| 1188186 | 4/9/2021 | IL | 18 | M | 4/7/2021 | 4/7/2021 | We gave patient the vaccine and advised him to wait for the CDC recommended 15 minutes observation time. He decided to leave after just a few minutes, despite his dad (who was with him) questioning the decision and suggesting he stay 15 minutes. I was then told by a member of management through our walkie-talkie system that they needed me at the front register immediately because someone passed out after getting a vaccine. I was there within the minute with my vaccine emergency bag. Upon arriving, the patient was already awake, talking, and sitting in a chair. He also was profusely sweating. He stated he's never experienced anything like this before. He said he normally has low blood pressure. He starting drinking some water. When I checked his blood pressure it was so low the machine gave an error message. Throughout this time, the patient progressively was feeling better and eventually wound up laughing and smiling. Him and his father said that he would be ok and that he was feeling himself. I told him to sit for a bit more before leaving and stay as long as he wants. I called him later that evening to check on him and had to leave a voicemail. His father called back 2 days later and said he's been fine. |
| 1188119 | 4/9/2021 | | 21 | F | 4/5/2021 | 4/6/2021 | Dizziness and passed out twice in a matter of 15 minutes. Fatigue day after. |
| 1186567 | 4/9/2021 | FL | 65 | F | 4/8/2021 | 4/8/2021 | 1158: Vaccination given 1215: c/o dizziness, transferred to recliner. Passed out in recliner, airway protected. RR 12 1220: able to arouse; feels dizzy 1222: BP: 127/58. HR 62. SpO2% 97. Itchy, can barely speak, difficult to arouse. Epinephrine 0.3 mg IM in Right quad. 1225: BP: 126/58. HR 60. SpO2 100 %. no signs of angioedema: breathing without difficulty; speech more clear; follows commands. Drank water without signs or symptoms of dysphagia. States normal HR 80-100. 1235: BP: 123/83. | 1186682 | 4/9/2021 | TX | 23 | F | 4/8/2021 | 4/8/2021 | PT FAINTED AND APPEARED TO BE HAVING SEIZURES FOR ABOUT 3 MINUTES, SHE STATED THAT IT HAPPENED TO HER BEFORE! 911 WAS CALLED, HER VITALS WERE CHECKED SHE WAS STABLE AND COHERENT. SHE WAS ADVISED TO SEE HER PCP AND REPORT WHAT HAPPENED TO HER PREVIOUSLY AND AFTER SHE RECEIVED THE VACCINE. |
| 1186454 | 4/9/2021 | NY | 48 | M | 2/24/2021 | 2/25/2021 | After second dose, tired, very fatigued, whole body was sore, chest rash, injection site pain, this was the day after the shot and last for about 4 days. Felt bad for weeks after 2nd dose. On 3/23/21, Syncope and collapse, 3 days in hospital. Dr's could not find the cause of syncope and collapse, they ran many tests. On 3/23/21, woke up with severe chest pains and collapsed, large gash on my head, taken to hospital by ambulance. Dr's did not think it was from 2nd dose, but they could not find another reason for Syncope and collapse. |
| 1186459 | 4/9/2021 | MN | 16 | F | 4/9/2021 | 4/9/2021 | Pt was vaccinated. She said she felt fine. Pt walked 15 feet then fainted. Her mom was able to catch her. We moved her to a cot. She slowly regained consciousness. She had no signs of anaphylaxis. She was breathing fine. Her mother states she has fainted during blood draws in the past and her daughter hadn't eaten this morning. We monitored pt for 30 minutes. Her color and smile came back. Pt was able to walk out on her own. Her mother will monitor her today. |
| 1186516 | 4/9/2021 | IL | 49 | F | 4/8/2021 | 4/8/2021 | Immunization clinic note: Patient reported feeling dizzy after about 20 minutes post-vaccination. Patient had a blood pressure of 140/100, had pulse and was breathing well. She was in and out of consciousness and non-responsive. EMT arrived about 10 minutes later and she was transported to ER. ED note: Pt observed while in the ED - ambulating about dept, maintains stable vitals, no recurrence of syncope. Remains symptoms free. Discussed with pt that syncope - likely vasovagal in light of covid vaccine administration. We discussed possibility of allergic reaction - at this time, no signs for airway compromise and pt remains comfortable on RA. We will dc home with rx for benadryl and 4 additional days of prednisone. |

| 1186519 | 4/9/2021 | CA | 21 | M | 4/9/2021 | 4/9/2021 | Patient passed out roughly 5-10 minutes following vaccine while seated on a planter; witnessed by store employee. Hit his head causing a small laceration above the right eyebrow which was cleaned with alcohol and bandaged prior to EMS arrival. The patient experienced dizziness and numbness/tingling in both hands/arms. He was able to tell RPh his name, the year, and knew where he was. Paramedics were called to assess his condition. Per patient and mother, only underlying condition is anxiety and only medication is zoloft. |
| 1186400 | 4/9/2021 | TX | 27 | F | 4/7/2021 | 4/7/2021 | Almost fainting, dizziness, dilated pupils, black vision, could not speak, unable to move which occurred minutes after receiving the J&J vaccine. Side effects dissipated within five minutes after onset. Normal BP recorded |
| 1186546 | 4/9/2021 | MO | 30 | F | 4/9/2021 | 4/9/2021 | Patient fainted/ seized about 10 minutes after receiving vaccination. Patient admitted to not eating anything prior to coming in for vaccine. Patient was sat up on the floor and given crackers and water and a cold rag. |
| 1186356 | 4/9/2021 | TX | 22 | M | 4/9/2021 | 4/9/2021 | Patient was given the Janssen covid vaccine and after he had sat down in the waiting area he fainted. time was 12:39 pm Friday, 4/9/21. We called EMS and code white at that time. Patient was unresponsive for a few seconds but woke up quickly. When we asked about any reactions to previous vaccine patient stated he had no reactions. After talking to him once he was feeling better, he did mention that this has happened in the past when his blood sugar was low. We gave cool compress and patient refused services from EMS. We also offered water and store management offered orange juice. We also advised him to stay for an additional 30 minutes for observation. |
| 1186581 | 4/9/2021 | NC | 71 | F | 3/26/2021 | 3/27/2021 | Received Moderna vaccine from Medical Group on 03/26/2021-2nd dose. Reports that about 5:30am on 03/27/2021 she began to have chills, weakness. States she eventually passed out, falling on the floor in which she does not remember, breaking her ankle. Ankle repair required surgical interventions. She is now back home wearing a cast to affected foot. |
| 1186615 | 4/9/2021 | AL | 47 | M | 4/9/2021 | 4/9/2021 | Started to feel light headed and passed out within 5 minutes. |

| 1186645 | 4/9/2021 | TX | 42 | M | 4/9/2021 | 4/9/2021 | He got cold and clammy and passed out in the chair with head slumped. His wife rubbed his chest and spoke to him and I, waved ammonia inhalants under his nose. He immediately came to. We got him a bottle of water and a snack (he had not eaten yet today). I also checked his blood pressure and it was normal. We had him sit a little longer until he felt better. We initially called an ambulance, but called it off at his request. |
| 1186652 | 4/9/2021 | MI | 32 | M | 4/9/2021 | 4/9/2021 | Patient started fainting a few minutes after the Janssen vaccine was injected. Patient started fainting in while he was seated. He wasn't very responsive but his eyes were open. Patient stated that he has a panic attack to the injection of the needle and has had similar reactions in the past from other injections. |
| 1186670 | 4/9/2021 | | 45 | M | 4/9/2021 | 4/9/2021 | Transient hypotension/near syncope. |
| 1186674 | 4/9/2021 | NY | 19 | F | 4/9/2021 | 4/9/2021 | passed out 2 minutes after moving from vaccine seat to observation area 20 ft away, very brief mild, seizure less than 30 seconds. regained complete alert and consciousness |
| 1186545 | 4/9/2021 | CO | 39 | M | 4/8/2021 | 4/8/2021 | Patient lost consciousness about 10-15 seconds after vaccination administered. Concerned initially that patient may have been having a seizure due to twitching motion of head lasting 2-3 seconds. Then patient appeared to be sleeping. He was breathing, but audibly snoring and it seemed somewhat irregular. I moved patient from chair to floor and had staff call 911. Patient was still breathing but remained unconscious for about 1.5-2 minutes. He then woke abruptly and was immediately lucid. He was awake when EMS arrived. He stated he has passed out on previous occasions of abrupt pain/use of needles. EMS monitored patient for around 20-30 minutes, and he also had a bottle of orange juice and a granola bar and appeared to feel better. Patient declined transport to hospital by emergency personnel. |
| 1186288 | 4/9/2021 | OH | 29 | M | 4/2/2021 | 4/2/2021 | Pt experienced vasovagal syncope within 15 minutes of vaccination. Supportive care provided and pt recovered without incidence. |

| 1186296 | 4/9/2021 | MN | 52 | M | 4/7/2021 | 4/7/2021 | <p>Patient did say before vaccine that he has fainted in the past from previous vaccines. I had a Representative administer vaccine while i stood next to patient and talked with him as a distraction from the shot. After Representative gave the vaccine patient asked "did you give vaccine?", he then immediately started to sweat very hard and said he was light headed (he was sitting down), then his eyes rolled back and he slouched down in chair, at which point I held him so he did not fall on floor. He started to jerk and twitch, perhaps was having a seizure, and was sweating very hard. I held him in chair so he would not hit his head or get hurt. After about 30 seconds he regained consciousness and asked how long he was out. His T-shirt was soaked in sweat and he said he felt very dizzy. The Representative got him an ice pack and placed at base of neck, which he said helped alot. I sat with him for 10-15 minutes until he said he felt fine. I asked if he needed medical care and he said he did not, just needed to sit for awhile, and said this has happened before. I gave him a chair to sit in after he was fully alert and he sat for close to half an hour, at which point he said he was back to himself and felt fine. I did offer he could stay as long as needed and I could call anyone if he needed me too, he insisted he was fine and after about 45 minutes he left. I did call him the next day to check on him and he said he was fine.</p> |

| 1186297 | 4/9/2021 | NC | 34 | F | 4/7/2021 | 4/7/2021 | 34yr old female with shellfish allergy (reaction: anaphylaxis), exercise induced asthma, previous issues with injections/blood draws (reaction: dizziness) and other comorbidities presented for COVID-19 J&J vaccine on 4/7/21. CMA administered the JANSSEN COVID19 VACC (LOT # 043A21A, exp 6/21/21) IM in patient's left deltoid at 1318. Within 2 minutes of administration, patient became lightheaded and shortly after passed out. Patient had one convulsion (arching back, tense limbs) lasting 5-6 seconds. Once relaxed, patient was arousable. Patient denied hives, shortness of breath, throat swelling, or chest pain. At 1325, BP 48/31, MAP 76, HR 79. Patient assisted to Trendelenburg position and remained lying for 20m. Patient developed chills and tremors during this time stating she was cold. At unknown time later, patient endorsed feeling better and was lifted to sitting position and allowed to sit for another 10minutes. At 1346, final BP 105/58, HR 73. Patient endorsed feeling back at baseline. Provider released patient and patient discharged. Of note, provider notes patient with vasovagal syncope and convulsions after receiving J&J COVID vaccine. Patient has history of vasovagal reactions. |

| 1186264 | 4/9/2021 | NY | 33 | M | 4/9/2021 | 4/9/2021 | <p>Patient presented for his first vaccine dose. He later stated he felt a sensation of something moving through his arm after vaccine administered, then states he felt some increased anxiety, followed by cold sweats, and then lost consciousness. He was noted to be unresponsive, initially with brief period of apnea, and was unresponsive to sternal rub by vaccine administration staff. He was placed into a reclined position in the driver seat of his vehicle. He regained consciousness within a minute, and was normally responsive but with pale color noted to face and chest, diaphoresis, and thready pulse with bradycardia, HR 43. Difficult to auscultate HR and breath sounds clear but shallow. EMS responded promptly and assisted with evaluation, with initial BP 80/50, SpO2 97%. Patient became less responsive and started to lose consciousness again, but responded to questioning, then lost consciousness again. His feet were placed on the dashboard to elevate them, and he quickly regained consciousness, pulse improved to HR 86, and repeat BP after a few minutes was 140/76. Oxygen saturations briefly dipped to 90% then rebounded to 100%. He improved quickly, was normally responsive and able to drink orange juice. He had pale clammy skin on the face, neck and hands, and some facial flushing. Patient was monitored for several minutes, had improvement in symptoms, and refused transport by stretcher to the ambulance. He was able to walk to the passenger side of his vehicle and was driven out of the vaccination facility and further monitored. Blood glucose noted to be 96, EKG normal with sinus rhythm, no acute ST or T wave changes or other acute abnormality. Patient was offered transport to the hospital for further evaluation, but he declined. Symptoms resolved completely, he was monitored for resolution of symptoms. He reported prior similar symptoms after a hand laceration at work and after a dental visit. Risks discussed, prevention measures for second dose discussed. Encouraged follow up with PCP given recurrent vasovagal syncope. No signs of allergy noted.</p> |

| 1187306 | 4/9/2021 | NJ | 19 | M | 4/8/2021 | 4/8/2021 | Patient, while waiting for for the 15 minutes post-vaccination, fainted. The mom, accompanying the patient, started helping him off the floor and as I was helping her, the patient immediately woke up and regained consciousness, but was a little pale. I brought water for the patient, took his blood pressure which was about 100/50. His mom brought him orange juice and as I was sitting with the patient, he stated that he usually faints when getting blood drawn and such. I sat with the patient for about 10-15 minutes, and he was improving, regaining color and more talkative. I then had the patient slowly get up and had his blood pressure measured again and it was 105/75 which according to himself and his mom was his normal. They then decided to leave and the patient was doing well by then. |

| 1187061 | 4/9/2021 | CA | 35 | M | 4/9/2021 | 4/9/2021 | <p>HPI: Patient is a 35 year old male who presents following administration of a single dose of J&J COVID19 vaccine in the left deltoid. Patient started to feel light headed and nauseous while walking to his car. About 20 minutes following vaccination, a vaccinator had walked passed his vehicle and noted that he was unconscious. Patient was still unconscious upon medical response team arrival and unresponsive to stimuli. Once the patient awoke about 30 seconds later, he continued to state that he was nauseated and ?did not feel good.? Patient was unaware that he had lost consciousness. He further disclosed that he had been working in the sun planting trees all day and had not consumed any food or beverage. He denied allergies to medication, food, and other vaccines. He relayed that he had passed out from vaccinations in the past as a child. He affirms lightheadedness and nausea. He denies chest pain, difficulty breathing, swelling of the face/lips/tongue/throat, skin rash/itching, cramping abdominal pain, and vomiting. Exam (update as needed): GEN: Upon arrival, patient unconscious and not responsive to stimuli HEAD: NCAT EYES: pupils unreactive and mydriatic ENT: Ears normal, Nose normal, OP normal, no evidence of angioedema NECK: Supple, without LAD. CV: RRR, no m/r/g, palpable strong radial pulse PULM: Clear to auscultation bilaterally, no accessory muscle use ABD: Soft, no tenderness. SKIN: Skin pale, cool, and clammy. No rashes. No erythema or edema of the injection site. MSK: FROM, MS 5/5 NEURO: Patient unconscious upon arrival. CN 2-12 grossly intact, no ataxia, gait steady Clinical Impression/Field Tx: Vasovagal syncope. EMS called immediately to respond to the site for further evaluation. Patient placed into a reclined position. Patient not displaying active signs or symptoms of anaphylaxis. Upon regaining consciousness, patient was alert and oriented x4. Once the patient demonstrated ability to control airway, he was given candy and water. EMS arrived and an EKG and BGL were performed, both of which were normal. Vital signs were stable. Instructed patient to consult their PCP regarding the post-vaccination reaction. Patient instructed to go to emergency department should they develop chest pain, difficulty breathing, swelling of the face/lips/mouth/tongue/throat, or cramping abdominal pain with nausea/vomiting, as these are signs of possible</p> |

| 1186759 | 4/9/2021 | SC | 21 | M | 4/6/2021 | 4/6/2021 | 1. Vasovagal syncope almost immediately after vaccination, little to no warning of oncoming syncope 2. Extremely fast acting fever (temperature went from 98.6 to 100.5 in roughly 30 minutes) followed by nausea, pounding headache, and body aches/chills. Remedied by alternating very high doses of ibuprofen (800mg) and acetaminophen (1000mg or 1g) every two to three hours. This did not ever bring down the fever below 100 degrees. 3. Blurred vision around 29 hours after vaccine - advised to go to ER by triage nurse. ER doctor determined not to worry about, likely due to headache but not 100% sure. |

| 1186751 | 4/9/2021 | WI | 49 | M | 4/9/2021 | 4/9/2021 | Patient fainted post vaccination. Patient was sitting in observation chair when he fainted. Staff immediately attended to patient, and he regained consciousness rapidly. He was given water/snacks and monitored for an additional 15 minutes and then left and he stated he was feeling fine. Patient was called later for follow-up and said he was still feeling fine/no issues. |
| 1186711 | 4/9/2021 | RI | 37 | F | 4/7/2021 | 4/8/2021 | Passed out on 4/8 @ 8am Was at home. On going headache for remainder of 4/8 |
| 1186804 | 4/9/2021 | MI | 40 | F | 3/31/2021 | 3/31/2021 | Pain in arm immediately upon injection. Extreme dizziness, light-headedness, and a warm flush came over me within 2-3 minutes. Sat down on a chair, put my head between my knees. Wasn't helping so I sat down on the floor cross-legged and put my head to the ground to try to keep myself from fainting. A medic noticed I wasn't doing well and took me to a tent on the other side of the large room to lie down. She asked if I wanted a wheelchair and I declined. I barely made it to the tent to lie down before I would have fainted. Lying down was significantly better than sitting down. After staying prone for about 20 minutes, I was doing better so I left. Immediately after walking outside and feeling cool fresh air I was much much better. Dull headache approximately 19hrs after shot that lasted half a day. 48hrs post shot had tingling and numbness in injection arm that lasted about a day. Injection arm soreness for 3 days total. |

| 1180614 | 4/8/2021 | IN | 18 | F | 4/6/2021 | 4/6/2021 | Initially she passed out following the vaccine - within 90 seconds- she has a history of passing out with injections and blood draws. Around noon she had a seizure. She describes a feeling of darkness and dread closing in on her and she was unable to speak or move. She was on the stairs at the time. I witnessed her stiffen, then go limp and fall between the electric stair hair and the wall. She hit the hardwood floor face first then she began to shake/twitch. She was unconscious. She awoke screaming, incoherent speech, and flailing limbs. It took about 5 minutes to calm her and be able to understand her speech. She only remembers the darkness and waking up scared and feeling awful. She was put supine on the floor with feet elevated, blood pressure monitored, given juice to drink, and vitals checked routinely. After about an hour supine and conscious, she felt good enough to sit up. She sat up for 15 minutes before she was able to stand with assistance. Family physician was notified immediately and we are still waiting for a response. She has a goose egg sized knot on her forehead, a bruise on the side of her face and a black eye from hitting the floor. She has a huge bruise on her outer thigh and lower leg where she hit the stair chair and then seized and it it repeatedly on the metal. She has underarm pain from where her armpit hit the edge of the stairs when she fell and seized. She has no history of any types of seizures. |

| 1181655 | 4/8/2021 | CA | 23 | F | 4/8/2021 | 4/8/2021 | The patient was sitting for their 15 minute observation time and about 5 minutes after the patient's vaccination the patient was holding her head and tilting forward. I came over to ask if the patient was ok. The patient said they felt unwell and needed to vomit. The patient proceeded to vomit several times in a garbage can. The patient and their mother were sent to the back of the store near the bathroom to be observed for further symptoms. Patient and mother stated no need to call 911. After about 20 minutes the patient felt well enough to try to home. I escorted the patient and their mother out of the store when the patient felt ok. The Vaccine Administration Record(VAR) form filled out by the patient did not state that they had felt dizziness or fainting from any vaccine previously. Upon questioning the patient after vomiting the patient stated she had dizziness/fainted and vomited before after blood draws. However, the patient has not gotten any recent vaccinations and no such adverse reactions took place before. |
| 1178955 | 4/8/2021 | ID | 19 | M | 4/7/2021 | 4/7/2021 | The patient experienced syncope, diaphoresis, nausea and vomiting. The patient was able to recover within 45 minutes and leave under his own power. The patient was coherent and not in any noted distress. |
| 1180677 | 4/8/2021 | AZ | 16 | M | 3/31/2021 | 3/31/2021 | Approximately 5 minutes after receiving his first shot he passed out and seized for approximately 15 seconds. Fire and EMT called and stabilized him then taken to hospital for tests. |
| 1180402 | 4/8/2021 | | 38 | F | 4/7/2021 | 4/7/2021 | Started with chills, then dizziness, nausea and passed out until was found by another person. Had ringing in ears either right before passing out or when coming to consciousness. Vomited after waking up. Chills returned, fever of 100.3, blue lips. Headache came later |
| 1180653 | 4/8/2021 | WA | 19 | M | 4/8/2021 | 4/8/2021 | vasovagal response. - sudden flushing - faint feeling x30 seconds - passed out while seated (x3 seconds) - resolved unconsciousness after laying prone - nausea and dry heaving once conscious x1 minute return to normal after 5 minutes (and given 500mg tylenol & 25mg benedryl) |

| 1181485 | 4/8/2021 | CO | 27 | M | 4/8/2021 | 4/8/2021 | Patient received immunization and felt fine after sitting in chair for a few seconds. Pt got up and went to waiting area and was sitting down in chair during the 15 minute observation window. Pt passed out and slumped/fell out of chair on patients left side. I was called out by the person monitoring the waiting area to see pt in fetal position on their left side seizing. The seizing lasted for about 15 seconds and then stopped. PT was motionless for a few more seconds and then came around and said "I'm back". The pt was given a bottle of water because he said he was thirsty. In the meantime the paramedics were called and arrived. They checked his BP and Blood Glucose. After several minutes they took the pt out on a gurney for further evaluation, there was a question as to whether or not pt hit his head. |
| 1181399 | 4/8/2021 | FL | 43 | M | 4/1/2021 | 4/1/2021 | Within 15-minutes of vaccination, the patient experienced a syncopal event. EMS evaluated the patient on-site. The patient was hypotensive (54/31) and bradycardic (42bpm). EMS transferred the patient to Medical Center Emergency Department. In the ED, the patient reported a syncopal event that lasted 1-minute. Th patient was resting comfortably in no acute distress and reported feeling improved. Physician administered 1L IV normal saline. After noted improvement, the physician discharged the patient with diagnoses of Vaccine reaction and secondary Near syncope. |
| 1181409 | 4/8/2021 | TN | 36 | M | 4/6/2021 | | The patient received his Janssen Covid 19 vaccine, and sat down in the waiting room for about 2 minutes. He started feeling sick and got up to go to the restroom. On his way to the restroom, he passed out and fell in the hallway. We then got him to a seat and gave him some water and orange juice. The patient was adamant that we not call an ambulance for him, so we made the patient stay seating under our direct supervision. He sat in the waiting room for about an hour until someone could come to pick him up. By the time someone arrived to take him home, he seemed to be doing much better. |

| 1180734 | 4/8/2021 | MO | 18 | F | 4/8/2021 | 4/8/2021 | Patient vomited immediately after vaccination. She sat for approximately 7 minutes with an ice pack before asking to walk somewhere to lay down. About 100 feet in to the walk, she fainted. She was being supported on both sides by pharmacist and her boyfriend, so she went to the ground gently. |
| 1181308 | 4/8/2021 | OH | 39 | F | 4/8/2021 | 4/8/2021 | About 10 minutes after receiving the vaccine the patient was showing signs of becoming light headed and pale and passed out momentarily. She slide out of her chair tot he floor but quickly regained consciousness. She said she felt light headed and was having trouble breathing. We called 911 and kept her comfortable until they arrived. No medication was given. Patient left with the squad. |
| 1181293 | 4/8/2021 | MA | 26 | F | 4/8/2021 | 4/8/2021 | Pt recieved covid19 vaccine. While sitting in observation. PT began experiencing dizziness. PT fainted and struck the floor causing an abrasion on her top right forehead and chipped her tooth cap. PT was evaluated with EMS on scene. PT was transported by fire rescue shortly after. |
| 1181283 | 4/8/2021 | NJ | 48 | M | 4/8/2021 | 4/8/2021 | Systemic: Fainting / Unresponsive-Mild, Additional Details: Pt seemed to be fainting after administering the Janssen COVID vaccine - felt better and was normal after administering EpiPen. 911 was called after administering EpiPen - they came and cleared the pt to go. Pt sat for another 15 minutes afterwards and left after assuring us that he was feeling normal - he was accompanied with his wife the entire time. |
| 1181275 | 4/8/2021 | MI | 64 | F | 4/8/2021 | 4/8/2021 | Patient was feeling light headed, shaky and started to sweat. She then fainted and was caught by myself. We immediately called 911 , her blood pressure was taken and it was within normal limits. She did not have any difficulty breathing, swelling of the tongue or other side effects that were showing signs of anaphylaxis. Patient received water and started to feel cooler and less shaky. Once the paramedics arrived, she was assessed and was monitored for at least 25 minutes by myself and the paramedics. Patient was not disoriented and was given the OK to go home by the paramedics. Patients husband was contacted to come and drive her home. |

We gave him a 25 mg benadryl. We called 911 and his vital signs were normal when 911 checked. They admitted him to the hospital for monitoring the symptoms. |
| 1179400 | 4/8/2021 | MA | 25 | F | 4/7/2021 | 4/7/2021 | I walked up the stairs to go to bed at 10:45pm and started feeling very dizzy, lightheaded, and nauseous. At the top of the stairs I passed out and fell backwards. Not sure exactly how long I was out, but no more than a few minutes. When I woke up I was disoriented and nauseous but didn't have the strength to get up. I rolled into my side and vomited 3 times. My fiance helped me get up slowly. He took my temp but I did NOT have a fever. The nausea, dizziness, and lightheadedness subsided after about 10 minutes, so I decided to NOT seek medical attention. This morning I have a headache and body aches in my lower back and left arm. |

| 1179483 | 4/8/2021 | MI | 40 | F | 4/6/2021 | 4/6/2021 | My vaccine was administered at 12:30pm. I waited until 12:55 at CVS after the vaccine to make sure there were no reactions. I also move my arm around a lot after the injection to keep it from hurting. I drove home, at lunch and about 2:45 was hit with a very noticeable headache. I never get headaches and eat healthy and consume about a gallon of water a day. I knew it wasn't from dehydration or being hungry. Headache was in the temple area and made my eyes hurt in the same way they would if you had cried for an extended period of time or were overtired. At 3pm a wave of exhaustion hit me. I was sitting working trying to combat the headache and felt almost wiped out. I got through the rest of my work day (4:30) and went to lay down immediately. I passed out almost instantly until 7 pm. I work up and showered, ate dinner and started to feel a little warm. It should be noted it was an unseasonably warm day and got up to 77, so it was a tiny bit warm in my home. I put on loose fitting clothes and slayed on the couch still with the bad headache and the injection site started to throb so I placed and ice pack on for 20 minutes. I could only stay awake until 8:45 and got in bed. I could not get comfortable for several hours feeling very warm. I tried a fan on high and drinking more water but i felt very warm like how you feel with the flu. I took my temp at 1130pm it was normal. I continued to toss and turn and feel very warm and slightly dizzy, in the sense that I hadn't been able to sleep and with the headache my body was just exhausted. Around 2 am i woke up for more water and got in the shower because I had sweated so much my sheets were wet and my clothes. I got out of the shower around 10 minutes later, changed and got new sheets and got back in bed. Around 330 I felt very hot again and opened the windows and got another ice pack for my arm which was throbbing again. I finally fell asleep after 3:45am. I got up for work at 6am. I felt slightly foggy, and very hot. But no fever. My temp is normally around 97.4-97.9 and it was 98.4. Still normal but I was running warmer than usual. It took a long time to get ready and despite hot water in the shower I was freezing. i got dress and debated going to work. Got in the car at 6:45 and my drive to work is 30 minutes. 1/2 way into my drive I got very sweaty again and went home to change my clothes because they were too warm. Got to work around 7:20 and still felt warm but they take our temps at the door and |

| | | | | | | | body aches; headache; coughing; fever; This is a spontaneous report from a contactable consumer. A 73-year-old female non-pregnant patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN) via unspecified route of administration on 20Feb2021, at 08:00 (at the age of 73-year-old) as a single dose for COVID-19 immunisation. The patient medical history included COPD, hypertension, hyperlipidemia, Osteoporosis, Spinal Stenosis, Syncope, tobacco use, neuropathy. Prior to the vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient concomitant medication included clopidogrel at a dose of 75 mg, irbesartan at a dose of 300mg, metoprolol at a dose of 50mg, pregabalin (LYRICA) at a dose of 100mg thrice a day, hydrochlorothiazide at a dose of 25mg, tramadol at a dose of 50mg, ibuprofen at a dose of 800mg as needed, duloxetine at a dose of 60mg, trazodone at a dose of 50mg, tiotropium at dose of 18ug, and albuterol [salbutamol sulfate] at a dose of (.5 - 2.5mg/3ml) (as reported). The patient previously took Tylenol, Wellbutrin, Steroids (high dose) and experienced allergy. The patient previously took historical vaccine, first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Lot Number: UNKNOWN) via unspecified route of administration on 30Jan2021 at 07:30 (at the age of 73-year-old) for COVID-19 immunisation. On 21Feb2021, at 04:00 the patient experienced body aches, headache, coughing and fever. The patient received ibuprofen 800mg as treatment medication to all the events. The outcome of the events was not recovered. Information about lot/batch number has been requested. |

| 1179224 | 4/8/2021 | TN | 85 | F | 2/10/2021 | 2/10/2021 | swollen lymph nodes after vaccination; If she accidentally picks up something or tries to pull on something with right arm she has excruciating pain; Right arm bicep muscle is so sore and is a hard knot; the muscles if you were going to make a muscle is very sore and hard/If I try to lift something too heavy, its excruciating pain; the day I got the shot, my hand became a little weak; This is a spontaneous report from a contactable consumer. A 85-years-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), dose 1 via an unspecified route of administration, administered in Arm Right on 10Feb2021 (Batch/Lot Number: EL9264) as SINGLE DOSE for covid-19 immunisation. Medical history included covid-19 from 21Dec2020, Stomach problem, Acid reflux, fatigue felt tired , little fever , historical allergies, Neuropathy , High blood pressure. Concomitant medications included atorvastatin; gabapentin for neuropathy peripheral,; cyanocobalamin (VITAMIN B12 [CYANOCOBALAMIN]) taken for an unspecified indication. The patient previously took codeine and experienced she almost passed out, demerol and experienced she almost passed out. It was reported arm that received the injection, "the muscles if you were going to make a muscle is very sore and hard". Caller says this is not the same area/muscle that the injection was given. the day I got the shot, my hand became a little weak. It went away. "Caller also says she had covid infection in Dec2020, This consumer was administered her first dose of Pfizer COVID-19 Vaccine 10Feb2021 at (Facility name). She had no problem whatsoever until 16Feb2021. Starting 16Feb2021 her right arm bicep muscle is so sore and is a hard knot; If she accidentally picks up something or tries to pull on something with right arm she has excruciating pain. She has no fever. She cannot get ahold of her doctor because their office is closed today due to the weather. She called to ask about these events; if she should put ice or heat on the affected area; how many Tylenol she should take for this. She initially reported that the affected area is the area of the muscle that you make, not in the backside muscle where the Pfizer COVID-19 Vaccine injection was administered; affected area is the front muscle, bicep that tightens when you flatten your hand forward and curl upward with the lower arm. If she raises her right arm up so far it's |

| 1179042 | 4/8/2021 | CO | 37 | M | 4/7/2021 | 4/7/2021 | within in minutes of the vaccine and while driving to the rest area almost fainted, started to black out, dizziness an hollow hearing/tinitus. Lasted for 10 mins and gradually subsided over 20 minutes |
| 1179041 | 4/8/2021 | CA | 32 | F | 4/5/2021 | 4/6/2021 | I had my vaccine Monday. On Tuesday morning I was nauseous and had diarrhea. I had a brief time where I felt very hot, sweaty, nauseous, my arms felt like pins and needles, and my hearing started sounding muffled or far away. I drank water, cooled down my arms and face as soon as I could, and laid down. I felt nauseous the rest of the day and today. I feel ok now. I've never fainted before I'm not sure if that was happening but it was completely unexpected and not listed on vaccine side effects. |
| 1178965 | 4/8/2021 | | 36 | F | 4/7/2021 | 4/7/2021 | Symptoms: Light headed, nausea, shaky and pain at injection site, history anxiety. History of nausea an syncope episode when getting any vaccine, asthmatic and didn't have any albuterol and baclofen today and didn't have it with her on site. Pain started at the injection site (left arm) and over 5-7 minutes the pain increase and radiated to the left clavicle. We pulled EMT from already on site to further evaluated cardiac concerns. EKG was normal that was performed by EMT on site. EMT administered: 4mg Zofran, 100 micro sublimaze for pain 1st VS: 158/110, RR 22-24, Oxygen 98%, pulse 88 15 minutes later 2nd VS: 150/110, RR 22-24, Oxygen 98%, pulse 88 Transported by EMT to hospital Will follow up with phone call tomorrow |
| 1178956 | 4/8/2021 | WA | 47 | F | 4/7/2021 | 4/7/2021 | SYNCOPE - PATIENT LOST CONSCIOUSNESS AFTER ADMINISTERING THE SHOT. PATIENT REGAINED CONSCIOUSNESS QUICKLY. NO FALL OR INJURY INVOLVED. |

| 1180648 | 4/8/2021 | MA | 49 | F | 4/8/2021 | 4/8/2021 | Patient reported that she felt light headed immediately following administration (2 to 5 minutes) and asked if we could get her some apple juice. She then bent over in her chair to get bloodflow back into her head, and reported that she felt as though she passed out during that time and requested to lay down on the floor. Once on the floor she said that she was beginning to feel better, but vomited a little when she was sitting back upright. Because she lives over an hour away, I stated I wanted to call EMS to get her checked out. EMS reported to the scene and evaluated her. She said she was feeling better, declined to go to the hospital, and walked around the store before leaving. |
| 1179352 | 4/8/2021 | CA | 17 | M | 4/7/2021 | 4/7/2021 | Systemic: Fainting / Unresponsive-Mild, Systemic: light headed, fainted after 5-10mins received vaccine-Mild, Additional Details: After received vaccine 5-10mins, he started feeling light headed, fainted. RN notified him to floor leftside, cold water to back of neck and forehead. BP: 91/66 -90/70, HR 91-85 when left side lying, BP 123/87, Hr 100 when sitting on floor. BP 122/85- 117/83, HR 99-95 when sitting in chair. He went home accompanied by his mother when feeling better. He has fainted in past with shots and blood draws |
| 1179720 | 4/8/2021 | IA | 54 | F | 4/7/2021 | 4/7/2021 | Janssen COVID-19 Vaccine EUA 5 minutes after receiving the shot, I was sitting in my car waiting for the 15 minute monitoring period, and I passed out. Help responded and I came out of it, and proceeded to vomit 4-5 times. Felt weak, dizzy, nauseous. My mom came to drive me home. Slept the rest of the morning and had some feeling of tightness in my chest in the late afternoon and evening. Thursday morning when I woke up, my arm was sore but I felt mostly better (still a bit of tightness in the chest). Did not seek medical attention at this time - just monitoring symptoms as of Thursday, 4/8/21. |
| 1180091 | 4/8/2021 | NY | 27 | M | 4/6/2021 | 4/6/2021 | Patient fainted immediately after getting vaccine. Pt reports that he has a history of fainting with vaccinations. He was reported to be unconscious for approximately 40 seconds. He was not injured and denied any other symptoms. He was released at 1:30 pm. |

| 1179620 | 4/8/2021 | IN | 23 | M | 4/6/2021 | 4/6/2021 | 5 minutes after the shot, I began experiencing severe hot flashes, sweating, paleness, and vasovagal syncope. This continued for 10-15 minutes while the fire department and physician on site checked my vitals. After being laid down at roughly 10 minutes after the shot, I began to regain consciousness. An ambulance was called, but was not needed. |
| 1179612 | 4/8/2021 | OH | 23 | F | 4/1/2021 | 4/1/2021 | Patient fainted approximately 10 minutes after receiving dose 1 of Pfizer covid vaccine LOT ER2613 on 4/1/21. She hit her head on the desk in the room. This was unwitnessed by any staff member. There were no bumps or open areas on patients head. Patient was immediately alert and oriented upon assessment when writer walked into room. After assessment advised patient she should go to the ED for further evaluation. Patient called her mom to come take her to the ED. Further follow up documents patient was not seen in ED. |
| 1179572 | 4/8/2021 | VA | 38 | F | 4/6/2021 | 4/7/2021 | 35 weeks pregnant, I had no side effects after first vaccine. Less than 24 h after second vaccination, began to experience mild chills and mild lightheadedness. Within 30 minutes of symptoms onset, I had a near syncope with transient hypotension with blood pressure measured 70/40. I required some assistance from coworkers before my husband was able to pick me up. Once home, symptoms evolved to fever over 100°F, chills, mild nausea, mild headache, and moderate to severe back, hip, and leg pain. Myalgias and joint pain particularly back pain 24-36 h after vaccination was debilitating and prevented sleep overnight. Symptoms as described in the context of acetaminophen use, 500-650 mg every 4-6h. |

| 1182691 | 4/8/2021 | NC | 26 | M | 4/8/2021 | 4/8/2021 | Patient came in for vaccine. After vaccination, I had patient sit in a chair in case of any adverse reactions. About 5 minutes after vaccination, another patient came over and said that was not feeling well. When going out to patient I noticed he was very pale and sweating. The patient then proceeded to pass out. I was able to hold the patients head and the other customer was able to hold his shoulders to make sure he did not fall out of the chair. The patient then got very stiff and proceeded to push back in his chair, after about 10 seconds he relaxed. The patient was passed out for about 3 mins, during that time I was able to remove his mask and hold his head. After gaining consciousness, I was able to make sure he was ok. We were able to give him some water and he stated he felt better. I asked the patient to stay for another half hour to monitor. After giving the patient another bottle of water, and having him sit he was able to get up and leave. |
| 1183071 | 4/8/2021 | CA | 65 | M | 4/8/2021 | 4/8/2021 | we administer Janssen Covid-19 Vaccine , 5 to 10 minutes later the patient fainted in the waiting area. the associate who is watching our patient notified me that the patient is dizzy. I went outside and I noticed that the patient is leaning on the table and he fainted i put him down on the floor and lifted his feet up. he woke up in few seconds we also called 911 and they took the patient to the ER |
| 1183059 | 4/8/2021 | HI | 20 | M | 4/8/2021 | 4/8/2021 | Patient briefly fainted after covid vaccination administered by pharmacy technician. Patient was sitting down. EMT arrive but patient refused ambulance transport to hospital. No anaphylaxis or other symptoms. |

| 1183057 | 4/8/2021 | NM | 29 | M | 4/8/2021 | 4/8/2021 | gave patient vaccination in designated vaccine area after going over possible side effects. vaccine was given in left arm. I asked patient if he felt ok to move to observation area. patient said yes and stood up and walked to observation area. he sat down and I told him I would be right back. I turned around and was walking back into the pharmacy when I heard a loud crash. I turned around and patient was slumped side ways about to fall out of chair. He had fainted or had a seizure (he was very stiff, redness to face, eyes open and fixed). I ran over to him and a pharm tech and I got him to the floor immediately. He regained consciousness within 5-10 seconds after placing him on floor. he asked how long was he out. he stated he had this seizure happen before but never after a vaccine. he said he has had multiple vaccines like hepatitis b and this never happened. he states it happens when he has something done to him that causes intense pain. he said it happened after hurting his ankle or when he hit his hand in a fan. checked his BP-172/100 pulse-65. paramedics came to check him out. BP still elevated. he walked out with paramedics. |
| 1183056 | 4/8/2021 | | 29 | F | 4/8/2021 | 4/8/2021 | Post-vaccine syncope. Patient recovered in observation. |
| 1183052 | 4/8/2021 | GA | 43 | F | 4/7/2021 | 4/7/2021 | Right at the time I got my vaccine. Three people in the group started fainting and having seizures immediately after. I had my vaccine at 1:46pm I wanted to report it since Im not sure the facility or nurses will. One you g lady fainted, then and old man passed out, then another young man in his 30s had a violent seizure. Even ripped his shirt. The organizers stopped the vaccinations until the ambulances left. I was left horrified, as was everyone else there. Im not sure what kind of poison. We have been injected with. Please send more information about the ingredients of this vaccine to me. Thanks |

| 1182878 | 4/8/2021 | NC | 31 | M | 4/8/2021 | 4/8/2021 | Patient is 31 year old male who came in today to get his Janssen Covid-19 vaccine. He came with his wife and father-in-law. He verbalized ahead of time that he has a history of fainting due to his fear of needles. He does not have any allergic reaction to vaccine components. After reviewing his PQCF and possible side effects of the vaccine, patient verbally consented to get vaccinated. I administered the vaccine into the deltoid muscle of his right arm. I gave him an ice pack. Right after the vaccine was administered patient said he felt fine. He relocated from the immunization booth to a Post Vaccine waiting chair with his wife by his side. He fainted into his wives's arms for about 30 seconds. His father-in-law helped place him on his back on the floor and we raised his legs up on a chair. Patient came to immediately when placed on supine position and said he just needed to rest. We called Code White and assistant manager came to the scene. Patient was conscious and verbalized that he was feeling fine but should just rest. Patient continued to use ice pack and rested for about 30 minutes. |
| 1182844 | 4/8/2021 | IL | 20 | M | 4/5/2021 | 4/5/2021 | About 3 mins after Janssen vaccine was given, pt was very white and faintish. I rushed out of pharmacy and had a tech call 911. As I was running to him pt started slipping out of his chair, as a women, who I later found out was his mother and I helped keep pt in chair as he fainted and then seized for about 2 seconds and then gained consciousness. Upon awakening pt said , what just happened?" The mother answered "oh you just had a little seizure, you're fine." To my surprise, I asked the mother is this has happened before and she said yes when he sees needles/get shots. I told them the ambulance was on it's why and the mother asked "why?!" I told her because your son just fainted/had a seizure and we want to make sure he is ok. The pt refused to go to the hospital. I did go back out there and mentioned to them that it is very important to answer questions truthfully any time they are asked as they failed to honestly answer our questions about ever feeling faint after receiving a vaccine. His blood pressure normalized and once the paramedics left so did they. |

| 1182717 | 4/8/2021 | | 23 | F | 4/6/2021 | 4/6/2021 | Client received the COVID vaccine (Janssen, Lot# 1808980) complained of feeling dizzy at 1424, EMT and RN responded. The client was sitting in a chair with her head in her hands, stated that she felt dizzy and was having a "hot flash." The client stated that she is anxious around needles and has a history of syncope after blood draws. She also complained of experiencing tunnel vision and hearing. The client's vital signs were a temperature of 96.7, blood pressure of 122/82, heart rate of 92, and O2 of 99%. The client stated she did eat that morning, and refused a set of repeat vitals, but agreed to wait 30 minutes for observation after her symptom onset. Per the client, she has no allergies or medical conditions, and takes no medications. At 1435, the client accepted some water to drink. At 1440, the client stated that she no longer felt dizzy. The client's color had returned and she was no longer dizzy. She agreed to have repeat vital signs at this time: blood pressure of 118/82, heart rate of 90, respiratory rate of 16, and O2 99%. The client refused benadryl at this time. At 1454, the client's vital signs were as follows: blood pressure of 116/82, heart rate of 90, respiratory rate of 12, and O2 of 99%. The client stated that she felt "back to normal" and called her sister to drive her home. She was escorted to her car by the EMT, she ambulated with a steady gait. Education provided regarding emergency response, V-safe, and the importance of following up with a primary care provider. |
| 1182699 | 4/8/2021 | WI | 32 | M | 4/8/2021 | 4/8/2021 | Patient had an episode of fainting about 10 mins after vaccine administration. after regaining consciousness he had rolling eyes and seizure and 2nd episode of fainting. The fainting episodes were for few seconds (30-45 sec). Patients feet were elevated and paramedics were called. while waiting for the paramedics we had patient drink water and orange juice as he was on diet and had taken only 300 calories per patient. Used cold compress on his face and neck, patient was comprehending well afterwards. paramedics arrived and examined the patients vital and asked if he would like to go to the hospital even though patient seemed fine. Patient denied going to the hospital and paramedics left afterwards. patient waited for 30 minutes afterwards and then left. we called the patient later and he was doing fine. |

| 1182011 | 4/8/2021 | MD | 35 | F | 4/6/2021 | 4/6/2021 | I got the vaccine, then was asked (due to having previous allergic reaction to Levaquin in the past, I was asked to wait 30 minutes) I got up and walked a total of 30 feet to sit in a chair. I felt completely normal, up until this point. I sat down and began to text my Mother that I had just got the vaccine & I was told to wait 30 minutes, at this point (2 mins in) I felt normal. I sat my phone down on my lap and was just looking about. I began at that point (2 1/2-3 mins mark) seeing the tile floor morph; the blue tiles and the green tiles kept merging together and forming one color. Then my heart raced, immediately and I started having hot flashes that shot out my ears. My heart raced even more and at that point I had realized something wasn't right. A National Guards member came up to me and had asked if I were okay, I explained I was not and something was not right. They took me to a medical area and made me take deep breaths, and made me drink some water. My BP was high, and my Pulse Ox had dropped slightly, and then went straight back to normal once they had asked me to stick my head between my knees and keep breathing deeply. Also, both of my ears had turned deep red/purple and they were VERY warm to the touch. They felt as if heat were tunneling out of them. The only way I can explain truly how I felt, and I have NEVER done it fully, I felt as if I was fainting. Out of nowhere I felt as if I was going to pass out ? but it didn't happen. The entire ?spell? lasted about 20 mins? I was monitored for an additional 40 minutes and was allowed to leave. |

| 1181769 | 4/8/2021 | FL | 56 | M | 4/8/2021 | 4/8/2021 | Pt. walked to the front of the Pharmacy from the post vaccination waiting area (4 feet) asking for help because he was dizzy. He was sweating and having shortness of breath. Pt. was taken to the seat where he fainted. Pt. was laid on the floor with his legs up in a step. He gained consciousness in less than 1 min. Pt was pale. Pt. was given an alcohol swab to smell. 911 was called. First responders took his blood pressure again and blood sugar. Uncle's pt. was called and came to the Pharmacy to pick him up to avoid pt. having to drive his car back home. |
| 1181889 | 4/8/2021 | RI | 32 | F | 4/6/2021 | 4/6/2021 | Immediately following the injection, felt immediate metallic taste in mouth, warm sensation from head to toe, lightheaded that almost lead to fainting (did not ever actually pass out), tachycardia... this lasted for about 5 minutes. Later that day I continued to feel flushed and had localized hives that went away on their own. |
| 1181879 | 4/8/2021 | SD | 17 | M | 4/8/2021 | 4/8/2021 | Shot given around 1125 am. Pt and pt's mother went to sit in front of pharmacy. At around 1135, pt fell out of chair, sounded/looked like he may have hit his head on blood pressure machine that he was sitting near. We thought he had fainted. Pt woke within 10 or so seconds after fall and was confused. Said his head didn't hurt. His skin did lose it's color and he was looking "white as a sheet". We had pt lie on floor and elevated his feet. After a few minutes he was feeling better and was able to sit in a chair. Pt and his mom left the pharmacy area about 15-20 minutes after pt fainted. Upon looking at video of the event, it appears that before the patient fell out of his chair that his right arm raises up and his elbow is bent in a very stiff way. A split second later his whole body appears to stiffen and bend to the left, then he falls out of the chair and is lying on the floor. When on the floor, his legs appear to be fairly stiff as well. This whole episode seems to last about 10 seconds or less. The video makes it look more like a seizure than a case of syncope. |
| 1181854 | 4/8/2021 | | 27 | M | 4/8/2021 | 4/8/2021 | Fainted and fell on the floor, non responsive for thirty seconds . |

| 1181838 | 4/8/2021 | CT | 33 | F | 4/8/2021 | 4/8/2021 | On 4/8/21 Physician was administering Covid-19 vaccines at our clinic in the lawn and garden center. She had a patient who was there to receive her first dose of the vaccine. After the vaccine was administered, she was okay and went to sit in the waiting area. Shortly later she came back up to the pharmacist table and reported feeling dizzy, lightheaded and nauseous. Physician then told the patient to sit right by her so she could keep a better eye on her. The patient said she was okay and then suddenly she passed out. Physician was able to catch her as she was falling out of the chair and was able to lay her down on the floor. She may have bumped her head slightly on the ground during this process. Physician then reports that the patient's breathing sounded labored, and the patient was not conscious. At that point Emergency department was called. Physician removed the patients mask and was preparing to administer an EpiPen due to the labored breathing but then the patient regained consciousness. The Emergency operator advised her to keep the patient on the ground until EMS arrived on scene. Patient was conscious and okay on the ground. EMS then came and took care of the patient. It was deemed that the patient gets lightheaded when she gets bloodwork done usually and believes this may have been an anxiety event. She did not want to go to the hospital. She felt a bit dizzy once she was sitting back upright and EMS approved the patient drinking some water. This seemed to help, and the patients color came back. The patient sat with Physician for a while and then felt back to normal and left on her own accord. |
| 1181785 | 4/8/2021 | MI | 17 | F | 4/8/2021 | 4/8/2021 | Patient fainted. She faints after all immunizations according to her and her father. She was fine, laid down, raised feet, ice pack on forehead/neck. She rested and left after 15 minutes |
| 1181669 | 4/8/2021 | NY | 21 | M | 4/6/2021 | 4/6/2021 | Patient became dizzy and lightheaded with blurred vision after receiving first dose of Pfizer vaccine. Patient stated he had a history of dizziness and fainting from shots. He also stated he had not eaten that morning. Patient laid down for 15 minutes. Vitals were monitored and improved. He refused transport and left clinic on his own. |

| 1181768 | 4/8/2021 | PA | 50 | F | 3/3/2021 | 3/10/2021 | Dizziness began 7 days after first dose and as of 5 weeks later still has not stopped. Lightheaded every day, sometimes heavy dizzy spells. Almost fainted once. The lightheadedness sometimes clears after a short walk outside, but then returns the next day. I was completely fine and extremely active physically up until receiving the first dose. In addition to the dizziness, my energy has been effected. It took an extreme downturn 5 days after the first dose. I have not regained my normal health or routine since receiving the first dose. |
| 1181729 | 4/8/2021 | MI | 23 | F | 4/8/2021 | 4/8/2021 | Patient experienced light headedness and felt as if she was about to faint. she had to sit down on the floor because she could not stand. This occurred about 5 minutes after administration of the vaccine. prior to receiving the vaccine the patient stated that they have had a history of fainting when she sees needles. patient was offered water for hydration, and given a cold rag and water bottle to put on her face and neck. Patient was advised to sit with her chest down to her thighs. after about fifteen minutes the patient felt better and wanted to go home with her mother |
| 1181716 | 4/8/2021 | WI | 67 | F | 4/6/2021 | 4/7/2021 | Woke with body aches, 102.6 fever, horrible headache. Lasted the whole day after injection. Around 5:30 pm I started feeling woozy and passed out. Neighbor couldn't bring me around. 911 was called. I started vomiting and very nauseous by 6:00 pm. All vitals were ok by medics. I went in my house, went to sleep and woke the next day fine. Wasn't sure about the passing out and vomiting, nor the fever for the day being normal. |

| 1183370 | 4/8/2021 | OR | 20 | F | 4/6/2021 | 4/6/2021 | Immediately after the vaccine was injected, I felt like I got slugged in the arm. I also had a momentary hot flash. Then, I went to go sit in the waiting area, and I continued to get warmer and warmer. After 5 minutes, I went up to the front desk, and told them I didn't feel well and that I felt like I was overheating. They put me in a wheelchair, and I immediately passed out and hallucinated for a minute or two. I felt incredibly weak, and I had sweat completely through my shirt. A paramedic came and put me in a stretcher in a cornered off area of the clinic. After 30 minutes or so, I started feeling better, but I got several spurts of cold flashes. All of my vitals came back normal. |
| 1181937 | 4/8/2021 | | 58 | F | 4/3/2021 | 4/3/2021 | Patient with known fear of needles reported lightheadedness and fainted after receiving her vaccine. She was seated at the time, and was guided from chair to floor by her husband. She did not sustain any trauma and did not lose consciousness. After several minutes, she transferred independently to a chair and remained under observation for 30 minutes. She reported all symptoms resolved, she left the clinic independently |
| 1182526 | 4/8/2021 | | 23 | F | 4/8/2021 | 4/8/2021 | 20 minutes after receiving vaccine patient walked up to pick up counter to tell someone she did not feel well-sweating and headache. Patient could not speak and passed out. EMS was called and responded. Vitals checked out ok. Patient was not transported. Patient's mom was called and came to pharmacy. Patient rode home with mom. |
| 1181752 | 4/8/2021 | GA | 38 | F | 12/21/2020 | 1/12/2021 | I experienced hypersensitivity, arm pain dizziness, chills, and joint pain after my second dose vaccine after 24hours. I went to the ER twice because I almost passed out. On 03-15-21, went to the ER, was told I was dehydrated. At the ER labs were elevated also MRI and CT scans were performed. I was placed on steroids for ten days. For two weeks I could not do my normal activities. I saw my endocrinologist. I felt so sick and had to ask for time off at work. I was told to follow up with my endocrinologist. |

| 1182634 | 4/8/2021 | KY | 37 | M | 4/8/2021 | 4/8/2021 | This morning I gave a patient a moderna vaccine. During administration the patient expressed his fear of needles. After the vaccine I asked the patient to have a seat and wait in the waiting area for 15 minutes. He went and sat down for just a couple minutes and stood up to look for his spouse and when he stood up he passed out and hit the floor face first. I ran out there to check on him and he was unresponsive and bleeding a lot. My team immediately called 911. I started tapping him and slightly shaking him and after a few minutes he woke up. He told me the only thing he remembers is feeling dizzy then woke up on the floor. EMS showed up a few minutes later and took the patient to the hospital. |
| 1182642 | 4/8/2021 | | 25 | M | 4/7/2021 | 4/7/2021 | Patient passed out |
| 1182615 | 4/8/2021 | CA | 18 | M | 4/8/2021 | 4/8/2021 | Patient at Vaccination table, just received dose of vaccine when patient's arm went limp. Also developed generalized weakness. Mother stood in front of him and held his head with both hands. Patient then passed out with eyes rolling in back of head. Also had convulsions for a few seconds that mimicked seizure. Patient soon became alert. Vitals obtained with BP 92/52, HR 34, O2 96% on RA. Patient also diaphoretic to touch. EMS activated and arrived at 1:30pm. Placed in reclining wheelchair and taken to private area. Started to feel better after given cold water. Suggested ER due to having seizure first time. Declined ambulance but mother will take to ER in private car. Patient and mother left with no further incident. |

| 1182293 | 4/8/2021 | KY | 22 | M | 4/8/2021 | 4/8/2021 | Patient left pharmacy and passed out on the sidewalk. Unknown if vaccine or fall caused Nausea, Headache, Memory loss. |
| 1182294 | 4/8/2021 | CO | 35 | F | 4/8/2021 | 4/8/2021 | I really think this was a result of my anxiety regarding needles rather than from the actual vaccine. I have had fainting spells after blood draws. After about 5 or 10 minutes from receiving the shot I started feeling warm and nauseous. The on site nurse came over and I did vomit. I felt better almost instantly. She was wonderful, but had me stay in the supervision area for an additional 20 minutes to make sure I didn't have any more nausea or other symptoms. |
| 1182309 | 4/8/2021 | | 42 | M | 3/11/2021 | 3/11/2021 | Patient received Janssen lot#1805020 with expiration of 05/25/2021 at 1420 sitting in upright chair. Vaccinator was notified that he has a history of vasovagal response with needles. This response presents itself as sweating (and possible fainting) and is alleviated by lying down. Client mentioned that previous nurse advised him to smell an alcohol pad to distract and prevent a vasovagal response, as this had worked previously on a glucose check. No medications were disclosed or history of anaphylaxis reported. With this background information, RN offered to have vaccine administered in reclined position, however client refused. RN conferred with co-lead about administration recommendations. Vaccinator then checked in with patient at 1423 to see if patient was okay and patient did not answer the question. RN then felt the client's hand and noticed hand was clammy. At 1425 the reclining chair was brought to the station and patient was transferred into chair, appearing diaphoretic. RN palpated pulse and noted patient was not tachycardia, but RN did note tachypnea and uneasiness. RN then provided distraction and promoted relaxation. Then at 1426 patient reported feeling okay and RN noted patient no longer felt clammy. At 1440 patient was asked if he would prefer if EMS should be called, patient declined and stated that he was able to drive home. Then at 1447 patient left the site appearing well, alert and oriented x3 leaving by self in private car. |

| 1176117 | 4/7/2021 | | 38 | M | 4/7/2021 | 4/7/2021 | The patient experienced syncope and fell out of chair. The patient was unconscious for about 15 seconds. The patient was observed in medical tent and had two episodes of bradycardia and fainted twice more. The patient was transported to Hospital. |
| 1176116 | 4/7/2021 | NV | 47 | M | 4/6/2021 | 4/6/2021 | Patient received the vaccine. Immunizing tech stated: the patient seemed fine at the time of the shot. After administration of the shot the patient began to bleed out of injection site (like normal). The immunizing tech swabbed the area with cotton and placed a Band-Aid on the patient then stepped back into the pharmacy to grab another band aid while the patient remained at the immunization chair. The tech applied another band aid and told the patient to wait 15 minutes after the immunization and directed him to a waiting chair. The tech came back into the pharmacy and was cleaning the immunization basket when the patient's wife yelled for help. At this point I went out to the patient. Another tech called 911, another grabbed a nearby EpiPen. The immunizing tech grabbed the e-kit while I was out with the patient while he was unresponsive. Patient was unresponsive and slouched in chair. His wife and I supported the neck of the patient and laid him on the floor. I checked pulse and breathing to which both were present. Patient was still unresponsive and making strange movements. Pulse and breathing remained present and then the patient became responsive relatively quickly. At this point patient responsive and answering questions and moving fine. He asked if he had passed out then stated, he had a phobia of needles and said he felt nauseated. (wife previously stated he had a fear of injections). Soon after the ambulance showed up and I told the paramedics the above story. After a few more minutes I checked in with the paramedics and they said the patient was doing fine. Lastly, he was taken out of store with paramedics. |
| 1176190 | 4/7/2021 | MD | 57 | F | 3/17/2012 | 3/18/2021 | Vasovagal syncope: suddenly felt extremely sick the next morning. Went to bathroom, thought I might vomit. Passed out, hit face on floor, needed stitches in brow and chin, split lip, broke tooth. The sick feeling lasted maybe 10 minutes before passing out. Did not notice it again after regaining consciousness. |

| 1175028 | 4/7/2021 | CA | 59 | M | 2/19/2021 | 3/18/2021 | 3 days of intense diarrhea, lost about 10 pounds; Weak, no appetite, lethargic, sleeping a lot; Still just don't have the energy to this day; Chills all the time, fever of 102 for 5 days - went up every time after eating; Friday, got worse, by afternoon, was in bed. Got up to use restroom, next thing I remember was that I was on the floor and could not get up; Thursday, started not feeling great; 3 days of intense diarrhea, lost about 10 pounds; Chills all the time, fever of 102 for 5 days - went up every time after eating; This spontaneous case was reported by a consumer (subsequently medically confirmed) and describes the occurrence of SYNCOPE (Friday, got worse, by afternoon, was in bed. Got up to use restroom, next thing I remember was that I was on the floor and could not get up) in a 59-year-old male patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch nos. 040A21A and 023M20A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No medical history reported). Concomitant products included ESCITALOPRAM OXALATE (LEXAPRO), LEVOTHYROXINE SODIUM (SYNTHROID) and FINASTERIDE for an unknown indication. On 19-Feb-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 16-Mar-2021, received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) dosage was changed to 1 dosage form. On 18-Mar-2021, the patient experienced FEELING ABNORMAL (Thursday, started not feeling great). On 19-Mar-2021, the patient experienced SYNCOPE (Friday, got worse, by afternoon, was in bed. Got up to use restroom, next thing I remember was that I was on the floor and could not get up) (seriousness criterion medically significant). On an unknown date, the patient experienced DIARRHOEA (3 days of intense diarrhea, lost about 10 pounds), WEIGHT DECREASED (3 days of intense diarrhea, lost about 10 pounds), ASTHENIA (Weak, no appetite, lethargic, sleeping a lot), DECREASED APPETITE (Weak, no appetite, lethargic, sleeping a lot), LETHARGY (Weak, no appetite, lethargic, sleeping a lot), HYPERSOMNIA (Weak, no appetite, lethargic, sleeping a lot), ASTHENIA |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

(Still just don't have the energy to this day), CHILLS (Chills all the time, fever of 102 for 5 days - went up every time after eating) and PYREXIA (Chills all the time, fever of 102 for 5 days - went up every time after eating). The patient was treated with Bed rest for Feeling abnormal. At the time of the report, SYNCOPE (Friday, got worse, by afternoon, was in bed. Got up to use restroom, next thing I remember was that I was on the floor and could not get up) and DIARRHOEA (3 days of intense diarrhea, lost about 10 pounds) had resolved and FEELING ABNORMAL (Thursday, started not feeling great), WEIGHT DECREASED (3 days of intense diarrhea, lost about 10 pounds), ASTHENIA (Weak, no appetite, lethargic, sleeping a lot), DECREASED APPETITE (Weak, no appetite, lethargic, sleeping a lot), LETHARGY (Weak, no appetite, lethargic, sleeping a lot), HYPERSOMNIA (Weak, no appetite, lethargic, sleeping a lot), ASTHENIA (Still just don't have the energy to this day), CHILLS (Chills all the time, fever of 102 for 5 days - went up every time after eating) and PYREXIA (Chills all the time, fever of 102 for 5 days - went up every time after eating) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): In March 2021, Diagnostic procedure: all normal (normal) All normal. The patient has taken acetaminophen (TYLENOL), loperamide (IMMODIUM), and an unspecified prescription nausea medication to alleviate his discomfort. The patient saw a doctor who ran unspecified tests and they were all normal. This case was linked to MOD21-065196 (Patient Link).; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.

| 1175169 | 4/7/2021 | ME | 70 | F | 3/5/2021 | 3/6/2021 | fatigue; mild diarrhea; abdominal pain; gas; runny nose; diarrhea with blood; Sneezing; watery eyes; orange bowel movement; near syncope; lightheaded/lightheadness; chills; body aches; decreased appetite/poor appetite; This is a spontaneous report from a contactable Other-HCP (healthcare professional) in response to HCP letter sent in cross reference case. A 70-year-old female patient received the second dose of BNT162B2 (COVID-19 MRNA VACCINE BIONTECH; Lot Number: EN6201) intramuscularly on 05Mar2021 (at the age of 70-years-old) as a single dose in the deltoid left for COVID-19 immunisation. Medical history included ongoing HTN (hypertension; onset date: years ago; pertinent details: well controlled) from an unspecified date and menopause from an unspecified date and unspecified if ongoing. Concomitant medications included ongoing hydrochlorothiazide orally taken for HTN from an unspecified date, ongoing estradiol benzoate (ESTRADIOL) vaginal taken for menopause from an unspecified date and ongoing multivitamin orally taken for health maintenance from an unspecified date. The patient previously received the first dose of BNT162B2 (COVID-19 MRNA VACCINE BIONTECH; Lot Number: EL9261) intramuscularly on 12Feb2021 as a single dose in the deltoid left for COVID-19 immunisation and experienced sore arms and should injury. Prior vaccinations were reported as none. On 07Mar2021 the patient experienced diarrhea with blood (medically significant), sneezing, watery eyes, orange bowel movement, on 06Mar2021 the patient experienced near syncope, lightheaded/lightheadness, chills, body aches and decreased appetite/poor appetite, on 08Mar2021 the patient experienced fatigue, mild diarrhea, abdominal pain, gas and runny nose. It was reported that the event near syncope was non-serious, did not require treatment. It was also reported that the events near syncope and diarrhea with blood required a visit to the emergency room. The clinical course was reported as follows: "05Mar2021 Vax. 06Mar2021- Lightheadedness onset day after COVID vax #2. Lightheaded, chills, body aches, decreased appetite. 07Mar2021- Sneezing, watery eyes, orange bowel movement, poor appetite, diarrhea with blood. To ER. 08Mar2021- Fatigue, poor appetite, mild diarrhea, abdominal pain and gas, sneezing, runny nose. 09Mar2021- Improved." The patient underwent lab tests |

| 1174035 | 4/7/2021 | FL | 67 | M | 1/26/2021 | 2/1/2021 | Lightheaded; almost fainted; dizzy; dizziness; Almost passed out; Very light headache; This is a spontaneous report from a contactable consumer (patient). A 67-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Lot Number: EL9263), via an unspecified route of administration in left arm (shoulder), on 26Jan2021 at 12:00, at a single dose, for COVID-19 immunization. The patient's medical history included blood pressure, acid reflux, and multivitamin. The patient's concomitant medications included amlodipine for blood pressure, esomeprazole for acid reflux, and ascorbic acid/ biotin/ boron/ calcium/ calcium pantothenate/ chloride/ chromium/ colecalciferol/ copper/ cyanocobalamin/ folic acid/ iodine/ lycopene/ magnesium/ manganese/ molybdenum/ nickel/ nicotinamide/ phosphorus/ phytomenadione/ potassium/ pyridoxine hydrochloride/ retinol acetate/ riboflavin/ selenium/ silicon dioxide/ sodium metavanadate/ thiamine mononitrate/ tocopheryl acetate/ xantofyl/ zinc (CENTRUM SILVER ADULTS 50+) as multivitamin, all were ongoing; omeprazole for acid reflux; and an unspecified multivitamin. The patient really had no issues going on prior to onset of these events. The patient has been administered both first and second doses of Pfizer-BioNTech COVID-19 vaccines. The patient had been having some strange things that he didn't know if its COVID-19 shot related but they're symptoms he never had before. About 8 to 11 days after first dose of the vaccine (Feb2021; maybe 09Feb2021 or 10Feb2021), the patient had a very, very lightheaded episode where he almost passed out or almost fainted. The patient clarified he thinks one event was like 8 days and the other was like 10 days after the vaccine doses were administered, but is not sure, so left it as about 8 to 11 days. Also, in Feb2021, the patient had almost a very light headache where he almost fainted. The patient went to the emergency room in Feb2021 and was admitted to hospital from about 13:00 that day, overnight and discharged about 17:00 to 18:00 the following day. The patient spent the night in hospital, they sent him the next day. While in hospital (Feb2021), the patient had electrocardiograms (EKGs) of his head (as reported), magnetic resonance imaging (MRIs) of his head, computed tomography (CTs; CT scan with contrast) of his head, and echocardiograms of his heart |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

(microcardiogram). All of those tests came back normal (okay), nothing abnormal on results. They were relating this to a stroke-like symptom; however, the results were normal, also his blood test results were fine. The patient had blood work done the first time he was in the emergency room when he was admitted to the hospital in Feb2021; they took his blood 3 to 4 times while he was there overnight and blood work results all came back normal. The patient was not sure what they were testing for, but thinks they were looking for stroke type things because the event almost made him pass out. They did not draw more blood the second emergency room visit. Because of the first episode, the patient then went to his family doctor and the doctor ordered some other testing done. The patient was scheduled to get a nuclear stress test and an exercise stress test (stress test of heart), his results on 10Mar2021 came back normal (not performed until after the second reported event following second dose of Pfizer-BioNTech COVID-19 Vaccine). The patient believed that the results of those tests both came back good, family doctor emailed him the results which were normal. The patient was continuing to have some lightheaded episodes or symptoms just about daily but nothing really; continued to have symptoms which was not normal for him. Sometimes, they last for 30 minutes or more, multiple times a day. Sometimes, the patient had a good day, but he had those lightheaded episodes and he never had it before he got the shot. As therapeutic measures in the hospital, the emergency room gave the patient something for dizziness when he was there, but he was no longer taking it. Currently, the patient was really taking nothing. The patient had also gone to the ear, nose, and throat (ENT) doctor where he had a balance test or a videonystagmography (VNG) test done on 17Mar2021. The patient will get results of balance test on Wednesday (24Mar2021). Every year (unspecified), the patient goes and get his yearly test in which they had his blood work done and this and his glucose levels were always good, cholesterol level was always good. All the patient's other tests come back as normal on an unspecified date. The patient had never had these symptoms before, he hasn't changed his medications or habits and it's odd that this happened 9 to 10 days after both doses of the vaccine. The patient would like to know if this has been reported before as a

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

side effect related to the vaccine. The patient was not sure if the events are Pfizer-BioNTech COVID-19 Vaccine related, but they never happened to him before those doses were administered. He does not know if this is vaccine related or just coincidence that they popped up at the same time as the vaccine doses. Also, he does not know if events could be age related, the medical community can't figure it out so he is trying to get information on if events could be related to the vaccines. So the patient doesn't know if anybody else is reporting this but he had 2 sorts of severe episodes both of them around days after each shot and he was continuing to have lightheaded episodes but not severe as those 2 but he had lightheaded (dizzy) episodes daily, since the COVID-19 vaccine. But they didn't know what brought these episodes on, other than timing wise it was during the COVID-19 shot. And he never had anything like that, and he was not blaming it on the COVID-10 shot. That was the only thing changed in his lifestyle. There might be a possibility, because that's the only thing changed, his medication has not changed, and diet doesn't change. Nothing has changed other than the patient got COVID-19 shots. The patient wanted to report it, so the company had a report file and other people reporting it. The patient wanted to know if the company was having any other report or something like this so that he would know if it might be related to the shot. The patient had not recovered from "Lightheaded; almost fainted; dizzy; dizziness". The outcome of the other events was unknown.

| 1173813 | 4/7/2021 | NJ | 59 | M | 3/19/2021 | 3/19/2021 | passed out; i may have had a TIA; This is a spontaneous report from a contactable consumer (patient). A 59-year-old male patient received the first dose of bnt162b2 (BNT162B2, Lot number and expiry date were not reported), via an unspecified route of administration, administered in left arm on 19Mar2021 11:15 (at the age of 59-year-old) at single dose for COVID-19 immunization. Medical history included high blood pressure. The patient had no known allergies. Concomitant medication included losartan. No other vaccine in four weeks. No COVID prior vaccination. On 19Mar2021 11:15 AM, the patient immediately passed out and was taken by ambulance to hospital. They said that he may have had a TIA (even though the CT scan and MRI were clean). The patient will not get the 2nd vaccine because of his reaction. The adverse events resulted in Emergency room/department or urgent care, Hospitalization. He was hospitalized on 19Mar2021. The patient had nasal swab test on 19Mar2021 with negative result. The patient received treatment for the events. The outcome of the events was recovering. Information on the lot/batch number has been requested. |
| 1176939 | 4/7/2021 | IA | 51 | M | 4/6/2021 | 4/6/2021 | Patient became anxious and passed out. ambulance called and performed evaluation of patient at that time he informed EMT that this had happened with previous vaccine |
| 1175110 | 4/7/2021 | IL | 67 | F | 3/29/2021 | 3/29/2021 | Approximately three hours after receiving the vaccine I became nauseated. I had been sitting with my legs extended, as I attempted get up from the chair I experienced a severe cramp to my left anterior leg and my knee was locked. After several minutes I was able to stand and the cramp subsided and my knee was no longer locked. As I began walking I became extremely hot and sweaty and felt light headed. I then fainted. No injury, with my husband's help and the wall I eased to the floor. After approximately 30 seconds I was able to get up and walk an additional eight feet to my bed. I still felt nauseated, hot and sweaty for 10 minutes longer. This sequence of events lasted about 15 minutes. I then felt fatigued and slept for 45 minutes. When I woke up I felt fine. |

| 1174986 | 4/7/2021 | OH | 58 | M | 4/4/2021 | 4/6/2021 | I woke at 6:30am on 04/07/2021 in a state of complete confusion and disorientation. It was a level of disorientation I have never experienced before in my lifetime. I fainted one time and was having extreme difficulty getting my bearings and walking and was simply in total "mental disarray". I was having difficulty producing words, a prolonged stutter, you might say. I was shaking. The local paramedics came and I was taken to the local ER. Because I was having difficulty speaking, the paramedics (and later the physicians) thought I might have had a TIA. An MRI on 04/07/2021 at 5pm produced a negative result. So i can only attribute my reaction to the vaccine. It was very significant, and i thought it made sense to report it. |
| 1175503 | 4/7/2021 | IL | 38 | M | 4/7/2021 | 4/7/2021 | Patient got very faint and passed out. Patient came to shortly after. 911 was called and they took patient to hospital. |

| 1175727 | 4/7/2021 | NY | 25 | M | 4/7/2021 | 4/7/2021 | He was ok right after administering vaccination. 10 minutes later he stood up and said he was feeling hot and collapsed on the floor. Seemed like he was having difficulty in breathing. Called 911 and administered chest compressions. He was partially alert during chest compressions and after 2 minutes of administering chest compressions he gained full consciousness and requested me to stop chest compressions and requested an ice pack to place on his forehead and also requested some electrolyte drink and they were provided. He sat up on the floor after a few minutes. He also said this fainting happens to him all the time when he gets any shot (injection). He was responsive and sat on a chair until paramedics arrived. on arrival they asked his couple of questions and checked his blood pressure and monitored his heat for a few minutes. He left with paramedics about 30 minutes from the time of vaccination. |
| 1175723 | 4/7/2021 | PA | 46 | M | 4/7/2021 | 4/7/2021 | Patient had 2 syncope episodes |

| 1175171 | 4/7/2021 | CA | 46 | F | 3/9/2021 | 3/9/2021 | patient fainted as lost consciousness; patient fainted as lost consciousness; patient urinated in her pants; Felt dizzy after 12 hours; patient had problems with concentrating; massive headache; This is a spontaneous report from a contactable consumer (patient). A 46-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 1 via an unspecified route of administration, administered in Arm Left on 09Mar2021 09:30 (lot number: 1; pending clarification) at the age of 46 years old, as single dose for covid-19 immunization. Medical history included allergy to metals (titanium metal). Concomitant medications were none. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. No other medications received within 2 weeks of vaccination. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. On 09Mar2021 21:00, the patient experienced massive headache. After 12 hours (09Mar2021 21:30), the patient felt dizzy. On 10Mar2021, around 10 am, the patient fainted as lost consciousness, urinated in her pants and had problems with concentrating. No treatment was given for the adverse events. Since vaccination, the patient has not been tested for COVID-19. The patient was recovering from all the events. |

| 1175510 | 4/7/2021 | NY | 16 | F | 4/7/2021 | 4/7/2021 | <p>Patient presented for her first COVID-19 vaccine. Approximately a minute after vaccine was given, she was noted to be seated upright in the passenger seat of her car, with head bent forward and eyes open. She was unresponsive, stiff posture, and was placed into a reclined position. She then had some posturing with head turned to the left, no eye deviation or nystagmus, no tonic-clonic movement. Radial pulse was thready, bradycardia was noted, with normal respirations. She was noted to become diaphoretic and pale/ashen color noted to the face and arms. She became responsive within a few minutes, however initially was not able to answer questions clearly. She had no loss of bowel or bladder function. EMS assisted with evaluation. Initial blood pressure 78/31, HR 54, SpO2 100%. EMS then transferred her to the stretcher and she was transitioned from her car to the ambulance. She continued to improve spontaneously with BP 94/61 then 103/60 and HR 86 then 74. SpO2 remained stable at 100%. Skin color improved. She had normal responses to questions, no complaints of headache, dizziness, chest tightness, shortness of breath, numbness or tingling. She had some shaking/voluntary movement of the limbs and body noted, but she could control and stop this voluntarily, no myoclonic or tonic-clonic jerking noted. After syncopal event occurred, mom reported that the patient has a history of syncope routinely with blood draws and vaccines in the past, however this episode was slightly more prolonged and seizure-like activity was different. She has had some jerking movement previously with syncope which lasts 20-30 seconds, different from today's response. No known history of seizure disorder.</p> |

| 1175192 | 4/7/2021 | TX | 52 | F | 3/12/2021 | 3/12/2021 | fainting; dizzy; tachycardia; high blood pressure; then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head; then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head; then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head; then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head; then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head; This is a spontaneous report received from a contactable nurse (patient). A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), intramuscularly on 12Mar2021 at 09:30 (at the age of 52 years) at a single dose in the left arm for COVID-19 immunization. The patient medical history and concomitant medications were not reported. The patient had no allergies to medications, food, or other products. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. The patient was not pregnant at the time of vaccination. On 12Mar2021, the symptoms the patient had were fainting, feeling dizzy, tachycardia, high blood pressure, then numbness to left side of face swelling then progressed to left arm left leg with excessive pressure to head. The events resulted to doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. The patient did not receive any treatment for the events (as reported). Since the vaccination, the patient has not been tested for COVID-19. The outcome of the events was recovered with sequel in Mar2021. Information on the lot/batch number has been requested.; Sender's Comments: A contributory role of BNT162B2 to event fainting cannot be excluded based on temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. |

| 1175274 | 4/7/2021 | MN | 41 | F | 4/6/2021 | 4/6/2021 | Patient had checked "yes" to the question about fainting, light-headedness, dizziness from previous immunizations so healthcare worker was aware of the situation. Healthcare worker told her to remain seated in her chair and to wave if she felt any issues arise. Right after the immunization she was fine, able to walk to the chair directly outside of pharmacy for observation. Approximately 5 minutes into observation, she waved healthcare worker down, healthcare worker immediately went to talk to her about her symptoms, healthcare worker grabbed an ice pack, while breaking the ice pack, patient fainted while she was sitting in the chair, healthcare worker held her head up to ensure proper breathing and spoke to patient, she came back after about 30 seconds, which is when healthcare worker assisted the patient in moving to the ground and putting her feet up. Healthcare worker or a pharmacy technician remained with the patient until her husband arrived. It took her husband approximately 25 minutes to get to the pharmacy, during that time healthcare worker did ask the patient if she wanted medical attention and she declined, knowing the feeling would subside. It did take her approximately 30 minutes to feel comfortable enough to sit up. Her husband took her out in a wheel chair. |

| 1178095 | 4/7/2021 | OH | 64 | F | 4/2/2021 | 4/3/2021 | On 4/3/21 at 7 AM, I tried to get up to brush my teeth, but was unable to stand. I sat down in the chair in front of my sink and called for my husband. I was very hot and sweaty. When my husband got to me I had passed out, unresponsive and was very pale. After 5 minutes I was able to respond to him. He asked if I could sit up. I said no so he put me back in bed. After 2 hours of sleep, I was able to get up and dress. I rested the rest of the day but checked and found that I had a fever of 99.6F. The fever lasted the day and was gone the next morning. The next morning I was OK. |
| 1178275 | 4/7/2021 | FL | 69 | F | 3/2/2021 | 3/2/2021 | Mild syncope; Mild syncope; Low grade fever; Arm soreness 1st 24 hours; This is a spontaneous report received from a contactable consumer (patient). A 69-year-old female patient received second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot: EN9581), via an unspecified route of administration in left arm on 02Mar2021 13:30 (at the age of 69-years-old) as single dose for covid-19 immunisation. The patient was not pregnant at the time of vaccination. The patient's first dose of bnt162b2 (lot not reported) (at the age of 68-years-old) in left arm on 01Feb2021 at 14:00 for Covid 19 immunization. The facility where the most recent COVID-19 vaccine was administered was reported as other. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. The patient did not have other vaccines within 4 weeks prior to the COVID vaccine. Medical history included mild syncope episodes and pacemaker. The patient had no allergies to medications, food, or other products. Concomitant medications included alondranate, calcium, metropolol and an unspecified multi vitamin. The patient experienced arm soreness in the first 24 hours on 02Mar2021. Mild syncope and low grade fever 20 days after dose 2 (on 21Mar2021 at 13:00). The treatment received for the adverse events was paracetamol (TYLENOL). The outcome of all events was recovered on 03Mar2021 for pain in extremity and in Mar2021 for the rest of the events. |

| 1178219 | 4/7/2021 | CO | 67 | F | 4/2/2021 | 4/3/2021 | Vasovagal syncope - occurred about 3-5 minutes after administration. Patient slouched in chair, eyes rolled back slightly and patient was snoring. Patient was guided to the floor by pharmacist and significant other and regained consciousness after just a few moments. Patient was unaware of what happened. Patient was given water and remained lying on the floor for a few minutes and then was able to sit up and recover. |
| | | | | | | | At 1 AM on 4/3/21, I got up to take some Tylenol since I woke up feeling like I had a temperature. I walked to the kitchen (which isn't very far) and had an extreme feeling of overwhelming weakness and fainted. (only fainted one other time in my life). I hit my head and eye and now have bruising from my hairline and down my cheek on my right side. My eye and eye lid are black and blue. I had 101 temp and chills and body aches. Immediately starting vomiting and had diarrhea for 6 hours. Had a temp of 100 the whole day of 4/3/21. Then 99.5 on 4/4 and 4/5/21 and still tired and achy. By 4/6, I felt better. Although my symptoms were just a few days, I would have never taken the second Moderna shot, in hindsight. In fact, lots of people I know have had strong reactions to the second Moderna vaccine. I have to say I have never gotten so sick so fast in my life. No way to fight it - I felt took weak and vulnerable. |

| 1177782 | 4/7/2021 | GA | 32 | M | 4/4/2021 | 4/7/2021 | The patient got up from the vaccine and sat in the chair. He felt faint and his mother put him on the floor. She immediately contacted the pharmacist and the pharmacist checked his pulse and talked to him. His mom wanted him to be seen at the hospital so 911 was called and the ambulance took him to the ER. He never passed out only felt like he was going to. He felt better at the time he was taken away in the ambulance. |
| 1178121 | 4/7/2021 | TN | 51 | M | 4/7/2021 | 4/7/2021 | Patient passed out and fell out of chair after receiving his second dose. He hit his head when he fell. We called 911 and he was transported to our local hospital. I spoke with his brother and he was released and doing ok. |
| 1178349 | 4/7/2021 | SC | 22 | M | 4/7/2021 | 4/7/2021 | Patient immediately felt light headed and notified immunizer. He then quickly fainted. Pharmacist and technician carefully lowered him from the chair to the floor and laid him on his back. Pharmacist quickly checked for a pulse and removed his mask. Patient came to within 10 seconds and pharmacist then elevated his legs using a chair. Patient remained laying on the floor for 10 minutes and then felt ready to sit up. After sitting up, patient was given a cold water to drink and a snack, and remained under pharmacist's supervision for 30 minutes. Patient then felt back to his normal self and felt confident he could safely leave the pharmacy. |

| 1178058 | 4/7/2021 | PA | 26 | F | 4/7/2021 | 4/7/2021 | A few minutes after being vaccinated patient was sitting for her 15 minute observation period and walked over to the pharmacy counter stating "I just got my vaccine and I really don't feel well" the pharmacist approached the patient and caught her under both arms from behind her back as the patient fainted. Patient did not hit the ground or injure herself-she did not lose consciousness she was flushed and sweating. Pharmacist sat on floor with patient for 2-3 minutes and gave her water, patient was then able to stand up with little assistance and brought to sit down. Patient stated she felt nauseous and may vomit she was given a trash can but did not vomit she was able to drink a bottle of water and was given a soft pretzel. After about 10 minutes she stated she was feeling much better was no longer flushed or sweating she called her boyfriend for a ride home. |

| 1178045 | 4/7/2021 | MN | 24 | F | 4/7/2021 | 4/7/2021 | <p>Patient received her Janssen COVID vaccine and was sitting in a chair in the conference room when she slumped over in her chair and became unresponsive. Patient had just received her one dose Janssen vaccine and was sitting in a chair approximately 3-5 minutes after receiving the vaccine. She began to slump over in her chair and was unresponsive. Two RNs responded to assess the patient. Patients feet were elevated and ice packs applied to her neck and axillary areas. Patient was breathing and had a pulse. Patient responded to her name once and then passed out again. Patient was unable to respond after this. Her eyes were open. Patient was lifted into a wheelchair by three nurses and brought to a private area. Patient was warm and sweat was running down her face. Her sweater was removed and ice packs again were applied to her neck and axillary area. Patient continued to have a pulse and was breathing. EMS was called. Patient slowly began to come around and could answer questions after about 5 minutes of being unresponsive. She was confused and had no memory of what had occurred. She reported feeling light headed and seeing spots in her vision. She continued to feel light headed. EMS assessed patient. Vitals were stable and blood sugar was WDL. Patient reported feeling much better. She denied feeling light headed or dizzy any longer. She was able to answer all questions asked. Patient did not want to go to the hospital and refused transport to the hospital via ambulance. She was observed for an additional 20-30 minutes at which time her boss arrived to pick her up. She was educated on calling 911 if she began to feel light headed or dizzy again. Patient verbalized understanding. She was walked to the car by an RN.</p> |

| 1178024 | 4/7/2021 | CT | 33 | F | 4/7/2021 | 4/7/2021 | Immediately following vaccination patient passed out in the chair. Woke up approximately 10-15 seconds later, skin very pale white, clammy. Patient stated she "did not feel right". When asked to describe her symptoms, the patient said she felt "tingly and dizzy". Pharmacist gave patient water bottle and a breakfast bar. Patient ate most of the breakfast bar and then said she felt like she was "going to throw up". Patient then vomited 3 times in the trash can. Immediately after vomiting, patient's color skin color returned to normal and she stated she "felt much better". BP checked and within normal range. Patient stayed at the pharmacy for 45 min for observation and drank a second water bottle. Refused medical care and refused to have someone pick her up from the pharmacy. Pharmacist followed up with patient via a phone call at 6:20pm. Patient said she was feeling much better and had no other adverse reactions. |

| 1178893 | 4/7/2021 | NY | 65 | F | 3/11/2021 | 3/11/2021 | Woke up from sleeping in the middle of the night to go to the bathroom, fainted on floor. Woke up on bathroom floor. Not sure how long I was there. Couldn't get up was sweating, nauseas and had the chills. Crawled back to bed. Slept another 8-10 hours. Woke up at 2PM. Wanted to see if I had a concussion given I'd fallen on a tile floor. Was seen at Sollis Health they discovered I was likely dehydrated so they gave me an IV to hydrate and my platelets were very low (they're usually normal). Was tired, chills, nausea, weak and slept a ton until Sunday when I woke up feeling fine. Had platelets checked later that week and they were fine. After first shot got "covid arm" on day 10. Arm still hurts in the area, thought less than it did after the second dose. |
| 1178884 | 4/7/2021 | MI | 37 | F | 3/25/2021 | 3/26/2021 | Woke up at 2am and felt dizzy, passed out, when I came to I was dizzy every time I opened my eyes I was spinning counter clockwise for the next 6hrs. Now (2 weeks later) I get dizzy every time I move too fast and I have a constant ringing in my ears. |
| 1178871 | 4/7/2021 | CO | 27 | M | 4/7/2021 | 4/7/2021 | The patient passed out cold immediately after getting the injection. He fell forward out of the chair and landed prone on his face. He came conscious quickly after we rolled him on his side. The paramedics treated him for a laceration on his nose and forehead and he left the store on his own. |
| 1178866 | 4/7/2021 | CA | 63 | F | 4/2/2021 | 4/4/2021 | I had a horrible, lengthy Charley Horse cramp (on my right leg), followed by stomach pains, dizziness, diarrhea, fever, sweats, blurry vision, nausea, then I fainted/collapsed. When I came to, I was disoriented, had more diarrhea, chills, followed by my second Charley Horse cramp, this time on my left leg. When I woke after a few hours of sleep, I was tired, weak and had a slight headache but generally felt ok. By Tuesday, other than little/mild muscle aches, I'm back to normal. |

| 1177406 | 4/7/2021 | FL | 18 | M | 4/7/2021 | 4/7/2021 | Per the NP: 1:20pm: While in observation, patient had an episode of syncope/ hypotension. It was unclear at the time if this was a reaction to the vaccination or not. Was treated immediately by NP and EMT/Paramedic staff. 911 was called and pt was transferred to the ER via monitored stretcher for further evaluation. Prior to leaving, and as pt was being transferred from one stretcher to the transport stretcher, pt experienced another syncopal episode. No arrhythmia noted on monitor, BP running 70's/50's. Awake, sluggish but oriented to person and place upon leaving. Transported via monitored stretcher to the ER. |
| 1177729 | 4/7/2021 | MI | 74 | F | 3/27/2021 | 3/28/2021 | The morning after my 2nd shot, I got up to use the restroom. I took an item out of the bathroom vanity under the sink and then without feeling dizzy and not knowing that it was going to happen, I passed out and landed on the bathroom floor. I've never had this happen to me before and so I am questioning if it could be because of the covid shot that I had less than 23 hours earlier. I ended up with 10 staples in my head with the 2 1/2 inch injury on the back of my head. Thankfully I didn't break any bones nor have any other adverse problems. The emergency room did several tests, and they couldn't find any reason for it to happen. |
| 1177703 | 4/7/2021 | CT | 24 | F | 4/7/2021 | 4/7/2021 | The patient received the vaccine and was waiting her 15 minutes to make sure she didn't have any reactions. Approximately 8 minutes after the vaccine was administered and the patient passed out. She did not report that she was not feeling well until after she came to. She then reported dizziness and nausea. She laid on the floor in the recovery position on the floor for about 30 minutes before feeling ok enough to sit in the chair and eventually be able to walk out of the store. |
| 1177668 | 4/7/2021 | | 46 | F | 4/7/2021 | 4/7/2021 | Vasovagal syncope resulting in fall to floor. While on ground pt became rigid. Pt began to come to and was transported to medical via cot and EMS was notified. Pt symptoms resolved and EMS was refused. |

| 1177646 | 4/7/2021 | TN | 33 | F | 4/6/2021 | 4/6/2021 | Patient reported a low grade fever starting at around 2000 hours on 4/6/2021. Her fever reached 103 F and the patient reports that she believes that she passed out. She says that she has not taken anything for her fever except for using a cold compress. She reported that she was still running a fever at 0900 when I talked to her. The patient also reported an headache and diarrhea. She reported feeling dehydrated and said that she has been drinking Gatorade. I encouraged the patient to drink Pedialyte or uncolored Gatorade. I informed the patient that she needed to take Ibuprofen (or other NSAID) or Tylenol for her fever. I also encouraged her to seek medical help if for no other reason then to receive IV fluids. |
| 1177630 | 4/7/2021 | | 32 | M | 4/7/2021 | 4/7/2021 | Syncope post vaccine. Patient taken too medic tent. No chest poison, no SOB, no weakness of extremities. No facial droop. No bowel and bladder incontinence. No confusion the following syncope. Syncopal event lasted for a brief 2 to 3 seconds. |
| 1177554 | 4/7/2021 | | 16 | F | 4/7/2021 | 4/7/2021 | POST VACCINATION SYNCOPES. DID NOT FALL, LOWERED TO GROUND. QUICKLY ALERT AND ORIENTED, ASSISTED TO WHEELCHAIR. WHILE WAITING FOR COT HAD ADDITIONAL SYNCOPAL EPISODE, NAUSEATED. MONITORED FOR 25 MINUTES AND SYMPTOMS RESOLVED. |
| 1177416 | 4/7/2021 | | 19 | M | 4/2/2021 | 4/2/2021 | vasovagal reaction with syncopes including multiple episodes of transient loss of consciousness and tonic-clonic seizure motions |
| 1177621 | 4/7/2021 | NY | 38 | F | 4/7/2021 | 4/7/2021 | Ten minutes after vaccination patient experience lightheadedness, diaphoresis, and brief syncopes at the pharmacy counter. Pharmacist assisted patient to a chair. Patient was responsive but sweating profusely, experiencing tremors, and appeared lethargic. No signs of anaphylaxis, however upon checking patients vitals - heart rate and blood pressure were below normal for patient. Paramedics arrived and monitored vitals for about 20 minutes. Patients condition appeared to improve and walked out of the pharmacy with the paramedic personnel. Patient was not taken to the hospital. |

EMS was called and arrived in approximately another 5 min. Gave patient water and cold rags for neck. |
| 1177628 | 4/7/2021 | CO | 74 | F | 4/6/2021 | 4/7/2021 | Patient received the COVID-19 Moderna vaccine on 4/6/21 at 2:18pm. The following day on 4/7/21 at about 2:15pm, the patient was shopping in the store and fainted at self checkout. An associate caught her before she hit the ground and lowered her down gently. Store management alerted the pharmacy and I, the pharmacy manager, went to assist the patient. She said she felt fine yesterday after receiving the vaccine but did not feel well this morning. An ambulance was called and EMS arrived at the scene. One of them reported that her pulse was low but did not report a specific number. EMS took her to a local hospital. I spoke to her husband and let him know that I would call to follow up with them tomorrow. |

| 1171776 | 4/6/2021 | NY | 16 | F | 4/6/2021 | 4/6/2021 | Patient is a 16yo seen for her first dose of the COVID-19 vaccine. She was seated in the back seat of the car. Shortly after receiving her vaccine (within a few minutes), she chose to move to the front passenger seat of the car, and after sitting in the passenger seat she became lightheaded and lost consciousness. Syncopal event was witnessed and lasted a few seconds. She spontaneously regained consciousness, and complained of some lightheadedness and tunnel vision. No significant confusion was noted, her responses to questions were appropriate. Initial pulse was thready and heart rate initially difficult to auscultate. Pale color noted on the face. Initial pulse approximately 50bpm. Breath sounds clear with good air exchange. Patient was placed in a reclined position with feet on the dash. She quickly recovered and repeat heart rate was auscultated at approximately 70bpm, stronger pulse noted. She was noted to have improvement and she was then driven out of the vaccine site after obtaining consent from her mother (who was the driver) and parked beside EMS. BP was 100/50 and HR 68-72, SaO2 97%. Lightheadedness resolved and she was feeling well, at her baseline. She was monitored for 30 min then allowed to leave with her mother, she was at her baseline at last evaluation. Per history review with her mother, she has had 2 prior episodes of syncope with pin removal from hand after surgery and IV placement. |
| 1171766 | 4/6/2021 | NY | 30 | F | 4/6/2021 | 4/6/2021 | Patient said she walked two miles and didn't eat breakfast before the vaccine and doesn't do well with needles. Patient has had fainting spells in the past from vaccines. She reports feeling much better is eating, drinking and taking it easy today. If she experiences other symptoms she will contact her PCP. |
| 1171754 | 4/6/2021 | | 47 | M | 4/6/2021 | 4/6/2021 | arm pain, dizziness, passed out x2. Evaluated by EMS-Refusal to transport. |

| 1170755 | 4/6/2021 | TX | | M | 1/19/2021 | 2/20/2021 | <p>Arrhythmia; Supraventricular Tachycardia; Severe cramping; Trouble equalising pressure in ears; sinking spells; Sore arm; Headache; Lethargy; Elevated Temperature; This spontaneous case was reported by a non-health professional and describes the occurrence of ARRHYTHMIA (Arrhythmia) in a 69-year-old male patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch nos. 030M20A and 042L20A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included Arrhythmia. Concomitant products included METOPROLOL, SIMVASTATIN, OLMESARTAN and WARFARIN for an unknown indication. On 19-Jan-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 20-Feb-2021, received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) dosage was changed to 1 dosage form. On 20-Feb-2021, the patient experienced LETHARGY (Lethargy), BODY TEMPERATURE INCREASED (Elevated Temperature), PRESYNCOPE (sinking spells), VACCINATION SITE PAIN (Sore arm) and HEADACHE (Headache). On 21-Feb-2021, the patient experienced SUPRAVENTRICULAR TACHYCARDIA (Supraventricular Tachycardia), MUSCLE SPASMS (Severe cramping) and BAROTITIS MEDIA (Trouble equalising pressure in ears). On an unknown date, the patient experienced ARRHYTHMIA (Arrhythmia) (seriousness criterion medically significant). On 22-Feb-2021, LETHARGY (Lethargy), BODY TEMPERATURE INCREASED (Elevated Temperature), SUPRAVENTRICULAR TACHYCARDIA (Supraventricular Tachycardia), MUSCLE SPASMS (Severe cramping), BAROTITIS MEDIA (Trouble equalising pressure in ears), VACCINATION SITE PAIN (Sore arm) and HEADACHE (Headache) had resolved. At the time of the report, ARRHYTHMIA (Arrhythmia) outcome was unknown and PRESYNCOPE (sinking spells) had resolved. Treatment information was not provided. Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. However, the patient's past medical history of Arrhythmia may remain as a risk factor for this event. Further information is requested.; Sender's</p> |

| 1171133 | 4/6/2021 | IL | 17 | M | 3/9/2021 | 3/9/2021 | Within 1-2 minutes my son passed out and started violently shaking/convulsing. His chin was pinned to his chest, he struggled to breath and was making a sound as if he was loudly snoring but seemed to be struggling to breathe. I was unable to wake him. I'm not sure how long it lasted but maybe 2 minutes or so. He woke up and asked what was going on as we had all been standing over him trying to unsuccessfully wake him. He shared that he thought he'd been asleep and had been dreaming. He also shared that his throat hurt very much. He had the shakes for about 30 minutes after and was extremely exhausted. He slept for 14 hours as soon as we arrived home. |
| 1171444 | 4/6/2021 | NC | 43 | F | 4/3/2021 | 4/4/2021 | Almost fainted twice about 23 hours after receiving the vaccine. Dizzy and nausea for 1.5 hrs. Also experienced sore muscles, fatigue and chills within 12hrs. Fatigue continued for 48hrs. All resolved. |

| 1171131 | 4/6/2021 | NC | 60 | F | 3/24/2021 | 3/25/2021 | <p>She got the vaccine, that evening she had a headache. Then her arm started hurting to the point that she could not move it. On Thursday, 3/25/21 she was tired but functional. Then around 5:30 PM she started feeling really strange, odd, felt faint, got hot/cold, her heart was racing. She laid down as she was at a friends house, they checked her BP, blood sugar and her temperature and they were all normal at that point. Around 8:00 PM she got the nausea that would not stop and took Zofran. Around 9:30 she started throwing up. She then tried Phenergan and was not able to keep that down yesterday. Then she started running a temperature, and called her doctors office and told her what to look for and to call back if things got worse. They then got worse, called them back and then around 8:00 AM on Friday they told her to go to the hospital. When she got to the hospital they started checking things as her fever was higher, her liver enzymes, her thyroid, her kidneys, iron just started going off the page. Her fever then kept getting higher and higher and at one point it was documented at 104.8, and felt like her organs hurt. 11 days prior to this visit she had just had labs done and everything was normal. So due to the new findings everything was all elevated, so they checked her for an infection, COVID which was negative, but the intensity of the symptoms got to the point they were unbearable. She stayed in the hospital for 4 days, and the doctor came in and noted that she had a severe reaction to the vaccine. They told her to stay longer than the 15 minutes as they had some issues today, and told her that they had to call a medic for 4 other people that passed out, which made her wonder if they had a bad batch or not, and wonders how many people from that day got sick as well. She still has the most dreadful fatigue, headache and cannot walk from her house to the mailbox without feeling like she is going to faint and used to walking 2-4 miles daily. Wonders how long is this going to last and that this will pass and that she will be okay, or is she going to be permanently this way. She feels like she has a bad case of mono or something and cannot stay up and has to go to bed, and also has bouts of insomnia as well. The body aches are extreme and is taking pain medicine daily due to these symptoms, which she did not have prior to the vaccine. She got the vaccine, that evening she had a headache. Then her</p> |

| 1171193 | 4/6/2021 | FL | 33 | F | 4/2/2021 | 4/5/2021 | I'm currently 11 weeks postpartum and exclusively breastfeeding my infant. I experienced typical vaccine adverse effects on day 0-1 (fatigue chills muscle aches weakness arm pain and fainting episode (I have a history of fainting and with other vaccines)) followed by mastitis on day 2 after my vaccine second dose. Mastitis symptoms included fever chills muscle aches weakness breast pain swelling redness and decreased milk production from blocked duct(s). I had no symptoms of blocked duct prior to the vaccine or prior to day 2. My prescriber ordered an antibiotic and ibuprofen which helped. We believe that the blocked ducts/mastitis occurred in relation to lymph node swelling that has been seen with the vaccine although we did not have a physical exam to determine if that is true. |

| | | | | | | | aches) outcome was unknown. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. The Treatment information included Ondansetron, Ibuprofen. |
| 1173793 | 4/6/2021 | FL | 17 | M | 4/6/2021 | 4/6/2021 | After leaving vaccination room with mother, heading towards the lobby for minimum of 15 minutes post-vaccination observation, patient collapsed/ fainted and fell to floor. Mother was able to catch and support patient's head as patient slowly fell to floor. After only seconds, patient alert again and speaking and answering questions correctly. Patient attempted and was able come to a complete unassisted standing position, but was immediately encouraged to stay lying down until EMT has arrived. EMT arrived, assessed patient vitals, and encouraged patient and mother to go with them to hospital if they were concerned, but mother declined and signed affidavit. Patient and mother left to go get late lunch, as it was revealed patient had not eaten breakfast or lunch yet and was nervous about getting the shot. |
| 1173781 | 4/6/2021 | WA | 27 | M | 4/6/2021 | 4/6/2021 | Syncope, layed the patient down and the event resolved within a few minutes. |
| 1173702 | 4/6/2021 | NV | 47 | F | 3/24/2021 | 3/25/2021 | Fatigue; shortness of breath when walking or talking; fast heartbeat; passed out twice (the second time I passed out on the floor, lost consciousness for a few seconds and hit my face and my nose on the floor. My left calf hurts as well. |
| 1173696 | 4/6/2021 | NV | 32 | M | 4/6/2021 | 4/6/2021 | Patient received COVID Janssen injection, saw blood and had a vagal response to which he passed out and was lowered to ground. Did not hit head. Laid supine with legs elevated, profuse sweating, ice packs to chest, water given. After a few minutes assisted to sitting position and then assisted to standing position with no s/s reported. Assisted to monitoring area for continued monitoring. |
| 1173688 | 4/6/2021 | NC | 20 | F | 4/5/2021 | 4/5/2021 | Patient fainted after injection. Mom was with her and stated she has done this in the past with vaccines or giving blood. Becomes very anxious and has needle phobia. Mom put cool pack on back of neck and wet cloth on forehead. Also gave water as she was waking up. She was fine and ready to go in about 20 minutes. |

| 1173833 | 4/6/2021 | CA | 35 | M | 4/6/2021 | 4/6/2021 | Vaccine Reaction: Nauseated, Syncope and sweating Description of Event: Pt found in observation chair, sweaty and nauseous and had about a 1 minute syncopal episode observed by OBS RN. Pt slow to arouse post syncope. Able to ambulate 2 steps and placed on gurney. Taken outside of the building by exit doors. Pt sleepy and sweaty, placed on vital sign machine. Dr. and multiple RN's with patient. Pt remained slightly nauseous at 1033. Pt had eaten breakfast and denies any medical history or meds. 1035 attempt sips of water, 1038 we called his girlfriend to come be with him and drive him home. Pt felt like he couldn't get enough air at 1038, we removed both of his masks at this time. Pt was sweaty again, but oxygen sats were 100%. 1056 GF arrived. 1106 we attempt to sit up patient slightly and he gets lightheaded and request to lie flat again. Sips of water causes nausea. Dr. remains at BS with patient. Pt began feeling a whole body tingle, encouraged to take nice slow easy breaths. 1111 took a bite of granola bar. 1143 tried sitting up again, gets lightheaded and laid back down. 1154 Dr. back at bedside. 1200 Pt cold bath blanket put on patient. Pt had periods of being slightly pale during observation period and dry mucuous membranes. Pt refusing to try water or granola bar at this time. 1205 pt began to vomit stomach contents. 1212 Dr. back at BS to evaluate patient. Pt feels slightly better, taking sips of water. 1220 pt has been able to lay with head up on his left side now for 20 mins. Dr. offered to send patient to ER to get IVF and be checked out, pt began to perk up and wanted to go home. Orthostatic VS done and remain stable. GF is agreeable to take patient home and monitor him, she is not going in to work today. Pt taken to car via wheelchair, assisted in car, able to walk a few steps. Advised by Dr. to eat a salty meal and drink plenty of fluids and rest. Go to ER if symptoms worsen. Also advised by this RN to follow up with his PCP and let them know of his syncope with vaccine. Pt also advised if he dose get the second vaccine to let them know up front he faints and will be given vaccine in reclining chair. |

| 1172764 | 4/6/2021 | VA | 21 | M | 4/6/2021 | 4/6/2021 | Felt anxious about the shot and got it at 10:48, started feeling dizzy at around 10:55 during the 10 minute waiting period, then started to black out and I immediately told the nurse who's quick actions prevented me from fully fainting (laying me down and giving me food/water and elevating my legs). Blood pressure was fine she said along with O2 levels. Left around 11:25 after I felt able to. We both think this was likely related to the anxiety about getting the shot itself (I have anxiety in general so it was not paired with a mistrust or anything about the vaccine) and began fainting 7 minutes after getting the vaccine. I was anxious about any possible symptoms and needles/shots/blood draws make me feel uneasy. However, this issue was not present with the first shot. |
| 1172756 | 4/6/2021 | CA | 25 | F | 4/6/2021 | 4/6/2021 | patient was in the observation area and fainted from her chair to the floor. Observation nurses were able to arouse her immediately and transferred her from the observation area to the EMS room via wheelchair. Patient reported that she has "issues" when she gets her blood drawn bur has never passed out before. She denies chest pain, shortness of breath or nausea at this time. She was given H2O and allowed to rest on the gurney, all vitals were WNL 128/87 pulse 75 pulse ox 100%. Pt was discharged in stable condition to father who was driving her home @ 12:35pm. |
| 1172744 | 4/6/2021 | ID | 29 | M | 4/6/2021 | 4/6/2021 | Patient was waiting 15 minutes after receiving the vaccine and before the 15 minutes were up, he stood up to ask a question to the staff. While walking to the counter patient fainted hitting neck on a stand as well as head on ground. Staff members came out to approach patient at which time he was conscious. He was able to identify his name/age and speak normally but reported dizziness. Emergency services were contacted and while waiting for them to arrive patient had requested to sit up and was moved slowly to chair. Emergency services evaluated patient and determined he was ok and didn't need to go to hospital and was ok to leave when comfortable. |
| 1172729 | 4/6/2021 | IL | 25 | F | 4/6/2021 | 4/6/2021 | Patient fainted approximately 5 minutes after vaccination. Patient regained consciousness immediately. Patient also reported cold sweats. |

| 1172846 | 4/6/2021 | KS | 22 | M | 4/6/2021 | 4/6/2021 | Two minutes after the vaccination, PT walked up to the counter and said he feels dizzy. I asked him to sit down and started walking around the counter to check on him and check his blood pressure. At that moment he fainted and lost consciousness. Another patient caught his head and he did not hit his head. He remained unconscious for 30 seconds and we were preparing to start CPR breaths as he had a pulse but was not breathing. His eyelids were fluttering. He regained consciousness at that time and we waited with him until EMS arrived. His blood sugar was very low when EMS arrived. |

| 1172558 | 4/6/2021 | ME | 45 | F | 4/5/2021 | 4/5/2021 | Minutes after getting the vaccine patient said she was feeling lightheaded. We went to check on her and she fainted. EMS was called. Patient was unconscious for roughly 15 seconds. We checked pulse and positioned on the floor. Once responsive patient said she was feeling okay. She said she faints when she gets anxious (this was not disclosed before vaccine was given). She spoke with EMS who determined she did not need immediate care. She waited another roughly 30 minutes and was able to leave the pharmacy. |

| 1173312 | 4/6/2021 | CO | 42 | M | 4/6/2021 | 4/6/2021 | Patient was given first dose of Pfizer COVID-19 vaccine. I counseled the patient on side effects and asked him to wait 15 minutes afterwards in our waiting area. After about 5 minutes, the patient starting complaining of feeling dizzy. We asked him to sit back in the chair and brought him a bottle of water. I asked the patient if he had eaten today and he replied no. I offered a snack and also a glucose tablet to help with shakiness. As I went to get a bottle of glucose tablets off the shelf, the patient fainted and fell out of his chair. I immediately ran to get an Epipen while my technicians called for a Code White and 911. I was about to inject the patient with the Epipen when he came to about 10 seconds later. He said he was really hot, sweaty, dizzy, and nauseous. Paramedics and AP arrived to evaluate him and take a statement. Patient left on his own will and received a ride home from his mother-in-law, who is an associate at our store. |
| 1174140 | 4/6/2021 | MN | 43 | M | 4/6/2021 | 4/6/2021 | Patient fainted 5-10 minutes after the shot. He was seated and fell to the floor. Pharmacist came out immediately to ask him if he had labored breathing. He laid flat on the floor claiming he was dizzy. I called 911 and they took him by ambulance to the hospital |
| 1172584 | 4/6/2021 | MS | 18 | F | 4/6/2021 | 4/6/2021 | Within 5-10 minutes after receiving vaccine, patient began to become very pale. Her symptoms included dizziness, syncope, stomach ache, foaming at the mouth, vision disturbances. 911 was called and paramedics arrived.. Her vital signs were all normal. Patient did not wish to go to hospital, and her mother took her home. Other pertinent information is that patient has a history of seizures and had been off of her seizure medication for 4 weeks. I believe that I understood her mother to say that her neurologist knew she was getting the vaccine today. Patient reported no allergies to any other vaccine, medication, or other. |
| 1172718 | 4/6/2021 | CA | 35 | M | 4/5/2021 | 4/5/2021 | Syncope, dizziness, BP 130/90 (pulse 61), O2 sat 99%. Hit left forehead, 1.5 inch gash along eyebrow. Sent to ED. |

| 1173298 | 4/6/2021 | AL | 21 | M | 4/6/2021 | 4/6/2021 | Patient received vaccination sitting down. Stood up to move out of the vaccination room went to be seated outside the door. Patient said he felt like he was about to faint and went to sit down and immediately started to slid out the chair once seated. Patient was out for no less than 15 seconds. Paramedics was called during the fainting. He was responsive and able to breath. Patient was kept on the floor in supine position. no difficulty in breathing and knew who he was and where he was located. No signs of distress just very pale and shaky. Paramedics arrived at scene and O2 stats and HR was normal BP was normal. Patient was taken to hospital for further test. Pharmacist called for follow up at 5:30 with fiancé and she stated that they had diagnosis of vasovagal syncope and that they were running more test. She stated that he was doing fine and that he seemed to be better. They were still in the ER at 5:30 pm. |
| 1173136 | 4/6/2021 | WI | 65 | F | 3/31/2021 | 4/1/2021 | Noted lt. arm soreness at 3 a.m. (more than dose 1), noted chills at that time and body aches. Got up at approximately 8 a.m. and walked to the bathroom but felt nauseous. Sat on toilet, had diarrhea and felt like I was going to faint. I knew I needed to get my head down inorder to feel better. I stood up to pull my pants up and passed out. My husband heard the clunk as I hit my left forehead on wall - he came rushing in - I was face down on the tile which actually felt cool but good on my face. he helped me sit up while sitting on the floor but I still felt faint and needed to keep my head down. I quickly felt another bout of diarrhea before he and I could get back up to the toilet. I was able to wash up with him handing me washcloths and towel and clean lower extremity clothing - still felt nauseous. Had gatorade which improved how I felt quickly - temp was 96.5. rested most of the day. Completely fine on 4/2/2021. Bruise on left forehead about size of quarter and small bruise left side of nose. |

| 1168986 | 4/5/2021 | TX | | M | 2/13/2021 | 2/14/2021 | <p>Taken to ER where had EKG, blood tests and low blood pressure; Vaccine Poisoning; Fainted 2 times; Sweating; This case was received via an unknown source (no reference has been entered for a health authority or license partner) on 02-Mar-2021 and was forwarded to Moderna on 03-Mar-2021. This spontaneous case was reported by a consumer (subsequently medically confirmed) and describes the occurrence of SYNCOPE (Fainted 2 times) in a male patient of an unknown age who received mRNA-1273 (Moderna COVID-19 Vaccine) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No adverse event reported.). On 13-Feb-2021 at 10:00 AM, the patient received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) 1 dosage form. On 14-Feb-2021, the patient experienced SYNCOPE (Fainted 2 times) (seriousness criterion medically significant) and HYPERHIDROSIS (Sweating). On an unknown date, the patient experienced HYPOTENSION (Taken to ER where had EKG, blood tests and low blood pressure) and TOXICITY TO VARIOUS AGENTS (Vaccine Poisoning). At the time of the report, SYNCOPE (Fainted 2 times), HYPERHIDROSIS (Sweating), HYPOTENSION (Taken to ER where had EKG, blood tests and low blood pressure) and TOXICITY TO VARIOUS AGENTS (Vaccine Poisoning) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On an unknown date, Blood pressure measurement: low (Low) low. On an unknown date, Blood test: unknown unknown. On an unknown date, Electrocardiogram: unknown unknown. Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. | 1168985 | 4/5/2021 | CA | 74 | M | 2/19/2021 | 2/20/2021 | passed out; Blood sugar was 60; A spontaneous report was received from a consumer concerning a 74-years-old male patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced passed out and blood sugar was 60. The patient's medical history included diabetes and high blood pressure. Concomitant medications included human insulin(Novolin 70/30). On 19Feb2021, the day before the onset of the events, the patient received first of two planned doses of mRNA-1273 (Lot: not reported) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 20Feb2021 at approximately 1 am, the patient experienced a blood sugar of 60. He drank orange juice and ate half an orange but passed out in the kitchen. He got up but passed out again. He states that he took his insulin and passed out due to his insulin and not the vaccine. and his health care provider switched him to dulaglutide. Action taken with mRNA-1273 in response to the events was not reported. The outcome of the events, passed out and blood sugar was 60 were unknown.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. However, since the patient is known diabetic and is on insulin may remain a contributing factor to this event. Further information is requested. |
| 1168774 | 4/5/2021 | OK | 33 | F | 4/5/2021 | 4/5/2021 | Patient received the vaccine and apprx 5 minutes into waiting period she passed out and fell out of her chair. Patient hadn't reported any previous similar reactions on first ask. when the paramedics arrived to check her out, she state that she's been known to pass out while giving blood, admitted a fairly strong aversion to needles and when asked if she felt it was a reaction to the vaccine or anxiety she said anxiety quoting "as soon as I got the shot I started thinking about a chemical being in my body and my brain took it from there and the next thing I knew, I was on the ground~~ |

| 1168988 | 4/5/2021 | NV | 21 | F | 2/9/2021 | 2/9/2021 | Fainting; Injection site soreness in arm; nauseous; A spontaneous report was received from a consumer concerning a 21-year-old, female patient, who received Moderna's COVID-19 Vaccine (mRNA-1273) and experienced, fainting (syncope), injection site soreness in arm (vaccination site pain), and nausea (nausea). The patient's medical history included vasovagal condition that cause heart rate and blood pressure to drop due to stress on body and dehydration resulting in fainting. Concomitant product use was not provided by the reporter. On 09 Feb 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: 013M20A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 09 Feb 2021, the patient was fine until about 11 pm after which she experienced arm soreness on the injection site and felt nauseous. On 10 Feb 2021, at 5 am in the morning, the patient fainted. The patient assumed that shot might have added stress to her body which most likely caused her to faint. No treatment information was provided. Action taken with mRNA-1273 in response to the events was unknown. There was no change planned to the dosing schedule of mRNA-1273 in response to the event as patient would be receiving second dose on 09 Mar 2021. The outcome of events, fainted (syncope), injection site soreness in arm (vaccination site pain), and nauseous (nausea), were considered as unknown.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the onset date of the reported events of syncope, vaccination site pain, and nausea, a causal relationship cannot be excluded. Patient's prior medical history of vasovagal reactions is considered a contributing factor to syncope. |

| 1169005 | 4/5/2021 | OH | 63 | F | 3/9/2021 | 3/9/2021 | went into seizure; felt a metallic taste; felt dizzy; nearly fainted; not able to walk; had chest tightness; did not feel like she could breathe; did not feel well; her face was flushed like she was on fire; A Spontaneous report was received from a phycsian concerning a 63 Year old Female patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced Dysgeusia/Felt like metallic taste, Dizziness/Dizzy, Presyncope/ Near fainting, Gait Disturbance /Walking difficulty, Chest discomfort/ Chest tightness, Dyspnoea/ Breathing difficult, Malaise/ Feeling unwell, Seizure, Blood pressure abnormal, Blood sugar abnormal and Flushing. The patient's medical history included Asthma. No relevant concomitant medications were reported. No information on allergies were provided. The reported stated that the patient was physically and mentally healthy before vaccination. On 9 Mar 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: unknown) via intramuscular route and unknown location for prophylaxis of COVID-19 infection. had chest tightness and she is an asthma patient. She did not feel like she could breathe and did not feel well. She went back to the pharmacy and they did not want to give her EpiPen. She went into seizure because she already had seizure disorder. Her blood pressure went to 162/80 and her blood sugar went to 152 when she was on her way to the hospital and her face was flushed like she was on fire. She took Zofran during her 5 hours of hospitalization and got a CT scan. They diagnosed her with a post vaccination reaction but she still wants to get the second dose. Action taken with mRNA-1273 in response to the events was not reported. The outcome for the event Dysgeusia, Dizziness, Presyncope, Walking difficulty, Chest discomforts, Dyspnoea, Malaise, Seizure, Blood pressure abnormal, Blood sugar abnormal and Flushing was considered unknown.; Sender's Comments: Based on the current available information which includes a strong temporal association between the use of the product and onset of the events, and excluding other etiologies but for history of asthma, causal relationship cannot be excluded. |

| 1169010 | 4/5/2021 | PA | 73 | F | 3/20/2021 | 3/21/2021 | Went black, did not lose consciousness, but hit the head on the tiles; Hit head on the tiles; Woke up and could not even walk; Heart was in a fast heartbeat; Weakness; Slept whole day; Dizziness; Tired; Freezing; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOPE (Went black, did not lose consciousness, but hit the head on the tiles) in a 73-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 007B21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included Immune disorder (NOS) and Knee surgery NOS in 2019. Concurrent medical conditions included Macular degeneration. Concomitant products included ACETYLSALICYLIC ACID (BABY ASPIRIN), VITAMIN D3, MAGNESIUM and TURMERIC [CURCUMA LONGA RHIZOME] for an unknown indication. On 20-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 21-Mar-2021, the patient experienced FEELING COLD (Freezing) and FATIGUE (Tired). On 22-Mar-2021, the patient experienced SYNCOPE (Went black, did not lose consciousness, but hit the head on the tiles) (seriousness criterion medically significant), HEAD INJURY (Hit head on the tiles), GAIT INABILITY (Woke up and could not even walk), HEART RATE INCREASED (Heart was in a fast heartbeat), ASTHENIA (Weakness), SOMNOLENCE (Slept whole day) and DIZZINESS (Dizziness). At the time of the report, SYNCOPE (Went black, did not lose consciousness, but hit the head on the tiles), HEAD INJURY (Hit head on the tiles), GAIT INABILITY (Woke up and could not even walk), HEART RATE INCREASED (Heart was in a fast heartbeat), FEELING COLD (Freezing), ASTHENIA (Weakness), SOMNOLENCE (Slept whole day), DIZZINESS (Dizziness) and FATIGUE (Tired) outcome was unknown. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. This case was linked to US-MODERNATX, INC.-MOD-2021-056437 (E2B Linked Report).; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. | 1169097 | 4/5/2021 | CA | 52 | M | 4/1/2021 | 4/1/2021 | Pt got his first dose of Covid 19 vaccine with a Pfizer brand administered intramuscular at left arm at 01:11 PM. Pt sat down at 01:20 PM and pt verbalized that he is feeling light-headed/ dizzy. The EOA, RN stayed with the pt and asked admin to help patient lay on the floor. At 01:22 PM pt passed out. Admin placed pt laying on the floor with legs elevated and head on the side. Pt was unconscious with pulse and with breathing. Vital signs was checked BP 102/60 mmhg; PR 83 ppm; RR 18cpm, T 97.6 F, Oxygen sat 98% at room air, Blood sugar 128 as taken by RN. After 30 seconds pt regained consciousness, pt is alert oriented to self, time, place, date and location. Pt stated no complaints of chest pain or SOB. EOA assesses muscle strength in both upper and lower extremity and is 5/5. EOA assigned RN to continuously monitor pt every 15 mins until stable. Pt was advised to call family for us to inform and EOA highly recommended to have a family member stay with him. Admin called the wife and wife stated that she will here in an hour. Pt refused to call 911 as well but pt was advised to have a follow up appointment with primary care doctor. Pt stated he has an appointment the next day. Pt also stated he has no history of him passing out after any vaccination. Pt was transitioned from laying to sitting with latest vitals of 110/ 68mmh, oxygen sat 99% at room air, PR 72 ppm, RR 10, T 97.6 F. No complaints of dizziness. RN (EOA), and a admin stayed with the patient until family member arrives. By the time family member arrives, RN (EOA) discharged pt without any discomforts. |
| 1169156 | 4/5/2021 | VA | 19 | F | 4/5/2021 | 4/5/2021 | Patient didn't think she fainted. Thought she fell asleep. However, a customer saw her phone and personal items fall. She did state she has a history of fainting from taking blood, so it's possible she fainted. She was feeling light headed and woozy and her ears were ringing just before the episode. I asked her if she wanted me to call 911 and she said no because when it had happened in the past, she had been fine. I took her blood pressure and it was 95/52. She waited in the area till 12:25 and I took her blood pressure again and it was 115/60. She did not have any other incident. She left with her companion. I called her at 1:27p. She had arrived home and was still doing ok. |

| 1167466 | 4/5/2021 | TX | 32 | F | 1/12/2021 | 1/23/2021 | Fainted; Dizzy and lightheadedness; Arm was huge; Swollen at the injection site; Arm was red at the injection site; A spontaneous report was received from a 33-year-old female consumer who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced events fainted, dizzy, huge arm, red and swollen arm at the injection site. The patient's medical history was not provided. No relevant concomitant medications were reported. On 12 Jan 2021, at 05:00 pm, prior to the onset of the events the patient received their first of two planned doses of mRNA-1273 (lot batch: 025L20A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 23 Jan 2021, the patient experienced delayed reactions where the patient fainted which is a medically significant event, while walking up the stairs and felt dizzy. The injection site was about 3 inches tall and 2 inches wide and raised which remained the same for about 4 days. The patient fainted again on Monday and felt dizzy and light-headedness at the time of report. Treatment medication included diphenhydramine cream for arm. Action taken with mRNA-1273 in response to the events was unknown. The outcome of the events fainted, dizzy, huge arm, red and swollen arm at the injection site was considered as unknown.; Reporter's Comments: This case concerns a 32-year-old female who had serious unexpected events of syncope and NS unexpected dizziness, peripheral swelling and expected vaccination site swelling, vaccination site erythema. Event onset occurred 12 days after the first dose of mRNA-1273. Treated with Benadryl cream. Event outcomes unknown. Based on current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded. |

| 1168273 | 4/5/2021 | WI | 19 | F | 4/1/2021 | 4/1/2021 | Approximately 15 minutes after receiving her vaccine, patient reported feeling "light headed". When I was called to help her, she had fainted. She was able to slowly respond to us and was breathing. We placed her on the floor laying on her side. A cold compress was placed on the back of her neck and a pillow was placed under her head. 9-1-1 was called. When EMS responded, she had normal blood pressure and blood sugar, but was still feeling "out of it". She was placed on a stretcher and taken to the ambulance, but did not get transported. She had a family member pick her up from the clinic. She was able to walk from the ambulance to the car on her own. |
| 1168276 | 4/5/2021 | MN | 38 | M | 4/5/2021 | 4/5/2021 | FAINTING AFTER RECEIVING DOSE OF PFIZER OCCURRED IMMEDIATELY AFTER ADMINISTRATION, PATIENT PASSED OUT IN CHAIR. THEN WAS MOVED TO THE FLOOR IN A PRONE POSITION WITH LEGS ELEVATED FOR 5-10 MIN. THEN MOVED TO SITTING POSITION WHERE HE PASSED OUT AGAIN. WE MOVED HIM BACK TO PRONE POSITION WHEN THE PARAMEDICS ARRIVED WE MOVED HIM TO A CHAIR WHERE HE PASSED OUT FOR A THIRD TIME. PATIENT DID REPORT SEVERE ANXIETY WITH VACCINATIONS AND HAPPENED TO PASS OUT WITH THE FIRST SHOT BUT DID NOT REPORT THIS TO THE PHARMACIST ADMINISTERING OR ON THE CONSENT FORM. |
| 1168353 | 4/5/2021 | NJ | 84 | F | 3/27/2021 | 3/30/2021 | On Saturday March 27, 2021 the patient was fine on the actual day of second shot which she received at approximately 11:30am. The next day she had a fever of 102, chills, body aches, and severe headache. Tylenol was given with little relief. Symptoms persisted until Monday morning and she reported feeling ?much better.? On Tuesday 3-30-21 at about 3pm she passed out n was taken to an urgent care center where a CT scan of the head was done and was negative. She was discharged to home. The next morning she felt ok but as the day went on she developed facial drooping and slurred speech. She was taken back to the ER and admitted where she remains. An MRI confirmed an ischemic stroke on 4-1 -2021 |

| 1168420 | 4/5/2021 | OH | 38 | M | 4/2/2021 | 4/2/2021 | Pt passed out after receiving vaccine. He became pale in color and was talking. Wife provided Gatorade since we noticed he wasn't feeling well. Pt then laid back in the chair and became unresponsive, but still conscious. Pharmacy team, moved patient to the floor, where he immediately became responsive and color came back to skin. It is noted that the patient was sweating at the time of the event, and he stated he does not do well with shots. All of this took place within 15 minutes of receiving the Janssen Covid-19 vaccine. |
| 1168498 | 4/5/2021 | OH | 23 | F | 4/2/2021 | 4/2/2021 | Patient stated in VARS form that she "might" pass out after receiving shot. She said that she has anxiety when receiving vaccination shots. Patient received vaccine and about one minute later the patient passed out and fell forward. I was able to catch her and lower to the ground safely. I called for pharmacist on duty to assist in the care of the patient. Less than a minute after the patient passed out she was awake and alert. The patient was asked multiple times if she needed to go to the hospital and asked if she was okay to drive home. She insisted that she faints frequently from vaccines and denied any further care. She stayed in the waiting area while being checked on several times. The patient left after she said she was "100% good." She thanked us for taking care of her and apologized for what happened. |

| 1170144 | 4/5/2021 | NY | 30 | M | 4/5/2021 | 4/5/2021 | CPT administered Janssen COVID-19 vaccine to the pt 4/5. While sitting in the pharmacy area for his 15 minute observation period, he fainted. He said that he was texting on his phone and the next thing he knew, he was on the ground with people around him asking if he was ok. He stated that he was very sweaty, nauseous, and a little dizzy. We called a code white, provided the pt with a cold compress and elevated his feet. Pt did not want us to call 911. Pt did not have PCP and has not been to a doctor in about 5 years. He said he was very nervous getting the shot and is afraid of needles so that may have contributed. Pt stayed in the pharmacy area for about 45 minutes until he started to feel better and his mom came to get him. I tried calling pt again at 7:10pm to check in, but there was no answer and I could not leave a voicemail due to mailbox being full. |
| 1169945 | 4/5/2021 | MA | 24 | F | 4/5/2021 | 4/5/2021 | PT received covid19 vaccine. PT had anxiety to needles, experienced vasovagal syncope. PT was immediately seen and treated by EMS and Fire/Rescue on scene. PTs condition improved over the course of 15 minutes. PT declined transport. PT was wheeled into the observation area for a remainder of 15 minutes. PT left observation area accompanied by mother. |
| 1169954 | 4/5/2021 | PA | 35 | M | 4/5/2021 | 4/5/2021 | Vasovagal syncope 5 minutes post vaccination. Patient regained consciousness in chair in observation room 2 minutes after fainting. Vital signs at baseline: blood pressure 59/34, heart rate 44, respiration 22. Vital signs at patient discharge 40 minutes later: blood pressure 105/80, heart rate 74, respiration 18. |

| 1169283 | 4/5/2021 | MD | 20 | F | 4/3/2021 | 4/3/2021 | Following the vaccine, I was perfectly fine and was able to go about my day as normal. However, while doing dishes at 11:30 at night (about 10 hours after I received my second dose of the Moderna vaccine) exhaustion and dizziness suddenly hit me, and my vaccine went black and my ears started ringing. I managed to lie down but I fainted and blacked out for a minute. After I regained consciousness, I had these muscle contractions/shivers (although I took my temperature and had no fever). I felt really exhausted, and went to sleep after that. However, other than that I had no other vaccine side effects. I was told by my doctor to report this though since they had not heard of anyone else fainting, and I have no history of fainting (other than once following blood donation). I also was not thinking about anything remotely related to the vaccine at the time of fainting, and I had no qualms with being vaccinated so I highly doubt it was psychological, especially considering I have no history of fainting, and I had an injectable medication so I have no issues with injections. |
| 1170020 | 4/5/2021 | CT | 60 | F | 4/2/2021 | 4/4/2021 | Dizziness, passed out, diarea, throwing up, chills, headache, body aches |
| 1169916 | 4/5/2021 | VA | 43 | M | 4/5/2021 | 4/5/2021 | Patient passed out in their seat in waiting area. Struck back of his head on window behind him. Responsive after 20 seconds. Ambulance called to assess patient further. No treatment required and patient's wife drove him home. |
| 1170040 | 4/5/2021 | IA | 17 | F | 4/5/2021 | 4/5/2021 | Fainted for 2 seconds. Sweating. Pale lips but the color got back on after few minutes. Tingling. Could not lift up her arm (but could feel squeezing thumb). Shaken hands and feet. Lied down on the ground around for 10 minutes and elevated feet. Had her to keep breathing in/out. Kept drinking water and gave orange juice. Called 911. EME arrived and took care of patent. Pt didn?t want to ride on the ambulance and said fine. Was able to walk in the end. Left the scene with her mom. |
| 1170052 | 4/5/2021 | TX | 22 | F | 4/5/2021 | 4/5/2021 | Patient received the vaccine and upon standing fainted. She came to in about 30-45 seconds. EMS was called, pt was monitored for 45 minutes and released. |

| 1170150 | 4/5/2021 | OH | 17 | F | 4/5/2021 | 4/5/2021 | Pt had reaction in the waiting room. Pt became pale, diaphoretic, passed out and had brief seizure x 3-5 seconds. She suddenly became aware again with no recollection of what happened. She continued to be pale and diaphoretic and c/o confusion and blurry vision. Pulse ox 98-100, HR dropped to 40's and BP 90/60. Squad was called, they assumed care and transported pt to ER with her mother present. |
| 1170197 | 4/5/2021 | NV | 21 | F | 4/5/2021 | 4/5/2021 | Patient stated she felt like fainting post immunization. Pharmacists quickly grabbed adverse event protocol and followed directions as stated. Called code white on intercom to alert store management. Asked patient about symptoms and she reported symptoms of sweating, coldness, dizziness and nausea. Assessed patient blood pressure and asked patient if she wanted us to call 911. Patient did not want us to call 911. Patient never lost consciousness but had low blood pressure on initial reading. Instructed patient to lay down with feet elevated. We gave patient a pillow to assist in elevation of feet and gave her cold compresses to apply to neck and face. After a few minutes, patient blood pressure was normal and patient stated that she was feeling better. We requested that she sit for an addition 15 minutes before she can leave. After 15 minutes patient, patient was feeling ok and left with her boyfriend. She was exhausted from work and this was likely the main factor for the feeling of syncope. |
| 1170200 | 4/5/2021 | NH | 33 | F | 4/5/2021 | 4/5/2021 | Patient became dizzy and fainted |
| 1170224 | 4/5/2021 | NY | 36 | F | 4/5/2021 | 4/5/2021 | A few minutes after vaccination the pt had what appeared to be a seizure with momentary loss of consciousness. Profuse sweating, tunnel vision and syncope also present. EMS was called and patient was transported to hospital directly from the pharmacy. |

| 1170290 | 4/5/2021 | FL | 54 | F | 4/5/2021 | 4/5/2021 | Administered vaccine at 12:40pm Pt during administration of vaccine started to pull away but full dose was administered, pt was nervous about the needle. After instructing pt to sit in the post vaccine chair for 15 minutes I noticed visible distress at around 12:50pm. I rushed to her aid and asked her how she was feeling and she reported feeling dizzy. I then helped her out of her chair onto the floor to ensure she would not fall and hit her head - told her to lay supine. I then asked my technician to give me the bp monitor. I then checked her bp and it was below 80/60. I informed her this could be contributing to her dizziness and then asked for consent to help raise her bp. She consented and then I told her I would be lifting her legs in the air to raise her BP. I held her legs in the air for 10 minutes or so and then reassessed her BP and it was 110/48. She started to feel better but reported feeling as if ants were all over her left arm which is where I gave her the vaccine. I assessed once again for angioedema, anaphylaxis, hives, redness, swelling, but didnt see anything. Since the pt was dizzy I did not offer her benadryl liquid but instead offered clairitin. The pt was merely having a panic attack post immunization and said she could swallow tablets and was feeling better. I gave her one clairitn tablet etc. She wanted to sit up so I assisted her to a sitting position while she was on the floor. She sat there for additional ten minutes then moved into a chair and was brought food by her husband because he said she did not have breakfast and thought that could be why she was dizzy. She was not a diabetic so I was not concerned about her BG. She said that this never happened in the past when I reviewed her PCQF form prior to giving her the vaccine. She has had zero history of syncope so this was rare for her. After an additional 10 minutes she had a bp reading of 98/60 and left the store feeling much better |
| 1170320 | 4/5/2021 | WA | 37 | M | 4/5/2021 | 4/5/2021 | Patient experienced vasovagal syncope approximately 2 minutes after receiving vaccination. Patient's spouse was with him with the anticipation of him having an event. He was pre-screened on our VAR. After it was determined that his experiences in the past were no longer an issue, we proceeded to administer the vaccine. He rested with cool compress and fluids for 30 minutes before leaving on his own accord. |

| 1166423 | 4/4/2021 | FL | 37 | M | 4/3/2021 | 4/3/2021 | JANSSEN COVID-19 VACCINE EUA I received the vaccine on 3rd April, 2021, at approximately 9:30 am. There were no immediate side effects. Approximately 10 hours later I began to feel EXTREME cold and chills. So much so that I had to put on 3 layers of clothing, socks and cover myself with 3-4 blankets. I also experienced a fever and body soreness. My wife tended to me with two ibuprofen tablets, 200 mg each and continually to put cold presses on my forehead. I drank a lot of water but my fever continued to spike to 102.8. The symptoms continued for another 3 hours. Out of concern we called the emergency room to ask if we should be concerned about the fever. We were advised to take two Tylenol tablets. My wife gave me two Tylenol PM tablets. About 30 mins after taking the Tylenol tablets and continuing to hydrate, my cold and chills began to subside and I began to shed all of my layers. About 30 minutes after that, my fever levelled out to about 100.8. Then I passed out. The following morning, I woke up with cold, chills and fever gone. I had a mild headache and took 2 Extra Strength Tylenol tablets. It's been four hours since then and I feel fine, just a little weak. |
| 1166534 | 4/4/2021 | NJ | 44 | M | 4/3/2021 | 4/3/2021 | Systemic: Fainting / Unresponsive-Mild, Additional Details: After awakening patient said he felt like he couldn't breathe but was. | 1166427 | 4/4/2021 | WA | 25 | F | 4/2/2021 | 4/3/2021 | The whole night after the injection I was sweaty, couldn't get comfortable. Woke up feeling sore and dizzy with a terrible, painful headache. When I attempted to take a shower, I fainted for a few seconds and it was a struggle to move. Only felt comfortable when I was laying down. My muscles all felt painful and sore, had a painful headache, felt very disoriented and woozy. It was a struggle to walk or move, and couldn't talk loud or for a long time at once. Had to go home from work and spent the rest of the day sleeping. Around 4pm, 24 hours after the injection, my muscles felt less sore and was feeling better. The next morning, I was back to being completely normal. |

| 1165580 | 4/4/2021 | OH | 65 | F | 2/27/2021 | 2/28/2021 | I sat down on floor passed out for 5 mins; light headedness, dizzy; Sweaty; arm soreness; legs felt achy; A spontaneous report was received from a consumer who was also a 65-year old, female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced sat down on floor passed out for 5 mins/ loss of consciousness, legs felt achy/ pain in extremity, light headedness, dizzy/ dizziness, sweaty/hyperhidrosis, and arm soreness/ vaccination site pain. The patient's medical history was not provided. Concomitant medications included fluticasone propionate and salmeterol xinafoate and salbutamol. On 27 Feb 2021, prior to the onset of the symptoms, the patient received their first of two planned doses of mRNA-1273 (Batch number: 025A21A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 28 Feb 2021, the patient had arm soreness and in night her legs felt achy. On 01 Mar 2021, the patient suddenly had light headedness, dizzy, and sweaty. The patient sat down on floor passed out for five minutes. The patient reported feeling better. Treatment for the events included Ibuprofen and paracetamol. Action taken with mRNA-1273 in response to the events was not provided. The outcome of the events, the patient sat down on floor passed out for five minutes was considered as resolved on 1 Mar 2021. The outcome of the events, the patient suddenly had light headedness, dizzy, and sweaty was considered recovering.; Reporter's Comments: This case concerns a 65-year-old female with serious unexpected events of loss of consciousness along with nonserious unexpected dizziness, hyperhidrosis, pain in extremity and expected vaccination site pain. Event onset occurred 2 days after the first dose of mRNA-1273. Treatment included Motrin and Tylenol. Events resolving. Based on current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded. |

He immediately stated he thought he was going to pass out. Patient passed for approximately 30 seconds and jerked/like a seizure then came back but still felt dizzy, passed out again and jerked came back but still felt bad, Patient stated he did not feel right was not wanted to lie down on floor. 911 was called made patient comfortable until EMT's arrived and patient was taken to ambulance and released. |
| 1166994 | 4/4/2021 | KS | 71 | M | 2/23/2021 | 3/20/2021 | 28 days (March 20th) following 1st Moderna shot which was given on Feb 23rd, felt dizzy, weak and lightheaded leading to fainting (syncope). Ambulance arrived and determined to take me to hospital after having 2nd syncope in their presence. Remained in hospital overnight. All vitals, heart and bloodwork were fine as seen by cardiac doctor and determined it was dehydration. Followed up with primary physician and told him I was urinating excessively. He put me on Flomax 0.4 mg. I had the 2nd Moderna shot on March 23rd and again was taken to the hospital on March 31st with same symptoms and near syncope and again was told it was clinical dehydration. They told me to drink a combination of pedialite and water which I have been doing and I am still experiencing the dizziness, lightheadedness and weakness. Woke up on April 4th and felt like my soul was being ripped from my body. I honestly thought I was going to die. Looked on line and found forums of people experiencing similar symptoms. Went to pharmacy and they recommended meclizine and have taken a clonipin for anxiety. I am feeling better now, but worried about how long I will be experiencing these symptoms. |
| 1166894 | 4/4/2021 | CA | 58 | M | 4/4/2021 | 4/4/2021 | Shortly after leaving the facility, after waiting the required 15 minutes post vaccine, I was driving back home on the freeway when I suddenly felt light-headed and as though all the energy had left my body (as though I was about to pass out). Then, without warning, I passed out, while driving on the freeway. Fortunately, I did not hit anyone, or was hit by anyone, and must have bounced off guardrails after crossing traffic twice and going off the freeway into the middle of an off ramp, where I finally came to. I did not suffer any injuries in the accident. |

| 1166781 | 4/4/2021 | OH | 42 | F | 4/2/2021 | 4/2/2021 | First day nothing really happened just I developed a Bad headache that I needed to sleep a little bit. Was a little bit weak. Did not take anything but felt hot but no fever. Second day I had to work so I woke up very early in the morning tried to go down to pick up some thing and I passed out. I waited 15 minutes and I tried to wake up back again wash my face and I close my eyes and your eyes and my blood pressure played around again and ran to the bed and went back to sleep. All through the day It was impossible for me to get up because of my blood pressure. I stayed sleeping all day almost was watching TV. I canceled school or work you can call it. Every time I would be watching TV I would be sleeping without knowing. So basically all throughout the day I fell asleep. I felt very weak And could not walk at all. The headache would not go away. I felt like I had a cold I felt hot but no fever at all throughout the whole day. My shoulder pain got really bad and my neck but then at the end of the night all that subsided and I got better that was way at night at 8 PM. I then went back to sleep Took a muscle relaxer to make sure that I would sleep throughout the whole night I woke up the third day and I still feel not myself but much way better. When I first got up it was very hard to walk but then I kept going and I survived lol. Just thought to share my story because my first vaccine was not like this at all actually the first date was the hardest for me for my first vaccine this time it was my second day for my second vaccine |
| 1166770 | 4/4/2021 | IA | 21 | M | 4/1/2021 | 4/1/2021 | Patient was in medical observation fell on floor and passed out. Moved back to cc part of building where we kept for 30 plus minutes. Asked patient if he hit his head he stated no- no neck problems just right knee was hit when he fell. BP 115/72 mmHg, pulse 72 bpm, pulse ox 99%, RR 16 brpm. Patient was monitored for 30 minutes and then discharged home. |
| 1166752 | 4/4/2021 | AZ | 27 | M | 4/3/2021 | 4/3/2021 | Pt fainted while waiting for 15 minutes after the vaccination was given |

| 1166695 | 4/4/2021 | LA | 37 | F | 3/31/2021 | 4/1/2021 | Janssen COVID-19 Vaccine EUA 12 hours after receiving the vaccine (4/1/21 at 3am), I fainted and collapsed at home. Hit my head and landed on back. Had about a 2 second warning that I was going to faint. I felt perfectly fine prior to fainting. After fainting where I was unconscious for 15 seconds, I was dizzy. Today (4/4/21) - I am very tired and weak and have lower neck pain due to fall. |
| 1166596 | 4/4/2021 | | 28 | M | 4/4/2021 | 4/4/2021 | Patient experienced post-vaccination syncope within two minutes of receiving vaccine. Patient was sitting and got lightheaded and sweaty and fell out of chair. Patient denied any pain but was assisted to wheel chair and brought to medical observation tent where he was given juice and monitored for 15 minutes. Patient BP was checked twice (110/60 and then 102/64) with a heart rate of 86 BPM. Patient declined EMS eval and was sent home |

| 1166645 | 4/4/2021 | NJ | 32 | M | 4/3/2021 | 4/3/2021 | Felt a bit odd on the couch, little shiver and what felt like adrenaline. I got up and went into the bathroom where the incident occurred. I used to be on 10mg of Ramipril years ago and moved to 5 due to light headedness when standing up. Yellow tinted vision, bright and sparkly. Getting up too fast with heart pressure meds prescribed for albumin /T1D and not for heart pressure. The secondary use of Ramipril is normal for type 1 diabetes after 20+ years. So I went to 5mg and haven?t had that issue since. I should also mention that when this used to happen to me I would lay down and recover with no problem. Back to the incident it felt exactly like that but on steroids. I was in the bathroom looking for Tylenol and I got light headed, yellow tinted vision, bright and sparkly, ringing in the ears, dizzy, and confused. I remember thinking I should probably get down on the tile floor and lay down like I?m used to from the episodes years ago with 10mg Ramipril causing the same symptoms but never anything so extreme. Next thing I know I?m on the ground waking up where I fainted and hit my head pretty hard on the way down. I probably have a minor concussion. Iced my head in the back where I hit it last night and this morning. Surprisingly 0 bumps, etc other than a little bit sore. Trying to remember going down is impossible. There is a strange, I guess it?s not strange as I fainted, but to me being 1 moment thinking what I should do then the next moment still thinking that same exact thing but coming to on the bathroom floor with parents yelling over top of me as I was at their house is strange. I recall what almost felt like a dream while I was out but I was wondering why everyone was asking if I was ok, of course I?m ok I thought. Then I realized what happened and crawled around on the floor the rest of the night if I needed anything and was checked every hour through the night which was horrible but necessary. Also my blood glucose was a 220 at the time of the incident according to my CGM so it didn?t have to do with low blood sugar. In any case I feel better today but in a fog with a slight headache. |
| 1166811 | 4/4/2021 | NY | 68 | M | 3/31/2021 | 4/1/2021 | Passed out . Went to hospital to be evaluated. Released. |

| 1167100 | 4/4/2021 | ID | 25 | F | 4/4/2021 | 4/4/2021 | After vaccination the patient looked to be doing well, good color in the face and communicating freely. After providing the same immunization to her spouse she lost color in her face, began sweating, and became faint. She did not lose consciousness but was drowsy, diaphoretic, pale and stated she lost hearing for a couple minutes. I kept her awake and asked her questions to assess for alertness. She was aware of date, location, name, year. She was not improving after 5 minutes so paramedics were called to evaluate her. She was cared for by the paramedic team and recovered after 40 minutes. She was diagnosed with vasovagal syncope due to the vaccine. She refused transport to the ER and left of her own accord. |
| 1167254 | 4/4/2021 | TX | 21 | M | 3/23/2021 | 3/24/2021 | 8:00 woke up very tired and decided to stay in bed and rest. 11:00 When woke up again I felt sick to the stomach and had the urge to throw up. While rushing to the bathroom I lost consciousness and fainted. Hit my face against the tub and the wall. My nose was bleeding and went to the emergency room. 11:45 in the emergency room they took blood samples, a head scan and put me on an I.V. for 45 minutes. |
| 1167245 | 4/4/2021 | CA | 35 | M | 4/4/2021 | 4/4/2021 | PATIENT FAINTED AFTER VACCINATION. PARAMEDICS WERE CALLED AND PATIENT VITAL SIGNS WERE NORMAL. |
| 1167238 | 4/4/2021 | OR | 37 | M | 3/19/2021 | 3/19/2021 | Syncopy repeated twice after first initial collapse/fainting |
| 1167225 | 4/4/2021 | CA | 45 | F | 4/4/2021 | 4/4/2021 | patient received her moderna covid vaccination first dose in the consultation room (she had stated that she was nervous and wanted her husband to come in with her and I assured her it would be fine -she - was fine at first but a few minutes later she stated she was feeling nervous so I had her go and sit in the waiting area with her husband in case the consultation room was claustrophobic. a few minutes later the technician called me stating that she had passed out. I asked her to cAll 911 whilst I checked her breathing. she came around shortly thereafter and the paramedics arrived and attended to her - she had come Around by the time the pAramedics arrived, and wanted to go home They however advised her to go the ER, to get checked and she and her husband left with them |

| 1167183 | 4/4/2021 | CA | 29 | M | 4/4/2021 | 4/4/2021 | After receiving the COVID vaccine, the patient was instructed to have a sit in the clinic for 15 minutes in order to be monitored for any adverse reactions. Within that time period, the other patients in the waiting area reported to the staff that the patient has fainted. The patient woke up shortly after fainting. He was visibly pale but he confirmed that he is okay and not in distress (no difficulty breathing, etc). He reported that he's fainted before after a vaccination due to nerves. We gave him some water to drink and had him stay for another 30 minutes so we can monitor him closely. After 30 minutes, we determined that he's well enough to leave the store and no other further care was needed at the time. |
| 1167131 | 4/4/2021 | FL | 31 | M | 4/4/2021 | 4/4/2021 | Passed out, low blood pressure, extreme sweating |
| 1167102 | 4/4/2021 | | 16 | F | 4/4/2021 | 4/4/2021 | Patient received Pfizer vaccine at 2pm, went to coffee shop, and then went out to car to wait. Became dizzy 5 minutes after coffee shop order. Patient fainted approximately 15 minutes after receiving pfizer vaccine on 4/4/21. Mom came into store to alert courtesy clerk, alerted pharmacy who brought E-kit out to car, brought patient into store to take blood pressure. Took patients blood pressure. ~83/63 mmHg pulse 109. EMTs were called and arrived within 5 minutes. EMTs arrived and stated vitals were normal but recommended mother take patient to be checked out by a doctor at a nearby hospital. Patient saw Dr who determined she can get the second dose, but must remain seated for 15 minutes after vaccination |
| 1163846 | 4/3/2021 | IL | 43 | M | 4/3/2021 | 4/3/2021 | Fainted about 7 minutes after receiving the vaccine. Came up to consciousness again after 1-2 minutes, but felt lightheaded and nauseas. Vomited 45 minutes after receiving the vaccine. |
| 1163802 | 4/3/2021 | CA | 16 | F | 3/30/2021 | 3/30/2021 | Syncope, dizziness. BP 55/30 (pulse 56). Final BP 111/54, 100% O2 sat. |

| 1163770 | 4/3/2021 | IL | 29 | M | 4/2/2021 | 4/2/2021 | Patient fainted approximately three minutes after his vaccination. He regained consciousness immediately and we moved him to the floor with his feet elevated. We asked him a series of questions to assess his health. He was pale and sweaty but his blood pressure and pulse were stable. We monitored him for roughly 20 minutes after the incident while continuously checking his pulse and blood pressure. He denied any further intervention/assistance and insisted that he felt fine. He left on his own accord. |
| 1163741 | 4/3/2021 | MO | 70 | F | 4/1/2021 | 4/1/2021 | After shot was received went to have breakfast and then to grocery store. Came home and put a few things away and began to feel nauseous and a little dizzy so laid down. Needed to use bathroom so went into bathroom and became very dizzy. Attempted to make it back to bed and called for husband. Husband heard me yell and when he came to bedroom I was laying in floor passed out. He called paramedics and they came immediately. When I came to I had a feeling of extreme heat over my entire body and then broke out into a bad sweat (I was still lying in floor). After that I had a feeling of extreme heat (like fire) in my feet that rushed up to my calves. Paramedics checked me out and during that time I had I believe 2 more episodes of the heat and sweat. Paramedics stayed for maybe 20 minutes and I seemed to be okay. I did not go to ER. Remainder of Thursday I was dizzy when I got out of bed. Dizziness improved on Friday and was better by Friday evening. Still some dizziness today (Saturday 4/3) when I move around but not bad. Blood pressure has sometimes been a little low (105/68) but sometimes more normal (118/70). |

| 1163566 | 4/3/2021 | CA | 40 | M | 3/20/2021 | 3/20/2021 | Patient came in to the clinic to receive his dose of the Janssen COVID vaccine. Within the 15 minute post-vaccine period, the patient reported feeling warm, sweaty, having clammy hands, and the feeling of almost "passing out". Patient was taken to a patient room to rest, vitals were taken at 13:16 PM with readings of BP: 91/57, HR 72, SpO2 98%, temp 98.5. Patient denies any past medical history, reports he only takes vitamin supplements, and denies any past history of anxiety. He denied any chest pain or SOB. Patient was provided water and was told to rest for a few minutes. Vitals at 1:42 PM were noted to be: BP 108/71, HR 72, SpO2 99%, and temp of 98.1. He says he feels much better and denies any symptoms at this time. ER precautions were given to the patient. Called patient again 4/2/21 at 09:59 AM - pt denies any ER visits, hospitalizations, or any visit to any other healthcare provider since his vaccine. The day after his vaccine, he says he developed a headache with left arm soreness (injection site was left upper arm) which was all improved by Monday, 3/22/2020. He says he took Advil, drank plenty of fluids, and rested for his symptoms of headache and arm soreness. He denies any other symptoms of near syncope after his near syncopal episode at the clinic. He denies any symptoms of fevers, CP, SOB, swelling, drainage, or pain at injection site, abdominal pain, dizziness, lightheadedness, or any other side effects/averse effects of the vaccine. He says he is doing well overall |
| 1163442 | 4/3/2021 | MD | 61 | F | 3/26/2021 | 3/28/2021 | I was having the stated symptoms of fever (102); chills, fatigue starting the evening after receiving the vaccine (3/26/21). Felt these symptoms all day on 3/27/21. Got up to go to the bathroom at 3:00AM on 3/28. Started feeling weird while going to the bathroom. Finished and tried to make it back to bed but passed out before I could get to the bed. This woke my husband up and he wanted to get me up but I could not--too weak. Laid on floor for about 30 minutes before I felt strong enough to get up with assistance. Pregnancy History: 1 Child (9lbs. 1ox.) via C-Section |

| 1162487 | 4/3/2021 | FL | 42 | F | 3/15/2021 | 3/1/2021 | like blurry vision and then she lost her senses/loss of consciousness (fainting)/passed out; like blurry vision and then she lost her senses/loss of consciousness (fainting); tachycardia; mental confusion; loss of sphincter control (urinary incontinence)/pissed on herself; diarrhea; This is a spontaneous report from a contactable consumer (patient). A 42-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration administered on arm left on 15Mar2021 13:15 (Batch/Lot number was not reported) as SINGLE DOSE for COVID-19 immunization at the pharmacy. Medical history was not reported. There were no concomitant medications. The patient was not pregnant (including at the time of vaccination). On 16Mar2021 13:15, she came around to feeling really something bad in her body. She described this as she had loss of consciousness (fainting) which started to feel like blurry vision and then she lost her senses. She then passed out for 5-8 minutes and she had loss of sphincter control (urinary incontinence) as she pissed on herself. She also had tachycardia and mental confusion by that time. They called an ambulance and she was brought to the emergency or urgency department/room. The events [loss of consciousness (fainting), loss of sphincter control (urinary incontinence), tachycardia and mental confusion] were considered as serious (medically significant). She also had several diarrhea (noted in 2021) episodes during one week. She had no COVID prior vaccination and not tested post vaccination. She would like to know if the reaction that she had with first dose vaccination was normal as she was afraid of the second one. The patient did not receive any treatment for the events of loss of consciousness (fainting), loss of sphincter control (urinary incontinence), tachycardia and mental confusion. Outcome of the event of diarrhea was unknown while recovering for the remaining events. Information on the lot/ batch number has been requested. |

| 1162489 | 4/3/2021 | | 58 | M | 3/19/2021 | 3/19/2021 | <p>Syncope episode; Lightheaded; This is a spontaneous report from a non-contactable nurse. A 58-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 1 intramuscularly on 19Mar2021 at 13:00 (01:00 PM) (Batch/Lot Number: ep6955) at the age of 58-years-old as single dose for COVID-19 immunization. The patient was vaccinated at a hospital. There was no other vaccine in four weeks. The patient's medical history and patient's concomitant medications were not reported. The patient experienced lightheaded/syncope episode on 19Mar2021 at 13:15 (01:15 PM). The events resulted in emergency room/department or urgent care. It was unknown if the patient received treatment for the events. The patient had no COVID prior to vaccination and has not been tested for COVID post vaccination. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected.; Sender's Comments: Based on the information currently available, a possible contributory role of the suspect drug in the reported event syncope episode cannot be completely ruled out given the known suspect drug profile and/or implied temporal association. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p> |

| 1163045 | 4/3/2021 | TX | 26 | F | 4/2/2021 | 4/2/2021 | Patient, received immunization, proceeded to post-immunization section for 15 minute observation. RN and EMT personnel noticed that individual appeared to lean in chair and then leaned forward as if experiencing dizziness. RN approached individual at which time she appeared to be on verge of fainting, and sounded incoherent, her pulse was at 45, and she was dizzy, at which time an Epinephrine pen was utilized. As patient became more coherent she indicated she felt nauseous and proceeded to vomit. She was monitored by EMT and RN for about 30 minutes and was offered further medical assistance which she declined. Patient indicated that she had history of experiencing dizziness after a previous TB immunization. |
| 1163176 | 4/3/2021 | FL | 39 | M | 4/2/2021 | 4/2/2021 | Systemic: Dizziness / Lightheadness-Mild, Systemic: Fainting / Unresponsive-Mild, Additional Details: Patient passed out. 911 was called. Blood pressure was checked. EMS arrived and determined that patient was okay. |
| 1163164 | 4/3/2021 | NY | 35 | M | 4/2/2021 | 4/2/2021 | Systemic: Confusion-Mild, Systemic: Dizziness / Lightheadness-Severe, Systemic: Fainting / Unresponsive-Mild, Systemic: Flushed / Sweating-Mild, Additional Details: Patient fainted and hit his head on the way down. Was unresponsive for <10 seconds and came to then was able to sit up and hold a conversation. Had 2 orange juice bottles and patient communicated that this was a known issue with needles. |
| 1163279 | 4/3/2021 | NJ | 26 | F | 4/2/2021 | 4/2/2021 | Systemic: Fainting / Unresponsive-Severe, Additional Details: Before vaccination, patient briefed pharmacist regarding very probable likelihood of fainting. Per patient's own account, this event occurs very frequently when receiving vaccines. Pharmacist understood and with consent of patient continued vaccination. Within a minute after administration patient did pass out into catatonic state, followed by epileptic-like convulsions. RPh provided physical support with patient as she was convulsing out of chair and onto floor. Convulsions ended within 2 minute |

She recovered quickly, but felt confused, sweaty, and tingling in her arms after. She felt better after about 15 minutes, but we had to stay to observe for 30minutes after. She was feeling better by the time she left the store. |
| 1163161 | 4/3/2021 | GA | 92 | F | 4/2/2021 | 4/2/2021 | Systemic: Allergic: Difficulty Breathing-Medium, Systemic: Confusion-Severe, Systemic: Fainting / Unresponsive-Severe, Systemic: Nausea-Medium, Systemic: Vomiting-Medium, Additional Details: Patient recieved vaccine and was helped to observation area. About 3-5 minutes after vaccination the patient told her son that she felt hot and then her head slumped forward. She became unresponsive to verbal/ physical stimulation. Patient vomited and would have fallen out of her chair if she had not been caught. She also made some noises from her throat that sounded concerning. EMS was immediatly called and epinephrine administration was attempted. Epi not given. Pt recovered and taken to ER. |
| 1164928 | 4/3/2021 | PA | 24 | F | 3/14/2021 | 3/15/2021 | I passed out in my bathroom the morning after the vaccine shot around 5:30am. I called the doctors and they said that was unrelated to the vaccine, but I had intense dizziness and tinnitus before I passed out. I was incredibly fatigued all day long for the rest of the day and had a migraine - both to be expected. However, I am 3 weeks post-vaccine (April 3) and have been having intense muscle cramping and fatigue in my legs during exercise. I wake up with muscle soreness that goes away throughout the day and then comes back during exercise. |
| 1164740 | 4/3/2021 | WI | 56 | F | 4/3/2021 | 4/3/2021 | fainting spells (feeling warm/hot and dizzy) 5 minutes post vaccination no loss of conciousness she was alert and coherent the whole time. treatment done placed on supine position with elevated legs- Felt a lot better few seconds after. Prior to vaccination she verbalized she is scared of shots |

| 1164804 | 4/3/2021 | MN | 38 | M | 4/2/2021 | 4/2/2021 | While sitting down during the post-vaccination period, patient asked his wife for water about 10 minutes after receiving vaccine. Pharmacy staff provided water and pharmacist went over to check on the patient. Patient expressed feeling "hot" and wanted an ice-pack, which was given. Patient expressed feeling "faint," after which he briefly lost consciousness. Pharmacist immediately started checking for pulse and obtained Emergency Kit. Patient regained consciousness quickly without need of CPR or administration of Emergency Kit medications. At some point patient also released his bladder, most likely during the syncope episode. Patient expressing feeling "nauseous" and asked for something to throw up in. Pharmacist quickly got a trash can and gave to patient, shortly after which patient started vomiting. Pharmacist was attending to patient and asked patient if he wanted 911 to be called, to which he replied "No" and that he just needed some time to sit. Patient also stated he did not eat much that day. Pharmacist offered Pedialyte, to which patient agreed, in order to replenish fluids/electrolytes lost due to vomiting. Patient also asked for some crackers since he did not eat much earlier. After taking sips of Pedialyte and taking bites of crackers, patient could not hold anything down and continued to vomit. At that time patient's wife asked pharmacy staff to proceed with calling 911. 911 was called and paramedics took patient's vitals upon arrival at the scene. Vitals were all stated to be normal. Patient agreed to be taken by ambulance to the hospital. A couple hours later patient's wife informed pharmacy staff that patient was doing much better and was expected to be released from hospital soon. Before receiving vaccination, patient did share that in the past he had "felt faint" when giving blood but it was not made clear that patient had felt faint or fainted during vaccinations prior. After the incident patient's wife confirmed that patient had fainted in the past both after giving blood and after receiving vaccinations. Pharmacist called patient at 9:12 AM the following day (4/3/21) to see how patient was doing but was only able to leave a voicemail message. |

| 1164318 | 4/3/2021 | TN | 37 | F | 3/29/2021 | 3/29/2021 | I received my first dose of the Pfizer Covid vaccine in my left arm. It didn't hurt and I felt good. I walked to the area of observation and sat in a chair. I was texting friends and looking at social media when all of a sudden I felt very hot for a split second then lost consciousness. When I woke up I was on the ground in quite a bit of pain. I was told by the paramedics that I was unresponsive for 60 seconds and that I had fallen directly on my head and neck. I was immobilized and taken to the ER in an ambulance. I am very healthy and have never passed out before. I have no medical history or events that would justify this happening. In fact, I recently got an annual physical and my blood work was perfect. It was about 5 minutes after the first dose that I completely lost consciousness. |
| 1164233 | 4/3/2021 | FL | 72 | F | 3/9/2021 | 3/10/2021 | 12 hours after the second COVID vaccine was received I had chills for two hours and then started vomiting. Only took two Tylenol and water. We had to spend the night because my husband had his second shot the next day. We had a two hour drive home and almost home I started to feel nausea light headed very hot. I passed out in the car so my husband pulled over to assist me. After five or so minutes I decided I could make it home but started vomiting again. I had nothing to eat but did drink sips of Sprite. He wanted to take me to ER but I said no. Worse sickness I've had in 72 years |
| 1164239 | 4/3/2021 | PA | 30 | F | 4/1/2021 | 4/2/2021 | Fainted at 5:30am immediately after vomiting and bowel movement. Chills and assumed fever began around 1:30am. |
| 1165135 | 4/3/2021 | | 37 | M | 3/26/2021 | 3/26/2021 | 12 minutes post vaccination, the patient was sitting down and attempted to stand up to tell the observing health care staff that he was feeling "woozy." When he stood up, the patient fainted and fell to the ground. He appeared to be unconscious for 5-10 seconds and then came to. While he was confused for a few minutes, he was able to orient himself to place, time, and date. No treatment was administered. Patient's blood pressure was monitored throughout recovery time. |

| 1164690 | 4/3/2021 | MO | 20 | F | 4/3/2021 | 4/3/2021 | Patient was given the injection and then she started feeling dizzy right after administration. She sat with her head against the wall and dropped her phone and passed out for just a moment. She had a slight tremor/shake for a few seconds. (I did not witness, unsure exactly what happened or how long) She came too fairly quickly after being yelled at, are you ok? When she regained consciousness she complained of being hot all over for a bit. We gave her ice packs to cool down. She felt hot for maybe 10-15 minutes, but felt relief with the ice packs. She also drank some sips of cool water which seemed to help her cool down. |
| 1164304 | 4/3/2021 | FL | 32 | F | 4/1/2021 | 4/1/2021 | Systemic: Allergic: Anaphylaxis-Mild, Systemic: Dizziness / Lightheadness-Mild, Systemic: Fainting / Unresponsive-Mild, Systemic: Vomiting-Mild |
| 1164326 | 4/3/2021 | MA | 29 | M | 3/25/2021 | 3/25/2021 | Syncopal episode a few minutes after the vaccine. No injury. Reported history of fainting after vaccines. |
| 1164341 | 4/3/2021 | OR | 53 | F | 4/3/2021 | 4/3/2021 | Patient fainted 2 minutes post-vaccination. Patient reports she had a panic attack due to reading the potential side effects vaccine pamphlet. Patient reports she has had panic attacks in the past, but never from a vaccine. Patient was shaky and slightly disoriented but alert enough to answer questions about her identity and how she was feeling. |
| 1164366 | 4/3/2021 | CO | 44 | F | 4/3/2021 | 4/3/2021 | Patient was waiting in lobby for 15 observation period. During this time she started to feel faint and approached the counter. I asked her to return to her chair, she passed out. The patient fainted but did not hit her head. Her breathing was monitored, her husband was called, and I sat with her until paramedics arrived. The patient was able to walk out of the store after her examination with the paramedics. |
| 1164398 | 4/3/2021 | TX | 36 | M | 4/3/2021 | 4/3/2021 | Patient received his vaccine and was doing well, he proceeded to sit on the chair to wait for 15 mins for us to monitor him. He was with his wife and fainted and fell out of the chair. 911 was called and they came and took him to the hospital |

| 1164404 | 4/3/2021 | WI | 30 | F | 4/2/2021 | 4/2/2021 | Severe body aches, chills and sweating. Dizziness, nausea, dehydration and stomach pain. Headache and passed out! |
| 1164684 | 4/3/2021 | MI | 18 | M | 4/2/2021 | 4/2/2021 | Patient passed out briefly a few minutes after receiving the vaccine. Nurses evaluated patients orientation, oriented x3, vitals, within normal limits. Last food or drink a banana earlier that morning Called EMS who cleared patient to leave. Patient did not go to the hospital. |
| 1164615 | 4/3/2021 | NC | 36 | M | 4/3/2021 | 4/3/2021 | Patient immediately felt lightheaded and fainted with head in lap for 5 seconds. We called 911 and he drank a lot of water and felt better and paramedics left. |
| 1164430 | 4/3/2021 | AZ | 58 | F | 4/3/2021 | 4/3/2021 | Pt received Janssen COVID vaccine. 4/2/21 at 12:20PM After the injection pt was seated in a chair for observation. Pt began feeling light headed and passed out. Her eyes never closed and she did not fall from sitting in the chair. She looked out of it for a brief period, 1-2 minutes. Afterwards, pt stated she had a burning sensation and she felt weak. We gave the pt water and she agreed to stay in waiting area for 30 minutes. Pt husband and daughter were with her while she was in waiting area. 911 was not called as pt was responding and began to feel better. Pt observed for 30 minutes. She stated she felt fine when she left the pharmacy with her husband and daughter. Told pt to seek medical attention is symptoms persist or come back. |
| 1164597 | 4/3/2021 | | 37 | F | 4/2/2021 | 4/2/2021 | Lightheaded, claustrophobic wheelchair to medical tent and passed out states "this happens with needles". Pt rested on cot and voiced she felt better. Pt refused EMS AMA upon EMS arrival. |
| 1164688 | 4/3/2021 | CA | 28 | M | 3/30/2021 | 3/30/2021 | Syncope, fear of needles, hadn't eaten meal. BP 70/37 (pulse 60), 100% O2 sat. Final BP 111/72 (pulse 82), O2 sat 100%. |

| 1164566 | 4/3/2021 | IA | 31 | M | 4/3/2021 | 4/3/2021 | Patient was talking to a friend about five minutes after receiving the vaccine and suddenly passed out and fell to the floor. He was awake again in about a minute. The patient was sweating, pale and a little disoriented for a couple minutes but started improving steadily until he was feeling his normal self again. The EMS was called but the patient declined being taken to the hospital as he felt much better by the time they arrived. |
| 1164519 | 4/3/2021 | MD | 16 | F | 4/3/2021 | 4/3/2021 | Dizziness and near syncope |
| 1164509 | 4/3/2021 | MN | 38 | M | 4/2/2021 | 4/2/2021 | Approximately ten minutes after receiving the vaccination I got very dizzy and passed out. I was out for 3-4 minutes and came to. Subsequent to passing out I vomited a few times and could not hold anything down. I also urinated on myself at some point when out. I was not getting better so 911 was called and I was transported to the emergency room via ambulance. Once the ambulance arrived at the hospital I vomited again filling about half of the vomit bag. I arrived at the hospital and an IV was not able to be administered so I was given Zofran for nausea and Gatorade to try and hold down. I spent approximately 4 hours in the ER, was able to finally get to the point where the nausea calmed down and I was able to walk around. I was then discharged. |

| 1164484 | 4/3/2021 | WY | 68 | F | 2/26/2021 | 2/28/2021 | <p>Tested positive for COVID-19 January 11th 2021. Feb 26th 2021 went in to get the first COVID vaccine around 1130 with Public Health. COVID vaccine manufacturer was Moderna. Given in the left deltoid, IM. Patient did stay an extra 30 minutes post vaccine b/c she has lots of allergies. About an hour After the vaccine she experienced pain in her left arm and up into her neck on the left side. Symptoms are very simular to something that she ingested and had an allergic reaction to in the past. Felt okay the first day, second day (2-27-2021) she had chills, fatigue, aches and pains. Started to feel like she was improving on Monday around the 28th of February 2021. Fever was down. Still felt fatigued. Nose felt like it was runnng, itching. Experienced dry eyes, started using the eye drops more frequently. Ear canals were itching. She noticed a tickle in her throat later. Not conscios of everything all the same time, she just didn't feel well overall. Vagina and anus were itching. Started to use the estradiol compound daily hoping that might help. Itchy all over and then realized that the reaction was sort of the same reaction she had in the past with the statin medication. Few days after that had abdominal bloating and cramping, also loose stool and finally diarrhea. Around that same time she reports that she was very dizzy and saw stars, had to sit down, did not actually faint. Denies any fainting episodes, but felt faint. Resolved after 5-10 minutes of sitting down, did not feel clear headed after that for several days. Did do her daily walk, starting on 2-28-2021, felt like she had less stamina. Feels more tired in general still now. Does regret getting the COVID vaccine now. Took some benadryl at the time of the reaction and at hs PRN, benadryl makes her feel drowsy. Takes zyrtec, flonase daily and singulair. Pt's husband is a physician, and he prescribed a Medrol dose-pak, which did not seem to help. At the time was taking all of her prescribed medications amlodipine, benazepril. Has taken pepcid for heart burn in the past, was not taking it as the time. Taking prn omeprazole. Denies experiencing any wheezing. Experienced Generalized swelling of eyelids, face, hands, feet. Tongue is kind of swollen today, and she feels like it has been swollen on and off since the vaccine. Prior to the vaccine she felt pretty good overall. Went out for a few days and went skiing with her family. Has a place out of town that she deep cleaned, felt like</p> |

|---------|----------|----|----|---|-----------|---|--|
| | | | | | | maybe she over did it, but she recovered after she rested briefly. Was due for the second vaccine last week. She held off until she could discuss with her doctor, and they discussed that she should not have any further doses. Physically she felt that she should not receive the 2nd vaccine. Continued symptoms include itchy throat (tickle), vaginal and anal itching all day every day. Itching has become a little more like soreness of the tissues. No bruising. Patient has not had the shingles vaccine (Shingrix), thinks she should not get it now. She has pretty much avoided getting vaccines throughout her life b/c she has had poor reactions to flu shots in the past as well. One year, we tried a "half-dose" regimen of the flu shot, giving 0.5ml IM , waiting one month and repeating 0.5ml IM. She did tolerate this well with no reported adverse outcome and did not get influenza that year though it was very active in the community. Since the Moderna vaccine, pt describes Abd distention, bloating of small intestine, "I look 6 months pregnant." pt states her stomach has been like this since the COVID vaccine reaction. | |
| 1159933 | 4/2/2021 | DC | 43 | M | 4/2/2021 | 4/2/2021 | Patient developed signs of syncope within five minutes of receiving the second dose of the Pfizer COVID-19 vaccine. Patient stated he ate little that day and often has similar episodes after giving blood. The patient also stated a fear of needles and taking a look at the needle today caused anxiety. |
| 1159773 | 4/2/2021 | WA | 19 | M | 4/2/2021 | 4/2/2021 | Near syncope, hypotension and nausea. |
| 1159886 | 4/2/2021 | IL | 37 | M | 4/2/2021 | 4/2/2021 | Vaccine was administered at 10:25am. Patient walked over to the waiting area and as he was walking he passed out and fell to the ground. Vitals were taken at about 10:28am: B/P 132/74 HR 70 RR 18, glucose 120. Patient was able to state his name and where he was located, but kept his eyes closed and kept stated he felt "confused and dizzy" and was apologetic. EMS was called at 10:30AM and when EMS was here pt was noted to have another syncopal episode. Patient was transported to Hospital via ambulance. |
| 1159911 | 4/2/2021 | WI | 16 | F | 3/20/2021 | 3/20/2021 | Vasovagal Syncope. Awake within 3 seconds, kept her legs elevated, pushed fluids and a snack. Patient was given the Moderna Vaccine and is under the age of 18 |

| 1159892 | 4/2/2021 | WI | 38 | M | 4/1/2021 | 4/1/2021 | Patient had a vasovagal response. Patient observed another person feeling anxious and then he fainted. Patient immediately recovered without any further concerns. |
| 1159889 | 4/2/2021 | TN | 19 | F | 4/1/2021 | 4/1/2021 | Patient sustained a vasovagal syncope event about 3 to 4 minutes subsequent to vaccine administration. Struck back of head on chair with fall to ground. Evaluated by medical staff and referred to medical center via ER non-emergent transport. Subsequent to ER staff evaluation for syncope and head injury, she was treated and released from the ER without need for further work-up or imaging. |
| 1159924 | 4/2/2021 | PA | 29 | F | 4/1/2021 | 4/1/2021 | Fainted for roughly 2 minutes |
| 1159640 | 4/2/2021 | WA | 72 | F | 2/23/2021 | 2/23/2021 | approximately 14 hours after second Moderna vaccine, developed severe shaking chills, low grade fever, nausea and fainting |
| 1159839 | 4/2/2021 | MA | 23 | F | 4/2/2021 | 4/2/2021 | near syncope |
| 1159756 | 4/2/2021 | IN | 36 | M | 4/1/2021 | 4/1/2021 | Pt received his vaccine and then went to the observation area. While he was there he started feeling lightheaded and unwell. 5 minutes after vaccination, pt was hot, diaphoretic, and went very pale. His eyes started rolling into the back of his head and he was exhibiting shallow breaths. His pupils dilated and he started foaming at the mouth. Pt was lowered to the ground and a full dose of adult epi pen (Lot#0FM406 Exp FEB 2022) was given to the left lateral thigh at 1725. 911 was also called. Pt came to almost immediately. His pupils and breathing returned to baseline. He stayed lying down but was A & O x4. He confirmed that he does not have any allergies, however he has passed out after a vaccine before. Paramedics arrived on scene and took over the encounter. Pt felt much better, however still went with the Paramedics to the ER. Also advised pt to follow up with his PCP in regards to receiving the second vaccine. |

| 1160173 | 4/2/2021 | TX | 57 | F | 3/30/2021 | 3/30/2021 | ASSESSMENT: 57 y.o. female with PMHx of HTN who presented today to the Vaccine site for her second COVID vaccine. She c/o only a sore arm for 1-2 days after her first vaccine but otherwise tolerated it well. NKDA. She states that about 5-10 min after the vaccine she developed rhinorrhea so she went to the bathroom and blew her nose and it improved some but did not resolve. She did not inform us of this until her 15 min timer went off so I completed an evaluation. I am the physician assistant on site at the vaccine clinic who monitors the patients and is there for emergencies. If a patient feels they are having a reaction I complete an exam on the patient. She states the rhinorrhea was still there but was better than it was. Associated with a sensation of "oil in my throat, like eating some butter" but denies throat itching or tightness. Associated with intermittent dry cough and throat clearing. Denies difficulty breathing, wheezing, tongue/lip swelling, mucosal or skin itching, hives, palpitations, lightheadedness, dizziness, SOB, headache, nausea, vomiting, diarrhea, abdominal pain. She has experienced similar rhinorrhea and dry cough in the past with certain medical masks like the one we provided her today. She also experiences this with her seasonal allergies. Her allergies have not been flaring up the last 2 weeks or so but they were before that. She states she has dry mouth and has to drink a lot of water or she will develop a dry cough and throat clearing like she has today. Reports she has never had an allergy to any vaccine or injectable medication in the past. ROS: Constitutional: Negative for chills, fatigue, fever, diaphoresis and weakness. REFLEXES Gait: normal PSYCHIATRIC
ORIENTATION: She is alert and oriented to person, place and time. MOOD/AFFECT: Normal mood and affect. INSIGHT/JUDGEMENT: Normal insight/judgement. The patient has good insight with good judgment. ASSESSMENT/PLAN:
Rhinorrhea - Airway remained clear, breathing was normal, circulation was good and mentation was good. - She was monitored for 60 min after the rhinorrhea began, vitals remained stable and WNL (despite slightly elevated BP). She drank 1.5 bottles of water which improved her dry cough. She stated she was feeling back to normal before she left the clinic. - Warned her that she likely was having a mild allergic reaction to the vaccine and warned that it is possible for allergic reactions to worsen. Reviewed signs and symptoms of anaphylaxis in detail and gave strict ER warnings if any develop, especially difficulty breathing, throat/facial swelling or any worsening symptoms occur. Warned her while driving to work (15 min drive) she keep an eye on her symptoms and pull over and call 911 if any signs or symptoms of anaphylaxis develop. - Advised she take a non-sedating antihistamine like Claritin on her way to work. I advised she let her colleagues at work now to keep a close eye on her at work. - She expressed understanding and stated she was feeling well and wanted to go to work - All questions were answered. I informed her PCP and sent them my note. I called 4 hours after the vaccine to follow up but had to leave a voicemail,. I spoke with her the following day on 3/31/21 and she stated she felt great besides localized soreness at the injection site. Otherwise she felt well. The rhinorrhea, cough and throat clearing had completely resolved after taking 1 claritin. Denied shortness of breath, difficulty breathing, wheezing, fever, chills, n/v/d, chest pain, hives, itching, palpitations, dizziness, syncope, near syncope or headache. She did not require any further treatment and did not need to have a visit with her PCP and did not need to go to the ER or hospital.

| 1158677 | 4/2/2021 | IL | 41 | F | 3/16/2021 | 3/16/2021 | <p>started feeling tired/she was starting to feel tired, then really tired and the mom said 'maybe you should pull over' and she didn't have time to process it as she fainted/blacked out right after; fainted/blacked out right after; she rear ended another car and then drove around that car and she think the car stopped itself possibly not sure but when she awoke she was directly in front of the vehicle she had rear ended; This is a spontaneous report from a Pfizer-sponsored program. A contactable consumer reported that a 41-year-old female patient received dose 1 bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, administered in the left arm on 16Mar2021 16:00 (Batch/Lot number was not reported) as SINGLE DOSE for covid-19 immunization . There were no patient's medical history and concomitant medications. The patient waited the 15 minutes at the site and felt fine. She got on the road at 6pm and started feeling tired. She was on the phone with her parents and mentioned she was starting to feel tired, then really tired and the mom said 'maybe you should pull over' and she didn't have time to process it as she fainted/blacked out right after. When she woke up, she was still behind the wheel the drivers steering wheel airbag and airbag at her legs had deployed. She has no memory of what happened but her daughter (age 9) was in the back seat of the car with the dog. The patient's daughter said that she accelerated into the intersection passed through ("I blacked out as the light was changing to green") she rear ended another car and then drove around that car and she think the car stopped itself possibly not sure but when she awoke she was directly in front of the vehicle she had rear ended. The driver in the other car was taken in an ambulance with she believes the other driver had some discomfort in the neck/back but she was not 100% sure. It was reported that the outcome of events was recovering. It was unknown if the patient receive treatment for the events. The events were considered as serious due to hospitalization. Information on the lot/batch number has been requested.</p> |

| 1158366 | 4/2/2021 | CA | 38 | F | 4/1/2021 | 4/1/2021 | <p>On Thursday, 4/1/2021, client received her first dose of Pfizer COVID vaccine (LOT # EW0150, EXP 7/2021) at approximately 10:07 am by vaccinator RN. RN instructed client to self-monitored at the observation area. EMT found this 38 years old female in an observation chair sitting upright and requesting assistance. Due to the client needing translator, site manager present provided translation. lead RN came to assist EMT as needed. EMT reported client had a chief complaint of lightheadedness. Client stated that she felt like her head was "big" but that she did not feel like fainting. Client stated she had a history of high blood pressure and diabetes type 2 but did not take diabetes medication. Instead, she stated that she managed it strictly with her diet. Client had no known allergies. Assessment revealed no redness, hives, swelling, shortness of breath, chest pain or other signs of anaphylaxis throughout her body. Client denied having a headache but stated that she felt "hot" and that the heat was rising to her head. Client denied having a meal before her vaccination. Initial vitals were as follows: Alert and oriented x 4, Eyes were PERL (Pupils Equal and Reactive to Light) at 4 mm, pulse - 74, regular and strong at radial. O2 - 99%, blood pressure 160/98, Temperature 97 F, Respirations 20 and regular. Skins were warm and mildly sweaty. Client consented to staying present for an extra 30 minutes after incident onset. Staff present verified that client had no food allergies and was provided food to eat while under observation. Client's vitals were monitored at 5 minutes intervals after the onset of the incident as follow: 10:18 am: 160/98 (Blood Pressure), 74 (Heart Rate), 99% (Oxygen), 20 (Respiration), 97 F (Temperature); 10:23 am: 162/98, 68, 99%, 18; 10:28 : 162/98, 68, 99%, 18; 10:33 : 162/98, 72, 99%, 18; 10:38 am: 162/98, 72, 99%, 18, 98 F; 10:48 am: 162/98, 72, 99%, 18. Client reported at the end of her observation that she no longer felt hot and her head sensation was gone. Client's temperature improved from 97 degrees Fahrenheit to 98 degrees Fahrenheit and she ceased sweating at the end of her observation period. Client's husband was present and both were provided a Pfizer vaccine fact sheet and instructed to seek out medical advice or emergency care if a severe allergic reaction occurs later in the evening. Client left with husband in no apparent distress at 10:48 am with husband stating he would drive them home.</p> |

| 1159157 | 4/2/2021 | MI | 59 | F | 3/31/2021 | 4/1/2021 | At 4am, I woke up with a high fever (which I expected). I got up to eat a piece of toast before I took Tylenol. I ate about 2 bites of the toast and started sweating profusely. Fortunately, my husband had gotten up at that time to help me out. At about that time, I totally passed out (fainted). According to my husband, I was out about 10 seconds. I woke up to him panicking and on the verge of calling 911. I was extremely weak and could not walk without his help. I did not end up taking Tylenol since I could not keep anything down (I ended up with the dry heaves). The "passing out" side effect is not listed on the side effects. My daughter said her brother-in-law also passed out several hours after taking Moderna. I experienced all of the side effects listed: fatigue, headache, muscle pain, joint pain, chills, nausea, vomiting, fever, dizziness and weakness. |
| 1159114 | 4/2/2021 | NY | 18 | F | 4/1/2021 | 4/1/2021 | Patient reported to her friend that she felt nauseous. According to the friend she then slouched to her right and fell off her chair. She came to within a minute. 911 was called at 12:45. She stayed on her right side on the floor for approx 3 minutes before being assisted to sitting on the floor. She was alert and oriented. She was given juice. She reports she had eaten that morning before getting vaccine. She reports that she has not ever "passed out" after an injection or vaccine before. She was assisted to the chair then to a wheelchair. She was wheeled to the ambulance. EMS checked her blood sugar and it was 65. She did not go to the ER, she was treated and released. She reported that she went for lunch after leaving vaccine site. |
| 1159107 | 4/2/2021 | CO | 59 | F | 3/15/2021 | 3/16/2021 | Slight ha when woke up on 16th. Within 15 min dizzy and passed out. Heavy vomiting and no strength. Bone crushing pain, Laid on floor, partner called 1-800 suggested pepto mismol. Vommitted that. Called EMS to help Get. Me to bathroom and back laid down. No fever. Took other vs . Next thing I know I was in bed eating toast and cola. Left me still weak and trouble keeping balane. Should I get 2nd shot? |

| 1162057 | 4/2/2021 | PA | 55 | F | 3/3/2021 | 3/4/2021 | <p>her stomach was bothering her; her daughter told her the right side of her tongue looked swollen; allergic reaction to the COVID-19 Vaccine; heaviness with her headache; stroke; Facial droop; Numbness / left half of her face was numb / numbness in her left hand/numbness and tingling all over her body; Tingling; Tiredness; Pain; Headache; This is a spontaneous report received from a contactable consumer, the patient. A 55-year-old adult female received the first dose of BNT162b2 (solution for injection; Lot EN6202 and expiry information not provided) via unspecified route in the left arm on 03Mar2021 between 17:10 and 17:30 (at 55-years-old) for COVID-19 immunisation. Relevant medical history included Frozen shoulder (2020-2020), and severe migraines (especially in the past ten years). The patient further stated that she has always had migraines. She said sometimes when her migraines escalate, her blood pressure goes up, and her left side tingles. She said several times in the past, she thought her migraine symptoms may have been a stroke. She said she her doctor is checking her for any kind of things like rheumatoid arthritis, mast cells, constant (chronic) fatigue, and fibromyalgia. She said right before the COVID-19 Virus pandemic she had passed out unexpectedly. She said she doesn't know what caused her to pass out. She said she needs another neurological test done. She said she had a neurological test that maybe showed that veins were dying in her brain, but she wasn't sure. She said her doctor had been doing heart tests too, but because of the pandemic, it was taking longer to have the tests done. The patient also mentioned that her last blood work was probably in/around Nov2020. There were no concomitant medications or past drug history reported. The patient denied receiving any other vaccination within the four weeks prior to the vaccination. The patient also denied receiving any other vaccination on the same date as the vaccination. The patient reported that on 04Mar2021, approximately seventeen hours after she received the COVID-19 vaccine, she had what she thought was a kind of severe reaction. She said she had an inside numbness and tingling all over her body. She said the left side of her body, especially, had a very strong numbness and tingling, like a stroke. She said the numbness was in her left hand, and outside left shoulder. She said the left half</p> |

| 1162637 | 4/2/2021 | TX | 24 | M | 4/2/2021 | 4/2/2021 | of her face was numb. She said at the time she felt weird. She said she was speaking to her friend on a video call and did not want her friend to think she was a cry baby. She said then her friend told her there was something happening with her face. She said the right side of her face had dropped. She said her right eye and the right side of her mouth were drooping. She said she told her friend she thought she had an allergic reaction to the COVID-19 Vaccine. She said it took about three hours for her symptoms to pass. She said afterward she was so tired, had pain, and a headache. She said it was strange for her to have a headache because she was used to migraines. She said she still had a headache today (08Mar2021). She said she had a heaviness with her headache. She said if she had a migraine, she would not be able to do anything, but with the headache she had, she was able to go about her everyday things. She said her stomach was bothering her too, but she was not worried about how her stomach felt. The events did not require any visits to a physician's office nor the emergency room. Treatment for the events included drinking a lot of water and moving around. The outcome of the events, inside numbness and tingling all over her body, very strong numbness and tingling, like a stroke, numbness was in her left hand, and outside left shoulder, half of her face was numb, right side of her face had dropped, and tongue looked swollen, and allergic reaction to the COVID-19 Vaccine was recovered on 04Mar2021 after about three hours duration. The outcome of the events so tired, and pain was recovered on an unspecified date in Mar2021. The outcome of the events, headache, and heaviness with her headache was not recovered. |

| 1162105 | 4/2/2021 | PA | 27 | F | 3/11/2021 | 3/15/2021 | <p>passed out; experienced seizure like activity; low fever; arm pain; fatigue; chills; feeling very weak and sick; feeling very weak and sick; This is a spontaneous report from a contactable consumer (patient). A 27-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), first dose via an unspecified route of administration, administered in the left arm on 11Mar2021 at 15:45 (batch/lot number was not reported) as a single dose for COVID-19 immunisation. Medical history included asthma, Ehlers-Danlos syndrome, known allergies to red food dye and sulfa; all from unspecified dates. The patient was not pregnant at the time of vaccination. Concomitant medications included celecoxib (CELEXA), lorazepam (ATIVAN), VITAMIN D NOS (VITAMIN D), cyanocobalamin (VITAMIN B12), curcuma longa (TURMERIC); all taken for unspecified indications, start and stop date were not reported. The patient previously took gabapentin, escitalopram (LEXAPRO), and promethazine and experienced known allergies to all drugs. Facility type vaccine was pharmacy or drug store. No other vaccine in four weeks. It was unknown if the patient had Covid prior to vaccination. The patient was not Covid tested post vaccination. After receiving the first shot, the patient felt the expected side effects (low fever, arm pain, fatigue and chills) but they worsened over the next several days. After feeling very weak and sick all day, she passed out for approx 30+ minutes, she was alone but was found on the floor by her mother after she attempted to call her multiple times and she didn't respond. She experienced seizure like activity and was advised by her primary care doctor to go to the emergency room, and was seen there. Start date for the adverse events reported as 15Mar2021 at 16:00. The adverse events resulted in doctor or other healthcare professional office/clinic visit and emergency room/department or urgent care. There was no treatment received for the events. The outcome of the events was recovering. Information on the lot/batch number has been requested.</p> |

| 1162060 | 4/2/2021 | NY | 45 | F | 1/26/2021 | 1/26/2021 | Tachycardia; Rash; This is a spontaneous report from a contactable healthcare professional. This is the second of two reports for the same patient with reoccurring events separated in time. A 45-years-old non-pregnant female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), second dose (Batch/Lot Number: UNKNOWN) via an unspecified route of administration on 26Jan2021 (at the age of 45-years-old) as a single dose for COVID-19 immunisation. The vaccination was received at the hospital. Medical history included asthma, clotting disorder and allergies. The patient did not receive any other vaccines within 4 weeks prior to the BNT162B2 vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. Since the vaccination, the patient has not been tested for COVID-19. Concomitant medications included unspecified medications. It was reported that the patient had received other medications within 2 weeks of vaccination. The patient previously received the first dose of BNT162B2 on 05Jan2021 for COVID-19 immunisation and experienced tachycardia, rash and presyncope. The patient developed tachycardia and rash which started approximately 2 weeks after the first vaccine and worsened after the second vaccine on 26Jan2021. The tachycardia and rash required a visit to the Emergency Room and Physician Office. Treatment included steroid injections, oral steroids and Diphenhydramine (BENADRYL). The patient was not admitted to the hospital. The outcome of event tachycardia was recovered on an unknown date. The outcome of event rash was recovering. The healthcare professional reported casual effect of the events tachycardia and rash to the vaccine. The lot number for the vaccine was not provided and will be requested during follow up.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events of tachycardia and rash due to temporal relationship. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics including EKG, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product |

| 1161921 | 4/2/2021 | TN | | F | | 3/1/2018 | <p>her heart went back into afib one; feeling tired; numbness in her hands and fingers; tingling in her hands and fingers; lower back pain on the right side/lower back starts to hurt sometimes; weakness in legs/legs are weak; shortness of breath; feeling off; black eye; This is an initial solicited report from a non-Pfizer sponsored program, from a contactable consumer, based on information received by Pfizer. This 79-year-old female patient was involved in a patient support program. The patient received apixaban. The report describes a case of fatigue (feeling tired), hypoaesthesia (numbness in her hands and fingers), paraesthesia (tingling in her hands and fingers), back pain (lower back pain on the right side/lower back starts to hurt sometimes) and muscular weakness (weakness in legs/legs are weak). The occurrence of additional non-serious events is detailed below. The patient's past medical history included High frequency ablation and Hospitalisation. In March 2018, the patient started apixaban (Oral), (unspecified dose, twice a day). On an unknown date, the patient experienced fatigue (feeling tired), hypoaesthesia (numbness in her hands and fingers), paraesthesia (tingling in her hands and fingers), back pain (lower back pain on the right side/lower back starts to hurt sometimes), muscular weakness (weakness in legs/legs are weak), dyspnoea (shortness of breath) and feeling abnormal (feeling off). The action taken with apixaban (Oral) was unknown. At the time of the report, fatigue, hypoaesthesia, paraesthesia, back pain, muscular weakness, dyspnoea and feeling abnormal outcome was unknown. For apixaban (Oral), the reporter did not provide any causality assessments. Patient received apixaban for the indication of Atrial fibrillation. The consumer reported that in Mar-2018 during a trip with her daughter, she began feeling tired and her legs hurt. When she returned home, she was hospitalized and diagnosed with Atrial Fibrillation. Follow-up (18Mar2021): This is a follow-up solicited report from a non-Pfizer sponsored program, from a contactable consumer, based on information received by Pfizer license party for apixaban. This 79-year-old female patient was involved in a patient support program. The patient received APIXABAN. The report describes a case of ATRIAL FIBRILLATION (her heart went back into afib one). The occurrence of additional non-serious events is</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

detailed below Co-suspect products included Covid-19 Vaccine. The patient's past medical history included High frequency ablation and Hospitalization. Concurrent medical conditions included AFib. In March 2018, the patient started APIXABAN (Oral), (unspecified dose, twice a day). On an unknown date, the patient experienced ATRIAL FIBRILLATION (seriousness criterion medically significant), FATIGUE (feeling tired), HYPOAESTHESIA (numbness in her hands and fingers), PARAESTHESIA (tingling in her hands and fingers), BACK PAIN (lower back pain on the right side/lower back starts to hurt sometimes), MUSCULAR WEAKNESS (weakness in legs/legs are weak), DYSPNOEA (shortness of breath), FEELING ABNORMAL (feeling off) and EYE CONTUSION (black eye). The patient was treated with Surgery (heart monitor) for Atrial fibrillation. The action taken with APIXABAN(Oral) was unknown. At the time of the report, ATRIAL FIBRILLATION, FATIGUE, HYPOAESTHESIA, PARAESTHESIA, BACK PAIN, MUSCULAR WEAKNESS, DYSPNOEA, FEELING ABNORMAL and EYE CONTUSION outcome was unknown. The patient stated that she had the coronavirus Pfizer vaccine and a few days later she had a black eye. The patient was concerned about this because she takes Eliquis so she asked a healthcare professional for advice they then informed her that the vaccine had caused her black eye. She was told that she cannot miss her second vaccine and that she might have to stop Eliquis. Patient was concerned about having to stop and had some questions. The patient reported that, she had been on Eliquis for a while and she had been doing just fine. She recently took the Pfizer Covid vaccine and a week or two later she developed a "black eye". She described the color around her eye as eggplant purple. She remembered her mother would have blood vessels burst around her eye, so at first, she thought nothing of it. She said the day before yesterday she went with her daughter while she got the Moderna Covid vaccine. She asked the nurse administering her daughters Moderna Covid vaccine if the Pfizer vaccine could cause black eyes. The patient said the nurse did some research and told her the the Pfizer vaccine was known to cause hemorrhaging, and that the vaccine caused the black eye. The nurse told the patient she should go to her HCP as soon as possible and get blood work done. The patient did not

say anything else was abnormal about her blood work. She told the HCP what happened to her eye after she was given the Pfizer Covid vaccine. The HCP told her that no matter what the patient should get the second Pfizer vaccine, even if she had to stop the Eliquis for a few days. The patient said she did not want to stop the Eliquis because she has been doing wonderful on the medication and did not think the Eliquis was the cause of the black eye. She said she will have a talk with her normal primary care doctor as well as her cardiologist. The patient said she rather not get the second covid then stop the Eliquis. The patient started Eliquis two years ago after her heart went into "full afib" she had an ablation procedure and they shocked her heart three times to get it back into rhythm. Since starting the Eliquis the patient said her heart went back into afib one time. She wore a heart monitor and her heart went back into sinus rhythm on its own. She also mentioned that her HCP prescribed her a diuretic but she said she has a terrible reaction to it. She was prescribed the diuretic to help with the swelling around her ankles. She said the diuretic was also to help "keep congestion from her heart". The diuretic makes her feel "terrible" so her HCP allows her to cut the pill in half or quarters and take as needed to keep swelling down. She said the diuretic makes her feel faint and she even passed out one time while walking in the mall. She said she has not taken it in a while. The patient said she had a lot of allergies to medications, to many to list.

DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 17-Mar-2021, Prothrombin time: 16.2 seconds. For APIXABAN(Oral), the reporter did not provide any causality assessments. Patient received apixaban for the indication of Atrial fibrillation. The consumer reported that in Mar-2018 during a trip with her daughter, she began feeling tired and her legs hurt. When she returned home, she was hospitalized and diagnosed with Atrial Fibrillation. The strength of Eliquis was 5 mg. Most recent follow up information received on 18-Mar-2021 from Non-Health Professional incorporated above includes : New events added, lad data, concomitant drugs and narrative updated.; Sender's Comments: BMS Medical Evaluation Comment: This 79-year-old patient had atrial fibrillation after therapy with apixaban. Elderly age and underlying atrial fibrillation can be associated with increased risk of arrhythmias and

| 1162065 | 4/2/2021 | OH | 64 | M | 3/11/2021 | 3/11/2021 | Kidney stone; Blood all over him; Falling down; Wobbliness; No energy; Could not sleep at all; Sweating like crazy; No appetite; This is a spontaneous report from a contactable consumer (patient). A 64-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE), first dose (at the age of 64-years old) via an unspecified route of administration in the left arm (reported as injection in left shoulder) on 11Mar2021 at 13:00 (Batch/Lot number UNKNOWN) as a single dose for COVID-19 immunisation. Medical history included colitis ulcerative from 1982 and ongoing, ongoing seizure (he had seizures for about 6 years and they got worse, probably it has been 6 or 7 years he has had seizures), high blood pressure, heartburn and insomnia (comes and goes). Concomitant medication included atorvastatin (manufacturer unknown, Tablet) 40mg strength, oral administration, 20 mg daily (half a tablet at bedtime) taken for an unspecified indication from an unspecified start date and ongoing; cholecalciferol (manufacturer unknown, Tablets) oral administration, 2 tablets in morning taken for colitis ulcerative from an unspecified start date and ongoing; escitalopram (manufacturer unknown), oral administration, 20 mg once daily taken for seizure from an unspecified start date and ongoing; lacosamide (manufacturer unknown) oral administration, 200 mg twice daily taken for seizure from an unspecified start date (for approximately a couple of years) and ongoing; lisinopril (manufacturer unknown), oral administration, 20 mg daily taken for high blood pressure from an unspecified start date and ongoing; mesalazine (MESALAMINE, Tablet), oral administration, 4 tablets a day taken for colitis ulcerative from an unspecified start date and ongoing; omeprazole (manufacturer unknown) oral administration, 20 mg as needed (two or three pills daily as he feels like he needs) taken for heartburn and ulcerative colitis from 2001 (approximately 20 years ago) and ongoing and zonisamide (manufacturer unknown) oral administration, 100 mg twice a day taken for seizure from an unspecified start date (for a couple of years) and ongoing. The patient did not receive any other vaccines within 4 weeks prior to the COVID-19 vaccine. The patient received the vaccination on 11Mar2021. After he received his first dose of the vaccine he experienced a bunch of symptoms which he listed as sweating, he could not |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

sleep at all the first night, he was falling down, he had no appetite, and had no energy that same day. This occurred after the 15 minute window of waiting after getting the vaccination. On 11Mar2021, after the vaccination, the patient went to the store to buy groceries and started sweating like crazy. He could hardly carry the groceries to the car. He also had wobbliness. On 11Mar2021, the patient fell down and passed out coming home that night and he had blood all over him. He later clarified that he did not pass out, he got into the house and fell down and somehow landed on the recliner. He was covered in blood and all kinds of stuff. On 11Mar2021, he could not sleep at all that first night and his prescription Melatonin (Manufacturer Rugby) 3mg did not help at all. The falling down occurred roughly that same night on 11Mar2021. The patient stated that they told him they thought he was having seizures again but he was not. He had imaging which showed no seizures and Xray of his brain with unknown results in Mar2021. He had to have another Xray to make sure he did not have bleeding on the brain. Xray of his stomach showed kidney stones on 12Mar2021. The patient was not admitted to the hospital. The patient was scheduled to return for the second dose 01Apr2021. The patient inquired if he should get the second dose of the vaccine. The outcome of events kidney stone, blood all over him, could not sleep at all and wobbliness was unknown. The outcome of events sweating and falling down was recovered on 11Mar2021 and no appetite was recovered in Mar2021. The outcome of no energy was recovering. The lot number for the vaccine was not provided and will be requested during follow up.

| 1162919 | 4/2/2021 | CA | 24 | M | 4/2/2021 | 4/2/2021 | <p>On Friday, April 4, 2021 client (DOB 5/3/1996) received his first dose of Pfizer COVID vaccine (LOT # EW0150, EXP 7/2021) at approximately 12:56pm. Per EMT report: at 1:06pm, client fell out of chair, landed on his left knee and regained consciousness immediately. Upon assessment, client stated his left knee pain was a 3 out of 10 scale. At 1:07pm, client was sat in the zero-gravity chair in supine position and given a bottle of water. Client stated he "felt pressure in ears-mainly right ear." EMT & 2nd EMT coached client to breathe normally. At 1:09pm vitals were taken: BP: 120/70, HR: 52, RR: 10, O2 sat: 95%, skin: pale, moist, cool, eyes: PERRLA, LOC: A&O x4. Lead RN was notified and advised vitals be taken every 5 minutes for an additional 30 minutes. At 1:13pm vitals were retaken: BP: 120/70, HR: 69, RR: 12, O2 sat: 94%, eyes: PERRLA, skin, pale, moist, cool, LOC: A&O x4. On assessment, client stated he has no history of fainting, no allergies, and not taking any medication. Client stated he had a small amount of food and water intake and was not currently experiencing nausea. At 1:20pm, client stated the pressure in his ear subsided and was experiencing no headache, light-headedness or dizziness. At 1:25pm vitals were retaken: BP: 120/70, HR: 69, O2: 98%, skin: warm, pink, dry, LOC: A&Ox4. At 1:35pm, vitals: BP: 120/78, HR: 72, RR: 12, O2: 96%. Client was lowered to sitting position in gravity chair. No changes in vital signs were assessed by EMTs. At 1:40pm one final set of vitals were taken: BP: 120/76, HR: 66, RR: 13, O2 sat: 97%, eyes: PERRLA, A&O x4, skin: pink, warm & dry. At 2:15pm, client was able to safely stand up. No further interventions indicated. Client was educated by Lead RN & EMT on signs and symptoms of adverse reactions and when to go to the ED/call MD. Client was also encouraged to sign-up. Client left vaccination site at approximately 2:15pm with a steady gait. A family member was able to pick him up and drive him home.</p> |

| 1162823 | 4/2/2021 | CA | 23 | M | | 4/2/2021 | Patient got first dose of Covid vaccine (Prizer) on 04/02/21 around 11:00am. Patient started develop adverse effects of dizziness, cold and low blood glucose. He almost passed out. He refused us calling 911. However after 20 minutes, symptoms get worse . We call 911 and AMR arrived. |
| 1162822 | 4/2/2021 | TX | 60 | F | 3/6/2021 | 3/10/2021 | I felt OK for the first 3 days and then I started having worse symptoms of my MCAS and POTS condition. Note, I had NOT had POTS symptoms for 7 years. I was originally diagnosed with POTS in 2010 but slowly got better over 3 -4 years time and have not had issues with POTS since until after the 1st dose of the Covid 19 vaccine. Once my mast cell issues seemed to improve after the first week or so then the POTS symptoms kept getting worse. I am now one month out from the first shot and my heart rate and blood pressure are so bad I'm mostly couch ridden. I'm seeing a cardiologist on Monday. Heart rate even when sleeping at night is shooting up to 125-136 without exertion, just sleeping or standing. I have almost passed out while driving 5 times. Until I improve I won't be driving on major freeways. My vision has also been severely effected. Very blurry and one time all I could see were prisms blinding my view of almost everything. Also very weak all of the time and a lot of pressure in my head, it feels like someone is pushing my head forward. Some ringing of the ears as well. |
| 1162778 | 4/2/2021 | TX | 53 | M | 3/20/2021 | 3/27/2021 | I TOOK THE SHOT ON 03/20/2021, FELT BREATHLESS WHILST TAKING A WALK ON THE TRAIL ON 03/27/2021. DIZINESS ABOUT FOUR TIMES ON 03/27/2021 AND I PASSED OUT MOMENTARILY/CHECKED INTO ER. NOT EXACTLY SURE IF THE VACCINE IS THE CAUSE, BUT IT REQUIRES LOOKING INTO BECAUSE I HAVE NEVER HAD SUCH AN EXPERIENCE IN MY ENTIRE LIFE. |
| 1162773 | 4/2/2021 | CA | 64 | F | 4/2/2021 | 4/2/2021 | dizziness, fainting feeling post vaccination, has hx DM on oral meds, no meds given, stable and DC AMA with son driving pt home |

| 1162770 | 4/2/2021 | CA | 26 | M | 4/2/2021 | 4/2/2021 | Patient fainted after the Shot and regained consciousness .He complained about dizziness and nausea. 911 was called. He was advised to sit and be observed until they arrived |
| 1162956 | 4/2/2021 | MI | 19 | F | 3/30/2021 | 3/31/2021 | I received my second dose of the COVID 19 Moderna vaccine on Tuesday morning. By Tuesday night I started to have virtually every side effect that Moderna listed including; fatigue, headache, muscle pain, joint pain, chills, nausea and vomiting, and extreme fever. The next morning as I woke up in attempt tp get ready for work, I was not feeling any better and began to feel light headed, and felt the need to vomit. As I had the feeling of needing to vomit, I turned to do so and fainted. From accounts by my family, I was told I woke up, and quickly passed out a second time. As I was awoken, there was probably a minute before I fainted for a third time. All three times I was told I lost consciousness. I was awoken and by that point my family had contacted emergency responders. Paramedics arrived and took all necessary vitals. I did not pass out after that third time. As I expected all side effects Moderna listed, I did not expect to feel as bad as I did and I thought it was worth reporting what happened to be the next day. It caused a panic and I was scared and nervous as I was unsure why that was happening. I've tried to look up articles and links between passing out and the vaccine and all I can find is people fainting as they get the vaccine (which is common for any shot) but nothing for fainting that long after the vaccine was administered. I just wanted to report my incident. |
| 1162893 | 4/2/2021 | NJ | 24 | F | 3/31/2021 | 4/1/2021 | Low blood pressure, brief (5 minute) fainting and dizziness spell |
| 1160543 | 4/2/2021 | ME | 18 | F | 4/2/2021 | 4/2/2021 | Patient received Janssen Vaccine around 11:30 am. Patient was told to wait around 15 minutes to make sure everything was ok. Patient got my attention a few minutes later saying she felt dizzy. As i was guiding her back to the chair she passed out and i guided her to the floor. In a few minutes she was able to sit upright in the chair. EMS was called and she later went to hospital for further evaluation. |

| 1160678 | 4/2/2021 | DE | 63 | F | 4/1/2021 | 4/1/2021 | After the Covid shot, I was instructed to wait in my car for 15 minutes. Approx. 12 min after the shot, I got a burning sensation in my left arm that continued across my upper body, throat and into my bladder and felt like I was going to urinate. It lasted approx. 2 min and subsided. Then I felt like I was going to pass out, so I drank some water and reclined in my seat to rest. I never passed out but waited another 15 minutes to proceed home. As I was driving home approx. 6 minutes since I left the clinic, the same feeling came over me. I immediately pulled off the highway into a near by parking lot until it subsided which was again approx. 2 minutes. I waited 10 minutes then proceeded to drive home which was only. Additional information for Item 18: which was only 5 minutes away. Once home, I laid down because I was tired and uneasy about what had just happened. I had no other symptoms and that feeling never returned. I thought I should call my family doctor and let him know what happened. I called Dr. office and left a message for him about what happened. His nurse called me back and she had relayed the message to Dr., and said I should not receive the 2nd Covid shot since I had this reaction to the first shot. I have not had any other issues except a little soreness in the arm where the shot went in. |

| 1160668 | 4/2/2021 | WV | 42 | F | 3/12/2021 | 3/22/2021 | Ten days after the vaccine was administered I woke up feeling like something was wrong. I just didn't feel right. I tried to lay down to see if I could feel better but this did not help. Even while in a relaxed state my blood pressure was up to 170/97 and heart rate of 220. I was very dizzy and felt like fainting but did not lose consciousness. I had a terrible pressure in my chest, in the left side of my neck and along the inside of my left arm. Also notable my vision was blurred. Called 911 ambulance took me to the Hospital ER and the ekg they performed was abnormal and also notable when they drew my blood my sodium level was below the normal threshold. I had taken 3 nitroglycerin tablets and my symptoms subsided enough for them to let me go home. Since coming home my bp has remained elevated much higher than normal at around 135/85. I continue to feel not quite normal and have the pressure in my left side of neck, chest and left arm. I feel very certain this is all due to the covid vaccine I received. |

| 1160718 | 4/2/2021 | MN | 34 | F | 4/2/2021 | 4/2/2021 | vaccine was administered to patient, and patient immediately fainted. Her head drooped, and she was not conscious. The technician who administered the vaccine caught the patient so she didn't fall out of the chair. The pharmacist on duty was alerted, and 911 was called. The pharmacist ran out to the patient to check vitals. Patient was already conscious again, but looked pale and weak. Pharmacist and technician stayed with patient to make sure she did not pass out again. EMT arrived shortly after call and took over the situation. Patients blood pressure was taken, and was very low 80/50 for several minutes. EMT stayed and monitored patient until she regained normal vitals, and sent patient home with her mother so did not have to drive. |
| 1160548 | 4/2/2021 | PA | 24 | M | 4/2/2021 | 4/2/2021 | I felt light headed, hot, and passed out within minutes of injection. About 10 minutes later I felt like I might pass out again, but did not. |

| 1160574 | 4/2/2021 | NC | 42 | M | 4/2/2021 | 4/2/2021 | Patient's wife exited from car screaming for help reporting patient passed out. Upon arrival of RN, patient had regained consciousness and was A&O x 3. He was sweating, pale, with active pilomotor reflex. VS: BP 80/55, temp unable to obtain, HR 67, RR 24 EMS called and repeat vitals at their arrival BP 152/121, HR 67-70, T 96.5, RR 24. Patient's brother is MD and spoke with EMS reporting extensive hx of vasovagal syncopal events at dentist in past as well as with high stress events. Patient decline transport to ER and wife elected to drive home. Patient remained at cognitive baseline without complaints at time of departure from site. |
| 1160968 | 4/2/2021 | MN | 23 | M | 4/2/2021 | 4/2/2021 | Patient indicated on consent form that he had never had a reaction after receiving a vaccine before. Pharmacist on duty administered vaccine to patient. Patient walked from the vaccine administration location to the waiting area and sat down. Pharmacist heard a loud thud, and customer yelled "call 911" 911 was called, and patient was given a pillow under his head, and a blanket covering his body. He was unconscious for about 5 seconds, then came to. He was able to answer questions correctly like his name, and what year it is. Management came to help and take care of patient also. EMT arrived and took patient's BP and blood glucose levels. EMT recommended a snack because patient had not eaten yet today. Patient was given cheetos and water. EMT stayed to monitor patient until his vitals returned to normal. Patient told EMT that he has fainted about 8 times previously after giving blood, but never after receiving a vaccine. Came to pick him up so he did not have to drive home. Patient stated he had chipped his tooth when he fell from the chair. |

| 1161147 | 4/2/2021 | TN | 20 | F | 4/2/2021 | 4/2/2021 | Patient received 1st dose of Pfizer COVID vaccine. Upon administration, patient reported she felt as though she was having an anxiety attack. She then fainted and started falling forward in her chair. The pharmacist and technician caught the patient as she fell forward and as they were leaning her back in the chair she began seizing in their arms for approximately 5-10 seconds (no more than 20-30 seconds). At this point, the patient spoke and stated that was weird and said she felt lethargic. Another technician was on the phone with 911 at this time. We gave her a bottle of water and kept the patient seated in the immunization room until EMS arrived. She was complaining of being very hot and lethargic. EMS arrived and checked her vitals and recommended the patient go with them to the hospital due to B/P and pulse being very low (exact vitals were not communicated to us). She agreed to go to the hospital and we will be following up with the patient tomorrow. |

| 1160896 | 4/2/2021 | MN | 61 | F | 4/2/2021 | 4/2/2021 | Patient alerted pharmacy that she had experienced swelling and itching from influenza shots in the past, and has asthma and allergies, however has never had to use an Epi-pen in the past. Patient seemed very nervous, but insisted she was OK to receive the shot. Pharmacist on duty administered Moderna to patient, and waited next to her for several minutes to observe for possible reaction. Patient felt fine after several minutes of talking, so pharmacist advised patient and her husband to let her know if patient started feeling SOB, or itchy, or swelling of face, and went back to pharmacy to complete rxs in que. At that time a different patient who had just received the Moderna vaccine passed out, and pt witnessed this, further increasing her anxiety. 911 was called for the patient who passed out. During the next half hour, pharmacist kept checking on pt. She indicated her tongue seemed to be swelling. So pharmacist on duty asked EMT to check out pt after they had finished taking care of patient who had passed out. EMT checked pt throat, and assured her there was no swelling, however suggested diphenhydramine 25-50mg to be proactive. Pharmacist on duty asked pt if she would like diphenhydramine, and she said, "Yes, Please." So pharmacist provided the diphenhydramine to pt, and she took 50mg. After that she seemed to be fine, and her husband took her home. |

| 1160891 | 4/2/2021 | WI | 32 | M | 3/26/2021 | 3/26/2021 | Pfizer-BioNTech COVID-19 Vaccine EUA 32-year-old male with history of anxiety and hypertension presents with possible reaction to the COVID vaccine. He was in his usual state of health and doing well until he received his first dose of the Pfizer vaccine around 0740 this morning. Around 10 minutes following the vaccine, patient became short of breath, lightheaded and had his vision gray out before losing consciousness for few seconds. Patient was sitting in a chair at that time and did not fall or hit his head. He was then given juice and was able to ambulate and felt better. Patient was directed to the emergency department for evaluation. He states that he now feels back to his baseline with no lightheadedness or difficulty breathing. Patient states that he has passed out following blood draws in the past and usually lies down afterward. Patient's presentation is overall most consistent with vasovagal syncope, especially given his history of similar events following blood draws. Patient was observed in the emergency department for nearly an hour and remained asymptomatic so he was discharged home with return precautions |
| 1160830 | 4/2/2021 | IL | 25 | F | 4/2/2021 | 4/2/2021 | Patient expressed seeing spots then fainted, hypotensive, vitals stabilized, refused of transport |
| 1160979 | 4/2/2021 | SC | 52 | F | 4/2/2021 | 4/2/2021 | Patient fainted a few minutes after receiving the vaccine. She has fainted after vaccines in the past, and fainted for about a minute after receiving the Janssen Covid-19 vaccine. After she returned to consciousness, she reported no difficulty breathing or other adverse reactions at the time. She was monitored in store for 30 minutes following the fainting episode and was feeling much better at the time of departure. Her husband safely drove her home. |
| 1155172 | 4/1/2021 | NY | 61 | F | 3/10/2021 | 3/12/2021 | Woke up very dizzy, light headed, felt like diarrhea, hot, sweaty, passed out approximately 4 times, had a harder time breathing, than normal being on oxygen. Stayed in bed for approximately 27 hours, just couldnt function well. Didnt contact Dr. About it, had family stay with me for couple days. I know it was from the vaccine. |

| 1155610 | 4/1/2021 | OH | 28 | F | 3/31/2021 | 3/31/2021 | Janssen COVID-19 Vaccine EUA Received the shot at 11 am and started feeling tired with some muscle aches at 2:45 pm. I slept from 3:45 to 4:30 pm but was still tired and felt weak. I did feel hungry and made dinner over 30 minutes. However, this wore me out. I was even more tired and started getting dizzy. I almost fainted as I made my way to a chair to sit down. I couldn't eat because of slight nausea and cold chills. I was shaking for about 20 minutes. Eventually, I made it to my bed to lay down, but my legs were shaking as I walked up the stairs. At 6:00 pm, my temperature was 98.8 F. I was freezing a shivering for the next hour in bed under 3 blankets. My hands and feet felt like ice. At 8:00 pm, I had a fever of 100.2 F that lasted all night. My body ached all over, especially at the hips. I couldn't sit still and couldn't sleep until 4:00 am. I woke at 8:30 am with some milder aches and fatigue with a temperature of 97.6 F. |

| 1155832 | 4/1/2021 | OH | 25 | M | 3/30/2021 | 3/30/2021 | Patient reported to clinic for Pfizer Covid-19 vaccination. Patient did not indicate on questionnaire that he had experienced fainting or severe reactions from receiving vaccinations before. About 5 seconds after receiving vaccination patient said he would like to sit for just a minute. The clinic had a designated waiting area about 25 feet away where patients sit for 15 minutes after receiving vaccination. My technician and I agreed that patient should stay seated in the same chair he was receiving the vaccination in so we would be right next to him. After 2-3 minutes I noticed the patient had his eyes closed and then his head began to nod and he started to slump down in the chair. As I went to patient's side to stabilize him he pushed his chair backwards away from me about 5 feet which caused him to roll to the right side of the chair and fall off hitting his head on the floor. My technician immediately called 911 and EMTs arrived in about 5 minutes. A bystander who was a nurse helped me roll him onto his back and we propped his legs up with 2 cushions. We took his blood pressure and pulse. Patient regained consciousness in about 30 seconds and the EMTs cleared him to stand up after about 15 minutes. After patient had recovered, patient's mother who was there with patient and other siblings stated that the whole family has fainting episodes when receiving vaccinations. I informed patient's mother and patient to please inform any future vaccinators of these fainting episodes so they can be prepared. |

| 1155881 | 4/1/2021 | WA | 30 | M | 3/30/2021 | 3/30/2021 | Patient received his first Moderna COVID-19 vaccine dose at around 2pm at State Fairgrounds mass vaccination drive through site. Shortly after while in the observation lane, patient experienced an episode of syncope along with brief LOC and bumped the car in front of him. Medical Controller alerted the Clinical Supervisor of the incident. Clinical Supervisor arrived on the scene when EMTs were taking patient's vitals: BP (90/60), pulse, temp. (afebrile). Patient was able to state that he has a history of episodes of syncope that can be triggered by various things such as even watching a movie with blood. Patient states he feels fine, but still tingly and shaky. Patient brought to medic unit on site for stat ECG. At 2:15pm patient was offered transport to the hospital, but he refused. Patient continued recovery in the medic unit. ECG report was unremarkable, BP 104/68, pulse 99 and patient states he's feeling better. Patient released by paramedics/ EMTs. Clinical Supervisor spoke with patient prior to him leaving the vaccination site to verify that he is feeling well and able to leave. |
| 1155527 | 4/1/2021 | WI | 16 | F | 3/31/2021 | 3/31/2021 | They made initial contact with young lady when she entered the holding area (as they do with every car). Their second contact came when the mother showed up on scene. At that time the patient reported that at one point her vision began to get dark on the peripherals and she may have passed out. She stated she turned on her hazard lights (four-way flashers) at that point. Our personnel never noticed a vehicle not progressing forward at any point. Our personnel then removed her from the line for evaluation: She no longer had any complaints, vitals: BP 106/57 P-64 and regular SPO2-99% and did not want transport to the hospital. The patient and mother were given instruction of things to watch for and what warranted calling 911. They report the mother and patient had no concerns upon their departure. Further, there were 4-6 personnel in the 15-minute holding area yesterday. They are constantly on foot moving between all the cars. |

| 1155919 | 4/1/2021 | PA | 28 | M | 4/1/2021 | 4/1/2021 | Patient has a history of syncope after vaccinations (last occurred with a vaccination 10 years ago) but did not state this prior to receiving his first COVID-19 vaccine. About 1 minute after sitting down in the observation area, he fell to the ground and briefly lost consciousness. Multiple staff members came immediately to assess, rolled him over, and he immediately came to and was alert and oriented. He was taken to a medical area and laid down on a cot. He had unremarkable vitals and was breathing normally. He initially endorsed feeling lightheaded, but denied any other symptoms. He was given crackers and water given that he had not had much to eat or drink before the vaccination. He had a normal neurological exam. He was noted to have a superficial abrasion above and below the left eye (lower forehead and upper cheek), and a small Bandaid was placed on the forehead. Fire rescue on site called EMS, who assessed him. There were no immediate concerns and he refused transportation to a hospital for further assessment. After 1 hour had passed, the patient confirmed that he was feeling normal and he was allowed to leave. He was able to walk out of the facility of his own volition and did not have further symptoms when standing. His wife verified that she would drive him home. Prior to leaving, he was given strict instructions of reasons to seek immediate medical care should he have any new or worsening symptoms. The patient indicated understanding. Communication was performed via a Language Line medical interpreter. |

| 1155405 | 4/1/2021 | WI | 28 | M | 3/31/2021 | 3/31/2021 | Patient indicates he was feeling very anxious before receiving the shot. Reports that he is overall healthy but had a blood pressure reading of 133/86 at a wellness fair and had an appoint with a doctor to evaluate his blood pressure on 04/01/2021. Denies any known illnesses or health conditions. Reports that about one minute after receiving the vaccine he became very light-headed, dizzy and sweaty. Denies any SOB, throat swelling. The next thing the patient remembers is" waking up with a bunch of people looking at him. An ambulance on-site assessed the patient and felt he should be transported to a local emergency room to assess. The ambulance staff had blood pressure readings of 90/50 and 80/51 . The patient reports he felt "much better" after arriving to hospital. Indicates he was hydrated with fluids and had an EKG while in the ER. His blood pressure reading at the ER was 133/86. Patient reports that the ER doctor indicates that he most likely had a "Vaso vagal syncope episode.". The patient indicates that he did not receive any medications and was told to follow-up and keep his appt. on 04/01/2021 in regards to his high blood pressure. reading. |
| 1155392 | 4/1/2021 | CO | 30 | M | 4/1/2021 | 4/1/2021 | Pt fainted about 5 minutes after receiving vaccine. He was seated and fell to the ground facedown. We turned him over onto his back and he slowly regained consciousness. Paramedics arrived shortly afterwards. |
| 1155867 | 4/1/2021 | NC | 20 | M | 4/1/2021 | 4/1/2021 | Patient fainted few minutes after receiving the vaccine. EMS was called and patient was treated on site. Patient was not transported to the hospital. |

worse. She had no history of headaches, and he reported a fever of 99.4, although he said his thermometer, may not be accurate. The patient's home thermometer was broken therefore she was unable to measure her fever. The patient's husband said that her side effects started on yesterday, and were worse today (as reported). The patient was resting at the time of this call. The patient mentioned that she had lab work done on 19-Mar-2021. The pregnancy result was unknown. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient was recovering from fainting which was described as dizziness, fever was worse, and fatigue was worse, and had not recovered from vaccine exposure during pregnancy, and intermittent headache. This report was serious (Other Medically Important Condition). Additional information was received from consumer on 26-MAR-2021 following information was updated and incorporated into case narrative: Patient demographic details (height, weight), patient history, parent history (patient's grandmother had history of Hypercholesterolemia and Diabetes Mellitus, Patient's father had hepatitis C), concomitant medications (Prenatal Multivitamin, Calcium, Magnesium, Vitamin D3, Vitamin K2), pregnancy details (gestation, LMP date, gravida), event (intermittent headache), outcome of the events (recovering from fainting which was described as dizziness, fever was worse, and fatigue was worse; and not recovered from intermittent headache), reporter details (contact), other identification numbers and event description was updated.; Sender's Comments: V1: Follow up information received updates patient demographic details (height, weight), patient history, parent history (patient's grandmother had history of Hypercholesterolemia and Diabetes Mellitus, Patient's father had hepatitis C), concomitant medications (Prenatal Multivitamin, Calcium, Magnesium, Vitamin D3, Vitamin K2), pregnancy details (gestation, LMP date, gravida), event (RRT amended to intermittent headache), outcome of the events (recovering from fainting which was described as dizziness, fever was worse, and fatigue was worse; and not recovered from intermittent headache), reporter details (contact), other identification numbers and event description. This updated information does not alter prior causality assessment of reported event. 20210335441-JANSSEN

| 1153878 | 4/1/2021 | OH | 63 | F | 3/6/2021 | | LOSS OF CONSCIOUSNESS, FAINTED; HEART WAS RACING; DIZZY; VOMITING; CANKER SORE UNDER TONGUE; HEADACHE; NAUSEA; FATIGUE; INFLAMMATION ON LEFT EYE; FALL ON BED; SMALL HIVES UNDER EYE; This spontaneous report received from a patient concerned a 63 year old female. The patient's weight, height, and medical history were not reported. The patient's concurrent conditions included seasonal allergies, and codeine allergy. The patient received covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin not reported, batch number: 1802068, expiry: UNKNOWN) dose was not reported, administered on 05-MAR-2021 to left arm as prophylactic vaccination. No concomitant medications were reported. On 06-MAR-2021, after vaccination, she felt fine all day and night. The next morning she woke up and felt sick. She had nausea, headache, hive under eye. She laid back down and tried to sleep. A few hours later, she woke up to use the bathroom. She was very nauseous and dizzy. She lost consciousness and fell trying to get to the bathroom. She fell on her bed and was uninjured. The paramedics took her to the hospital. She was given medication for nausea, headache, and IV fluids. She gave blood for lab tests and they came back normal. No COVID test was administered. When she felt better, she was released. A few days later, she discovered her tongue was sore and red. She called her primary care physician (PCP). PCP said the red and sore tongue was probably related to allergies. Two weeks later, her tongue was not sore, but still red. They advised her to get a second opinion with another HCP. She was going to visit her allergy specialist.. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient recovered from loss of consciousness, fainted, heart was racing, dizzy, headache, nausea, fatigue, inflammation on left eye, and small hives under eye on MAR-2021, and vomiting on 07-MAR-2021, and had not recovered from canker sore under tongue, and the outcome of fall on bed was not reported. This report was serious (Hospitalization Caused / Prolonged). Additional information was received from the patient on 23-Mar-2021. The following information was updated and incorporated into case narrative: Patient's medical history added as seasonal allergies and codeine allergy, Vaccination site as left arm added; Additional events as small hives under eye, fall |

| 1154282 | 4/1/2021 | MA | 23 | F | 3/29/2021 | 3/29/2021 | 23 y.o. female has a past medical history of Anxiety and Depression. Who was a proceed out after receiving her first vaccine for Covid. Patient reports a long history of fainting with vaccines in the past. She received the first vaccine and about a minute later started to feel diaphoretic and lightheaded. She had to sit herself down and staff at the vaccine clinic lifted up her legs. Ended up doing repeat vitals with initial blood pressure of 60 over palp. She was cool and clammy at that time. She denies any nausea or flushing. At the time of my evaluation in the bouncing clinic, blood pressure had improved to 85 over palp with 2+ radial pulses bilaterally. Patient was then transferred to emergency department for observation. At the time of transfer she started to feel back to baseline. She denies any cardiac history, drug use, decreased p.o. intake, family history of cardiac disease, sudden history of cardiac death, bleeding, black or bloody stools. She is unsure of her last menstrual period. |
| 1155010 | 4/1/2021 | CA | 72 | M | 2/27/2021 | 2/27/2021 | Systemic: Fainting/Unresponsive-Medium, Additional Details: pt received vaccine and went to waiting area. Pt fell faint and went out of chair to ground and then started to get back up. I went out and helped pt up into chair and when talking to pt his head drooped and stopped talking. Pt was unresponsive. Vaccination pharmacists came over and I called 911. Pt had undetectable pulse according to (Pharmacist) Epipen administered. Pt stated was fine when came back to and that he fainted often. Ambulance assessed pt and then pt left on his own. |

| 1154953 | 4/1/2021 | CA | 28 | F | 3/31/2021 | 3/31/2021 | <p>On Wednesday, March 31, 2021 client (DOB 4/30/1992) received her first dose of Pfizer COVID vaccine (LOT # EW0150, EXP 7/2021) at approximately 11:50 am by vaccinator RN. RN instructed client to self-monitored at the observation area. EMTs found a 28 years old female sitting up while leaning forward and waving for assistance in an observation chair. Client had a chief complaint of dizziness. Client reported dizziness and fatigue to EMTs present after having sat in the observation area for approximately 10 minutes. Client had no known allergies or major medical history. Client denied pregnancy. Client agreed to be assisted walking up to the front EMT station so that she may be assessed more closely and with greater privacy. While walking over to the EMT station, the client experienced sudden loss in weight bearing and was prevented from falling by EMT present. EMT promptly came over to assist with transferring the patient to a chair for safety. Client was kept safe in her chair by EMT. It was at this point client experienced syncope. Client was then transferred to the gravity bed and laid supine until she became more alert. Client was then transferred to sitting semi-fowlers at 45 degrees once she was alert and tracking. lead RN came to assist EMTs as needed. Assessment revealed no hives, swelling, redness, difficulty breathing, wheezing or pain throughout her body. Client's skin was free of any signs of anaphylaxis throughout her body. Client's first set of vitals at 11:50 am was as follows: blood pressure 100 / 64, O2 - 99% on room air, pulse was 64 and regular at radial, respirations was 20 and regular. Client was fully alert and oriented x 4 (person, place, time, situation) and eyes were equal and reactive to light. Client stated that she had breakfast and denied any pain throughout her body. Client agreed to stay in the observation area for another 30 minutes after the onset of the incident per lead nurse's instruction to EMT. Client's vitals were reassessed at 5 minutes intervals as follows: 11:50 am- 110/64 (BP), 20 (respirations), 64 (pulse), 99% (O2); 11:55 am- 102/64, 18, 64, 99%; 12:00 pm - 104/ 68, 72, 18, 99%; 12:05 pm - 118/ 72, 72, 16, 100%; 12:10 pm - 118/ 78, 99%, 16, 78; 12:15 pm - 118/ 78, 100%, 16, 78; 12:20 pm - 118/80, 100%, 16, 78. After approximately 10 minutes, the client was asked to sit up so that her orthostatic vitals could be reassessed. Throughout her observation, client's vitals slowly returning to normal with</p> |

Patient states has a history of Vasovagal syncope and usually gets like this after having a shot, and that she was a little anxious getting the second shot since so many people told her it makes them sick. Patient was assessed by nurse and EMT, BP 86/39, P74, R22, was put in lying position on stretcher and BP was monitored closely. 16:19 BP 118/78 P64 R20 patient states feeling well and is ready to go home., was escorted by nurse and EMT to vehicle at 16:25, no problems noted. |
| 1154232 | 4/1/2021 | MA | 48 | F | 3/11/2021 | 3/11/2021 | 48-year-old female past medical history recurrent neurocardiogenic syncope, Mobitz 1 AV block, hypertension, hypothyroidism, history of gastric bypass (2018), and anxiety presents from vaccine clinic with an episode of presyncope. Patient was at the vaccine clinic this morning to get the second dose of her COVID vaccine. Approximately 5 minutes after receiving the second dose, she noted gradually worsening palpitations, mild nausea, shortness of breath, and a sensation that she has been to pass out. Staff in the vaccine clinic were concerned the patient was having allergic reaction, so they gave her an EpiPen. Of note, however, patient denied any cough, chest tightness, sensation of throat closing, wheezing, abdominal pain, diarrhea. She reports that today's episode is nearly identical to multiple prior episodes of syncope/presyncope. She has been worked up extensively for these episodes, including echo, stress test, and Holter monitor. In the ED, she reports feeling back to her baseline. She denies any ongoing symptoms, including presyncope, chest pain, shortness of breath, palpitations, diaphoresis, nausea/vomiting. |

An 84-year-old female patient received the second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, administered in left arm on 23Feb2021 09:30 (Lot Number: EN6200) as single dose for covid-19 immunisation at age 84 years old. Medical history included low thyroid and allergies to grasses. The patient was not pregnant. The patient had no Covid prior to vaccination and was not Covid tested post vaccination. Concomitant medications included levothyroxine sodium (SYNTHROID) taken for an unspecified indication, start and stop date were not reported. No other vaccine taken in four weeks. The patient previously received the first dose of BNT162B2 administered in left arm on 02Feb2021 09:30 AM (lot no: EC9265) for COVID-19 immunization. On 16Mar2021 09:15 AM, 15 minutes after eating usual breakfast: avocado/toast, coffee, almond milk, the patient went into severe anaphylactic shock: extreme itching on palms, red welts on body, explosive diarrhea, dizzy/fainted, extreme blood pressure drop to 60/XX, in/out of consciousness, loss of bowel/urine. Rushed to ER. High blood pressure 7 days after (Mar2021). The events resulted in Doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, emergency room/department or urgent care and were considered life threatening illness (immediate risk of death from the event). Treatment given in the emergency room includes unknown (as reported), prednisone, Pepcid. Outcome of the event was unknown. |

| 1154093 | 4/1/2021 | NM | 74 | F | 3/16/2021 | 3/16/2021 | a little tired; passed out; weakness; disorientation when walking; headache; nausea; hand on the side that she got the vaccine was cold; Second dose: pain at injection site; This is a spontaneous report from a contactable consumer (patient). A 74-years-old female patient received BNT162B2, dose 2, via intramuscular, administered in right arm on 16Mar2021 10:00 AM (Lot Number: EN6204; Expiration Date: Jun2021) as single dose for COVID-19 immunisation. Vaccination facility type was hospital. Medical history included eczema from 2017, she had eczema all over her back and arms and had mild allergies to mold and juniper. The patient's concomitant medications were not reported. The patient previously took first dose of BNT162B2 at the age of 74-year-old on 23Feb2021 at 10:00AM (lot number: EN6198, Expiry: Jun2021) intramuscular injection in left arm and experienced pain at injection site and couldn't sleep. The patient also took Prolia shots for arthritis. The patient experienced headache, nausea, pain at injection site and hand on the side that she got the vaccine was cold on 16Mar2021, passed out, weakness and disorientation when walking on 17Mar2021, a little tired on 18Mar2021. The clinical course included: The patient was calling about the second vaccine that she got on 16Mar2021 (Tuesday). She was calling about the after effects. They were quite huge. She had a headache, nausea, weakness, and disorientation when walking. Stated she obviously had pain at the site of injection. Stated some of it was her own fault, and at first she felt fine. On the same day that she got her second dose of the covid vaccine, she had a glass of wine and was not too hungry. She ate a little that evening. The next morning she passed out. Clarified that she had two glasses of wine, not one. Caller's daughter was a doctor. Caller referd to her daughter as doctor daughter. Stated that she told her daughter about what happened. Her daughter told her it was because she was dehydrated. Her daughter told her that it was called vagus something or another. Her daughter was not there with the caller. Her daughter called it vagus something, she does not remember. Her daughter told her that it had to do with inflammation and her immune system. Caller stated she also has arthritis. Her daughter told her that she was stupid for drinking wine after receiving the second dose of the covid vaccine and not eating a full meal. Whenever |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

she passed out and fell, she did not hurt herself but it was a wake up call. She realized she was vulnerable. She was calling because she did not know why no one told her to drink a lot of water after receiving the vaccine. She got a Prolia shot in July and the nurses told her to drink a lot of water. She was asking why the nurses who gave her the covid vaccine are not saying that to people. Her daughter told her to call the doctors office about this, and she told her daughter that it was over with now, she's 95%, she was a little tired on 18Mar2021. She was unconscious for 15 seconds per her husband. Her husband was shouting her name, and she did not hear anything. She wanted to call and report that the nurses should tell people to drink water. One more thing, her daughter told her that the covid vaccine was slowly released. About 10 hours after receiving the second dose of the covid vaccine her hand on the side that she got the vaccine was cold. She got the vaccine about 10AM, and about 10PM at night is whenever her hand got cold. She had pain at the injection site where she had the first dose of the vaccine too. She had more pain at injection site after the second dose of the vaccine. It was not awful, but only if she pressed on it. Clarified that she gets Prolia shots twice a year for her arthritis. Luckily whenever she started to get dizzy, she braced her self, whenever she fell, she did not fall from an upright position. She was crouched over, and fell against trays that fell with her. Her doctor daughter told her that inflammation was because of her immune system. One other thing was that she has been stung in the past and had extreme reactions from yellow jackets in the 90's. She thought her immune system was sensitive. One other things related to her autoimmune from 3 years ago. She moved to a city in 2012. Everyone told her after 5 years she would develop allergies. In 2017, she had eczema all over her back and arms. It was not just like a topical thing where she scratched and itched, it was under her skin. She went to a dermatologist and he took a biopsy, but the results just said eczema. She went to an allergist, he finally found a space on her underarms where he could do a test. The test showed that she had mild allergies to mold and juniper. Juniper is a tree that they have there, she has one in her back yard. Her allergy was very mild. She tried everything, and in 4 months it went away. Now she just latherers her skin with coconut oil. Her diagnosis

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

that this autoimmune issue was related her immune response from the yellow jacket reaction is a self diagnosis. A doctor had never told her this, this was coming from her own self. Clarified that she is calling about the second dose of the pfizer covid 19 vaccine. Headache: It was not a bad headache, it was more like pressure all across the top. Whenever she went to sleep, the headache started. She got the second dose of the covid vaccine on 16Mar2021. She had a little bit of a headache this morning. A cup of coffee with milk made it better. Nausea: It started whenever she did not want to eat dinner. She could tell her stomach was not right. The nausea and headache started together about 12 hours after her vaccine at 10:00 PM. Weakness: She noticed weakness on the next day whenever she got up to use the bathroom. Clarified as the early morning of 17Mar2021. Her weakness was about 90 percent resolved. Disorientation when walking: Clarified that her disorientation was in reference to walking only right before she fell. She was not mentally disoriented. Mentally she knew that she was not doing well. Second dose: pain at injection site: The pain only lasted for about 2-3 hours. It was now absolutely minimal. She would have to press on it to feel anything. Her hand on the side that she got the vaccine was cold: She got the second dose of the covid vaccine around 10:00 AM, and noticed her hand was cold about 5:00 PM., about 7-8 hours later. Whenever she went to bed, she was cold. She thought that it resolved by the next morning. The morning after receiving the second dose of the covid vaccine, she passed out: She passed out about 8:15 AM. The outcome of the events headache, nausea, weakness, pain at injection site was recovering. The outcome of the events disorientation when walking and her hand on the side that she got the vaccine was cold was recovered on 17Mar2021. The outcome of the other events was unknown.

A 63-year-old non-pregnant female patient received bnt162b2 (Pfizer Brand COVID 19), dose 2 intramuscular, administered in left arm on 26Feb2021 12:00 (Lot Number: EN6198) as single dose for COVID-19 immunisation. Medical history included hypothyroidism from an unknown date and unknown if ongoing. The patient was not diagnosed of Covid prior vaccination and has not been tested for Covid post vaccination. The patient has no known allergies. Concomitant medication included levothyroxine, liothyronine (NP THYROID) taken for an unspecified indication, start and stop date were not reported. The patient previously received bnt162b2 (Pfizer Brand COVID 19), dose 1 intramuscular, administered in left arm on 05Feb2021 11:30 AM, (Lot Number: EM9810) for COVID-19 immunisation. There was no other vaccine in four weeks. On 27Feb2021 07:45, the patient passed out, unfortunately hit head, felt light headed and slightly nauseous. It was also reported that patient had intense right knee pain, a temperature of 99.6 and flu-like symptoms. The events were also described as follows: 18hrs after the injection, I had intense right knee pain that lasted for 24hrs. Also in that same time period, I felt a huge rush of energy come over me and passed out. Unfortunately hit my head. I had a temperature of 99.6 and flu-like symptoms that lasted 24hrs. For 4 days I felt light headed and slightly nauseous but that could have been due to hitting my head. Called 911, EMT evaluation and the patient received treatment for events. Outcome of the events was recovered on an unspecified date.;</p> <p>Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the reported events and other events. There is limited information provided in this report. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any</p> |

| 1157483 | 4/1/2021 | FL | 50 | F | 3/11/2021 | | <p>LIGHTHEADEDNESS; PASSED OUT ONCE; COUGHING OUT; ACHINESS THROUGHOUT THE BODY; CHILLS; NAUSEA; FEVER; HEADACHE; This spontaneous report received from a patient concerned a 50 year old female. The patient's weight was 165 pounds, and height was 162.56 centimeters. The patient's past medical history included passed out, and concurrent conditions included allergy to bactrim. The patient received Covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin not reported, and batch number: 1805025 expiry: UNKNOWN) dose was not reported, administered on 11-MAR-2021 14:00 for prophylactic vaccination. No concomitant medications were reported. On 11-MAR-2021, after getting the vaccine, the patient experienced achiness throughout the body, coughing out, chills, fever, headache and nausea. Later, she was having lightheadedness. On 12-MAR-2021, she passed out once. Reporter stated that, she might had passed out due to lightheadedness. She has passed out before, but it doesn't happen often and she was fine now and has no issues. The action taken with Covid-19 vaccine ad26.cov2.s was not applicable. The patient recovered from passed out once, and fever on 12-MAR-2021, coughing out, achiness throughout the body, nausea, headache, and lightheadedness, and chills on MAR-2021. This report was serious (Other Medically Important Condition). Additional information received from patient on 26-MAR-2021 The following information was updated and incorporated into the case narrative: patient details (age, height, weight, medical history and drug allergy), outcome of the events and event description updated.; Sender's Comments: V1: Additional information received updates patient details (age, height, weight and drug allergy), medical history (passed out), outcome of the events and event description. This updated information does not alter prior causality assessment for previously reported event. 20210327370-Covid-19 vaccine ad26.cov2.s-Passed out once.. This event(s) is considered unassessable. | 1157278 | 4/1/2021 | CA | 55 | F | 4/1/2021 | 4/1/2021 | Following administration of dose 2 of moderna covid vaccine. pt has syncope episode and fell landing on butt and hitting head on floor. LOC elapsed 30 seconds. No seizures. Pt evaluated by onsite MD and placed on gurney to be evaluated at triage bay area. 1020am: BP 220/126 P120. No meds and no previous allergies. 1050am: BP 176/104 P=85 . Pt was monitored and symptoms improved. Pt ambulated and was stable prior to d/c from vaccination site. onsite MD recommended for patient to follow-up with outside PCP if persistent elevated BP or symptoms. |
| 1157191 | 4/1/2021 | CA | 36 | F | 3/28/2021 | 3/28/2021 | Vaccine on 3/28. 45 min after vaccine felt cold sweats, nausea. 3/29 ongoing cold sweats, nausea, fatigue, mild body aches. Went to work, symptoms worsened and developed severe body aches, headache, photophobia, gasping for air (but could breathe ok). Got up from a chair and syncopized, unknown amount of time unconscious. Taken to ED, normal exam, diagnosed with vasovagal syncope, went home to rest remainder of day. 3/30 still fatigued, tried drinking coffee and it spilled out right side of mouth. Looked in mirror and thought right eye and lip were drooping. Touched face and could not feel anything on right side. Also noticed splotchy red rash bilateral cheeks and left arm (same as injection) that was itchy. Saw PCP (via tele) who documented decreased right smile, forehead elevation, cheek puff and decreased sensation on face. Prescribed 7 day course of Valtrex TID and Prednisone 60mg daily which she began on 3/31. Seen by neurology (via tele) 4/1, patient indicating 50% improvement in symptoms but states she cannot feel entire right side of face or ear. When talking appears to only be talking out of left side of mouth but no flattening of right nasolabial fold, normal smile, cheek puff, questionable asymmetry of right forehead elevation but symmetric eyebrow furrow. Unable to assess forced eye closure. States she cannot feel pinch or nail on right side of face. |

| 1157561 | 4/1/2021 | MI | | F | 2/11/2021 | 2/11/2021 | Died; Unresponsive; Shortness of breath; Not able to eat; Sick; Nauseous; Vomiting; Passed out on kitchen floor; Blood sugar increased; A spontaneous report was received from a consumer concerning an unspecified age, female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced raised blood sugar/blood sugar increased, passed out on kitchen floor/loss of consciousness, nausea, vomiting, sick/illness, not being able to eat/decreased appetite, shortness of breath/dyspnea, unresponsive/unresponsive to stimuli and died/death. The patient's medical history included diabetes. Products known to have been used by the patient, within two weeks prior to the event, included unspecified insulin. On 11 Feb 2021, the patient received their first planned doses of mRNA-1273 (Batch number: unknown) intramuscularly for prophylaxis of COVID-19 infection. On 11 Feb 2021, the patient had a rise in her blood sugar (blood sugar 208, 212, 199 up until her bedtime of 9:45PM). On 12 Feb 2021, the patient passed out on the kitchen floor and the patient's blood sugar took a dive (blood sugar was 304 9:00AM, blood sugar was 260 10:30AM then stayed over 200/280 all day even with insulin). That evening, the patient experienced nausea and vomiting. On 13 Feb 2021, the patient's blood sugar was up and had nausea and vomiting throughout the night. The patient spoke with her doctor, who told her to regulate it with insulin if she needed too. Per the report, the doctor informed the patient that there have been studies that say the vaccine has shown to mess with blood sugars. The patient's blood sugar remained between 144-179 all day even with insulin. The patient had nausea and vomiting. On 14 Feb 2021, the patient reported still being sick. The patient reported a weight loss of 5 pounds and reported not being able to eat. Blood sugar was 174-292 all day even with insulin. On 17 Feb 2021, the patient's blood sugar was bouncing between 53-151 all day even with insulin. On 18 Feb 2021, the patient reported shortness of breath and was using Vicks to help clear the nasal passage. On 19 Feb 2021, approximately at 6:00AM, the patient's spouse found patient breathing but unresponsive. At approximately 7:25AM, the patient died. Treatment information included, unspecified insulin and Vicks. Action taken with the drug in response to the event is not applicable. The outcome of event, passed out on kitchen |

| 1158158 | 4/1/2021 | CA | 54 | F | 3/18/2021 | 3/18/2021 | Thursday, March 18, 2021, 11:00 pm Around 12 hours after the vaccine, I started having stomach cramps and began having diarrhea. About an hour later (around midnight), I fainted while seated on the toilet and fell face first into the tiled floor. My forehead and mouth/teeth apparently broke my fall and I realized when I came to, I had chipped my two front teeth. There was a good amount of blood and soon after my house mates came to find me, they got me up to lean over the toilet as then I began getting sick and throwing up. They called the paramedics as I kept throwing up. The paramedics tended to me and after two does of an anti-nausea pill, I was able to at least keep a bit of water down. |

| 1156081 | 4/1/2021 | CO | 23 | F | 3/31/2021 | 3/31/2021 | Patient received first dose of Moderna COVID19 vaccine at 1030 via IM injection in left deltoid. Prior to injection, patient reported being nervous about fainting. She reported no prior history of fainting due to vaccination or blood draws; she "passed out" two years prior to dehydration at a music festival. Approximately four minutes after injection, patient stated that she was going to "pass out" and had an episode of syncope. She exhibited pallor, dry heaving, and arm contractures. The nurse helped her to a supine position on the floor and called for assistance. The nurse team encouraged deep breathing and provided apple juice, pretzels, ammonia inhalent, and cool washcloths. EMS was called and arrived at 1045 for further assessment. Patient reported that she had not consumed any food or drink prior to vaccination and stated that her hands were "tingly". EMS took blood pressure and heart rate; both were within normal range. The patient was taken to the hospital by EMS at 1055, where providers determined that syncope was likely caused by anxiety. Patient returned home and reported feeling tired but stable when health department called to check in at 1400. |

| 1155971 | 4/1/2021 | MN | 20 | F | 4/1/2021 | 4/1/2021 | Patient was given moderna vaccine. About 10 minutes after while she was waiting for her 15 minutes of observation to finish, she stood up and fainted. Pharmacist went over, had her lie down, and held up her legs. Patient said she felt okay but still dizzy. Emergency responders was called. Ambulance came about 10 minutes later to examine her. They took her vitals and blood sugar, found them to be within normal limits, and stated patient was okay to go home if she got a ride. She called a friend and her ride came about 30 minutes later. |
| 1157098 | 4/1/2021 | NE | 30 | F | 3/31/2021 | 3/31/2021 | I received the vaccine and approximately 5 minutes after the injection I began sweating profusely and passed out. While I have passed out in the past, I have never done so after receiving a vaccine or while sitting down (which I was). After I "came to" I felt an all over tingling sensation throughout my body. As noted, I have never had any reaction to a vaccine and my most recent previous vaccine was a tetanus booster in 2020. Not history of fainting or any adverse reactions to a vaccine. |
| 1156899 | 4/1/2021 | MS | 25 | F | 4/1/2021 | 4/1/2021 | Patient did not report any history of syncope with injections; stated she takes B-12 injection and injections for her migraine with no issues. She received the J&J vaccine at 3:41pm. Reported immediate arm soreness. While in the 15-min observation area at 3:45pm, patient fell out of chair onto the floor 2/2 LOC. I attended immediately to the patient (EMS was called at 3:47 due to LOC) When I arrived, patient was laying on her stomach and was awaking up. We turned her onto back and placed her feet in the air. Patient was immediately able to tell me her name and date of birth. She was given cold towels and she was cooled down. Initial vitals taken at 3:47p were 146/98, HR 66. EMS arrived at 4:02 and took vitals (BP=146/94, SPO2=99%). EMS stood the patient up and patient refused to go with EMS. Patient instructed to wait an additional 15 mins after EMS left. Patients left in care of boyfriend |
| 1157056 | 4/1/2021 | IL | 27 | F | 4/1/2021 | 4/1/2021 | patient said she felt light headed during the post administration wait time. I gave her an ice pack and checked in on her again. She has hx of fainting and getting light headed post administration. After 10 minutes she felt better. |

| 1156576 | 4/1/2021 | TN | 20 | F | 4/1/2021 | 4/1/2021 | Patient passed out shortly after vaccination, nursing staff attended patient, used an alcohol swap, patient came to, pulse rate taken (86), patient was in chair during the duration of this. Patient was given juice, water, snack and was laid at an examination table. Was assessed by a nurse and after the patient was cleared she was walked /escorted to her vehicle out of the vaccination site by a security guard. |
| 1157009 | 4/1/2021 | OR | 54 | F | 3/27/2021 | 3/27/2021 | The patient presented with witnessed vasovagal syncope in her car after vaccination in the monitoring area. The patient had a weak radial pulse to palpation. EMS was summoned to the car. The patient was attached to monitor and 12 lead was performed. 12 lead showed no acute changes but sinus bradycardia initially at 33 bpm. BP was 120/95. The patient was supine in her car and given oral hydration. After serial evaluations, she improved with normalization in vitals and resolution of all symptoms. She was discharged home with her husband as a driver. |

| 1156929 | 4/1/2021 | | 71 | M | 3/31/2021 | 3/31/2021 | Patient received his Moderna #2 around 9:40 AM. About 4 minutes later his wife signaled that he was in distress by honking her horn. Upon arrival to the patient, he was clutching at his throat, wheezing, and whispering he couldn't breathe. Dyspneic with respiratory rate 20-30, heart rate 60's. No hives/flushing or signs of syncope. Given significant respiratory distress, decision was made to give epinephrine IM right thigh. About 4-5 minutes after injection, patient's respiratory rate came down and he said he felt his throat open up. He was then sent to the ER, where he received Benadryl, Famotidine, Methylprednisone, and Albuterol/Atrovent nebulizer. Pt sent home at 1PM, after 3 hours of observation. Pt is still doing well via phone follow up 24 hours after event. |
| 1156795 | 4/1/2021 | SC | 38 | F | 3/22/2021 | 3/22/2021 | I passed out about 10 min after receiving the vaccine. The nurses said my BP dropped and kept me an hour after receiving the vaccine. Within 3 hours of receiving the vaccine I felt nauseous and had arm pain around the injection site. Two days after the injection the arm pain was gone but the nausea remained and I began having severe stomach cramps w/gas and feeling light headed. The nausea, body aches, stomach cramps and gas remain on day 9 and the night of day 9 I woke up shivering and drenched in sweat while having a nightmare. It is day 10 and I have nausea, stomach cramps, fatigue and mild body aches. |

| 1156778 | 4/1/2021 | FL | 24 | M | 4/1/2021 | 4/1/2021 | patient's vaccine was administered at 3:40pm, he disclosed that he had passed out after a vaccine previously so I advised that he could wait 15 minutes in the post-vaccination area but not to drive for 30 minutes. At 3:44pm the patient was waving at me indicating that he felt dizzy so I ran out there and he asked for ice and said he was feeling lightheaded and seeing black spots. I asked him to lay on the floor with his feet elevated in a chair. He stayed that way for a few minutes and said he was feeling better, and we were able to get him a cool pack. He sat up on the floor and put the cool pack on his neck. After a few minutes he was feeling better so I allowed him to remain seated in the chair until 4:10pm. Store management came to get a statement from him and he ended up staying in the pharmacy area for approximately 1 hour post-vaccination. He waved and thanked us when he left. |
| 1156759 | 4/1/2021 | NE | | U | | | Fever, almost fainted, really dizzy, my vision went black, got very weak, heart very accelerated |
| 1156673 | 4/1/2021 | AZ | 75 | F | 4/1/2021 | 4/1/2021 | Client was in observation for 30 minutes after vaccination. At 29 minutes client had near syncope event with shortness of breath. On-site EMS evaluated and called for transport and client was transferred to nearest emergency room. |

| 1156932 | 4/1/2021 | VT | 35 | F | 1/19/2021 | 1/20/2021 | 1/19 vaccination 1/20 At about 3pm, I had symptoms of having my period. I started having really bad pain on lower back, I could not stand. I could not pick my baby up. I called my husband to come home. The pain was extremely bad, I could not walk. I took Ibuprofen, called clinic and they said you should call CDC or wait. I went to bed and around 6am I felt like I had to go to the bathroom. Walking back, I went to sit on edge of bed, I was in so much pain. I started feeling so bad, I fainted. When I woke up, my husband was asking me questions. We called 911, took vitals, transferred to ER. Gave Ibuprofen and did ultra sound. They discharged between 11-12. They said to follow up with PCM. It was so scary. Symptoms lasted for 4-6 days after. It became better each day. *still have not had second vaccine |
| 1151545 | 3/31/2021 | CT | 33 | F | 3/31/2021 | 3/31/2021 | Patient reported burning sensation on injection into left deltoid and localized painful reaction. Within approximately 10 minutes following injection, patient reported dizziness, weakness, and nausea. Patient tried to stand and reported that she experienced syncope, fell, and struck her head. Patient called out pharmacist's name. Pharmacist arrived to find patient lying on the floor. Patient had visible mark and bump on her forehead. Pharmacist elevated patient's feet. Patient elevated herself under her own power to a seated position. Patient was given water and blood pressure was taken. Blood pressure was 128/86 with a heart rate of 76. Patient requested pharmacist not contact 911. All events occurred within 15 minutes following vaccination. Patient reported she would visit urgent care following departure from pharmacy but unknown if patient will follow-up. Patient left under her own power and was driven home by husband. |

| 1151440 | 3/31/2021 | CA | 30 | F | 3/2/2021 | 3/2/2021 | cardiac arrhythmia; dizziness/lightheadedness; nausea; muscle weakness; extreme fatigue; lost consciousness/She is in and out of consciousness; extreme weakness; extremely low blood pressure; tachycardia when resting/heart rate is high/HR gets up to 135; One foot and leg became very cold and turned blue; One foot and leg became very cold and turned blue; other foot warm and hot; This is a spontaneous report from a contactable consumer (patient's sister). A 30-year-old non-pregnant female patient received the second dose of bnt162b2 (BNT162B2 reported as PFIZER COVID 19 VACCINE; lot number: EN/ EW 6198; expiration date: unknown), at vaccination age of 30-year-old via an unspecified route of administration in the left arm on 02Mar2021 as a single dose for covid-19 immunisation. The patient medical history was not reported. The patient was not diagnosed with covid prior to vaccination. The patient received the first dose of bnt162b2 (BNT162B2 reported as PFIZER COVID 19 VACCINE; lot number: EN6198), at vaccination age of 30-year-old via an unspecified route of administration in the left arm on 09Feb2021 as a single dose for covid-19 immunisation but had weakness, fainted, lost consciousness and concussion. There were no concomitant medications. The patient did not receive other vaccine in four weeks. The reporter mentioned that on the next day after vaccination (03Mar2021), the patient's one foot and leg became very cold and turned blue other foot warm and hot started cardiac arrhythmia, dizziness, lightheadedness, nausea, muscle weakness, extreme fatigue, extremely low blood pressure and tachycardia when resting. The reporter stated that since 02Mar2021, she hasn't been able to get out of bed due to extreme weakness. The reporter also mentioned that her heart rate (HR) gets up to 135 [unit unspecified]. The reporter also stated that the patient was wearing a heart monitor and was waiting for data. They went to the emergency room (ER) on 12Mar2021 due to concerns of blood clot, ruled out blood clot. The doctors can't explain what is happening to her. She was extremely healthy and fit, no previous cardiac or energy issues. No blood pressure issues or family HX. She says she "feels like she's dying". The adverse events resulted in doctor or other healthcare professional office/clinic visit, emergency room/department or urgent care, |

| 1150959 | 3/31/2021 | NC | 68 | F | 2/16/2021 | 2/24/2021 | sepsis; gallbladder attack; passed out from the gallbladder attack; Gets dizzy; Weakness; she was trying to gain her strength from being sick; her head hurt from the fall; her head hurt from the fall; she had to walk slower because she got dizzy; This is a spontaneous report from Pfizer. A 68-year-old female contactable consumer reporting for herself received the first single dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot EN6200, expiry date Jun2021) on 16Feb2021 at 14:45, in left arm, for COVID-19 immunisation. The patient received the COVID-19 vaccine for age and several comorbidities. No other vaccines were administered within 4 weeks. Medical history included ongoing high blood pressure diagnosed 25 years ago, ongoing hypothyroidism diagnosed 25 years ago, liver resection in 2007 for a benign tumor (she had not been sick and it was found accidentally), liver bile duct stopped up from 2017 and ongoing (due to scar tissue from the liver resection surgery; she had an emergency stent placed in her bile duct), chronic Crohn's disease, ongoing thyroid disorder. The patient previously received flu vaccines on unspecified dates for immunization experiencing unspecified side effects some years ago, but this past year she didn't have a reaction. The patient previously received pneumonia shots on unspecified dates since few years. Family history included gallbladder problems in her sisters and mother. Concomitant medications included oral amlodipine (manufacturer: Lupin, expiry date: 23Feb2022) from an unspecified date (a few years ago) and ongoing, 5 mg at night, for blood pressure, oral telmisartan (MICARDIS; manufacturer: Alembic, expiry date: 02Mar2022) from an unspecified date (few years ago) and ongoing, 80 mg at night, for blood pressure, oral metoprolol (manufacturer: Mylan, expiry date: 09Feb2022), from an unspecified date (few years ago) and ongoing, 25 mg twice daily, morning and night, for blood pressure, oral levothyroxine sodium (SYNTHROID) from an unspecified date (20 years ago or more), 75 ug daily in morning, with water, hour before any eating or other medications, for thyroid disorder. The patient experienced sepsis on 25Feb2021 with outcome of recovered on 03Mar2021, gallbladder attack on 24Feb2021 with outcome of recovering, passed out from the gallbladder attack on an unspecified date in 2021 with outcome of unknown, got dizzy on an |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

unspecified date in 2021 with outcome of not recovered, weakness from being hospitalized on an unspecified date in 2021 with outcome of not recovered, she was trying to gain her strength from being sick on an unspecified date in 2021 with outcome of unknown, her head hurt from the fall on an unspecified date with outcome of unknown. The patient was hospitalized for sepsis due to a gallbladder attack from 25Feb2021 to 03Mar2021. The events gallbladder attack and sepsis required also an ER visit. They did not require a physician office visit. Additional clinical course of the events included the following details. Gallbladder attack turned into infection/sepsis quickly. She previously had an emergency stent placed in her bile duct and now there was a stone in the bile duct and she was unsure if it was related; they will either remove her gallbladder or place a permanent stent. They removed stones and "goop" and placed a stent. Her gallbladder still needed to be operated on, but she was not sick with sepsis anymore. Regarding gallbladder attack the patient reported that it was controlled until further tests and surgery were performed. They couldn't do the surgery due to the infection which had cleared up but she did not want the surgery right now. A stent was placed in the duct until something was done and the stone will be crushed eventually. The patient passed out from the gallbladder attack. She never passed out, she had only ever passed out one other time in her 20's where she stood up too fast. The patient reported that she had to walk slower because she got dizzy and she was trying to adjust to getting home. She walked to the bathroom, used it, and her husband heard a thump while he was using the other bathroom. She was looking at the thermostat and fell in the den and she was surprised she didn't hit anything. Her head hurt from the fall. Sepsis: caller reported that as soon as she went to the ER, she was diagnosed with sepsis. Sepsis resolved the day she was discharged from hospital and when she was dismissed all tests were negative for sepsis. She went home on antibiotics for security for another week after discharge from hospital. Dizzy: it was just trying to get her strength up. She'll just be doing nothing and getting up too fast, it happened to any old person with blood pressure medicines. Dizziness began before she went into the hospital. She was experiencing weakness from being hospitalized and she was trying to gain her

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

strength from being sick. Weakness began during her hospital admission and it was ongoing. On 03Mar2021 the patient underwent lab tests and procedures which included haematocrit: 30.4 %, haemoglobin: 10.4 g/dl (not in normal range yet), CMP: within normal limits (all results were within normal limits, including sodium and potassium), platelet count: 159, RBC count: 3.33 (supposed to be 3.9 or more but could have gotten better by now), WBC: 6.1 x10⁹/L, blood cultures: the results were not yet listed but sepsis was gone according to discharge blood work. She went to the doctor regularly. Her doctor knew how sensitive that was with her, but that her side effects were probably no more than anyone that experienced that. In some years she did not experience adverse events, specifically she did not with her flu vaccine in 2020. She has had side effects that had made her feel ill for 2-3 days and her niece was a nurse and thought she was making it up. The patient was advised to wait for the 2nd dose, she was unable to get it as scheduled on 08Mar2021. In meantime between receiving her first dose and her appointment for her second dose on 08Mar2021, she was hospitalized. The patient was just coming out of the hospital before 08Mar2021 and she still did not feel well so she cancelled the appointment. The hospital doctors, as well as the doctors approaching more tests with her gallbladder, recommended to not get the second dose as scheduled on 08Mar2021, but they could not recommend how or when to get it.

| 1150917 | 3/31/2021 | OH | 52 | F | 3/8/2021 | 3/1/2021 | high level of shortness of breath; Diarrhea; spinal column hurt the worst (the spine from the top of her neck to her butt); butt muscles hurt really bad; caller's spinal column hurt the worst, the front of her calves and hip joints; spinal column hurt the worst, the very edges of her back, the side of her back was excruciating; Dizziness; Vomiting; not feeling well enough; shaking; shivering/ chills; pulse ox and it dropped down to 93; Excruciating body pain; Headache; sore arm / front of her calves, front of her thighs, left arm, 3 left fingers; Exhaustion; no appetite at all; This is a spontaneous report from a contactable consumer, the patient. A 52-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE; Lot number: unknown), via an unspecified route of administration in the left arm on 08Mar2021 at 10:15 (at the age of 52-years-old) as a single dose for COVID-19 immunization. Medical history included ongoing epilepsy since Oct2015 (officially diagnosed in Oct2015, but the doctors believed it was in her early 20s but she was misdiagnosed for decades), post-traumatic stress disorder (PTSD) from 2020 (diagnosed a year ago), sleep apnea since 2016 (patient thought she was diagnosed in 2016), COVID-19 in Nov2020 from which the patient almost died, memory loss (left over COVID symptom) for which the patient was in speech therapy, intermittent body pain (aftereffects of COVID-19), relapse in seizures due to COVID-19, her eyesight was terrible, epilepsy migraines. Concomitant medications included unspecified epilepsy medications. There was no other vaccine given on the same day, or 4 weeks prior to the vaccination. The patient previously received a flu shot and fainted, on an unspecified date. On 08Mar2021 at 11:15, the patient experienced sore arm (pain 2/10). On 08Mar2021 at 22:00, the patient had headache which got progressively worse, then it got so bad she wanted to pop her head off at midnight. On 09Mar2021 at 00:00, the patient had shaking and shivering where it looked like she was convulsing (she had history of epilepsy and knew what a seizure felt like, her husband may have thought she was having a seizure). The patient had chills to the point where she had multiple blankets and could not stop shaking, took her pulse ox and it dropped down to 93. The caller's baseline temperature was 97.1 and her daughter took her temperature and it was 98.9, most people wouldn't |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

consider that a temperature, but it was a temperature for her. The caller kept shaking like that for hours. On 09Mar2021 between 21:00-23:00, the patient had chills again. On 09Mar2021, the patient experienced excruciating body pain (pain 9/10) in very specific parts of her body. On 09Mar2021 by 12:00, the caller's spinal column hurt the worst, the front of her calves and hip joints, the very edges of her back, the spine from the top of her neck to her butt and then next to it was not so bad but the side of her back was excruciating, the butt muscles hurt really bad, the front of her thighs, left arm, 3 left fingers, but not the other 2 fingers. Oddly enough, she was considered a long hauler, it was the places that her occupational therapist and physical therapists were working on. On 09Mar2021 at 00:00, the patient experienced dizziness (that was on and off all day until bedtime last night on 09Mar2021) and vomiting (she couldn't hold down water). On 09Mar2021, the patient was not feeling well enough. On 10Mar2021 at 08:00, the patient experienced diarrhea (she's only gone to the bathroom twice). On Mar2021, the patient experienced exhaustion and no appetite at all. On an unspecified date, the patient experienced a high level of shortness of breath (patient was unsure if this was due to COVID-19). The patient underwent laboratory tests and procedures which included an echocardiogram on an unspecified date: her left atrium was enlarged and her cardiac numbers were high, they were going to monitor her heart and the doctors didn't know if it was because she had COVID-19 or if it was that the doctors got lucky and found it, they had nothing to compare it to because she only had this one echocardiogram. The patient had history of epilepsy migraines (can pinpoint the spot where it hurts), she thought she would try sumatriptan succinate (IMITREX) for this headache (her whole head hurt), as it didn't interact with her other medications. The patient also took acetaminophen/diphenhydramine (TYLENOL PM; Lot: GF6062, Expiry: Jun2022), ibuprofen (patient thinks the Lot is QWE2546A, but is unsure) for the headache. The patient took ondansetron (ZOFTRAN) which she had from a previous prescription and that made the vomiting stop. The events did not require an emergency room or physician office visit. The patient did not think that the reactions were due to her epilepsy medication. The clinical outcome of excruciating body

| 1150393 | 3/31/2021 | UT | | M | 3/10/2021 | 3/10/2021 | I passed out, fell to floor and was unresponsive for multiple minutes; fell to floor; Momentary feeling of nausea and lightheadedness before passing out; Momentary feeling of nausea and lightheadedness before passing out; mild sore arm; This is a spontaneous report from a contactable consumer reporting for himself. A 52-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE) (lot number EN6198/expiration date: not provided), via an unspecified route of administration, on 10Mar2021 at 14:00 (as a single dose in the right arm for COVID-19 IMMUNIZATION. The patient had known allergies to statins and aspirin. The patient had no other medical history. Prior to the vaccination, the patient was not diagnosed with COVID-19. Concomitant medication (other medications taken in two weeks) were none. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 10Mar2021, the patient experienced a mild sore arm. On 13Mar2021 at 17:30, the patient experienced nausea and lightheadedness before passing out. The clinical course was as follows: On 10Mar2021 afternoon, the patient received the first dose of COVID-19 vaccine. No overt signs of illness or other symptoms beyond mild sore arm. On 13Mar2021, in the afternoon, the patient passed out, fell to floor and was unresponsive for multiple minutes. Momentary feeling of nausea and lightheadedness before passing out. No other signs of illness at time. Paramedics and subsequent ER visit did not find any signs of physical symptoms that would have attributed to syncope. Lightheadedness lasted for awhile and was still occurring on and off during ER visit. The adverse events resulted in a doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care. The patient did not receive any treatment for these events. The outcome of the events mild sore arm, passed out, nausea and lightheadedness was recovered on an unspecified date in Mar2021. Since the vaccination, the patient had not been tested for COVID-19. |

| 1150372 | 3/31/2021 | TN | 59 | F | 3/13/2021 | 3/14/2021 | When she passed out; feeling real dizzy; since her leg and knee feel bruised; right eye was swollen; felt unwell; weak; This is a spontaneous report from a contactable consumer (patient) reported that a 59-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 13Mar2021 as a single dose (at the age of 59-years-old) for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. It was reported that the patient got the Pfizer-BioNTech COVID-19 Vaccine first dose on Saturday, 13Mar2021, and was fine after the shot but had a reaction on Sunday, 14Mar2021. On 14Mar2021, she got up to make breakfast and started feeling real dizzy and the next thing she knew, she was on the floor; this happened twice. When she passed out, she must have hit something on her right side, since her leg and knee feel bruised and right eye was swollen. She felt unwell, dizzy and weak; no dizziness today (15Mar2021). She planned to discuss further with her physician. The outcome of the event dizziness was recovered on 15Mar2021 and unknown for the rest of the events. Information on the lot/batch number has been requested. |

| 1150069 | 3/31/2021 | OH | 61 | F | 3/16/2021 | 3/17/2021 | I had my Pfizer vaccine on March 16, 2021. On March 17th I had a headache, body aches and fatigue which I expected since I had Covid in November 2020. Most of these symptoms only lasted 3 days. After the 3 days I had a continuing headache and started having jaw pain. On March 22nd I started having dizziness and a severe headache with jaw pain, fatigue and nausea. On March 23rd I got up abruptly and felt extremely dizzy and almost passed out. I am having continued sporadic headaches, nausea, dizziness behind my eyes with fatigue and a metal taste in my mouth especially when my mouth is dry. As of March 30th, only side effects lingering are dizziness behind my eyes and nausea |

| 1150044 | 3/31/2021 | OH | 19 | F | 3/31/2021 | 3/31/2021 | I got my shot, sat down, and was reading through the information that the clinic provided me. A few minutes after, I noticed my right arm was getting warm, but I thought I was being paranoid (placebo effect). I began to feel nauseated. About another 5 minutes after feeling warm and nauseous, my ears began to ring and my vision went white. I was cold but sweating. I have passed out a handful of times before for various reasons, so I knew what was happening. I tried to signal to a volunteer from my seat that I needed help, but I ended up laying on the ground by my chair before someone came over. Once I laid down, the attention of the volunteers and nurses was on me. Three came over to assist me. They held my legs up, kept a hand on my wrist for a pulse, and fetched water. I talked myself through the dizziness and ringing in my ears. They put a cold rag on my forehead and had smelling salts on hand. Once I began to feel better, they helped me slowly sit up, and eventually helped me stand up and get into a chair. They kept a close eye on me for the next 30 minutes to make sure I didn't have any other reactions. |

The 67-years-old female patient received bnt162b2 (BNT162B2), dose 2 intramuscular, administered in Arm Right on 04Feb2021 (Batch/Lot Number: EN5318) as SINGLE DOSE for covid-19 immunisation. Medical history included breast cancer - stage 2 from Jan2008; 29Jan2008 surgery, breast cancer. First surgery for breast cancer removal and lymph node removal, then the cancer went around the first and second lymph nodes so they had to go back in because they had to take out a bunch more and she had to give them permission to take out more lymph nodes. Concomitant medication(s) included ongoing simvastatin for High cholesterol; ongoing bifidobacterium bifidum, bifidobacterium longum, lactobacillus gasseri (PHILLIPS COLON HEALTH) she has high pain tolerance, had stomach cramp did not know what it was and one a day vitamin. The patient previously took bnt162b2 (BNT162B2), dose 1 intramuscular administered in Arm Right on 14Jan2021 (Batch/Lot Number: EL8982) as SINGLE DOSE for covid-19 immunization and experienced Injection site sore. The patient experienced passing out on 28Feb2021, injection site sore, lymph nodes swollen on 04Feb2021, thumb pink on 26Feb2021, erratic body temperature, horrible headache, bodyaches, dry heaves on 05Feb2021, she was 155 lbs before when she was in the hospital - and now 160 lbs on an unspecified date. The patient was hospitalized for passing out from 01Mar2021 to 02Mar2021. The event passing out lead to emergency room visit. The patient lab tests and procedures which included cat scan/ cat scan groin area with contrast: normal; EKG: normal; blood workup: normal; Blood culture:normal, all on 01Mar2021; cat scan head and neck with contrast: normal and cat scan head and neck without contrast:normal on 02Mar2021. The outcome of the event thumb pink was recovering, erratic body temperature was not recovered,</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

horrible headache, bodyaches, dry heaves recovered on 26Feb2021, and was unknown for the rest events. Reported as: Caller states that on 04Feb2021 she received her 2nd vaccine at around 3:30 pm, and then around 10 pm she had injection site soreness. The morning after the second injection around 4 am, she had site on her arm soreness, erratic body temperature with slight fever, horrible headache, bodyaches, and dry heaves. Her lymph nodes also swelled up again. Caller clarifies that this also happened after her first injection of the Pfizer Covid19 vaccine and on a similar timeline. Caller clarifies that 2 weeks later on 26Feb2021 she had ended up with horrible headache, dry heaves, headache, body temperature 104.4. She states that this lasted Friday night and Saturday night and Sunday she was feeling better. Clarifies that was the week of 26Feb2021. Caller states that her events were on a similar timeline and that her first vaccine was 14Jan2021 at 3:30 pm on Thursday. States that by 10 o'clock that night, injection site was sore. At 4 am, injection site was very sore. A couple of days later, her lymph nodes were swollen in her left leg, groin area, right arm under armpit. Adds that area under armpit was the size of her thumb. Also, on the left underneath her chest wall. She states that she has had breast cancer in that left breast. She states that the swelling went away completely, but that the groin area swelling took 2 weeks to go away. Unable to verbalize exact dates. Confirms that this was after the first vaccine and also occurred after the second vaccine. Caller then adds that she was feeling better Sunday, 28Feb2021 but that her husband then found her on the floor Sunday night at 8:45 pm. She states that she passed out. Monday she passed out again and was taken to the hospital where she stayed until 02MAR2021. Healthcare Provider also provides information that her son ran her to emergency room, and she is not familiar with the doctors there. Also, a doctor that she does not remember the third physician but it was a neurologist. Caller states that she was 155 lbs before when she was in the hospital - and now 160 lbs. States that she was dehydrated in hospital and did not eat a thing. Normally she runs around 160 lbs. States she had breast cancer so left arm cannot be used, so they used her right arm for both vaccines. caller adds that she had a cruise she was going to go on but refused to go on in 2020. States that

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

she heard you will need to have a vaccination passport to travel in the future so she wanted to get vaccine. States she did not want to get covid. States that so many people have died. Caller clarifies that she was admitted to (Hospital Name) on 01Mar2021. Caller adds that she went to the hospital 2 weeks after the second dose. She states that is what makes them wonder if it is from the Covid vaccine. Adds that she is not saying that is what caused all of this, but that it is just a coincidence that it was exactly 2 weeks after the vaccine, exactly 2 weeks out when this happened. She states that she has been thinking if she should be wasting Pfizers time reporting this but it could be a coincidence or maybe a reaction. Caller adds maybe it is because she had 34 radiations, 8 chemo treatments, 1 year of Herceptine, and breast cancer. States that maybe she can save somebody else, or if a possibility, people can be prepared two weeks early. She adds that she is lucky she did not break an arm, leg, or bone. States that she doesn't know if maybe she can save some other person by sharing this information. Injection site sore: States that this was after both first and second vaccine. It stayed sore for about a week, and was just tender after that. If she touched it, she noticed, but it didn't hurt her from doing anything. With the first vaccine, injection site soreness started 14Jan2021 around 10 pm and completely resolved after about a week. She adds that with the second vaccine she also noticed injection site soreness that same day on 04Feb2021 around 10 pm also. She adds that it lasted about six days or seven days or so. It was the same way, tender the first day and then at 4 am was when it got really bad. That Friday 05Feb2021 was when it hurt worse. Adds that she went into hospital on 01Mar2021 on Monday. States she was feeling okay, stayed dizzy and confused and thought she was getting Alzheimer's or dementia but it cleared. At 11 pm on Sunday felt completely different, like the old her. States she was fine yesterday 15Mar2021. She had felt disoriented but is now feeling better and back to normal. Erratic Body Temperature: States that she started watching and recording her body temperature on 09Mar2021. She states that it was 104.5 on Friday, and Saturday and Sunday night she used a wet washcloth to her forehead. States that her body temperature initially was variable starting on 26Feb2021. She adds that it continued until

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

Sunday 28Feb2021. On 26Feb2021, her body temperature was 104.5. She states that it was then low on Sunday 28Feb2021 and was 98 or 99. Adds that it had been erratic but that once the fever broke it has been between her normal which is 98.6 to 98.7. Adds that her and her husband know for sure that when she passed out the three times, her temperature was 94.4. States that her husband gave her aspirin for the temperature. Adds that her temperature has been between 97.9 to 94.9 and dropped to its lowest on Saturday 13Mar2021 at 10:35 am. She states that it is still doing this erratic behavior and that this morning it was 96 at 1 am and then 96.8 at 8 am. While on phone today, it is 97.1. Lymph nodes swollen: States noticed swelling at 4 AM 16Jan2021. States this occurred 4 am after both first and second injection. Occurred to groin area, right arm, and left arm. It was there for a couple of days and then it would just remind her it was there. The arm lymph node swelling went away after a few days, maybe before a week or so. The one in the groin was there for about two weeks. On a scale of 1 to 10, it was a 1.5 and was not something that people need to take an Advil or something for. Clarifies it was in the armpit except in the left side because they took those lymph nodes out during surgery in 2008. Also, she noticed lymph node swelling in the chest area. Lymph Nodes at second vaccine she also noticed them starting at about 4 am after the vaccine and it started hurting again. Caller reiterates both shots were given at 3:30 pm and then at 10 pm injection site gets sore. Then 4 am injection site gets more sore. She's been telling everybody to get the vaccine in the morning. Her symptoms lasted two weeks and then she was fine. Caller adds that her husband never felt a thing from receiving the vaccine. She states that the injection site was tender on her husband but gone the next day. Investigations: stated they looked at her in the hospital and said she was fine. The girl came back up and did more cultures and nothing grew. They were confused and so was she and she has been debating whether to call and waste time reporting but thinks that Pfizer needs to know what happened to her. Simvastatin: Adds that asked doctor if this caused her symptoms and he said no. Phillips colon: doctor 6 to 9 months later did scan, the next day was in emergency surgery and it was her appendix. It enlarged and had grown into the other

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

organs. Doctor said it was a mess and it was ready to rupture as a precaution they wanted to remove it. Bayer product Code above expiration date states 0C09C and expiration is Mar2023. Thumb pink: thumb nail to finger print past where you bend it was where she noticed it was pink. States it is now 98% better. Friday 26Feb2021 afternoon at 1 pm, right thumb turned pink. She took a pen and marked where it was vertical and horizontally pink to scarlet in color. She put herself on antibiotics. She was not sure if maybe she cutting chicken and cut it, or closed finger in drawer. It swelled up twice the size, turned purple. Went all around the finger and it was hot. She thought it was going to pop off. She kept wondering what she was going to do to her thumb. She did jam it and cut herself 2 months ago. Clarifies it was right hand thumb. Treatment: took antibiotics, which she states they kept her on in the hospital in IV form. She started the antibiotics on Friday 26Feb2021. Took it Friday afternoon, Friday night, and Saturday and Sunday. She thought it was doing better Sunday night before she passed out. Clarifies Cephalexin, 500 mg daily (Keppra) three times a day and by mouth. Adds that she keeps this medication on her because she travels the world and it is good to have on hand since it is broad-spectrum. Passing out: 28Feb2021 Sunday night noticed the volume on television was driving her crazy and it was irritating. Around a quarter to 9 she got up to brush her teeth and go to the bathroom. She went pee and then fell off toilet. She got really really dizzy, and her husband was standing over her yelling asking what happened. She saw the wall and she did not know what happened. States she was out cold and he was calling her name but she did not hear him. She heard him asking what happened but it was in the distance. He got her to bed and about 20 minutes later (husband reports 30 minutes later) she was so dizzy and passed out again. She adds that this may have happened Saturday also because she was sleeping a lot and it was like she was seeing words repeat themselves over and over again and her vision would get very narrow. Her husband was not sure if she passed out on Saturday also, but said both times Sunday she was out cold. Monday 01Mar2021 she called her husband's office and woke up to the nurse on the other line screaming. She dropped the phone and heard her name being screamed over and over on the phone and

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

when she picked it up the nurse said that she must have passed out even though she thought she was sleeping. The nurse got ahold of her husband in his office. She believes she passed out again Monday morning and was then in the hospital Monday and Tuesday.

Hospitalization: On 01Mar2021, her husband is a physician and suggested she go to the hospital. She was trying to get ahold of her son and daughter in law. She sent them a text and called and they did not answer. Her sons phone was charging and when he looked at it he was on his way to her. She states that when she came to all three times, she was extremely dizzy foggy and confused. Adds that the nurse at her husband's office alerted her husband and he told her to stay in bed and her son came to help her and then drove her to ER. States she was there Monday 01Mar2021, and discharged Tuesday night 02Mar2021 about 4:30 to 6 pm. Caller does not want to file a report for her husband regarding the injection site soreness. She states it was like the flu shot. She clarifies that it was not his arm, it was the injection side. She states that these people who are going on and on about their arm hurting, it is the injection site. She states it is the injection site and will not be the arm. States that it is like the flu shot. States she does not want to file a report regarding her husband because it was injection site soreness and went away. Provides no additional information. Adds that this is a new drug and new disease and we do not know what the future holds Caller adds that she keeps a diary and started a diary so that she has everything recorded in terms of medical history. States that it is important that everybody do so. Family Medical History Relevant to AE(s): callers dad passed out at age 85. He found out he was diabetic and had heart issues. Also had a stroke at age 87 and passed away. Adds that between ages 85 and 87 he passed out every few months, he would do one of his passing out things. Caller also had a brother who passed out sitting at table and went forward into table. She states at that time her brother didn't realize he had stage 4 lung cancer, and her brother passed away 1 and a half years later. Caller adds that he smoked from ages 15 to 64, and quit at age 63 because the doctor told him to. No follow-up attempts possible. No further information expected.

passed out; dizzy spell; fell down; have gotten shorter/shrunk; This is a spontaneous report from a contactable consumer (patient). An 81-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EN6203), via an unspecified route of administration on an unspecified date as a single dose for COVID-19 immunisation. Medical history included high blood pressure, diabetes, thyroid disorder, and bleeding. The patient stated "I am bleeder. My father had hemophilia and I have the female version which I never remember what it's called but I bleed easily but I didn't bleed at all for when I had the shot, it was fine." Concomitant medication included levothyroxine sodium (SYNTHROID). Patient stated, "Yes, I took my medication that morning. I take thyroid medication, blood pressure medication. I don't remember what I take for blood pressure." The patient reported "Well I am calling I felt just fine right now. I had my first shot by Pfizer on the 24th and I felt great and they watched me and I left and I was driving home and I had a dizzy spell while I was driving. I don't know if I passed out or not, I might have but if I did, it wasn't for very long, they were digging up the road I couldn't stop, couldn't park so I made it home okay and I was fine the rest of the day but then the next day, I had a lot of dizzy spells but I was at home so I didn't worry, I just sat down and I was okay and then the 3rd day I got up for breakfast and I bumped into everything, I dropped everything and then I started to get out of chair and the chair fell down and I fell down and that was just a mess. So, I went to bed and I felt at least if I fall, I fall on bed and that was the day I was dizzy but then it went away and I have been fine ever since. That began on 24th, the 24th was the first day and I did call my doctor and I have been trying to call here and I never think it through but finally today, sat to watch, hang on to the phone and what I am concerned about is getting my second vaccine. Is there anything I should watch for or tell anybody or, because my doctor said you shouldn't get dizzy but I did?" The patient confirmed the vaccine as Pfizer's Covid 19 vaccine. About the lot number, the patient stated, "It looks like EN, I am not sure if it's E and N 6203." The patient further reported, "No, I just went home and the first day I was over with it by the time I got home and I didn't had anymore. The next day I just sat

| 1154611 | 3/31/2021 | PA | 36 | M | 3/18/2021 | 3/18/2021 | MODERNA COVID 19 Vaccine EUA Patient got the vaccine and was waiting the 15 minutes after during which he went to stand up and fainted. The pharmacy technician called the pharmacist immediately and when pharmacist arrived patient was alert and talking. He states that he always faints after he gets IVs placed or shots in his back. He states that this is normal and happens whenever he gets shots. EMT was called as a precaution because he hit his head as he fainted. Patient was okay and taken by the EMT to get evaluated. |
| 1154594 | 3/31/2021 | NY | 37 | F | 3/30/2021 | 3/30/2021 | After waiting 8 minutes, I had a minute episode where my heart started racing out of the blue unexpectedly and after a minute returned to normal. Within that minute, I was worried I could have physically passed out. Then it stopped. I didn't tell anyone because it happened quickly and I was worried it could be misconstrued as anxiety and I didn't fully understand what happened. The intensity and quickness of the episode felt very physically driven and I'm unsure if this is within the scope of normal reactions. I have never experienced anything like that getting a vaccine. |
| 1154592 | 3/31/2021 | WA | 64 | F | 3/29/2021 | 3/31/2021 | Fatigue and headache day after vaccination, next morning I passed out. Nausea, dizziness. |
| 1154557 | 3/31/2021 | KS | 66 | F | 3/30/2021 | 3/31/2021 | Pt called today, one day after getting her second moderna vaccine, stating that she was feeling nauseas and passed out. She states she has a history of passing out when feeling nauseas. She was concerned that the vaccine caused her to pass out. I explained to her that based on her history, that I did not think the vaccine caused her to pass out. Encouraged her to reach out to her health care provider if she was concerned. |
| 1154632 | 3/31/2021 | PA | 22 | M | 3/31/2021 | 3/31/2021 | Patient received vaccine was fine while sitting. When patient stood up and was walking to the door he passed out. BP was 117/74 prior to EMS arriving. When EMS arrived he was placed into a chair and BP was lower initially. After sitting for about 10 minutes his blood pressure returned back above 117/74. |

| 1154722 | 3/31/2021 | MN | 29 | M | 3/31/2021 | 3/31/2021 | syncope episode- 1:33 pm individual fell head-first off from chair in observation area and hit her head. I was called over by the observation person that someone needed attention right away. I ran over the individual was lying on the floor and her husband was sitting on a chair right next to her. He said she fainted and fell forward. The individual appeared to be unconscious when I arrived and was very diaphoretic. I loudly asked if she was okay and then tapped her chest. She looked up at me and said "oh snap.?" She was oriented to person and place and her pupils were equal, round, and reactive. She denied that she had any tingling in her arms or legs. She said she heard everyone talking to her, but thought she was dreaming. She said that she has a history of passing out with finger-pricks (she cannot donate blood anymore because of this), shots, and she passed out when she got a piercing in the past. She said she felt her HR slowly starting to climb, but she felt she would be okay. She said she then started feeling lightheaded and passed out. I took HR BP at 1:35 128/74, 62 and again 5 minutes later 128/80, 62. Individual was given an ice pack for her head. She had a bump on the upper right side of forehead. She said she had not eaten or drank much before her shot. She said her stomach was a little upset. She was given water and granola bars and sat up for a while before standing up. She asked if I thought she should get her head checked out. I said it is never a bad idea to get checked and since she did hit her head hard enough for a bump to happen right away. Individual was feeling better before she left, stating just her head hurt. We told her to ice and ibuprofen or Tylenol to treat discomfort. |
| 1152401 | 3/31/2021 | MN | 45 | M | 3/31/2021 | 3/31/2021 | Patient waiting his 15 minutes after receiving 1st dose. Became limp in chair, face pale. He responded to his name and other simple questions within 30 seconds of onset but continue to appear pale and reported feeling light headed. Stated that he has fainted before after giving blood, etc; His blood pressure then was 110/60 and pulse 68-72. @nd blood pressure a few minutes was 82/40. He continued to feel light headed with nausea. Decision was made to take him to the Emergency department as vaccine clinic was in hospital. Patient was admitted then to the Emergency room. |

| 1152759 | 3/31/2021 | NE | 48 | F | 3/17/2021 | 3/25/2021 | 7 AM 3/25/2021 - Patient called out to husband from the bathroom where she experienced a syncopal event, then passed out. An ambulance was called and she was revived for a short period of time. She was taken to Hospital where she coded 3 times. She was then life-flighted to second Hospital. According to the hospital records, tests conducted over the course of several days determined that she had no neurological activity. Initial reports in the records indicate pulmonary embolism, cardiac and respiratory arrest. She was on life support for the remainder of her time. Organ donation is being pursued at present and results of this are pending at time of this report submission. Date of death is unknown until organ retrieval is accomplished. Family will be contacted in the next few days to ask further questions about any other kinds of vaccine-related reactions that may have happened more immediately to days after the vaccination on 3/17/2021. A co-worker thought that she had shortness of breath for 3-4 days before this critical event occurred on 3/25/2021. |

| 1147093 | 3/30/2021 | TX | | F | 3/4/2021 | 3/1/2021 | Fainting; Vomiting; Shingles R Herpes infection; Rash on the back; A spontaneous report was received from a consumer concerning a 82- year old, female patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced Fainting (Syncope), Shingles R Herpes infection (Herpes zoster), Rash on the back (Rash) and Vomiting (Vomiting). The patient's medical history included shingles but not had since 2006.. She received the old Shingles shot in 2006. Now receiving new Shingles shot a year before and later. The patient's current conditions included diabetes and heart disorders. Concomitant medications included,medications for heart conditions and diabetes. On 04-Mar-2021,prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (lot number-unknown) via unknown route on right arm for prophylaxis of COVID-19 infection. On 18-Mar-2021,the patient experienced, about to Pass out, fainting followed by vomiting-3 episodes. On an unknown date in Mar 2021, she had Shingles R Herpes infection which broke out now. On an unknown date in Mar 2021, she also felt rash on the back. The event about to Pass out and fainting was medically significant events. On 18 Mar 2021, the laboratory data included, blood pressure was 128/84 and pulse rate was 94/50 .Treatment information included pain relievers and calamine lotion for rash. Action taken with mRNA-1273 in response to the events was unknown. The outcome of the events, Fainting (Syncope), Shingles R Herpes infection (Herpes zoster) and Vomiting (Vomiting) was unknown at the time of the reporting. On an unknown date, the outcome of the event, Rash on the back (Rash) was recovering.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of these events, a causal relationship cannot be excluded. |
| 1147076 | 3/30/2021 | NJ | 22 | F | 3/26/2021 | 3/26/2021 | Adverse event occurred approximately 11-13 hours vaccination. Moderate chills, turned into approximately 100 degree fever (felt like the fever is breaking), sweating, became dizzy, vision was spotty, and then fainted. (Adverse event occurred after both doses. After receiving 1st dose (February 26) and 2nd dose (March 26). |

| 1147007 | 3/30/2021 | CO | 30 | F | 3/29/2021 | 3/30/2021 | I have experienced severe episodes of nausea with some vomiting and feelings of near syncope. The near syncope resolved when lying down but returns when standing up. The nausea seems to be intermittent and also improved when lying down. Earlier this morning at approximately 3 a.m. I woke with chills and nausea which lasted an hour. When the chills resolved I began to feel very warm as if I had a fever but I did not get up to check my temperature. |
| 1147181 | 3/30/2021 | WA | 32 | M | 3/26/2021 | 3/26/2021 | Medic on site working in the observation area witnessed patient in his car, slumped into the seat and not moving forward as expected per protocol of this drive through mass vaccination site. Upon assessment by medics, the patient had very pale skin color, eyes were closed, but he was responsive to questions. Patient was able to state that he had a history of syncope and that this is not an unusual response for him to needles. Patient was able to place his vehicle in park and wait in place for about 15 minutes and until he recovered. When fully recovered, patient traded seats with one of the other passengers in his vehicle and had one of the other passengers drive as they left the vaccination site. |

| 1147260 | 3/30/2021 | NC | 35 | F | 3/3/2021 | 3/3/2021 | 35 yo female with a history of heart failure (EF 35%) dx 2020, reports AE after Covid vaccine #1 (3 MAR 2021) at drivethrough event characterized by onset of dizziness and CP 6/10, feeling cold 10 minutes after vaccine receipt. She denies, pruritis, urticaria, oral/face/throat/tongue swelling, flushing, red/watery eyes, cough, wheeze. She was transferred to ER with neg eval and released. She states CP continued until that evening, but was consistent with CP she intermittently experiences baseline. She reports mild dizziness continued for two days. She had mild site pain. She had increased fatigue for a few days and resolved. She reports a history of presyncope after blood draws. She denies previous AE after vaccine. She was treated with IVF, ASA 325, torrodol 30 mgs and zofran 8 mgs. No repeat event with second dose receipt. |
| 1147291 | 3/30/2021 | AR | 34 | F | 3/30/2021 | 3/30/2021 | Is 17 weeks pregnant with her first child. I do not know her estimated date of delivery. She fainted approximately 5 minutes after receiving her vaccine and fell from a chair. She landed on her side face down, so we turned her face up so we could see her face. Her eyes were barely open, but she nodded her head the second time we asked if she could hear us. We took her blood pressure, and it was 107/71 with a heart rate of 85. EMS came, and she felt better, so she decided not to go with them. They asked her to stand up to sit back in the chair. When they left, she slowly progressed to walking around while talking on the phone with someone to come pick her up so she didn't have to drive herself. She told us this was the first time she had fainted in 3 years and the first time ever fainting due to a vaccine. |

| 1147294 | 3/30/2021 | RI | 20 | F | 3/26/2021 | 3/26/2021 | Roughly 12 hours after I recieved my second dose of the vaccine (around 11:00 PM on 3/26) I started to develop a fever, headache, and chills. These symptoms lasted throughout the night into the morning. In the morning on Saturday (3/27), and for most of the day I felt fatigued and slightly nauseous. At 5:00 PM that night, I was walking in the hall of my residence when I experienced a syncopal episode, which has never happened to me before. I fainted several times and my roommate brought me to the ER. Other than low BP, my EKG and other vitals looked fine, and the doctor sent me home with the conclusion it was likley related to the vaccine. The next day, Sunday 3/28, I felt naseua and dizziness all day. |

| 1145737 | 3/30/2021 | FL | | F | 3/11/2021 | 3/12/2021 | PASSED OUT ONCE (Passed out, Loss of consciousness) COUGHING OUT (Coughing, Cough) CHILLS (Chills, Chills) NAUSEA (Nausea, Nausea) FEVER (Fever, Pyrexia) HEADACHE (Headache, Headache) This spontaneous report received from a patient concerned a female of unspecified age. The patient's weight, height, and medical history were not reported. The patient received covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin not reported, batch number: 1805025, expiry: UNKNOWN) dose was not reported, administered on 11-MAR-2021 14:00 for prophylactic vaccination. No concomitant medications were reported. On 11-MAR-2021, after getting the vaccine, the patient experienced achiness throughout the body, coughing out, chills, fever, headache and nausea. On 12-MAR-2021, the patient also passed out once. The action taken with covid-19 vaccine ad.26.cov2.s was not applicable. The patient recovered from passed out once, and fever on 12-MAR-2021, and chills on MAR-2011, had not recovered from headache, and achiness throughout the body, and the outcome of nausea and coughing out was not reported. The reporter causality between covid-19 vaccine ad26.cov.2.s and passed out once, coughing out, achiness throughout the body, chills, nausea, fever, headache was possible. The company causality between covid-19 vaccine ad26.cov2.s and passed out once, coughing out, achiness throughout the body, chills, nausea, fever, headache was possible. This report was serious (Other Medically Important Condition). |

| 1146198 | 3/30/2021 | IL | 22 | M | 3/29/2021 | 3/29/2021 | <p>Pt received the first of the two-series COVID vaccination at 1512. Once in observation area, pt became unresponsive shortly after sitting down. This provider was called over by staff to pt, which was noted to have become unresponsive while sitting in the chair. Pt remained in the chair, did not fall or injure self. Upon arrival to patient, he was noted to have severe diaphoresis, prominent pallor, with shallow, slow breathing, no cyanosis noted. His head initially fell back and head was aligned/adjusted to maintain an open airway. This provider was speaking to the pt and performed a sternal rub to elicit a response, pt remained unresponsive and with eyes closed. Pt remained in this state for approximately 10 seconds. Pt noted to suddenly have some muscular rigidity to arms and torso and in order to prevent injury upon possible onset of seizure activity, pt was lowered to the floor by this provider and RN . Once on the ground the pt was relaxed and opened his eyes. Pt was immediately verbally responsive and asked if he passed out. Pt was able to sit up and was assisted into the wheelchair. Pt moved to treatment area where vitals and blood glucose were obtained. (@1525 BG- 104 mg/dL, VS BP 116/72, HR bradycardic @51 bpm, O2 sat 95%). Patient responses/speech was clear and pt was oriented to self, place, time and situation. Pt stated that he felt nauseated upon sitting in the observation area and admitted that he only had a coffee today, nothing to eat all day and attributed this as the cause of his reaction. Pt verbalized that he would not respond to the hospital with the paramedics and was encouraged to at least call someone to take him to the hospital. This provider spoke with the patient?s mother and explained the events. The patient?s mother stated that the patient had febrile seizures when approximately 4 years old, associated with asthma exacerbations; but pt was evaluated with a neurologist and there were no abnormal findings. Pt admitted that he has a similar syncopal episode after washing a laceration and seeing his finger bleeding. Pt states this was a few years ago and witnessed by his father that told the patient he initially fainted and then became momentarily rigid before responding appropriately (similar to today?s events). Ambulance - arrival @1536 report given and pt stated he was feeling better and declined further evaluation in truck and also declined transport to ED (departed at 1545).</p> |

| | | | | | | | Pt?s overall condition, appearance, including color was much improved. Pt denied any allergies or medication history. Past medical hx of febrile seizures at approximately age three and four, childhood asthma and one syncopal episode as an adult. Pt girlfriend arrival and she agreed to drive patient from the vaccine clinic. Pt and girlfriend were both provided with an explanation of the many concerning causes of syncope and the necessity for further evaluation in the Emergency department to rule out any underlying conditions. Both patient and girlfriend verbalized understanding and although they still declined to respond to ED directly from the clinic, both did agree to respond to ED if any changes in mental status occurred. Pt lives alone, but agreed to stay with parents and family in order to have others watch him for any changes. Pt was advised to followup with PCP and made aware that an provider would contact him tomorrow to check on his status, understanding verbalized and agreed with plan of care. Pt in no acute distress, awake, alert and oriented. Color within normal limits for and departed facility with girlfriend at 15:56, steady gait noted. Patient?s appointment for second dose was cancelled and will need to obtain clearance prior to second vaccine dose. |

|-----------------|-----------------|--------------|----------------|------------|-----------------|-------------------|---|
| 1148528 | 3/30/2021 | UT | 60 | F | 3/19/2021 | 3/19/2021 | Sensitivity started within four hours of dose. Autistic sensitivities to maximum. Scrambling of all senses including proprioception to the point of not being able to move from standing or sitting. By hour seven, all sensory inputs were too overwhelming to do anything but shut down and sleep. 911 was not an option because they don't let you sleep, and ERs are overwhelming already, before maximizing all inputs. 7.5 mg hydrocodone for overwhelming pain and sensitivity, allowed sleep. On waking, sensitivity was lessened, but the pain started, 18 hours after the vaccination. Emotional lability for three days. Average aching of arm and injection site were not above expected levels. "Brain fog" and lack of ability to articulate (another autism symptom) started within that first seven hours, and diminished over next ten days. Not yet gone as of today Dry mouth; overproduction of thick 'chunky' mucus that wouldn't cough out, treated with guaifenesin, lasted three days. Shortness of breath and cough associated with that mucus also diminished after three days. Not completely gone ten days later. Excessive thirst, onset two hours after vaccine, lasted two days. Hyperalert (can't sleep without drugs), hyperactive despite weakness, and hypervigilant (extreme startle reflexes) lasted three days as well. Sleep was achieved with hydrocodone and THC. All over body pain, feelings of immune mobilization (coming down with) for two days were not above expected levels. No fainting or other collapse at time of injection, or later. Knowing that severe over-stimulation is exacerbated in a medical setting, it was decided not to seek medical support for three days of systemic symptoms that would have easily merited hospitalization. |

| 1148544 | 3/30/2021 | AZ | 24 | M | 3/28/2021 | 3/29/2021 | got up about 5:15AM to use the restroom, parents heard a huge crash and we came running - he had collapsed and fainted in the bathroom, against the toilet, (with shelves and glass crashing down him - he grabbed the shelves and had a few cuts and bruises), was unresponsive, no color in his face, could not stand or move, could barely speak - slumped against the toilet. Parents called 911 and tried to get him to respond, he was listless but opened his eyes - we lifted him and moved him to recliner in living room. Fire Dept./EMT's arrived within a few minutes, blood pressure was 87/43, glucose was normal. EMT's determined it was a reaction to the vaccine and asked if he wanted an ambulance or if parents should drive him for further care - he opted for us to drive him (his Mom called the Dr. on staff first - Dr. said it was a reaction to the vaccine and he should not get a 2nd dose). Patient's Dad took him to Urgent Care - they ran an EKG (normal), and stayed there until his blood pressure showed (although still low) normal/acceptable again. I looked at the CDC website for covid anaphylaxis and it appears it was an allergic reaction (cardiovascular), on the site, he had these symptoms: "Cardiovascular: fainting; hypotension (abnormally low blood pressure); pallor. ... Symptoms of anaphylaxis often occur within 15-30 minutes of vaccination, though it can sometimes take several hours for symptoms to appear.~~ |
| 1148551 | 3/30/2021 | CA | 25 | F | 3/30/2021 | 3/30/2021 | Patient felt dizzy after 5 minutes of sitting in wheelchair with her legs elevated (she said she had a history of fainting at the sight of needles. Took her vitals and B/P was 82/42, removed her mask to focus on breathing. O2 sats were 97% on RA, HR was 53. Ice pack placed to her neck and O2 per N/C placed at 3 L. At 10:47 she briefly lost consciousness for a few seconds and ammonia whiffs were given. Stat team called and she was taken to clinic treatment area for further observation. Patient's mother reported that patient had taken Ativan PO at 0945, same day. |
| 1148571 | 3/30/2021 | WA | 54 | F | 3/30/2021 | 3/30/2021 | fainted a couple of mins, regained consciousness but feeling light headed, nauseated reported a cold sweat. had diarrhea. was not still feeling well so 911 called and was taken to a hospital |

| 1148401 | 3/30/2021 | GA | 20 | M | 3/30/2021 | 3/30/2021 | Patient reports routinely having spells of syncope with injections and still insisted on receiving COVID-19 vaccination. Gave injection into left deltoid. Had patient scoot up to table in immunization room with both legs fully under the table just in case there was an issue. I set the timer for 15 minutes and left him in the immunization room with his girlfriend, who also received a vaccine. A few moments later the girlfriend asked for our help stating he was feeling like he was going to pass out. I went into the IMZ room and checked with him. At the time, he was sweaty with a rapid heartbeat. I instructed him to take some deep breaths and went to get a cold paper towel to apply to his head. When I returned he had passed out, not responsive but still breathing, in his chair and his girlfriend was holding his head in her hand. We gently lowered his head to rest on the table while another associate called 911 per girlfriend's request. He began moaning a few moments later and was able to talk to us. He was very hot and sweaty, light headed and breathing rapidly. We applied a cooling pack to his forehead as he continued to lie his head on the table. He then said he might feel more comfortable lying on the floor. We assisted him to the floor, elevated his feet on a chair and placed his head on a roll of paper towels. At that time the paramedics showed up and said his blood pressure was fine and he was just having some hyperventilation. The paramedics got him back up in the chair and his girlfriend got him some apply juice. After about 30 minutes he was talking fine, shaking had stopped and his breathing a temp went back to normal |

| 1148376 | 3/30/2021 | MA | 67 | F | 3/19/2021 | 3/19/2021 | By late afternoon my left arm and armpit felt a little sore. I went to bed around 8 p.m. and awoke at 11 p.m. ~12 hours after receiving my second vaccination, with chills, arthralgias, myalgias, headache, a slightly stiff neck. I got up to take some Acetaminophen and Ibuprofen. My hands shook badly and I had trouble opening the bottles and getting out a couple of pills (APAP 500 mg, Ibuprofen 400 mg). I returned to bed and eventually the symptoms subsided and I fell asleep. In the morning I had extreme lethargy, felt dizzy after standing a few minutes to the point of pre-syncope as I made it back into bed. I slept on and off most of the day (Saturday). By Sunday, I was much improved but still had little energy and took it easy. My left axilla still felt a little full but I could not detect any lymph nodes. By Monday, I was pretty much back to normal including my left arm and axilla. |

| 1148371 | 3/30/2021 | CA | 50 | F | 1/19/2021 | 1/20/2021 | She got her vaccine, told them that she had a lot of reactions to many foods. The shot area was a little swollen, kept messaging it so that it wouldn't be painful the following day. She told them that she was feeling a little wheezy but that she would get a reaction within 24 hours. She did have some dizziness but nothing to complain about. She went to bed and at 12:35 AM she work up with a high fever, body aches, extreme chills to the point of toes being frozen, extreme headache, excruciating abdominal pain. Her muscles were sore and swollen. The chills went away within 24 hours. Where she received her shot it was about the size of a baseball. She could not move, she did make it to the restroom and her temp was 104 degrees. She was able to put water on her body and got it down to 103, which took about 45 minutes and then she passed out. She thought she was going to die. She focused on her breathing, lives alone. She lost her equilibrium, and was not able to get up to get anything to eat or drink anything. She woke up around 4-5 hours later and she was tired, still in pain muscle wise, abdominal area was very painful and that's when she started calling us. She took Tylenol for these symptoms. She did call her doctor and he advised her to call 9-1-1 if her breathing got worse and advised her not to get the 2nd vaccine. On the 5th day she was okay and back to her baseline. |

| 1148167 | 3/30/2021 | CO | 35 | M | 3/29/2021 | 3/29/2021 | Incident occurred at Health Department mobile clinic hosted by County Public Health at County Fairgrounds. The clinic was staffed by Health Department staff, County Public Health volunteers, County Fire Department Paramedics and contract temp staff. Client received his first dose of Pfizer vaccine (lot #: EP6955 exp: 6/30/21) and was advised to wait in the waiting area for 15 minutes for recovery. During the recovery period, about 10 minutes post-vaccine, client was seated and reported to the monitoring paramedic that he felt "dizzy and might faint" and moved onto his knees. The paramedic immediately attended to the client and caught him as he fainted. The paramedic slowly brought the client to the ground in a supine position. A second paramedic called for an ambulance and Health Department RN also responded at 4:45pm. The client immediately regained consciousness. The client was alert and oriented. The client reported that he has never before fainted or had problems with vaccine administration. The client was returned to a seated position and provided juice and water. EMS arrived with ambulance at 4:55pm, they conducted their assessment and were concerned about 'abnormal heart rhythms' found via EKG. Client reported no cardiac hx. They offered to transport the client to Hospital for further evaluation. The client accepted the transport. The client left County Fairgrounds via ambulance at 5:16pm. |

| 1148192 | 3/30/2021 | MO | 35 | M | 3/30/2021 | 3/30/2021 | Pt. has history of having reactions when given shots. Pt. walked to a chair outside about 20 feet outside of the injection room after receiving his shot. He sat down in the chair and within 1-2 minutes the patient fell face down on the floor. A customer yelled for help and pharmacy staff and the nurse practitioner responded to help. Pt. was passed out but breathing heavily. We rolled patient to his back and he came to and tried to get up. We told him to stay flat and assured him he was being taken care of. The nurse practitioner stated it was a vagal nerve response. The patient sat up and talked with us and stated this has happened before. The ambulance response was called and checked patient out and he was released about 30 minutes later. His blood pressure was normal and patient stated he felt fine. |
| 1148118 | 3/30/2021 | CA | 23 | F | 3/28/2021 | 3/28/2021 | pt was shaking up and fainted after vaccination and ambulance was called. Pt was taken away by ambulance |
| 1148111 | 3/30/2021 | NC | 27 | F | 3/22/2021 | 3/30/2021 | Day after receiving vaccine, my entire body was extremely sore. I also felt dizzy and almost passed out. I am now 1 week post vaccine and have developed COVID arm. I have a rash near my injection site. I have also noticed little red itchy spots on parts of my body as well. No treatment had been done. Hoping it will resolve on its own. |
| 1148088 | 3/30/2021 | MA | 22 | F | 3/29/2021 | 3/29/2021 | FAINTED 20 MINUTES AFTER RECEIVING COVID19 VACCINE, SWEATING, UNRESPONSIVE. CALLED 911, EMTs ARRIVED IN LESS ABOUT 6 MINUTES. SHE COMPLETELY REVIVED ON HER OWN, EMT CHECKED HER VITALS, RELEASED HER, SHE WALKED OUT ON HER OWN POWER ALONG WITH HER TWO FRIENDS. CALLED HER AN HOUR LATER AND SHE WAS REPORTED TO BE DOING WELL. |
| 1148054 | 3/30/2021 | CA | 46 | F | 3/30/2021 | 3/30/2021 | It hurt my arm muscle REALLY badly right as it was being administered. I passed out within 2 minutes due to the pain. (The first shot barely hurt a month earlier at the same vaccine distribution center.) EMT checked heart rate which dropped to 50 and blood pressure was up and down, but was "dangerously low.~~ |

| 1143767 | 3/29/2021 | AZ | 31 | F | 3/27/2021 | 3/28/2021 | I passed out and had convulsions while sitting in a chair at a nail salon. During this event I peed myself. Prior to the event I had some minor body aches, but no fever. Following the event I returned home and began running a fever of 100.5. |
| 1143731 | 3/29/2021 | | 48 | M | 3/29/2021 | 3/29/2021 | After receiving the 1st dose of Pfizer COVID-19 vaccine, the patient moved to the observation area. After 5 min, patient reported feeling light-headed and tried to stand up. The patient sat down on the floor and leaned against the wall. Patient was able to stand and walk to the provider room for closer observation. Patient felt hot and looked pale. The provider placed a blood pressure cuff on the patient, at which point the patient slumped forward and stopped breathing. A carotid pulse was not able to be appreciated. The patient was pulled to the floor, positioned airway open and was given oxygen. BP was 96/40. Blood sugar was checked (104) and the AED pads were placed. EMS was called. AED advised no shock, patient had a pulse and was breathing. Patient gradually became alert, though reported not feeling well. Patient was disoriented and was not aware of passing out nor the current event. Repeat BP 115/50. Patient began vomiting (~300-400 mL). Patient left with EMS to be evaluated at local Emergency Department. Of note, patient reports history of vasovagal syncope events 2/2 to various situations. |
| 1143867 | 3/29/2021 | TX | 37 | M | 3/26/2021 | 3/26/2021 | Vasovagal syncope post injection lasting a few seconds, no injuries helped to floor, complete recovery. |

| 1143809 | 3/29/2021 | NY | 65 | F | 3/8/2021 | 3/8/2021 | feeling sick to my stomach ended up fainting onto bathroom floor; feeling sick to my stomach; arm felt mildly painful as injection went in; severe chills; fever; fatigue; restless sleep; This is a spontaneous report from a contactable consumer (patient). A 65-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), second dose at the age of 65-years-old via an unspecified route of administration on 08Mar2021 08:15 (lot number: EN6203) as single dose for covid-19 immunisation. Medical history included covid-19 (covid prior vaccination: yes) from 10Jan2021 to an unknown date. There were no known allergies. Concomitant medication included acetaminophen taken for an unspecified indication, start and stop date were not reported. The patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), first dose at the age of 65-years-old, administered on the left arm on 15Feb2021 08:15 (lot number: EL9264) for covid-19 immunisation and experienced very painful injection site, chills, fever and fatigue. The patient reported that when she had her second vaccine on 08Mar2021, her arm felt mildly painful as injection went in, as though never healed from previous shot. This time, within 3 hours of vaccine, she began to feel fatigue, then began to experience chills and fever. She drank plenty of fluids, and took acetaminophen about 6 hrs after injection. In the evening her temp was up to 101.2 (her normal 97.2) and she took Acetaminophen at bedtime. Had very restless sleep, and at 5 AM on 09Mar2021, she got up feeling sick to her stomach ended up fainting onto bathroom floor. Luckily uninjured, and felt better upon "coming to". She was very fatigued rest of day, then normal next day. The patient underwent lab tests and procedures which included body temperature: 101.2 on 08Mar2021. No treatment was received for the events. The patient recovered from the events on an unspecified date.; Sender's Comments: Linked Report(s) : Same reporter,patient,product/ 2nd dose;US-PFIZER INC-2021269674 Same reporter,patient,product/ 2nd dose |

| 1142926 | 3/29/2021 | CA | 46 | F | 3/4/2021 | 3/1/2021 | The second day after injection temperature dropped to 93.7; I was very cold; I was dizzy almost passed out; tired; nausea; headache; almost passed out; Hypertension/BP 155/103; This is a spontaneous report from a contactable consumer (patient). A 46-years-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Solution for injection, Lot Number: EN6203, expiry date not reported) via an unspecified route of administration, administered in left arm on 04Mar2021 at a single dose for COVID-19 immunisation. Medical history included interstitial cystitis and endometriosis, known allergies to milk and sulfa, have had a complete hysterectomy, and patient was getting hormone injections. The patient was not pregnant at the time of the report and vaccination. The patient had no covid prior to vaccination. Concomitant medications were unspecified; it was reported that patient had other medications in two weeks. The patient previously took ibuprofen and experienced known allergies; and had first dose of bnt162b2 for covid-19 immunisation on an unknown date. The patient had no other vaccine in four weeks. The second day after injection (06Mar2021), temperature dropped to 93.7, BP 155/103, and patient was very cold. Patient was dizzy, almost passed out (Mar2021). Patient temp ran from 97 to 98 and was able to get temp up to 95 (2021) but it's been there and dropping to 94.9 since 06Mar2021. Patient did have hypertension BP but take meds for it (Mar2021). Patient was also very tired, nausea and headache on and off (Mar2021). But all those have been reported. It's not normal for the patient to be cold because patient have had a complete hysterectomy and was getting hormone injections. Therapeutic measures were taken as a result of the event hypertension. No treatment received for the other events reported. The patient was not tested for covid post vaccination. The outcome of the events was not recovered. |

| 1143481 | 3/29/2021 | IN | 73 | F | 2/2/2021 | 2/25/2021 | cannot be excluded. Had one fainting episode; Very tired; low energy (it has been almost 3 weeks); problems with high blood pressure; This is a spontaneous report from a contactable consumer (patient). A 73-year-old non-pregnant female patient received her second dose of bnt162b2 (BNT162B2 reported as PFIZER COVID-19 VACCINE; lot number: EL9262), at vaccination age of 73-year-old via an unspecified route of administration in the left arm on 02Feb2021 16:00 as a single dose for covid-19 immunisation. Medical history included hypertension and PCN allergies (penicillin allergy). The patient was not diagnosed with COVID-19 prior to vaccination. The patient did not receive other vaccine in four weeks. Concomitant medication included unspecified medication. The patient received the first dose of bnt162b2 (BNT162B2 reported as PFIZER COVID-19 VACCINE; unknown lot number and expiration date), at vaccination age of 73-year-old via an unspecified route of administration in the left arm on Jan2021 15:15 as a single dose for covid-19 immunization. On 25Feb2021 06:00 PM, the patient was very tired, low energy (it has been almost 3 weeks), had one fainting episode though the patient doesn't know if it was related, and problems with high blood pressure. The fainting episode is reported, the other problems have been ongoing since second shot. The events required emergency room/department or urgent care visit. The patient underwent lab tests and procedures which included blood pressure was high on 25Feb2021 and nasal swab (sars-cov-2 test) was negative on 22Feb2021. The outcome of the events was recovering. Information on the lot/batch number for first dose has been requested. |

| 1143489 | 3/29/2021 | | | F | 3/1/2021 | 3/1/2021 | she felt her body slide off the seat and her head rocked to the right and hit her shoulder/she nearly passed out; dizzy; she could feel something going on with her heart/heart started racing; felt like she was stoned; had a hard time forming sentences and talking; Headache; tired; she was jolted back by the pain in her neck; felt flush; This is a spontaneous report from a contactable consumer. A female patient (age: 60 with no unit provided) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 via an unspecified route of administration on Mar2021 (Batch/Lot number was not reported) as single dose for covid-19 immunization. The patient was pretty reactive to most drugs. The patient had anaphylactic reaction to a spider bite. She has a history of having gotten stung by a scorpion and having an anaphylactic reaction. She was also one of those people who end up having to throw away a lot of medicines because she was allergic to them. She has had seven spine surgeries and gets a lot of shots so she was not scared of needles. The patient had the first shot on Friday in Mar2021. The patient had a not so pleasant reaction to it immediately. The patient heart started racing right after they injected and then she felt dizzy in Mar2021. The heart racing went away pretty quickly but the dizziness did not. For the first 15 minutes the patient had a hard time forming sentences and talking. It felt like when someone wakes you from a dead sleep. Like wanting to tell people to go away, go away. Then she felt head drop to right shoulder and slide off of feet. That caused pain because she have had multiple neck surgeries in the past and jolted her out of whatever was happening. Then that passed. At 4:30 she told them she need to go before rush hour. She felt like she was driving stoned. Very carefully like she was under the influence of something. The dizziness gradually faded, and she went to bed. The next day she had a headache, felt flush, and tired. And then eventually everything went away. She took a Benadryl an hour and a half before getting the vaccine because that's why provider told her to do. She did take Benadryl before the vaccine just in case, she was unsure if she took it after or not, she thought about it. As soon as she got the injection of the first dose of the Pfizer COVID 19 vaccine she could feel something going on with her heart. Then she got really dizzy. While waiting in the parking lot, there were two paramedics that |

| 1142780 | 3/29/2021 | CA | 19 | F | 3/28/2021 | 3/28/2021 | stood there and spoke with her because she had mentioned that she thought she was high risk. The first thing she noticed was that she was wondering why they wouldn't go away, she was dizzy, and then she felt her body slide off the seat and her head rocked to the right and hit her shoulder and she realized she nearly passed out and she was jolted back by the pain in her neck. On the way home she was still dizzy and as she was driving she felt like she was stoned. She was very careful getting home and went to bed at about 1830 and just watched TV. The dizziness went away overnight. The next day she had a headache and was tired and then by Sunday she was okay. She was concerned that her doctor will tell her it was an allergic reaction and she just need a straight answer as to whether the second shot was recommended for her. Outcome of the events was recovered in Mar2021. Information about lot/batch number has been requested. |

| 1145940 | 3/29/2021 | MN | 26 | M | 3/29/2021 | 3/29/2021 | Patient reported to immunizing technician before administration of vaccine that he had a history of fainting post-vaccination due to anxiety and nerve about needles. Pt stated that previously he had fainted immediately post-vaccination. After discussing patient's medical history the supervising pharmacist advised pt to stay in vaccination seat for direct observation for 10-15min. After about 10 minutes post-vaccination in observation period the pt alerted immunizing tech, "oh, its happening." The tech brought a wet paper towel and placed it on the back of patient's neck and pt replied, "oh, that feels good", then patient's head immediately dropped and he went out of consciousness. Pharmacist witnessed event and rushed over to support patient from falling off chair. Pharmacist was rubbing and patting patients back and chest, yelling his name to arouse him. Pharmacist directed tech to call code white and alert store manager. In total, the patient was approximately in and out of consciousness about 20 seconds. Pt responded to stimulus and recovered without other effects or injury. Patient was fully responsive and aware of event went he became conscious again. We offered him a cold water bottle and encouraged him to remove mask if it helped him to breath better. Pt was able to communicate with pharmacist about the sensations he had leading to the event where he described first tingling in his feet, than dissociation from body, where he felt like he was having a dream but could hear someone yelling at him. EMS arrived at the scene and performed vital check. Based on patient abnormal hypertension at scene and higher BMI, EMS offered to transport patient to the ED for further tests and observation but patient declined. Patient was accompanied by his emergency contact, his father (who also witnessed the events unfold). |

| 1144565 | 3/29/2021 | FL | 21 | F | 3/11/2021 | 3/11/2021 | fainted when I sat down; stood up and started to feel dizzy; I felt throat pain like strep throat pain; started feeling very intensive cramps in my lower abdomen like very intense period cramps for about 10 minutes.; felt very weak with no energy to get out of bed; This is a spontaneous report from a contactable consumer (patient). A 21-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot number: EL3302) via an unspecified route of administration, administered on the right arm on 11Mar2021 16:00 at a single dose for COVID-19 immunisation. Medical history included low thyroid. There were no concomitant medications. After receiving the shot of the vaccine on 11Mar2021 16:00, the patient stood up and started to feel dizzy. She was able to find a nearby chair and fainted when she sat down. When she woke up seconds later of fainting, she felt throat pain like strep throat pain and then she started feeling very intensive cramps in her lower abdomen like very intense period cramps for about 10 minutes. The patient stated that nobody in the (Pharmacy name) was prepared to react to these symptoms and the rescue took too long to come in, when they came in she was feeling better and did not see the need of going to the hospital. But it was an immediate reaction that affected 3 different parts of her body that was very painful. During the day and the day after she felt very weak with no energy to get out of bed. "I am wondering if I can still receive the second dose after this reaction to the first dose?" No treatment was received for the events. Prior to vaccination, the patient was not diagnosed with COVID-19. Post vaccination, the patient has not been tested for COVID-19. Patient was not pregnant. No known allergies. The facility where the vaccine was administered was in a pharmacy drug store. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Outcome of the events was recovering. |

| 1144677 | 3/29/2021 | AZ | 38 | M | 3/29/2021 | 3/29/2021 | Patient became lightheaded and dizzy. Patient was placed in seated position on floor and passed out. Mild muscle spasm/seizure like activity and pharyngeal gurgling. Patient was unresponsive for approximately 2 minutes and regained consciousness without intervention. EMS was called and attended to patient. Sinus rhythm normal, blood pressure 140/82. Patient placed into an upright seated position, blood pressure remain unchanged. Patient declined transport to hospital, was observed for several minutes and released on his own volition. |
| 1144685 | 3/29/2021 | FL | 26 | M | 3/29/2021 | 3/29/2021 | I received the shot and was told to sit in a chair and wait for 15 minutes. After about 5-10 minutes I began to feel faint/lightheaded/clammy. I do have a history of these from shots I have had in the past. I got the pharmacists attention and told her I was feeling faint and asked for some water. Once she left, breathing in my throat felt significantly constricted. I had a reaction to clear my throat a few times but that didn't not affect anything. The pharmacist came back with water and an ice pack that she held against my neck. During this episode I was able to drink water still. The severity of the breathing issue leveled off and eventually I was able to breathe normally again. The whole thing lasted 1-2 minutes. It felt longer thinking back on it but I don't think it lasted as long as my impression of the episode. After that I felt tingling followed by shakiness in my extremities which was more typical of the fainting side effects ive had in the past. I've never experienced breathing issues with other shots I've received in the past. The pharmacist kept me there to monitor me for 30-45 minutes. No additional medication was administered |
| 1144691 | 3/29/2021 | OH | 16 | F | 3/29/2021 | 3/29/2021 | Approximately 15 minutes following vaccination, the patient complained of headache, dizziness, chest pain and throat burning. I asked that she wait an additional 15 minutes so that we could monitor her. Approximately 30 minutes after vaccination, patient appeared to experience syncope or absence seizure (prev. history). we called 911 and paramedics transported her to hospital |

| 1144797 | 3/29/2021 | CA | 79 | F | | | Severe vomiting, blood pressure spiked at 172/157 pulse rate 148, then severe hot flushing sensation ending in being soaking wet and clammy feeling, dizziness and feeling like I was passing out. Sat down on toilet, called my daughter and all I could say was help, I think I'm passing out. She found me passed out on the toilet, got me to wake up but not coherent. She called 911 and I was checked and taken to emergency room with diagnosis of dehydration caused by the vomiting. |
| 1144815 | 3/29/2021 | NY | 54 | F | 3/24/2021 | 3/25/2021 | Pfizer-BioNTech Covid-19 Vaccine EUA I felt fine the day of the injection at 2PM (3/24/21). I slept poorly and woke up feeling exhausted (3/25/21). Developed a fever of over 101 degrees Fahrenheit and was resting in bed. At around 2:45PM I used an oximeter and noticed how my pulse was steadily increasing within a few minutes - from 80's to over 135 and then I fainted. I was in bed and didn't fall. After I came back after maybe 1/2 minute I was still dizzy but started feeling better shortly. As my husband happened to observe me passing out we went to the ER. At around 3:45PM my blood pressure, when checked in the ER, was 102 over 58 and my temperature had gone back down to 98.4 degrees. I started feeling better quickly after that. I was tested for a heart attack which was negative and released later that evening. |
| 1144845 | 3/29/2021 | MO | 61 | F | 3/22/2021 | 3/29/2021 | passed out at home, diarrhea and nausea, and blood in stool this all |
| 1145117 | 3/29/2021 | IN | 46 | F | 3/27/2021 | 3/28/2021 | Severe headache, muscle aches, fever, chills, dizziness, sore arm. Body chills started around 1am, by 7:00 a.m., I had headache and dizziness, with extreme fatigue. I almost passed out after breaking out in cold sweat by 8:30 a.m. Started running a fever around 9:30 a.m. Took Tylenol for headache and body pain. Slept until 1:30p.m. Woke with a fever of 101.4 and severe headache. Took more Tylenol and laid back down. By 4:30p.m. I was able to lift my head off a pillow and walk without dizziness. Chills and low-grade fever returned around 6:30pm. Went to sleep. Woke at 7:30 am. No headache, slight fatigue, sore arm. No fever, no dizziness. |

| 1141305 | 3/28/2021 | KY | 34 | F | 3/26/2021 | 3/27/2021 | 9 hours after receiving my 2nd Moderna shot, I woke up with diarrhea. 12 hours after receiving the shot, I got up to use the bathroom, and began to feel dizzy. When I sat down, my blood pressure dropped and the room started spinning and I could feel that I was going to lose consciousness. My husband came to help and watched as I passed out cold on the toilet for over a minute. 15 hours after receiving the shot, I passed out again on the toilet with the same symptoms before losing consciousness. I was unable to get up without passing out for over 16 hours after receiving the shot. I had continued dizziness and muscle weakness for over 24 hours, along with flu-like symptoms as expected. |
| 1141565 | 3/28/2021 | CO | 59 | F | 3/24/2021 | 3/24/2021 | Approx. 5 hours after shot broke out in a profuse sweat, got dizzy and passed out while standing in my kitchen. Felt unstable for about an hour after then symptoms subsided. No other reactions after that |
| 1141557 | 3/28/2021 | ID | 80 | F | 3/9/2021 | 3/10/2021 | The morning after the 2nd dose, I got up to make coffee. I had just started and felt a bit light-headed. I was going to go sit down, but I passed out and fell onto the kitchen floor for a few seconds. I have never passed out before or felt such light-headedness. I went to lay down. I vomited a bit of liquid. I lay down and several hours later my husband drove me to the emergency room. After many tests they said I had suffered a Syncope and had a slight concussion. |
| 1141583 | 3/28/2021 | PA | 42 | F | 3/27/2021 | 3/27/2021 | Shortly after exiting the vaccination room, the patient felt lightheaded and dizzy and experienced an episode of near-syncope. She immediately lay down on the floor. She was sweating profusely. She remained on the floor for approximately 5 minutes with her legs raised and she started to feel better. She was given a bottle of orange juice to drink and was taken to the waiting area where she was observed for another 25 minutes. Patient stated that she felt fine and left the pharmacy. |
| 1141394 | 3/28/2021 | PA | 60 | F | 3/25/2021 | 3/26/2021 | Fever and chills began around 3 am following vaccination at 6:45 PM. Upon arising around 7 am, fainted in bathroom and was dizzy when upright for about thirty minutes. Bruised ribs secondary to falling. |

| 1141135 | 3/28/2021 | FL | 26 | F | 3/27/2021 | 3/27/2021 | Patient was administered vaccine and told to wait the 15 minute monitoring period. After about 4 minutes, I heard her say "I'm not feeling right." I went to where she was sitting and asked "are you ok?" and had her take some slow, deep breaths. I then saw her eyes roll back and she lost consciousness. Thankfully, I was there and grabbed her as she toppled from the chair. I told the staff to call 911 and supported her neck and body in the chair. I could tell she was breathing and she was sweating profusely. I held her and spoke to her, and after about 15 seconds, she began to come out of it. After about a minute she was alert and orientated again. I had her slowly sip a little water. The EMTs arrived in about 5 minutes and the assessed her vitals. She indicated that this was the first time anything like this had happened to her. They advised that since she had fainted, she should go to the hospital for observation, but she declined, stated that she felt fine at that point. Since she was driving, I insisted that she remain another one-half hour before leaving. During that time she drank more water and alternately sat and walked around the pharmacy. She did indicate that she had drank a protein shake that morning, but not eaten. I advised her to in the future, tell her doctor and/or any immunizer about the event. She left, stating that she was feeling fine, and I called her several hours later to make sure that she had indeed gotten home ok. She again said that she felt fine. |

| 1140685 | 3/28/2021 | CT | 69 | F | 3/8/2021 | 3/9/2021 | mild nausea; Syncope (2x) w/mild seizure; Syncope (2x) w/mild seizure; Flu-like symptoms; chills; joint/muscle pain; joint/muscle pain; injection site pain; headache; labored breathing; dry-heaving after second syncope; This is a spontaneous report from a contactable consumer (patient herself). A 69-year-old female patient, not pregnant, received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: LOT 6205 (as reported)), via an unspecified route of administration in the right arm, on 08Mar2021, at a single dose, for covid-19 immunization. The patient has no medical history and has no known allergies. Concomitant medications included sertraline; docusate sodium, ferrous fumarate (FERRO-SEQUELS); and multivitamin - all taken for unspecified indications, start and stop dates were not reported. The patient previously received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number EN6201) on 15Feb2021 17:00 in the right arm for covid-19 immunization at 69-years-old. The patient did not have covid prior vaccination. The patient did not receive any other vaccines in four weeks. The vaccine was given at the public health clinic. The following day on 09Mar2021 15:30 after a short walk, the patient experienced flu-like symptoms, chills, joint/muscle pain, injection site pain, headache, syncope (2x) with mild seizure, labored breathing, and dry-heaving after second syncope. The patient was then taken by ambulance to the ER (resulted in an emergency room visit) and was given saline fluids via IV. The vitals and EKG were "ok" on 09Mar2021. The patient recovered relatively quickly and was released. The only symptoms remaining on 11Mar2021 were mild headache and mild nausea. The patient had not recovered from headache and nausea at the time of the report; while recovered outcomes on Mar2021 for all the other remaining adverse events. The patient was not covid-tested post-vaccination. |

| 1141633 | 3/28/2021 | CA | 83 | M | 3/27/2021 | 3/27/2021 | Pt sts to nurse that he "feels weak" 20 minutes after receiving vaccine. Radial pulse 67 and slightly irregular. Day was very warm and patient sitting in very warm vehicle. EMS called. Patient transported to hospital.. Remained awake and alert. No syncope, shortness of breath or chest pain. |
| 1142283 | 3/28/2021 | | | U | | | Fainted approximately 5.5 hours (12:00am) after vaccine followed by diarrhea 30 minutes afterwards. I am still experiencing chills and fatigue. |
| 1142254 | 3/28/2021 | | 26 | M | 3/28/2021 | 3/28/2021 | Patient vaccinated and within a few minutes after vaccination, patient with syncope. Able to stabilize patient in chair and bring to first aid. Patient recovered quickly. MD at bedside. Discharged without difficulty. |
| 1142240 | 3/28/2021 | CA | 45 | F | 3/25/2021 | 3/26/2021 | I woke up at approximately 2:30 AM feeling very sore, achy, clammy, and feverish. I felt like I needed to get out of bed because laying there felt very uncomfortable. I got up to go to the bathroom. On my way to the bathroom, I fainted in the hallway and landed flat on my face. My front left tooth was knocked completely out of my mouth, and the two adjacent teeth were knocked loose. I found my tooth on the floor, placed it on a shelf in my bathroom, and then took a shower as I was in shock and felt very sweaty and out of sorts. At 2:41, after the shower, I called 911, but declined an ambulance ride and hung up. I then googled what to do when your tooth is knocked out, and learned that I should put the tooth back in its socket immediately. I put the tooth back in and then at 2:57, I called an emergency dentist dispatch line. The dispatcher told me about a dentist who could make an urgent appointment for me when their office opened at 7 AM. I felt like I needed to be under medical supervision right away, so at 3:37 AM, I took a Lyft to the ER at , where I was observed and given an IV. I was discharged at 6:45 AM, and caught a Lyft home at 6:51 AM. My husband returned from work at 8:15 AM. He took me to my emergency dental appointment at 10 AM, where the dentist gave me multiple novocaine shots, straightened my two loose teeth and wired all my front teeth together to stabilize the front tooth that had been knocked out. It is unclear at this time whether my natural tooth will be able to be saved. |

| 1142200 | 3/28/2021 | KS | 35 | M | 3/26/2021 | 3/27/2021 | Vaccination at 11:15am. Onset of soreness / flu-like symptoms around 9pm. Patient awoke around 3am to use the bathroom and fainted (lost consciousness and collapsed) on the floor. Patient's wife tried to help patient back into bed, once patient was standing patient lost all muscle control and experienced muscular spasms in legs (possibly arms). Patient's wife laid patient flat on floor; patient's eyes rolled into back of head. Patient was unresponsive for approx 1 minute, by the time wife retrieved phone to call for help, patient was again responsive and displayed extreme flu-like symptoms (severe shaking, sweating, and thirst). Patient remained laying on ground for 10 minutes before being able to sit and return to bed. |
| 1141778 | 3/28/2021 | CA | 32 | M | 3/28/2021 | 3/28/2021 | Soon after vaccination patient felt very light headed. No Syncope. States always feels like this with needles. |
| 1141688 | 3/28/2021 | CA | 69 | F | 2/25/2021 | 3/5/2021 | I initially had 2 days or so of feeling very ill. Then ok for 5 days. Then second round of reaction started. Intense pain and swelling of right side of neck for 3 days. Also left wrist unable to use. Pale, ill. Vital signs ok. Then on 3/8, pain switched to left side of neck and upper back. 3/10, right neck again with swollen lymph nodes bilateral. 3/11 back of neck and upper back hurts. Intense. Could not sleep. 3/12 pain in upper quads and hips, mid pack. Feeling freezing cold. Temp ok. Called my Dr. Right side of neck continued to hurts even now (3/28/2021) but at least I can function now. I no longer feel sick, brain fog, cold. So greatly improved but not normal. Reaction has lasted a month. Vaccine number one resulted in 2 days feeling ill with upper back pain, chills but only a few days. First night vomited, passed out. First vaccine reaction was frightening but was short lived. I am a retired RN. |
| 1142574 | 3/28/2021 | IN | 43 | F | 3/26/2021 | 3/27/2021 | Headache, hot flashes, passed out several times, very thirsty |

| 1142113 | 3/28/2021 | MI | 20 | F | 3/28/2021 | 3/28/2021 | immediately felt dizziness and syncope, observed for 30 minutes and recovered, no issues |
| 1141985 | 3/28/2021 | CA | 42 | M | 3/28/2021 | 3/28/2021 | Patient received the vaccination and after he got up from the chair, he passed out and fell to the floor. The intern notified the pharmacist. When I went to see that patient, he was laying on the floor with his eyes rolled in the back of his head and was unresponsive. He was not alert. He started having a mild seizure and I rolled him over on his left side. While I was bracing the patient, pharmacist came in and administered an Epi-pen to his left thigh. Patient stopped seizing so I rolled him back on his back. He became alert and was able to provide me his name, DOB and what he was at the pharmacy for. I rested my hand under his head and monitored his pulse until the paramedics arrived |
| 1141858 | 3/28/2021 | IL | 73 | F | 3/4/2021 | 3/4/2021 | Moderna COVID-19 Vaccine EUA - after receiving the second dose of the moderna covid-19 vaccine, pt developed a red and warm to the touch face while being observed in the waiting area. Also, while being observed and these symptoms were noticed, pt fainted in the waiting area. She regained consciousness seconds later and we continued to monitor her for an additional 30 minutes. No other adverse events were noted, she declined additional assistance. |
| 1141820 | 3/28/2021 | MA | 40 | F | 3/26/2021 | 3/27/2021 | 12 hours after receiving the first dose, I woke in the night with extreme dizziness and subsequently fainted. I was unconscious for about 10 seconds. When I regained consciousness, I was violently ill with vomiting and diarrhea. I had chills and sweating, and extreme dizziness that felt like a hallucination. We called 911 and I was taken to the hospital in an ambulance and admitted to the hospital for treatment. |
| 1142163 | 3/28/2021 | NJ | 22 | F | 3/27/2021 | 3/27/2021 | Onset of symptoms occurred within a minute of having the vaccine administered. Symptoms included heart racing/palpitations, profuse sweating, sudden lack of vision and hearing, on the verge of fainting. |

| 1139620 | 3/27/2021 | IA | 73 | F | 2/24/2021 | 2/27/2021 | <p>Pfizer COVID-19 EUA Vaccine Pt received first COVID vaccine 2/25/21. Tested positive for COVID late February. Reported to ED 3/5/21 with near syncope. Patient was seen emergency department laying in bed. The patient had a noticeable scalp laceration to posterior parietal area. After being symptomatic with COVID-19 for a few days, the patient reports getting up at 5:00 a.m. to use the bathroom, feeling lightheaded, then ended up on the floor, she reports sitting on the floor and then hit her head at some point, but was not entirely sure of this timeline. She states she ended up moving to the living room when she noticed that her head was bleeding a lot and her fiance called 911. She reports a history of syncopal episode in 2001 when she had influenza and apparently the story was much the same as this time, but she actually lost consciousness in 2001. Admitted to observation. 3/7: 73-year-old female recent COVID-19 infection admitted on 03/05/2021 for an episode of syncope probably secondary to bradycardia versus volume depletion. Paramedic on arrival at home reported bradycardia with heart rate in the 30s but has been normal since admission. The CT angiogram of the chest done at the emergency room showed bilateral infiltrates compatible with recent COVID-19 infection. No PE. However patient has no respiratory symptoms and O2 saturation is perfectly normal. Urinalysis was suggestive of infection and subsequent culture was positive for E coli and it is pansensitive. She was admitted to hospital for overnight observation. She was commenced on IV Rocephin and azithromycin. The EP cardiologist was consulted and she recommended echocardiogram and it revealed mild global hypokinesis with LVEF of 45-50% but patient denied any prior history of cardiac problem. On re-evaluation this morning the vital signs remains normal. Patient has not had any episode of bradycardia since she presented to the emergency room. She will be discharged home follow up with the EP cardiologist for further evaluation. Patient does not need outpatient oral antibiotics as IV Rocephin for 3 days should be adequate for uncomplicated UTI.</p> |

| 1139211 | 3/27/2021 | CA | 31 | F | 3/26/2021 | 3/26/2021 | On Friday, March 26, 2021 client 31 years old female received her second dose of Pfizer COVID vaccine (LOT # ER 8732, EXP 7/2021) at approximately 2:38pm by vaccinator. After vaccine was administered, client complaint of dizziness and brief seizure seating at the vaccination chair in an upright position. Vaccinator lead registered nurse clinician lead, came to assist vaccinator with client's care. (EMT) assumed care of client. Per EMT prior to onset of syncope and brief seizure, patient was alert and oriented to person, time, place, and situation with Glasgow Coma Scale score of 15 (responsive) with all airway, breathing and circulation intact. Client told EMTshe has no prior medical history or reported allergies and had no issues with first Pfizer vaccination on 3.3.21 with Lot #:EN6199.. EMT placed patient on the ground into a recovery position and assessed vitals first time at 2:43 PM: BP 86/60, P 70, R 18. Patient's vitals assessed the second time at 2:48 PM until paramedics arrived: BP 80/66, P 71, R 18. Client remained stable and paramedics arrived at 2:49 PM and they placed client in a supine position on a gurney before transported client to the hospital. No further interventions indicated. |
| 1139988 | 3/27/2021 | CA | 34 | F | 3/27/2021 | 3/27/2021 | dizziness after 2 minutes, then passed out < 1 minute, then regained consciousness and stability. |
| 1139950 | 3/27/2021 | MO | 21 | M | 3/27/2021 | 3/27/2021 | Patient reported feeling dizzy. Patient was sitting in chair and fainted approximately 5 minutes after receiving the vaccine. Patient was unresponsive for about 30 seconds. Patient was not injured from fainting (This writer was able to catch him and guide him to the ground). Patient remained in pharmacy for about 45 minutes. Patient was given water, a cold compress, and candy (Patient felt that his blood sugar was low and requested candy). Patient left feeling well. |
| 1139414 | 3/27/2021 | MI | 66 | F | 3/17/2021 | 3/18/2021 | Had expected body aches and chills during the night. Very lightheaded when I got up and some nausea. Thought to ?sit down before you fall down? then ?came to? next to toilet. Head resting on toilet seat. Had some bruising on cheek but don?t remember going to floor. Rest of day was okay with just the most common side effects. Never fainted before but not uncommon for me to be lightheaded with nausea. Most embarrassing...passed some stool. |

| 1140394 | 3/27/2021 | AZ | 69 | F | 2/25/2021 | 3/24/2021 | <p>This is a 70 year old female with paroxysmal atrial fibrillation (anticoagulated on Eliquis), obstructive sleep apnea (uses CPAP), mitral valve regurgitation, remote tobacco use, hypertension and dyslipidemia who presents to the ED for worsening dyspnea, cough, subjective fever, chills and body aches that have been ongoing for the past several days. The patient indicates that her dyspnea is exacerbated with exertion but she denies chest pain, pleuritic chest pain, leg swelling or calf pain. She mentions that she has received both of her COVID-19 vaccines (Pfizer); the first immunization was on 02/25 followed by her second immunization which took place eight days ago on 03/18. She is not confident that she has had any contact with a known sick or definitive COVID-positive individual recently. Of note, the last documented incidence of testing for COVID-19 was performed on 10/31/2020 after the patient was seen at a Clinic after a exposure for a COVID-positive individual. Testing at that time had resulted negative. To her knowledge, she states that she had, in fact, tested positive for COVID-19 in late fall of 2020, but she was not hospitalized. Yesterday (3/26/2021), she was evaluated at a Pharmacy where she was testing for COVID-19 which has since resulted positive. The patient denies any other acute symptoms of illness. In the ED, the patient was found to have acute respiratory failure with hypoxemia and pneumonia due to SARS-CoV-2 infection. Review of Systems Constitutional: Positive for chills, fatigue and fever. Negative for activity change. Respiratory: Positive for cough and shortness of breath. Cardiovascular: Negative for chest pain and leg swelling. Gastrointestinal: Negative for abdominal pain, diarrhea, nausea and vomiting. Genitourinary: Negative for dysuria. Musculoskeletal: Positive for arthralgias and myalgias. Negative for gait problem. Neurological: Negative for syncope. All other systems reviewed and are negative. Vitals Blood pressure 159/79, pulse 65, temperature 36.4 °C (97.5 °F), temperature source Oral, resp. rate 18, height 1.6 m (5' 3"), weight 107 kg, SpO2 98 %. Physical Exam Vitals reviewed. Constitutional: General: She is awake. She is not in acute distress. Appearance: Normal appearance. She is well-developed. She is morbidly obese. She is ill-appearing. She is not toxic-appearing. Interventions: Nasal cannula in place. HENT: Head: Normocephalic</p> |

| 1137784 | 3/26/2021 | CO | 74 | F | 2/2/2021 | 2/4/2021 | Patient is a lovely 74-year-old female with a long history of PACs and hypertension. Her blood pressure has been getting a little bit worse over the past years. She was admitted through the ER with 1st known episode of atrial fibrillation and hypertension. She reports that on 02/02 she received her 2nd COVID vaccine. She had joint achiness and a low-grade temperature. She rested the following day but then on 02/04 went for her usual hour long runs/hike. She did not feel very well during exercise and started have a headache and some increasing palpitations. Later that evening she was watching TV and started to have significant tachycardia that was irregular. Symptoms persisted and she presented to the ER which sound to be in AFib with rapid ventricular response with a blood pressure of 215/158. She was started on a diltiazem drip and has converted to sinus rhythm with PACs. Blood pressure has improved significantly. Troponin negative x2. Her last evaluation at a Heart facility was in 2017. She had an echocardiogram in 2014 with normal EF, mild MR and mild TR with normal estimated PA systolic pressure. She denies chest pain or dyspnea. No history of syncope. Sometimes with palpitation she does get lightheaded. She gets occasional lower extremity edema that seems dependent in nature. She is still having palpitations but recognizes that she is no longer in atrial fibrillation as that was more severe in terms of symptoms of tachycardia. |

| 1136905 | 3/26/2021 | VA | 23 | F | 3/26/2021 | 3/26/2021 | Patient reported no to having prior history of fainting or dizziness after receiving vaccine. Vaccine was administered at approximately 9:04 am and patient's boyfriend was administered at approximately 9:08. Upon return to his seat beside her at approximately 9:10 am, he noticed she was losing color and going limp. He called for help, and I assisted. The pharmacy team sent a Code White on the radio and several members of management responded to check on the scene. We moved the patient to the floor and applied ice packs to the neck and chest and removed her face mask for better circulation. The patient was wearing a thick sweatshirt so we attempted to increase air flow around her head and neck to cool her down as she was visibly sweating. The patient never lost consciousness or breathing and her pulse was always palpable. By 9:20 am, we had moved the patient from the floor to a sitting position then to a chair and provided her with a cold bottle of water and continued one ice pack on her neck. She stayed seated until 9:40 (34 minutes after her injection). She denied the need for an ambulance transport as she had her boyfriend here who could drive her. |
| 1138783 | 3/26/2021 | AZ | 32 | M | 3/26/2021 | 3/26/2021 | Pt had syncope episode while waiting in observation area. Pt fell out of his chair and hit face on outer corner of right eye causing a skin abrasion. Suffered a small abrasion to outer aspect of his right wrist. |
| 1138908 | 3/26/2021 | TN | 35 | F | 3/25/2021 | 3/26/2021 | Severe dizziness leading to almost fainting, nausea, diarrhea, feeling like ice was flowing through veins while severely sweating, rushing noise in ears, difficulty standing without feeling faint. Lasted for about 30 minutes before being able to fall back asleep. |

| 1139117 | 3/26/2021 | OK | 29 | M | 3/16/2021 | 3/18/2021 | I felt soreness and pressure build up in my arm starting a few hours after the receiving the dose. The soreness and pressure got progressively worse over the course of two days. It wasn't unbearable, just uncomfortable. The second day after the vaccine I had stretched my arm pretty good for minute, when I released the stretch I felt a rush of something for from my arm into my torso. I got really dizzy and passed out, my wife was in the room at the time and said I never closed my eyes; but I had completely blacked out. My wife had woken me up and I wasn't sure what had happened, it took me about 30 seconds to realize I had passed out after stretching that arm. My arm had felt better after waking up from passing out, and soreness had passed a couple days later. I didn't get checked out, after I woke up I started feeling fine. I'm honestly not sure if it's directly related to the vaccine or not, I just thought I should let someone know just in case. |
| 1139143 | 3/26/2021 | CA | 42 | F | 3/21/2021 | 3/22/2021 | I am 5 days out from the 2nd dose. I had to make an urgent care visit because of shortness of breath, blurred vision, light headedness, brain fog, nausea, fatigue, feeling of fainting and tightness in throat. These symptoms have been present and overwhelming for over 3 days presented themselves after day 2 of vaccine. The original symptoms of headache, body aches and chills subsided by day 3. |
| 1137871 | 3/26/2021 | IN | 67 | M | 3/24/2021 | 3/25/2021 | Extreme Flu-like symptoms. Massive headache, nausea, muscle aches. Coincidentally, happened to have a previously scheduled blood draw for the next day at my doctor, listed previously. I got extremely nauseous, began sweating profusely and passed out right after the draw (have never had a blood draw reaction). 56 hrs since my shot and I still feel poorly, but better. |

| 1138901 | 3/26/2021 | OH | 32 | M | 3/26/2021 | 3/26/2021 | A few minutes after the vaccine was administered the patient felt hot, lightheaded, dizzy and had to sit down. While sitting down his eye rolled back and he passed out. His spouse said his body was shaking. She lowered him to the floor and he awoke. Paramedics were called and determined his blood pressure was very low. They tried to stand the patient up to take another blood pressure reading, but the patient had to sit down as he became dizzy and lightheaded again. The paramedics took him to the ER where the doctor said he was fine and discharged him. |
| 1138508 | 3/26/2021 | CA | 32 | M | 3/26/2021 | 3/26/2021 | Patient received the first covid19 Pfizer biontech immunization and 15 minutes later reported to the pharmacist that they felt nauseous and dizzy. Pharmacist instructed patient to sit down on the ground and as they crouched down to do so, he passed out and his wife caught him and eased him to the ground. Patient then regained consciousness in less than 30 seconds and remained on the ground for 15 minutes with legs propped up. 911 was contacted and fire dept came to check patient's vitals. Patient reported feeling a lot better after the wait period and vital signs were reported normal. Consultation was provided and patient instructed to follow up with primary MD, and patient went home. |

On 12 Mar 2021, the patient felt so weak and exhausted, she didn't have the strength to brush her teeth. She remembered feeling dizzy while standing in the bathroom. She fainted shortly after. She felt like couldn't stand up because she was so weak and was very scared. Treatment of the event was not provided. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events is not applicable. The events fainted, feeling dizzy, weakness, and fatigue were considered resolved on 13 Mar 2021.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |
| 1138091 | 3/26/2021 | MI | 33 | M | 3/18/2021 | 3/18/2021 | Became very dizzy and nearly fainted within 5 minutes of receiving the vaccine. Needier assistance walking. Felt discomfort in leg for for 2 days. |
| 1138097 | 3/26/2021 | AZ | 84 | M | 3/22/2021 | 3/23/2021 | Patient apparently was in the bathroom, shaving. Patient's wife was in the kitchen. He does not recall exactly what happened other than he fell backwards. His wife heard a "thud." She went into the bathroom and the patient was not responding. Eyes were open but he was not focusing. He did have generalized shaking of his extremities. Nine-one-one was called at this time. Patient does complain of some mild back pain. He denies any significant headache. There has been no nausea or vomiting. He was diagnosed with syncope event and new onset bells palsy. |

| 1133492 | 3/25/2021 | FL | 72 | M | 2/5/2021 | 2/5/2021 | Passed out; cardiac event; This is a spontaneous report from a contactable consumer from a Pfizer-sponsored program COVAX Support. A 72-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 2 via an unspecified route of administration, administered in left arm on 05Feb2021 15:30 (Batch/Lot Number: EL9269) as a single dose for COVID-19 immunisation. Medical history included defibrillator insertion from 2014 to an unknown date (has never had it go off), blood pressure abnormal, heart disorder, blood cholesterol increased (Lipitor indication: to lower cholesterol), and eye disorder. The patient previously received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, Batch/lot number: EL3246), on 15Jan2021, at 15:30 PM in the left arm, for COVID-19 immunization. Concomitant medications included acetylsalicylic acid (ASPIRIN) taken for heart from 2010 and ongoing; carvedilol taken for heart from 2014 and ongoing; ubidecarenone (CO Q 10) helps with the statin for his heart from 2014 and ongoing; atorvastatin (LIPITOR) taken to lower cholesterol from 2014 and ongoing; lisinopril taken for blood pressure from 2014 and ongoing; xantofyl (LUTEIN) taken for eye from an unspecified start date and ongoing; and warfarin taken as blood thinner from 2010 and ongoing. The patient reported that 2 hours and 15 minutes after the second dose on 05Feb2021, he passed out and his defibrillator kicked in and he had a cardiac event but was not sure what kind of cardiac event. He stated it was probably unrelated, but the doctor said to call Pfizer to notify. He said he has had the defibrillator since 2014 and has never had it go off. He is having a stress test to check it all out. He added he felt great by about two hours after the defibrillator kicked in and went golfing. The outcome of the events was recovered on 05Feb2021. |

| 1133493 | 3/25/2021 | NJ | | F | 2/1/2021 | 2/1/2021 | passed out; felt dizzy all day long; concussion in her head; felt very nauseous; diarrhea; headache; This is a spontaneous report from a contactable consumer (patient). This 60-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot number was not reported), via an unspecified route of administration at single dose in Feb2021 for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. In Feb2021, the patient experienced passed out (medically significant), felt dizzy all day long, concussion in her head, felt very nauseous, diarrhea, headache, all with outcome of unknown. Clinical course was described as follows: Patient received the first dose of the Pfizer-BioNtech Covid-19 vaccine approximately 3 weeks ago, she's scheduled for her second dose on Saturday. When she received the first dose of the vaccine she felt dizzy all day long and when she went to the bathroom she passed out and had a concussion in her head, she also felt very nauseous, had diarrhea and a headache. Her doctor told her that she passed out from the injection and then her headache was from the concussion, he recommended her that for her second dose there's someone with her because she lives alone. Patient would like to know if this dosage of the vaccine could have caused her the reaction. Information on lot number/batch number has been requested. |

| 1131211 | 3/25/2021 | CA | 23 | M | 3/8/2021 | 3/8/2021 | <p>Passed out /Lost all awareness; Light-headed; Hyperventilating; He caught his breath; Elevated heart rate; Tingling sensation; He was unable to form cohesive sentences; Muscles movements were impeded; This is a spontaneous report from a contactable consumer (patient). A 23-year-old male patient received the first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine, Lot. EN6206) single dose, in the left arm, on 08Mar2021, at 11:45 AM, for COVID-19 immunisation. The patient had not received any other vaccines within 4 weeks prior to the BNT162B2 vaccine. The patient had not received any other medications within 2 weeks. Relevant medical history and concomitant medications were unknown. No known allergies were reported. The patient had not experienced COVID-19 prior vaccination. On 08Mar2021, at 12:00 PM, 5 minutes after vaccination, the patient became very light-headed. In a few seconds his vision went dark and he passed out. After an unknown amount of time, he became semiconscious and was hyperventilating. While hyperventilating, his eyes were open, but he could not see anything. Once he caught his breath, after about 15 seconds, his vision came back and he lost all awareness of where he was. After about 30 seconds, the patient realized he was in the observation area for the facility and alerted the medical professionals near his vehicle he was sitting in. Medical professionals checked his vitals, which were fine other than an elevated heart rate, and he had a tingling sensation over his body for the next two minutes. In this time, he was unable to form cohesive sentences, and his muscles movements were impeded. It took another 40 minutes to return to a relatively normal state. No treatment was received. The patient recovered from the adverse events. Post the vaccination, the patient has not been tested for COVID-19. No follow up attempts are possible. No further information is expected.</p> |

The patient's medical history was not provided. No relevant concomitant medications were reported. On 31 Dec 2020, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Batch Number: 039K20A) for prophylaxis of COVID-19 infection. On 31 Dec 2020, immediately after receiving vaccine, the patient felt like she was going to pass out, tunnel vision a medically significant event, was white and sweaty, increased heart rate, blood sugar dropped, minor chills, dizzy, pain at injection site all the way up the right and left side of neck. The patient was monitored at a doctor's office for about 3 hours before she felt good enough to drive home and felt better. Pain injections lasted a week and other symptoms ended on an unspecified date. On 26 Feb 2021, the patient got really sick and had violent bed shaking chills (ended on an unknown date). The patient has not gotten her second dose but did test negative for COVID. Laboratory details included increased heart rate, blood sugar dropped and test negative for COVID. No treatment information was reported. Action taken with mRNA-1273 in response to the events was not reported. The outcome of events, tunnel vision, presyncope, pallor, hyperhidrosis, heart rate increased, blood glucose decreased, chills, dizziness and neck pain, was resolved on 31 Dec 2020. The outcome of events, vaccination site pain, illness and chills, was resolved on an unspecified date.; Reporter's Comments: Based on</p> |

| 1135549 | 3/25/2021 | NJ | 24 | F | 3/11/2021 | 3/11/2021 | left arm is very sore, painful to touch and difficult to move; left arm is very sore, painful to touch and difficult to move; fainted /vasovagal syncope episode; might have convulsed on the floor; out of breath; nausea; dizziness; This is a spontaneous report from a non-contactable consumer (reported for herself). A 24-year-old female patient (not pregnant at the time of vaccination) received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), dose 1 intramuscular, administered in Arm Left on 11Mar2021 15:00 (Lot Number: EN6199) at the age of 24 years old as single dose for covid-19 immunisation. The patient's medical history was not reported. Concomitant medication received within 2 weeks of vaccination included levonorgestrel, ethinyl estradiol (reported as "Levonor-E Estrad"). Facility where the most recent COVID-19 vaccine was administered in Pharmacy or Drug Store. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 11Mar2021 15:15, Few minutes after vaccination patient fainted and might have convulsed on the floor. Patient became conscious after a couple min. Patient had spouts of nausea and dizziness. 2 hr after dose (11Mar2021) patient was out of breath and went to a hospital. Doctors suppose that the incident was a vasovagal syncope episode. After 18 hr (12Mar2021) patient's left arm was very sore, painful to touch and difficult to move. The events resulted in Emergency room/department or urgent care. No treatment received for the adverse events. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient hadn't been tested for COVID-19. No covid prior vaccination. No covid tested post vaccination. The outcome of the events was recovering. No follow-up attempts are possible. No further information is expected. |

| 1135558 | 3/25/2021 | NC | 70 | F | 2/20/2021 | 2/21/2021 | Bruising of foot; foot was all messed up/it was all bruised and swollen, but it was not broken. She says this was her right foot; Fatigue; had a low blood sugar episode she supposed; passed out/Unconsciousness; had muscle spasms almost to seizure amount of shaking/full body muscle spasms; had muscle spasms almost to seizure amount of shaking/full body muscle spasms; crashed unconscious to the floor/fell/fell backwards/caught her foot under the vanity; This is a spontaneous report from a contactable consumer (patient) reporting for herself A 70-years-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), dose 2 via an unspecified route of administration, administered in the left arm on 20Feb2021 11:00 (Lot Number: EN6201) as a SINGLE DOSE (at the age of 70 years old) for covid-19 immunisation. Medical history included breast cancer from 1988 to an unknown date , ovarian cancer from 2015 to an unknown date , she has had lymph nodes removed from her right arm "30 years ago" from 1988 to an unknown date, pass out from unknown date to unknown date. Concomitant medication included olaparib (LYNPARZA) taken for ovarian cancer from Feb2020 at 150mg, 2 tablets in the morning and 1-2 tablets at night by mouth.She says she is a little person and couldn't tolerate the side effects of that, so she varies how many she takes based on her side effects. She says she is supposed to take 300mg in the morning and 300mg at night. She says how she takes it is, she takes 150mg or one pill in the morning, then one or two at night depending on how she is doing. Historical vaccine information included BNT162B2 dose 1, lot no: EL9264, route left arm for Covid-19 immunisation. Past drug history included on days of intravenous (IV) chemo when she was being highly treated in the past sometimes she would pass out. The patient reported approximately 15 hours after the shot, on 21Feb2021 she had muscle spasms almost to seizure amount of shaking, full body muscle spasms. She clarifies that her side effects didn't kick in until 02:30AM on 21Feb2021. She says at 07:00AM on 21Feb2021 she got up and went into the bathroom and passed out, and had a low blood sugar episode she supposed. She crashed unconscious to the floor. She said that could be from the shot, but she is also a high risk patient, a cancer patient, and is on a maintenance chemo drug. She says on days of |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

intravenous (IV) chemo when she was being highly treated in the past sometimes she would pass out, so she doesn't know if that was related to the COVID shot or not. No testing had been done on high risk patients, so she thought maybe this could be a good heads up for something someone else may experience. Her side effects were on and off for several hours, the shaking and spasms would subside and then start again. She says that they went away, and then she got up and passed out, and her foot was all messed up, she doesn't know what she did when she fell, but she had it checked and it was not broken, it was all bruised and swollen, but it was not broken. She says this was her right foot. She says she thinks she fell backwards, and she thinks she caught her foot under the vanity. On unknown date, she experienced bruising of foot, fatigue, foot was all messed up/it was all bruised and swollen, but it was not broken. She says this was her right foot. Outcome of the events was unknown. Information on the lot/batch number has been requested.

| 1135566 | 3/25/2021 | OK | 54 | F | 3/5/2021 | 3/6/2021 | delirious as if I was hungover; delirious as if I was hungover; felt on the brink of fainting; chills; joint pain; pain at the injection site; lethargic; dry cough; severely nauseous; could not eat; serious fogginess; General malaise; fatigued; a debilitating headache; did not feel comfortable driving; weak; hurt in my chest; slept the whole day; This is a spontaneous report from a contactable consumer. A 54-year-old non-pregnant female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), via an unspecified route of administration, administered in the left arm on 05Mar2021 at 13:30 (Batch/Lot Number: EN6202) at 54-years-old as a single dose for COVID-19 immunization; administered in a hospital. The patient did not receive any other vaccine within four weeks of the suspect vaccine. Medical history included hypertension, and acne from an unknown date and unknown if ongoing. The patient did not have COVID prior to the vaccination. Concomitant medications included hydrochlorothiazide, olmesartan medoxomil (MANUFACTURER UNKNOWN) taken for an unspecified indication, start and stop date were not reported; isotretinoin (MANUFACTURER UNKNOWN) taken for an unspecified indication, start and stop date were not reported. The patient previously took (ceftriaxone sodium) ANCEF, start and stop date were not reported, and experienced drug allergy. On 06Mar2021 at 04:00 (as reported), the patient experienced: delirious as if i was hungover (medically significant), felt on the brink of fainting (non-serious), chills (non-serious), joint pain (non-serious), pain at the injection site (non-serious), lethargic (non-serious), dry cough (non-serious), severely nauseous (non-serious), could not eat (non-serious), serious fogginess (non-serious), general malaise (non-serious), fatigued (non-serious), a debilitating headache (non-serious), did not feel comfortable driving (non-serious), weak (non-serious), hurt in my chest (non-serious), slept the whole day (non-serious); with no treatment received. The clinical course was reported as follows: The patient reported that on the first night (as reported) she had chills, joint pain and pain at the injection site. The next day (as reported) she was lethargic and was severely nauseous to the extent she could not eat. The patient also experienced serious fogginess, felt delirious as if she was hungover. The patient felt general malaise and a |

| 1134685 | 3/25/2021 | CA | 63 | F | 3/25/2021 | 3/25/2021 | Pt presented today for 1st Pfizer mRNA COVID vaccine. She received the vaccine at 11:06am and proceeded to the check out area and scheduled her second appointment and checked out at 11:10am. She was sitting in the secondary seating area, she looked scared, then she indicated to the APP she felt dizzy, eyes fluttered back, and slumped back into the chair and into APP's arms. With the assistance of another RN, we laid her down on the ground and lifted her legs. She was arousable to sternal rub and complained of dizziness. She was able to report her name and that her husband was outside in the car waiting for her, however, she was slow to answer questions and still appeared distressed. We made several attempts to obtain a BP, however, it would not register on machine, O2 sat 100%, HR 42, manual HR 50 at pericordium. Her bilateral upper extremities were cool to touch and appeared mottled. We attempted to give her apple juice just she was only able to take a few sips. We placed her on 100% non-rebreather. Given low HR, unable to obtain BP, and semi-conscious state, we elected to call 911 at 11:30am. Her husband was retrieved and at patient side when EMS responded. He reported that she has fainted in the past with blood draws and has a past medical history of "leaky valve, low platelets" and later it discovered via her medical records that she has a history of seizures and was on vimpat and lisinoril. EMS arrived, assessed the patient, and moved her to stretcher and transported patient at 11:39am. |

| 1134845 | 3/25/2021 | TN | 30 | F | 3/25/2021 | 3/25/2021 | Patient received vaccine while seated and had no problems. She stood up and walked several feet to the observation seating area and had a seat. A few minutes later she fainted and fell out of the chair onto the floor. We helped her up to a sitting position and gave her a bottle of water and an ice pack. The right side of her forehead appeared red from apparent hit on the floor when she fainted. We had her wait on the floor for about 30 minutes to ensure she remained conscious. Patient reported an ache on her forehead at site of hit. She was also sweating and reported feeling hot. Patient had a partner with her who agreed to escort her to an urgent care clinic in the same building as the pharmacy. Store manager in charge took the patient to the urgent care clinic by wheelchair to be examined. |

| 1134827 | 3/25/2021 | MN | 39 | F | 3/25/2021 | 3/25/2021 | Patient received her 1st Pfizer vaccination dose at 12:37PM. Patient was seated in the vaccination waiting area for her 15 minutes observation window. About 5 minutes after vaccination the patient fainted and fell out of her chair on to the ground. She hit her head on the wall behind her, and ground when falling. Pharmacy staff immediately went to check on patient. She was found to be breathing, but unresponsive for about 20 seconds. 911 was called immediately by another employee. She was positioned lying on the ground with her feet up and came to consciousness quickly. Once awake patient was alert, verbal, and seemed to have a normal mental status. She reported no respiratory issues, no throat or lip symptoms, and no itching or hives. She states that she felt fine other than her head hurting from the fall. She reported no symptoms prior to waking up on the ground. She was speaking in full sentences, responsive, and had a strong, steady pulse at 98 bpm and a normal respiratory rate. No hives, swelling were observed. Patient reported she was a type 1 diabetic and her blood sugar was found to be normal (approx. 145) after she was able to sit. No medications were administered on site as she did not report any additional symptoms indicative of anaphylaxis. The ambulance and local PD arrived quickly. She was walked outside for observation and appeared to be taken away in the ambulance. The patient was not reached for a follow-up call to check in on her later the same afternoon. |

| 1129767 | 3/24/2021 | | 83 | M | 2/12/2021 | 2/15/2021 | Stroke; Passed out; Was flailing like a fish; Could not walk; lost motor skills and had to be fed; Could not speak; Did not understand where he was; was in La La land; A spontaneous report was received from a consumer concerning his father a 83– years-old male patient who received Moderna’s COVID-19 vaccine (mRNA-1273) and experienced stroke, passed out, was flailing like a fish, was in la la land for many day, could not walk, he lost his motor skills and had to be fed, he could not speak, did not understand where he was and he was wheelchair bound. The patient’s medical history, as provided by the reporter, included blindness in one and lost some hearing. Concomitant medications reported included diazepam, bisacodyl and oxycodone. On 12 Feb 2021, approximately three days prior to the onset of the events, the patient received his first of two planned doses of mRNA-1273 (batch 013m20a) via unknown route for prophylaxis of COVID-19 infection. On 15 Feb 2021, the patient experienced stroke, passed out, was flailing like a fish, was in la la land for many days, could not walk, he lost his motor skills and had to be fed, he could not speak, did not understand where he was and he was wheelchair bound. No tests were done, and it was previously agreed that he would not go to the hospital if anything should happen to him. No treatment information was provided. Action taken with mRNA-1273 in response to the events was not reported. The outcome of event, he lost his motor skills and had to be fed, was considered resolving. The outcome of the events, stroke, passed out, was flailing like a fish, was in la la land for many days, could not walk, he could not speak, did not understand where he was and he was wheelchair bound were unknown.; Reporter’s Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1129775 | 3/24/2021 | FL | 60 | F | 3/24/2021 | 3/24/2021 | PT REPORTED DIZZINESS TO US AFTER HER IMMUNIZATION. SHE DECLINED OUR OFFER TO CALL 911 FOR HER. WE TOOK HER BP AND PULSE. HER BP WAS 132/88 AND HER PULSE WAS SLIGHTLY LOW AT 57. WE ADVISED PT TO SIT AS LONG AS SHE NEEDS TO AVOID FAINTING, AND TO NOTIFY US IF HER STATUS CHANGES AT ALL. WE PROVIDED HER WITH A BOTTLE OF WATER. SHE WAS WITH A CAREGIVER OR SPOUSE HERE AS WELL. AFTER ABOUT 5 MINUTES, WE TOOK A SECOND BP AND PULSE READING. BP WAS 142/99 AND PULSE WAS 56. SHE AND HER CAREGIVER OR HUSBAND PROCEEDED TO GO TO EMERGENCY ROOM. THEY PREFERRED TO TAKE THEMSELVES INSTEAD OF CALLING 911 FOR AN AMBULANCE. |
| 1129393 | 3/24/2021 | FL | 63 | F | 3/11/2021 | 3/11/2021 | Patient received the first Moderna vaccine at nine o'clock Thursday morning, felt fine until 2pm. She began to feel feverish, achy, nauseous, weak. All symptoms lasted through Sunday when she passed out early in the morning. We found her on the kitchen floor, having hit her head and bleeding. She was conscious and alert but a little disoriented and very weak. We called for an ambulance which took her to the same facility where she had been vaccinated. She was diagnosed with a concussion and low blood pressure (62/49). Today she still feels weak and dizzy and nauseous. She has not returned to work yet, pending recommendation from her cardiologist and PCP. |
| 1128330 | 3/24/2021 | FL | 39 | F | 3/23/2021 | 3/23/2021 | Patient stated that her tongue felt numb, then her whole face became tingly and numb. The patient's left side of her face became droopy and she fainted at one point. |

| 1129718 | 3/24/2021 | MD | 37 | F | 3/12/2021 | 3/13/2021 | I had only pain at the injection site after the first dose on February 12. I got my second dose on Friday, March 12 at 1pm and woke up at 2am Saturday with debilitating headache and severe nausea. I took tylenol and fell back asleep. I woke up again around 6am with the same severe headache and excruciating pain in my left arm at the injection site and tried to get up to get some ibuprofen. I felt extremely dizzy and could barely walk which ended up in me fainting in the kitchen. I somehow got back to bed, took ibuprofen and went back to sleep. I started feeling better after that, severe headache went away but I had low grade fever, chills, slight nausea and painful arm the whole Saturday up until Sunday morning. I had dizziness on Sunday, was very tired on Monday and still felt weak on Tuesday but after that I recovered and experienced no more symptoms. |
| 1128477 | 3/24/2021 | IN | 64 | M | 3/17/2021 | 3/19/2021 | Flu-like symptoms, sweating, chills, nausea, passed out twice during the first few hours after the onset of symptoms. Upset stomach, vomiting in the night. Felt better the next day and by the third day after the onset of symptoms felt recovered. |

| 1130145 | 3/24/2021 | MO | 71 | F | 2/26/2021 | 2/26/2021 | <p>Syncope; things went dark; almost passed out twice; BP spikes; left arm pain at the site of the injection; fatigue; A spontaneous report was received from a Consumer concerning a – 71 Years-old female patient who received Moderna 's COVID-19 vaccine (mRNA-1273) and experienced almost fainted/presyncope, Fainting/Syncope, Blackout/Loss of consciousness, Injection site pain, BP spikes and Fatigue. The patient's medical history was provided as Atrial Fibrillation, Syncope and Diabetes (borderline). Relevant concomitant medications were reported as Warfarin, Cimetidine, Carvedilol, Spironolactone, Glipizide, Magnesium, MiraLAX, Probiotics, Stool softener and Clonidine PRN. On 26 Feb 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (lot/batch: unknown) unknown route in the left arm for prophylaxis of COVID-19 infection. On 26 Feb 2021, after receiving the first Moderna Covid -19 Vaccine the patient experienced dizziness, increased heart rate, left arm pain at injection site. She reported of "almost passed out, and things went dark" on day 4 (02FEB2021) and day 5 (03FEB2021) after the vaccination. She reported that she had one syncopal episode 02FEB2021 while she was standing around the stove, and 2nd syncopal episode occurred on 03FEB2021 while she was getting out of shower. She also has mild fatigue since the vaccination. Fainting and Blackout were medically significant. Laboratory details were provided by her BP readings which are as follows: BP reading on 02MAR2021 -- 102/56, 168/69, 103/54 BP reading on 03MAR2021 -- 180/90, 193/75, 201/91, 215/115 (took Clonidine) BP reading on 04MAR2021 -- 176/81, 200/87 BP reading on 06MAR2021 -- 200/90, 220/92 (took Clonidine) She checked her blood glucose levels daily, and its "within normal" limits. Treatment details was provided as Clonidine PRN. Action taken with mRNA-1273 in response to the events was unknown. On unspecified date, the outcome of the events injection site pain was Recovered/Resolved. At the time of this report the outcome of the events Fainting, Blackout and Fatigue were unknown.; Reporter's Comments: Based on the information provided, the established safety profile of mRNA-1273 vaccine and a strong temporal association between the reported events and the administration of mRNA-1273 vaccine, a causal</p> |

| 1129259 | 3/24/2021 | WA | | F | 3/5/2021 | 3/5/2021 | <p>Passed out; Chills during the night; Weak/weakness; Fever in the morning; Nausea; fatigue; dose 1 on 16Feb2021 15:00 and dose 2 on 05Mar2021 15:00; dose 1 on 16Feb2021 15:00 and dose 2 on 05Mar2021 15:00; This is a spontaneous report from a contactable consumer (patient). An adult female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) dose 1 (lot number EN6200) on 16Feb2021 15:00 and dose 2 (Lot Number: EN6198) on 05Mar2021 15:00 both via an unspecified route of administration in arm left as single dose for COVID-19 immunisation. Medical history included allergy to Thimerosal. The patient was not pregnant at the time of vaccination. Concomitant medication received within 2 weeks of vaccination included estradiol (ESTRADIOL TRANSDERMAL) 0.05 mg per day, Multivitamin and colecalciferol (D3 5000). Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient has not been tested for COVID-19. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Symptoms after the second vaccine on 06Mar2021 04:00 included chills during the night, weak, fever in the morning, fatigue. Took 2 extra strength Tylenol at 9:00 am, back to bed. Up at 12:00 pm and overwhelmed with weakness, nausea, passed out, when she woke up she was laying on the floor. She did not know how long she was out, but she did not think it was more than 5-10 minutes. No treatment was received for the adverse event. The outcome of events chills, weakness, nausea, passed out, fever and fatigue was recovered, other events was unknown.</p> |

| 1128513 | 3/24/2021 | | 26 | M | 3/23/2021 | 3/23/2021 | ED Note: At 1650, patient was observed following another nurse to the observation area, when he began swaying from side to side, lost consciousness and landed on his right side. This nurse approached the patient while other co-workers were assisting him to a chair. The patient was regaining consciousness. The patient's vital signs were as followed: 112/96, pulse ox 99%, pulse 46. This nurse gave the patient water and the patient was alert and oriented X 3. The patient c/o left knee pain but denied any other symptoms. This nurse again checked his vital signs at 1655: 85/52, pulse ox 100%, pulse 86. At this point, rapid response was called and report was given. This nurse moved the patient to a wheelchair to prepare for transport to the E.R. The patient denied any further symptoms at this time except pain in his left knee. This nurse checked his vital signs at 1658: 102/64, pulse ox 100%, pulse 59. Rapid response arrived and this nurse gave report to them. Patient was transported to the E.R. via stretcher. No further issues noted at this time. Pt reports he has a history of getting nervous and "passing out" when getting blood drawn or getting a shot. Pt stated that when he stood up after getting his covid vaccine he felt lightheaded and passed out. ED staff responded to vaccine clinic. At 1658 where pt's VS were as follows: 102/64 HR: 59 Sats 100% At present time, pt reports feeling "totally normal" and does not feel that he needs to stay to be seen in ED. Pt comfortable with being monitored by RN for 10 min. Pt still does not want to be seen in ED, wants to leave. Pt ambulated out of ED without difficulty. |
| 1128537 | 3/24/2021 | TX | 34 | F | 3/9/2021 | 3/9/2021 | I passed out about 20 min. after the shot. I felt fine up until then. When I was walking to wash my hands, i felt intense heat, vision blacked out and I passed out for about 30 seconds. It was dizzy with delayed vision for the rest of the day. |

| 1129256 | 3/24/2021 | | 44 | F | 3/7/2021 | 3/7/2021 | Dizzy; Lost all the strength in her arms and legs; Passed out; Nauseous; She dropped to her left when she passed out and fell in shower; Ear completely clogged up only on the left side; Headache; Tired; Soreness on my arm; This is a spontaneous report from a contactable consumer (patient). A 44-year-old female patient received her second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not provided), via an unspecified route of administration on 07Mar2021 at 11:00 at single dose for COVID-19 immunization. Medical history included underactive thyroid. Concomitant medication included unspecified thyroid medication. The patient was asking if her symptoms were normal following the vaccination. She got the second dose of the COVID vaccine yesterday, 07Mar2021 at around 11:00 (also reported as 10:00 to 10: 15 or 10:30). Throughout the day, she was fine and mentioned that she had soreness on her arm later. At around 22:00, she was driving home and started feeling a slight headache and reported that she didn't take anything. She was tired, so when she got home, the patient fell asleep. She woke up and did feel a slight headache and couldn't sleep on her left arm because it was killing her, but it was fine. At 5:30 this morning (08Mar2021), the headache was still there. She then stood and sat up, took her thyroid pill because she has an underactive thyroid and was on the highest dose of thyroid replacement. The patient stated that the events happened so fast, as soon as she got into the shower. She got out of bed and started walking, grabbed her stuff to shower and started feeling that her headache was building up more than it had all morning so far. She thought maybe it was just because she had just physically gotten up and started walking. She got into the shower, and for about 2-3 minutes into getting into the shower, she remembered she had started putting shampoo into her hands; grabbing the shampoo bottle; but she suddenly got so nauseous and the headache that came on was extreme. She did not have a lot of time to react. She thought she would throw up in the shower, she had no time to get out of the shower to the toilet to throw up; she suddenly felt dizzy, passed out in the shower and fell to her left side on the floor. All she could remember before she passed out was that she had the shampoo bottle in her hands and she said out loud, she heard |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

| | | | | | | | |
|---------|-----------|----|----|---|-----------|--|---|
| | | | | | | herself say "What is happening to me". Then she lost all the strength in her arms and legs. She remembered for a split second she tried to hold on, she dropped the shampoo bottle on the floor and grabbed the rail or edge of the shower and tried to hold on because she felt herself when she went down. Her left ear was completely clogged up only on the left side. When she passed out, thankfully she thought by trying to hold on to the rail or edge of the shower that she kind of eased her fall down, so she did not fall hard or hit her head. She did not know if she passed out for seconds or minutes because she has no idea exactly when she went into the shower, maybe around 05:45; but when she woke up she realized she was on the floor, she was not flat on the floor but on her knees, having fallen to the left side with her head off to the side on the shower wall; the glass door to her shower was wide open and all the water was coming out of the shower; it scared her when she woke up. The outcome of the event passed out was recovered on 08Mar2021, not recovered for headache, and unknown for all other events. Information on the lot/batch number has been requested. | |

| 1131677 | 3/24/2021 | AZ | 63 | F | 2/18/2021 | 2/20/2021 | Hurt to even swallow water. I have GERD and Shotsky?s ring. Ended up taking 100mg if Omeprozole during the entire day (then Gaviscon Extra Strength. I had to talk to the on call Dr. 2x. After taking the Gaviscon, I burped and had excruciating pain at the base of my esophagus, broke out in sweat and almost passed out. I had to breathe as if I?m labor. It happened again about an hour later. The Dr. said it could be a cardiac issue and go to the ER. I ended up with normal EKG?s and normal bloodwork during the time I spent the nite for observation. The cardiologist said I had no heart issues and to go home. I can only come to the conclusion that the inflammatory response from the vaccine was the culprit. |

| 1131671 | 3/24/2021 | LA | 51 | F | 3/13/2021 | 3/15/2021 | Following the vaccine injection which was provided by the personnel, I have developed minor fainting spells and angina for the past 10 plus days. A large dried blood clot was noted on the first day of my period which occurred on March 16th. I continue to pass large blood clots while I was having my period. I also want to point out that a personnel who gave me an injection was incorrectly injected the vaccine outside of the area of the preferred injection zone. I have reported this event to the supervisor who was on site. I have not yet contacted my health care provider at this time but plan to contact her tomorrow as these symptoms have been persisting. |
| 1131674 | 3/24/2021 | NV | 43 | M | 3/23/2021 | 3/23/2021 | No issues immediately following vaccine. About 11am, mild symptoms like 99.4 degree fever, muscle aches, joint pain, very mild nausea, fatigue began. Severe nausea began about 7:15pm. At 7:45pm, severe dizziness resulting in loss of consciousness and fall. Seizure Syncope event lasted 2 1/2 to 4minutes. Slow to wake. Trembling/shaking in extremities, cold sweat. Delayed speech. Paramedics were called. Went to ER at approximately 8:30pm. |
| 1130028 | 3/24/2021 | ID | 24 | F | 3/23/2021 | 3/23/2021 | Patient fainted during waiting period after receiving the Moderna COVID-19 vaccine. Patient was laid down and feet were elevated. Patient came to after about 10 seconds and was maintained in lying position until they were aware of surroundings and felt stable. Patient was helped back to their chair and were monitored without any other issue. |
| 1131721 | 3/24/2021 | AZ | 64 | F | 3/24/2021 | 3/24/2021 | Customer received vaccine and shortly began to feel dizzy, lighted-headed, and fainted while seated. She became responsive and was sweating stating she did not feel well. Customer complained of feeling nauseated, hands were cramping and difficult to move. Finger tips were tingling. She sat in our waiting area and was observed for over 30 minutes. She began to feel better after 15-30 minutes. |

| 1130141 | 3/24/2021 | GA | 66 | F | 2/4/2021 | 2/5/2021 | while taking blood pressure patient passed out; not feel well; fever; aches; headache; chills; A spontaneous report was received from a nurse concerning a 66-year old, female patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced fever, aches, headache, chills, did not feel well and passed out. The patient's medical history included atrial fibrillation following symptoms of feeling sick, headache and chest discomfort in September 2020. Current conditions included elevated blood pressure (BP) and a shrimp/shellfish allergy. Concomitant medications included apixaban, carvedilol, lisinopril and vitamin D. On 04 Feb 2021, the patient received the first of two planned doses of mRNA-1273 (Batch Number: 013M20A) intramuscularly in left arm for prophylaxis of COVID-19 infection. On 05 Feb 2021, one day after receiving the vaccine, the patient experienced fever, aches, headache and chills. She took paracetamol and felt better. On that same day at approximately 1330, 24 hours after the vaccine, the patient was preparing a sandwich and was not feeling well. She sat in a chair to take her blood pressure and passed out. At some point, it was reported that patient was admitted to the hospital for a five-day stay. (admission/discharge dates not reported). Treatment for the events included paracetamol. There was not change planned to the dosing schedule of mRNA-1273 in response to the events as it is known that on 05 Mar 2021, the patient received the second of two planned doses of mRNA-1273 (Batch Number: 002A21A) intramuscularly in left arm for prophylaxis of COVID-19 infection. The outcome of the events, fever, aches, headache, chills, not feel well and passed out, was considered recovered/resolved on an unspecified date.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1131517 | 3/24/2021 | WI | 31 | F | 3/24/2021 | 3/24/2021 | Patient reported in chart notes a history of fainting after vaccinations. Pharmacist asked patient about this before administering vaccine, and patient said she often faints in regards to blood draws or vaccines. Patient was prepared to sit in waiting area for at least 15 minutes. Patient was given vaccine and pharmacist confirmed patient was feeling okay. Patient returned to waiting area to sit, then allegedly decided to stand up and go to the in-window when beginning to feel faint. She fainted in this process. RPh and store manager immediately rushed to patient, who returned to consciousness right away. Patient stated to RPh that she did not hit her head nor did she have any pain in her legs or trouble breathing. She felt mostly embarrassed. Store manager called paramedics, who arrived, examined patient, and the patient let them leave and proceeded to shop in the store aisles until her husband arrived. |

| 1130143 | 3/24/2021 | WI | 73 | F | 3/1/2021 | 3/1/2021 | Extremely dizzy; Don't remember nothing; Felt like she was going to died; Felt so sick; Completely unconscious/passed out; High blood pressure 215 over 156; Vomiting for 1 hour constantly/threw up; Nauseate; Headache like someone is pressure her brain; Fast heartbeat; Weak; A spontaneous report was received from a consumer concerning a 73-year-old, female patient who received the Moderna COVID-19 (mRNA-1273) vaccine and experienced the following: completely unconscious/passed out(loss of consciousness), dizziness, vomiting for 1 hour constantly/threw up (vomiting), don't remember nothing (amnesia), felt like she was going to died (feeling abnormal), high blood pressure 215 over 156 (hypertension), felt so sick (malaise), headache like someone is pressure her brain (headache), fast heartbeat (tachycardia), nauseate (nausea) and weak (asthenia). The patient's medical history was not provided. Products known to have been used by the patient, within two weeks prior to the event, included atorvastatin, bupropion hydrochloride, cetirizine hydrochloride, anxiety medicines, clonazepam, metformin, metoprolol, and trazodone. On 01 Mar 2021, the patient received the first dose of two planned doses of mRNA-1273 (Batch number: unknown) and 45 minutes later was extremely dizzy. At home one hour later she started to vomit for one hour constantly, became completely unconscious, didn't remember anything, and was really scared. The last thing she remembered was telling her husband: you need to call somebody because she felt like she was going to die. The patient was taken by ambulance to the hospital and while in the ambulance, the patient was administered medicines for nausea and blood pressure. The blood pressure measurement taken in the ambulance was 215 over 156. The patient didn't know her address or anything else. She was released to go home after a few hours, but still felt so sick. On Sunday night (07-Mar-2021), the patient threw up again. On an unspecified date, she had a headache like someone was putting pressure on her brain; she also had a fast heartbeat. Since the vaccine, the patient reported feeling really nauseous and remembering nothing about it. She is still weak. Treatment information included ondansetron medicine for nausea. Action taken with mRNA-1273 in response to the events was unknown. At the time of reporting, the outcome of the |

| 1126020 | 3/23/2021 | WI | 32 | M | 3/23/2021 | 3/23/2021 | <p>Patient received Pfizer COVID 19 vaccine at 8:42am. This was patient's first dose. He was observed in clinic for 18 minutes afterwards without concern and left approximately 9:00am. Patient returned to clinic at 9:28am with complaints of sweating, nausea and lightheadedness. RN took patient to private observation room and started assessment. VS 9:30am O2 100%, BP 147/78, HR 50. Patient is laid back on bed with head at 45 degrees and legs elevated. Patient was given 6oz of water and neurological assessment completed. Patient alert and oriented without changes. Patient denies SOB, scratchy or tight throat, hoarse voice, trouble swallowing or itching. VS 9:40am O2 100%, BP 151/77, HR 54. Patient given another 6 oz of water and continues to lie back with feet elevated. Patient took clonidine, sertraline, propranolol, Adderall and vraylar this AM. He ate breakfast. Is not a diabetic. Patient states his lightheadedness has subsided, still complains of sweating and nausea but states he is "feeling better and ready to go home". Patient has a ride and is going home to his parent's house where they will both stay with him all day. VS 9:45 O2 100%, BP 143/81, HR 61. Patient appears more comfortable, less anxious and HR has risen. States his nausea is lessening. Patient would like to leave. RN educated patient on emergency signs to seek 911 for and they include SOB, throat swelling, sudden emesis, increased lightheadedness or nausea, fainting, new dizziness or any other sudden change in condition. He voices understanding; plans to go home with parents, have toast for lunch, push fluids and rest. Patient escorted to the door and visualized entering vehicle with family.</p> |

| 1125384 | 3/23/2021 | IL | 89 | M | 2/26/2021 | 3/11/2021 | 3/11/21 orthostatic hypotension, Fall and N-Stemi dx at a hospital -3/12 transferred to another hospital - 3/16 discharged to Swing bed at another hospital HPI: History of Present Illness: Patient is an 89-year-old Caucasian male with a medical history significant for atrial fibrillation on anticoagulation due to prior GI bleed, HTN, HLD, T2 dm, BPH who initially presented to outside facility following a fall. Fall was mechanical in nature and occurred whenever he slipped on water while walking with his cane out the front door. Primary point of impact was on his left leg in hip as well as possible head trauma. Preceding this event, patient denies any presyncope, syncope, chest pain, shortness of air, palpitations. An extensive workup was performed outside facility including CT scan of the left hip without contrast, CT scan of the head without contrast, lumbar x-ray, CT scan of the left knee without contrast all of which showed no acute fracture or abnormality. EKG showed normal sinus rhythm heart rate of 75 with incomplete RBBB. Labs are included below. Vital signs normal. Patient was getting ready to be discharged from facility and whenever they sat him up, he had an episode where he stared ahead and got diaphoretic as well as dizzy. Patient has recollection of this incident. Outside ER decided to get troponin at that time and came back elevated at 0.163. Patient continues to deny any chest pain. Denies other associated symptoms including fever, fatigue, chills, shortness of air, palpitations, abdominal pain, nausea, vomiting, diarrhea. CBC: WBC 9.2, HGB 13.4, HCT 39.3, PLT 223 BMP: Na 141, K 3.7, Cl 104, HC03 31, BUN 22, CRT 0.94, GLU 124. PT 10.5, PTT 24.7, PLT 1.07. Due to lack of Cardiology coverage at outside facility, patient transfer was requested for further troponin trending and possible cardiology evaluation should be deemed warranted. hpi 3/16 The patient is a 89 y.o. male with a past medical history notable for atrial fibrillation, CAD, diabetes, BPH, hyperlipidemia. The patient presents for evaluation of worsening issues of weakness status post recent hospitalization were patient was fainted and was found to have orthostasis. Patient had a cardiac workup which was negative for any significant cardiac disease. Patient's plan is to hopefully get stronger return home to more independent living. Patient was seen today in his room. Patient notes that he has done very well with therapy after his fall. Patient is |

| 1127388 | 3/23/2021 | NY | 60 | M | 3/23/2021 | 3/23/2021 | IMMEDIATELY AFTER DOSE WAS ADMINISTERED PATIENT COMPLAINED OF DIZZINESS WHILE SEATED. IMMUNIZING TECHNICIAN IMMEDIATELY CAME AND NOTIFIED ME, AT WHICH POINT I ENTERED OUR VACCINATION ROOM AND KNELT DOWN NEXT TO SEATED PATIENT. HE CONFIRMED THAT HE FELT REALLY DIZZY AT WHICH POINT I ENCOURAGED HIM TO SIT BACK IN THE SEAT AND RELAX AND I WOULD STAND BY HIM. WITHIN APROX 5 MINUTES OF VACCINATION PATIENT FAINTED IN THE CHAIR AT WHICH POINT EMS WAS CONTACTED. WITHIN APROX 30 SECONDS PATIENT STARTED TO REGAIN CONCIIOUSNESS (NOTED BY EYE, MUSCLE MOVEMENT) OVER THE COURSE OF THE NEXT FEW MINUTES PATIENT SLOWLY BECAME ALERT AND ORIENTED AT WHICH POINT EMS ARRIVED AND TOOK OVER HIS CARE. AFTER APROX 15 MINUTES OF CARE FROM EMS PATIENT OPTED TO GO HOME WITH HIS DRIVER. I CONTACTED THE PATIENT AT APROX 130 TO CHECK IN ON HIM AND HE ADVISED ME HE WAS FEELING NORMAL AND THANKED US FOR HELPING HIM THROUGH HIS FAINTING EPISODE. |
| 1127390 | 3/23/2021 | OH | 39 | M | 3/23/2021 | 3/23/2021 | Shortly after receiving the vaccine, the patient passed out. I ran out to him and shook him after having someone call 911. He regained consciousness after about 45-60 seconds. EMT checked his pulse and blood pressure and released him. |
| 1127410 | 3/23/2021 | NY | 43 | F | 3/23/2021 | 3/23/2021 | Near syncope treated oral glucose and IV fluids. Transport to local ED. |
| 1127428 | 3/23/2021 | TX | 42 | F | 1/4/2021 | 1/13/2021 | 1st Moderna shot was 1/4/21. Had a syncope episode/potential seizure on 1/13/21 - unwitnessed loss of consciousness for a short period of time with loss of urinary continence. 2nd Moderna COVID shot on 1/29/21 with no reactions. My doctors evaluating me did not consider this as a COVID vaccine reaction, even though it did occur after the first vaccination. I am a nurse with a doctorate degree and do not believe the seizure was the reaction of the COVID vaccine. I was under extreme amounts of stress at work at the time. I also have a prior medical history of syncope episodes when I was a teenager (25+ years ago). |

| 1127658 | 3/23/2021 | MA | 66 | F | 3/6/2021 | 3/21/2021 | I woke up after a normal night's sleep and found that everything was spinning. Was dizzy and could not properly walk. After trying to drink a bit of water, fainted and vomited it all back up. I was weak and tired. Slept or rested all day and by late afternoon was able to hold down some toast and by evening symptoms had resolved. Clearly, I am not sure that this was vaccine related since it occurred 2 wks after vaccination but felt should be reported. |
| 1127659 | 3/23/2021 | OH | 42 | M | 3/23/2021 | 3/23/2021 | Patient fainted at pharmacy approximately 7 minutes after receiving vaccine. Went to Emergency Room by ambulance. On follow up phone call patient stated he is doing fine. He received iv fluids at Emergency Room. |
| 1127662 | 3/23/2021 | | 50 | M | 3/23/2021 | 3/23/2021 | dizziness, bradycardia, sweating, fainted & fell. VS taken, observed, juice offered, symptoms resolved, pt transfer to ED for abrasion on right side of his forehead |
| 1128102 | 3/23/2021 | WA | 57 | M | 3/23/2021 | 3/23/2021 | After receiving his vaccine, patient had a slight syncopal episode. Patient reported that he was going to get lightheaded as he normally gets this way with vaccines or blood draw. Patient never passed out; however, he almost fell when getting up from the vaccine chair, he reports lightheadedness and requested to lay down on the ground and have his feet elevated. Oxygen was brought to patient by post observation and 2 Liters delivered maintaining 99% saturation. After approximately six minutes, patient decided to get up from the ground. Two staff including patient's wife assisted him to stand however, patient requested to be seated for a while. Patient was then moved to post observation where he was conscious, speaking clearly and monitored for an additional 30 minutes with no further incident. |
| 1127736 | 3/23/2021 | NJ | 31 | F | 3/21/2021 | 3/22/2021 | At 9pm, Muscle pain, fatigue, headache and soreness in the arm. Took Tylenol 2x325mg. At 3 am, woke up feeling dizzy and headache. After walking 2 steps I fainted and collapsed on the floor. During the following day, I had fever of 101.5F, extreme headache, dizziness, muscle ache and fatigue. |

| 1126954 | 3/23/2021 | CA | 30 | F | 3/15/2021 | 3/15/2021 | Patient came to Vaccination Clinic to receive first dose of Pfizer vaccine on 3/15/2021. Patient was vaccinated at 1147 and began to walk toward EMT monitoring area at 1153. While the patient was walking, the patient reported feeling faint. RN, followed the patient from behind. RN noticed patient beginning to fall and was able to catch her using her leg as support and guided patient to the floor. Both RN and patient decline sustaining any injuries related to this event. When on the floor, patient appeared pale, had cold and clammy hands, and was diaphoretic. RN assisted the patient by holding her legs in the air while the patient layed on her back. Patient was A&Ox4 at 1155 with a BP of 121/76. At 1159, patient reported feeling "better" and was transferred to zero-gravity chair. The patient's blood pressure was reassessed at 1201, 1221, and 1227 and reported to be 124/81, 122/74, and 125/79, respectively. The patient refused transport via EMS and stated she preferred to drive herself home. Patient able to ambulate without assistance. Patient left to her car at 1230. Upon departure, patient was ambulatory, A&Ox4, with no reports of trouble breathing, dizziness, or lightheadedness. The patient was given education related to when to seek medical care, including shortness of breath, chest tightness, and sensation of throat tightness. The patient was provided with additional guidance on what to do when receiving a second dose, including notifying the nurse that she has had a history of fainting. |
| 1126947 | 3/23/2021 | VA | 36 | F | 3/10/2021 | 3/10/2021 | Patient fainted after vaccination and fell on floor. Had right knee pain. IV was started and patient was transported to ER via EMS. |
| 1126938 | 3/23/2021 | VA | 77 | F | 2/15/2021 | 2/17/2021 | Patient fainted two days after receiving vaccine and was transported to ER via EMS. |
| 1122678 | 3/22/2021 | VA | 32 | F | 3/19/2021 | 3/19/2021 | After approximately 5 min after receiving the shot i started to feel a strong feeling of dizziness along with nausea, i could not stand and fainted, they carried me to a private area where i was picked up by the ambulance, my vital signs were not ok. |

| 1122712 | 3/22/2021 | | | F | 2/5/2021 | 2/5/2021 | <p>Lost consciousness (passed out) for several seconds; Went pale; Started seeing stars; Remained weak for several hours; Nauseous; Chills; Fever; A spontaneous report was received from a consumer concerning a female patient of an unknown age, who received Moderna's COVID-19 Vaccine (mRNA-1273) and experienced lost consciousness (passed out) for several seconds, fever, chills, nauseous, went pale, started seeing stars and remained weak for several hours. The patient's medical history was not provided. Concomitant product use was not provided by the reporter. The patient received the first of two planned doses of mRNA-1273 (Batch number not provided) on an unspecified date. On 05 Feb 2021, approximately few hours prior to the onset of the symptoms, the patient received their second of two planned doses of mRNA-1273 (Batch number not provided) via an unknown route for prophylaxis of COVID-19 infection. On 05 Feb 2021 Friday night, the patient had chills and fever. On 06 Feb 2021, patient gradually became nauseous, went pale, started seeing stars and then lost consciousness (passed out) for several seconds (medically significant event). The patient remained weak for several hours but gradually recovered and was back to normal at the time of this report. Treatment information was not provided. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events is not applicable. The events, chills, fever, lost consciousness (passed out) for several seconds, nauseous, went pale, started seeing stars and remained weak for several hour was recovered on an unspecified date.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.</p> |

| 1122976 | 3/22/2021 | CA | 57 | F | 3/19/2021 | 3/19/2021 | 57y/o female presents with mild throat tightness ~15min after receiving Pfizer vaccine into the left arm. She states that it feels as though something small got stuck in her throat and is causing mild discomfort. She reports associated injection site pain, body cramps, and headache. She denies itching, difficulty breathing, shortness of breath, chest pain, palpitations, blurry vision, presyncope, difficulty swallowing water, or lip/tongue swelling. She reports no change in symptoms after 40min. post-injection. Physical Exam: Heart Rate 66bpm, Blood Pressure 115/74, Repeat Blood Pressure at 40min post-injection 120/80 Cardiac: regular rate and rhythm Lungs: unlabored breathing, clear to auscultation bilaterally Skin: no injection site erythema or swelling. No rash. No lip/tongue swelling or narrowing of oropharynx. Plan: Patient reports that her symptoms have improved at 1hr post-injection and would like to leave. I advised her that she should wait until all of her symptoms have resolved as throat tightness is a concerning adverse reaction. I provided her with options including contacting EMS right now to take her for observation at the hospital, however, the patient declined and said she would not go in the ambulance. She insisted that she wanted to go home and that her husband was driving and would take her to the emergency room if her symptoms worsen. Patient was well-appearing when she left the vaccination site. |

| 1121845 | 3/22/2021 | WI | 74 | F | 2/9/2021 | 2/9/2021 | Faint; Dizzy; Slight reaction; Very tired; A spontaneous report, was received from a consumer (patient), a 74 years-old female patient, unknown race and ethnicity, who was administered Moderna's COVID-19 vaccine (mRNA-1273), and experienced faint (syncope), dizzy (dizziness), slight reaction (vaccination complication) and very tired (fatigue). The patient's current conditions included atrial fibrillation, back trouble and peripheral neuropathy (diagnosed years ago). The patient had medication allergies to pain medications and non-steroidal anti-inflammatory drugs (NSAIDs). Concomitant products included digoxin, carisoprodol, metamizole sodium and warfarin sodium. On 09-FEB-2021, prior to the onset of events, the patient received their first of two planned doses of mRNA-1273 (Lot number: 012M20A) intramuscularly in left arm for prophylaxis of COVID-19 infection. On 09FEB--2021, after receiving the vaccine, the patient had a slight reaction and became very tired, faint and dizzy. The patient's husband helped her to bed. The next morning on 10-FEB-2021, the events were resolved. The patient was scheduled for next Moderna vaccine (second dose) on 09-MAR-2021. No treatment information was provided. Action taken with second dose of mRNA-1273 in response to events was unknown. The outcome of the events, faint, dizzy, slight reaction and very tired was recovered/resolved on 10-FEB-2021.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1121855 | 3/22/2021 | | | M | 3/2/2021 | 3/5/2021 | <p>diagnosed with neurocardiogenic syncope; P.O.T.S/-POTS; tired the next day; experienced a headache for a couple hours; This is a spontaneous report from a contactable nurse. The nurse reported similar events for 2 patients. This is 1st of 2 reports. A 58-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number and expiration date unspecified), via an unspecified route of administration on 02Mar2021 as single dose for COVID-19 immunisation. Medical history included open heart, prostate cancer, Lyme disease, neobladder, and sepsis, all from Aug2020; and blood pressure (abnormal). Concomitant medication included fludrocortisone for blood pressure (abnormal). Reporter stated that her husband seemed tired the next day, although husband says he wasn't. Today, 05Mar2021, patient experienced a headache for a couple hours, and was tired today. On an unspecified date, the patient was diagnosed with neurocardiogenic syncope and Postural orthostatic tachycardia syndrome (POTS) and given medication Florinef 0.1mg. Patient had been taking for about a week. Reporter was asking if it would cause issues with the vaccine since it was a corticosteroid and if it would cause issues if he was going to get a flu shot. Reporter was also asking what the efficacy after the first dose was. Outcome of events was unknown. Information about the Lot/batch number has been requested.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate. ,Linked Report(s) : US-PFIZER INC-2021261960 same drug/reporter/event, different patient</p> |

| 1122080 | 3/22/2021 | PA | 46 | F | 3/12/2021 | 3/19/2021 | Patient's received 2nd dose of Moderna vaccine Friday 3/12. Her husband reported she had not unexpected fatigue, malaise, and fever for 1 day but better after that. On Monday she began complaining of shortness of breath. This progressively worsened and she started having presyncopal episodes. On Saturday she was unable to come down the stairs in the house so husband planned to take her to the hospital but she stood up and passed out and woke up quickly. He decided to call EMS. By the time she presented to our hospital she was cyanotic and agonal breathing. On moving her from EMS stretcher to ED bed she had PEA cardiac arrest. She underwent mechanical device CPR with only brief (<1 min) ROSC x1. She at some point did have a shockable rhythm. Cath lab was notified and she was taken emergently to the cath lab with ongoing mechanical device CPR. Peripheral VA ECMO was placed after about 1.5 hours. Pulmonary angiogram was done which showed massive saddle PE with near complete obliteration of the right pulmonary tree and some filling defects in the left tree as well. At that time she had severe mixed respiratory and metabolic acidosis with a lactate of 24. She also had no gag or corneal reflex, minimally responsive pupils, and no response to noxious stimuli. Mechanical thrombectomy was attempted with some result. She was transferred to the SICU with increasing pressor requirement, and DIC. Ultimately, the venous catheter of the ECMO circuit malfunctioned thought to be secondary propagating IVC thrombosis. Family decided to withdraw care and she passed away. |
| 1122086 | 3/22/2021 | NE | 58 | F | 2/16/2021 | 2/17/2021 | Normal reactions such as body aches, fatigue, pain at injection, but also Extremely high temperature (not taken) which resulted in fainting and brief loss of consciousness. |
| 1122164 | 3/22/2021 | NJ | 28 | F | 3/3/2021 | 3/3/2021 | Patient post-vaccine felt hot and anxious. Patient passed out and fell out of chair. She was witnessed by staff. No LOC, post-fall immediately AAOx3. Vital signs 120/64, HR 90, rr 20, spO2 99%. ice pack applied to forehead, denies any pain. Patient able to go home. |

| 1122174 | 3/22/2021 | NY | 30 | F | 3/18/2021 | 3/20/2021 | Patient reports she got her Covid-19 vaccine 2 days ago, first dose and has felt fatigued since then. Patient states she vomited in the lobby and then passed out, now feels better, able to drink a glass of water. No other symptoms, no CP, no SOB. |
| 1122296 | 3/22/2021 | CO | 23 | F | 3/19/2021 | 3/19/2021 | Within about 5 minutes of patient receiving the vaccine, she began to feel dizzy and nausea. She proceeded to have several episodes of vomiting afterward. She was treated with oral Benadryl 25mg PO x1, but vomited afterward. She was later administered Benadryl 25mg IM x1 and Zofran 4mg ODT x1 with improvement in her symptoms. Vital signs remained stable throughout 2 hours of observation and she was discharged home. Subsequent telephone follow-up indicated patient's initial symptoms continued to improve by the evening and the following day. Patient never developed syncope, rash/hives/SOB/lip, tongue or throat swelling. |
| 1122524 | 3/22/2021 | NV | 49 | F | 3/4/2021 | 3/6/2021 | I fainted and once I woke up I could not muster the strength to get up. I couldn't get my legs underneath me, I couldn't push myself up with my arms. I had to call a friend to come help me get to my bed. It took me 15 minutes to scoot myself to get to the front door. It took another 10 to try to unlock it. I spent the next 2 days in bed very fatigued with my legs feeling like jelly. I am still very fatigued but getting better every day. I was also experiencing hot and cold chills for about 2 weeks after the vaccine. I did not seek any medical treatment. |
| 1122554 | 3/22/2021 | WI | 33 | F | 3/19/2021 | 3/20/2021 | Vaccinated at 12:00 19Mar2021. Sore arm started a couple hours afterward and is still present. Started experiencing fogginess and feeling cold at 1:00 am 20Mar2021. Went to bed at 1:00 and dreamed of being sick until waking up at 8:30 am 20Mar2021. Woke up and was very weak (could not push toothpaste through toothpaste tube), almost passed out in trying, so I sat on the floor. Tried getting back to bed and was extremely nauseous and started vomiting. After that, I had the sweats/fever/chills for a couple hours (until ~11:00am), and was fatigued until 4:00 pm. Spent most of the day sleeping, unable to do anything. Today, 22Mar2021, feel slight tingling on palm of left hand and fingers. Injection site is still sore and bruised |

| 1121859 | 3/22/2021 | NY | 79 | F | 3/6/2021 | 3/1/2021 | I went to the bathroom and the next thing I know was that I woke up on the bathroom floor, I passed out for couple of minutes; Chills; Weak; Dizzy; Nausea; Sore arm; This is a spontaneous report from a contactable consumer (patient). A 79-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection; Lot number was not reported) via an unspecified route of administration, at the age of 79-year-old, on 06Mar2021, as SINGLE DOSE for covid-19 immunisation. The patient medical history was not reported. The patient's concomitant medications were not reported. The patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection; Lot number was not reported) via an unspecified route of administration, on an unspecified date, as SINGLE DOSE for covid-19 immunisation. After taking the second dose on 06Mar2021, the patient waited for half an hour and there was no problem. The patient came home no problem. In the middle of the night, the patient woke up with chills, the patient know that is one of the side effects, she was okay and not worried about it. The patient took her temperature that was normal but then couple of hours later, she went to the bathroom and the next thing she knew was that she woke up on the bathroom floor, the patient passed out for couple of minutes. Then she went to bed and was very weak and dizzy and nausea. The patient didn't want to call right away or did not wanted to go to the emergency room. The patient called her friend because she got very nervous and she said come back to her house. The patient took a Benadryl (treatment) and came back home and slept few hours. The patient woke up this morning, felt pretty good and took Benadryl (treatment) and then came here of her friend house and took Benadryl (treatment) again few minutes ago and four hours later. The patient had several things like these like she was dizzy and had nausea. The patient felt okay now and she doesn't want to go to emergency room and she seems to be fine now. The patient was dizzy, nausea and passed out. The patient had a chills and experience sore arm. Outcome of the events was recovered in Mar2021. Information on the lot/batch number has been requested. |

| 1124638 | 3/22/2021 | OH | 30 | M | 3/22/2021 | 3/22/2021 | During the 15 minute observation period after injection, patient returned to the check-in desk complaining of dizziness. He was brought immediately to exam room where he became pale, diaphoretic, and stated he "felt like he was in a dream." Seated BP was 74/palp. He was placed in supine position on exam table, cool compresses placed on forehead and back of neck. He complained of some nausea, which quickly improved. He never lost consciousness. His color and alertness improved steadily over the next 10 minutes. Repeat BP (lying) was 100/50. After a few minutes he sat up on exam table, dangling legs. BP remained stable at 110/60, HR 84. He continued to improve and stated that he felt better, drank some water and ate some goldfish crackers. Reported that he just remembered he had not eaten since lunch. After another 5-10 minutes he was alert, oriented, able to walk unassisted. Final BP 114/70, HR 80. His wife remained with him and confirmed she could drive him home. Discussed that although I feel confident this was a vasovagal near-syncope, if symptoms recur or worsen, he should go to ER for evaluation. Understanding verbalized. |
| 1124221 | 3/22/2021 | TX | 63 | F | 3/18/2021 | 3/19/2021 | 22 hours after being vaccinated, I fainted (approximately 7:00 AM the next day), the duration of fainting was more or less than a minute. The rest of the day I felt very weak. I had a fever of 37.5C. My blood pressure was normal (good), just my heart rate a little high (I usually monitor 70 and it was close to 100 for several hours after fainting). During the night before the event, I got up to urinate several times and usually I only get up once. I did not take any medications or supplements on the day of the vaccination. I also did not take painkillers after vaccination. |

| 1124802 | 3/22/2021 | MN | 31 | M | 3/22/2021 | 3/22/2021 | Pt went to sit down to wait 15 minutes after his Pfizer/BioNTech COVID-19 shot at about 7 pm on March 22, 2021. Approximately five minutes later he mentioned to his female colleague who was with him that he felt feverish and sweaty and when he reached over to get a drink from his water bottle he fell over and passed out for a few seconds. By the time I ran out to check on him he was already getting up and I had him sit in the chair while my technician called 9-1-1. The paramedics soon came out (I think it was about 10 minutes) and checked him out. Both theirs and my IR thermometers showed a normal temperature. His BP was normal according to the paramedics. They asked some more questions and ultimately let him go home under his own power with his female cohort. |

| 1123724 | 3/22/2021 | NY | 67 | F | 3/17/2021 | 3/19/2021 | I was walking out of my apartment building to my car inside the garage on Friday at 6:00 pm. As I was walking, my arms & legs began to feel heavy. By the time I reached the garage I was feeling extremely fatigued. I got inside of my car and thought to myself that I've never felt this tired in all of my life. I then felt very cold and decided it was best to go back upstairs. When I into my apartment unit - my cats greeted me as if I was gone for an extremely long time - and I noticed the sun coming in through my windows when the sun should have been on the other side of the building at 6:00 pm. Both the cats & the sunshine told me something was very wrong. I looked at the clock - it said 8:08. I put on the tv and discovered it was 8:08 A.M. on Saturday morning. I had fallen asleep (or passed out) in my car from 6pm Friday evening until 8am Saturday morning. I have no sleeping disorders & do not require naps during the day. Today I still feel fatigued, but only slightly. From the time I entered my car at 6pm Friday - until the time I exited my car at 8am Saturday - it felt as though only moments had passed. I had no idea I had fallen asleep or passed out. |

| 1124115 | 3/22/2021 | FL | 50 | F | 3/15/2021 | 3/16/2021 | Moderna COVID-19 Vaccine The morning post second dose of vaccine, I felt nausea like symptoms which followed by fainting spell. In the afternoon had similar nausea like symptoms but felt okay after few minutes without fainting. Next day, 2 days post second dose of vaccine, felt like little nausea like symptoms but resolved quickly. |
| 1124133 | 3/22/2021 | | 49 | M | 3/20/2021 | 3/20/2021 | Vasovagal event without syncope post vaccine. Clammy and nauseous with tingling to hands. EMS and Dr on site. Blood pressure 90/49 at 18.10. at 18.15 blood pressure was 114/81. Released home and advised to seek medical attention later if needed, client verbalized understanding. |
| 1124201 | 3/22/2021 | ND | 33 | F | 3/15/2021 | 3/17/2021 | Call received from patient who was advised to call to report a reaction to the COVID-19 vaccine. Patients history includes contracting COVID back in June of 2020 for which she spent 2 days in the hospital. In November of 2020, she reports she ended up in the hospital for another 2 days and was diagnosed with post-COVID POTS. She then went to medical facility and underwent 6 treatments of hyperbaric oxygen in February of 2021. Patient states that after these treatments, she felt great. She has reportedly been out of work since November, I believe, and was given the OK to return on 3/10/21. She was also advised by her neurologist that she should take the COVID vaccine which she did on 3/15/21. Two days later, on 3/17/21, she states that her POTS was "triggered" and she began to experience dizziness, fainting, fatigue, headaches, nausea and vomiting and various GI issues. Currently, she states these symptoms are getting worse, instead of better, and she has been unable to work, missing last Thursday and Friday, and will be going home early today. She asks if she should get her second COVID vaccine. I advised that is something she needs to discuss with her primary care provider. |

| 1119802 | 3/21/2021 | ME | | F | 2/10/2021 | 2/10/2021 | Dizzy/dizziness; Nausea; Fatigue; first day after administration of the vaccination the patient fainted; Diastolic in the 40s; Heart squeezing; Unresponsive for 30 seconds; A spontaneous report was received from a consumer concerning a female patient who experienced unresponsiveness for 30 seconds/altered state of consciousness, dizzy/dizziness, diastolic in the 40s/blood pressure diastolic decreased, heart squeezing/palpitations, dizziness, fainting/syncope, nausea and fatigue. The patient's medical history was not provided. Concomitant product use was not provided by the reporter. On 10 Feb 2021, approximately 10 days prior to the onset of the symptoms, the patient received second of two planned doses of mRNA-1273 (Batch number not provided) for prophylaxis of COVID-19 infection. On 10 Feb 2021, the patient reports she received the second dose of the vaccine. On day one was unresponsive for 30 seconds and has been dizzy since. The next day she fainted after administration of the vaccine. The first 5 days after receiving the vaccination, patient felt like her heart was being squeezed. Diastolic dropped to 40s and heart rate has not been higher than 70. On following up, she reports having nausea and fatigue now along with dizzy feelings. Treatment information was not provided/unknown. The patient received both scheduled doses of mRNA-1273 prior to the events therefore, action taken with the drug in response to the events is not applicable. The outcome of the events, unresponsiveness for 30 seconds/altered state of consciousness, diastolic in the 40s/blood pressure diastolic decreased, heart squeezing/palpitations and fainting/syncope, were considered resolved. The outcome of the events, dizzy/dizziness, nausea and fatigue, were considered unknown. Follow-up received on 19 Feb 2021 included that the patient now has nausea, fatigue and dizziness.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

Got up and again collapsed passed out =don't remember it happening Went to ER for fall and analysis as to what , why, etc. I would be having this acute autoimmune reaction... blood work etc. you can contact the LWRM and Dr for details. |
| 1120152 | 3/21/2021 | MD | 45 | M | 3/21/2021 | 3/21/2021 | 45 yo M had syncopal episode after getting vaccine. Has hx of vasovagal syncope, usually with medical procedure or blood draws. Passed out for about 40 seconds, witnessed by son who was in the car. On my evaluation, symptoms had resolved,pt was asymptomatic, vitals unremarkable. Given juice, and observed in car. Subsequently discharged home. |
| 1120145 | 3/21/2021 | PA | 52 | F | 3/18/2021 | 3/19/2021 | The morning after receiving the shot I ran 104 fever all day 102 with Tylenol was very tired and slept through to Saturday Saturday was running between 102 and 100° temperature with Tylenol cannot take Advil. I was experiencing headaches all day. The following morning on Sunday I woke up and passed out, I guess my blood pressure dropped and I don?t know why and this is never happened. Had no appetite since Friday and maybe that?s why but my BP is 120/60 as of 10:08am AFTER I passed out at around 8:30am. I?m now feeling better all of a sudden, can drink coffee and hopefully I?ll get a shower..... oh and my joints are sore, I think whatever could go wrong , did! |

| 1119976 | 3/21/2021 | FL | 80 | F | 1/7/2021 | | passed out; Did not get second Covid 19 vaccine when scheduled; 50 days since las shot; first Covid 19 vaccination lot number says RL3246; This is a spontaneous report from a contactable consumer, the patient via the Pfizer sponsored program. A 80-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), intramuscularly on 07Jan2021 at 12:00 (at the age of 80-years-old) as a single dose in the right arm for COVID-19 vaccination. Medical history included ovarian and endometrial cancer. Concomitant medications were not provided. The patient did not receive any other vaccinations within four weeks of immunization. On 07Jan2021, the patient received the first Pfizer shot. When she went for the second shot, she was waiting outside in the heat (she is a cancer victim) and she passed out so they wouldn't give her the second shot. She mentioned that, then, she couldn't go back because of cancer treatments she was being given and the facility was only open in that community for a certain amount of time. She finally went for a second shot at a different facility ("Institute") but she was told that she couldn't get the shot because "they didn't know if the first shot was real" as they had a different lot number than the Pfizer lot number that she had. She explained further that her first COVID 19 vaccination lot number is recorded on her vaccination card as "RL3246." Her husband's COVID 19 vaccination card says "EL3246" for lot number and they received injections on the same day. The caller believes her lot number should also say "EL3246" - she thinks it's a small written 'e.' The patient added that, as of the reporting date, "It is 50 days since I had the last shot." She also asked if she has to retake the vaccines or if she can just take the second dose. The clinical outcomes of the event "passed out" was not provided. |
| 1119390 | 3/21/2021 | NJ | 60 | M | 3/20/2021 | 3/20/2021 | Systemic: Fainting / Unresponsive-Mild, Additional Details: Small laceration on right ear from falling into shelving area. Cleaned and applied pressure by who was first on scene. |

| 1121047 | 3/21/2021 | GA | 30 | M | 3/21/2021 | 3/21/2021 | PATIENT PASSED OUT OF CHAIR ABOUT 12 MINUTES AFTER RECEIVING VACCINATION. SLOWLY FELL TO GROUND. DID NOT HURT HIS HEAD OR ANY OTHER BODY PART. IMMEDIATELY REGAINED CONSCIOUSNESS. KNEW WHO HE WAS AND WHERE HE WAS. REQUESTED WATER WHICH WAS GIVEN TO HIM. WAS VERY WARM TO TOUCH AND LIGHTLY SWEATING AROUND THE FOREHEAD. 911 WAS CALLED. EMTS CHECKED VITAL SIGNS AND COGNITIVE FUNCTIONS. PT COULD STAND UP AND WALK ON HIS OWN BUT WAS ESCORTED OUT OF STORE ON STRETCHER FOR SAFETY. |
| 1120628 | 3/21/2021 | FL | 62 | F | 3/13/2021 | 3/15/2021 | No symptoms after the vaccination on the day of or the day after getting the vaccine. Two days after the vaccine, while at orthopedist (for a Rotator Cuff Surgery), I began to feel dizzy. I sat down for a few minutes, drank some water, and then resumed my therapy. After the first set of my 4th exercises I began to get dizzy, I sat down on the PT table, then laid down and fainted for about 1-2 seconds. My blood pressure plummeted to 60/?. EMT's and an ambulance were called. I was given an IV and taken to hospital. In the ER, my blood pressure elevated to 205/121. (I think that was it.) I was given a cat scan, ekg, chest X-ray, blood tests, etc. All tests were normal except a very slight (by one number) magnesium level. I was admitted for observation and more tests were performed. My blood pressure remained high, but I had no more dizziness or syncope. I was given many more blood tests, imagining, ultrasound of heart, ultrasound of carotid arteries, ultrasound ?bubble test,? nuclear heart treadmill stress test. All tests were normal. The only change in my health that can be attributed to this episode is the Covid vaccine. |

| 1120131 | 3/21/2021 | FL | 55 | F | 3/17/2021 | 3/17/2021 | I had awful nausea, loud ringing in the ears, I fainted. The medics provided help, gave me oxygen. I started having convulsions. After some time I felt like the lower part of my face went numb and it took tremendous effort to move my lips to talk. At that point, the medical called the ambulance and sent me to ER, where I was under supervision for some time. I was very weak and nauseated. After I was released, I was very weak could not keep the vertical position. The next day I was very nauseated, with awful tinnitus, lightheadedness, and weakness. Staying vertical for more than 15 minutes brought fainting symptoms. I was not able to get out of the house to work. The next day the fainting symptoms disappeared, everything else continued. Too weak to go to work. I started moving about only on the 4th day after the shot. During this event, I did not have any fever or muscle ache, no virus0tyle symptoms. |
| 1121125 | 3/21/2021 | MD | 74 | F | 3/11/2021 | 3/12/2021 | Woke Friday am with no control over my bladder and violent shaking of my legs with pain radiating from my hips. Fever of 100.9. Couldn't move my legs or sit up and eventually fell to the floor on my back. Spent over an hour using my elbows to scoot across floor. Hit head 3 times and passed out for awhile. Got help and went to the ER. CT showed no concussion. Pain reliever helped and after several hours was discharged with instructions to use a walker. Used walker for 2 days and then cane. Still have leg pain on occasion and now the Vertigo is worse. Also had reaction to first vaccine but just high fever, 101.4 and aches. |
| 1120638 | 3/21/2021 | TN | 48 | F | 3/20/2021 | 3/21/2021 | I went to bed with a stomach ache around 10:00pm. At 3:00am I was awoken by severe abdominal pains/cramps and in a cold sweat. When I got out of bed I was lightheaded and passed out in the bathroom as I was getting Tylenol. I took 2 Tylenol and had diarrhea about 10 mins later. I went to get some gatorade and passed out again in the hallway on the way to the kitchen. About an hour after taking Tylenol symptoms began to improve but became nauseous and couldn't get back to sleep. As of 2pm Sunday current symptoms are extreme nausea and extreme exhaustion. |

| 1121002 | 3/21/2021 | VA | 21 | F | 3/21/2021 | 3/21/2021 | Patient experienced syncope after administration of her first COVID vaccine. Her mother is a physician and was present, providing care for her by fanning, comforting and helping her to lie down on the floor next to the waiting chairs. The patient did not faint. She did experience what appeared to be heavy breathing and light-headedness. We provided an ice pack from the immunization cart. The mother stated that the patient experiences this reaction every time she receives a vaccine due to her fear of needles. After about 30 minutes the patient was up and smiling. The family was thankful for our concern and help. |
| 1121275 | 3/21/2021 | NY | 31 | F | 3/18/2021 | 3/19/2021 | Patient got up middle of the night to use the restroom feeling extreme dizziness. Patient fainted while seated on the toilet, did not suffer any known injuries. Regained consciousness and was still very dizzy. Went back to sleep and woke up without dizziness. Fatigue and weakness for the next day. Patient feeling back to normal minus the rash on injection site and slightly worried about dizziness at the second shot scheduled for April 15th. |
| 1121014 | 3/21/2021 | IN | 28 | F | 3/21/2021 | 3/21/2021 | Syncope, tachycardia, shortness of breath, chest pain/tightness, throat tightness. Resolved in 10 minutes. No treatment needed. |
| 1121335 | 3/21/2021 | NJ | 47 | F | 3/20/2021 | 3/21/2021 | Headache, dizziness followed by blackout/fainting resulting in head bruise and swelling. Rest at home, cold compress for swelling, Tylenol. |
| 1120987 | 3/21/2021 | FL | 19 | F | 3/21/2021 | 3/21/2021 | Pt had a fainting spell. At first it appeared as if she was potentially having a seizure. After about 3 minutes she came to and was fine. She was examined by EMS and was released to going home own her own with her friends. |

| 1120981 | 3/21/2021 | OK | 16 | M | 3/21/2021 | 3/21/2021 | Patient received vaccine and went to sit down in front of pharmacy. He then immediately started feeling lightheaded, his eyes rolled into the back of his head and he had a couple of convulsion. He did not lose consciousness and was immediately aware. He was pale, lips were blue tinged, pulse was 60, sweating and blood pressure was 98/50. Paramedics were called but he had recovered by the time they got there. They said he had a fainting episode due to the vaccination and did not have a seizure. The patient had not eaten anything the whole day and he felt that contributed. Followed up with patient's parent and he is feeling just fine now. |
| 1120881 | 3/21/2021 | CA | 68 | F | 3/13/2021 | 3/14/2021 | 3/14, 1 AM--awoke with fever, could not sleep for more than an hour or more at a time. Got up at 7 AM and took a Tylenol and drank water. Extreme weakness for the rest of the day with chills, some body aches, a little nausea. 3/15, 7 AM--woke up after 9+ hours of sleep and felt great. Drank water, took the dog for a walk (about an hour). Returned to my house and was talking to a neighbor when I was overwhelmed with lightheadedness and nausea, told her I needed to sit down and suddenly passed out. Came to in about a minute, had a cut in my head from hitting the concrete and could not stand without feeling dizzy. An ambulance was called and I was transported to the local hospital. Was given fluids and anti-nausea medication in the ambulance. |
| 1120810 | 3/21/2021 | TX | 19 | F | 3/21/2021 | 3/21/2021 | Patient passed out shortly after receiving first dose of pfizer covid 19 vaccine. Pt stated that she has fainted before after receiving IM injection, but failed to mention on consent form |
| 1120804 | 3/21/2021 | IL | 22 | M | 3/21/2021 | 3/21/2021 | Upon administration patient passed out in chair within minutes. Patient became very limp and jerky. Within minutes patient came to and was able to respond to questions |

| 1120639 | 3/21/2021 | PA | 28 | M | 3/16/2021 | 3/17/2021 | I started to get uncontrollable shakes the night of my vaccine for 10-15 minutes. I had chills for about an hour afterwards and a sleepless night. The next morning I woke up with a headache and was achy/sore throughout my body. While I was eating I passed out without any signs. I was unconscious and do not remember the episode. Once I was alert, I felt nauseas and was heading to the restroom when I passed out again and was unconscious. I do not remember the episodes. There were no signs of passing out before I did either time. |
| 1120935 | 3/21/2021 | OH | 51 | M | 3/1/2021 | 3/1/2021 | About 10 minutes after the shot I started feeling hot, started sweating, clammy hands, dizzy and then I passed out walking to get help. I hit my head on a chair when I was falling and cut my head. I stayed laying down because I was still dizzy and hot. They called the squad and did vitals and I was fine. I sat there for about another half an hour and I went home. I have felt fine ever since. Only thing that hurt was my head from the fall. |
| 1120696 | 3/21/2021 | ME | 21 | F | 3/21/2021 | 3/21/2021 | after receiving immunization patient felt hot and dizzy. She then fainted and lost consciousness for about 10 seconds. |
| 1118671 | 3/20/2021 | CA | 38 | M | 3/20/2021 | 3/20/2021 | Pt. was screened twice about allergic reactions any medical conditions/immunocompromised etc. Pt. responded no to all of the above questions. He was vaccinated IM on left arm. Pt. was educated about post care. Pt. was alert. I moved on to the next two cars and on the third car and about three minutes after his female partner called out for help and said that the Pt. passed out. That's when the other nurse ran to the car to check on him and told me he was having a seizure. I ran to the lead to explain what happened and to call the medical team right away. The other nurse was stabilizing the patient. The patient was going in and out of consciousness for about ten seconds. The medical team arrived and took vitals. |

| 1117993 | 3/20/2021 | FL | 39 | M | 3/15/2021 | 3/17/2021 | Feeling of manic depressive event. First a euphoric high day after dose. Then depressive feeling on second evening. Then near-syncope on day 3 post vaccine. Patient felt a sense of impending dread while lying down and receiving physical therapy on TENS unit with heat. Then, a heat throughout the body, followed by sweating. Lastly, a near loss of consciousness. Patient was inverted with legs up. Patient requested an ambulance. Airway was clear. The incident occurred again 2 hours later with same presentation. Patient went to ED and received IV and vertigo medication. No episodes after. |
| 1118583 | 3/20/2021 | CO | 62 | M | 3/13/2021 | 3/14/2021 | Janssen COVID-19 Vaccine EUA 2 1/2 days of severe flu symptoms. Nausea, Fever, Chills, weakness, no sleep. The next days nausea and light headedness Day 7 (today 3/20/2021) nausea, weakness, and fainting spells. Fainting spells include vision impairment (everything looks fuzzy like a bad tv reception). |
| 1118317 | 3/20/2021 | PA | 31 | M | 3/20/2021 | 3/20/2021 | Patient received vaccine and was fine until after a few minutes. He started to say he felt lightheaded. He placed his head between his knees, he started to sweat and I gave him some water at his request. He sat back and started to get pale and more sweaty, he complained about pain in his arm and neck. He then began to slightly shake and passed out. He was awoken very quickly by his wife who was standing in front of him. We kept talking to him and I checked his pulse and called 911. After about 30 minutes he was feeling much better and did not need to go to the hospital. His vitals were strong and he walked out on his own. I contacted him 3 hours later and he was resting but feeling fine. |

| 1118256 | 3/20/2021 | MN | 28 | F | 3/20/2021 | 3/20/2021 | Patient had appointment at 9:20 am. She was fine during the check in process, while receiving the imz and the 15 mins post vaccination wait time. Approx 10 am she left the IMZ room and about halfway through the store, she fainted. CSM said she fell outside of patient's room and did not seem to hit her head or neck. 911 wasn't called because she came to right away. They got her water and a chair. I was brought over approx 10:10 am. I talked with her and she seemed cognitive, lucid and understands who she is, where she is and what happened. She said she waited the 15 min and felt totally fine but then she got up and fell about halfway through store. Approx 10:20 am we brought her over to pharmacy area for more privacy and RPH checked her BP. reported 130/90. I asked patient if she wanted the paramedics called just in case of a head injury. I asked her before palpating her head and neck. She said she felt no pain, no visible bleeding or lacerations, no inflammation or redness and she has full mobility in her neck with no pain. Patient said she did not want paramedics called and instead called her mother in law who lives nearby to see if they can come get her. She is worried about 40 min drive home. Pt overall physically seemed fine. She was just shaken, nervous and embarrassed as she's never had something like this happen before. She waited for about 20 mins until her father in law came and picked her up. I updated him of the situation and they left together. |
| 1118194 | 3/20/2021 | NJ | 51 | F | 3/11/2021 | 3/12/2021 | I had stomach pain about 2 hours after the injection. I went to sleep at 10 pm and woke up at 2 am to go to the bathroom. My legs felt like I could barely move them but I was able to go the bathroom. Once I got up and walked toward the bathroom door I hit my head into the door. I ended up on the floor. I sat up and my husband came in. He said I was mumbling incoherently and then passed out for about 28 seconds. He said my arms were moving up and down while passed out. I woke up covered in sweat and he put me in bed. I slept until 8 am and then woke up with a headache, nausea, body aches and dizziness. The headache and dizziness lasted until 3/18/21. |

Patient woke up with brief seizure(jerky movement) and vomited couple times. Patient complained about dizziness. Patient was taken to the emergency room. |
| 1118018 | 3/20/2021 | MA | 67 | F | 3/18/2021 | 3/19/2021 | I got up around 8:30 , went to the toilet, and as I was washing my hands, I blacked out. I slipped to the floor and then vomited several times. Fortunately, I had not eaten since about 7 pm the night before, but I still expelled material. Stayed in bed all day. Drank lots of water and slept. FEEL MUCH BETTER today....eating and vertical. PS After the first shot, I slept most of the next day, felt very achy, sweated, and had a headache. Those symptoms disappeared after about 24 hrs. BUT about a week after the first shot, I developed a large rash not on, but rather near the injection site. It was itchy for a day or two, as well. As I said, I feel much better today, but just thought you should know, especially because the fainting and vomiting are not listed as common reactions. THANKS |

| 1119162 | 3/20/2021 | CA | 27 | F | 3/20/2021 | 3/20/2021 | Patient stated that she was fainted from last year travel vaccine. Immunizer and patient both aware it might happen. immunizer told patient will monitor closely then gave the shot. Right after shot, patient stated that she is feeling dizzy and is going to faint. she fainted. gained conscious right after (about 2- 5 seconds) and offered to call 911 and she said it is ok. She was sitting that same chair for 10 minutes, then she wanted to sit on the ground (not lying down) . after she was sitting on the ground, she felt better, so we moved to outside of immunization area chair for monitor. She felt fainting is coming again so she sit on the ground. but she did not faint again. She wanted to lying down. she lied on the ground for about 20 minutes , then sit up for another 15 minutes. she felt find and went home . checked back 3:30 pm on same day, she was ok . |
| 1119123 | 3/20/2021 | AK | 24 | F | 3/17/2021 | 3/18/2021 | Sudden nausea and vomiting the morning after vaccine (8:30am; got vaccine at 6:10 the night prior). After getting sick, suddenly got very lightheaded and dizzy and fainted in shower. Awoke and had severe fever and headache the rest of the day after vaccine (102°F fever). |
| 1119113 | 3/20/2021 | CA | 24 | M | 3/12/2021 | 3/12/2021 | Patient fainted after vaccination, while waiting in the seating area during the 15 min observation period |
| 1118763 | 3/20/2021 | NY | 23 | M | 3/13/2021 | 3/13/2021 | Shortly afte receiving the vaccine, the patient fainted. The paramedics were called and the patient attributed this to his underlying anxiety; he also stated he was anxious about getting the vaccine. |
| 1119057 | 3/20/2021 | MO | 18 | F | 3/20/2021 | 3/20/2021 | Patient had a vasovagal syncope response tonight (3/20/2021) after receiving her first dose of the Moderna Covid-19 shot. Patient did not make contact with the ground. A friend was present who caught her and made sure that she wasn't injured. Patient was monitored for 1/2 hour after vaccination and left under her own power after that time. Patient was asked if they wanted to make a report and they declined. |

| 1119080 | 3/20/2021 | WA | 27 | M | 3/20/2021 | 3/20/2021 | Patient became pale and then experienced syncope. Friend caught him as he fell. Did not hit his head. Patient was placed on the ground in Trendleberg. Due to him not having eaten in the previous several hours, he was provided with orange juice after approximately 10 minutes. Colour soon returned to his face. He was placed upright and asked to wait for an additional 30 minutes. |
| 1118902 | 3/20/2021 | | 61 | M | 3/20/2021 | 3/20/2021 | After receiving vaccination, patient proceeded to observation area. He passed out briefly, then regained consciousness, but was sweaty, disoriented, dizzy and drowsy. EMS was called, he asked to lie down and was helped to ground into a recovery position. EMS arrived and took him for further evaluation. |
| 1118789 | 3/20/2021 | CA | 32 | F | 3/11/2021 | 3/11/2021 | On Thursday March 11, 2021 I received my first dose of Pfizer COVID vaccine. Within about 5 second after administration I began to feel severe arm pain spreading from the injection site down to my fingers that were tingling and numb. Then within about 20 seconds of the vaccine I fainted. The fainting spell was brief, a few seconds, but the symptoms that continued after were long lasting. My blood pressure after was about 80/50, I was diaphoretic, pale, had moderate arm pain (tingling, numb, painful to move) and severe nausea. I was also light headed. These symptoms lasted through the night but I felt overall improved the next day other than fatigue and lingering arm pain. Then on March 16, 2021, 5 days later, I woke up with extreme fatigue. Over the course of the day I then began to get a headache. I got back in bed and then in the afternoon started to feel moderate arm pain again at the injection site and down the entire arm. Then severe nausea set in again along with more diaphoresis, chills and light headedness. The symptoms this time again lasted through the night and I felt better again the next morning. |
| 1118832 | 3/20/2021 | NC | 21 | M | 3/20/2021 | 3/20/2021 | Patient fainted approximately 2 minutes after the vaccine was administered |

| 1118838 | 3/20/2021 | OH | 34 | F | 3/18/2021 | 3/20/2021 | Of course I had side effects like aches, bone pain (mainly spine and sternum), kidney pain, abdominal pain, sweating with no fever, etc. But none of that is an adverse effect. The adverse effect happened when I was taking a shower 45 hours after my second vaccine. I was starting to feel better at this point. I started to feel like I was going to pass out. I quickly turned off my shower and sat down. I would have passed out had I not focused to not. I felt nauseous, lost my hearing and started to lose my sight. After I was ok, my lips were blue/Gray. I don't pass out. I've passed out twice in my life when I was much younger. That's how I knew what was happening. I'm scared this will happen again and I don't know what this means. |
| 1118853 | 3/20/2021 | WI | 17 | F | 3/20/2021 | 3/20/2021 | Patient fainted roughly 5 minutes after receiving the vaccine. She was sitting down on a chair resting her head on a table in the waiting room. She felt lightheaded and then fell down to the ground. Her mom was with her at the time. We made sure she was not having an allergic reaction. Patient responded seconds after she was on the floor but was not coherent. EMS was called and arrived within minutes. Patient was accessed and transported to the hospital. |
| 1118861 | 3/20/2021 | OH | 37 | M | 3/19/2021 | 3/19/2021 | Joint and muscle pain, Low heart rate, low blood pressure, syncope |
| 1118884 | 3/20/2021 | NC | 35 | F | 3/15/2021 | 3/15/2021 | At an offsite J&J clinic. She has a history of fainting from needles. About 10-15 minutes after her vaccine, she passed out in her chair losing consciousness. We called 911, moved her to the floor, elevated her feet, and monitored her breathing. She was out for about 1 minute. EMS arrived and evaluated her for about 1h before she walked out on her own. |

| 1118774 | 3/20/2021 | OK | 23 | M | 3/20/2021 | 3/20/2021 | After giving the patient his Covid Vaccine, he tensed up and said he was feeling like he may vomit. He then became very pale and fainted while in the vaccination chair. After a few seconds he regained consciousness. We then helped him to the floor and elevated his legs and placed a cold pack on his neck. He started feeling better instantly but we kept him there for about 5 minutes. We then had him move to a chair and the technician sat with him for an additional 40 minutes. He then said he was fine and that he has fainted before (which was not disclosed) and left. |
| 1115214 | 3/19/2021 | IN | 22 | M | 3/17/2021 | 3/18/2021 | Felt weak, dizzy and passed out about 3 hours after receiving vaccine |
| 1115660 | 3/19/2021 | UT | 57 | F | 3/18/2021 | 3/18/2021 | DURING THE 15 MINUTE OBSERVATION PERIOD, ABOUT 5 TO 10 MINUTES POST VACCINE THE PT FAINTED WHILE SITTING IN HER CHAIR AND FELL OUT OF THE CHAIR. I INSTRUCTED A TECH TO 911 WHILE RAN TO THE PT. AS I TOUCHED HER TO FEEL FOR A PULSE SHE REGAINED CONSCIOUSNESS. I EXPLAINED WHAT HAPPENED AND ASKED HER TO STAY WHERE SHE WAS AT UNTIL PARAMEDICS CAME. SHE WAS ALERT AND ABLE TO ANSWER QUESTIONS. THE PARAMEDICS ARRIVED ABOUT 5 MINUTES LATER. THEY GOT HER UP AND SHE HAD A SEIZURE. THE TOOK HER TO AND UNKNOW HOSPITAL |
| 1115841 | 3/19/2021 | OH | 44 | M | 3/19/2021 | 3/19/2021 | Five minutes after receiving the vaccination on her left arm, she developed nausea and lightheadedness and weakness. No vomiting or syncope. She was escorted to a private session of the arena and monitored. Her initial blood pressure was 140/80. She was given water to drink and ate an apple. |
| 1115789 | 3/19/2021 | CA | 30 | F | 3/18/2021 | 3/18/2021 | First Moderna Covid Vaccine administered in the right deltoid. Patient felt fine, and ambulated to the observation area. She took a seat, and then shortly thereafter passed out in her chair. Nursing responded; vitals were taken, and recorded in her chart. Patient was transported via wheelchair to the Urgent Care within the facility. Patient was observed, assessed by a Physician's Assistant and released home without further incident. No medications or diagnostic tests were ordered at the time. |

| 1115649 | 3/19/2021 | NY | 65 | F | 3/17/2021 | 3/18/2021 | Patient reports receiving the second dose of the vaccine on 3/17, feeling weak that night. on 3/18 she passed out x2 for several seconds each time. No postictal response. Patient was brought to the ER, diagnosed with vasovagal response Chest xray, EKG, labs normal |
| 1115599 | 3/19/2021 | | 42 | F | 1/19/2021 | 1/20/2021 | Passed Out; Possible Seizure; Swollen Tongue; itches; Headache; shivering; shaking really bad; A spontaneous report was received from a nurse who was a 42- year-old, female patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and who experienced shivering, shaking really bad, had a headache day afterwards, tongue was swollen, passed out and doesn't know if she had a seizure and itchiness. The patient's medical history was not reported by the reporter. Concomitant medications were not provided. On 19-Jan 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: 039K20A) intramuscularly for prophylaxis of COVID-19 infection. On 20-Jan-2021, 24 hours after vaccine administration, the patient reported that she was shivering and shaking really bad and had a headache day afterwards. On an unknown date, she reported that her tongue was swollen. She also reported that the she passed out and doesn't know if she had a seizure (date unknown). The patient reported that she took ibuprophen for her headache and diphenhydramine for itchiness. On 28-Jan-2021, she reported that she felt fine. Treatment for events included ibuprophen and diphenhydramine. Action taken with mRNA-1273 in response to the events was unknown. The outcomes of events, experienced some side effects was unknown, shivering, shaking really bad, had a headache day afterwards, tongue was swollen, passed out and doesn't know if she had a seizure and itchiness, were considered recovered/resolved on an unknown date.; Reporter's Comments: Based on the information provided and a strong temporal association between the reported events and administration of mRNA-1273 vaccine, a causal association between the reported events and the product use cannot be excluded. Headache and chills are consistent with the known safety profile of the vaccine |

| 1115172 | 3/19/2021 | IL | 71 | F | 3/10/2021 | 3/10/2021 | Received the vaccine, and at 3:00 to 4:00 her left arm felt like it was in a vice, being squeezed tighter and tighter, and could not lift or move her arm. Took Tylenol which did not improve any symptoms. Got headache and had that with the arm in the pain all night long. Woke up totally drenched by sweating, and went to the bathroom and felt dizzy yelled for her husband and passed out, and her husband caught her while passing out and woke up on the floor. On the Thursday she was in her recliner the entire day, had nausea, fever, chills, headache, continued with the pain of the arm in a vice, which lasted all day long. Her husband forced crackers and water down her as she had no appetite either for 3 days. She felt so fatigued and her head was not clear. She slowly gradually improved, and yesterday 3/18/21 she feels her head fogginess has improved, and her arm is gone as she has been exercising with a band. It is a little sore but otherwise fine. The excruciating pain lasted for 2 full days. She put some Lidocaine and it possibly helped. She called her doctor and they told her to exercise the arm, and to take more Tylenol, which she had tried which did not improve anything. |

| 1114316 | 3/19/2021 | NC | 66 | M | 2/11/2021 | 2/12/2021 | Fainted; unresponsive; Chills; cool; pale; This is a spontaneous report from a contactable consumer (patient). A 66-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number: EN9581), via an unspecified route of administration, administered in right arm on 11Feb2021 at 01:30 AM (at age of 66 years old) at a single dose for COVID-19 immunization. Medical history included elevated cholesterols, prostate cancer-low-Gleason scale-7. Known allergies: Seasonal allergy, pollen. The patient previously took BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, lot number: 3L3247), via an unspecified route of administration, administered in right arm on 21Jan2021 at 02:30 PM (at age of 66 years old) at a single dose for COVID-19 immunization. The patient did not had Covid prior vaccination, also not did Covid tested post vaccination. Concomitant medications included atorvastatin calcium and tamsulosin. On 12Feb2021 at 12:30 AM, the patient experienced chills, cool, pale, moist skin. Fainted 22 hours' after received the second dose of vaccination. Was unresponsive about 30-40 seconds. After getting cold compress on the neck and face splashed with cold water, was able to answer basic question to EMS team who was called by patient's wife at 12:28 PM. EMS advise to drink a lot of fluids with/electrolytes also took 500 mg Tylenol rapid release gels and 4 hours later Aspirin 325 mg as Tylenol did not help. Stay warm in bad until next day. The events resulted in Doctor or other healthcare professional office/clinic visit. The outcome of the events was recovered in Feb2021. Information on the lot/batch number has been requested. |

| 1113922 | 3/19/2021 | NY | 77 | F | 2/23/2021 | 2/24/2021 | Fainted; lightheaded; This is a spontaneous report from a contactable consumer (patient). A 77-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), via an unspecified route of administration, administered in left arm on 23Feb2021 10:00 (lot number: EN6201) at the age of 77 years old, as single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient was not pregnant at the time of vaccination. The patient previously took codeine and experienced allergies. The patient previously received first dose of bnt162b2 on 04Feb2021 for COVID-19 immunization (product: COVID 19, brand: Pfizer, lot number: EL9264, administration time: 09:45 AM, vaccine location: left arm). Next morning after vaccination (occurred on 24Feb2021 08:00), the patient felt lightheaded while bending over to empty dishwasher. The patient sat down on chair; and the patient's husband found the patient on floor, as she had fainted. The patient had no recall of fainting. No treatment was given for the events. The patient was not diagnosed with COVID-19 prior to vaccination. The patient has not been tested for COVID-19 post vaccination. The patient did not receive other vaccines four weeks prior to COVID vaccine. The patient recovered from the events on unspecified date. |

| 1114243 | 3/19/2021 | ME | 34 | F | 1/12/2021 | 2/10/2021 | <p>Passed out for 40 secs; Chills; Cardiac issues; A spontaneous report was received from a consumer who was also a 34-year-old, female patient who received Moderna's COVID-19 Vaccine (mRNA-1273) and who experienced passed out for 40 secs/ loss of consciousness, chills, and cardiac issues/ cardiac disorder. The patient's medical history included depression. Products known to have been used by the patient, within two weeks prior to the event, included quetiapine fumarate (Seroquel) since 2014. The patient received the first of two planned doses of mRNA-1273 (Batch number: 039K20A) on 12 Jan 2021. On 10 Feb 2021, approximately one day prior to the onset of the symptoms, the patient received the second of two planned doses of mRNA-1273 (Batch number: 028L20A) for prophylaxis of COVID-19 infection. On 10 Feb 2021, after receiving the second dose of the vaccine the patient, had experienced cardiac issues. On 11 Feb 2021, the patient started experiencing chills and passed out for 40 seconds (secs). The patient had visited the emergency room (ER) and EKG (electrocardiogram) showed slight abnormality. She was given heart monitor for 14 days. She was scheduled for Stress test and Echo. She was on antipsychotic medications for seven years. She was curious whether the antipsychotic drugs caused the cardiac abnormalities in response to Covid-19 vaccine. Treatment information was not provided. The adverse event of passed out for 40 secs was assessed as medically significant. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events was not applicable. The outcome of the events chills and cardiac issues was unknown. Outcome of the event passed out for 40 secs was recovered on 11 Feb 2021.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.</p> |

| 1114246 | 3/19/2021 | MD | 68 | F | 1/27/2021 | 1/27/2021 | Diagnosed with C. difficile.; Nasty abdominal cramps; Passing out; Lack of appetite; Diarrhea; Falling; Arm pain; A spontaneous report was received from a consumer concerning a 68 year old, female patient who developed severe stomach cramps, passed out, lack of appetite, falling and diarrhea. The patient's medical history was not provided. Concomitant product use included Tums (up to 2 tabs five times per day), Gas-X, Pepto, Probiotic (30 billion units) and clindamycin, all were used for an unknown indication. The patient received the first of two planned doses of mRNA-1273 (Batch number: 010M20A) on 27 Jan 2021. On 24 Feb 2021, approximately 5 hours prior to the onset of the symptoms, the patient received the second of two planned doses of mRNA-1273 (Batch number: 013A21A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. After the first shot of vaccine the patient reported no reactions other than mild arm pain. After the second dose of vaccine the patient had gastrointestinal distress. The patient had severe stomach cramps, she passed out while on the toilet, she fell in toilet and her husband helped to stabilize, lack of appetite and diarrhea. Patient had been instructed to adhere to a bland diet consisting of toast, rice, bananas, broth, and Pedialyte by her physician. She reported that she was hospitalized on 09 Mar 2021 and was released on 11 Mar 2021. She stated that she ended up being diagnosed with C. difficile. She stated the gastroenterologist did not believe the C. difficile was caused directly from the second dose in the series from Moderna's COVID-19 vaccination. Consumer reported that she was originally was taking a three days course of clindamycin which is a suspect for C. difficile. She was prescribed a 10 days course of vancomycin. Treatment for the event included Bland diet, Tums, Gas- X, Pepto, Probiotic. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events is not applicable. The events, severe stomach cramps, passed out, lack of appetite, diarrhea, was considered resolving.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1114505 | 3/19/2021 | AL | 37 | M | 3/16/2021 | 3/16/2021 | Well I?m alive. It started about 45 minutes after taking the vaccine. It began as heavy salivating and turned into a numb tongue. I have never had an allergic reaction, so didn?t pay much attention to it. After returning home I became severely lightheaded and almost passed out. I immediately took a Benadryl and Motrin. Then my heart rate shot up to 160BPM according to my smart watch and maintained that for around 5 minutes. The home medicine helped it to subside, but the same feelings would return in moderate waves. By 2pm, I decided I should seek professional help and was taken to the ER by a family member. By this time I had moderate chest and jaw was very tight. At the ER I was monitored for 1 hour and then given an IV injection of Benadryl, Pepcid, and Decadron(steroid). I immediately get relived and well. I was released from the ER around an hour later and sent home with a prescription of Benadryl, Pepcid, and Prednisone Oral Steroid. I have since had a few different side effects like chest pain, extremely flushed face, and low grade fevers. The medicine taken at home immediately stopped the face flushing. |

| 1115091 | 3/19/2021 | AL | 41 | F | 3/18/2021 | 3/19/2021 | Sore arm all day. Woke up at 1am extremely nauseated, headache, and in sweats. Went to kitchen to get some nausea meds and felt my ears closing. I couldn't breathe and apparently passed out. My husband called 911 and I came in and out for about 30 min he said. I couldn't open my eyes and couldn't feel my legs. Bp was normal and so was blood glucose. They gave me some fluids and nausea meds and I started coming too. Today I am extremely achy and terrible headache, scared to get out of bed. |
| 1114365 | 3/19/2021 | | 36 | F | 3/1/2021 | 3/2/2021 | Fainted; This is a spontaneous report from a non-contactable nurse. A 36-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, administered in arm right on 01Mar2021 (at the age of 36-years-old; Batch/Lot number and expiry date were not reported) as single dose for covid-19 immunisation. The patient's medical history was not reported. There were no concomitant medications. The patient fainted on 02Mar2021 and recovered from the event on an unspecified date. No treatment was received for the event. No follow-up attempts are possible; information about lot/batch number cannot be obtained.; Sender's Comments: As an individual case report there is not enough evidence to establish a causal relationship with the suspect vaccine. Currently there is no clear biological plausibility between the vaccine use and the even onset. More information such as complete medical history and concomitant medications are needed for fully medical assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. |
| 1117160 | 3/19/2021 | | 36 | F | 3/19/2021 | 3/19/2021 | Patient with syncope after vaccine. Recovered well. Provided rest and water. Vitals stable. Sent home. |

| 1116937 | 3/19/2021 | OR | 53 | F | 3/17/2021 | 3/17/2021 | Passed out within 2 minutes of getting the shot. I don't know how long I was out. The EMT's were called, my blood pressure was really low, but as I sat up for a while it got better and I was able to go home. The next day my arm was really sore, I took too ibuprofen twice that day which helped. The next morning I woke up with hives all over my upper body that's itchy. |
| 1116947 | 3/19/2021 | NJ | 20 | M | 2/28/2021 | 2/28/2021 | Syncope |
| 1116975 | 3/19/2021 | WI | 34 | M | 3/18/2021 | 3/18/2021 | Patient reported to vaccinator before receiving vaccine that he normally passes out when he gets shots. After receiving shot, patient passed out for about 20 seconds and head fell back. Vaccinator called for assistance. Patient regained consciousness and stated, "I didn't even know where I was." Patient noted to be diaphoretic. He also had pulse rate of 42 and Bp of 98/48 which he reports as being normal for him as he is a runner. Patient stayed seated, vitals assessed, ice applied for sweating, and juice given. After 15 minutes, patient escorted in wheelchair to monitoring area where he remained in a cot for 20 minutes. Vitals reassessed with Bp 113/73 and pulse 49. Patient reported feeling well and able to ambulate steadily. Patient left at that time |

| 1117101 | 3/19/2021 | IN | 30 | F | 3/18/2021 | 3/18/2021 | 1022 - Patient received her 1st Pfizer vaccine by RN. She noted a history of vasovagal syncope to needles in the past (did not seem like it was complete syncope to all needle sticks per RN). RN offered for her to lie down, but she said she felt ok sitting. She did not endorse any history of severe allergies or reactions to injectables in the past; she was asked the necessary questions prior to vaccination. We later learned she has Crohn?s and is on immunosuppressant Imuran for this disorder. 1023ish ? walked to checkout area 1025 - While sitting at the checkout registering for her second shot she started to feel faint and checkout staff called for help 1026 - RNs were getting the BP cuff on her. She appeared obtunded and slouching in her chair- eyes closed. Gentle sternal rub and she was able to open her eyes and tell us what her name was and ask to call her dad. BP 90/58. Cold cloths placed on her neck. Continuous pulse ox monitor placed, showing 99%. 1030 - Still drowsy and diaphoretic. Able to tell us that "she passes out when she gets shots" C/O nausea and vomited. Still in and out of awareness. NP is site coordinator is now present and suggests taking patient by wheelchair to safer and more private area for evaluation in SR Room. Patient able to stand and transfer to wheelchair, which we did slowly and carefully. 1034 ? Now in safer and more private area SR room with NP and RN and Dr. Firemen are here and assessing the scene with medic assessing patient. Ambulance in route, about 5 - 10 minutes out per radio communication. Checking BP every 2 minutes. Now is 68/44. C/O nausea and vomited. Pulse ox won?t pick up. Patient with decreasing LOC, eyes rolling back in head, unable to maintain posture seated, and not able to describe symptoms to us (unknown if she felt itchy but no obvious cutaneous manifestations). Unable to visualize oropharynx. 1037- BP 57/40. NP administered Epi pen 0.3 mg dose to L lateral thigh due to s/s of systemic allergic reaction/anaphylaxis including 3 known body systems: hypotension (cardiovascular), vomiting (GI), and decreased LOC (neuro). No IV fluids immediately available but were preparing to obtain. Staff getting cot for patient to lie down. Provider spoke with her mom on the phone and informed her of event. Mom confirmed that she has often before passed out with vaccines and blood draws. Dad was on his way to center and rerouted to ER. 1038 - BP 68/45 Talking to medics and able to tell |

| | | | | | | | them she ate breakfast and that she has a hx of Crohn's and takes a monthly injection. Informed provider that her dad was on his way. EMS team here to transport to ER. We were preparing to put her on a cot so help with her blood pressure/blood flow when she started to stabilize and EMS arrived with stretcher. 1040 - BP 97/53. Patient is now alert and talking to us. Says she has had syncope in the past ?but never anything like this.? 1041 - BP 115/53. Patient still alert and talking. Oriented x 3. 1042 - Transported to ER by EMS ambulance on stretcher. DEBRIEF: Somewhat atypical (no obvious cutaneous manifestations) and rapid, severe reaction. Ddx vasovagal vs anaphylaxis. Response to epi consistent with anaphylaxis reversal. Perhaps immunosuppressant medication contributed to severity and rapidity of reaction. |
| 1117119 | 3/19/2021 | MO | 29 | M | 3/15/2021 | 3/19/2021 | Patient fainted 3 times - Called EMS and they checked him out before he left - tried to call patient to follow-up 3/19/21 5:30pm - no voicemail set up |
| 1116859 | 3/19/2021 | IL | 39 | M | 3/19/2021 | 3/19/2021 | Syncope lasting 15 seconds, Patient assessed. vitals normal. Patient refused transport. |
| 1117154 | 3/19/2021 | IL | 46 | F | 3/19/2021 | 3/19/2021 | came in to our store for her COVID 19 vaccine appointment on 3/19/21 at 10:30am. On her VAR form, she indicated "no" on #5 that if she ever had a reaction after receiving a vaccination, including fainting or feeling dizzy questions on the VAR form. She also had history of Wolff-Parkinson-White (WPW) syndrome. We gave her Covid 19 vaccine and noticed she was nervous about the shot that she is getting. We ask her to stay in the pharmacy for at least 15 minutes for adverse reaction observation. About 5 minutes in while she was sitting , my technician noticing that the patient is not normal like she is about to faint and call the pharmacist on duty for attention. The pharmacist ran to the patient right away and noticed the patient starting to faint and unconscious, the pharmacist told technician on duty to call 911. We laid her down on the floor to see if we need to process CPR but she regained her concious and alert after about 30 seconds. The paramedic arrived within couple minutes and check her vital and they said her BP is low and she agreed to go to the Hospital for check up. Paramedic took the patient with on stretcher. |

| 1117259 | 3/19/2021 | MA | 29 | F | 3/15/2021 | 3/15/2021 | Patient reported history of queasiness after injection. Patient fell weak, diaphoretic after injection. Patient was escorted to a chair when she fainted and became unconscious for approximately 1 minute, had an episode of incontinence. EMS service was ordered. Patient's BP was recorded by the EMS and was hypotensive. Patient refused to go to ER and was escorted to the car where her family member was waiting to take her home. |
| 1117166 | 3/19/2021 | NY | 37 | F | 3/19/2021 | 3/19/2021 | Tongue swelling, dizziness, brain fog, fainting. Lasted 3 hours. |
| 1117196 | 3/19/2021 | CA | 16 | F | 3/19/2021 | 3/19/2021 | PT RECEIVED 1ST DOSE OF PFIZER COVID VACCINE. SHE SAT ON A CHAIR FOR 15 MINUTES AND WAS FINE WHILE SEATED. AFTER 15 MINUTES SHE STOOD UP TO LEAVE AND WALKED ABOUT 25 YARDS WHERE SHE SUDDENLY FELT DIZZY AND PASSED OUT. SHE FELL TO THE GROUND, HER FACE SLAMMING THE FLOOR. AFTER A FEW SECONDS SHE WAS CONSCIOUS AND BREATHING. WE KEPT HER LAYING ON THE GROUND AND TOLD HER TO KEEP BREATHING. SHE WAS CONSCIOUS AND RESPONDING TO OUR QUESTIONS. WE CALLED 911 AND EMT ARRIVED AND TOOK OVER HER TREATMENT |
| 1117606 | 3/19/2021 | WA | 38 | F | 1/27/2021 | 1/28/2021 | I got up around 8 am to use the restroom was the last thing I remember. I had a syncopal event and my partner found me unconscious on the bathroom floor. When I fainted I hit my forehead causing a large hematoma. I also got a laceration on my chin about 2 inches across. I hit my right cheek as well but no skin was broken just a big bruise. The chin laceration required stitches. I have never fainted in my life. All the medications I am currently taking I have been on for years. |

| 1114251 | 3/19/2021 | GA | 83 | F | 3/3/2021 | 3/3/2021 | faints when she gets up; Yesterday started to get itch and rash around the injection site; Yesterday started to get itch and rash around the injection site; Was sick for days; joint pains; fatigue; headache; muscle pain; chills; sore arm; A spontaneous report was received from a consumer who was an 82-year-old, female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced sore arm, was sick for days, fatigue, headache, muscle pain, joint pains, chills, itch and rash around the injection site and faints when I get up. The patient's medical history was not provided. No relevant concomitant medications were reported. On 03-Mar-2021, prior to the onset of the events the patient received the first of two planned doses of mRNA-1273 (lot/batch: 013A21A) intramuscularly for prophylaxis of COVID-19 infection. On 03-Mar-2021, the patient experienced the events sore arm. She reported that she was sick for days, suffered fatigue, headache, muscle and joint pain and chills. On 06-Mar-2021, she stated that her vaccination site started to itch and a rash developed around it and that she felt tired all day. On 07-Mar-2021, she reported that the redness and itchiness at the injection site was gone and that she felt better but still like when she had Covid in the past. Additionally, patient reported that she fainted when she got up (date unknown). Treatment included paracetamol 2 tablets on 06-Mar-2021 in the evening. Action taken with mRNA-1273 in response to the events was not reported. The outcome of events, itch and rash around the injection site, was considered recovered/resolved. The outcome of the events, sore arm, was sick for days, fatigue, headache, muscle pain, joint pains, chills and faints when I get up, were considered unknown.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded. |

| 1116398 | 3/19/2021 | NY | 68 | F | 3/6/2021 | 3/7/2021 | She had the vaccine at the facility where she lives. She fainted less than 24 hours after the vaccine, got up from that and had dry heaves, lost her speech and had loose stools. The aide caught her as she was fainting as she would have fallen on the floor. She said it was weird, she looked at people and it looked like they were 2 dimensional and knew something was wrong, but couldn't figure out what as they attended to her. They asked her questions, but she was not able to speak to them. They apparently spent 2 hours with her, but she doesn't believe it was that long, and then they knew she wanted to go to one Hospital and not the other. She had been loosing words before this happened, but not as bad as this one. This was about the same reaction that she had when she got the COVID virus in January. She was then taken to the hospital where she was given fluids and hydrated her and checked her heart, saw a cardiologist and a neurologist to see if those things caused the fainting and had blood work done. They also did a CAT Scan of her head and neck. They told her that she was fine and was discharged back home after 5 days, which was 3/11/21. Since then she has been very tired, she does have GERD and her stomach has been hurting a lot as well. |
| 1116417 | 3/19/2021 | WA | 89 | F | 3/12/2021 | 3/13/2021 | patient reported 20 minutes of visual hallucinations about 15-17 hours after 2nd dose of COVID-19 vaccine and passed out for possibly 5 minutes. during fall she injured right low leg, but no evidence of DVT on exam today (6 days after fall). |

| 1116469 | 3/19/2021 | PA | 21 | F | 3/19/2021 | 3/19/2021 | gave patient immunization,told her to wait for 15 minutes. After 5 minutes patient experienced dizziness and feeling light headed. i was talking to patient constantly to keep her alert as much as possible. Her eyes started to roll back slightly and I laid her flat on ground with support behind her head, The patient remained conscious. Took her pulse which was steady and regular, breathing on own without difficulty. 911 was called immediately. After about 2-3 minutes patient was becoming more responsive .After a few more minutes we placed patient on the chair, at which time the paramedics arrived. Patient has had past experiences of fainting due to body piercings or had problems as a child when she was immunized that was later revealed to me by her father. Patient had a flight or fright experience and after another 20 minutes left with her father and boyfriend |
| 1116688 | 3/19/2021 | VA | 38 | M | 3/19/2021 | 3/19/2021 | Patient received vaccination and passed out. Patient states that he has a history of fainting after receiving vaccination. Patient was given water and cold compresses was applied to patients head to help cool him off. Patient's vitals were obtained and everything was normal except blood pressure. Blood pressure was found to be 99/42. After approximately 15-20 mins patients BP was 100/60. |

| 1111278 | 3/18/2021 | NY | 32 | F | 1/27/2021 | 1/27/2021 | fever/temperature reached 101 degrees; Chills; Swollen lymph node in left armpit/swollen lymph node under her left arm, which is the same side that she received her vaccine; Passed out; Body aches; This is a spontaneous report from a contactable nurse (patient). This 32-year-old female patient received second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE) (Lot# EL1283, Expiry Date: Apr2021), via an unspecified route of administration on 27Jan2021 09:00 at single dose in the left arm for COVID-19 immunization. The patient's medical history and concomitant medications were none. No family history. The patient previously took first dose of BNT162B2 (Lot# EL1283) on 07Jan2021 for COVID-19 immunization. Vaccination facility type was nursing home patient was employed at; administered by pharmacy. No additional vaccines administered on same date of Pfizer suspect. No prior vaccinations received within 4 weeks. No adverse events follow prior vaccinations. Patient had fever: temperature reached 101 degrees, early morning on 28Jan2021; chills on 28Jan2021; body aches: at night of 27Jan2021; passed out: later on day of 27Jan2021, didn't get out of bed, didn't remember passing out. Remembers waking up on the floor; swollen lymph node: under her left armpit/left arm noticed on 28Jan2021, which was the same side that she received her vaccine. Hurts less when she puts her arm down. Really was sore to the point where she had to keep her arm open. She can rest her arm now, but it is still sore. Everything has subsided except for the swollen lymph node. Her energy was back. No relevant tests. Relatedness of bnt162b2 to events for Fever/Chills/Body aches/Passed out/Swollen lymph node in left armpit: Source of assessment: Primary Source Reporter, Method of assessment: Global Introspection, Drug result: Related. Event relatedness between COVID-19 Vaccine and fever/Body aches/Swollen lymph node in left armpit was Related. Outcome of the event was swollen lymph node was not recovered, outcome of other events was recovering. No investigation assessment.; Sender's Comments: Based on the information available, a possible contributory role of the suspect BNT162B2 at 2nd injection cannot be excluded for the reported events based on the known safety profile and the plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures |

| 1111279 | 3/18/2021 | IL | 85 | F | 1/23/2021 | 1/23/2021 | fainted; passed out and was unconscious; still kind of feel weak; bruise on both knees; fall; This is a spontaneous report from a contactable registered nurse (patient, Retired RN). An 85-year-old female patient received her 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL8982) at single dose via an unknown route injection in left arm on 23Jan2021 around 08:15 for Covid-19 immunization. Medical history included ongoing blood pressure high which was controlled with medication, allergic to penicillin and acetylsalicylic acid;ascorbic acid (ASPIRIN). She had lost weight and shrunk according to when she went to the doctor 2 months ago. No other products were taken. No history of all previous immunization with the Pfizer vaccine considered as suspect; no vaccines administered on same date with the Pfizer vaccine considered as suspect. No other vaccinations within four weeks prior to the first administration date of the suspect vaccine, no events following prior vaccinations. No family medical history relevant to the events. Patient passed out on her way home on 23Jan2021 (unknown time). The event required a visit to Emergency room, but not a Physician office. The event clinical course was as follows: She got the first dose of the Covid-19 vaccine on Saturday 23Jan2021. Patient reported that after being monitored at the vaccination site for 20minutes, she left to go catch the bus and fainted before boarding the bus. She remembered getting on the bus, but did not remember crossing the street. She passed out and was unconscious. An ambulance was called and they took her back to the hospital where she got the vaccine. She was taken by ambulance back to the ER, stayed for half the day, she received IV fluids, and a brain scan due to her fall. She stated that she still feels kind of weak as of 29Jan2021. She did not know what time it happened, because she lost her sense of time on that day because she did not remember. When she got to the hospital she woke up and wondered where she was because she did not remember what happened. They got an x-ray of her head to see if she had bumped it, but it was negative. She did have a bruise on both knees. They gave her IV fluids, and kept her there for a little while, then sent her home. She called her doctor the next day, but he was busy, so she talked to the nurse. No treatment was recommended, just said to get a lot of rest. She was |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

scheduled for the 2nd dose on 13Feb2021 and was scared to death. Patient verified that she was not admitted to the hospital. Investigation assessment were performed. They hooked her up to the monitor, did an x-ray and a CT scan while at the hospital on 23Jan2021 which were normal (both fine), and gave her IV fluids. Outcome of fainted, fall, passed out and was unconscious was resolved on 23Jan2021. Outcome of kind of feel weak was not resolved. Outcome of the other event was unknown.; Sender's Comments: Considering the temporal association, a causal association between administration of BNT162B2 and the onset of fainted and unconscious cannot be fully excluded. The underlying history of high blood pressure for this 85 years old patient might provide an alternative explanation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

| 1111282 | 3/18/2021 | NY | 45 | F | 1/5/2021 | 1/20/2021 | body rash; tachycardic; near syncope; This is a spontaneous report from a contactable other health care professional (patient). A 45-year old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date unknown) via an unspecified route of administration on the left arm on 05Jan2021 at a single dose for COVID-19 immunisation at the hospital. Medical history included asthma, clotting disorder and allergies. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. However, it was reported that the patient had other medications received within 2 weeks of vaccination. The patient was not diagnosed with COVID019 prior to vaccination. The patient experienced body rash, tachycardia, near syncope on 20Jan2021. As a result, the patient went to the doctor office; clinic visit and emergency room/ department or urgent care. The patient received Cortisone injections, oral steroids and antihistamine in response to the events. The events were considered as non-serious by the reporter. The outcome of event recovering. Since the vaccination, the patient has not been tested for COVID-19. The patient received the second dose of bnt162b2 (lot number: e13246, expiration date unknown) on 26Jan2021 at 9:30 AM via an unspecified route of administration on the left arm at a single dose for covid-19 immunization. No follow-up attempts are possible, information about batch number cannot be obtained.; Sender's Comments: Based on the information received, the reported serious events of Generalized rash, Tachycardia and Pre-syncope were plausibly consequent to single dose for COVID-19 immunisation. The impact of this report on the benefit/risk of profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. |

| 1111441 | 3/18/2021 | GA | 44 | F | 3/17/2021 | 3/17/2021 | <p>Patient stated that she almost immediately felt nausea after the injection appx 3:15, was able to ambulate to observation on her own and then signaled staff for help, felt hot, felt dizzy, felt nausea, staff immediately assisted to chair, RN @ side; inquired re food; had lunch; sips of beverage w sugar given able to eat cracker. She stated she felt better, was upright in her chair, no SOB, no complaints of swelling throat, itchy etc. After some initial sips of liquid, still feeling dizzy lowered to floor by staff w wedge cushion and legs and feet elevated above heart per protocol b/p 140/96 pulse 86. Stated she had been anxious re injection, but denied ever having this experience after injection. Additional information for Item 18: Reviewed the POD form questions again with her, denied any issues. She then stated she was feeling much better again, her warm feelings were going away from ice in a glove that we had used from her initial dizzy, warm/hot feeling. Around 3:30 she felt nausea again, so we sat her up and gave her a bucket to use to vomit if needed. She was unable to vomit. She wanted to sit up on floor. We sat with her and she sipped on clear beverage. She began to get cold. We put her legs back up took b/p 140/91 pulse 86. No change. We called nursing DON for District to make her aware and by that time patient experiencing chills. We called her husband to be on his way to drive her home after 30 minutes @ 3:45. She continued to tell us she felt better for a few minutes only to then tell us she was feeling nausea again. Rolled her to left side, helped her to prop us to vomit but she was unable to vomit anything. B/p readings 147/91, 150/90, 140/87, 150/88 She desired to sit upright again. So on floor with nurse holding and b/p cuff on sat her up to try to vomit, unable to do so. Lowered back to floor with legs upright where she remained local Paramedic on site and he came to assist, a portable recliner that allowed for legs to be elevated above heart was set up. Patient felt that she could transfer with paramedic and staff help and passed out while attempting briefly, chilling when she was alert, then passing out again; 911 was called and arrived by 3:55, patient and husband initially wanted to take patient home after hearing patient state she felt better once paramedics had evaluated her. However in front of husband, patient again passed out, and after she was conscious stated she could not feel her arms. and when</p> |

| 1111544 | 3/18/2021 | PA | 51 | F | 1/13/2021 | 1/13/2021 | I got the shot and waited for 15 minutes. My arm started hurting really bad that evening and it lasted until day two. During the night I felt really dizzy. I got up during the night and I fainted. We called an ambulance my blood pressure was a little low. I went to my Primary care doctor the next morning. My brain was foggy, and I was a little confused. The doctor checked my blood pressure, and it did not change on standing. I saw my allergist and he is going to run tests to check for allergies to ingredients in the vaccine. I have not taken the second dose. |
| 1111466 | 3/18/2021 | TX | 29 | M | 3/12/2021 | 3/12/2021 | About 5 to 10 minutes after the shot I felt extremely lightheaded and then fainted. When I came to about 10 seconds later, there was a public health official there rubbing my chest asking me if I knew where I was. It took me a second to fully come to my senses but then I realized where I was and what had happened. I was very pale, felt chills, was sweating, and it took effort to open my hands. The EMTs ran a bunch of tests, my Blood pressure was low (I think the number I remember was 104/33), but the rest of the measurements like blood sugar or the number of ekg like tests they did all came back normal. The EMTs in the field said they think it was a response to the vaccine. After about 20 minutes of the EMTs monitoring me, my numbers came back up and I was feeling relatively normal. I waited another 30 minutes before leaving just to make sure. It has been almost a week and I haven't felt any symptoms close to that since then. |
| 1110140 | 3/18/2021 | MD | 25 | F | 3/16/2021 | 3/17/2021 | I had a moment yesterday evening where I almost passed out (tunnel vision and my arms and legs went numb) followed by an intense urge to vomit. I instantly broke out in cold sweats and completely soaked through my shirt in about a minute. The intense sensations passed, but happened again at around 10pm as well. I've just woken up for the day today, and so far I feel okay but I'm a little weak and extremely tired. |

| 1111635 | 3/18/2021 | TX | 23 | F | 3/15/2021 | 3/15/2021 | <p>Patient had history of fainting noted on patient also notified immunizer of history. Vaccine was administered and patient appeared to be ok. She was told to have a seat and wait 30 minutes to ensure patient safety. Immunizer notified me/pharmacist of patient's history and staff was informed to watch her for any adverse events. 5-10 minutes later patient walked up to counsel window and notified pharmacist she was going to faint. I asked her to please return to her seat and immediately a technician and I went out and assisted her to a chair. We provided a bottle of water and advised her to sip some. After a few more minutes she passed out in the chair. At that point we called 911. The operator advised us to lay her flat. We moved her into the training room and waited for EMT to arrive. They arrived a few minutes later. At that point she was beginning to come around. I left to return to pharmacy as she was being cared for. 20 minutes later the EMT consulted me and patient vitals were good and she was feeling much better and refused to be transported to hospital. I signed off their form as a witness of her refusal.</p> |

| 1110290 | 3/18/2021 | IL | 63 | M | 3/12/2021 | 3/17/2021 | 3/17/21 63 y.o. male who presents with sudden onset of chest pain and palpitations, which occurred while patient was exerting himself. Pain is substernal, radiated to the left arm, associated with lightheadedness. Denies diaphoresis or nausea. Per EMS there were short runs of nonsustained ventricular tachycardia 3/18: - remains inpatient admission as of 3/18/21 @ 0900 63 y.o. male with a past medical history of nonsustained ventricular tachycardia. He states he was lifting a couch yesterday and his heart started beating fast. He did not really have any chest pain, but felt a little bit lightheaded. He called an ambulance and they brought into the ER. In the emergency room his EKG did show some frequent PVCs. However, he did not really require any intervention. He was given 3 nitro, but it really did not make any difference in the way he was feeling. The patient denies multiple times that he actually had chest pain. He states he just felt like his heart was beating funny. The patient's most recent stress test was a nuclear stress test in May of 2019. Overnight, the patient has felt very well. He denies any significant chest pain. He denies any further heart palpitations. On the monitor he would occasionally going to bigeminy, which is not abnormal for him. EKG this morning was unremarkable. After speaking with the patient's wife, she told me that he has had a several month history of very limited exertion. She states every time he exerts he becomes extremely dyspneic and has heart palpitations and sometimes almost passes out. She states last night he was extremely diaphoretic and very nearly passed out. |

| 1110477 | 3/18/2021 | MN | 26 | F | 3/17/2021 | 3/18/2021 | Developed a sore arm around 10pm, woke up with severe 7/10 body aches that quickly worsened leading to almost fainting, and sick to stomach along with mild headache. |
| 1110481 | 3/18/2021 | VA | 70 | F | 3/16/2021 | 3/16/2021 | Can not lift my arm as of 3/18 and excruciating pain nite of 16 and 17 . Extra strength Tylenol did not phase pain. Pain eased up on 3/18 but still minimum movement. Chills on 16 ,17. Fainted on 3/17 at 3:30 a.m. when I went to get a drink of water. |
| 1110574 | 3/18/2021 | CO | 30 | F | 3/13/2021 | 3/14/2021 | She says she had her second dose of the COVID vaccine on Saturday 3/13/2021 and she woke up that night around 1 am with lots of pain in her armpit and neck with dizziness. Before she could go sit down she passed out. She later woke up on the floor, got up and threw up. Since then her neck and shoulders area has been more tense and tight than normal. She says that other than muscle tension she feels "back to normal" now (three days later). |
| 1110674 | 3/18/2021 | PA | 83 | F | 1/22/2021 | 1/23/2021 | I don't have all the info you want, but my Mother In Law, who resides at this senior assisted living center, had falls the day after her Moderna first and Moderna 2nd vaccine. Each landed her in the ER, suspected fainting episode. Lots of testing done, bruised eye and forehead each time. It may be noteworthy to report that she contracted covid 19 dec 30, about 3 wks prior to the first dose of vaccine. |
| 1110710 | 3/18/2021 | NE | 67 | F | 2/27/2021 | 2/27/2021 | About 12hours after the vaccination I had a 101.3 fever (normally 98.1) Body aches; when I got up about 9am the next morning I was dizzy and then fainted. The fever persisted until mid afternoon that day, as did the body aches, and a headache. I spent the day dozing or sleeping. I did eat some oatmeal and have a cup of black coffee about noon. That helped the headache. That evening I was more tired than usual, but no fever or aches. The next day I was also very tired, but I did go to work. The rest of the week I had no energy, but that was the only other side effect. After the first shot, I had only had an achy arm at the injection site that persisted for 2 or 3 days. |

| 1111985 | 3/18/2021 | NY | 51 | F | 3/17/2021 | 3/17/2021 | 20 min after vaccine , tingling in the mouth and throat . She stated she could not swallow. redness and swelling noted during examination BP 135/87 O2sat 99% RR16 P80 Reg rhythm. Benadryl 25mg given, Tingling sensation improved. After a couple of minutes, she complained of light headedness and felt warm from head to face. Repeat BP 124/87 HR80 RR16 O2 sat 99%.. Advised to go to Hospital but refused. She verbalized that she was very anxious to go to the Hospital. She agrees to call 911 for difficulty breathing,, severe dizziness, syncope and severe rash. she left site with son and friend |
| 1353793 | 3/18/2021 | | 72 | M | 2/18/2021 | 2/19/2021 | difficulty swallowing Narrative: He reports PMH significant for "throat cancer" s/p radiation. At baseline, he reports occasional difficulty swallowing large pills and consumes food with liquid to a/w swallowing. About a day after the initial vaccination, Patient reported difficulty swallowing large pills. This concern lasted less than another day before spontaneous resolving (which is typical for him). He did not think to report it to his healthcare team previously b/c this has occurred in the past. He denied pruritus (except minimally over injection site), urticaria/hives, flushing, swelling/angioedema, difficulty swallowing, confusion/disorientation, lightheadedness/dizziness, weakness, LOC/syncope, SOB, stridor/wheezing, tachycardia/palpitations, nausea/vomiting/diarrhea or abdominal cramping. He was able to complete his normal activities of daily living w/o any issues and able to additionally eat/drink w/o any disruption. |

| 1112671 | 3/18/2021 | GA | 24 | F | 3/18/2021 | 3/18/2021 | Patient came to the center for a Moderna vaccine at 5pm. The patient expressed that she felt dizzy shortly after immunization (before leaving the immunization chair). Her head began to fall backwards so I quickly supported the patient's head and neck area and was able to keep her from falling out of her chair. The patient fainted but regained consciousness approximately 3 seconds later. The patient came back alert but nauseous. The patient vomited in a trashcan and then felt fine. The patient blamed the reaction on her severe anxiety and said the exact same thing happened after a nose piercing. I observed the patient for 30 minutes and sent her on her way. The patient left healthy and happy. I told the patient to warn the pharmacist prior to receiving her second dose. No drugs were administered. Written up in SCRT and VAERS. I followed up with the patient at 7 pm and she was home safe. |
| 1111865 | 3/18/2021 | KS | 69 | F | 3/15/2021 | 3/16/2021 | Client reports she started to feel "off" just before bed on the day of the vaccination. She felt tired and "not well" all day the day following the vaccination then at 1030pm on the 16th she passed out while sitting at the table. She was unconscious for 1-2 minutes and began vomiting when she came to. Her husband called the ambulance and she was transported to the County Hospital. ER provider told Client that it was a reaction to the vaccination. |

| 1353789 | 3/18/2021 | | 45 | M | 2/18/2021 | 2/18/2021 | Narrative: He states experiencing mild disorientation/fog and mild dizziness ~ 20 minutes at the initial vaccination. While he was still oriented to person/place/time, he states having difficulty in trying to find his car (no issues reported during the 15 minute waiting period). Both concerns resolved w/in 5 minutes spontaneously. He had not had a prior similar reaction to a past vaccination. Denied pruritus (other than over injection area), urticaria/hives, flushing, swelling/angioedema, lightheadedness, weakness/difficulty ambulating, syncope/LOC, SOB/dyspnea, tachycardia/palpitations, nausea/vomiting/diarrhea, abdominal cramping. He has no allergies that he is aware of and was able to work afterwards. RN reviewed common adverse effects and when to seek care. Advised 30 minutes of supervised post-vaccination wait time. Reinforced to alert staff if he experiences any of the adverse effects we discussed related to concerns for immediate allergic reaction. Patients intention is to return to work today (works with health care professional). He was checked on during/at the end of the observation period and reported no issues. |
| 1112449 | 3/18/2021 | NY | 34 | M | 3/18/2021 | 3/18/2021 | Pt felt light headed and passed out for approx. 30 seconds |
| 1111864 | 3/18/2021 | | 70 | F | 3/9/2021 | 3/9/2021 | Symptoms began 2 hours after dose, including headaches, myalgias, and lower extremity weakness. Tried Tylenol with no relief. Symptoms progressively worsening. Fell and hit head the following day, denied loss of consciousness. Never had a reaction to vaccine before. No response to first dose. No lightheadedness/presyncope prior to falls. Came to ED after fall (evening of the day after receiving the vaccine). Found to have elevated troponin. CK elevated, aggressive fluid repletion initiated, determined to be in rhabdomyolysis. Hypokalemic. Patient improved with fluids and electrolytes, determined to be stable for discharge after 2 days. |

| 1111918 | 3/18/2021 | FL | 30 | F | 3/12/2021 | 3/12/2021 | Within 15-minutes of vaccination, the patient had a syncopal event preceded by nausea and lightheadedness. EMS evaluated the patient on-site. The patient was pale, diaphoretic, and hypotensive (67/37). EKG (3/12): Sinus brady, rate 46 bpm, no ST elevation. FSBG (3/12): 89mg/dl. EMS administered 500mL IV saline. EMS transported the patient to Hospital Emergency Department. In the ED, the patient feels back at baseline and was normotensive (119/72). Patient stated they have a history of vasovagal response and vasovagal vomiting, but had never experienced a vasovagal syncope episode. Physician administered 0.5mg Lorazepam. The ED physician admitted the patient to the telemetry unit for vasovagal syncope due to patient's prodrome and prior history of similar near syncopal episodes. Inpatient attending agreed that the patient's vasovagal response may be secondary to poor PO intake with extreme stress. Patient's admission was less than 1-day and stated they were anxious to return home. Discharged with diagnoses of Mild leukocytosis, Vasovagal response, and Orthostatic hypotension secondary to dehydration. |
| 1111978 | 3/18/2021 | NM | 59 | F | 3/3/2021 | 3/3/2021 | Shortly after I got home, within the hour; My husband told me when I got home I started acting loopy. by 5pm - it was if I was drunk, hallucinating and talking jibberish. By 6pm I passed out but restless - no fever but knocked me out for over 10.5 hours (I normally sleep 6 hrs a night). Woke up the next morning with no other reaction but a sore arm. |
| 1112037 | 3/18/2021 | TN | 28 | M | 3/18/2021 | 3/18/2021 | Patient was given the immunization and as I was talking to him after the immunization he told me his palms were sweaty and he wasn't feeling well. His pupils got large and he then passed out. Code white was called, 911 was called, we got an ice pack and placed on his chest and a cold rag on his head. After about 10 seconds, he regained alertness. EMT arrived and accessed the patient. His blood pressure was normal and pulse was normal. He was given a cold drink and sat in the chair until he felt better. |

| 1112230 | 3/18/2021 | MD | 21 | F | 1/8/2021 | 1/8/2021 | Immediately, I had increased heart rate - 194 - I fainted to the ground. I became nauseous, sick and had seizure like episode and then I had tingling sensation in my face and limbs. They gave me shot epi-pen - two doses. I was pretty much paralyzed for hands and legs. I was brought to hospital and they treated me there for about a week and I had muscle weakness. I gained feeling back in my hands but not in my feet. I was at Haywood for a week. Outpatient therapy and a visiting nurse for three weeks. B12; Iron; Gabapentin and that was for anxiety through it all. Test results came up as neuropathy on left side of my body. I have pins and needles pain now. I did gain my walking back. I take Gabapentin for neuropathy pain. I went to hospital - went one day and I didn't get anything back from them. I now use handicap parking for disability. |
| 1112395 | 3/18/2021 | IN | 46 | M | 3/18/2021 | 3/18/2021 | Patient fainted, laid patient down immediately -HR 46, Oxygen 99%, Blood Pressure 100/70 at 11:46 continued to monitor 11:48 HR 48, BP 110/80, O2- 98% 11:51 HR 51, BP 100/70, O2- 99% 11:56 patient sat up and drank some water, HR 54, BP 122/80, O2-99% 12:08 HR 45, BP 116/76, O2-99% patient waited and felt better. | 1111822 | 3/18/2021 | OH | 52 | F | 1/27/2021 | 1/27/2021 | I received the second dose of the Moderna COVID-19 vaccine on 1/27/21 at 07:30 a.m.. Around 11:30 p.m. I developed a throbbing headache, chills, and severe muscle and joint pain. Throughout the night I developed dizziness, crushing chest pain and my left ear felt plugged. In the morning, I was up walking and started to not feel right due to the dizziness and fainted. After 6 days of feeling this way, I contacted my PCP and had a virtual visit. I was given a step down dose of Prednisone and a medication for the dizziness. My PCP advised me that I needed to report my reaction to this vaccine to the CDC. I contacted my Manager and also had to contact the nurse here. |

| 1108386 | 3/17/2021 | NV | 59 | F | 3/16/2021 | 3/16/2021 | After the injection the patient grabbed her arm and when she was asked if she was ok she didn't respond and seemed slouched down. It didn't seem like she passed out but she was slouching and not responding. She seemed like she was having convulsion that lasted less than 5 seconds. Then she calmed down and her breathing was fine. I got her to respond to me that she was awake and ok. She responded with head nods. She seemed to come to a little more after a minute and she said she was fine but I wanted to call 911. I called the paramedics. During the wait she seemed to get better, we gave her water and she was slowing starting to move around more. We asked her about any under lying issues or any problems with any vaccine before. She said no to everything. The paramedics came and took all of her vitals and she was cleared that everything was ok. She called her boyfriend and we asked him to come by to help her and give her a ride home and assist. He got here and she still didn't feel totally better. After a few more minutes I took her blood pressure and it was 87/55 and her pulse was around 60. We called 911 again because she stated she wasn't feeling well again. The paramedics came back and she had a 89/41 blood pressure with a pulse of 40. They indicated that she may be having a cardiac issue so they took her to the ER. |
| 1108406 | 3/17/2021 | LA | 26 | F | 3/17/2021 | 3/17/2021 | The patient sat for about 5 minutes after receiving the vaccine then told a tech that she did not feel good. By the time I got to her she, was passed out. We put paper towels on her neck and fanned her but that didn't work so we gave an EpiPen. She started feeling better for a few mintues then passed out again. We called 911 and by the time they got here, she was alert and talking. They brought her to ER |

| 1108431 | 3/17/2021 | CA | 43 | F | 2/11/2021 | 2/11/2021 | After the first injection, I noticed mild mouth tingling, but nothing else, did not report as it was so mild and it was more notable in retrospect. A week after the first injection developed vertigo for the first time in my life. This lasted about a week had mostly resolved when I got the second dose. Immediately upon receiving the second dose I felt faint. I went to the observation area and when the feeling got stronger, reported it. My blood pressure was taken and although I always have normal blood pressure, it was extremely high - 195/100. My heart was racing. I was observed for longer because of this, and was asked to lie down. The faint feeling and high blood pressure lasted 30 min, at which time it started to improve and was sent home. I persisted in having bouts of feeling faint (but never fainting) in the days and weeks following, joined with shortness of breath which started the second day after the second injection. I also had the normal fever, aches and pains for 4 days. It is now a month after the second injection, and while the faintness and vertigo are mostly gone, I have persistent shortness of breath. Prior to the vaccine I had an albuterol inhaler that I would use 1-5 times a year for allergies. Almost never used it. I began having to use it multiple times daily after the second dose of the vaccine. I am not on a steroid inhaler. I have never had shortness of breath like this before. I was examined at the doctors office, not much can be seen that is wrong. An allergist believes that I did not have an allergy because my blood pressure was high instead of low as in anaphylaxis. |
| 1108137 | 3/17/2021 | NJ | 28 | M | 3/16/2021 | 3/17/2021 | Roughly 8 hours post vaccination, patient fainted spontaneously. |

| 1107189 | 3/17/2021 | FL | | F | 2/23/2021 | 2/23/2021 | Tired; Passed out, was semi-unresponsive; Vein was hit on vaccination; Arm blew up after the shot (swelled); Arm was still back and blue; Extreme weakness; Wanted to sleep/slept for 24 hours/slept the rest of the day; A spontaneous report was received from a consumer, concerning herself, a 71-year-old female patient, who received Moderna's COVID-19 Vaccine (mRNA-1273) and was passed out, was semi-unresponsive; vein was hit on vaccination; arm blew up after the shot (swelled); arm was still back and blue; extreme weakness; wanted to sleep/slept for 24 hours/slept the rest of the day and tired.~ The patient's medical history includes leukemia ongoing since on an unspecified date and was not being treated. Concomitant medications were not reported. On 23-Feb-2021, prior to onset of events, the patient received their second of two planned doses of mRNA-1273 injection, (Lot/Batch number: 001A21A) intramuscularly in their left arm for prophylaxis of COVID-19 infection. On 23-Feb-2021, after the second dose of vaccine, the patient's arm blew up (swelled) and passed out, duration unknown, followed by less responsive with extreme weakness and sleepiness. Patient was sent to the ER (Emergency Room) where she was administered with fluids and anti-nausea medication and was released. Patient also informed that her vein was hit during the vaccination. Patient slept for 24 hours. On 24-Feb-2021, she was only awake for five hours. She again slept the rest of the day. At the time of this report, patient's arm was still back and blue, and was still tired but she was also much improved and is staying hydrated. Action taken with mRNA-1273 in response to the events were not applicable. The outcome for the event, arm was still back, and blue was considered not resolved at the time of this report. The outcome for event tired was resolving at the time of this report. The outcome for events, passed out, was semi-unresponsive; vein was hit on vaccination; arm blew up after the shot (swelled); extreme weakness; wanted to sleep/slept for 24 hours/slept the rest of the day were resolved on 23-Feb-2021.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded. |

| 1107204 | 3/17/2021 | NC | 68 | F | 3/1/2021 | 3/2/2021 | <p>Passed out; Sweats; Lightheaded; Fatigue; Chills; Nausea; Vomit; Headache; A spontaneous report was received from a consumer concerning herself, a 68 year old female patient who experienced passed out/loss of consciousness, sweats/hyperhidrosis, lightheadedness/dizziness, fatigue/fatigue, chills/chills, nauseas/nausea, vomit/vomiting, headache/headache. The patient's medical history was not provided. Concomitant product use was not provided. The patient received her first of two planned doses of mRNA-1273 on unknown date for prophylaxis of Covid-19 infection. On 01-Mar-2021, prior to the onset of events, the patient received the second of two planned doses of mRNA-1273 (Batch number 014M20A) intramuscularly into her left arm for prophylaxis of Covid-19 infection. On 02-Mar-2021, the patient stated she "passed out", she also experienced sweats, lightheadedness, fatigue chills, nauseas, vomit, and headache. No other treatment information was provided. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events is not applicable. The events, passed out/loss of consciousness, sweats/hyperhidrosis, lightheadedness/dizziness, fatigue/fatigue, chills/chills, nauseas/nausea, vomit/vomiting, headache/headache.was considered unknown.;</p> <p>Reporter's Comments: Based on the information provided, a strong temporal association and the established safety profile of mRNA-1273 vaccine, a causal association between the reported events and the product use cannot be excluded. Fatigue, chills vomiting, headache and nausea are consistent with the known safety profile of the vaccine</p> |

| 1107214 | 3/17/2021 | MI | | F | 3/3/2021 | 3/3/2021 | <p>passed out; could not breath; twitching of foot; extremely cold; became warm; upset stomach; room began to spin; unusually tired; A Spontaneous report was received from a health care professional concerning an female patient who received Moderna's COVID-19 Vaccine (mRNA-1273) and experienced unusually tired, extremely cold, became warm, upset stomach, room began to spin, could not breath, pass out, twitching foot. The patient's medical history, included cancer, prior radiation and chemotherapy and surgery. Concomitant product use included unspecified inhaler. On 03 Mar 2021, the patient received their first of two planned doses of mRNA-1273 (lot number 011az1a) intramuscularly for prophylaxis of COVID-19 infection. On 03 Mar 2021, the same day of vaccination the patient was unusually tired and slept ten hours. Next day, the patient felt extreme cold and decided to take warm bath. Then within ten minutes after the bath, patient became warm, had an upset stomach, and noted the room began to spin. The patient subsequently could not breath and passed out. The patient's husband noted the patient's foot twitching, and felt that she was still alive. Per the patient's spouse, the patient was unresponsive for one minute. Once awakened, the patient took her inhaler and Benadryl. Within 30 minutes all the symptoms were gone and have not returned. The patient noted having this same type of experience during her Sep 2020 first round of chemotherapy. The patient has been cancer free for five months. Treatment information included inhaler and Benadryl. There was no change planned to the dosing schedule of mRNA-1273 in response to the events. Patient's physician stated it was okay to take the second dose. The events unusually tired, extremely cold, became warm, upset stomach, room began to spin, could not breath, passed out, and twitching foot were considered resolved on 04 Mar 2021.; Reporter's Comments: Very limited information regarding this event/s has been provided at this time. Further information has been requested</p> |

| 1107260 | 3/17/2021 | VA | 79 | F | 2/27/2021 | 2/28/2021 | Dizziness; feels unsteady at times; nearly passed out/totally passed out; This is a spontaneous report from a contactable consumer. A 79-year-old female patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection; lot number: EN6198), via an unspecified route of administration, administered in Arm Left on 27Feb2021 as SINGLE DOSE for covid-19 immunisation. The patient's medical history was reported as none. There were no concomitant medications. It was reported that the patient received first COVID shot Saturday. She confirms the Pfizer COVID 19 Vaccine. She says 24 hours after she had the shot she nearly passed out, she got really dizzy and someone asked, are you okay, and she said no and they caught her before she totally passed out and she sat down. She is still having waves of dizziness and she feels unsteady at times, not every second but she is a little scared to drive a car. She just thought someone should know that. It was reported that dizziness began the next day on 28Feb2021 around 3pm. She closes her eyes and says she doesn't want to look at that. It is ongoing but it is not so bad after she gets up. It seems to have lessened after about 3 pm yesterday it is bothersome. She confirms it is ongoing but improved a little since it began. The outcome of the event dizziness was recovering, while unknown for the other events was unknown. |
| 1107722 | 3/17/2021 | NC | 70 | F | 3/16/2021 | 3/17/2021 | I awoke this morning feeling feverish. I walked to the kitchen to take tea and a Curamin tablet since I had run out of Advil.. I began to feel as though I was going to vomit so walked slowly to the toilet, knelt in front, then made a quarter turn,, thinking this would not happen, and I fainted/blacked out. I found myself face down in front of toilet and a good bump on my right eyebrow....face turned inward. I stayed still long enough to feel safe to rise and so did. No more sense of vomiting, thank goodness. Just very very tired. I did make oatmeal with blueberries for breakfast and ate this slowly. Just wanted to ask if this is to be expected. It is now four hours fifteen minutes since this happened. As I walk carefully , I am trusting all will be well ...but when? |

| 1108050 | 3/17/2021 | NY | 24 | M | 3/16/2021 | 3/16/2021 | Patient was sitting in observation area following vaccine administration when he fainted in his seat. He started sliding down and was unresponsive for a moment according to witness. Pharmacist laid patient down and raised legs, removed coats to make patient more comfortable. Patient re-gained consciousness spontaneously. As patient felt better he was made comfortable , observed longer until he felt confident to leave (refused suggestion to call for escort). Pharmacist called patient at home to make sure he was feeling good. |
| 1107657 | 3/17/2021 | NY | 22 | F | 3/15/2021 | 3/15/2021 | Pt reported to the vaccination area stating that she had a history of fainting after medical procedures, including vaccination. Was with her mom, in case she had an issue. Vaccination without incident. Kept pt at the vaccination area to observe. About three minutes after receiving the vaccination, pt started to shake. Was conversing. Stated she was warm, so got her a cold bottle of water. Stated she was dizzy so helped her to the floor to lay down. She had contractions of her hands, which she stated that they were numb. She recovered from the dizziness, but then had a panic attack. Her BP was normal, but her heart rate became elevated. Had her lay down until she felt better, helping to slow her breathing. After about 40 minutes, p t felt good enough to sit in the recovery area. Ensured she had water and some food to help prevent a blood sugar drop. |

| 1108042 | 3/17/2021 | OH | 59 | F | 3/16/2021 | 3/16/2021 | Patient received Janssen COVID19 vaccine (LOT#1802068) at approximately 12:00 pm on 3/16/21. During the 15 minute observation period, she expressed "I don't feel good" and endorsed nausea. Shortly thereafter at approximately 12:10 pm, she started to slouch and nearly fainted while sitting in a chair. She did not fall or hit any part of her body. She was easily aroused with a touch on her arm and responded to verbal questions within seconds (less than a minute). She denied trouble breathing or chest pain. She then reported nausea again and was offered a receptacle to vomit in if needed; however, she did not vomit. Patient was encouraged and instructed to sit on the floor to prevent injury in case of fall but she refused stating that she didn't think she would be able to get back up given her preexisting knee problems. Pharmacy staff offered her water, a fan, and opened windows. Her jacket was removed in order to monitor blood pressure/ pulse, which was not abnormal. Patient did not have any trouble breathing, rash, swelling, abdominal cramps, or mental status changes. She was contacted via phone a few hours later for follow up on the incident, at which time she denied any issues and reported feeling well. |
| 1108045 | 3/17/2021 | ID | 43 | M | 3/17/2021 | 3/17/2021 | Client observed kneeling by chair as diaphoretic. immediately post vaccine. I asked client if he would lie down to be assessed. Client fainted and fell to the floor and hit the back of his head on the floor. Called code team with immediate assistance. Supported head and neck. Vital signs consistent with fainting episode and stabilized within fifteen minutes. Transferred by EMS to hospital for evaluation of head injury. Initial assessment showed no immediate neurological deficits and no superficial bleeding at head impact location. |

| 1108758 | 3/17/2021 | IL | 41 | F | 3/16/2021 | 3/16/2021 | I got my vaccination at 4pm, waited the 15 minutes at the united center waiting area and felt fine. I went home to pickup my daughter and at 6pm was back on the road driving and started to feel tired. I stopped at the light at foster and had just called my parents to tell them i had gotten the shot. I mentioned I was starting to feel tired and as I said it started to feel more tired. My mom responded maybe you should pull over and that was the last thing i remember as I fainted/blacked out immediately after. When I awoke my daughter (in the back seat along with my dog) explained that I had accelerated and hit the back of another car and then drove around that car, ending with both cars facing the direction of travel with my car in front of the car i had rear-ended. I was completely disoriented and had not recollection of hitting the gas or break much less driving. I was told two times that the driver in the other car was fine and was told when asked a third time that he did have some pain possibly and went in the ambulance to get checked out. I felt disoriented and jittery last night, took 2 Tylenol before bed and have felt fine today beyond feeling confused and horrible about what happen. My husband picked me up form the site and took me to my parents a few blocks north of the accident. |

| 1108987 | 3/17/2021 | NY | 61 | F | 3/16/2021 | 3/17/2021 | Janssen COVID-19 Vaccine EUA; at 4:15 a.m. I took a tylenol for the headache I'd had since around 8 pm; ate a few crackers with it; then as I was going back to bed I immediately felt weak/dizzy and then I passed out on the floor. My life partner started calling my name and check my pulse (which he said was strong); then I came to but was really dizzy; I was nauseous and vomited for a few minutes; extremely hot/sweating; and after I stopped vomiting, then had a bowel movement (He had to aid me in getting to the bathroom). About 20 - 25 minutes later I felt much better; everything calmed down. I was ultimately able to fall back to sleep. |
| 1109072 | 3/17/2021 | TX | 39 | M | 3/17/2021 | 3/17/2021 | Reports he fainted for few minutes. History of similar symptom with venipuncture. BP: 134/94 and 150/103 (repeat) Fingerstick: 121 HR: 60 SpO2: 99% RA Refused to be transported by EMS to ER. Refusal form signed by patient Seen and cleared by EMS, |
| 1109064 | 3/17/2021 | ME | 31 | F | 3/17/2021 | 3/17/2021 | No pain at the time of injection, but fainted after returning to sit outside. After about twenty minutes, with fluids and a snack kindly provided by the pharmacy staff, recovered quickly. |
| 1108752 | 3/17/2021 | OR | 53 | F | 3/17/2021 | 3/17/2021 | She sat down after getting shot then started to lean forward after saying she was nauseous. Rph caught her as she started to lean forward and she almost fell but I was able to get her to turn sideways and instead lay down on bench rather than fall forward. So she basically fainted for a minute and then laid for awhile while 911 was called. Ambulance arrived and patient remained conscious. |

| 1105044 | 3/16/2021 | CA | 39 | M | 3/16/2021 | 3/16/2021 | 39y/o male presents with syncope, head injury and body shaking within 5min of receiving Pfizer vaccine in left arm on 3/16/21. Patient lost consciousness, fell from a seated position and hit the left side of scalp on the floor. Patient then experienced uncontrolled body shaking for <5sec. He had drool from his mouth during episode. Patient regained consciousness after cessation of shaking. He reports associated sweating and head pain. He denies throat enclosing, difficulty speaking, lip/tongue swelling or itching, injection site pain or itching, blurring of vision, light headedness, chest pain, palpitations, or shortness of breath. He reports history of syncope when getting his blood drawn and at site of blood. He denies allergies to medication or vaccinations. He denies any current medical conditions or h/o seizures. On physical exam: Vitals: Heart rate 88, blood pressure 150/100 Skin: his skin is diaphoretic and ~4x2cm skin abrasion to his left scalp is noted. Cardiovascular: Radial Pulse 2+ . Heart regular rate and rhythm. Lungs: clear to auscultation bilaterally Patient was examined by EMS and informed that he could be transported to hospital via ambulance for immediate consultation with provider or can decline services and seek care at a later time. Patient opted to drive on his own to seek care at a later time. He was advised to contact his primary care provider regarding his adverse reaction, seizure and head injury. Note: MA called for PA on site when patient fell and hit head. PA told site manager to call 911 while attending to patient. When PA arrived to patient's side, he had regained consciousness and PA proceeded to provide care and investigate incident. |

| 1104811 | 3/16/2021 | FL | 47 | M | 3/16/2021 | 3/16/2021 | On 3/16/21 at approximately 12PM a middle-aged male patient came in to get his first dose of Moderna vaccine. I took in this patient into the IMZ room to give his vaccination and reviewed his form he filled out. On the question related to "have you ever had a reaction to a vaccine (fainting/dizzy)" the patient answered "No". The patient walked outside to the waiting area and sat down to begin his 15mins, at that point another customer yelled for medical attention for him because he passed out in the chair. I ran out with an EpiPen in case it was anaphylaxis. After I got outside the patient regained consciousness in the matter of seconds but was still dazed/confused and I applied a cold compress to the back of his neck and gave the patient some water to drink while feeling for his pulse in the wrist. He began to lose his color/pallor in his face again for a second time at that point I told my technician to call 911, after we dialed them, the patient came back to fully again this time and all color was restored to his face and he was fully conscious this time and able to speak in complete sentences. He wanted me to cancel the 911 call and since he came back to consciousness again in the matter of seconds so we canceled it. I made the patient wait an extra 30 minutes to observe him and he was fine from there on out, his wife was accompanying him and stated he has done this in the past for vaccines (despite answering no in the assessment form) and said she will be driving him home and checking in with his doctor later. |

| 1104130 | 3/16/2021 | NY | 66 | M | 3/9/2021 | 3/10/2021 | Body chills. In going to bed I had heavy clothing, bathrobe and multiple blankets to offset the chills. During the night I woke up overheated and bathed in sweat. Got up to go to the bathroom for BM but was nauseous, feeling need to vomit at the same time. After BM I stood and still felt need to do one or the other or both when I passed out. Wife came upstairs and found me sitting up against the corner wall. She was able to shake me awake while calling 911. I was groggy but aware I was still nauseous and stayed down next to toilet until stomach settled. I came downstairs and EMTs arrived. Took blood pressure. Result was it was low. Took EKG and that was normal. Second blood pressure test showed that I rebounded. When offered I felt it unnecessary to go to hospital. |
| 1104270 | 3/16/2021 | VA | 23 | M | 3/1/2021 | 3/16/2021 | Patient passed out and slid out of his chair while waiting after receiving his vaccine. The fall was witnessed by NP and aid was provided, immediately. Patient was laid flat on the floor and his Covid mask was removed. Patient returned to conscious state <5 seconds after onset of event. BP was checked while laying down (130/76 HR 80) and patient was given water and a pillow. Patient was allowed to sit after 5-7 mins but began to get dizzy, again. He was taken by wheelchair to clinic and allowed to lay on an exam table. A snack was provided and NP remained with patient until he was d/c'd at 10:05 am. His d/c BP was 128/78 (HR 65). Patient was reminded to alert staff to this event with his next vaccination. |
| 1103896 | 3/16/2021 | IN | 31 | F | 3/15/2021 | 3/15/2021 | Patient was at check out. She told that she felt faint. Check out woman went around and caught her before she hit the floor and lowered her down. Patient was out for about 10 seconds. Patient reports a hx of fainting with vaccines. She has no hx of HTN. Her bp was 90/50 at 4:13 pm when she was assessed. Her oxygen was 97% and pulse was 60. 5 minutes later she was assessed again. bp was 100/60 oxygen 98% and HR 70. At 4:25pm her bp was 104/62. oxygen 99% and pulse 69. She was still lethargic from the event. We had her picked up. |

| 1106332 | 3/16/2021 | | | F | 2/10/2021 | 2/1/2021 | I was lethargic; had no energy; appetite was gone; nauseous; head was a little dizzy, especially when I lay down/dizzy spells; I also felt unbalanced; I was shaky; I was unable to sit or stand up by myself. I was so weak.; Whiplash; fainted or passed out; fallen down the whole flight of stairs; I had no recollection on how I got there.; acromioclavicular joint separation; right thumb fracture; thumb was very sore; back was sore; felt so sick; My right thumb was very sore and I could not move my left shoulder or arm.; temperature was high; felt terrible; pale; pain; I had bruises all over my shins, knees, right elbow and 2 bumps on my head; headache; chills; no idea when I will fully heal, or when I will be able to get back to normal activities; Concussion; imbalance in my inner ear from the fall and from the bangs I received on my head; This is a spontaneous report from a contactable consumer, the patient. A female patient of an unspecified age received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Lot number unknown), via an unspecified route of administration on 10Feb2021 at 09:30 as a single dose for COVID-19 immunization. The patient's medical history included an unspecified immune system disorder from an unknown date and unknown if ongoing. The patient's historical vaccinations included the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) on 20Jan2021 after her Remicaide infusion. The patient's concomitant medications were not reported. The patient experienced loss of consciousness on 11Feb2021, fall on 11Feb2021, joint dislocation on 11Feb2021, thumb fracture on 11Feb2021, concussion on an unspecified date in Feb2021, dizzy spells beginning on 13Feb2021, headache on 10Feb2021, chills on an unspecified date in Feb2021, fever on 11Feb2021, being unwell on 11Feb2021, being pale on 11Feb2021, pain beginning on 11Feb2021, contusions on 11Feb2021, decreased appetite on 14Feb2021, nausea on 14Feb2021, back pain on an 11Feb2021, sickness on 11Feb2021, pain in arm on 11Feb2021, memory deficit on 11Feb2021, weakness on 11Feb2021, balance difficulty on 13Feb2021, had no energy on 14Feb2021, being shaky beginning on 12Feb2021, whiplash injury on 11Feb2021, lethargic on 17Feb2021, inner ear disorder in Feb2021 and ADL impaired in Feb2021. Event descriptions were provided in the |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

following first person account which was provided by reporter (the patient): "This is a chronological record of my experience after the Pfizer Vaccine 20Jan2021, I received my first shot of the Pfizer vaccine after my Remicade infusion in (hospital name) Wednesday, 10Feb2021, I received my second shot of the Pfizer vaccine at 9:30am at (hospital name). I started getting a headache before I went to bed at around 8pm. During the night, I got a severe headache and very bad chills. So bad my teeth were rattling and I had to pull an extra blanket over me. Thursday, 11Feb2021, I got up at 7.08am. I went into the bathroom and washed my face. I was very pale and I felt terrible. I went downstairs to the kitchen. I put the kettle on and took my temperature. I had three doctor appointments that morning in and I was worried I would not be able to get into them if my temperature was high. It was 100.1. I went into the ground floor bathroom. I left the bathroom when I heard the kettle was fully boiled. The next thing I remember was the feel of carpet on my left cheek. I knew the only floor in my house that had carpet, was the basement floor. I opened my eyes and to my horror, I was able to see the basement storage room. I had no recollection on how I got there. I knew straight away, that I had fainted or passed out, on the stairs landing and had fallen down the whole flight of stairs. I was afraid to move because I didn't know if I had broken my back or my neck. I was home alone. After laying there for a few minutes, I knew I had to try to get back up the stairs so I could get to a phone. If I didn't, I knew my husband would not find me there, until after 2:30pm. I tried to get up. I struggled but I got to my knees. The next thing I recall is waking up again on the carpeted floor. This time I was sprawled out in the opposite direction, this time my head was near the thread mill. I had obviously passed out again. Now this really frightened me, I was terrified to stand up in case I fell back down again. I literally crawled up the stairs on my hands and knees. I grabbed my cell phone and called my husband to come home from work. I made that call at 7.34am. I didn't move from the sofa until he came home. He made me a cup of tea. He then brought me into the bathroom to wash my teeth. When I was finished washing my teeth, I passed out again. I woke up this time to my husband tapping my face and calling my name. I had fainted again; he had caught me and had carried me

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

into the sofa. I was unable to sit or stand up by myself. I was so weak. I felt so sick, I couldn't even drink the tea. My husband brought me up to bed. He checked on me every hour. I came back downstairs at 4pm. I hurt all over. I had bruises all over my shins, knees, right elbow and 2 bumps on my head. My back was sore. My right thumb was very sore and I couldn't move my left shoulder or arm. I put ice on my shoulder and thumb all night. I took Tylenol pm to help me sleep. Friday, 12Feb2021, my husband helped me to get dressed. I came down the stairs with him. I was very weak. I was shaky and did not trust myself to walk down the stairs. He was having knee surgery that morning. His friend took him to the hospital as I was not fit to drive. I did not move from the sofa until he came home at around 2pm. We talked about going to the ER but I really didn't want to go because of Covid. I was not steady on my feet and I would have to be dropped outside the hospital on my own. I took pain killers all day and iced down my left shoulder and right thumb. Saturday, 13Feb2021: I was still in a lot of pain and my head was a little dizzy, especially when I lay down. I went to Urgent care at 9am. I was seen by Dr. (Name provided). She sent me for 4 x rays and took my blood. My back and right shin were x rayed, I had no broken bones. My shins and knees were badly bruised. The other 2 x rays showed I had a fracture on my right thumb and there was something wrong with my left shoulder. She suggested I go to see an orthopedic doctor on Monday. I forgot to tell her about the dizzy spells and my neck been sore. She did not examine my head or neck. She found no other reason for my fainting, except that I got the Pfizer vaccine the day before. Sunday, 14Feb2021, I continued with the pain killers and ice on my shoulder and thumb. I continued to have dizzy spells. I also felt unbalanced. My appetite was gone and I felt nauseous sometimes when I was eating. I had no energy and I hurt all over. Monday, 15Feb2021, I got an appointment with an Orthopedist at 4.30pm. My husband dropped me off. Nurse and his assistant looked after me before I saw the doctor. I was told I have a separated bone in my left shoulder. It's called acromioclavicular joint separation. AC (collar bone) separates from the scapula (shoulder blade). So, I will have to wear a sling for a few weeks. I will also have to wear a temporary cast on my right hand for a few weeks to heal the fracture on my

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

right thumb. No surgery is needed for either. They also put me on steroids for 2 weeks, Prednisone. Tuesday 16Feb2021, I rested all day. I was still having dizzy spells and I felt off balanced & very shaky. My husband, a close friend and a coworker thought I may have a concussion and advised me to get it checked out. I spent all day on the phone trying to get an appointment with a neurologist. I did get an appointment for the next day. Wednesday 17Feb2021, I still felt the same dizziness and I was lethargic. I had an appointment with the neurologist, Dr. (Name provided) at 2pm. I had a CAT scan and it was normal, no bleeding. The doctor said I had whiplash and a concussion. He did not find any other reason for my fainting, except for the side effects of the Pfizer vaccine. He told me, I just have to rest and the symptom from the concussion should subside in a few weeks. Wednesday 24Feb2021. The Dr.'s nurse called to see how I was. I told her there was not much improvement and that I was still having dizzy spells. She called me back after she related everything to the doctor He is concerned and wants to see me again on Monday 01Mar2021. He may do an MRI to see if there is anything else going on, other than the concussion. Friday 26Feb2021. I am still having dizzy spells. Monday 01Mar2021. I had another appointment with the neurologist at 9:30 am. I need to stay off work for another week and he will re-access me again next Monday. He says I have an imbalance in my inner ear from the fall and from the bangs I received on my head. He demonstrated some EPLEY exercise, that he wants me to do. The dizzy spells have not improved. I don't feel well at all. I cannot complete house hold tasks. I still cannot drive. I can" go to work. I have used over 40 hours of sick leave already. Now I have to be off work for another week and probably longer. I am worried and I have no idea when I will fully heal, or when I will be able to get back to normal activities. Prior to getting the vaccine, I was an ardent runner. I exercised every day and exercise is very important to me. I don't know how long it will be before I can go back to work or back to my exercise routine. I would never be in this situation, if I had not taken the Pfizer vaccine. I feel I was overdosed. I think one shot of the Pfizer vaccine would have been sufficient. I just went through 12 months without getting Covid. My immune system is suppressed so I am seriously careful about picking up germs. I have been

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

| | | | | | | | |
|---------|-----------|----|----|---|---|-----------|---|
| | | | | | <p>using sanitizer wipes and hand gel for years because of my immune system being suppressed. Long before the whole world heard about Covid, I was acutely aware of germs & viruses in public places. I am so sorry now that I got this Pfizer vaccine. I think I could have gone on living for the rest of my life, without catching Covid, because I am so careful. If I had to do it all again, I would not get this vaccine. The research was not completed. The trials were not long enough. The trails were conducted in a controlled setting. They do not know all the side effects. They do not know the extent of the adverse effect on anybody, never mind somebody with my suppressed immune system. They said the side effects could be chills, fever, flu symptoms, tiredness, joint pain, muscle pain and headache. Nobody told me I might pass out or faint. Nobody warned me. If I had known fainting was a possibility, I would not have been home on my own. The word needs to get out about this side effect. The media needs to know. The public needs to know. I do not want this to happen to anybody else. Since this happened to me, I heard or someone else, that also fainted. These vaccines need more research period." The patient underwent lab tests and procedures which included unspecified blood test on 13Feb2021 with unknown results, body temperature of 100.1 on 11Feb2021, computerised tomogram: normal on 17Feb2021, X-ray on 13Feb2021 had no broken bones but otherwise with unknown results. The clinical outcome of loss of consciousness, fall, joint dislocation, thumb fracture, concussion, dizzy spells, headache, chills, fever, being unwell, being pale, pain, contusions, decreased appetite, nausea, back pain, sickness, pain in arm, memory deficit, weakness, balance difficulty, fatigue, shaky, whiplash injury, lethargic, inner ear disorder and ADL impaired were unknown. Information on Lot/Batch number has been requested.</p> | | |
| 1106386 | 3/16/2021 | OH | 52 | M | 3/16/2021 | 3/16/2021 | <p>After receiving the vaccination, he started feeling lightheaded, then started sweating. He asked for water and drank water prior to a brief episode of syncope. He denies any trauma to his head or any part of his body. No mental status changes. He was assisted to the supine position on the floor, then was able to ambulate to a private section of the area and lay recumbent on an EMT gurney. He has a history of syncope with needlesticks.</p> |

| 1106317 | 3/16/2021 | NY | 69 | F | 2/13/2021 | 2/17/2021 | Blacked out; fractured nose; fainting; very tired and cold; very tired and cold; light headed; thirsty; nausea; This is a spontaneous report from a contactable consumer (patient). A 69-year-old female patient received the second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number: EL9266), via an unspecified administered in the left arm on 13Feb2021 at 08:15 AM at SINGLE DOSE for COVID-19 immunisation. The patient had no other vaccine in four weeks. The patient had no COVID prior to vaccination. The patient was not pregnant at the time of vaccination. Medical history included arthritis (No chronic health conditions besides arthritis). Concomitant medications included venlafaxine hydrochloride (EFFEXOR), simvastatin, and colecalciferol (D3). The patient previously took cipro [ciprofloxacin hydrochloride] and experienced allergies. Historical vaccine includes first dose of (PFIZER-BIONTECH COVID-19 MRNA VACCINE, lot number: EL9262), via an unspecified route of administration in the left arm on 22Jan2021 at 5:00 PM for COVID-19 immunisation. It was reported that for 2 days, patient was very tired and cold. At day 4 while at her trainer, the patient experienced light headed, thirsty, nausea, and had blacked out. All tests were normal at emergency room (ER), but have fractured nose. The patient wanted to understand if this fainting can be related to the second shot. Cardiologist said no problems in the heart. All events started on 17Feb2021. There was no treatment received for all events. The patient had COVID test post vaccination via nasal swab on 17Feb2021 which showed negative result. On an unspecified date in 2021, the patient recovered from all events. |
| 1106694 | 3/16/2021 | MN | 29 | F | 3/16/2021 | 3/16/2021 | Pt had a reaction to vaccine. Specifically, she fainted and had seizure. It happened within seconds after the immunization delivery. Pt had upper body seizure waist up in the chair. This lasted about 30 seconds at a time. This occurred roughly 3 or 4 times. Emergency services were called. EMTs responded to scene. Pt was well enough not to go to the hospital. Eventually, left with boyfriend feeling better. |

| 1106683 | 3/16/2021 | CO | 41 | F | 3/16/2021 | 3/16/2021 | <p>Patient felt faint nearly immediately after but said she wasn't having problems breathing. She was told to breath deeply and she quickly started feeling "a little better" so she was helped to a chair with arm rests in the room. She said she had an orange in her bag, so she started eating her orange. Just a minute later she said she was going to pass out, so the pharmacist caught her. He held her up in the chair and tried to revive her for a few moments but noticed that the blood was draining from her face and her lips were turning blue so yelled for one of his technicians to call 911 and the other to grab an epi pen. He then lowered her to the floor in case he needed to begin to resuscitate while the technician brought him the epipen. While lowering her she urinated on herself. As the pharmacist went to check her vitals before administering the epipen and beginning cpr if necessary the patient suddenly gasped once and her eyes opened widely, but not continue to breath. Upon inspection in her mouth there was a piece of orange near the bottom of the throat. The pharmacist asked if she was choking and she did not response at all, but did not start visibly breathing either. So the pharmacist swiped the piece of orange out quickly, in case it was either previously lodged or patient would have to be resuscitated. She did not seem to enjoy this and this seemed to wake her up and she quietly gasped not choking. She started to quickly improve and admitted that she was feeling better, and had passed out before after getting blood drawn but never after a shot so didn't mention this. While this was happening a police office was going through the drive through so the technician called him in for assistance and he arrived around this time. He asked her a few questions like "what's her name, who's president, how many quarters are in a dollar" which she was able to answer. She said she was mostly embarrassed and was feeling much better. She sat up in the chair again about the time the emts came in. The checked her out, but she didn't want to go to the Emergency Room. She was driven home by her father. I called her later around 6 pm that night and she said she was feeling totally fine and I advised her to please call her PCP and discuss this incident with him or her.</p> |

| 1106671 | 3/16/2021 | TN | 42 | M | 3/16/2021 | 3/16/2021 | Notified by pharmacy technician that patient had 'passed out' in parking lot. Patient found lying on the ground, pale but awake. Patient had been instructed to wait in the store for 15 minutes after vaccination in case of any adverse reaction but, per police, decided to wait in the car instead. He then began to feel lightheaded and decided to come back into the clinic. He passed out on his way. Civilian notified policeman that patient was passed out and EMS was called. EMS arrived shortly after I went out to parking lot to check on the patient. Patient was alert and oriented for EMS, reported history of HTN. He continued to c/o feeling lightheaded and BP per EMS was 77/48mmHg. Patient taken by ambulance for further evaluation and treatment. |

| 1106307 | 3/16/2021 | TN | 65 | F | 2/22/2021 | 2/22/2021 | Patient felt like going to pass out and she did then, she was probably out less than in a minute; Severe headache; Nauseous; Throwing up/Vomiting; Sore arm; This is a spontaneous report from a contactable consumer (patient). A 65-years-old female patient (weight: 81.65 kg, height 170 cm) received the first dose of BNT162B2 (Pfizer-Biontech Covid-19 Vaccine, Lot. EN6201) at single dose, on 22Feb2021, for COVID-19 immunisation. Relevant medical history included thyroid disorder from an unspecified date. Concomitant medication included levothyroxine sodium (SYNTHROID) for thyroid disorder. On 22Feb2021, the patient experienced sore arm. On 25Feb2021, the patient developed severe headache, nauseous, and vomiting (throwing up) and the patient felt like going to pass out and she did then, she was probably out less than in a minute. The patient described as following: so, on 25Feb2021, the headache increased throughout the day and her nauseousness continued throughout the day and in the afternoon with the pain of the headache she thought she passed out, she vomited that gave her little bit of relief but then she took "two (not clarified) Advil and went to bed". Clinical outcome of the adverse events was unknown at time of this report. Patient asked if should be expected the same kind of reaction when she got her second shot. |

| 1105587 | 3/16/2021 | OR | 27 | F | 3/12/2021 | 3/12/2021 | I noticed a very mild headache and slight coldness within 2 hours of my vaccine. Onset of my severe symptoms began around 10PM on 03/12/2021 with a stabbing headache (Felt like someone took an air pump and kept 'blowing up' my head. My eyes felt achy and heavy and every time I looked in a different direction I would get a zapping/electric feeling throughout my head that would cause my head and neck to spasm (longer duration) or twitch (quick jolt). This also caused dizziness). I got really cold and had intense shivering and shaking. Around midnight, my skin started feeling bruised all over my body (very sensitive to touch, including my bed sheets against my spine felt like rubbing up against a wound). At the same time, my joints (especially my neck, hips, and knees) got hot to the touch and were incredibly painful (induced tears). My muscles developed a deep ache that also caused significant pain. I felt very weak and confused. I didn't take my temperature until the early morning, and it was 102.9 at that time. I alternated taking Tylenol and Ibuprofen throughout the day, but my temperature stayed between 102 and 103.1 for about 24 hours, as did the previously noted symptoms. I noticed a gradual improvement of my symptoms over the next two days. On the evening of 03/14/2021, my headache worsened some, and I had an unexpected episode where I nearly passed out (dropped to the floor but stayed conscious). I also had intermittent foot tingling (very noticeable, not mild) over the course of a few hours. For 3 full days (but by far the most severe within the first 24 hours), I experienced some strange sound processing. Things like the sound of a car driving by or the ceiling fan felt like it echoed throughout my whole body and gave me an uncomfortable shivering feeling. As of today (03/16/2021), I am mostly recovered. I am still experiencing fatigue, a very mild headache, and some mild pain. My nausea has completely resolved, though that was never a chief complaint of mine. I realize that some of my symptoms are to be expected with this vaccine. But especially the level of pain I experienced throughout my entire body was very concerning and not something that I was aware could happen as a result of the vaccine. |

| 1105640 | 3/16/2021 | IL | 33 | F | 3/16/2021 | 3/16/2021 | Patient fainted following vaccination and hit her head. Pharmacist provided first aid and verified patient was ok. Patient refused medical transport, pharmacist sat with her until another person came and picked the patient up. |
| 1105641 | 3/16/2021 | OH | 36 | M | 3/13/2021 | 3/13/2021 | Patient fainted and ended up falling and hitting her head on the floor. Once she came to, she felt "tingling" and ended up breaking into a sweat. |
| 1105902 | 3/16/2021 | SC | 38 | M | 3/16/2021 | 3/16/2021 | Patient received his pfzier covid vaccine. immediately after he had the vaccine administered, he stated that he started to feel very hot, dizzy, nausea and tingling down his arm that he received the vaccine in. We immediately got a yoga mat, asked the patient to remove his shirt. He fell to the ground. We placed a cold pack under his head around the neck area and cold paper towels on his head. We took his blood pressure it was 136/88. He started to mention his chest hurting. His past medical history includes fainting in the past (due to low blood sugars) and open heart surgery as a child. He is currently under the care of a cardiologist. More recently he has had several fainting spells which he believes is due to low blood sugar. He stated he had eaten a good lunch around 11:30. It was about 2:30 when this incident occurred. We offered the patient, a banana, orange, chicken sandwich and water. He ate the orange. We called EMS. When they arrived, they checked his blood sugar which it was 95. He started to feel better and his wife drove him to the cardiologist. |
| 1105645 | 3/16/2021 | MS | 58 | F | 3/16/2021 | 3/16/2021 | Before receiving her first dose of the one-dose series, pt stated that she always "faints or passes out" with IM injections/vaccines - in an attempt to prepare for this, another pharmacist assisted during the time of vaccination, and the patient did well. We sat with the patient for about 5 minutes and asked that she stay seated for the remainder of her "15 minute wait period." She was accompanied by her husband. Roughly 10 minutes after administration, one of our technicians alerted the pharmacists that the patient had experienced vasovagal syncope, so we rushed to the patient, called 911, and remained with her until she woke up (which was within less than 1 minute after the event) and was in the care of other healthcare personnel. |

| 1105604 | 3/16/2021 | IL | 25 | F | 3/16/2021 | 3/16/2021 | Pt received 2nd COVID vaccination at 1024. Once in observation area, pt became unresponsive shortly after sitting down. This provider was called over by staff to pt, which was noted to have dropped her water bottle and become unresponsive while sitting in the chair. Pt remained in the chair, did not fall or injure self. Upon arrival to patient, she was noted to have moderate pallor, with shallow, slow breathing, no cyanosis noted. Her head was aligned/adjusted to maintain an open airway. Pt noted to have some muscular rigidity and not verbally responsive. Another provider advised to call 911 due to unresponsiveness and seizure-like activity. 911 called @1027, meanwhile pt lifted and placed into a wheelchair and moved to treatment area where vitals were obtained, patient became verbally responsive @1034, responses/speech was clear but slow, pt was oriented to self, place, time and situation. Oxygen applied via facemask @4L. Pt provided staff with phone number to call her mother who was notified of daughter's condition @1032. FD Engine arrival @1033 report given and pt also became more responsive, eyes opened and stated clearly that she was feeling better. Pt color also improved. Pt denied any allergies, PMH or hx of seizure activity. Pt only reported a syncope many years ago. Ambulance arrival @1036, report provided to emergency staff and pt taken to ambulance for further evaluation @1039. Pt returned to vaccine clinic @1052, having declined ambulance transport. When asked about events, pt stated that upon sitting down she felt a sudden onset of moderate nausea and reached for her water bottle in her bookbag, pt states she could not recall or hear anything until she was moved to wheelchair, and did not recall how she came to be in the observation area (based on this information, suspected time unconscious was approx 6-12 seconds). Pt was educated regarding the many causes of syncope and the necessity for further evaluation in the Emergency department. Pt discouraged from driving herself from the clinic and was able to obtain ride from her roommate. Pt urged again to obtain a ride to the hospital for further evaluation, understanding verbalized and agreed with plan of care. |

| 1101910 | 3/15/2021 | NY | 64 | F | 3/1/2021 | 3/3/2021 | To give context to the adverse event, in early November 2020 I was diagnosed with Bell's Palsy of unknown origin on the left side of my face. I was tested for COVID-19 and it came back negative. It resolved itself in about a month. About 8 hours after receiving the COVID-19 vaccine on 3/9/21 (about 6:30 p.m., I started to feel a slight headache. Because I had just had the vaccine, I was trying to avoid taking any pain medication, so I did not take anything for it. The headache got worse throughout the evening, and by 10 p.m. I would describe it as a moderate headache. It was primarily concentrated on the left side of my head towards the front, on my forehead and above the eyebrow. I went to bed without taking any pain medication. About 3 hours later, at about 1 p.m., I woke up, and the headache was much more intense. It felt like all the nerves around the left side of my face, including the nerve along my jaw line leading to the 7th cranial nerve that causes Bell's Palsy, were throbbing. I grew concerned about getting Bell's Palsy again, so at that time I took one ibuprofen Advil. After taking it, the headache subsided, although I continued to have a dull headache throughout the night and the next day. Patient received the vaccine Monday March 1st around 2:30pm. Patient began to feel arm soreness around 5pm, woke up at 3am the following morning with a severe headache and spent the next day resting. Wednesday morning March 3rd, the patient reported extreme fatigue, dizziness and feeling "woozy". As she was walking around the store, around 8:30am, patient had to request help as she almost fainted. Patient went home quickly after, reported dizziness until 3pm. Patient's friend who is a nurse came to her home to check her vitals, confirmed they were normal and encouraged fluids/rest. After resting further Wednesday/Thursday, patient returned to work Friday morning and has been fine since. Patient did not take any medications prior/during/after incident. |

| 1101516 | 3/15/2021 | KS | 18 | M | 3/12/2021 | 3/12/2021 | Patient Passed out a few minutes after he received his vaccine and was walking to observation. was with patient and claims it is not unusual for the patient to pass out from needle fear. Patient was monitored by staff and had no other issues. Patient rested and drank fluids for thirty minutes and left. was fairly certain it was his fear of needles that made him pass out. |
| 1101933 | 3/15/2021 | NC | 82 | F | 3/6/2021 | 3/7/2021 | March 7, 2021 at about 6:30 p.m. I had two spells where I had no control over my body. I fell and could not get up. I had no strength and was unable to get up. Each time it only lasted a few seconds or minutes. It was sort of like I fainted but stronger. I had spent most of the day resting as I had a very bad headache but that was about gone when I had the two spells. I had also had a small patch of hives (fever and swelling) about the size of my hand at the site of the shot. That lasted about a week after each shot. I thought this was something I should report. Thanks. |
| 1101566 | 3/15/2021 | NY | 22 | F | 2/25/2021 | 2/25/2021 | Extreme dizziness and fainting after standing up for a prolonged period of time 12 hours after the second dose of the vaccine. |
| 1101702 | 3/15/2021 | | 27 | F | 3/15/2021 | 3/15/2021 | Patient with syncope a few minutes after vaccination. Able to keep patient upright in chair until able to get in wheelchair. After a minute or two, patient was alert again. Given juice. Vitals stable. Able to discharge home with boyfriend. |
| 1101951 | 3/15/2021 | | 42 | M | 3/15/2021 | 3/15/2021 | presyncope, nausea, evaluated by EMS, refusal to transport. |
| 1101969 | 3/15/2021 | IN | 29 | F | 3/13/2021 | 3/15/2021 | Patient fainted shortly after receiving the vaccination. She was seated in the post observation area. It occurred approximately 3 minutes after receiving the vaccination. Patient stated that she started feeling dizzy and then remembered waking up. She woke up quickly and EMS arrived to assess the patient. |
| 1102089 | 3/15/2021 | GA | 36 | M | 3/15/2021 | 3/15/2021 | Vasovagal syncope. Felt better after laying down for a while and then slowly drinking water and eating granola bar. |

| 1102333 | 3/15/2021 | MD | 69 | F | 3/1/2021 | 3/2/2021 | day 2 (3/2/2021) left arm swelling and red over the inject site; painful to raise arm overhead. day 3 - fatigue/chills - arm better, little pink inject area; swelling down. day 4 nausea/regurgitation/loose stools. day 5 called doc Thursday still weak- Dr said symptoms are among those possible; Advised I likely have more severe symptoms for 2nd shot; get gatorade; Imodium, BRAT diet foods, etc. Mon 3/8 had 3 near fainting spells. (3/8 pm -red painful rash on left arm inject site. Lasted till 3/15 Mon COVID ARM?) Checked BP and Pulse/Oxy. Called Doc/video visit; Thought my BP/O2/Pulse numbers OK/ Ordered blood work. 3/11/2021 8:40am did blood/urine tests/ Made follow up appt for 3/16 with GP. |
| 1102344 | 3/15/2021 | VA | 23 | F | 3/15/2021 | 3/15/2021 | PATIENT FAINTED IMMEDIATELY AFTER VACCINE ADMINISTRATION. BP WAS ELEVATED INITIALLY AND PATIENT WAS MONITORED AND REQUIRED NO FURTHER INTERVENTION. |
| 1101508 | 3/15/2021 | GA | 29 | F | 3/12/2021 | 3/13/2021 | On the day following my second dose, I woke up with a headache around 6am (expected this may happen and took Tylenol). A little before noon my partner and I got in the car to run an errand. In the car I started to feel worse and I fainted. I was out for about 30 seconds according to my partner. I came to and had my vitals checked at an urgent care center (all vitals WNL). During this episode in the car I think I also had chills. The onslaught of symptoms in the car lasted only about an hour before resolving. I continued to have a off and on headache for the rest of the day but other symptoms resolved. By Sunday I was pretty much back to normal; any headache symptoms were pretty much resolved. I am not sure if the fainting episode was related to vaccine or not. I have had fainting episodes in the past (2-3x at dentist office and 1x at optometrist when having eye pressure checked). |

| 1102345 | 3/15/2021 | VA | 33 | F | 2/20/2021 | 2/20/2021 | 1/23/2021 - The first Moderna vaccine. I had flu like symptoms, which included fatigue, muscles aches, muscle spasms, joint aches, chills, and shortness of breath for 2-3 days afterward. 2/20/2021 - The second Moderna vaccine. The side effects were much worse, including muscle aches, abdominal pain, back pain, headache, nausea, chills, fatigue, and shortness of breath. I also found myself limping. 2/21, 2/22, 2/23 - I rested and stayed home from work. Most of my symptoms had improved by the evening of the 23rd, and I felt like the shortness of breath was also improving if I took it easy. 2/24 - I went to work where the shortness of breath became much worse after working for a couple of hours. I began to get dizzy, and my hands and feet were cold and tingling. The school nurse checked my temperature (which was normal) and oxygen levels (99%). I was sent home and told to take another day or two off. I was fine if I was sitting still and doing nothing, but talking caused me to become winded. Walking and exertion of any kind caused me to become winded. Once winded, it would take 15 minutes of sitting still to get my breathing back under control. Then I would be hit by a wave of fatigue. Also, when my breathing was bad, I walked with a limp. 2/25 - I went to the shortness of breath was still bad. They were concerned. They took a chest x-ray (which came back clear), did blood work (which was normal), and gave me a Rapid Covid test (which was negative). My oxygen levels were at 99%. They prescribed a 6 day pack of MethylPREDNISolon. If I was not better by Saturday, they wanted me to return. They also did a PCR test (this came back negative on 2/28). 2/26 - The steroid did not help, and by the evening, I was worse. I went to the ER. The doctors there were concerned about a pulmonary embolism. They did blood work (which was normal), a chest x-ray (which came back clear), and an EKG (which was normal). My vitals were good, though my blood pressure was high for me (113/64). The doctor told me to continue the steroid pack and prescribed an albuterol inhaler. I was directed to contact a pulmonary specialist on 3/1 if symptoms did not improve. The doctor wrote a note for me to work from home through 3/5. 3/1 - The shortness of breath did not improve. I almost passed out while driving after I picked up my two small children from school. I could not catch my breath in the car and started |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

to get lightheaded. When I parked, I stayed in the car huffing and puffing for several minutes. I was seeing spot, was dizzy, and my hands and feet were tingling. When I climbed out of the car, my legs buckled beneath me. I was able to grab onto the car and not fall. I had some really bad breathing episodes between 3/1-and 3/3. At these times, the breathing was so rough, that I couldn't even talk. It would take 30 minutes or more of sitting still for me to be able to bring my breathing under control. 3/3 - Appointment with Pulmonary Specialist. I had an appointment. He ruled out asthma, as the inhaler and steroid were both ineffective. He considered anxiety, but the problem was clearly not a panic or anxiety attack. (I have experienced those before and know the difference.) He ruled that out. He ran a pulmonary function test (which was normal) and a CT scan with contrast (which was normal). The doctor wrote a note for me to work from home through 3/10. 3/4 and on - My breathing was better some days than others. The less energy I exerted, the better I did. If I did too much one day, my breathing would be worse the next day. 3/7 - Ajoyv injection. I was past due for this monthly injection. Once injected, I had an allergic reaction to it for the first time ever (this was the 7th time I used it). A few minutes after the injection, the injection area had a rash and was itching like crazy. I put ice on it and took benadryl. It was fine by the next morning. 3/9 - Appointment #2 with Pulmonary Specialist. The specialist was not sure what the problem was with my breathing. I was the first patient with these vaccine side effects that he had seen. He scheduled more tests and said he wanted to read more literature. He wrote a note for me to work from home through 4/6.

| 1100284 | 3/15/2021 | MI | | F | 1/28/2021 | 1/29/2021 | sore arm/arms were quite sore; injection site pain; extreme fatigue/exhaustion; a little headache; chills; muscle pains which makes them a little achy overall; feel like they have Covid all over again; achy; feel lousy; sleepy all afternoon and stated that she sat down and just passed out, caller clarified that she went to sleep/very drowsy; issues with breathing and shortness of breath; This is a spontaneous report from a contactable consumer (patient herself) via Medical information team. A 77-year-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection, Lot number: EL3248) intramuscularly on 28Jan2021 at single dose in left arm for COVID-19 immunization. Medical history included Covid (she had Covid already). Concomitant medication was none. Patient received the 1st dose of the vaccine yesterday afternoon. Today patient experienced a sore arm, injection site pain, extreme fatigue, a little headache, chills, and muscle pains which makes them a little achy overall on 29Jan2021. she received the vaccine yesterday and stated that she felt like she has Covid all over again on 29Jan2021. She stated that she had Covid already and stated that they have chills and are achy in 2021. Caller said that she was also having issues with breathing and shortness of breath in 2021. Caller said that she was also having that Covid exhaustion. Their arms were quite sore too from the shot, but she did not expect to feel lousy in 2021. patient have been sleepy all afternoon and stated that she sat down and just passed out, caller clarified that she went to sleep in 2021. Yesterday they were ok, but she felt sleepy. She started feeling very drowsy after the shot and they were fine all night. Caller said that since they have slept all afternoon they have perked up a little bit. She does not feel the chills anymore, she turned the furnace up a little bit. Achy: She said that it has improved as her back does not hurt as badly. patient said that this was her first dose of the Covid-19 vaccine. The outcome of event chills was recovered on 29Jan2021, for fatigue, COVID-19 and ache was recovering and for other events was unknown. No follow-up attempts are possible. No further information is expected. |

| 1100471 | 3/15/2021 | SC | 70 | F | 2/1/2021 | | <p>syncope; afib; afib; soreness, redness, and pain at injection site/left arm pain/under arm pain; soreness, redness, and pain at injection site; her blood pressure was really high and kept going up and down like a roller coaster; She was taken to the ER and began feeling sick to stomach in ambulance; headache; felt her ears vibrating; Breast, arm and clavicle starting hurting two weeks and one day after the injection; Breast, arm and clavicle starting hurting two weeks and one day after the injection; Breast, arm and clavicle starting hurting two weeks and one day after the injection; She is anxious about getting the second vaccine; Enlargement of lymph nodes; increased heart rate; This is a spontaneous report from a contactable Nurse reported for self. This 70-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 01Feb2021 on Arm left at single dose (Lot # EL9262, Expiration: May2021) for covid-19 immunisation. Medical history included Atrial fibrillation from Jan2020. Had 2nd dose appointment scheduled but canceled appointment. Concomitant medications included apixaban (ELIQUIS) from 07Feb2021 at 5mg twice a day by mouth (provided SN100089537925, LOT 1771228, EXP: May2023, NDC: 0003-0894-21) for Atrial fibrillation. History vaccine included a Tetanus shot 40 years ago (1981) for immunisation and reacted terrible to it. She reports having and experienced soreness, redness, and pain at injection site. She reports getting a mammogram sometime after receiving the vaccine. They saw a spot they are going to recheck and saw swollen lymph nodes on the left side/ Enlargement of lymph nodes, which is the same side she received her vaccine. She was told it was most likely due to the vaccine. Six days later she suddenly felt sick, near syncope, couldn't catch her breath. It got so bad she thought she was dying and called EMS. Leads confirmed afib, her blood pressure was really high and kept going up and down like a roller coaster. She was taken to the ER and began feeling sick to stomach in ambulance. IN the ER she received 1000 ml of fluids and additional metoprolol in addition to dose she took that evening at home. She was sent home to follow up with her Cardiologist the following Monday. He wasn't sure if it was due to vaccine and started her on twice daily eliquis and increased her toprolol immediate release to twice daily. The following Friday night she got</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

a headache and felt her ears vibrating. Her home EKG was fine, but blood pressure was high again and stayed up for hours. Took additional toprolol. Came down after 5 hours. Breast, arm and clavicle starting hurting two weeks and one day after the injection. She is anxious about getting the second vaccine. Asked PCP if she needed an antigen test to see if she needed a second dose of the vaccine. She says she got her first dose 01Feb, then on Wednesday, 03Feb she went and got a mammogram which had already been planned. She says that they saw enlarged lymph nodes to her left breast, under arm, and clavicle which they said are due to vaccine, but they also said they saw something else so they wanted to do a repeat mammogram three months later. She says it took two weeks, but suddenly her left breast and under arm were killing her, caller did not clarify this statement. She says she talked to her doctor who said don't worry it might take a while to go down. She says that the other thing is she has known atrial fibrillation that was diagnosed a year ago, and most of the time it is quick and doesn't last long, sometimes she doesn't know she is having it. She says 6 days after the first dose she started to feel ill, she had been in bed reading so she got up to get some water and suddenly felt like something was wrong and like she was going to pass out, she couldn't breathe, so she called EMS. She says her atrial fibrillation is not unusual, but she has never had it to where she couldn't breath. She says that the rate they estimated was 350, and her only other documented that was high like that was 150. She says that they treated her and she went home, and when she saw her cardiologist they said they don't know if the vaccine had to do with this, and to report it. She says a week later, on Friday a week ago, she started feeling funny standing while she was working on the computer in the middle of the afternoon, she felt like her ears were vibrating, which was very unusual, and she didn't know what was wrong so she looked at her Cardia app, and her heart was in normal sinus, and she checked her blood pressure which for her was sky high, up to 190/100 which her blood pressure is usually very low. She provided a second blood pressure that call handler was unable to capture and caller did not clarify as she no longer had her log with her. She says for hours her blood pressure (BP) went up and down, which was a similar or

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

same thing as what happened that night she went to the ER with her atrial fibrillation, her BP would go up and down like riding a wave. She says needless to say, she has two questions: she says she doesn't know if there have been reports of that vaccine making A-fib worse, she is scared to get her second dose which she was supposed to get Monday a week ago, but put off primarily before the second thing with BP, she thought she would wait because she could hardly move her left arm so she put it off until the next Wednesday, She says that her second dose is now scheduled for 03Mar, so 4 weeks between doses, and she is a little afraid to get it because she doesn't know if her response was over the top or caused the other things, going to the ER with A-fib was terrifying, and she doesn't want that to happen again. She says people say that she has got to get her second dose because she won't be protected, so she would also like to know if it is possible for her to get antigens early on. She says that she had a tetanus shot 40 years ago, and had a horrible reaction after it, then years later they did a titer for tetanus and they said she would likely never need a tetanus shot again since she had built up such a high level and would never need it again. She says is it possible that she had enough immunity that she wouldn't need the second dose, or would there be an antigen test that could tell her if she would need a second dose, if so what is that test? She says she is afraid the next dose will kill her. AE treatment included says that when she went to the ER it was about 12:30AM when she arrived, they did not admit her. She says on the way to the ER in the EMS truck they gave her Cardiozyme to get her blood pressure going down and gave her 1000 cc fluids, and Metoprolol, another dose. She says that the Cardiozyme was IV push in the ambulance, she doesn't have the information to provide for all of the heart stuff they gave her, NDC/LOT/EXP: Unknown for Metoprolol or Cardiozyme. She clarifies that she takes Metoprolol normally every day that they have had her on that is extended release and she takes it at night. She says she had taken that at 09:30PM, and by the time she got there to the ER after midnight a little, they after gave her another to see if it would bring her heart rate down. She says that they kept her there a couple of hours, until her heart rate was normal, though her BP was up a bit. She says that they told her they could admit her but she said

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

she would rather go home if they thought it was safe, and she went home. She says that her sister came home and stayed with her, whose husband is a cardiothoracic surgeon. Metoprolol: Caller says that the Metoprolol she is taking is in a pharmacy bottle that says use by 08Feb2022, it does not have an official label, the NDC or LOT are not on there. She says that they gave her 60 to take of regular Metoprolol, not extended release, which is 25mg to take twice a day by mouth, so 60 tabs and she would need to get refills as it is a months worth. Metoprolol extended release NDC/LOT/EXP not provided when queried. She clarifies that the not extended release is called Toprol/Metoprolol Tartrate 25mg. Caller says that her swelling lymph node limited the use of her arm, she can't pick up anything or lift her self up while moving in the bed, she is miserable, it hurts to put pressure on her arm and she can hold her arm up and move it around she can do anything with not holding anything, she feels a tightness there, even when she breathes or coughs. She says her left arm was sore initially for 3-4 days after getting the shot but the soreness left. She says she was told on 03Feb that she had swollen lymph nodes, which was two days after the shot, but she couldn't feel them then, she couldn't tell, and had no pain. She says it was two weeks later that happened, it was so odd that it was two weeks before it was hurting then got progressively worse. Caller says that Tuesday a week ago she thought she must have done weights with her arms since her muscles were sore, but it was only on one side and she hadn't done any exercise since after she went to the ER she was being careful what she did, and she thought she strained her arm and realized what it was, it has gotten progressively worse over the last week. She says last night she started looking up remedies, she has been putting ice on it, and the clinic said use warm, and she rubbed castor oil on it last night in the shower then this morning she massaged her arm with castor oil and put a warm wash cloth over it. She says that castor oil has anti inflammatory properties. She says she has not noticed a difference yet, but she has only done it two times. She says it also said she can take Aleve or Ibuprofen, they told her at the ER, they also started her on Eliquis the night she was there, which she had never been on, they didn't consider her A-f fib bad enough. She says that is what has her concerned, she got the shot then 6 days

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

later A-fib made her feel like she couldn't breathe. She says also her BP and heart rate going back up made her sick to her stomach that subsided when her BP was coming down but then it started going back up again, when she went to the ER that Saturday night on the 6th but by the time she got there it was the 7th. Outcome of the events was unknown.; Sender's Comments: The possibility that suspect drug may have contributed to the reported event cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

| 1100563 | 3/15/2021 | NC | 74 | F | 2/25/2021 | | watery eyes; runny nose; slight headache; This is a spontaneous report from a contactable consumer. A 74-year-old female patient received the 2nd dose of bnt162b2 (BNT162B2) at single dose on 25Feb2021 for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. The patient received the 1st dose of bnt162b2 (BNT162B2) on 01Feb2021 for COVID-19 immunisation and she experienced she passed out and fell to the floor before daylight and dizziness on 01Feb2021. The patient experienced watery eyes, runny nose and slight headache in 2021. No treatment was received. No admission to hospital due to the events. The outcome of events was recovered in 2021, she was fine now. Information about lot/batch number has been requested. |
| 1100271 | 3/15/2021 | WI | 82 | F | 2/8/2021 | 2/10/2021 | Lost control of muscles; ended up blacking out; could not move; could not talk; A spontaneous report was received from a Consumer concerning about a 82 years old female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced Paralysis, Syncope, Mobility decreased and Aphasia. The patient's medical history was provided as diabetes, dementia as current illness. Relevant concomitant medication was reported as blood thinner for blood clots. On 08 FEB 2021, prior to the onset of event, the patient received their first dose of two planned doses of mRNA-1273 (lot/batch: unknown) for prophylaxis of COVID-19 infection. On 10 FEB 2021, the patient experienced Paralysis, Syncope, Mobility decreased and Aphasia. Due to these events patient's required hospitalization and on oxygen. Laboratory details was not provided. Treatment information was not provided. Action taken with mRNA-1273 in response to the events was unknown. The outcome of the event's Paralysis, Syncope, Mobility decreased, and Aphasia was as unknown.; Reporter's Comments: The events were consistent with increased risk of cerebrovascular complications associated with elderly age of patient. Company assessed the events to be unlikely related to company product. |

| 1101151 | 3/15/2021 | IA | 92 | F | 2/19/2021 | 2/21/2021 | Sore arm; Passed out; loss sense of time for 36 hr; so weak to get up; Vomiting for several time; A spontaneous report was received from a consumer, who was a 92 year-old, female patient, who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced sore arm, lose the sense of time, vomiting for several time, so weak to get up and passed out. The patient's medical history included cancer, restless leg syndrome, allergies to shellfish and currently living in hospice. Concomitant products included rivaroxaban, digoxin, diltiazem, omeprazole, pramipexole, vitamin D3, budesonide and paracetamol prn. On 19 Feb 2021, the patient received the first of two planned doses of mRNA-1273 (Lot number: 004M20A) intramuscularly for prophylaxis of COVID-19 infection. On an unknown date after receiving the vaccine, the patient experienced sore arm. One night, she lost the sense of time for 36 hours. She got up in the middle of night and went to bathroom and was vomiting for several time. She then got back to bed with waste basket and was so weak to get up. She called the nursing home next door and she believed that they may have called 911 but was not full sure if they did or did not. The next day morning, one of the neighbors came to check on her at 11 am. When the neighbor tried to wake her up, she was passed out therefore the nursing home called 911 again. Patient believed that nurse gave her a shot to stop vomiting but do not clearly remember. She was not planning on getting the second dose of the vaccine. No treatment information was reported. Action taken with mRNA-1273 in response to the events was not reported. The outcome of the events, sore arm and so weak to get up, were unknown. The outcome of the events, lose the sense of time and passed out, were considered resolved on 22 Feb 2021.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1103100 | 3/15/2021 | LA | 66 | F | 3/11/2021 | 3/12/2021 | Woke up around 2 am with stomach cramps, loose bowels, nausea, chills, sweating, dizziness, sore left arm, very shaky feeling. Went to bathroom for bowel movement, had trash can in front of me in case of vomiting. Apparently passed out and fell off toilet. Woke up on floor, on my right side, with very cold chills and sweating. Finished going to bathroom. Noticed small cut on forehead, with dried blood, probably from hitting my head on trash can I was holding. Went back to bed. Still dizzy, chills, sweating, stomach cramps, nausea, sore arm, and aching all over. These symptoms persisted for hours. Finally fell asleep, woke up around 7:30 am, still dizzy, stomach cramps. Took temperature, normal, took blood Additional information for Item 18: pressure, also normal. Called office of primary care doctor, not open on Friday, declined appointment with another doctor, left detailed message, and was told they would contact me on Monday. Went back to sleep, woke around 11:15 am, still nauseous and stomach cramps and dizzy. Went back to sleep until around 2:30 pm. Woke up feeling better, still sore left arm, sore stomach, achy and very tired. |
| 1103157 | 3/15/2021 | MD | 55 | F | 3/12/2021 | 3/13/2021 | chest pain and nearsyncope 3/13 |
| 1103182 | 3/15/2021 | CA | 21 | M | 3/12/2021 | 3/13/2021 | I almost fainted the night after my shot. I had vaped cannabis prior at around 1:00am, and probably re-dosed at around 3:00AM, before falling asleep at around 4:30AM. I had a harder than normal time falling asleep that night, and I didn't sleep very well. At around 6:00AM I woke up and walked to the bathroom, feeling pain in my anal region. As I started to sweat profusely, I recognized that I was likely about to faint, so I pre-emptively lied down on the floor of the bathroom until I felt well enough to stand up. I don't remember exactly how long I was on the floor but most likely a few minutes. I then had a bowel movement, still feeling pain in my anal region but to a lesser degree, and then drank some water and went back to sleep at around 6:30AM. |

| 1103351 | 3/15/2021 | MI | 57 | M | 3/10/2021 | 3/10/2021 | <p>PRESENTING PROBLEM: Syncope and collapse [R55] HOSPITAL COURSE: History of Present Illness: 57-year-old man known to me for bilateral lung transplant for bronchoalveolar cell carcinoma complicated by bilateral pleural effusions of unknown etiology and mild decrease in pulmonary mechanics, DVT on Eliquis who came to the Emergency Room 3/12/21 with a chief complaint of near syncope. Patient and woke up in the early morning hours of 3/12/21 to use the restroom. While urinating, he became very dizzy and nauseated and had a sense like he needed to lay down to rest. Other than nausea he did not have any other symptoms. He returned to his bed and fell upon his wife and had decreased level of consciousness but without total loss of consciousness (he was able to hear his wife talking to him but was unable to respond). This lasted about a minute and slowly he came back to his senses. After this he felt quite cold and did have some shaking but is not clear whether these were true rigors. He did not have any preceding fevers nor did he have any fevers in the emergency room. After about 5-10 minutes he was feeling back to his normal self but want to come into the hospital to get checked out. He has never had anything like this before. The patient has had chest pressure since his COVID vaccine which he had on Wednesday. This is been intermittent, mostly positional and better with laying on his side and leaning forward, worse with recumbency. It is not pleuritic in nature. No associated shortness of breath. No other fevers chills sweats. No sick contacts. Evaluation in the emergency room was done and a CT scan was done and no pulmonary embolus was found. No parenchymal abnormalities. The patient's pleural effusions remain, and her mildly worsened, personally reviewed. Baseline labs were unremarkable for anemia, kidney injury. EKG personally reviewed, normal sinus rhythm. High sensitivity troponin was done and negative. Family otherwise feels well, no sick contacts, eating well no nausea vomiting diarrhea blood in his stool. Pt admitted for observation. Continued to feel well VSS, ekg stable, ECHO without acute findings (see below), UA neg, cardiac monitoring uneventful, orthostatics negative, walking in halls and eating well. Appears to have had vaso vagal episode. Will be getting routine head imaging in the coming month with cancer history See below testing Care plan upon discharge > To call if any return</p> |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

of symptoms > To hold metformin until Monday due to recent dye load > Blood cultures Pending, low clinical suspicion > To change H2 blocker to PPI due to GERD on 3 month esophagram > Follow up in clinic when return from break > Dr discussing with pulmonary team most recent CT (see below) and treatment plan moving forward Brief exam: awake, alert, oriented, not in any distress. PERRL, EMOI, tongue midline. Upper and lower extremities at full strength 5/5 in the arms, hands, dorsi flex and flexion at the ankles, knees and legs. Sensation not tested. Brief history and medical decision making: s/p bilateral lung transplant for bronchoalveolar cell carcinoma complicated by bilateral loculated pleural effusion, DVT on eliquis presenting post syncopal event. Syncopal event without evidence of seizure like activity, fast recovery, and no sudden changes consistent with an acute cardiac event. Thus symptoms were likely due to vasovagal event possibly post COVID_19 related side effect (headache, achy muscles, not feeling well overall). He has no neurologic deficit, CTA thorax without PE, negative EKG, troponin and echocardiogram. He is not on antihypertensives and blood pressures have been normal. Given his initial diagnosis of BAC, there may be concern for metastatic disease, though symptoms have not persisted and he has no focal deficit. He also received contrast for his CTA today, thus will defer further imaging for now. Syncope: - defer 2nd dose of COVID-19 vaccine as its effectiveness in transplant patient is not established and patient potentially had an adverse event. - oral hydration encouraged - monitor for additional ongoing neurologic symptoms such as headaches, vision changes, neck stiffness, fevers, night sweats, weight loss, weakness or paraesthesias - patient advised to avoid driving until further evaluation - consider MRI brain with and without contrast if any symptoms persist or reoccur Complex loculated pleural effusion

| 1103280 | 3/15/2021 | SC | 48 | M | 3/15/2021 | 3/15/2021 | Patient received first dose of his Moderna COVID 19 vaccine and was seated in the waiting area around 11:45am. Around 11:49am patient had fainted and fallen to the floor slumped over onto the adjacent chair. 911 was called, and patient regained consciousness after a minute and was responsive and stated no issues other than dizziness. Patients BP was checked and documented, EMS arrived and also did a thorough exam of the patient and found him stable. Patient stayed in seating area to wait for spouse who came to escort him home around 12:40. |
| 1103442 | 3/15/2021 | CA | 74 | M | 2/27/2021 | 3/1/2021 | Periods of dizziness for 4 hours followed by patient unable to stand, almost passed out, lasted most of day and for two days after feeling of not being connected to surroundings |
| 1103448 | 3/15/2021 | IL | 54 | M | 3/15/2021 | 3/15/2021 | Patient fainted a few minutes after receiving vaccine. He stated he had a history of doing this with past vaccinations. 911 was called. Patient declined treatment and left store approximately 30 minutes later. |
| 1103449 | 3/15/2021 | NY | 62 | F | 3/13/2021 | 3/13/2021 | Patient received covid-19 vaccine at off-site clinic. As she was walking up to the post vaccination waiting area after receiving the vaccine, she suffered what appeared to be an anxiety attack and fainted. She awoke quickly and was monitored by pharmacy staff. She maintained good blood pressure and was fine afterwards. |
| 1103468 | 3/15/2021 | FL | 66 | F | 3/8/2021 | 3/9/2021 | First started with nausea, slept because was very tired, this is now 10 hrs after vaccine. Went outside after nap for short walk with husband, started sweating, came in house was getting sick to stomach. Started vomiting, dry heaving then passed out hit chin and fell hit head on tile floor. continued with dry heaves, got chills. We called for ambulance EMT to check vitals. Decided not to go to hospital, to wait it out. Vials were ok just blood pressure was up. |

| 1103473 | 3/15/2021 | OH | 81 | F | 2/12/2021 | 2/19/2021 | 1-19-21 patient fainted after ONLY having rubber band wrapped around upper right arm. After 2 doctors & several nurses failed to revive her quickly, ambulance was called & patient was taken to emergency. After venous blood draw, another blood draw was ordered because doctors were not satisfied w/results. After THREE FAILED attempts to get satisfactory arterial blood draw from one wrist, TWO MORE attempts were done to OTHER wrist! Patient had to ask for a BASIC drink of water after 5 hours of NO nursing care attention. Then...after 7 hours we had to ask for food, since this was already 5PM & patient hadn't eaten until prior evening. After NO care/attention for over 9 hours, patient & spouse left emergency room. |
| 1103487 | 3/15/2021 | CA | 23 | M | 3/13/2021 | 3/13/2021 | My son had the shot and 3 hours later passed out on the bathroom floor. I called 911 and paramedics evaluated him, all vitals were normal and he felt ok 5 minutes later. |
| 1103528 | 3/15/2021 | NV | 19 | F | 3/15/2021 | 3/15/2021 | AFTER RECEIVING VACCINE PT. FELT LIGHT HEADED, SHE SAT DOWN AND APPROACHED PHARMACY AND ASKED IF SHE SHOULD FEEL COLD AND SWEATY. SHE THEN PASSED OUT AND GINGERLY FELL TO THE FLOOR. PHARMACIST RAN OUT TO ASSIST, ELEVATED LEGS AND SPOKE TO HER, SHE WAS SEMICONSCIOUS. PHARMACY WAS INSTRUCTED TO GRAB ICE PACK AND QUICKLY DID. ICE WAS APPLIED TO PT. WRIST AND SHE IMMEDIATELY REGAINED CONSCIOUSNESS. PT. WAS INSTRUCTED TO REMAIN ON FLOOR AND CONTINUED CONVERSATION TO MEASURE ALERTNESS. AFTER A FEW MINUTES SHE SAID SHE FELT FINE. PHARMACIST AND ASSISTED HER TO CHAIR, AND SHE REMAINED FOR 20 MORE MINUTES. DISCUSSED IF SHE HAD ANY INJURIED FROM FALL. SHE SAID SHE FELT FINE. PTS LEFT WITH INSTRUCTIONS TO CONTACT PHARMACY OR SEEK MEDICAL HELP IF ANY REOCCURRENCE. |

| 1103504 | 3/15/2021 | CA | 32 | F | 3/15/2021 | 3/15/2021 | Pt received 1st dose at 6:10PM. Was sitting in observation area for approximately 10 minutes when patient fainted in her seat slumped over. Patient did not respond to questions. EMS called. Patient was transported to the observation tent and was placed on cot in supine position with legs elevated. Initial vital signs BP 150/91, HR 127, 99% Room air, Temp 97.3 F. Patient regained consciousness and was able to respond to questions. Repeat vital signs 5 minutes later were BP 133/83, HR 117. EMS arrived on the scene and patient was advised to go to the hospital for further evaluation. Patient was transported via EMS. |
| 1102497 | 3/15/2021 | IL | 61 | F | 3/13/2021 | 3/13/2021 | Severe chills, fever highest 101.4°, Pulse ran 80-100, fell to do that I think I fainted Blood pressure 93/49,94/41,99/50,77/46,92/44, |
| 1103338 | 3/15/2021 | CA | 43 | F | 3/15/2021 | 3/15/2021 | Patient received the vaccine and went to sit down in the chair. Patient stated she started feeling nauseous and light headed so asked if she can wait outside for some fresh air. When she went outside, she sat on the edge of the stairs and fell backwards and passed out. The store manager was there to catch her before her head hit the pavement. Patient wasn't alert for about 2 minutes. Pharmacist came out and assessed the patient and she was communicative. She was in and out but was able to tell us her name, DOB and where she was. We sat her up, gave her some water, and waited with her. She requested not to call the ambulance. I checked her pulse at 1:15pm and it was 92. I checked her pulse again at 1:30pm and it went down to 72. Patient was fully alert and speaking in full sentences by 1:35pm. She called her mom and was able to stand up without feeling dizzy. She walked to the car with assistance and was driven home by her mother. |

| 1102707 | 3/15/2021 | NY | 39 | F | 2/3/2021 | 2/3/2021 | Around 1PM on 2/3/21 after receiving the second vaccine I started getting a headache and was extremely tired. Around 5PM I started having chills, cold sweats, muscle soreness, nausea, and vomiting. My arm was so sore i could not lift it al all. At some point around 9PM I passed out on my bathroom floor. My 6 year old found me and thought I had died and called her father crying hysterically. I think I was passed out for a few hours before I came too, as my child had the phone on speaker and her and my husband were both yelling at me to wake up. I crawled back to bed and went to sleep. The next morning 2/4/21, I could hardly move to get my daughter ready for school, I had to call out of work. I was still having chills, cold sweats, muscle soreness, nausea, and vomiting, headache, and I could hardly move my left arm. on 2/5/21 I was still very tired, still had nausea, and a headache. 2/6/21 - 2/7/21 I still had a slight headache. on 2/8/21 I felt better and went to work. |
| 1102816 | 3/15/2021 | IL | 35 | M | 3/15/2021 | 3/15/2021 | Patient fainted/fell and developed a rash on both arms 15 minutes after administration. Patient hit his nose as he fell. We gave the patient an icepack and administered oral Benadryl 20 minutes after injecting the vaccine. Patient went to the ER. The ER stated that his nose was cosmetic and that the rash was a bruise instead. |
| 1103052 | 3/15/2021 | PA | 27 | F | 3/11/2021 | 3/15/2021 | Began feeling sick after injection. Low fever, fatigue for day of injection and day after. Day 3 felt normal, but day 4 began feeling sick again with no appetite, nausea and chills. At 5:30 I passed out and remained unconscious until my mother found me on the floor and then had a seizure lasting about 2 minutes. I was unconscious for at least 30 minutes. I have had seizures in the past, but never anything close to this. |

| 1097912 | 3/14/2021 | TX | 28 | F | 3/8/2021 | 3/8/2021 | <p>Symptoms: Fainting, Unconsciousness (repeatedly), Profusive Sweating, Low Blood Pressure (60 over unknown number), Nausea, Dizziness, Unable to stabilize quickly, not able to get an IV, extreme thirst</p> <p>Signs: Immediately felt unwell within 5 minutes of the vaccine. Time Course: Injection (1st dose - Pfizer) at 4:00pm. Adverse Reaction at 4:05/4:10 (est.) Released at 5:00pm (est.) Description of Incident: On March 8th, at 4:00 pm, I received my first dose of the covid vaccine. Within 5 to 7 minutes, I felt unwell while sitting in the waiting area. I walked towards a worker to inform them that I was feeling unwell and that I was going to pass out. I became unresponsive and laid on the ground. My husband was with me at the time. I was unconscious for a bit and when I regained consciousness, my legs were being raised. I regained consciousness and was able to recall my name, DOB, and address. After I was done recalling my information, I began to lose consciousness again. They brought a wheelchair and took me to the medical room. As I moved from the wheelchair to the bed, I began to lose consciousness again. They told me to lay down. I overheard a woman ask my husband if I had diabetes or heart problems. He answered "No.". She explained to him that my body did not know how to accept the vaccine and was trying to regulate back to normal. She explained that my body was going through "homeostasis" (?). While I laid on the bed, some workers took my blood pressure and tried to start an IV. One of them made a comment and said I was extremely dehydrated. This was odd to hear because I normally drink 3 to 4 liters of water daily. During this entire medical event, I felt the water pushing out through my pores. I was drenched in sweat. He tried to start an IV on my left arm and was unsuccessful. He tried to start an IV on my right hand, which was also unsuccessful. He stated they were unable to start IV liquids because my veins kept popping/collapsing. My blood pressure was reading 60. They checked it again, still at 60. I laid in the bed and basically waited it out. After a few minutes, they checked my blood pressure at it was at 120. They said that was good and I was good to go. No report was given to me nor my husband about the event that occurred. Even after they agreed to let me use a wheelchair (due to feeling weak), one was not provided to me. They basically stated that I was "good to go", after doing a</p> |

| | | | | | series of hand squeezes and walking a few steps upright. I am currently trying to obtain a copy of the report I saw the gentleman fill out at the time. I was given Zofran to help with my nausea, it was placed under my tongue. After going home, I felt weak, tired and somewhat lightheaded. My husband drove me home and I got some rest. I set an appointment with my doctor on Friday March 12th to determine what happened to me during my vaccine and to record the incident. After describing the incident, she determined that it was anaphylaxis. She recommended for me not to get my second dose due to the anaphylactic shock I experienced with the first dose. She was shocked to learn that they did not transport me to the hospital or provided an Epi Pen injection. When asked why I didn't drive myself to the hospital, I let her know that they told me I was 'good?'. They did not explain what had occurred to me, no mention of anaphylaxis was explained. I was not aware that is what had occurred. The incident occurred from 4:00pm (injection time) to 5:00pm (left location). | | |
| 1098804 | 3/14/2021 | MO | 72 | M | 3/13/2021 | 3/13/2021 | Patient had a syncopal event approximately 20 minutes following his first dose of vaccine. The patient's wife reports that the patient has similar events with previous injections. As the injection was given at a vaccination clinic, patient was evaluated by onsite healthcare professionals while EMS was called. Patient was transferred to local ED for observation and was released home late the same day with a discharge diagnosis of syncope. |
| 1098555 | 3/14/2021 | PA | 50 | F | 3/14/2021 | 3/14/2021 | Patient developed signs of syncope about 5 minutes after vaccine given - 7:50 dose and 7:55am she felt warm, dizzy and had blurry vision and a dry throat. We supplied ice packs and she felt symptoms subside by 8:11am. At 8:18am she felt a wave of symptoms back and had an itchy throat - she was given 50mg of oral benadryl and felt better - leaving the pharmacy with her husband at 835am. I called patient at 1:18pm 3/14/21 and she had just gotten home from the ER where she was treated with iv fluids, benadryl and steroids per husband |

| 1098745 | 3/14/2021 | AZ | 47 | F | 3/9/2021 | 3/9/2021 | Four hours post vaccine I had muscle and joint pain throughout my entire body and I took 600 mg Advil. Four hours after that I repeated the 600 mg dose of Advil and went to bed. I felt feverish and my pain did not diminish despite the medication. At approximately 2 am I got up to try and cool myself off. I fainted in my bathroom and fell, hitting my head on the tub, although I did not know this at the time. I thought I just laid down. I was unable to get up. For the next 2 hours I slowly inched myself from the bathroom into the hallway and towards my bed. I was very cold and in severe pain. When I reached my bed I finally warmed up and fell asleep. I was unable to get up out of the bed, except to raise myself on my right elbow to drink a mouthful of water, until approximately 4 pm the following day. This was 28 hours after the vaccine. No medications helped my pain, it just slowly subsided on it's own. For the next 24 hours I was able to get up and use the bathroom and drink some water and juice but I could not eat or perform any function. I could not even sit up in bed. When I was able to start eating again I had diarrhea for 24 hours. It has been 5 complete days since the vaccine. I am still winded while performing simple cleaning tasks. I need about 2 hours of rest in bed (twice yesterday) just to get through a day with nothing in it. I did not expect the level of immobility/illness, unalleviated pain or the seriousness of my second vaccine reaction. |
| 1098735 | 3/14/2021 | NY | 50 | F | 2/10/2021 | 2/10/2021 | Developed scratchy throat and then itchy rash at approximately 15 minutes post dose. Patient given 50 mg oral Benadryl and monitored for over 30 minutes. Patient has a history of epi pen usage due to history of allergies to sulfa, flaxseed and environmental triggers. She has received flu vaccine in the past with minimal reactions. Given oral benadryl 50mg x 1 and monitored for at least an additional 30 minutes. Per pt on my chart in March: tingling of the tongue was mild. The right ear and right side of my head was intense with pressure and it did feel like it wanted to explode. After the Benadryl it started to subside. It lasted about 50 minutes. The rash were not like hives. The rash was on my neck , arms and face. It lasted about 2 days and was a mild case. Not over body. No fainting, no low grade fever. |

| 1098242 | 3/14/2021 | MI | 92 | F | 3/10/2021 | 3/10/2021 | Approximately 4 hours after receiving the Moderna COVID-19 vaccine (left-arm), my mother began to have moderate pain in her left arm, particularly in the left shoulder area. The pain continued to increase throughout the afternoon, until it became so severe (10 on a 10-point pain scale) by 8:30 pm on 3/10/21 , that she could no longer lift her arm. She took 500 mg of Tylenol to attempt to relive the pain and went to bed early. At 2:45 am on 3/11/21, she needed to go to the restroom, and I (daughter) had to assist her to get out of bed, as she had no use of her left arm due to severe pain in that arm. While seated on the toilet, she indicated that her arm was extremely painful and she felt that she was going to pass out and felt nauseated. Within a minute, she lost consciousness and I called emergency services. EMT arrived within 5 minutes and stated that her blood pressure was extremely low and she needed to be placed on the floor. They placed her on a gurney and took her to the ambulance, where they started an IV and took her to her local hospital. I followed shortly thereafter, where she was taken to the ER. She was admitted to the hospital for observation and given Ativan (she refused any opioids) She was ultimately diagnosed with vasovagal syncope due to the pain in her left arm. Two days later, the pain has subsided. |

| 1099323 | 3/14/2021 | TN | 39 | M | 3/14/2021 | 3/14/2021 | BEFORE GIVING THE JANSSEN COVID VACCINE (LOT # 1805025 EXP 5/25/21), THE PATIENT HAD STATED THAT THE LAST FEW TIMES HE GOT A SHOT OR HAD A BLOOD DRAW HE GOT REALLY SICK AND EVEN PASSED OUT. THE VACCINE WAS GIVEN WITHOUT INCIDENT AND PATIENT SAID HE FELT OK. HE TRADED PLACES WITH HIS GIRLFRIEND AND SAT IN A CHAIR IN THE EXAM ROOM. IT WAS NOT UNTIL AFTER I HAD ALREADY GIVEN HIS GIRLFRIEND HER VACCINE THAT HE SAID THAT HE WAS FEELING FUNNY. HIS COLORING CHANGED AND HE WAS DIAPHORETIC. I GOT A PAPERTOWEL WITH COOL WATER ON IT AND PLACED ON HIS NECK AND ANOTHER ONE FOR HIS FOREHEAD. AFTER A MINUTE OR SO, HE DID PASS OUT WHILE IN THE CHAIR. HE WAS OUT FOR ABOUT 30 SECONDS AND THEN CAME BACK TO AND WAS ALERT AND ORIENTED X 4 BUT STILL FELT VERY WEAK. I GAVE HIM A WATER TO SIP ON. HIS GIRLFRIEND STAYED AT HIS SIDE THE WHOLE TIME. HIS O2 WAS 100% AND HIS PULSE 53. HE SAID THAT HE HAD EATEN SHORTLY BEFORE COMING TO GET HIS VACCINE BUT THEN LATER ASKED FOR AN APPLE BECAUSE HE WAS ON A CLEANSE DIET AND REALLY HAD NOT EATTEN MUCH. THE PCT WENT TO GET HIM AN APPLE. AFTER EATING THE APPLE AND SITTING FOR AN ADDITIONAL 20 MIN HE FELT WELL ENOUGH TO LEAVE. STILL WITH HIS GIRLFRIEND AND HIS GIRLFRIEND COMMITTED TO DRIVING HIM SO HE DID NOT HAVE TO. HE LEFT WITH NO ASSISTANCE. |

| 1099155 | 3/14/2021 | PA | 58 | F | 3/14/2021 | 3/14/2021 | While patient was sitting in chair waiting her 15 minute monitoring period in post- immunization waiting area patient fainted. Patient did not fall down or was she injured by fainting. Patient slowly rolled off chair and patients friend helped lower her to floor where patient regained her awareness . Pharmacist raced quickly to be by patient's side to monitor her vitals and to see if an allergic/ anaphylactic reaction had occurred. No symptoms of an allergic reaction or anaphylaxis was observed by pharmacist. Patient quickly regained her awareness and stated that fainting is common to her when routine blood work, injections, giving blood, etc.. Patient stated that fainting is something that has occurred several times in her past. No signs of allergic reaction, redness, hives, facial swelling, cardiovascular collapse were observed by pharmacist while closely monitoring her vitals after 911 was called. EMTs and paramedics arrived quickly and after closely examining patient and talking with her it was decided by Paramedics that patient fainted due to an emotional response by patient and there was no allergic reaction or anaphylaxis to report, nor any injury sustained by patient after fainting. Patient was quickly back to normal, and she verbally declined ambulance. Patient stated that she felt fine and that she was going to do some shopping and return home to relax. |
| 1098906 | 3/14/2021 | CA | 20 | M | 3/14/2021 | 3/14/2021 | Patient passed out or fell asleep. Once approached he woke up and was shaking for a bit. He had no issues breathing, no hives, or rash. Upon awakening he was given some water and quickly recovered. After a few minutes the patient seemed normal. We observed him for about another 30 minutes and he continued to be fine. |
| 1099450 | 3/14/2021 | PA | 66 | F | 3/9/2021 | 3/10/2021 | Passed out and fell face-first on a tile floor. Teeth cut inside lip requiring many stitches. Glasses cut across my nose. | 1099097 | 3/14/2021 | FL | 52 | F | 3/3/2021 | 3/4/2021 | This is a report after my 2nd vaccine. I received my 1st vaccine on 2/10/21 [Lot # EL9265]. Both vaccines gave me a reaction, and both around the same time the next morning. My reaction to my 1st vaccine included slight fever, aches, and chills. Both doses were administered around 3:30pm and reaction was approximately 10:30-11am the next morning. On this 2nd dose, roughly 40 minutes after waking from sleep, I became mildly nauseas. I sensed I would vomit, so I sat down on the commode with a bucket in front. I started getting the sweats, got very cold, and my arms starting shaking. I started to feel the room spin, saw big black dots, and after banging on the wall to alert my husband something was happening, I fainted and passed out cold. My husband saw me fall face down, and after waking me, I was in a panic, did not know where I was, or how I was on the floor. I passed out a 2nd time, at which point, my husband was able to get me to the car and he took me to the local hospital. I was incoherent on the car ride, moaning, and not knowing what was happening. My eyes remained closed until I was wheeled into the emergency area and they asked me my name. I was taken to a private room, where they hooked up a blood pressure cuff, an oxygenator on my finger, and took several viles of blood. I was then taken to the cat scan room for a brain scan, and several hours later, was given a chest xray. I remained in the room for approx 6 hours, where I was becoming more and more aware of where I was. I had not eaten/drank anything, except a cup of water. I had not used the lavatory. The PA came to me hours later stating all my tests came back negative, and they could not determine what happened, xrays and blood tests were good, and cat scan was good. He said that while they couldn't determine what happened, they would recommend a stay, so they can do more extensive testing. I contacted my husband via cell, told him what they said, and after another 1 1/2 hours, I made the decision to release myself as I was feeling more like myself again, albeit tired. I went home that evening, ate a small dinner, went to bed, and by 12 Noon the next day, I was fine again. |
| 1099058 | 3/14/2021 | FL | 36 | F | 3/13/2021 | 3/14/2021 | Blurred vision and fainting that last about 3 minutes. |

| 1099260 | 3/14/2021 | VA | 42 | M | 3/14/2021 | 3/14/2021 | Patient passed out immediately after being administered the vaccine as he walked to the observation zone of the ware house. He was caught from behind by pharmacy technician on duty. He was able to respond to questions about his name, where he was and what he was there for. His blood pressure reading was showing "out" on the wrist cuff. Five minutes later the blood pressure was 127/68. Thirty minutes later his BP was 160/84. He called his dad who picked him up |
| 1099375 | 3/14/2021 | IL | 36 | M | 3/12/2021 | 3/12/2021 | Patient became very pale and sweaty and was close to passing out. Patient moved from the bench where he was sitting down to the floor. I came to check on him and gave him water and orange juice to drink. I checked his blood pressure twice, approximately 2 minutes apart. The first blood pressure reading was 73/46mmHg and a heart rate of 46bpm. The second reading was 110/74mmHg and HR 66bpm. After the second BP reading, patient stated that he was feeling better. This was just likely vasovagal syncope. Patient remained on the floor because it was a cooler location for approximately 15 minutes and was feeling better and went home with his father-in-law and mother-in-law. |
| 1098942 | 3/14/2021 | TX | 34 | M | 3/13/2021 | 3/13/2021 | Janssen COVID-19 Vaccine EUA 34 y.o. male with GERD who presents with syncope and question of PEA arrest. He went for COVID 19 J&J vaccine on 3/13/2021. A few minutes after getting the vaccine he started feeling nauseated. His lips became gray. He went unresponsive and was taken out of the car. He had agonal respirations. He had 90 seconds of chest compressions and returned to his normal state of health. He was seen in ED where labs were remarkable for mild hyperkalemia (serum potassium 5.5). Given worrisome syncope, chest compression he was admitted for observation. He did well overnight, No arrhythmias of telemetry and was discharged with Holter monitor. |
| 1096758 | 3/13/2021 | TN | 32 | M | 3/13/2021 | 3/13/2021 | Patient received vaccine and then became light headed and passed out. He states he does this with shots. Improved on his own within couple of minutes and needed no further treatment. |

| 1096930 | 3/13/2021 | MO | 67 | F | 3/3/2021 | 3/4/2021 | Mild dizziness after shot. But I passed out the next day after feeling extremely dizzy & nauseous. Then my husband also got dizzy & nauseous the following day. I thought it might be my meds but the only thing we both take is Levothyroxine. We were dehydrated?? |
| 1096686 | 3/13/2021 | NV | 31 | F | 3/9/2021 | 3/12/2021 | Immediately passed out and hit head. Days later, right eye is puffy and droopy. |
| 1096613 | 3/13/2021 | IN | 28 | F | 3/11/2021 | 3/11/2021 | 6 hrs after vaccine: low grade fever; 9 hrs after vaccine: fever, severe chills, moderate to severe body aches, inability to sleep; 15 hrs after vaccine: symptoms continued, fainted while walking back to bed after urinating, unconscious for about 1 minute; 21 hrs after vaccine: fever broke, no remaining symptoms whatsoever |
| 1096465 | 3/13/2021 | MN | 62 | F | 3/10/2021 | 3/10/2021 | The actual injection itself was so painful that I almost passed out. It hurts so badly while the needle was in my arm and when she took it out it was worse. I was in such pain that I began to sweat profusely and apparently I turned white and began dry heaving. This was all within a minute or so. I really thought I was going to pass out. A woman with a tag that said pharmacist came rushing over. She got a reclining chair with wheels, they help me into it and then took me to a recovery room. After a few more minutes of sweating and dry heaving I began feeling better. The pharmacist got me some paper towels so I could dry myself off as I was drenched in sweat. I asked her for a bottle of water. I waited the 15 minutes and came home. They never checked my vital signs. Once I got home, I laid down and slept for 15 hours. I was fine the next day and my arm was never sore. Could the shot have hit a nerve? I've never felt such acute pain. |
| 1096452 | 3/13/2021 | IN | 62 | F | 3/11/2021 | 3/12/2021 | Nauseous chills sweats headache and passed out |
| 1096376 | 3/13/2021 | NC | 23 | F | 3/10/2021 | 3/10/2021 | Patient became diaphoretic and passed out within minutes of receiving vaccination. She woke within seconds. Returned to baseline within 15 minutes. Patient stated this has happened before with blood draws and other vaccinations. She was released into the care of her driver/sister after returning to baseline. |

| 1097259 | 3/13/2021 | GA | 79 | M | 3/13/2021 | 3/13/2021 | patient's wife reported that he passed out in a restaurant about an hour after he left the pharmacy and received his vaccine. He started to feel bad and stood up from his seat to use the restroom and fainted. The staff called and ambulance but he refused to go to the hospital. Patient's wife reports the EMT's did check him over and said his vitals were okay and appeared fine. His wife then met him and took him home to rest. |
| 1097364 | 3/13/2021 | IN | 59 | F | 3/6/2021 | 3/6/2021 | Immediately Saturday: spacey and throat feels strange; afternoon: body is cold/tired. Sunday: felt great! lots of energy until during a walk at 3pm started to feel spacey (hands feel weird) and spiked a short term fever. Tired and cold. Monday: tired, bottom of lungs burning like I inhaled campfire smoke for a week straight, stumbling over words. Tues: tired, more burning lungs but sensation moving to mid chest (NOT heartburn), feeling like I needed to cough but nothing in lungs, still tired, still struggling with full sentences, irritable. Weds: felt hot but temp was below normal, lungs burning. Took Covid test (negative), incredibly tired, got the spacey feeling and hands felt weird-lasting 30 mins. Thurs: tired, irritable, left side hurt, started having to clear my throat every 20-30 minutes, cold. Fri: still tired, felt like I needed to cough but didn't reduce the pressure in chest/burnin/aching. Slept 14 hours. Sat: woke up feeling awful. Short of breath, clearing throat all day. Went to urgent clinic. Lab/chest x-ray and EKG all negative. Dr:"Nothing we can do for you. This vaccine is too new and you are likely having a reaction. Come see us if it gets worse." I almost cried. When he had me take 4-6 deep breaths to check my lungs with his stethoscope I almost passed out. Now I'm home stuck on the couch under an electric blanket feeling like crap with no relief in sight. Hoping no one else has this ever. |

| 1097323 | 3/13/2021 | AL | 50 | F | 1/6/2021 | 1/6/2021 | Almost passed out after injection. Had immediate disorientation, head pressure, ear ringing, and slight hearing loss. I stayed 1 hour after at facility . The next day disorientation was better. The head pressure was better after 2 weeks. The hearing loss has slightly improved. The ear ringing worsened significantly and is still going on now, 9 weeks later. It has improved some now after seeing an ENT ear specialist. I have been taking medicine to try to help the ear ringing for about 7 weeks. The severity of the ear ringing has gone from an 8 out of 10 in loudness to about a 2. It is not gone and may never go away. |

| 1094194 | 3/12/2021 | MD | 42 | F | 3/7/2021 | 3/8/2021 | Immediately after receiving the vaccine, I felt pretty good. Just some soreness in arm and a minor headache an hour later. I took Tylenol and symptoms were bearable the rest of the day. By around 6 or 7p that night, I experienced full body pain and chills, similar to the flu. I also had some chest pain and tightness but attributed that to the overall body pain. I was also very winded and short of breath. I called my Primary Care Doctor to report this, and she said this was a normal reaction and it meant my immune system was working. It continued into the next day, and I took my temperature and had a 102 fever. I slept most of the day and was unable to work. I also had a severe headache. The next day, on Day 3, my flu symptoms were getting better; however, I felt dizzy and short of breath. I also fainted . This is the first time this has ever happened to me. I have never fainted in my life. My symptoms seemed to resolve after eating and drinking, so I figured it may have been dehydration. On Day 4, I was concerned because I was having shortness of breath and chest pain, along with dizziness. I could not take a deep breath without having pain. I called my Primary Care Doctor, and she told me she was concerned I might have covid and to go to the ER. I do not believe I have covid. No one in my household has these symptoms except for me. I believe it is from this vaccine. My chest pain/shortness of breath seemed to go away. for a bit so I did not go to ER. I'm on Day 5 now, and the chest pain/shortness of breath has come back, so I decided to report this because I do not listed on the list of common side effects for the Johnson and Johnson vaccine. I joined a J&J social media group where others are also reporting these symptoms, so I decided to report to Vaers. I also have had night sweats every day since taking the vaccine and my blood pressure is lower since taking the vaccine. |

| 1093984 | 3/12/2021 | FL | 83 | M | 3/10/2021 | 3/10/2021 | On day of Wednesday day of Moderna vaccine shot, felt good all day, got ready for bed at 9 PM. Felt very warm and took my temperature it was 99.7. Not too bad. My hands and feet were very cold. Put socks on my feet and climbed in bed. Feeling ok. Woke up around 4 AM my tee shirt is soaking wet, had to pee. Got out of bed and walked to bathroom no problem. Sat down and then my wife said she heard a loud noise in bathroom. She comes to check on me and I?m sitting on toilet passed out, I?m leaning to my right against the shower door. She?s hollering and talks to me to wake up and shakes me and eventually I wake up, get up and walk to the bed no problem. Then I feel the urge to vomit. Go through a series of dry heaves, lay on my back and feel urge to vomit again. Wife tells me to lay on my side, not on my back, that works and I fall asleep. Woke up Thursday at 8 AM, wife is in the kitchen, I make the bed get dressed and feel ok. Walk out to the kitchen and wife is amazed I?m OK. She proceeds to tell me about my passing out in the bath room. I have no recollection that occurred. Had some tea and toast, drinking water to rehydrate and felt better. Walked outside, got leaves out of the pool. Feeling better. No further reaction, just a little tired the rest of the day. Had light lunch, soup. Took a nap at 3 PM woke refreshed and had normal dinner with a glass of wine. Today Friday had normal breakfast and feel completely normal. All in all not a bad reaction. |

| 1094315 | 3/12/2021 | CA | 33 | F | 1/15/2021 | 1/15/2021 | Within 5 minutes, I felt burning sensation in my chest; in 10 minutes - I started getting chills and within 15 minutes chills were a lot worse. They placed me on a gurney, and the chills started getting so bad I was shaking and out of control and I was really cold. After about 25-30 minutes after I felt like my blood pressure dropped and I actually passed out and once I passed out I don't know how long I was out for. Maybe less than a minute, I couldn't breathe and I was hyperventilating and they put a oxygen mask on me. They took me to ER (Hospital) and I recognized I was in there when I "woke up" - they were trying to get an IV in me but I was shaking so much it took several attempts. They gave me several medications because I was nauseated as I wanted to vomit and they gave me anaphylactic medications. I was having chest pains. I fell asleep. They were going to admit me but I kind of refused to be admitted and they let me go with Zofran, prednisone and one other medication. One of coworker took me home. I slept the rest of the day and night. The next day, Really fatigued and chest pain was semi getting better. Breathing - was pretty okay after that. By day 3, I was fine. |
| 1094392 | 3/12/2021 | CA | 27 | M | 3/12/2021 | 3/12/2021 | After receiving the Johnson & Johnson vaccination at approx 0855 the patient told the vaccinating nurse that he was "feeling dizzy." Pt then fainted and was lowered to the floor and positioned on his side; he was pale and diaphoretic initially but resolved before he was sat up. He then opened his eyes and stated that he was "feeling ok." Patient then confirmed that he has fainted twice before while receiving bloodwork or vaccines. Pt refused emergency services. Pt advised to call 911 or seek medical attention for any concerns after leaving facility. Pt verbalized understanding. Pt vital signs are as follows BP 136/58, R 18, P 84, O2 sats 98% on room air. Pt alert and denies any pain or discomfort. Denies any further concerns. Pt left facility at 0900. |

| 1094490 | 3/12/2021 | OK | 66 | F | 2/24/2021 | 3/10/2021 | Patient was vaccinated with her second dose on Wednesday, February 24th. A family member contacted us to let us know she was sitting in a casino exactly one week later and passed out, going into cardiac arrest. The patient did pass away. |
| 1094515 | 3/12/2021 | IL | 41 | F | 2/12/2021 | 2/13/2021 | Other than the normal symptoms of chills, body aches, feeling run down...the day after I had the second dose, I experienced a fainting episode and collapsed on the floor. |
| 1094583 | 3/12/2021 | AZ | 79 | F | 3/8/2021 | 3/9/2021 | I became progressively more sleepy the afternoon after the vaccination, as expected. I did get up and make dinner, then went to bed at 9:15 p.m. on March 8th and slept until 9:15 a.m. March 9th. I felt unstable walking into the bathroom to urinate, and even more unstable waking into the kitchen to take my meds. I passed out and woke up on the floor. I was weak but managed to pull myself up holding on to the kitchen range. I headed for the living room sofa and passed out again, waking up on the floor by the sofa. I'm guessing I was unconscious about 2 minutes each time, but don't really know. I lay down on the sofa and called a neighbor. He thought I should call 911, and they came and drove me to ER. They did an EKG, chest x-ray, and CAT scan of my brain, and drew blood. All results were normal. I returned home that same day (March 9) and had little energy, and ate lightly. When I was getting in bed about 10:30 p.m. I let my head drop on the pillow and the room started to whirl around me for about six seconds. Sometimes when I roll over in bed during the night there is a pause before it feels like the room gives one spin. My scalp is very tender in the large area where I hit it twice when passing out. I'm taking it easy again today, but do feel a little stronger. I am normally exceptionally healthy for my age, and work, traveling to destinations to research and photograph my articles. Both the travel and article take stamina, and I thrive on the work. |

Pt was incontinent of urine during event. He now reports some mild shortness of breath but no acute distress or known injuries from syncope episode. pt advised to go to the ER. Pt's states his wife is on her way home and will drive him to the ER. |
| 1094557 | 3/12/2021 | TX | 57 | F | 3/11/2021 | 3/12/2021 | She fainted and was out between 5-10 minutes. This has never happened before, she's healthy, nothing unusual except getting vaccine yesterday. |
| 1093812 | 3/12/2021 | MA | 67 | F | 3/11/2021 | 3/12/2021 | Vaccine was Thur 3/11 at noon. Slight headache and pain at site of injection. Friday morning, was very dizzy. Had walked into kitchen to get the thermometer. My temp was 99. I got very dizzy and passed out for a second or two. When I hit my head on a cabinet handle I came to. At first I thought I was in my bed and couldn't figure out what I had hit my head on. There was blood coming from the wound. My husband came to help me. We stopped the bleeding after a few minutes and I began icing my head. I was still very dizzy and had an urge to use the bathroom. I was afraid to get up. With my husband's help, I crawled to bathroom and he helped my onto toilet. I had diarrhea. At that point I was able to walk with help to my bed. I have had a mild to moderate headache since I had the vaccine. |

The patient's medical history was not provided. No relevant concomitant medications were reported. Laboratory data was Prolong QT interval on ECG reported. On 20 Jan 2021, approximately same day prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (Lot number: unknown) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 20 Jan 2021, 5 minutes after vaccination, the patient felt like her throat was closing, chills, lightheaded and fainted. In the ER the work up for syncope revealed prolonged qt interval on ECG. Treatment included Benadryl, Magnesium, fluids. The patient was discharged on the same day but she still feels tired having brain fog. Action taken with mRNA-1273 in response to the events was not reported. The outcome of events were not reported; Reporter's Comments: Very limited information regarding this event/s has been provided at this time. Further information has been requested.</p> |

| 1093323 | 3/12/2021 | NY | | F | 2/26/2021 | 2/27/2021 | Lightheaded; passed out; Lymph knot under armpit; A spontaneous report was received from a consumer for a 67-year-old female patient who experienced light headedness and passed out. She also had lymph knots under her armpit. The patient's medical history was not reported. No concomitant product use was reported. On 26 Feb 2021, the patient received their first of two planned doses of mRNA-1273 (Lot number: 011A21A) intramuscularly for prophylaxis of COVID-19 infection. On 27 Feb 2021, next day after receiving the vaccine, the patient felt lightheaded and passed out and was hospitalized. She also experienced lymph knots under her armpit. Action taken with mRNA-1273 with respect to the events was not reported. The outcome of the events was not reported. The reporter did not provide the causality assessment for the events.; Reporter's Comments: Based on the current available information which shows a strong temporal association between the use of the product and the start date of the reported event, a causal relationship with the event cannot be excluded. Axillary lymphadenopathy is consistent with the known safety profile of the mRNA-1273 |

| 1093460 | 3/12/2021 | CA | 22 | M | 3/11/2021 | 3/12/2021 | <p>On Thursday, March 11th, 2021 approximately 3:10 pm, Patient received his first dose of Moderna Vaccine (Lot number: 003A21A) in his left deltoid Patient received the Moderna Vaccine. After which he sat in the designated medical observation area for 15 minutes. Approximately five minutes later around 3:15 pm, Patient experienced syncope, fell out of his chair, hit the left side of his forehead on the ground. Due to the fall, he experienced a mild abrasion on the left side of his forehead, which led to bleeding. The Physician?s Assistant rushed to aid Patient who was lying on the ground in a supine position. Emergency Medical Services (EMS) - Fire Department and ambulance were called immediately and approximately five minutes later EMS arrived. During the time frame prior to EMS arrival, the Physician?s Assistant asked numerous questions to Patient to assess his condition. She asked Patient if he could breathe and he responded ?yes?. She asked Patient if he was short of breath and he responded ?no?. She asked Patient if he felt like his throat was closing and he responded ?no?. At this point, an Epinephrine pen was not used. Patient was alert and the Orient x 4 questions were asked [(1) Who are you? (2) Where are you? (3) What is the date and time? (4) What just happened to you?]. Patient also denied head pain, neck pain, nausea or chest pain. Staff performed a limited neuro-exam and was deemed within normal limits. Patients Glasgow Coma Scale score was 15 Patient mentioned that he has a phobia of needles and something like this has happened before when he was ?young?. Patient initially did not want an ambulance to be called. It was explained to him that it might be in his best interest to call EMS due to syncope and abrasion on his forehead due to the fall. Patient also mentioned that he only consumed two cookies and coffee for that day. When the EMS arrived (about 5 firefighters), they interviewed him and performed a blood pressure test. His sitting blood pressure was 130/82. One of the firefighters assessed his spine and Patient denied cervical, thoracic, and lumbar tenderness or pain. The firefighter assessed Patient's glucose level, which was a bit difficult to obtain in the first initial efforts, with the glucometer reading ?error?. The firefighters eventually were able to obtain a reading on Patient's glucose and it read 86. Patient was able to stand on his own, and a second blood pressure test was performed;</p> |

Resulted in fainting and falling, proceeded to faint multiple times - lost all bodily functions, eyes rolled in back of head multiple times and 911. Did get back to ability to get home but now repeats herself more than before and seemed to have lost some mental capacity till Wednesday March 10 / she now is better but scared to do anything on her own as fearing issues again |
| 1093782 | 3/12/2021 | MD | 75 | F | 3/4/2021 | 3/7/2021 | On 3/7 the patient presented to the ED after having 3 episodes of presyncopal staring events in the past week, and reports having them over the past year and a half. Reason for admission: syncope and collapse. Per, EUA all hospitalizations must be report after recently receiving a vaccine. This patient has had a history of syncope and this hospitalization does not seem to be related to the vaccine. |
| 1093525 | 3/12/2021 | AL | 30 | F | 3/11/2021 | 3/11/2021 | Systemic: Fainting / Unresponsive-Severe, Additional Details: Patient fainted immediately after injection. Immunizer (RN) administered epinephrine and the patient arose from her fainting state with no issues. Patient stated that she always faints from every needle stick (did not inform the immunizer beforehand). Patient was monitored for 30 minutes before leaving. |
| 1093533 | 3/12/2021 | NY | 51 | F | 3/11/2021 | 3/11/2021 | Systemic: Dizziness / Lightheadness-Medium, Systemic: Fainting / Unresponsive-Mild, Systemic: Nausea-Medium, Systemic: Shakiness-Medium, Additional Details: Patient stated she had only eaten a bagel and a lemon tart today, shortly after giving her 2 apple juice boxes and a few bites of vanilla ice cream paramedics checked her blood glucose and found it to be 88. Because she bumped her head when she fell, she was escorted to an emergency room. |

| 1095867 | 3/12/2021 | CA | 81 | F | 2/23/2021 | 2/23/2021 | She had no issues with the 1st dose in the series. She did not have any symptoms but acknowledged feeling anxious about the side effects prior to arrival for vaccine. After the 2nd dose, she experienced chest pain, jaw pain, body numbness and tingling, and nausea. She did not have vomiting, shortness of breath, syncope, or headache. She was hypertensive on the cardiac monitor and EKG with T wave inversion in lead III, otherwise unremarkable. Heart rate stable, alert and oriented, cardiopulmonary exam benign. She was sent to the ER for further workup, but did not seem to have any allergic reaction to the vaccine. It is unknown what occurred at ER, as she either went to a separate health system or did not go at all. |
| 1095500 | 3/12/2021 | DC | 24 | F | 3/12/2021 | 3/12/2021 | Patient notified administering pharmacist that she has a history of fainting after receiving flu shots. Two other pharmacists came in preparation to assist if needed. After the pharmacist administered the covid vaccine, the patient fainted for 1 second, regained consciousness. She refused medical treatment. Patient was breathing so Epinephrine was not administered. Patient was sweating and ice packs, water, and crackers were provided to her. She sat in a chair with her legs elevated for 1 hour with pharmacists closely monitoring her. |
| 1095521 | 3/12/2021 | NC | 47 | F | 3/12/2021 | 3/12/2021 | Patient warned staff that she was not good with shots and had a history of syncope. She also marked this on her VAR form. She was very nervous and crying in the chair. She received the vaccine promptly and remained in the chair for a few minutes before getting up to sit in the auditorium bleachers. after about 20 or more minutes someone shouted that saw her fall in the bleachers, she was face down between the benches. She was conscious and responding, breathing normally, with normal pulse when we examined her. She got up slowly and recovered without needed further medical attention. |
| 1095546 | 3/12/2021 | CA | 42 | M | 3/12/2021 | 3/12/2021 | Fainting, sweating, blood sugar dropped, unresponsive. |

| 1095577 | 3/12/2021 | DC | 20 | F | 3/12/2021 | 3/12/2021 | Patient did not report any allergic reaction to any vaccine or medications when asked during consultation prior to administration. The pharmacist had administered the vaccine and patient was sent to the waiting area to wait the mandatory 15-20 minutes after receiving the shot. Patient was seated and after 5 minutes, patient disclosed with another patient in the waiting area that she was not feeling well. After a few min she lost consciousness for less than a minute, her eyes rolled back. Epinephrine was not administered. When she became conscious, she refused medical treatment. Patient was nauseous and vomited a few times. A pharmacist checked vitals and all were within normal limits and a neuro check was also performed which was normal. Patient was given water, gingerale, raw ginger, and ginger tablets for the nausea. Patient was also given saltine crackers. Patient's aunt arrived at the scene. Patient reported feeling chills and weakness. Patient did not feel comfortable standing/leaving. Pharmacist stayed with the patient for 90 min until patient was stable and walked the patient to the aunts car. At the end of the event patient reported having vasovagal syncope and has a history of fainting at the site of blood, too much stress, and anxiety, but never after vaccines.She reported she did not eat anything in the morning and just drank coffee. |
| 1095578 | 3/12/2021 | TX | 28 | F | 3/12/2021 | 3/12/2021 | Patient immediately got lightheaded after receiving the vaccine. About 5-10 minutes after she fainted but regained consciousness. Patient was nauseous, her ears were ringing, and felt extremely hot. 911 was called and patient was taken to the hospital. |
| 1095597 | 3/12/2021 | WV | 66 | F | 3/8/2021 | 3/10/2021 | After 1 hour of light housework she walked approximately 200 yards to her daughter?s house to retrieve her dog. She bent over a couple times to pick up the dog then she became dizzy and passed out and fell to the ground. This has never happened before taking this shot. |
| 1095627 | 3/12/2021 | MI | 53 | F | 3/9/2021 | 3/9/2021 | 5-10 minutes after shot felt warm and passed out on third day (3/11/21) extreme fatigue, diaria, vomiting |

| 1096144 | 3/12/2021 | PA | 61 | F | 3/12/2021 | 3/12/2021 | Patient reported prior to administration of vaccine significant history of syncope episodes with previous vaccine injections. Placed in wheelchair prior to administration of vaccine. After vaccine given patient experienced lightheadedness and feeling hot within 1 to 2 minutes placed on cot no respiratory distress or anaphylaxis occurred symptoms persisted EMS on site now feeling better EMS recalled back to site and transported to local hospital. |
| 1096147 | 3/12/2021 | WV | 77 | M | 3/11/2021 | 3/12/2021 | Spouse reported that patient had been feeling achy, tired and fevered most of day and had spent day in bed. When he got up, he fainted face down on bed. EMT arrived and rolled him over. Oxygen level was at 88, fever of 99.9. Since a diabetic, finger stick done (171) Patient given oxygen and IV fluids before transport and he started to feel better. Transported to Hospital - unknown if admitted. |
| 1095795 | 3/12/2021 | NJ | 20 | F | 3/12/2021 | 3/12/2021 | Patient was flushed, could not hear, was feeling nausea, and fainted for few seconds. I administered Epi 0.3mg and called 911. Paramedics arrived and patient was taken to the hospital. |
| 1094827 | 3/12/2021 | TX | 58 | F | 3/9/2021 | 3/10/2021 | At 12:30 am awoke and felt thirsty and achy in my right arm. I had been feeling chills off and on for a couple of hours. I got out of bed and went to the kitchen, drank a small amount of water and located the bottle of Tylenol. While I was attempting to open the safety seal on the Tylenol I suddenly felt very dizzy and immediately passed out. I awoke on the floor moments later and passed out a second time. After awaking the second time, I remained still and waited a few minutes for the dizziness to go away. I then carefully crawled back to bed without standing. I continued to fill chills throughout the night and the next day (3/10/2021), as well as fatigue. The following day (3/11/2021) the symptoms all seemed to disappear, except for bumps and bruises I sustained in the fall. |
| 1096109 | 3/12/2021 | MO | 68 | F | 2/18/2021 | 2/20/2021 | Diarrhea (usually 4+ times per day) began on 2/20/2021, and continues to today (3/12/2021). Fainted 2/26/2021. To Urgent Care and then ER 2/27/2021. Suspected dehydration. |

| 1095470 | 3/12/2021 | MN | 60 | M | 3/10/2021 | 3/10/2021 | 08:10 vaccine administered 08:14 dizzy, light headed, room spinning. Sat down 08:25 felt lump in throat, contacted clinic nurse in waiting area. Uncomfortable but never to the point of difficulty breathing. ~08:30, BP 128/99 (I think) Systolic up only a bit. Diastolic very high for me sent to urgent care part of clinic. Monitored BP, oxygen, did EKG (normal), symptoms started easing ~ 09:40. Sent home. Attending PA though it might just be a Vaso-Vagal response, but, after hundreds upon hundred of needles, I've never had such a response, and, my symptoms did not involve a low BP, fainting or nausea, rather I remained conscious, had throat constriction with increased BP and a narrowed pulse pressure range. |
| 1094737 | 3/12/2021 | NY | 24 | M | 3/12/2021 | 3/12/2021 | Immediately after vaccination, patient felt dizzy, lightheaded, and nauseous. Immediately laid down. Observed to be pale and diaphoretic. No loss of consciousness, alert and oriented throughout. Patient reported that he has previously had fainting episodes associated with blood draws but not previously with injections. Patient was evaluated by staff and EMS. After 5-10 minutes lying down, felt better and was able to ambulate. Vaccination occurred at 1:35 pm; BP at 1:40 pm (lying down): 90/62. BP at 1:50 pm (sitting up): 110/78, HR 70, SpO2 100%. Patient felt better and refused transport to ED for further evaluation. |
| 1094817 | 3/12/2021 | GA | 50 | F | 3/8/2021 | 3/9/2021 | On day of shot, I was fine, more tired than usual by bed time. Next morning I was extremely weak and fatigued not able to get out of bed for two hours. I went downstairs to get water, blacked out and completely fainted. I got out of bed around 10:25 or so, went downstairs very slowly, saw clock when I was able to get up around 10:47. I don't believe I was passed out for long. Woke up on kitchen floor, arm bruised. Thankfully head was not injured, apparently fell with arm supporting head (assumption since no head injury). Advised by nurse to come to dr. office, they tested blood pressure, top number was 82 (did the tilt test for orthostatic hypotension). EKG was normal and other blood tests were normal. Was diagnosed with dehydration and low BP. I habitually drink water and even if I did potentially skip a day, I should not faint. |

| 1095193 | 3/12/2021 | NV | 24 | F | 2/19/2021 | 2/19/2021 | Anaphylaxis - Throat swelled almost completely closed, wheezing, lightheadedness (nearly passed out), throat/neck and injection site were very itchy and swollen, face/eyes swelled up, turned very pale all over, heart palpitations, etc. The next day - severe, horribly painful burning sensation all throughout my body. Even clothing lightly touching my skin felt like hot razors cutting in to me. Residual swelling of the face/ arm. Migraine. For two weeks after - Very large, hard lump under my skin at the injection site. It was about the size of my hand and was very painful. After a few weeks it went away. Treatment-large amounts of benadryl. The pharmacist wanted to use an epipen and send me to the hospital, but I refused because I could still get some air in (doctor later told me that my reaction was so severe I should have gone to the hospital). I had to keep taking large amounts of benadryl for the next few days to keep the reaction down a bit. |
| 1095195 | 3/12/2021 | ID | 54 | F | 3/12/2021 | 3/12/2021 | Patient was advised to wait in store for 15 minutes after receiving vaccine. She walked from the pharmacy to the meat department and fainted in front of the meat department. The store staff came to get the pharmacy staff and called 911. Patient was laying on the floor and reported she was "just having a hot flash". She was conscious and aware with no difficulty breathing. EMS arrived on the scene and patient refused service. An EpiPen was not administered |

| 1091343 | 3/11/2021 | MN | 71 | M | 2/18/2021 | 2/19/2021 | Pt woke up at 7. Cleaned up brushed his teeth and came upstairs from the basement to the kitchen. Poured a cup of coffee and sat down on living room chair four feet from me. He slumped over. I went to him and tried to wake him but he had passed out. Could not tell if he was breathing. I called 911. Put phone on speaker. I was told to lay him in the floor and start chest compressions. I did this for about 4 minutes when he made some noise. The first sheriff arrived after 8 minutes and by then PT had started to come around. He rolled over on his side and spoke to the sheriff. A couple minutes after that the ambulance arrived and the EMTs took over. They got him up and in the chair. Checked his pulse, blood sugar, blood pressure and did two EKGs. Everything was normal. He of course did not remember what happened but was very coherent. His conversation was very normal. They stayed with him about 30 minutes and he chose not to go to the hospital. He was out about 10 minutes. He has since been to the doctor and checked out fine. |
| 1091980 | 3/11/2021 | OH | 62 | F | 3/8/2021 | 3/9/2021 | started vomiting at 1:30 and I felt really dizzy and confused. My roommate found me on the floor passed out. I am not sure how long I was passed out. I woke up and I was talking gibberish. I was aware that nothing I said was making sense. I went to bed and slept almost 24 hours. I woke up feeling wiped out but I wasn't confused and I was talking normal again. Right arm hurt and is numb. (right side of my body typically is kind of numb but the right arm seemed more so numb after the vaccine) |
| 1091333 | 3/11/2021 | MN | 27 | F | 2/25/2021 | 2/25/2021 | Client received vaccination after reporting she felt anxious. After vaccination she lowered herself to the ground because she felt lightheaded and lost consciousness for 20-30 seconds. Episode witnessed by nurse and she reported that client did not hit her head. Upon regaining consciousness was responding and vitals were within normal limits. She stated she had history of fainting following blood draws and other vaccinations but did not tell vaccinating nurse this. EMS called. Client refused transport. She was monitored another 30 minutes and left after fluids and a snack. |

| 1091964 | 3/11/2021 | WI | 45 | F | 3/10/2021 | 3/11/2021 | Pt reports that 5 min after receiving the vaccination yesterday, she felt dizzy, lightheaded, "jaw tension and tightness." Symptoms lasted approximately 10 minutes. She also reports that for a split second she could not open her mouth due to jaw tightness, but reports that she has not had any further issues with this. She did not notify any of the immunization clinic staff about any of these symptoms. This morning when patient was at work, she noticed that she had some circumoral numbness and tingling with chin numbness and mild tongue swelling and numbness. The symptoms started at approximately 1030 this morning and are still occurring. "It feels like I just went to the dentist." Patient denies difficulty swallowing her secretions, but she does feel like there is possibly a "mild compression" in her esophagus. Denies any new foods or fluids, itching, shortness of breath, wheezing, voice changes, nausea/vomiting, syncope. She has not taken any over-the-counter medications for her symptoms. |

| 1090218 | 3/11/2021 | NY | 67 | F | 2/17/2021 | 2/17/2021 | <p>syncope; feeling of heat rising into throat; feeling of heat rising into throat; lightheaded; chills; mild pain at injection site; This is a spontaneous report from a contactable pharmacist reported for self. This 67-year-old female patient (no pregnant) received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 17Feb2021 13:45 PM on Arm left via Intramuscular at single dose (Lot # EL9269) for covid-19 immunisation. Medical history included Osteoporosis, known allergies: Sulfa, flu vaccine for immunisation. No COVID prior vaccination. Concomitant medications included alendronate sodium (FOSAMAX), ergocalciferol (VITAMIN D), calcium, magnesium, biotin, bifidobacterium lactis (PROBIOTIC). No other vaccine in four weeks. Past similar reaction from Flu vaccine 8 years ago (2013) for immunisation and treated in ED, had no problems with any other vaccine such as HepB (Hepatitis B), DTAP, pneumococcal 23, Shingrix all for immunization. On 17Feb2021 14:15 PM, feeling of heat rising into throat, then lightheaded- EMT on-site monitored BP, heart, oxygen then administered IV Benadryl and zofran - signed out in 2hr, developed chills and syncope for next 4 days and mild pain at injection site. Self treated with Tylenol/ advised by MD to not get 2nd dose. Events resulted in emergency room/department or urgent care. Treatments were received for the events. Treatment included IV Benadryl and IV Zofran. Outcome of the events was recovering.;</p> <p>Sender's Comments: Based on a temporal association, a causal relationship between the events of feeling of heat rising into throat, lightheaded and syncope, and BNT162B2 cannot be completely excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p> |

| 1090178 | 3/11/2021 | MI | 48 | F | 12/31/2020 | 1/8/2021 | Overwhelming weakness; Blood pressure was elevated to 160/100 bpm; Brain fog; Thought was going to pass out, thought she was going to die; Pre-syncope episode; Systolic blood pressure of 180; Rigors in her chest; Neuro effects; A spontaneous report was received from a nurse who was also a 48-years-old, female patient who received Moderna's COVID-19 Vaccine (mRNA-1273) and who experienced brain fog, pre-syncope episode, systolic blood pressure of 180, rigors in her chest, neuro effects, blood pressure was elevated to 160/100 bpm, overwhelming weakness and thought was going to pass out, thought she was going to die. The patient's medical history was not provided. Concomitant product use was not provided by the reporter. On 31 Dec 2021, approximately 9 days prior to the onset of the symptoms, the patient received their first of two planned doses of mRNA-1273 (Batch number: 026L20A) intramuscularly in the left deltoid for prophylaxis of COVID-19 infection. The patient had some brain fog off and on after receiving vaccine. About the 8th day on 08 Jan 2021, had a pre-syncope episode with systolic blood pressure of 180, thought patient was going to pass out and had rigors in patient's chest. Patient's husband called emergency medical service and went to the hospital where patient works, patient was evaluated in emergency room. The next day, patient rested at home. The following day, on 10 Jan 2021, patient went to work but couldn't think due to brain fog and neuro effects. After work, went back down to the emergency. Patient was admitted to the hospital and kept overnight. Consulted the neurologist. Neurologist stated it sounded like it was side effects from the immune response to the vaccine. Discharged the 11 Jan 2021 with no treatment besides follow-up with primary care doctor. Patient followed up with patient's primary care (cannot remember what date). The patient reported experiencing more pre-syncope episodes at home and at work. Patient's blood pressure was elevated to 160/100 bpm. Most recently had a syncope episode on 21 Jan 2021 where patient reported overwhelming weakness and had to sit down because patient "thought patient was going to die". After, made an appointment with the cardiologist. Had more test done. After taking medications patient felt a little bit better but had in head where doesn't feel right, feels little pings in head. Patient stated that patient missed forty hours of work because |

| 1091227 | 3/11/2021 | MO | 63 | M | 3/10/2021 | 3/10/2021 | Patient passed out after receiving janssen covid-19 vaccine. There was no injection site reaction, no wheezing, or rash/hives. Patient had vision loss, dilated pupils, sweaty, unable focus or respond to use questions being asked, and was having trouble hearing-said he had ringing in his ears. We were able to lay him on the floor without injuries-he did not fall. I was fanning him and we were talking to him. He got a little worse but then got better. When he was better, he said that he had passed out before when having blood taken. He did not mention this to me before the vaccine was administered. I do not feel that the Janssen COVID shot was the cause, I think he just passes out from injections or needles. We did call 911 when he was getting worse. By the time they got here, he was better but they did check him. |

| 1090639 | 3/11/2021 | VA | 38 | M | 1/14/2021 | 1/14/2021 | I passed out while sitting in the observation area shortly after receiving my shot (10-15 minutes). I was initially able to walk from the area where the injection was administered about 50 yards to the observation area. Sat down & shortly thereafter could feel myself getting woozy. I laid my head back & closed my eyes hoping to avoid it. I was given two epinephrine shots the second of which woke me up. Several medical staff were around me when I opened my eyes. I was taken to the patient wing and checked into my own room for observation for a few more hours. Blood was drawn and sent off for a Triptase test which came back negative a couple days later. After being kept under observation for a few hours I was release around noon. I have a history of problems with shots/needles. Haven't actually passed out from it in over 20 years, but it is a known problem. |

| 1090947 | 3/11/2021 | LA | 34 | F | 3/5/2021 | 3/6/2021 | Subject woke up to use the bathroom and passed out while on the toilet. She called my name immediately prior to the event. She fell prostrate on the floor resulting in facial bruising/cuts. Subject regained consciousness one minute later. She was able to work the next day and had chills for the next 2 days. |
| 1091139 | 3/11/2021 | IA | 29 | F | 3/9/2021 | 3/9/2021 | Vasovagal syncope a few minutes after vaccination. Fever of 101.8F 24h after vaccination (3/10/2021). Fever is continuing today (3/11/2021), but is lower at 100.4F. Tingling fingers on hand from vaccination arm (left), swelling from vaccination injection site, headache, and neck pain all developed on 3/10/2021. Headache and neck pain could be due to head trauma from vasovagal syncope. Tingling fingers were not observed on 3/11/2021. *I have had vasovagal syncope in the past, but never with vaccines. It always occurs when I see my own blood. |
| 1091174 | 3/11/2021 | IL | 30 | F | 3/11/2021 | 3/11/2021 | Patient was waiting in required observation area after her COVID-19 vaccination and suddenly passed out, fell out of chair, lost consciousness, and hit forehead on the floor. Rapid response call was initiated and patient was sent to ED. |

| 1092202 | 3/11/2021 | CA | 17 | F | 3/11/2021 | 3/11/2021 | Written by the patient and guardian: " 8-10 minutes after shot, complaints of light head an throat closing up. Removed mask for fresh air, no relief. Went to get up for water, immediately for light headed, pale face, checked-out look in eyes. Body went limp, set 17yo in chair, still was light headed and lethargic. Laid 17yo down on floor, administered water. Vision came back dizziness went away. remained seated for another 15minutes. Continued hydrating w/ water, other symptoms diminished." From Dr.: "Witnessed patient pass out in chair, within 10-20s was helping caregiver lower patient to the floor and patient had come to. Increasingly alert. Endorses above narrative, as well as not having eaten or drinking much today, "maybe an apple". She does not have a history of vasovagal syncope. Patient Pulse at 65, normal breathing, no distress, no signs of injury. Overall episode appears to be vasovagal syncope. Patient asked to drink water and remain at the vaccine center an additional 15-20 minutes for observation. After 15 min patient feeling back at baseline. No further medical intervention. |

| 1092560 | 3/11/2021 | CA | 33 | F | 1/5/2021 | 1/8/2021 | Day of injection after I left the vaccination site I started to have a really bad headache and then sore arm (left arm where the injection was). Then about 7 hours after the injection I started to have a really bad stomach ache and cramps with nausea. This last all night long into the next day where it slowly went away. I was incredibly fatigued and the headache would not break. Then on the 3rd day Thursday January 7 I was feeling okay but not 100% myself. Then Friday January 08 I woke up and knew something was incredibly wrong because my stomach hurt way worse then before, i was so lethargic that I was falling asleep at my desk at work, I was shaking uncontrollably, blurred vision, diarrhea with blood in stool and one close episode of fainting. So at the point I ended up in the ER missing the rest of my work day. My symptoms didn't get better until the following Monday |

| 1092258 | 3/11/2021 | CA | 25 | M | 2/2/2021 | 2/4/2021 | Moderna COVID-19 Vaccine EUA The day after I received the 2nd dose of the vaccine I had a headache. That same night I ran a fever and woke up the next morning feeling ok. I was taking a shower and it was reported to me by my fiancé I had passed out, started to seize, my eyes rolled to the back of my head. A few minutes later I woke up on the floor and asked what had happened. I was not sure what had happened. I felt fine when I woke up. When first responders arrived they asked me if I knew who I was, the date, the president, where I lived to all I was able to answer correctly. I went to the ER and they did a ECG, blood test, urine test, chest x-ray, CT of my head and they said everything came back normal. I was prescribed Keppra and have an MRI scheduled in the coming week. |

| 1092402 | 3/11/2021 | LA | 16 | M | 3/10/2021 | 3/10/2021 | Summary: Syncopal episodes x 2 16 yo patient received his Covid-19 vaccine and as he was going to sit down in observation, he leaned on his mom and passed out. His mother gently lowered him to the ground (@ 1804). Patient's mother stated he just passed out and that this was his first injection ever in his life. Patient was immediately assessed by multiple nurses. Patient did not fall or hit his head or injure any part of his body. Patient took less than 60 seconds to respond to verbal commands and comprehend what had happened. Patient's legs were immediately raised and vital signs were obtained. He was diaphoretic and pale but both were dissapating. Patient denied difficulty breathing, pain, discomfort. Patient was moved to a reclined chair. Patient and family at side (mother and father) agreed to be monitored. At 1828, Patient complained of feeling "a star" on the left side of his chest. Patient was unable to describe this further. I asked if he was feeling anxious and he said yes. I instructed patient to take several deep breaths in through his nose and out through his mouth. After doing this 3 times, patient stated he did not feel anything funny in his chest anymore. At 1835, while still seated in a reclined chair, patient passed out again. He was pale and diaphoretic. A few team members saw him jerk/twitch and it was questionable if he was having a seizure. The jerking did not last but a few seconds. 911 was called @ 1826. Patient was transferred to a wheelchair and put in the ambulance @ 1841. Vitals were obtained throughout and charted. Pulse ox saturation levels were not below 96%. Immediately after the patient passed out the second time, his pulse was measured at 38 bpm and his lips displayed slight cyanosis. His pulse quickly rose to 52 bpm, within less than 10 seconds. One minute later his pulse was up to 68 bpm. |

| 1088088 | 3/10/2021 | VA | 68 | M | 3/9/2021 | 3/10/2021 | Strong pain in the arm during the middle of the night. While getting up to get an ice pack, I felt nauseous and fainted, apparently from the pain. I stayed on the floor for some minutes in quite a bit of pain and then it subsided all at once. |
| 1088097 | 3/10/2021 | IL | 70 | F | 3/5/2021 | 3/6/2021 | After my second vaccination shot on 3/5/21 I started with a low grade fever on 3/6/21. On 3/7/21 after getting up I started feeling funny while going to the restroom. I laid on the floor for a while and then proceeded to the couch. I passed out on the couch. Upon waking up I was sweating very bad. My clothes were wet. |
| 1088118 | 3/10/2021 | GA | 52 | F | 2/11/2021 | 2/18/2021 | 1 week after dose 2 of the COVID-19 vaccine, the patient experienced swelling, burning, itching, and redness over the injection site in the left upper arm. Then over a few days, experienced a burning, itching, and tingling sensation over the left face, left arm, and left leg. The left side of her face became mildly swollen and itchy. She has since noticed swelling over the palms and soles. No shortness of breath or difficulty swallowing. No fever/chills. No pre-syncope/syncope. |
| 1088120 | 3/10/2021 | CO | 78 | F | 2/20/2021 | 2/21/2021 | Called nurse line 4 days after 2nd Moderna vaccine, SOB, fainting, can't eat, dry cough, nose bleeds since shot. Advised to go to ED, patient refused as she feels a bit better today. Called again the following day with same symptoms - again advised to go to ED and quarantine for flu/covid-like symptoms. Patient agreed to come to ED, found to have bilateral PEs and RLE DVTs. Covid/flu negative. LUE red/swollen at injection site - no cellulitis. Admitted overnight and d/c'd home the following day. |
| 1088173 | 3/10/2021 | KY | 26 | F | 3/9/2021 | 3/9/2021 | 5 hours after being given the shot, uncontrollable tremors began. Muscles began tensing up, tunnel vision started, extreme dizziness, vomiting, severe weakness in muscles, and fainting. These lasted for about 2 hours before decreasing in severity but continued to be present until about 10:30pm, 13 and a half hours after receiving the shot. Nothing was done to treat the symptoms. As of 12:30pm on 3/10, some minor symptoms are still present, such as muscle weakness and pain, severe migraine, and dizziness. |

| 1087612 | 3/10/2021 | PA | 72 | F | 3/8/2021 | 3/8/2021 | in less than a minute I had a vasovagal syncope response and my blood pressure got so high that the machine couldn't take it--in the 200's/100 something. I was taken to the ER and monitored for a few hours and labs. BP came down slowly, but not perfect. I was released around 7pm. Event happened at 3:46pm. The next day I had chills first, then I had a slight fever, a terrible headache in the back of my head, dizziness and night sweats. By the 2nd day after I am feeling better. |
| 1088138 | 3/10/2021 | CA | 50 | F | 3/6/2021 | 3/6/2021 | Syncope. Vasovagal episode, felt lightheaded. Loss of consciousness < 10 seconds while sitting. Prior history of vasovagal episodes with needles. Vital signs within normal limits. |
| 1087248 | 3/10/2021 | AZ | 44 | F | 1/31/2021 | 1/31/2021 | Within 1-2 minutes of receiving the vaccine in my right arm (while sitting in the passenger seat of our car), my husband pulled forward in the lot, and I immediately felt a wave of heat come from my chest, up through my neck and into my face. I started sweating, got light-headed, very nauseous, and the left side of my face (everything under my cheekbone) felt "tingly". When we parked, I opened the car door, we opened the windows I drank water, and did some deep breathing. If I had been standing up after the shot, I think I would have fainted. I'm not sure what that reaction was.....I have had similar reactions when I've had my triptan-class injection medication or even the triptan medication in pill form. In those instances, I think my blood pressure dropped because of the vasodilation . I am not scared of shots, needles, or getting blood drawn at all. It wasn't fear and I had eaten plenty that morning as well as drank a lot of water. As far as the numbless/tingly feeling in my face, I do have damage to my trigeminal nerve that occurred during my craniotomy in 2016, so that area doesn't ever feel 100% normal, however the change to a more intense "tingliness" after the injection was pronounced and lasted about 3-4 days. |

| 1086896 | 3/10/2021 | NM | 30 | F | 2/19/2021 | 2/19/2021 | <p>syncopal episode; itching; fullness; feeling funny; This is a spontaneous report from a contactable pharmacist. A 30-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EN6198), intramuscular on 19Feb2021 14:15 at single dose for COVID-19 immunisation. Medical history included manual vacuum aspiration (MVA), traumatic brain injury (TBI) from 2007 to an unknown date, vagovasal and hypotension post TBI, Celiac disease, allergy to milk products, diagnosed with COVID-19 from Aug2020 to an unknown date prior to vaccination. It was unknown if the patient was pregnant at the time of vaccination. Concomitant medication included famotidine, methylphenidate, fludrocortisone, omeprazole, desvenlafaxine succinate (PRISTIQ), brexpiprazole (REXULTI), and folic acid. The patient was previously vaccinated with the first dose of bnt162b2 (lot number: EL3246) at the age of 30-year-old, intramuscularly for COVID-19 immunisation on 19Jan2021 at 14:15 and experienced heart flutters and "fell faint" (fainted). The patient also previously took ibuprofen and experienced allergies. After approximately 5 minutes after the patient had the second dose of vaccine (19Feb2021 14:20), the patient had syncopal episode, itching/ fullness. Covering physician present and assessed with EMS on Duty: VS: 110/80-BP, 18-RR, 96-HR, SaO2-98% on RA, CBG: 138. Patient awakened and reported "feeling funny" on 19Feb2021, but was A &Ox4, MAEW x4 with equal strength, Lungs Clear to auscultation. At 14:20 the patient was given Benadryl liquid PO given along with 8oz of water. Patient able to drink without issues. At 15:00, EMS called for ER transport to due prolonged recovery. The events resulted in emergency room/department or urgent care. The outcome of the events was unknown.; Sender's Comments: Based on the very close temporal association, there was a reasonable possibility that the vaccination with BNT162B2 played a contributory role in triggering the onset of the reported events. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified</p> |

| 1086877 | 3/10/2021 CO | 94 M | 1/22/2021 | 2/10/2021 | <p>to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p> <p>low grade UTI; collapse; been kind of weak; A spontaneous report was received from a consumer, who was the caregiver of a 94-year-old male patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced urinary tract infection (UTI), collapse (syncope), and weak (asthenia). The patient's medical history was provided. Concomitant product use was not provided. On 22 Jan 2021, the patient received their first of two planned doses of mRNA-1273 (batch number 029L20A) intramuscularly in the left deltoid for prophylaxis of COVID-19 infection. The patient was hospitalized for a UTI from 10 Feb 2021 to 12 Feb 2021. The reporter stated, "after that, he's been kind of weak and everything". The reporter indicated it was a "low grade" UTI and the patient didn't show any symptoms but then stated "it actually had him collapse and he did that in between the two vaccines and spent two days in the hospital." On 17 Feb 2021, the patient received his second of two planned doses of mRNA-1273 (batch number 012M20A) intramuscularly in the left deltoid for prophylaxis of COVID-19 infection. The patient received both planned doses of mRNA-1273; therefore, the action with mRNA-1273 in response to the events was not applicable. Treatment for the UTI included nitrofluorine. The outcome of the events were unknown.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of these events, a causal relationship cannot be excluded</p> |

| 1087212 | 3/10/2021 | CA | 18 | F | 3/8/2021 | 3/8/2021 | At 1405, Patient was sitting in observation room after receiving first dose of Pfizer. Patient slide down from the chair to the floor and was assisted by her grandmother as well. I immediately went to the patient aide, and she awoke quickly to my voice. I asked the patient for her name and she stated her name. I asked her DOB and she identified her DOB. I asked her if she had any allergies and she denied. I asked the patient if she had any medical conditions, and she denied. I asked the patient if she has ever fainted before and she stated "yes", she has an extreme fear of needles. I also asked the patient if she had eaten anything and she stated, yes, we just had lunch. While I was asking the patient these questions, I assessed the Patient pulse and it was 110, and respiratory was 16. I then asked the patient to focus on her breathing and took the patient Vital Signs. 138/58, HR 78, Resp 16.Auscultated anterior fields, lungs were clear, no advantageous sounds heard. The patient remained on the floor while asking the questions and assessing the patient. The charge nurse and the LVN, placed the patients feet up on the chair. I then asked the patient how she felt and she stated she was fine, I assisted the patient to a sitting position and asked her how she felt and she stated fine, and then we went to a standing position and she stated she was fine. I then assisted the patient to the chair, provided water and also a cool ice pack. Patient continued to have normal conversation with myself and her grandmother. A few minutes later, the patient appear to look like she was going to vomit, I then immediately provided the trash can to the patient. I also assisted the patient with cleaning the patients hands and right arm, where vomit was. Provided Clean hand wipes, and hand sanitizer. The patient remained stable, and 30 minutes later walked to the car with her grandmother and went home. |

| 1089785 | 3/10/2021 | CA | 64 | F | 2/24/2021 | 3/4/2021 | Became incredibly ill on March 4, 2021, still sick, fluctuating fevers 100-104, body aches, dizziness, weakness, unbalanced, sweating, unable to get out of bed to days, almost passed out on March 6th. Day 7, dizzy head, dry mouth, recent tickle cough at back of tongue making it hard to breathe or talk without coughing spasm, slightly more strength today, but still feel incredibly weak and don't know how long to get back my normal self. No congestion or lung problems. |
| 1086931 | 3/10/2021 | MA | 75 | F | 2/10/2021 | 2/11/2021 | Shingles in the ear; Passed out; Couldn't mover her arm, head, legs, chest, felt paralyzed; Felt weak; A spontaneous report was received from a consumer concerning a female patient of 75 year old, who was received Moderna's COVID-19 vaccine(mRNA-1273) and experienced loss of consciousness, paralysis, weakness and shingles in the ear. The patients medical history, as provided by the reporter, included myasthenia gravis. Concomitant medications reported included lidocaine patch and prednisone. On 10 feb 2021, prior to the onset of events, the patient received their first of two planned dose of mRNA-1273(Lot number:010M20A) intramuscularly on an unknown arm for prophylaxis of COVID-19 infection. On 11 feb 2021, one day after vaccination, patient experienced loss of consciousness, paralysis and weakness. The event loss of consciousness and paralysis was also considered to be medically significant. On 16 feb 2021, patient experienced shingles in the ear. Treatment for the events included acyclovir and ice. Action taken with mRNA-1273 in response to the event was not reported. The outcome for the events loss of consciousness, paralysis, weakness and shingles in the ear were considered as unknown.; Reporter's Comments: Based on the current available information, a strong temporal association between the use of the product and the start date of the events, a causal relationship with the events cannot be excluded. |
| 1090288 | 3/10/2021 | CA | 23 | F | 3/10/2021 | 3/10/2021 | Syncope - fainted in observation area. Laceration above left eyebrow (2 cm x 2 cm) and on bottom lip. BPs 111/79 (pulse 104), 113/81 (pulse 98), O2 sat 100%. |

| 1088508 | 3/10/2021 | MI | 67 | M | 2/23/2021 | 2/24/2021 | diarrhea; 12 hours after injection - fainted in bathroom/fainted 2nd time; wooziness when trying to walk/just felt woozy; headache; chills; This is a spontaneous report from contactable consumers (patient and wife). This 67-year-old male patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EN6202) in right arm on 23Feb2021 05:00pm at single dose for COVID-19 immunisation. Medical history included high cholesterol, acid reflux (esophageal). The patient had no known allergies. Concomitant medications in two weeks included atorvastatin for high cholesterol, ongoing omeprazole for acid reflux (esophageal), and ongoing multivitamins (1 tablet a day for men over 50 by mouth as supplementation therapy). The patient did not receive other vaccine in four weeks. The patient previously received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Lot number: EM9810) at the age of 67-year on 02Feb2021 at 05:00PM in left arm at single dose for COVID-19 immunisation, had no reaction with the first dose, had no issues in the waiting period or while shopping afterwards; received influenza vaccine (FLU) and pneumonia shot for immunization on an unknown date a couple of months ago. The patient did not have COVID prior vaccination, COVID was not tested post vaccination. The patient received second dose of the Covid-19 Vaccine, then on 24Feb2021, fainted twice 12 hours after receiving the second dose, fainted in the morning of 24Feb2021 around 05:20, he got up because he had diarrhea and that was when he first fainted in the bathroom. He also had chills and a headache in the morning of 24Feb2021 at 05:15, but she reported that he did not have a fever. Temperature was normal on 24Feb2021. The patient reported that he just felt woozy, wooziness when trying to walk/just felt woozy in the morning of 24Feb2021 at 05:15. She said that he fainted for a second time just minutes after he fainted the first time when the reporter was helping the patient get back from the bathroom to the bedroom, the patient collapsed on the floor and reporter got him up. He developed the diarrhea around 05:30 in the morning of 24Feb2021. He took some ibuprofen to treat the headache. It was unknown if the treatment received for the other events. He has been resting since he had the diarrhea. Outcome of the events faint and diarrhea was unknown, wooziness |

| 1088523 | 3/10/2021 | KY | 26 | F | 3/9/2021 | 3/9/2021 | when trying to walk/just felt woozy was recovering, while other events was recovered on 24Feb2021. Pt reported that approximately five hours after vaccination, she experienced uncontrollable tremors, fainting, vomiting, chest pain and tightness. Today, extremely fatigued and has some chest tightness. She has a history of chest tightness. Did not seek emergency care last night, but called physician this morning who was not in office and referred to local health dept. Advised that it would be best to consult with local emergency facility and if anything worsens she needs emergency care. |
| 1088542 | 3/10/2021 | NV | 71 | F | 3/2/2021 | 3/2/2021 | About 6 hours after the vaccine she felt really, really sleepy. Then she laid down and then her left hand started stinging all over. Both legs started getting a strange warm sensation, the size of a pea that kept getting warmer. She was not able to get up or open her eyes, doesn't know if she passed out but apparently went to sleep and slept for 3 hours and woke up and went to bed. She then had toe cramps on her left foot, then got up and walked around the bed and laid down again and fell asleep until the morning. She did not feel normal until 3/5/21. On Sunday, 3/7/21 had nausea, took something for that and the next day she was fine. |
| 1089033 | 3/10/2021 | CT | 44 | F | 3/10/2021 | 3/10/2021 | Patient received her first Moderna COVID-19 vaccine and fainted within 1-2 minutes. She was sitting and fell to the floor. Vital signs remained stable as follows: 12:40pm BP 94/50, pulse oximeter - 97% and HR - 91 laying down 12:43pm BP110/78, pulse oximeter - 98% and HR 97 sitting 12:51pm BP 114/84, pulse oximeter - 98% and HR - 91 standing Patient was responsive after fainting and reported history of syncope. She was accompanied to Health Office at the school by wheelchair and family was called to pick her up. |
| 1088663 | 3/10/2021 | KY | 31 | F | 3/9/2021 | 3/10/2021 | Chills during the night and in the morning when got up from bed had symptoms of orthostatic hypotension' headache neckache and while using bathroom my head was spinning when got up to go to bed I fainted and fell down on the floor which I dont remember until I got up myself and found my son crying next to me i was sweating |

| 1088849 | 3/10/2021 | FL | 57 | M | 3/9/2021 | 3/9/2021 | <p>Around 5 pm patient got his first dose of the Moderna Covid-19 vaccine, and after 5 mins,he passed out while he was sitting in the observation area,his wife was with him, once that incident had been noticed, I ran quickly to him but when I reached him he started to wake up again, I brought the emergency kit , a bottle of water, also I asked pharmacy tech to call store manager to come over. I asked patient what happened and he stated that suddenly he felt dizzy and that he was anxious about the vaccine from the beginning and excited to get it at the same time, then I measured the blood pressure it was 125/61 with pulse of 45/min.I offered him and his wife to call 911 but they declined it. I asked him to go back to my consultation area so he could lie down on the floor and raise his legs up so we can bring back the blood pressure up, he did that, and he went with me over there and laid down on the floor and we raised his legs up, later I measured his blood pressure again, and it was 113/71 with pulse 51/minute, I offered again to call 911 but he refused and he said that he was feeling better. I left him about 10 more minutes,then he started to get up and sit by the chair and I re-measured the blood pressure and it was 121/76 with pulse of 54/minute, he started to drink water. He stated he felt better than he was about 20 minutes ago, then they left once their driver came to pick them up.</p> |

| 1084780 | 3/9/2021 | NJ | 42 | F | 3/9/2021 | 3/9/2021 | Patient experienced an episode of syncope and fainted twice during observation period. Offered oxygen and called 911 and EMS arrived. Patient evaluated by EMS and was recommended to go to ER with EMS but she declined. Patient was counseled on anticipated side effects. She was recommended to follow up with PCP and describe what took place and what she experienced. The timespan that this took place was 20 minutes and she improved and able to speak with assistance. Her husband was present. |
| 1084612 | 3/9/2021 | OH | 65 | F | 3/8/2021 | 3/8/2021 | Patient received Janseen COVID vaccine. The first 1/2 of the vaccine was given easily IM to the left deltoid and then the patient complained of severe arm pain, tensed her muscles, and the last 0.25ml was difficult to inject. Then the patient became hypotensive 90/45, dizzy, and felt like she was going to pass out. She was laid in the supine position, given a cool cloth for her forehead and monitored for approx. 45 minutes. Her blood pressure remained 90/60, 96/56 at discharge. Her heart rate ranged from 55-65, regular. Her son came to take her home as we did not feel comfortable with the patient driving. The patient was continuously monitored by the NPs and APCT. She ambulated without difficulty and was discharged home. She was given information for V-safe to report her reaction and advised to follow up in the ER for any SOB, difficulty breathing, difficulty swallowing, syncope, CP, etc. |

| 1085028 | 3/9/2021 | NJ | 34 | F | 3/9/2021 | 3/9/2021 | Patient and husband arrived to received covid-19 vaccine together, 12:30 pm and 12:45 pm appointments. I informed patients that if they wanted to, they can both enter room together. Both patients were counseled on side effects/ what to expect. Patient was administered the Moderna COVID-19 Vaccine first in left arm. Upon vaccination, patient's arm began to bleed from injection site. I informed patient I would clean her arm, and attempted to hold gauze in place myself. Patient stated she would hold the gauze instead. After applying bandaid and cleaning area, I began process to vaccinate her husband. While vaccinating husband, patient stated she felt dizzy/faint. Patient sat in chair. Husband stated she is prone to fainting spells. I offered EMS services. Husband refused. I elevated patient's legs with other chair. Patient started to become non-responsive. I stated I would use an epi-pen. Patient's husband refused epipen. Informed technician, to contact 911. Informed technician to contact front end manager. Patient continued to be non-responsive. Asked husband if I should get patient juice. Ran to get patient orange juice and straw. Husband wet patient with water. Patient started drinking orange juice through straw. Felt better. Started becoming responsive. Patient and husband waited for EMS. Refused EMS services. |
| 1085250 | 3/9/2021 | MS | 40 | M | 3/9/2021 | 3/9/2021 | seconds after administration patient started losing consciousness. he stated he previously experienced vasovagal syncope after flu shots. he went in and out consciousness several times over the next 5 minutes. he lost color in face and eyes closed when head dropped. his body was stabilized and kept alert with verbal and physical tests. cold compress was applied behind neck and BP monitor placed on arm. he had normal BP/pulse. skin color gradually improved as well as mental acuity. patient could stand after approx 10m and was observed for additional 30m. his phone was used to call his wife and someone came to assist getting home. said felt fine after full observation time and seemed to have made full recovery. |

| 1085128 | 3/9/2021 | MA | 53 | F | 3/6/2021 | 3/7/2021 | Apart from the expected side effects (soreness of injection site, muscle ache and fatigue, which all started the night after the injection, I experienced severe dizziness associated with vertigo (up and down motion of room), nausea, profuse sweating and near syncope around 7:15 AM the day after the injection. Symptoms lasted about 3-4 hours before they gradually subsided. There was no arrhythmia at the time of the near syncope, I was unable to check blood pressure, as I had to stay on the ground to avoid a fall. Fatigue and a sense of disequilibrium persisted for an additional 48 hours before resolving. |
| 1085196 | 3/9/2021 | OH | 69 | F | 2/9/2021 | 2/9/2021 | Feeling faint; Light headed; Fatigue; Diarrhea; Nausea; Vomited; Sore arm; A spontaneous report was received from a consumer concerning a 69-Years old, female patient who experienced the events syncope, dizziness, pain in extremity, diarrhoea, nausea, vomiting and fatigue. The patient's medical history was not provided. Products known to have been used by the patient, within two weeks prior to the event, included metformin for diabetes type 2, valsartan 25mg for high blood pressure and paroxetine for anxiety and depression. On 09 Feb 2021, prior to the onset of the events, the patient received their first of two planned doses of mRNA-1273 (lot/batch: 031M20A) intramuscularly in the left arm for prophylaxis of COVID-19 infection. On 09 Feb 2021, the patient experienced sore arm. On 11 Feb 2021, the patient felt very bad had nausea and vomited. The patient also experience diarrhea on the same day. On 12 Feb 2021, the patient woke up with feeling faint and lightheaded. The patient reported that she cannot put anything in their mouth and experienced fatigue. The event syncope was considered to be serious with seriousness criteria - medically significant and all other events were non-serious. Action taken with mRNA-1273 in response to the events was not unknown. The outcome of the events syncope, dizziness, pain in extremity, diarrhoea, nausea, vomiting and fatigue was unknown.; Reporter's Comments: Based on the current available information and temporal association between the use of the product and the start date of these events, a causal relationship cannot be excluded. |

| 1083928 | 3/9/2021 | TX | 40 | F | 3/4/2021 | 3/5/2021 | I thought my lopes were tingling immediately, but thought it may just be psychological. Several hours later, my arms and hands were tingling and numb, followed by some chest pains momentarily. Eight hires after the shot, I got up to use the restroom, in distress of the tingling and numbness. I was sitting on the toilet and seem to be going in and out of consciousness. I stood up, washed my hands... and woke up on the bathroom floor. I had clearly passed out, hit my head and lost some time. |

| 1083750 | 3/9/2021 | KY | 71 | M | 2/21/2021 | 2/22/2021 | passed out; This will drive me nuts all day; I don't feel comfortable walking in my own house; I got up this morning with the feeling of vertigo; getting little worse, worse than they were; This is a spontaneous report from a contactable Consumer. A 71-years-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, NDC number of Covid-19 Vaccine: 592671000-1, Expiry Date of Covid-19 Vaccine: 31May2021, Lot: EL9267), via an unspecified route of administration on 21Feb2021 13:24 at single dose for covid-19 immunisation. The patient medical history were none. Concomitant drug received. Patient stated, "Yes, I am on Inhalation Pump so, I take it went for one when I need it, I just had that was just little while ago, it wasn't (Incomplete sentence). The patient stated, "I got my second shot (Covid-19 Vaccine by Pfizer) Sunday about 1:30(13:24 PM) it says on the piece of paper, and I was fine all day Sunday, Monday(22Feb2021), I got up this morning with the feeling of vertigo, which I have had in the years of the past okay, all day, got out of shower from the bathroom out here and get some coffee, and I sat down I went to get up and the vertigo hit and I almost fall over, now I went into the shower and I dropped the wash cloth on the floor, so I went down to pick it up and again almost passed out, almost immediately, and I sat and I get in the kitchen for some toast and I said well let me see what happens here and sat down eating some toast and when I got up to put dirty dishes in the sink, I almost again passed out, now I just got up to get the check I have to write to the gentleman right here who is working for me and just before that I got the same thing now I don't like it, how are these supposed to last, is what I want to know because I can't, this will drive me nuts all day, I can't go anywhere, I can't drive anywhere, yeah I don't feel comfortable walking in my own house. Right now, I have to say I am feeling them getting little worse, worse than they were." No treatment. Outcome was not recovered. |
| 1085566 | 3/9/2021 | NY | 35 | M | 3/9/2021 | 3/9/2021 | after 30 minutes of receiving his Dose 2 of Pfizer COVID 19 vaccine. Patient c/o palpitations and tightness of his throat. Denies any SOB/Chest pain/Pruritus/syncope. Able to tolerate clear liquids with c/o of dysphagia unresolving " my throat is feeling like it is tightening up. ~~ |

| 1084058 | 3/9/2021 | CT | 36 | F | 3/6/2021 | 3/6/2021 | Post vaccination feeling of breath doom, walking to door to get fresh air. Syncope, fell to floor. No head injury. Post vaccination syncope, brief generalized tonic-clonic movement followed by emesis. Blood glucose 114, BP 120/80, HR90, O2 Sat 96%. |
| 1086361 | 3/9/2021 | TX | 24 | F | 3/9/2021 | 3/9/2021 | Patient came in for Janssen COVID vaccine that was scheduled electronically online. All appropriate prescreening was done and patient had no previous allergies or issues. Patient was instructed to sit in one of the chairs designated for post vaccine observation for 15 minutes after her vaccine. Within a minute or so patient felt light headed and like she might pass out. She notified the technician who was right there and he notified me. I assisted her to a sitting position on the floor from her chair and I was able to ease her back to a lying down position from there with her head on the floor and feet elevated above heart on a chair. Patient was able to talk the whole time. She told us at that point when she was younger she was scared of shots and had fainted when having them, but thought she was past that and did not mention it during screening. She said she was surprised to feel this way because she was so excited about getting her COVID vaccine. She had not eaten much today (a small snack) and had rushed here for her appointment without getting food. I checked her blood pressure while she was lying down and it was 94/63 and pulse of 75. She said she normally had lower end of normal blood pressure. She was pale when I started checking her, but her color began to return to normal within minutes. After 5 minutes she felt well enough to sit up and we got her a granola bar and water. She remained this way for 5 minutes and felt good, so we moved her to sitting in a chair and got her a pepperoni and cheese snack tray from the cafe. She ate this and waited for 10minutes and felt good. We walked her to her car and she felt fine. I called to verify she got home fine and she did. |
| 1085502 | 3/9/2021 | TN | 58 | F | 3/5/2021 | 3/5/2021 | Near syncope. Pt asked for help as she felt faint and the feeling worsened over the next two minutes. Had pt recline in her automobile. Called EMS and they arrived at 10:10am and evaluated her. She recovered quickly and by 10:30am was able to leave the facility by herself. |

| 1085561 | 3/9/2021 | CT | 61 | F | 3/9/2021 | 3/9/2021 | tingling sensation left arm, light headed, body extremely weak-could not get up, almost passed out, could barely speak, stomach nausea. EMT arrived checked blood pressure with finger (she did not tell us first result when I was extremely weak and felt like was about to pass out and had blurred vision-husband said I was barely responsive and couldn't move to get up), EMT then said would take BP again and while putting on arm cuff I vomited 2 times. After vomiting I felt immediately somewhat better. EMT took blood pressure and she said it was normal. EMT took blood sugar and she said it was normal All less than 15 minutes after shot. We then waited at EMT direction for another 15 minutes. We left the clinic and parked just outside till 10:30. I am now feeling better, just tired. |
| 1086511 | 3/9/2021 | MD | 29 | M | 3/9/2021 | 3/9/2021 | vasovagal syncope or seizure? After receiving the drive-through vaccine, we drove into a parking space to sit and make sure I was ok. Within 5-10 minutes, I was sitting in the car and sending a text and with no warning whatsoever mid-text lost consciousness, profuse sweating, wheezing, lost color in my skin, was making unintelligible noises, and eventually woke up about a minute later but couldn't speak or comprehend those speaking to me (according to my wife who was terrified). I was not nervous, stressed, or scared of receiving a vaccine. I regained the ability to speak about a minute later and my wife had summoned the staff on the scene who instructed me to lie back and breathe without a mask. I drank some liquids. A nurse was called over and offered to take my vital signs but I decided I felt ok enough not to. Eventually my normal skin color and came back and sweating stopped after about 5 minutes. We sat for a few extra minutes and once I felt it was past me, my wife drove us home. |

| 1086495 | 3/9/2021 | FL | 68 | F | 3/9/2021 | 3/9/2021 | Patient had an episode of syncope 6 minutes after vaccination while seated in a chair. Arousal was difficult, carotid pulse was difficult to discern. Once conscious, patient seemed like they were going to fall in and out of consciousness, so we kept speaking to her and asking her questions to keep her conscious. Patient began grabbing right upper abdominal quadrant and complaining of pain. She requested ice because she was feeling hot and her abdomen was hurting, ice was provided. AED was connected and 911 was called, no shock was suggested by AED. EMT arrived and took vitals and blood sugar. They found no issues with vitals, but suggested that she go to Hospital for further assessment. She was taken out on a stretcher, but it is unknown to me what resulted after she left the building. |
| 1086386 | 3/9/2021 | TX | 43 | F | 2/25/2021 | 3/5/2021 | On day 8 I got Covid Arm at the injection site. Lasted for 3 days. On 3/7/21 6:30am I woke up for work and had terrible chest pain. It knocked me back a few steps. Examined my chest and only experienced the pain when I moved a certain way. Thought I had pulled a muscle. Went to work feeling exhausted and my eyes burned. Came home early from work and passed out. Noticed that when I lay down my hands swell. Next morning I work up fine. No pulled muscle. No pain. Never experienced anything like it. I started my monthly cycle that morning. It is over a week early. |
| 1086372 | 3/9/2021 | | 34 | M | 3/9/2021 | 3/9/2021 | Patient entered to observation after receiving the covid vaccine. started to report feeling dizzy and fainted. patient began to keel over, and was escorted by two nurses on the floor. Patient did not hit his head, and no sustain injury on the way down. Patient was placed on supine position with legs elevated. Peep breathing exercises encouraged. Vitals were initiated and recorder. Patient had a syncopal episode, responded to sternal rub. Patient lost consciousness again and once again responded to sternal rub. Vitals were initiated and EMS was activated. Patient vitals were stable with one orthostatic hypotension. Patient reported feeling better and refused to go to the hospital with EMS. Patient was escorted out of building visibly looking better, no pale noted, left site at 1:30 PM. |

| 1085760 | 3/9/2021 | WI | 82 | F | 3/3/2021 | 3/3/2021 | On the first evening I had a fever and joint pains which resolves by the next morning, On 02/03/2021 I had diarrhea on awakening and about two hours later, after doing morning chores including carrying and lifting 4 gallons of water, I fainted, which included having another episode of diarrhea while I was out. I was seen by emergency medical personnel, had an EKG, and then my children, with whom I live, took me to see my primary care provider who ordered some basic blood tests: a CBC and panel. All blood tests were normal as well as the EKG, I assume. We think the faint was perhaps triggered by the diarrhea and exertion of chores in addition to the vaccine's effect. Since then I have had fatigue. |
| 1085815 | 3/9/2021 | ID | 87 | F | 2/9/2021 | 2/16/2021 | Pt experienced syncope and collapse, was admitted for pericardial effusion without cardiac tamponade. Treated for suspected inflammatory pericardial effusion with colchicine 0.6 mg daily for 3 months, ibuprofen 600 mg 3 times daily for two weeks. Patient was discharged home from hospital in good condition 2 days after admission, scheduled for follow-up with cardiology. Additionally pt was treated for a scalp laceration from collapse with staples to posterior scalp. |
| 1085844 | 3/9/2021 | | 60 | F | 3/9/2021 | 3/9/2021 | Syncope, difficulty focusing- Evaluated by EMS- Transported to Emergency room/department or urgent care. |

| 1085923 | 3/9/2021 | | 78 | M | 2/28/2021 | 3/1/2021 | While eating breakfast the next morning after my shot, I got dizzy/light-headed and fainted, falling to the floor. I was "out" for ~2 minutes, according to my MD wife. After 2-3 minutes, I felt fine and went and played tennis 15 Minutes later. I don't think that I have never fainted in my life time. I take no prescriptions for anything. I do still have a sore shoulder from the fall, since I was sitting in a "Bar stool" at a counter at the time of the fall. |

| 1086027 | 3/9/2021 | | 79 | F | 2/19/2021 | 2/1/2021 | <p>Passed out; Things were going downhill; Dizzy; Injection site was painful; Fatigued; Muscle pain; Joint pain; Nausea without vomiting; Low grade fever; A bit of an ache in injection arm; A spontaneous report was received from a consumer concerning a 79-year-old female patient who received Moderna's COVID-19 vaccine (mRNA-1273) and experienced the following: things were going downhill, injection site was painful, fatigued, muscle pain, joint pain, nausea without vomiting, low grade fever, dizzy, passed out, and a bit of an ache in her injection arm. The patient's medical history was not provided. No concomitant medications were reported. On 19-Feb-2021, prior to the onset of the events, the patient received their second of two planned doses of mRNA-1273 (lot/batch: 032L20a) intramuscularly for prophylaxis of COVID-19 infection. On 19-Feb-2021, the patient received the vaccine around noon and by the evening she could tell things were going downhill. She went to bed early, and throughout the night the injection site was painful, she was fatigued, she had muscle pain, joint pain, nausea without vomiting, and a low grade fever. The patient got up at night to go to the bathroom and got dizzy and passed out. She said she was passed out for barely a minute and when she came too she laid there for a bit before she went back to bed with her husband's help. All day on Saturday 20-Feb-2021 the patient was in bed but by that evening she was able to get up and walk out of the bedroom. On Sunday night 21-Feb-2021, she was able walk up stairs without huffing and puffing and felt much better. The patient states they have recovered from it all except sometimes when doing yoga, they can feel a bit of an ache in the injection arm. No treatment information was provided. The patient received both scheduled doses of mRNA-1273 prior to the event(s); therefore, action taken with the drug in response to the event(s) is not applicable. The outcome of the events things were going downhill, injection site was painful, fatigued, muscle pain, joint pain, nausea without vomiting, low grade fever, dizzy, and passed out, were considered recovered/resolved. The outcome of the event, ache in injection arm, was unknown.; Reporter's Comments: This case concerns a 79 Y/O F with a serious unexpected event of loss of consciousness along with NS unexpected dizziness, feeling abnormal, pain in extremity, and NS expected fever, fatigue, myalgia,</p> |

| 1086037 | 3/9/2021 | TX | | M | | 2/26/2021 | arthralgia, nausea, vaccination site pain. Event onset the same day as second dose mRNA-1273. Events resolved except arm pain. Based on current available information and temporal association between use of the product and the start date of the event, a causal relationship cannot be excluded. |
| 1081146 | 3/8/2021 | CT | 77 | F | 2/17/2021 | 2/18/2021 | Passed out for a few minutes; Nausea; 24 hours of fever; A spontaneous report was received from a consumer concerning a male patient of unspecified age, who received Moderna's COVID-19 Vaccine (mRNA-1273). The patient's medical history included immunodeficiency, cancer and gall bladder removal (not specified). Concomitant product use was not provided by the reporter. The patient received their first of two planned doses of mRNA-1273 (Batch number not provided) on an unspecified date. On an unspecified date, prior to the onset of the symptoms, the patient received their second of two planned doses of mRNA-1273 (Batch number not provided) via an unknown route for prophylaxis of COVID-19 infection. The patient had fever for twenty-four hours. On 26 Feb 2021, while on outing with patient's friend's patient had 2 beers. Later patient reported nausea and passed out for few minutes. However, patient drove back to home. Treatment information was not provided. The patient received both scheduled doses of mRNA-1273 prior to the events; therefore, action taken with the drug in response to the events is not applicable. The event, fever was considered recovered/resolved on an unspecified date, and the events passing out and nausea were considered recovered/resolved on 26 Feb 2021.; Reporter's Comments: Very limited information regarding this event/s has been provided at this time. Further information has been requested. |

| 1081452 | 3/8/2021 | | 62 | M | 3/8/2021 | 3/8/2021 | 64-year-old male with a history of hypertension, melanoma, vasovagal events from previous needles presenting to the emergency department today for vasovagal episode. Patient was across the street receiving his first dose of Covid vaccine. At that time patient had a syncopal episode. According to EMS they indicate that nursing there was unable to feel pulse and began CPR. They did multiple rounds of compressions and patient woke up. They are bringing patient in today for further evaluation of syncope versus cardiac arrest. Patient does endorse that he has chest wall pain from where they were doing compressions. |
| 1081214 | 3/8/2021 | IN | 60 | F | 2/26/2021 | 2/27/2021 | Fever greater than 104° for 24 hours. Syncope for 24 hours following that. |
| 1081276 | 3/8/2021 | MA | 32 | F | 2/23/2021 | 2/23/2021 | Patient neglected to tell the nurse administering COVID vaccine that she has fainted in the past. After getting the vaccine she seemed fine and walked over to the observation area. She suddenly stated she felt dizzy to a companion then collapsed onto the floor striking her forehead. She was unconscious briefly and a little dusky around her mouth. She awakened upon stimulation and was evaluated. Her vital signs were reassuring but a growing hematoma on her forehead prompted ac referral to the ED by ambulance. She was seen there and discharged without imaging. She had some fatigue, headache and vertigo for several days. |
| 1081298 | 3/8/2021 | | 79 | F | 2/28/2021 | 2/28/2021 | The patient had near-syncope and confusion about 2 minutes after receiving a vaccine. She is diabetic and hadn't eaten at all yet and thought it was more of a metabolic derangement. She was sent to the ER. |

| 1081311 | 3/8/2021 | OR | 38 | F | 2/27/2021 | 2/28/2021 | Patient experienced three episodes of syncope between 1000-1100 on Sunday, 2/28 after receiving the vaccine on Saturday, 2/27 at approximately 1810. Loss of responsiveness ranged from approximately three to twenty seconds. Two of the three episodes were witnessed. Episode one occurred when patient attempted to sit up after waking. Episodes two and three occurred while attempting to change position from sitting to standing. Episodes were preceded by flushing, diaphoresis, graying/blackening vision, and tremulousness. Patient had not experienced syncope prior to these events. Patient recovered at home with increased fluids and rest on Sunday, 2/28 and outpatient infusion of normal saline at a naturopathic clinic on Monday, 3/1. Patient experience no further episodes of syncope as of 3/8 but did have multiple episodes of near-syncope in the week following vaccination. Syncope started at approximately 10 am on Sunday after having received the vaccine on Saturday at approximately 6:10 pm. |
| 1081435 | 3/8/2021 | MO | 52 | F | 3/8/2021 | 3/8/2021 | patient passed out, she was clammy and sweating. She stated that it was the same feeling that ct dye gives. We called the ambulance and the paramedics checked her an her husband out. He was feeling nauseated and lightheaded after she started feeling better. |
| 1081167 | 3/8/2021 | VA | 41 | M | 3/6/2021 | 3/7/2021 | Woke up around 5:30AM having to go to the bathroom. Went to Flush the toilet and passed out on the floor. My wife found me unresponsive but breathing on the floor. My wife called 911 and was at the hospital around 6:15AM. |

| 1081560 | 3/8/2021 | AZ | 44 | F | 12/22/2020 | 1/1/2021 | I stood up from a sitting position after smoking a cigarette and got a headrush that traveled through whole body , and then I fainted for a few seconds. After the first event, I never fainted again but had several headrush like dizzy spells over the next few weeks. These spells would last for 1-2 minutes, originally only occurred after smoking a cigarette, but then began to happen when I would stand from a sitting position when not smoking, and I would need to sit back down until the headrush passed. This reaction occurred periodically up until one week before my second shot (01/23/2021), and I have not experiences it since, not even after my booster shot. I understand it may not be related, however, I have been smoking for 30-years and have never experienced a reaction such as this one before. |
