Conjunctivitis set up in the right eye and the right side of my head hurt really bad with the right eye area throbbing. Contacted my PCP who prescribed eye drops for me. My eye is still a little swollen and my head still feels really strange and still hurts a little on the right side. I have consulted with the NP and the PCP who is currently monitoring the situation
908411	12/24/2020	MA	49	F	12/20/2020	12/20/2020	Approx. 45 -- 60 minutes following the vaccine, pat c/o lightheadedness, blurry vision, tingling in Left cheek, x 1hour, skin turned bright red heart rate 147 BP 147/80. Iced back of neck/forehead, sat for a few minutes. Heart rate down to 104, went back to work, but continued to feel flushed. Upon examination, her skin was normal in color but she stated that she still feels flushed & hot.
908438	12/24/2020	PA	32	F	12/21/2020	12/22/2020	Right sided facial swelling involving right cheek and lower jaw. No eye involvement. No breathing or swallowing difficulty. Symptoms were noted around 21 hours after the injection
908478	12/24/2020	IL	53	F	12/20/2020	12/21/2020	Fever, Chills, swollen upper lip and eyes, rash on upper lip, tongue prickly and taste is some what lost
908487	12/24/2020	MN	32	M	12/23/2020	12/23/2020	Within about 20 minutes of receiving the vaccine my lips began to tingle, throat became scratchy, and began to feel light headed. At that time, I returned the the vaccination room and took two - 25mg Benadryl capsules and just asked to have an eye kept on me incase it continued to progress. Denied epipen at that time because did not have shortness of breath and throat did not seem to be closing. Symptoms were mostly relieved within 30 minutes. Continued to have a metallic taste and itchy tongue throughout the day. Following day, no symptoms. Given underlying anxiety disorder, panic attack is not out of the realm of possibility though those have been well controlled for years.

She denied any history of previous adverse reactions to vaccines. She was given the Pfizer vaccination in the left deltoid muscle. During her 15 minute waiting period after the injection, the patient began to experience dizziness/shakiness. This provider was notified of patient reaction and she was then transferred to the emergency bay via wheelchair where she was assessed. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea, increased work of breathing, persistent cough and cyanosis, vomiting, hypotension, dysrhythmia, chest pain and collapse. She denied difficulty breathing, throat tightness and tongue swelling, nausea. She reports a history of atrial fibrillation and states that she had a procedure in the past and the anesthesia provider questioned her about this diagnosis. She reports taking metoprolol and methimazole on a daily basis. She took all of her am medications today, including an 81 mg aspirin. Reports history of watery eyes and blurred vision, takes Zyrtec daily. Denies any worsening of these symptoms outside of her baseline. Denies use of anticoagulant use or diabetes. Last ate and drank about 1130 or noon. Review of Systems Constitutional: Negative for diaphoresis. HENT: Negative for congestion, drooling, facial swelling, rhinorrhea, sneezing and trouble swallowing. Eyes: Positive for discharge. Negative for redness. Respiratory: Negative for chest tightness and shortness of breath. Cardiovascular: Negative for chest pain and palpitations. Gastrointestinal: Negative for nausea and vomiting. Skin: Negative for color change, pallor and rash. Neurological: Positive for dizziness and headaches. Negative for syncope. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is not nervous/anxious. Objective Vitals There were no vitals filed for this visit. Physical Exam</p>

Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is obese. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Eyes: Comments: Watering of both eyes Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Comments: At right radial pulse Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert and oriented to person, place, and time. Assessment/Plan: Stress reaction following vaccine administration. Patient was transported to the emergency bay via wheelchair. Treatment included no therapy, but did continue with vital checks at approximately 5 minute intervals. 1603-blood pressure using the large adult cuff was 154/60 with large adult cuff, heart rate 69 with regular rate and rhythm at right radial pulse, 96% O2 sat on room air. Patient continues to feel slightly dizzy and shaky though denies any chest pain, shortness of breath, swelling of the lips or tongue. 1611 vital signs reassessed with blood pressure of 150/63, heart rate 64, 97 percent on room air, continues to feel slightly dizzy/shaky, though, reports not nearly as bad. Patient continues to answer questions appropriately and is talking without any signs of further decompensation. 1618-reports feeling better. Vital signs rechecked with BP of 121/55, 59 hearty rate and 96% RA. No new complaints. 1624- patient reports a slight headache, but denies chest pain, shortness of breath, chest tightness, lip or tongue swelling. Discharge vitals obtained at 1626-with blood pressure of 135/55, heart rate of 58, 95% on RA. No new complaints, except feeling a bit cold. Patient reports feeling better and feels that she can safely discharge. Discussed need for urgent evaluation at the emergency department or to call 911 if symptoms of chest pain, shortness of breath, angioedema present. Patient expresses understanding and all questions were answered to her satisfaction today. Follow up response to treatment:excellent. Patient discharge: Stable to go home and follow up with PCP. 907241	12/23/2020	MI	57	F	12/18/2020	12/18/2020	I didnt notice but evidently my eyes changed because the CNO looked at me and asked if I was ok. Im not sure of what they looked like to make her cue in on I wasnt feeling well but she came over and began to monitor me at that time. I felt light and fluffy and when I got up to get juice I felt like I was disassociated from my body, my movements were awkward, I was severely weak and was not steady on my feel. I felt as if my mind was moving but my body couldnt keep up. I was very laggy and felt as if I was intoxicated. The head of the ER made me drink alot of cold water about 24oz of water and 4 oz of juice which then caused me to get super cold and shivery. Vitals were stable the whole time but my BP shot up to 170/90 a few moments after the water. I was transferred to a monitoring room where I was covered with alot of blankets and allowed to lay down until I warmed up until my BP lowered and I was released. My arm didnt begin to hurt until about 6-8 hours after and I have a red mark and the top layer of skin just do not want to heal. I am still today having to put bandages on the spot because its red and the skin on top keeps coming off. I had joint pain and aches into the next day after causing me to take an Aleve gelcap for the pain. Nausea here and there also.
907394	12/23/2020		65	M	12/16/2020	12/17/2020	Patient reported significant arm pain with the injection that within about 24 hours progresses to COVID like symptoms inclusive of vision issues (blurry, loss of peripheral vision, felt like falling), fatigue and endurance issues, resulting in lost work time second to symptoms. Patient is approximately three months post COVID infections and endorses that symptoms were similar.

907197	12/23/2020	AR	49	F	12/16/2020	12/16/2020	<p>my eyes were painful; my eyes were itchy; Eyes swelling; my face were swelling; A little short of breath; Hands are still swollen, my arms are slightly swollen and so is my eyes; Dry rash on hand almost looks like dry eczema rash or psoriasis like it looks like it's a dry patchy rash; Severe headache almost like a migraine; I started to feel little bit, a little off; This is a spontaneous report from a contactable nurse, the patient. A 49-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: EJ1685), intramuscular in the left arm on 16Dec2020 (at the age of 49-years-old) as a single dose for COVID-19 immunization. Medical history included hypertension and hot flashes. Concomitant medications included clonidine (MANUFACTURER UNKNOWN) taken for hot flashes, fish oil (MANUFACTURER UNKNOWN) for an unknown indication, omeprazole (MANUFACTURER UNKNOWN) for an unknown indication, spironolactone (MANUFACTURER UNKNOWN) as a diuretic, and multivitamin (MANUFACTURER UNKNOWN) for an unknown indication; all from unknown dates and unknown if ongoing. On 16Dec2020, the patient experienced eyes were painful and itchy, eyes and face were swelling, a little short of breath, hands swollen, arms slightly swollen, dry rash on hand almost looks like dry eczema rash or psoriasis like it was a dry patchy rash, severe headache almost like a migraine, and felt a little bit off. The clinical course was as follows: the patient received the vaccine on 16Dec2020 and waited 15 minutes and did not have any reaction. She went back to work. As she proceeded to work her shift, she started to feel little bit, a little off. She couldn't really describe it but thought it may have been psychological because she was just really watching heavily for any type of symptoms. She had worked an hour over her shift and it usually took her about 40 minutes to get home. When she got home around 21:00, her eyes were painful and itchy and when she looked in the mirror her eyes and face were swelling. Then, she became a little short of breath not to a point where she thought she needed oxygen, just a little short of breath. She called the hospital where she worked and talked to the manager and then they advised her to go the emergency room. At the emergency room, she received intravenous fluid, diphenhydramine hydrochloride (BENADRYL), famotidine</p>

VAERS_ID	RECVD	STATE	AGE_YRS	SEX	VAX_DATE	ONSET_DATE	SYMPTOM_TEXT
----------	-------	-------	---------	-----	----------	------------	--------------

(PEPCID), and dexamethasone (DECADRON) for treatment. She also took cetirizine (ZYRTEC), prednisone (MANUFACTURER UNKNOWN) and triamcinolone cream for the dry patchy rash. The patient stated that she had lab work done earlier in Dec2020 (before the vaccination) and everything was normal. The clinical outcomes of the itchy eyes, eye swelling, hands swelling, and arms slightly swollen were not recovered and ongoing; while that of the little short of breath, dry patchy rash, headache, and feeling a little off, were unknown. The outcome of the eye pain was recovered on an unknown date in Dec2020; while that of the face swelling was recovering.; Sender's Comments: Based on the close temporal relationship and the description of the events, there is a reasonable possibility that the events are related to BNT162 vaccine. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate

907410	12/23/2020	CO	30	F	12/22/2020	12/22/2020	Medical History: severe anaphylactic shock requiring intubation related to rattlesnake bite August 2019. On September 2019, I went to the dentist and received septacaine, mouth and face swelled up immediately. Toxicologist said this was due to me still being in a "cytokine storm." 12/22/2020- I received my COVID-19 vaccine by Moderna. Within 5 minutes of me receiving the vaccine I first experienced tachycardia, felt my heart pounding, dizziness, and tunnel vision. Three hives, dime sized, appeared on my chest within 10 minutes of the vaccine. I felt difficulty swallowing (may have been anxiety related). The dizziness was intermittent for the next hour. I took 25 mg of Benadryl 15 minutes after the shot. My blood pressure was elevated for an hour, 170s/100 s, O2sat maintained above 94%, and heart rate 80s-90s. My resting HR and BP are 100s/60 and HR 61. I also started to feel bloated and burping. An hour and a half after the shot, the symptoms resolved and I drove home
907293	12/23/2020	NC	35	F	12/16/2020	12/16/2020	On the date of the vaccine that night my blood pressure went up to 143/130 which is higher than it has ever been. My blood pressure the bottom number would not go under 100. The entire night my head felt like I was in a tunnel and my heart and chest felt tight. I was unable to work the following day due to not getting any sleep out of fear of something tragic happening to me. In addition last night or early this morning at 3 AM I woke up and my body was itching all over. The palms of my hands were itching my gums were itching I had red marks on my body and had Not done anything out of the ordinary or eight anything out of the ordinary. I took two Benadryl?s and was able to fall back to sleep for a little while and now the itching has stopped but my eyes are swollen.
908024	12/23/2020	AZ	32	F	12/23/2020	12/23/2020	visual changes- resolved within minutes; MD examined, no intervention required
908156	12/23/2020	CA	48	F	12/21/2020	12/21/2020	She exhibited no symptoms immediately after the shot and began driving home at approximately 6:30 pm. As she was driving home, she gradually developed perioral numbness with the sensation of a "gummy" throat and bilateral eye "warmth and numbness",

Orthopedics Cosigned by: MD at 12/22/2020 9:48 AM  Patient: Date:  12/21/2020</p> <p>Subjective Patient is a 34 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. She was given the Pfizer vaccination in the right deltoid muscle. During her 15 minute waiting period after the injection, the patient began to experience generalized feelings of "not feeling quite right" as well as anxiety/nervousness, nausea and chills. She denied difficulty breathing, throat tightness, dizziness, chest pain, or other GI complaints. This provider noticed her raising her hand from across the waiting area and tended to her where she noted the above complaints. she was then assessed in the emergency bay area. She was monitored for severe reaction symptoms, including rapid progression of symptoms, vomiting, hypotension, chest pain, collapse and Respiratory distress. Past medical history includes anxiety for which she takes Effexor on a daily basis as well as type 2 diabetes, diagnosed approximately seven or 8 years ago during a pregnancy. She is on oral medication during the day and insulin at nighttime. She did take her oral medication today and last ate a pasta lunch right before arriving to the vaccine clinic. Last A1c was 6.5. Patient states that she generally runs a postprandial blood glucose following a heavy meal of about 180. She reported a previous history of anxiety and nervousness following vaccinations in the past. Most recently, she experienced a 30-minute period of anxiety and nervousness following her flu vaccine this past October. These feelings passed without further incidents. Review of Systems Constitutional: Positive for chills. HENT: Negative for drooling, facial swelling, hearing loss, rhinorrhea, sneezing and trouble swallowing. Eyes: Negative for redness and visual disturbance. Respiratory: Negative for cough, chest tightness and shortness of breath. Cardiovascular: Negative for chest pain. Gastrointestinal: Positive for nausea. Negative for vomiting. Skin: Negative for color change, pallor and rash. Neurological: Negative for dizziness, speech difficulty and light-headedness. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is nervous/anxious.</p>

----------	-------	-------	---------	-----	----------	------------	--------------

Objective She ambulates into the emergency treatment bay under her own power and without difficulty. She is seated on the gurney, and continues to answer questions appropriately. Physical Exam Constitutional: General: She is not in acute distress. Appearance: Normal appearance. She is not toxic-appearing or diaphoretic. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Cardiovascular: Rate and Rhythm: Regular rhythm. Tachycardia present. Pulmonary: Effort: Pulmonary effort is normal. No respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Mental Status: She is alert. Gait: Gait normal. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal.

Assessment/Plan Stress reaction secondary to vaccine administration and history of anxiety and nervousness following vaccinations. Vital signs obtained at 1352 with blood pressure at 154/95, mild tachycardia at 109 and 97% O2 saturation on room air. Patient denies any chest pain, shortness of breath time. She is given a bottle of water and assisted to lie down with the head of the bed slightly elevated. She continues conversating appropriately without any acute distress. Vitals reassessed at 1359 with blood pressure of 133/76, heart rate 97% on room air. Dr. at the bedside now. Suggested obtaining a blood glucose. Blood glucose obtained at 1405, elevated at 234. She continues to deny any chest pain, shortness of breath, chest tightness, swelling in the throat, nausea/vomiting or other GI complaints. Vital signs checked again at 1406 with blood pressure 133/77, heart rate 107 and 97% on room air. Vital signs last checked at 1415 to reveal a blood glucose of 219, blood pressure 127/82, heart rate 100 and O2 saturation of 97% on room air. Patient has no additional complaints at this time and reports feeling well. Her mother has driven her to the clinic today. She felt that she was able to safely walk out with any issues. She was assisted by nursing staff and ambulated out of the treatment bay independently. Treatment included routine surveillance of vital signs at about a 5-minute intervals following notification of her feeling poorly. Vital signs continued to normalize and remained stable through the duration of her 30 minutes following her vaccination. Follow up response to treatment: excellent.

907621	12/23/2020	CO	37	M	12/22/2020	12/22/2020	After patient received the vaccine at 3:20pm, he was cleared to return home at 3:48pm. At approx. 8:20pm, patient became faint while laying down, experineced hot and cold flashes and observed darkness closing in on his vision. He then expereined auditory dsrutptions and became highly disoriented. He was ice cold to the touch on his forehead, expericning cramping and sweating profusely on his back. Thereafter, he had diarrhea and continues to be symptomatic. He currently has no fever, but continues to remain confused and feels like he needs to lay down from this experience. He also has a metallic taste that has developed.
907500	12/23/2020	CT	29	M	12/21/2020	12/21/2020	Vaccine administered around 10:45(am) on 12/21/2020. Around 23:00(pm) (12/21/2020) I was feeling chilly, put my jacket while at work (night shift) on but continued to feel tired, eyes hurt a little, slight headache, general muscle soreness, and increasing pain in my left arm where I got the shot. I took 600mg Advil, felt fine most the night but still really tired. End of shift (07:30(am)) I was very tired with symptoms returning. Got home (08:00 on 12/22/2020), went right to sleep but at that point had chills, felt cold, headache, body aches, pain in left arm worse / really hurting - tender to touch but not swollen or red, neck glands ?felt swollen? but I don't think they actually were swollen. I woke up 4 hours later (12:00 - 12/22/2020) around noon exactly sweating, with all the same symptoms. No GI discomfort. I took 975mg Tylenol. Checked my temp, 99.9F. I couldn't fall back asleep for several hours and my body temperature felt like it was all over the place (sweating and hot, then cold, repeat). Finally fell asleep again from 16:00 to 21:30. Symptoms were all still present. Took Tylenol 1,000mg and stayed up until 05:00 (12/23/2020) with good relief from the Tylenol throughout the night and then went back to sleep from 05:00 to 10:00 (12/23/2020). Woke up symptom free and have remained symptom free.

907683	12/23/2020	OK	33	F	12/1/2020	12/1/2020	puffiness and itchiness around her upper eye/last night she had a puffing, her eyes were puffed; it was itchy and she experienced itchiness everywhere/itchiness around her upper eye; This is a spontaneous report from a contactable consumer (patient herself). A 33-year-old female patient received first dose of bnt162b2 (BNT162B2, lot number: EK5730), intramuscular on Dec2020 at single dose for COVID-19 immunization. The patient has no medical history and stated that she had no other medical conditions, stated that she was generally healthy. Concomitant medication included ibuprofen and paracetamol (TYLENOL). The patient received the bnt162b2 and she had a puffing, her eyes were puffed, the upper eye and it was itchy and she experienced itchiness everywhere on an unspecified date in Dec2020. Patient mentioned that there was no rash or hives. She said she took Benadryl and it helped with the puffiness around the eyes, it did help with itchiness but she was still having some itchiness so she wanted to go just ahead and report that to our safety department. Patient clarified that Benadryl helped with the puffiness around her eyes but the itching part was still there, it (Benadryl) helped but not that much. Patient reported that she had a CBC recently and she got her antibodies checked few days before she got the vaccine. Patient reported that there were some mild generalized itchiness. It was just mild right now. Outcome of eyes were puffed was recovering while outcome of itchiness was not recovered.

907700	12/23/2020	MT	36	F	12/18/2020	12/18/2020	I got a strong metallic taste; About 30 seconds later my entire body started to tingle and I couldn't feel my hands or feet; My heart started to pound out of my chest; headache; I got an extreme hot flash and all my coworkers said I looked bright red and glassy eyed; became drenched in sweat and had to sit down for about 15 minutes with cold packs; she looked bright red and glassy eyed; This is a spontaneous report from a contactable consumer (patient). A 36-year-old female patient received her first dose of bnt162b2 (PFIZER COVID-19 VACCINE, Lot Number: EK5730), via an unspecified route of administration on 18Dec2020 at 14:15 on her left arm at single dose for COVID-19 immunization. Medical history included hypothyroid- well controlled with levothyroxine and known allergies: Penicillin, sulfa, cephalosporin. Concomitant medications in two weeks included levothyroxine, multivitamin, ascorbic acid (VIT C), colecalciferol (VIT D3). It was reported that on 18Dec2020 at 14:15, the injection was painless and she felt great. About 30 seconds later she entire body started to tingle and she couldn't feel her hands or feet. Her heart started to pound out of her chest. She got a strong metallic taste. This subsided after 1-2 minutes. She went back to feeling good. Then about 15 minutes later, on 18Dec2020, the patient got an extreme hot flash and all her coworkers said she looked bright red and glassy eyed. She became drenched in sweat and had to sit down for about 15 minutes with cold packs. Then it subsided again. She had a few more hot flashes and headache the remainder of the evening, but felt generally pretty good ever since. No treatment was received for the adverse event, prior to vaccination, the patient was not diagnosed with COVID-19 and since the vaccination, the patient had not been tested for COVID-19. The outcome of the events was recovered in Dec2020.

907618	12/23/2020	CA	42	M	12/17/2020	12/17/2020	Prior to receiving the vaccine I was feeling well, history of asthma, seasonal and environmental allergies, and no history of significant symptoms after previous vaccinations. Shortly after administration of the COVID-19 vaccine I began to feel nauseous which lasted in duration for approximately 3 days. On the vaccine administration day, several hours after administration I developed retrobulbar pain, bilateral eyelid edema, erythema of the right eyelid, this was one of the most significant symptoms that persisted for several days. In addition, on 12/20 I experienced a several hour episode of tinnitus and diminished auditory acuity in my right ear, this has also resolved. From day 2 until current I have experienced decreasing myalgias and arthralgias, the most significant has been lower back midline pain which has been improving. I developed a temperature of 99.7 Fahrenheit, with administration of acetaminophen. Although the symptoms have improved this is certainly the most significant constellation of symptoms I have experienced after any vaccination.
907014	12/22/2020	CA	39	F	12/22/2020	12/22/2020	Visible hives twice, and stinging eyes.

905805	12/21/2020	KS	33	F	12/21/2020	12/21/2020	<p>Date: 12/21/2020</p> <p>Subjective Patient is a 33 y.o. female who was seen at COVID Vaccine Clinic today for her first dose of the COVID 19 vaccination. She denied any history of previous adverse reactions to vaccines. She was given the Pfizer vaccination in the left deltoid muscle. During her 15 minute waiting period after the injection, the patient began to experience feelings of hypoglycemia. She checked her blood glucose with her own monitor and had 77 at 1104. She chewed 1 glucose tab that she had in her purse. She noted some difficulty with swallowing it and notified clinic staff. Associated dizziness and was escorted by clinic staff to the emergency bay. This provider was notified of patient reaction and she was then assessed in the emergency bay area. She denied difficulty breathing and chest pain, history of adverse reactions with prior vaccinations or allergies to medications with the exception of spironolactone. Patient had already been given a bottle of water by clinic staff and reported that the glucose tablet went down easier following the water. She took a second glucose tab sometime before 1113. She rechecked her sugar and had slight increase of 79. She did eat breakfast this morning about 0800 and had a protein bar right before her arrival today. Monitored patient for severe reaction symptoms, including rapid progression of symptoms, respiratory distress with dyspnea and increased work of breathing, vomiting, abdominal pain, hypotension and chest pain. Review of Systems HENT: Positive for trouble swallowing. Negative for facial swelling, hearing loss, rhinorrhea and voice change. Eyes: Negative for redness. Respiratory: Negative for cough, chest tightness and shortness of breath. Cardiovascular: Negative for chest pain. Skin: Negative for color change, pallor and rash. Neurological: Positive for dizziness. Negative for syncope and speech difficulty. Psychiatric/Behavioral: Negative for agitation and confusion. The patient is not nervous/anxious. Objective Vitals There were no vitals filed for this visit. Physical Exam Constitutional: General: She is not in acute distress. HENT: Head: Normocephalic and atraumatic. Nose: No rhinorrhea. Cardiovascular: Rate and Rhythm: Normal rate and regular rhythm. Pulmonary: Effort: Pulmonary effort is normal. No</p>

respiratory distress. Skin: General: Skin is warm and dry. Coloration: Skin is not pale. Findings: No rash. Neurological: Motor: No weakness. Psychiatric: Mood and Affect: Mood normal. Behavior: Behavior normal. Assessment/Plan Patient is a 33-year-old female who has a 15-year history of type 2 diabetes, and experienced a hypoglycemic event without complaint of chest pain or shortness of breath. Vital signs obtained at 1105 with blood pressure within normal limits at 132/88, heart rate 83 and 98% O2 saturation on room air. Patient continued to compensate appropriately and reported feeling slightly better. Glucose checks repeated by patient at 1117 was 84, vital signs were blood pressure 116/80, heart rate 89, O2 saturation of 98% on room air. She continues to deny chest pain, shortness of breath or difficulty swallowing at this time. At 1117 a 10 mg cetirizine was administered by mouth. Patient was able to swallow this with a small sip of water without any difficulty. 1121, patient continues to deny chest pain or shortness of breath. She continues to be compensating appropriately and sitting at the edge of the bed. She states that she is feeling better. Vital signs obtained at 1123 with blood glucose per the patient's own meter, continuing to elevate at 103, blood pressure within normal limits at 116/91, heart rate at 85 and 100% O2 saturation on room air. At 1126, the patient continues to feel better. She is provided a granola bar to eat. She does note feeling sleepy though attributes this to this being the first day she has had off after working 4 days last week. She notes that she has been sleepy even prior to her arrival at the vaccine clinic today. She is able to eat the granola bar and continues conversing appropriately without difficulty. She continues taking small sips of water without issues. Continues to deny chest pain or shortness of breath. Blood sugar is rechecked at 1138 and continues to elevate to 116. She reports that her meter says her sugar is "stable." Final set of vital signs obtained at 1138 revealed blood glucose within normal limits at 116, blood pressure of 119/84, heart rate 83 and 100% O2 sats on room air. Patient denied complaints of chest pain, shortness of air, nausea, dizziness or blurred vision at this time. She felt much improved and we discussed her leaving the clinic and heading home to have lunch. She had no further complaints. She was able to rise to standing on her own

905921	12/21/2020	CA	58	F	12/19/2020	12/20/2020	Vaccine #1 12/19/2020. No immediate reaction. 12/20/2020 started to get burning around Left eye. 12/21/2020 started to get swelling and puffiness around both eyes, also started with cough and back pain. Feels like symptoms improving. Taking Benadryl.
905934	12/21/2020	TX	36	F	12/16/2020	12/16/2020	Experienced a vasovagal response about 30 minutes after receiving the vaccine. I felt it coming on and knew I needed to elevate my legs above my heart but could not at the time, so I sat down and put my head down. I had intense cold sweats and loss of vision for about 2 minutes until my blood flow returned to my head. I was then able to get to a recliner to elevate my legs with assistance. The entire episode lasted approximately 30 minutes. I was able to stand and walk after this time without dizziness. I contacted my doctor today 12/21/20 and he advised I report this episode.
905973	12/21/2020	CA	34	F	12/21/2020	12/21/2020	Shoulder joint pain. Both sides but more on my right side. Had same pain sensation my back, right side. A few seconds. Right elbow pain sensation. Left calf pain sensation. few seconds. Wave of dizziness and feeling weakness. Experienced it 3x. Had a sensation of little itchiness similar to my radish allergic reaction. Drop and spike of blood pressure Some swelling of eyelids. Lasted for 30 min. Pain in between left knuckles Left shoulder back pain lasts few seconds Left upper shoulder warm sensation a 2-3 minutes, Consistent warm slight burning pulsing pain sensation Right forearm warm burning sensation no pain. Pain in right hip, lasted few seconds. Sudden fatigue feeling suddenly extremely drained

905999	12/21/2020	NC	49	F	12/20/2020	12/20/2020	Employed as a nurse at this hospital. Around 8 PM she received her COVID-19 vaccine. She waited the 15 minutes she was required to wait and then walked to her car. She reports that as she walked to her car she had a pain in her left shoulder which was short-lived but followed by numbness and tingling of her left arm and the left side of her face going up the back of her head. Symptoms started around 8:20pm. She reported back to the clinic to report the symptoms--she lives along and wanted to be assessed before going home. In the clinic, she was assessed by myself. Employee noted that she had not eaten. She ate in the clinic and had something to drink. While in the clinic over the next 10-15 minutes, she noted that she had some numbness and tingling in her feet and calves bilaterally. No leg pain or swelling. Around 9pm, the clinic was closing and she could no longer be monitored under observation. She opted to go to the ER for observation. Per ER note-- She denies any headache. She denies any left-sided weakness. Patient is right-handed. She also reports some mild chest heaviness that lasted for about 20 minutes and then resolved. No shortness of breath. No dizziness, syncope or presyncope. No nausea or vomiting. No rash. No visual or speech changes. No ataxia. Patient continues to have the left-sided numbness and tingling but states that it is less intense than it was. She denies any other complaints. Follow up this AM-- Pt is only fatigued and has some muscle soreness where she had the vaccination. All of her symptoms have resolved and she is not having any further sx's of chest tightness or numbness

905675	12/21/2020	LA	39	F	12/21/2020	12/21/2020	18 minutes post vaccine dose 1, Pfizer COVID vaccine, development of globus sensation without airway compromise or stridor. Frequent throat clearing and swallowing. Followed by diaphoresis, loss of vision, extreme neuropathic tingling over entire head non painful. Bradycardic event to heart rate 35 recorded by Apple watch. Loss of consciousness with pupil dilation. Weak pulses but no loss of pulse. Heart rate recovered quickly. Blood pressure after initiation of iv fluids was normal in upright position once loss of consciousness subsided. Continued globus sensation. 30 minutes after initial event, again developed clammy hands, head tingling and worsening globus sensation but again no stridor or airway compromise. Given PO Benadryl 25 mg which did resolve globus sensation in next 30 minutes. Monitored for one hour post event with no subsequent symptoms other than fatigue.
905027	12/21/2020	IL	39	F	12/20/2020	12/20/2020	1505 right eye heaviness, BP: 114/61, O2 saturation: 100%, HR:74, pt sent to ED
905431	12/21/2020	NY	52	F	12/21/2020	12/21/2020	Patient described feeling numbness under the right eye. The numbness radiated down the right side of the face. Patient reported that the numbness subsided after 2 minutes
905423	12/21/2020	IN	34	F	12/17/2020	12/20/2020	On 12/20 at 9am started having left sided facial numbness, tingling, flushing. Near syncope episode (tachycardia, diaphoretic, blurred vision) around 1130am. Took Benadryl seemed to help. On 12/21- around 7a near syncope episode, tachycardia, diaphoretic, facial flushing, itching. Took Benadryl-improvement in facial itching, decreased heart rate.
905346	12/21/2020	HI	53	F	12/17/2020	12/17/2020	Dizzy, headache, blurry vision, fatigue
905343	12/21/2020		51	F	12/17/2020	12/17/2020	The patient pre-medicated with oral diphenhydramine because she had an allergic reaction to another vaccine in the past. The patient developed some upper body redness and slight eyelid swelling, and she continued to treat with oral diphenhydramine until symptoms resolved.

905307	12/21/2020	OK	50	F	12/18/2020	12/19/2020	Approximately 12 hours after receiving my Covid vaccination, I experienced onset of severe pharyngitis and BL earache along with severe swelling of the glands in my neck and jaw. I developed a severe headache, photophobia and BL eye pain. I developed lesions and ulcerations on the skin surrounding my mouth. My lips cracked and developed blisters and ulcerations. I developed intra-oral and buccal lesions and ulcerations. I developed nausea and severe diarrhea. Severe myalgia, skin sensitivity and fatigue. Later in the day on 12/19/2020, I developed changes in my sense of taste and smell. Everything had a metallic or "coppery" taste, and my sense of smell was diminished. The next day, 12/20/2020, the disturbances in taste and smell worsened. The symptoms were severe on Saturday 12/19/2020 and Sunday 12/20/2020, and have begun to improve today--Monday 12/21/2020. No further skin or oral lesions, blisters or ulcerations, and the existing lesions are now healing. Continued diarrhea and GI upset. Other symptoms are improving.

904588	12/20/2020	IL	35	F	12/18/2020	12/18/2020	Within minutes of receiving vaccination i had blurred vision, rapid heart rate, extreme nausea, rapid heart rate, shivering but a warm sensation that started in my abdomen that went into my chest. I became blotchy on left arm where injection was per nurse and my eye started to roll back in head per nurse. I was rushed down to Er where i was given water zofran and Benadryl and steroids. BLOOD pressure was high and pulse was elevated. Was sent home a few hours later w Epi pen and steroids to take over the course of four days. After coming home i developed at headache and fever and severe leg pain and fatigue that last until Saturday the 19th around the evening. I?m feeling better today Sunday the 20th. My main concern at this point is the arrhythmia and sometimes having shortness of breath.

904158	12/19/2020	OH	29	F	12/18/2020	12/19/2020	I started having chills before bed 12 hours after receiving vaccine. I woke up late morning (now 24 hours later) with a terrible migraine and continued to have chills. I went to the bathroom after I woke up and felt very nauseated and sick. I then started seeing black dots and felt very dizzy. Soon after my vision went completely black for what seemed to be about 5 min. I was shaking, having difficulty breathing and fell to the ground. My fiancé called 911 and an ambulance was on its way. The EMTs showed up and took my vitals. At this point I was able to see again and was sitting down. My blood sugar was normal along with my oxygen stats. My blood pressure was low while sitting and standing. I was starting to feel better and didn't end up going to the hospital. I continue to have chills, body aches and a headache but so far no more blackening out episodes. It was the scariest experience of my life!
904188	12/19/2020		27	F	12/18/2020	12/19/2020	reported eye vision changes, flashes of light, and a headache. Was treated in the emergency room.
904191	12/19/2020	OK	29	F	12/19/2020	12/19/2020	Lightheaded, heart racing in initial monitoring station, placed supine, transported to triage via wheelchair. Initial pulse ox 98%, HR 76 at 1250, denied SOB, tingling, no rash. Pulse ox 98%, HR 91 at 1256, no SOB, tingling improved. At 1300, c/o lightheaded, fuzzy vision, shaky, some chest tightness, some throat tightness, increased saliva. Diphenhydramine 50 mg IM administered 1304. Pulse ox 98%, HR 92 at 1318. Solid food intake 1322. Continued lightheaded, bilateral arm tingling, still shaky, but less cold at 1327. Self-reported weight 130. 1339, throat tightness not resolved, no difficulty swallowing or breathing, pulmonary auscultation no stridor., continued body tingling, c/o throat tightness, Pulse ox 99, HR 96. 1343, continuous monitoring to Pulse ox 90%, HR 110. Medical director updated 1347, decision to move to ER and transport initiated 1352.
904227	12/19/2020	PA	52	F	12/19/2020	12/19/2020	Within 30 minutes of vaccine patient's left pupil was dilated greater than right and reacted sluggishly to light with slight fuzzy vision. No other signs or symptoms. Pt to follow-up with Ophthalmologist next week.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
904260	12/19/2020	CO	40	F	12/17/2020	12/17/2020	12 minutes after injection, I felt flushed and dizzy. They hooked me up to a vital sign monitor which showed my heart increasing to 133 bpm, SaO2 98%. A manual blood pressure check was 168/110. My heart felt like it was pounding, I was hot and sweating. After 10 minutes or so, I felt increasingly dizzy and my vision started fading. VS still showed tachycardia and hypertension. It became difficult to swallow and my tongue was feeling fat. A Rapid Response Team was alerted, they started and IV, and took me to the Emergency Department. I became very cold and shaky. My hands and feet became a little mottled. They gave me 50 mg IV benedryl, 20 mg IV pepcid, a dose of solumedrol, and IM epinephrine 0.3mg, and 1 Liter of fluid. My symptoms resolved and I was discharged home a couple hours later.
904318	12/19/2020	CA	35	M	12/17/2020	12/18/2020	On 12/18/20, I woke up with a fever of 103.6, so I took Tylenol and applied wet wash cloths to my face and body to cool down. I initially was successful, and passed the temperature screening gates at work. But later that day at work I needed to take Tylenol every 8 hours because my fever returned, and I spent the whole day working while febrile. I am a respiratory therapist, so I knew that my fever was Covid vaccine related, and not because I was infectious. I also experienced base of the skull headache, bilateral eye orbital pain, and tachycardia on my pulse ox about 130 HR, probably due to fever. I also had joint pain, mostly of hip girdle.

<i>VAERS_ID</i>	<i>RECVD</i>	<i>STATE</i>	<i>AGE_YRS</i>	<i>SEX</i>	<i>VAX_DATE</i>	<i>ONSET_DATE</i>	<i>SYMPTOM_TEXT</i>
904263	12/19/2020	CA	52	F	12/18/2020	12/18/2020	Within 5-10 minutes after vaccine given, patient started feeling tingling of the hands and fingers. Shortly after, she felt the need to clear her throat because she felt like there was a furball in her throat. She drank some water, which didn't help. She then started feeling hot and became flush. She then felt her inner ear and tongue swelling. Shortly later, she felt chest pain and felt like she couldn't breathe. She was given IV Benadryl 50mg, IV dexamethasone 4mg, and IV Pepcid 20mg without symptom resolution. EpiPen was administered by vaccine clinic staff, and the patient felt a little better. Her shortness of breath continued and her chest felt heavy as she was transported to the ED. She also complained of blurred vision, which could have been due to EpiPen administration. In the ED, the patient still felt that her throat was tightening up. She was given IV Pepcid 20mg, IV Benadryl 25mg, IV SoluMedrol 125mg, racepinephrine & albuterol nebulizer. By 2150, she felt better. By 2257, she did not have any more tingling in hands or weakness and she stated she felt she was back to normal. Patient discharged home in stable condition at 2336.
903338	12/18/2020	VA	30	F	12/17/2020	12/17/2020	5-10 minutes after vaccination, vasovagal syncope: pallor, diaphoresis, dizziness, tunnel vision, nausea, weakness, tingling in arms/legs, BP 103/69
903724	12/18/2020	AR	49	F	12/18/2020	12/18/2020	aproximately 10 minutes after vaccine taken, I developed problems with my vision. I had double vision, and Kaleidoscopic vision with floaters in both eyes . Lasted about 30 minutes. Did not keep me from reading or walking. no pain.
903334	12/18/2020	PR	62	F	12/17/2020	12/17/2020	Immediately after administration felt a strange sensation on nostrils and mouth that dissipated after the initial 15 minutes. Then I started with mild itching in the next arm and neck. About 30 minutes after administration my eyelids became swollen. No shortness of breath or tachycardia. I received Benadryl and solumedrol at ER. Stay at the ED for about 2 hours and left home. After that I felt strange for a while and could not sleep at all. The next morning everything was fine except for mild left arm side of injection pain.

903506	12/18/2020	MO	44	F	12/17/2020	12/17/2020	(1145) Left eyelid swelling 15 minutes after vaccination. (1155) b/l superior periorbital edema and erythema, b/l ear erythema and burning, and b/l hand tingling. (1200) Oral Benadryl 25 mg was given. (1230) symptoms improved and I was able to leave. While riding in the car on the way home started to have chills w/ goosebumps and nausea in short waves. Took an nap b/c my chills worsened and slept until 1630. Work up b/c of worsening chills, shivering, chest tightness, nausea, b/l hand numbness and tingling, right foot burning and stinging, and constant throat clearing b/c throat felt thick. Called the nurse on-call number provided in vaccine packet and was transferred to virtual care and report was given. Medical team advised me to go to the ED. (1900) Arrived at ED and temp was 101 and the chills, numbness, foot burning, and chest heaviness were worse and my eyes were burning and heavy. I was given oral Pepcid and an IV was started. After an IVP of Benadryl and Solu-Medrol I experienced severe burning starting in my head, neck, chest, and stomach. Then it felt like my veins were on fire all the way to my fingers and toes. This was followed by strong nausea w/o vomiting. I was then given IVP of Zofran and Ativan and NS drip. (1940-2020) Chills, burning around eyes, and vertigo continued other symptoms were improving. (2020) Provider returned and reported that labs were normal and I was probably having a reaction to the vaccine. (2035) Discharged from ED. Experienced chills, hand and foot numbness and tingling after discharge but was able to go to sleep.
903692	12/18/2020	NY	40	M	12/17/2020	12/17/2020	I received my vaccination in my left deltoid. 3 hours post-vaccination I developed swelling around my right eye. Vision was in fact. No other symptoms, I did not take anything to treat it. It is still present 1 day later, but seems to be improving on its own.
