patient experienced PARAESTHESIA (Feel tingling with both hands) and NERVOUSNESS (Nervousness). On 27-Jan-2021, the patient experienced IMPAIRED WORK ABILITY (Unable to perform work). On 10-Feb-2021, the patient experienced PALPITATIONS (Heart palpitation) (seriousness criterion hospitalization). On 13-Feb-2021, the patient experienced LOSS OF CONSCIOUSNESS (Passed out) (seriousness criterion medically significant), DIZZINESS (Dizziness) and SITTING DISABILITY (Position changed to standing from sitting). On 14-Feb-2021, the patient experienced MUSCULOSKELETAL DISCOMFORT (Felt upper neck getting squeezing) (seriousness criterion hospitalization), FEELING OF BODY TEMPERATURE CHANGE (Feeling of cold/warm) and BURNING SENSATION (Heart burn/Burning sensation upto throat). In February 2021, the patient experienced DECREASED APPETITE (No appetite). February 2021, the patient experienced DYSPEPSIA (Heartburn), POSTURAL ORTHOSTATIC TACHYCARDIA SYNDROME (POTS(Postural orthostatic tachycardia syndrome)) and FATIGUE (Fatigue). February 2021, the patient experienced AUTONOMIC NERVOUS SYSTEM IMBALANCE (Autonomic nerve disorder). On 24-Feb-2021, the patient experienced SYNCOPE (Syncope) (seriousness criterion medically significant). On 26-Mar-2021, the patient experienced CHEST DISCOMFORT (Heaviness). On an unknown date, the patient experienced VACCINATION COMPLICATION (Side effects) and CONDITION AGGRAVATED (Anxiousness getting worse/weakness of hands getting worse). The patient was hospitalized from 14-Feb-2021 to 17-Feb-2021 due to DYSPNOEA, MUSCULOSKELETAL DISCOMFORT and PALPITATIONS. On 14-Jan-2021, PAIN IN EXTREMITY (Soreness of arm) had resolved. On 19-Jan-2021, DYSPNOEA (Shortness of breath/Unable to breath/Shortness of breath while walking in normal pace or going upstairs) had resolved. At the time of the report, MUSCULOSKELETAL DISCOMFORT (Felt upper neck getting squeezing), LOSS OF CONSCIOUSNESS (Passed out), SYNCOPE (Syncope), INSOMNIA (Headache interferes with sleep/Inability to fall asleep), CHEST DISCOMFORT (Squeezing sensation of upper chest), DIZZINESS (Dizziness), FEELING OF BODY TEMPERATURE CHANGE (Feeling of cold/warm),

carrying her. Her regular body temperature is 97.6degF. The patient felt so dehydrated after the second shot that her son had to keep on giving her water every 15 minutes. The patient took Tylenol for the symptoms. The patient also had physical examination with her gynecologist before first shot and it was normal. This case was linked to MOD-2021-089609 (Patient Link).; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.

PASSED OUT (FAINTED); HEART RATE OF 43; HEART RATE AS HIGH AS 149; TIREDNESS; HOT FLASHES; CHILLS; This spontaneous report received from a patient concerned a 59 year old female. The patient's height, and weight were not reported. The patient's concurrent conditions included seasonal allergies, and penicillin allergy. The patient received Covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin not reported, and batch number: 205A21A expiry: UNKNOWN) dose was not reported, 1 total dose administered on 11-APR-2021 on left deltoid for prophylactic vaccination. No concomitant medications were reported. On 11-APR-2021, the patient experienced hot flashes and chills which would come and come. She did not had temperature, but she took paracetamol (Tylenol) for her side effects. On 12-APR-2021 (within 24 hours of getting the vaccine), she passed out (fainted), which occurred once. While passed out her heart rate was 43 which she said lasted for minutes. Her heart rate was as high as 149 since she has received the vaccine. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient was recovering from passed out (fainted), had not recovered from hot flashes, chills, and tiredness, and the outcome of heart rate of 43 and heart rate as high as 149 was not reported. This report was serious (Other Medically Important Condition).; Sender's Comments: V0. 20210424060-covid-19 vaccine ad26.cov2.s -Passed out (fainted). This event(s) is considered unassessable. The event(s) has a compatible/suggestive temporal relationship, is unlabeled, and has unknown scientific plausibility. There is no information on any other factors potentially associated with the event(s).

| 1276712 | 5/1/2021 | AL | 69 | F | 2/12/2021 | 2/12/2021 | fainting; hitting the floor; "knocking out" both of her front teeth when she fainted and hit the floor; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOPE (fainting) in a 69-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. No Medical History information was reported. On 12-Feb-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 12-Mar-2021, received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) dosage was changed to 1 dosage form. On 12-Feb-2021, the patient experienced SYNCOPE (fainting) (seriousness criterion medically significant), FALL (hitting the floor) and TOOTH INJURY ("knocking out" both of her front teeth when she fainted and hit the floor). On 12-Feb-2021, SYNCOPE (fainting) and FALL (hitting the floor) had resolved. At the time of the report, TOOTH INJURY ("knocking out" both of her front teeth when she fainted and hit the floor) was resolving. Unknown She had a visit to Family Practice Physician, visit to Dentist and need for dental work. Company Comment: Based on the current available information and temporal association between the use of the product and the start date of the events, fainting and falling down, a causal relationship cannot be excluded. The event of tooth injury is unlikely related to mRNA-1273 since this was directly related to the event, falling down.; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, fainting and falling down, a causal relationship cannot be excluded. The event of tooth injury is unlikely related to mRNA-1273 since this was directly related to the event, falling down. |

| 1278949 | 5/1/2021 | NY | 45 | F | 4/5/2021 | 4/5/2021 | it could have been a seizure; Unconscious/Collapsed/ diagnosed her as having a Syncopal Episode; Urinated on self/Wet her pants; Headaches; Feeling light headed; Felt her heart beat faster; Sore arm; This is a spontaneous report from a contactable nurse (patient mother). A 45-year-old female patient received bnt162b2 (BNT162B2, lot number EW0150 and expiration date was not provided), via an unspecified route of administration first dose on 05Apr2021 15:00 at single dose for covid-19 immunisation. The patient's medical history included ongoing Hypertension (Patient diagnosed in her late 30's), ongoing Hypothyroid (Patient diagnosed when she was around 20 years old), ongoing Allergies, ongoing Gastroesophageal reflux disease (The patient was exposed to a chemical in her 20's that caused this condition), ongoing Birth control, ongoing Allergic to eggs (States patient has never received the flu vaccine due to her egg allergy), and ongoing Allergic to shellfish. The patient's concomitant medications included ongoing levothyroxine at 150 ug, 1x/day for Hypothyroid, ongoing Hydrochlorothiazide at 12.5 mg, 1x/day for hypertension, ongoing omeprazole at 20 mg, 1x/day for gastroesophageal reflux disease, ongoing losartan at 100 mg, 1x/day for hypertension, ongoing norethisterone (SHAROBEL) for Birth control. On 06Apr2021 13:00, the reporter stated that her daughter fainted at work, lost her urine, and was unconscious and was taken to the Emergency Room. Primary Care Physician told her daughter she should have no problem getting the second vaccine. States that she was not certain if her daughter should get the second shot. It was scheduled for next week. Also, reported that after lunch reporter stated that her daughter fainted in her office at work. She had urinated on herself and was unconscious. Caller was concerned it could have been a seizure. Her daughter was taken to the Emergency Room and they diagnosed her as having a Syncopal Episode. On 06Apr2021, the patient had headaches that continue since these events. The reporter stated that her daughter's doctor told her daughter that the blood work and electrocardiogram done at the Emergency Room were normal. The Emergency Room and her daughter's doctor acted like her symptoms were not serious. The reporter looked at the Vaccine Adverse Event Reporting System website and it said that a syncopal episode is a reportable event. Says that her |

VAERS_ID RECVDDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

daughter's doctors did not report this event. Says doctors need to have training on the importance of reporting events. The reporter called the Food and Drug Administration last week but she hasn't heard anything from them. States they told her it could take 5-7 business days. Says she called Pfizer today to see if there was any further information or guidance she could get as she is concerned about her daughter. She says her daughter has her own office so she was in there alone when she collapsed. Someone found her on the floor. The reporter was asking for guidance on administration of the second vaccine dose following a syncopal episode after the first. The patient received her first vaccine dose on 05Apr2021 15:00 and she was fine, she had a sore arm, but went to work the next day (06Apr2021) and after lunch she reported feeling light headed and felt her heart beat faster and went to get up and a colleague later found her on the floor and she had wet her pants. They took her to the ER around 1 pm the day after her vaccination and diagnosed her with a syncopal episode stating that they didn't think it was from the shot. The events syncope, urinary incontinence, seizure, and headache were considered as serious (medically significant) by the reporter. The events syncope, and urinary incontinence caused emergency room visit and physician office visit. The outcome of the events syncope, urinary incontinence was recovered on 06Apr2021. The outcome of the event Headache was not recovered. The outcome of the remaining events was unknown.; Sender's Comments: Based on the information currently available, a causal association between the reported events and bnt162b2 cannot be fully excluded. Case will be reassessed when additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and investigators, as appropriate.

| 1279196 | 5/1/2021 | NJ | 61 | F | 3/10/2021 | 3/10/2021 | heart was racing; tingling feeling; passed out; dizzy; queasy; I am diabetic; sick; This is a spontaneous report from a contactable consumer (patient). A 61-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 2 via an unspecified route of administration on 10Mar2021 (Lot Number: EN6201; Expiration Date: 30Jun2021) as single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. Historical vaccine included 1st dose of BNT162B2 (lot number: EN9581, Expiry Date: 31May2021) on 17Feb2021 and 13 days later patient started feeling sick and wholly got sick. Patient went for the second vaccine and passed out as she got the vaccine right there in the hospital (10Mar2021), so they gave her the vaccine and then patient sick for the next three weeks 3 and half weeks. The first-time patient passed out they took her to the emergency room for whole afternoon on 10Mar2021 because patient was so dizzy and queasy and she guessed they did like 'A1C' on her. They made sure that took blood for her they made sure patient was diabetic. They wanted to make sure there was nothing wrong with patient and then they sent patient home at same afternoon and patient went home and another whole week she was so dizzy and nauseous and now she was tingling feeling. All kind of weird things happened to patient and her heart was racing. Patient took herself back to the hospital after a week. Patient had to stay in the hospital for two days. And then they did MRI on her and a CAT scan and then they sent patient to neurologist and then patient to do another MRI. Patient been for past six weeks was being turmoil. Outcome of the events was unknown. |

| 1279202 | 5/1/2021 | MO | 29 | F | 4/7/2021 | 4/7/2021 | fainted five minutes after the vaccination; pale; diaphoretic; vomited; she was extremely anxious about receiving the vaccine; This is a spontaneous report from a contactable nurse. A 29-years-old female patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE, Solution for injection, Lot Number: PAA165969, expiry date not reported), intramuscular, administered in left arm on 07Apr2021 10:30 as a single dose for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. It was unknown if patient had known allergies or other medical history. It was unknown if patient had Covid prior vaccination. The patient was not pregnant at the time of the vaccination and report. It was unknown if patient received other vaccine in four weeks and other medications in two weeks. The patient received the vaccine at the doctor's office/urgent care. The patient fainted five minutes after the vaccination on 07Apr2021 10:30. She was pale and diaphoretic. She became responsive within one minute. She was given water and a cold compress, and reported she felt better, but then vomited a small amount of emesis 15 minutes later (07Apr2021). She was evaluated by the physician who determined it was an emotional response to the vaccine. The patient had reported she was extremely anxious about receiving the vaccine (07Apr2021), and had fainted when she tried to give blood, and hadn't eaten anything that day. After sitting for 45 minutes, the doctor felt comfortable letting her leave. A call was placed to the patient at 4:00 pm to check on her. She reported she felt fine. The patient received no treatment for the event vomited, while therapeutic measures were taken as a result of the other reported events. It was unknown if patient was tested for Covid post vaccination. The patient recovered on an unspecified date in 2021 from the events reported.; Sender's Comments: Based on the information available and a close temporal association, a possible contributory role of the suspect BNT162B2 cannot be excluded for the reported events of syncope. The case will be reassessed once new information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as |

| 1279247 | 5/1/2021 | NJ | 79 | M | 3/26/2021 | 4/7/2021 | <p>he fell in the bathroom and passed out; he fell in the bathroom and passed out; tested positive for Covid; This is a spontaneous report from a contactable consumer (patient's son). This consumer reported similar event for two patients (father and mother). This is the first (father) of the two reports. A 79-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Dose 1) via an unspecified route of administration, administered in the left arm on 26Mar2021 (batch/lot number: ER8727) at 79 years old as SINGLE DOSE for COVID-19 immunization. Medical history included ongoing AFib (atrial fibrillation) diagnosed between 1 and 2 years ago. Patient also has a pacemaker from an unknown date. Patient was exposed to COVID-19 prior to vaccination. Concomitant medication included apixaban (ELIQUIS) oral from an unspecified start date and ongoing at 5 mg twice a day taken for AFib (atrial fibrillation). On 07Apr2021, the patient was admitted to the hospital due to a fall; he fell in the bathroom and passed out. The patient is on Eliquis, so they were worried about bleeding. He tested positive for COVID on 07Apr2021, this was the same day he was admitted to the hospital. He was discharged on 10Apr2021 and was improving. It was reported that the reporter (patient's son) tested positive for COVID on 27Mar2021, so it was likely his parents were exposed or infected prior to their first dose of the vaccine. The reporter confirmed he has not been vaccinated. The patient was due to get the second shot today, but the reporter cancelled the appointment since his dad was still in quarantine. The reporter heard different things about when to get the second dose, everyone says to wait 90 days, they're getting mixed information, then he has heard 3 weeks is long enough to wait. The reporter wanted to know when his dad can get the second dose of the vaccine after having the COVID-19 infection. The patient is recovering from "he fell in the bathroom and passed out." Outcome of the event "tested positive for Covid" was unknown. This case involves a Product Complaint: Consumer reported that his father and mother tested positive for Covid infection on 07Apr2021 after receiving the first dose of the Pfizer COVID vaccine on 26Mar2021. It was not provided if a sample of the product was available to be returned, if requested and if packaging was sealed and intact.; Sender's Comments: Linked Report(s) : US-PFIZER INC-</p> |

| 1278916 | 5/1/2021 | MA | 60 | F | 3/26/2021 | 3/27/2021 | DVT blood clot; ankle was still swollen and uncomfortable; ankle was still swollen and uncomfortable/discomfort; nights were the worst for the pain; pulse ox was low; d-dimer was very high; fainted; Fracture of ankle/two fractures on her ankle; severely nauseous; Vomiting; Diarrhea; deathly sick; This is a spontaneous report from a contactable consumer, reporting for herself. A 60-year-old female patient received the first dose of the bnt162b2 (BNT162B2; Lot Number: ER8727), via an unspecified route of administration in the left arm on 26Mar2021 at 14:00 at a single dose for covid-19 immunisation. Medical history included osteoporosis at least 10 years, terrible nausea, mild case of covid from Nov2020 to an unknown date. There were no concomitant medications. The patient previously took alendronate from 2008 to an unknown date and experienced very sick, nausea, diarrhoea and zoledronic acid (RECLAST) from Dec2017 and experienced nausea and vomiting. On 27Mar2021 at 2:00, the patient experienced deathly sick, fainted, fracture of ankle/two fractures on her ankle, severely nauseous, vomiting, and diarrhea. On an unknown date, the patient experienced dvt blood clot, ankle was still swollen and uncomfortable/discomfort, the nights are the worst for the pain, pulse ox was low, and d-dimer was very high. The event, deathly sick, was life-threatening. The clinical course was as follows: the patient had the first dose of the vaccine on 26Mar2021 at 14:00 in the afternoon in her left arm. Twelve hours after the first dose, later in the night about 02:00 AM she woke up deathly sick; and severely nauseous. She remembered she was going to the bathroom then she must have fainted because they were taking her to the hospital. She went to the ER and they found she had a fractured ankle. She was not admitted to the hospital. She was in the ER from about 03:00 AM to noon the next day. There must have been something in there; she knew there must be something in the vaccine because of her reaction. Adds a few years ago, something like this happened before. She had osteoporosis and had similar reactions with other products she had tried for osteoporosis; she had terrible nausea. The other products she tried included: in 2008 she took alendronate, it made her very sick but not as severe as this time, she never fainted. She had nausea and diarrhea. Then in Dec2017 she had zoledronic acid. |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

She went for an infusion at the hospital then went shopping, and was fine until the early morning, when she woke up with nausea and vomiting. In the ambulance, they gave her ondasetron (ZOFTRAN) for the nausea so the vomiting stopped. With regard to her ankle, first they thought it was a DVT blood clot. They did the xray and saw actually two fractures on her ankle but she does not need surgery. She saw the orthopedic doctor the other day and he said her ankle was healing but she still will have no weight bearing for 6 weeks and she was in a boot. Adds her ankle was still swollen and uncomfortable. She hated to take medications and they gave her oxy but she didn't want to take it. She was taking ibuprofen but that messed up her stomach. The nights are the worst for the pain and discomfort. Doctor at the hospital and primary care agreed she should not have the second dose. She did have mild case of COVID in Nov2020 and they are hoping she had antibodies from the infection and the first dose. Her primary care doctor was reviewing the blood work she had done at the hospital and told her they were surprised the hospital didn't admit her for observation because her pulse ox was low and there was another test that she was questioning because the d-dimer was very high. They did a chest x ray with unknown results. The doctor was questioning why they didn't do something else to rule out a blood clot. Therapeutic measures were taken as a result of the events, deathly sick, DVT blood clot, fainted, fracture of ankle/two fractures on her ankle, severely nauseous, vomiting, diarrhea, ankle was still swollen and uncomfortable/discomfort, nights were the worst for the pain, pulse ox was low, and d-dimer was very high. The clinical outcome of the events, deathly sick, fainted, severely nauseous, vomiting, diarrhea, was recovered on 27Mar2021. The clinical outcome of the events, DVT blood clot and nights were the worst for the pain, pulse ox was low, and d-dimer was very high, was unknown. The clinical outcome of the event, fracture of ankle/two fractures on her ankle, was recovering. The clinical outcome of the event, ankle was still swollen and uncomfortable/discomfort, was not recovered. No follow-up attempts are needed. No further information is expected.

| 1277851 | 5/1/2021 | IN | 18 | F | 5/1/2021 | 5/1/2021 | Administered vaccine at 12 noon. At roughly 12:03pm the patient started experiencing signs of syncope. She had pale blue lips, ringing in ears, changes in vision/blurry vision, she felt dizzy/light headed. The symptoms began improving at roughly 12:10 and had almost completely resolved by 12:15. I kept the patient for an additional 15 minutes for monitoring. I counseled patient on what to do if they felt as though they were going to pass out. I provided a cold compress for the back of the patient's neck, and had ammonia inhalant on standby but didn't have to use to help keep patient conscious. By 12:30 the patient was feeling completely normal again. Her mom/stepmom was with her and was able to drive her home. I asked them to reach out in case of any other symptoms developed. |
| 1277722 | 5/1/2021 | NC | 19 | F | 5/1/2021 | 5/1/2021 | Pt was leaving vaccination area when she passed out. She described it like she was listening to music and woke up with her mom over top of her. Patient has a history of fainting when seeing needle. Ate water and crackers; color improved - released with mom |

| 1279184 | 5/1/2021 | CA | 32 | F | 4/9/2021 | 4/9/2021 | tingling; numbing; diarrhea; feel the liquid squirting into my arm which is unusual; Fainted; nauseous; Memory lapse upon waking up; Breathing was slow; hot; sweaty; Arm pain; This is a spontaneous report from a non-contactable consumer (patient). A 32-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection; Batch/Lot Number: EW0158), via an unspecified route of administration, administered in the left arm on 09Apr2021 at 10:30 AM at the age of 32-years-old as single dose for COVID-19 immunization. Vaccine facility type was reported as "Other". The patient had no COVID prior vaccination. The patient was not pregnant. The patient had no medical history and no known allergies. There were no concomitant medications. The patient had no other vaccine in four weeks and had no other medications in two weeks. On 09Apr2021, the patient fainted within 2 minutes if receiving vaccine. The patient had memory lapse upon waking up. Her breathing was slow. The patient was extremely nauseous, hot, sweaty. The patient was unable to sit up due to nausea for 1 hour. The following 2 days, the patient experienced nausea and diarrhea. Arm pain lasted for 7 days including tingling/numbing sensation down her entire arm on the 4th day (13Apr2021). At time of vaccine (09Apr2021 at 10:30 AM), she could feel the liquid squirting into her arm which was unusual. The patient reported that she gets lots of vaccines for traveling and have never had these reactions or sensations. The patient has not been tested for COVID post vaccination. The events resulted in doctor or other healthcare professional office/clinic visit. Therapeutic measures (unspecified) were taken as a result of the events. The outcome of the events was unknown. No follow-up attempts are possible. No further information is expected. |

| 1275048 | 4/30/2021 | TX | 75 | M | 3/8/2021 | 3/17/2021 | Patient was a healthy 75 year old male when he got the shot. Within 5 hours, he began to feel TIRED, which was an expected side effect. He felt tired for several days. Nine days later he went to Memorial Hermann ER in Kingwood, and they said he had pneumonia. They also said he had a "small mass" at the bottom of his lung and might want to get it checked out. On March 20, he developed a cough. On March 21 we went to a different ER and a CT scan showed he had plureal effusion. On the next day he was short winded. He went back to the ER and they admitted him and transferred him to hospital by ambulance. On March 23, 1.7 liters of fluid was drained from his lung and sent to be tested. On March 26 he was diagnosed with malignant plureal effusion. He passed out at the doctor office and tranferred to to another facility by ambulance. He remained there for 4 days for tests, and a port was put in to drain the fluid. On March 29 he was transferred . They repeated many tests and did a bronchoscopy. On April 1 they told him he had squamous cell carcinoma. He came home on April 2. The doctor called and said they made a mistake he had small cell carcinoma. He remained home until April 11, when he was taken back to by ambulance. He had gone from a healthy appearing individual on March 17 to a critically ill individual and he died on April 15. Doctors had never seen cancer overtake a man in 28 days. On March 22, he had a small mass at the bottom of his lung, and one week later, it was a mass so large, his lung could not be seen and his lung had collapsed. Doctors assumed that the cancer was dormant and that the vaccine did something to wake it. It attacked my husband with a vengeance. He never smoked. |

| 1274801 | 4/30/2021 | VT | 33 | M | 4/29/2021 | 4/29/2021 | Patient received vaccine at 545pm. Administration noted as normal per pharmacist (rph), pt walked to waiting area chair. Approximately 7 minutes later pt asked for water. Pharmacist brought water to pt and asked if he was feeling okay. Pt stated he was having trouble hearing the rph. Rph walked back to pharmacy and continued to observe patient. approx 2 min later, pt passed out from seated position. rph did not see fall. both technician and rph ran out to pt. pt face down and water bottle spilled. assistant store manager reported as well. pt came to immediately and sat up on floor. He attempted to stand to sit in chair, but rph asked him to remain on floor. rph went to get emergency kit while tech observed patient. rph came back with instant ice pack. First pack did not activate but second pack did and had patient hold to his head as there was a visible red spot. Patient continued to be observed and was texting on phone during observation. Patient came up to pharmacist at 6:15 to ask to leave and Rph asked if pharmacy representative to could walk him to his car. Patient denied and Rph asked him to wait additional 5 minutes for observation. After 5 minutes, patient left. Today I called patient. He said he is feeling better and still has mild pain and a headache today. |
| 1274799 | 4/30/2021 | CA | 16 | F | 4/30/2021 | 4/30/2021 | Patient fainted post-vaccination. Observed patient beginning to lean forward and RN was able to prevent her from falling. Patient's eyes observed to roll upward while patient became unresponsive to stimuli and diaphoretic. No incontinence. EMS called while patient assisted simultaneously to gurney by multiple staff. Upon lying down, patient awoke and become alert and oriented to person, place, time, and situation, though stayed pale and diaphoretic for several minutes. VS @ 12:55: BP 120/80, P 59, SAO2 99%, resp unlabored. VS @ 13:00: BP 138/83, P 62, R 20, SAO2 99% VS @ 13:04: BP 123/73, P 54, SAO2 99% VS @ 13:10: BP 100/69, P 78, SAO2 98% Sitting at edge of bed without symptoms at 13:05, alert and conversing with staff and mother. EMS arrived at 13:07 - their monitor showed NSR, random blood sugar = 93. Ate a snack and drank juice, symptoms completely resolved. Mother declined transport to ED. Discharged home with mother with post-vaccination instructions, will receive 2nd dose while lying down. |

| 1274385 | 4/30/2021 | CA | 61 | F | 3/27/2021 | 3/31/2021 | <p>~~Moderna COVID-19 Vaccine EUA" -- received 1st dose 3/27/2021 Received 1st Moderna vaccine in R arm on 3/27/21. Within first hour, she had a headache, R eye pain, and felt tired; symptoms subsided after she laid down. On 3/31 in early AM, felt sudden and more severe headache and same eye pain, and "electrical contractions down neck, back, and spine." Went to medical facility, then transferred to hospital, and transferred to another hospital via helicopter. 61-year-old female, generally very healthy, on no medications, here complaining of sudden onset right sided stabbing/electrical headache which began 30 minutes prior to arrival. She states she was standing at work when had sudden onset severe headache radiating into her right eye. Stating that it feels like my right eyeball is going to explode. She ranks the pain a 9 out of 10. She does have a history of migraine headaches which have never been evaluated with imaging or by neurology. They were normally frontal, and she has not had one in more than 2 years. She states that this headache is dramatically different than her prior migraines. Patient states associated with this sudden onset headache, she had bilateral neck pain, and substernal chest pain. Upon arrival to clinic, she points to her substernal region as the site of her chest pain. She denies associated shortness of breath, irregular heart rate/rhythm, presyncope. She does feel slightly weak. Of note, patient states she had a MODERNA COVID-19 vaccine on Saturday and subsequently had some right-sided shoulder pain. Her symptoms are on the same side. - 7:50 AM: BP 165/109 (R arm); pulse 86; no antihypertensives given, given a total of 100 mcg fentanyl over 1 hr - 9:04 AM: BP 150/92 (R arm); pulse 60; transferred to hospital and then transferred to another hospital via helicopter for SAH 3/31/2021 ED - given nicardipine IV, dexamethasone IV, levetiracetam, and antiemetics. Nero noted that no associated trauma, LOC, or seizure with the HA, Neuro assessment - day 4 (plus possible re-rupture within last 24 hours) of good clinical grade HH2 low volume aSAH due to ruptured R ICA ANR 4/1/2021 - completed successful and uncomplicated RICA oblong aneurysm coiling (successful coil elimination & preservation adjacent PcommA infundibulum). Patient was admitted to critical care for post procedure care, monitoring, and management of sodium, blood pressure, and headache.</p> |

| 1274185 | 4/30/2021 | OR | 58 | F | 4/27/2021 | 4/29/2021 | <p>This was a 58 year old female who received her 1st dose Pfizer on 4/6/21 (Lot# EW0175) and 2nd dose Pfizer on 4/27/21 (Lot# EW0151). Of note, the patient was in a motor vehicle accident on 4/12/21 with a diagnosis of concussion and cervical/thoracic strain/sprain (see history under patient information). On 4/29/21, the patient's sister contacted the patient's primary care clinic with the following documented concern: "Pt's sister calling to report that two days ago pt got 2nd dose Pfizer vaccine and has been sick. This morning they found her passed out against the her bedroom door. Pt reports that she can't remember much other than going to the bathroom. Pt's sister states that patient totaled her car a week ago, and that it was determined she had a concussion. "She hasn't been herself since the wreck and I am very concerned." This caller recommended the Ed or UC but caller denied stating that either needs to see her today. This writer is reaching out to nurse to see if they can advise from here." A RN assessed the patient virtually with the following documentation: "RN note: Call transferred from patient's sister. Pt noted to be found on her floor this morning. Pt unsure if she hit her head. Spoke to patient. She reports body aches, and feeling weak. Pt is slow to answer questions, and had a lot of difficulty hearing me (sister did not have any difficulty hearing me). Pt is noted to have more rapid breathing, and some slight wheezing. Speech is clear when she is speaking. Sister gave patient water to drink. She drank out of bottle and was able to hold on her own (though had difficulty with this at first). Sister noted some water dripping down face, but was able to swallow okay. Sister also noted that patient's lips seem to be pursed. Plan: Given recent concussion, and patients change in behavior per sister (pt more irritable, speaking more slowly, moving slowly, breathing faster, and wheezing), recommended patient be taken to the ED today--recommended ambulance since it took 2 men to help patient back to bed this morning. Sister states patient is not agreeable to going to ED at this time. Advised to try to encourage her to drink more fluids, and continue to monitor her sx's, and if any worsening, to call for ambulance transport. Sister agreeable to plan, and will discuss with sister, and recommend ED visit today." On 4/30/21, the patient's sister contacted the clinic to inform them that the patient was found dead that</p> |

| 1269802 | 4/29/2021 | HI | 33 | F | 4/26/2021 | 4/26/2021 | 33 year old female with no significant past medical history presents to the ED with syncope s/p receiving first COVID-19 vaccination this evening at 1758. The patient states that she completed her 15 minutes of observation when she suddenly felt dizziness after standing and had a syncopal episode, waking up on the ground. Per the nurse at the scene, the patient hit the back of her head. The patient does not remember hitting the back of her head as she lost consciousness prior to falling. Since then, the patient has been experiencing symptoms of generalized weakness and intermittent nausea, but denies symptoms of headache, visual changes, vomiting, neck pain, back pain, shortness of breath, chest pain, or abdominal pain. The patient has had normal PO intake today. She reports that she has had three separate syncopal episodes s/p getting her blood drawn in the past, but denies syncopal episode s/p receiving vaccinations in the past. The patient is an otherwise healthy individual with no known drug allergies, taking no daily medications, and denies the use of alcohol, tobacco, or drugs. Her last normal menstrual period was completed recently and she denies any chance of pregnancy, recent pregnancies, or currently nursing. |

| 1271161 | 4/29/2021 | NY | 17 | F | 4/29/2021 | 4/29/2021 | Recipient is a 17yo who presented for second dose of COVID-19 vaccine. She reported some anxiety related to receiving dose #2, and had some nausea after dose #1. She was alone as a driver of her own POV. Consent was obtained from the recipient and her custodial grandparent by phone, witnessed by doctor. She initially did well after the vaccine, but after approximately 5 minutes began to complain of feeling nauseated, lightheaded, and tingling extremities (hands and feet). She was noted to be hyperventilating, and was placed in a supine position but continued to feel some lightheadedness and difficulty breathing. Breath sounds were clear without wheezing noted, HR 70s with RRR. She was noted to have ongoing anxiety, nausea and symptoms progressed and although she remained normotensive to hypertensive (initial BP 128/74), she had repeated episodes of syncope. She was transferred to the ambulance and further vitals and EKG were obtained. She had some confusion after episodes of syncope and some seizure-like activity with syncope, with very brief episodes of LOC, with noted tachycardia with HR up to the 140s during episodes of syncope. BP ranged 129/86 to 140/84. IV access obtained and she was given NS and started on oxygen at 2 liters, but saturations remained in the 98-99% range. She was ultimately transferred to the local ER for further evaluation and management given ongoing symptoms, evaluated at hospital. |

A 34-year-old male patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot/batch number and expiration date not reported), via an unspecified route of administration, administered in Left arm on 15Apr2021 at 16:30 (at the age of 34-year-old) at single dose for COVID-19 immunisation. Medical history reported as no other medical history, no known allergies. Prior to vaccination, patient was not diagnosed with COVID-19. Concomitant medications reported as none. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. After 5 min from taking the shot on 15Apr2021 at 16:35, patient started feeling dizzy little bit. He thought walking around the aisle. But he still really felt very fatigue. He wanted back and a suit and started breathing hard. He started seeing everything turned yellow and barely could breathe. Then he passed out. The stuff came and help put an alcohol by his nose. He was soaking sweating. But couldn't move. The ambulance came to check his heart, blood sugar and blood oxygen on 15Apr2021, all with unknown results. Then patient started having sharp pain in his stomach. He had lunch on 15Apr2021 at one but he had spinach broccoli and beans. Patient was healthy. He worked out four times a week. After 30 minutes of receiving care. Patient felt better but he was worry for tonight on 15Apr2021. Events resulted in Doctor or other healthcare professional office/clinic visit. Since the vaccination, patient had not been tested for COVID-19. Therapeutic measures were taken as result of event passed out included put an alcohol by his nose, treatment for the other events was unknown. The outcome of the events was unknown. Information on the lot/batch number has been requested.</p> |

| 1269712 | 4/29/2021 | | | F | | | heart hurts; the feeling of fainting stopped; sore throat; trouble breathing; nasal congestion and felt very hot; nasal congestion and felt very hot; had chest pain/ heart hurts; seeing stars; This is a spontaneous report from a contactable consumer (patient's parent). A female patient of an unspecified age (age 27, unit: unknown) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot number was not reported) via an unspecified route of administration on an unspecified date at 5:30 pm at single dose for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. E-transmitting possible duplicate AE as caller stated they already reported AE to previous agent. Caller reporting on behalf of her daughter. The patient got the 1st dose at 5:30 pm, woke up with a jolt at 1:00 am with trouble breathing, a sore throat, nasal congestion and felt very hot. She took a COVID test since then which was negative. 5 days after that, this Monday 12Apr2021, she had trouble breathing again, that didn't get better, while in the shower. She had chest pain which she described as 'my heart hurts' when she got out of the shower started seeing stars. She put her head down and the feeling of fainting stopped. Both times, the trouble breathing lasted 5-10 minutes. And she felt okay after just a few deep breaths. On the 2nd time she felt better after deep breaths, cold water and felt fine. She had a Tele-visit with a different doctor than her usual physician. She was told to go to urgent care, where they did an X-ray and EKG (electrocardiogram) and COVID test, as mentioned earlier. By the time she went to urgent care she had no trouble breathing though. The outcome of the events trouble breathing and felt faint was resolved on an unspecified date, of other events was unknown. Information on the lot/batch number has been requested. |

| 1269623 | 4/29/2021 | IN | | F | 4/1/2021 | 4/1/2021 | This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 01Apr2021 (Batch/Lot number was not reported) as single dose (dose 2) for COVID-19 immunization. The patient's medical history and concomitant medications were not reported. The patient previously received the first dose of BNT162B2 in Mar2021 for COVID-19 immunization. The patient got her first dose in Mar2021 and had mild side effects then 3 weeks later on 01Apr2021 she got the 2nd dose. She has not been normal since then, she stated that it does not work. She signed a paper that showed all the side effects with the vaccine and the side effects she had were not on that paper. The patient thinks they were negligent. She passed out two times, it knocked her down but she didn't call the ambulance, her heart stopped for 2 minutes and came back it's been several days since she got the vaccine. She was weak, she has no energy, felt like she was going to die any moment, she can't eat food and she didn't digest for 12 to 16hours. These side effects were not mentioned on paper. The patient mentioned that she has no health issues. She was extremely healthy, she was a former athlete and mentioned that all this was because of the vaccine. It's not normal that she can't eat. She was dizzy and very weak and she felt like her heart can stop anytime. The outcome of the events was unknown. Information on the lot/batch number has been requested. |

| 1269554 | 4/29/2021 | | 22 | M | | | <p>severe blurred vision; shortness of breath; shaking; stiffness in his jaws; patient who fainted; This is a spontaneous report from a contactable pharmacist. A 22-year-old male patient received the first dose of bnt162b2 (BNT162B2, Solution for injection, Lot number was not reported), via an unspecified route of administration on an unspecified date (received at the age of 22-years-old) as SINGLE DOSE for COVID-19 immunisation. Medical history SVT (supraventricular tachycardia) (diagnosed with SVT by his cardiologist, however it was never confirmed), palpitation, and had fainted in two different situations in the past. Concomitant medications were not reported. The patient fainted after the first dose of COVID-19 vaccine as soon as he stood up. He was unconscious for about 5 seconds. He was experiencing severe blurred vision, shortness of breath, shaking and stiffness in his jaws. He was 22 years old, 170 pounds, and 6 feet tall. He has history of palpitation. In the past he was diagnosed with SVT by his cardiologist, however it was never confirmed. In addition, he had fainted in two different situations in the past. Based on what the patient says, his health issues and why he faints was never fully understood by medical doctors. Outcome of the events was unknown. Information about Lot/batch number is requested.; Sender's Comments: A possible contributory effect of suspect BNT162B2 on event syncope cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate.</p> |

| 1269551 | 4/29/2021 | FL | 24 | M | 4/14/2021 | 4/14/2021 | fell out completely; passed out/fell off at the store; feeling dizzy; had terrible headache; chills; weak with shilling; i started sweating; I'm still feeling very sick; This is a spontaneous report from a contactable consumer (patient). A 24-year-old male patient received first dose of bnt162b2 ((PFIZER-BIONTECH COVID-19 VACCINE; lot EW0158; Expiration Date: Jul2021), via an unspecified route of administration, administered in left arm on 14Apr2021 12:00 as single dose for COVID-19 immunisation. Medical history included eye allergy. Concomitant medication included amoxicillin sodium, clavulanate potassium (AMOXICILINA CLAV) taken for eye allergy from 12Apr2021. On 14Apr2021, he received the first dose of the vaccine about an hour ago and waited five minutes and went to the bathroom. He had a severe reaction while patient was in the bathroom, he started to feel dizzy, had a terrible headache and chills. He walked out of the bathroom at the store and fell out completely in front of the pharmacists. The patient also experienced weak with shilling (as reported) and started sweating. The pharmacists called 911 and the responders checked his vitals and blood pressure and all of that and everything was fine. Patient clarified he passed out completely for almost 5 minutes. Patient stayed there with everyone until, they were waiting to see how he was doing. He reported he was feeling much better now, still feel a bit dizzy, not 100% but not as bad as when it happened. It has improved and he definitely felt terrible at the time. He was monitoring himself at home to see if he notices something weird going on. He does not have a headache right now and was feeling much better. When he was having the effect, he was mentally sharp, and knew what was going on. He thought about letting himself walk outside the bathroom so he could be seen. He didn't lose track of what was going on and body reacted adversely. He remembered stuff and everything and he felt good. Patient stated the chills went away; however, would not say they went away completely, he was recovering. The events did not require a visit to emergency room or physician office and the paramedic said it was not necessary right now because all the vitals and everything else seemed fine. There was no therapy received for the events. There were no additional vaccines administered on same date of the vaccine and no other vaccines within 4 weeks prior |

| 1271572 | 4/29/2021 | OH | 16 | M | 4/29/2021 | 4/29/2021 | Approximately 10 minutes after being administered with Pfizer COVID vaccine patient became lightheaded and almost fainted. Patient did not fall out of chair, but did slouch over in chair. The patient's father alerted pharmacy staff and the nurse administering vaccines today, and I went out to check on him. Patient was sitting up in chair at this time, but was very sweaty, pale and cloudy. Nurse instructed him to place his head down by his knees and provided him with water, Gatorade, and cold compresses. Once patient was feeling a little bit better we moved him into a private room with father and let him lay down at rest. When patient felt okay to leave he was advised to lay flat when he got home and eat. Father was also advised to stay with him until he was feeling 100%. Event lasted approximately 30 minutes. A call was placed to parents around 3pm to check on him and he was doing well. (moving around and playing video games) |
| 1271361 | 4/29/2021 | CA | 17 | M | 4/27/2021 | 4/27/2021 | Syncope. BPs 119/49 (pulse 58), 99/47 (pulse 59). O2 sats 99%. |

| 1270761 | 4/29/2021 | | 20 | F | 3/11/2021 | 3/18/2021 | <p>After first vaccine: History: Moderna COVID vaccine on 3/11/2021. Arm soreness over the first day or two but nothing else that really struck her. A few days after she started to notice axillary pain that progressed up her right neck and down to her right hand. She saw a physician who thought she was having nerve pain brought on by the vaccine. Around the 18th she started to feel a snapping pain in her wrist. Went to ED on the 20th because she started to have arm shaking, she was given ativan, her arm shaking stopped and they discharged her home. That evening her fingers felt clenched. On the 21st she woke up in the morning, went to urinate and dropped to the floor because her legs felt like jello and felt like they kept giving out. They initially thought the ativan was just making her feel out of it. They waited until the evening but then needed to go to the ED. The concern was GBS and transverse myelitis. They ate dinner and decided to drive to ED, on the drive she was kind of falling asleep periodically. Then she suddenly couldn't lift her water bottle. She started to be completely out of it, Mom says she wasn't responding. Pt says that she felt like she knew what was going on, felt a little out of body and wasn't quite responding. Mom couldn't get her out of the car, she was carried into the ED and at that point she started to recover a little bit more. About 10 minutes later she started to feel better. She was admitted because she was still having trouble walking. In the hospital she had a normal CT head and video EEG but she didn't have any events while on the monitor. Discharged home the following day with the diagnosis of functional neurologic disorder and instructions to establish care with an adult PCP. They advised considering CBT as well. Since discharge her legs feels tired, going up the stairs feels much harder than it should. She has not had any falls and no longer feels like she is going to fall. She follows with a therapist, has had dissociative episodes and panic attacks in the past. Assessment: 20 YOF with PMH of panic attack, POTS, IDA and benign heart murmur who developed weakness of b/l LE and altered consciousness approximately 10 days after her first dose of Moderna COVID vaccine. Also had an episode of unilateral arm shaking the day prior that resolved with ativan in the ED. At this point unclear if directly related to vaccination. Differential includes mild Guillain-Barre 2/2 previous infection or vaccination,</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

stress reaction/anxiety, POTS complication, myasthenia gravis, tick bite, infection, heavy metal poisoning, B12 deficiency, seizure disorder, atypical migraine. Functional Neurologic Disorder diagnosed by neurology after overnight admission for video EEG which captured no events. CT head also WNL per neurology discharge summary. Neurologic exam today WNL. After Second Vaccine: History: She had her 2nd vaccine on 4/15 (6 days ago). Had vaccine in right arm again, she did have some arm pain again. She had coffee without breakfast in the morning. Had finished her first virtual class, went to the restroom during her second class, felt strangely in the restroom, went back to her room. She then passed out. Her fall was unwitnessed. She called to her roommate when she came to but her roommate hadn't heard the fall. She thinks she was only out for a few seconds but cannot be sure. Called her Mom who advised her to eat something so she ate an orange sitting on the floor. She got up to make herself breakfast and she passed out again. Again unwitnessed but patient thinks it was very fast. She crawled over to the couch, sat on the couch for for 15 minutes then felt fine for the rest of the day. She did not feel nauseous at all. She denies palpitations, difficulty breathing and chest pain. Today in office after orthostatics and blood draw she fainted again, only out for seconds. BP elevated immediately after the event but WNL minutes later. These syncopal episodes reminded her of her syncopal episodes with IDA and POTS. They do not feel like the episode after the first vaccine when she lost feeling in her legs and was very out of it. She feels like her arm pain from the first vaccine never fully resolved. After the arm pain worsened from the 2nd shot she tried a 3 day course of aleve to see if that helped things. At this point it is mostly just her right wrist that is painful. Overall feels more localized to wrist than prior. She has since stopped the aleve, last was last night. She has not noticed redness or swelling in wrist or arm. LMP was 4/2-4/6. She went almost a year without menses so stopped her OCP, but her menses have returned recently and she has restarted OCP. Assessment: Right arm pain persisted from the first vaccination but otherwise sx had resolved. She got 2nd vaccination on 4/15, only arm pain but yesterday had 2 brief syncopal events and one today in the office. Orthostatic BPs not completely convincing for orthostatic hypotension today.

| 1271015 | 4/29/2021 | FL | 16 | F | 4/22/2021 | 4/22/2021 | Within 2-minutes of vaccination, the patient experienced a syncopal episode. EMS evaluated the patient on-site. The patient was hypotensive (84/44) with a FSBG of 59mg/dL. EMS administered 15g PO Glucose. IV access was attempted but not obtained. Upon re-evaluation, the patient was hypertensive (147/116) and tachycardic (117bpm). EMS transported the patient to Hospital Emergency Department. In the ED, the patient stated they became dizzy and passed out after vaccination. The patient noted that they did not eat anything all day. The patient was hypotensive (99/56). The patient's labs/tests indicated dehydration and the physician administered 1L IV normal saline. The patient was discharged with dehydration and vasovagal syncope. |
| 1266337 | 4/28/2021 | NY | 17 | F | 4/28/2021 | 4/28/2021 | Pt. had first vaccine at 14:55. Pt. walked to observation one where she fainted upon arrival. Pt. was CAOx3 after she was laid down. Pt. was transferred to the back via wheelchair where she was observed for 15 minutes without any further complications. After 15 minutes patient walked out without any obvious difficulties. |

| 1266054 | 4/28/2021 | | | U | 4/2/2021 | 4/3/2021 | fainted/blacked out; fainted/blacked out; skin felt like had spider and ants crawling all on skin; goosebumps; farted; fell backwards and hit the elbow, and thumb and back of head on the floor; fell backwards and hit the elbow, and thumb and back of head on the floor; fell backwards and hit the elbow, and thumb and back of head on the floor; fell backwards and hit the elbow, and thumb and back of head on the floor; fell backwards and hit the elbow, and thumb and back of head on the floor; could not walk; dizzy; This is a spontaneous report from a contactable consumer (patient). A patient of unspecified age and gender received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 02Apr2021 (Lot Number: ER8737, unknown expiration) as a single dose for COVID-19 immunisation. Medical history included COVID-19 disease from 06Jan2021 to an unknown date. The patient's concomitant medications were not reported. The patient woke up in the middle of the night on 03Apr2021 at 02:00 AM, and the patient's skin felt like had spider and ants crawling all on skin and got goosebumps and had to get up to go to the restroom. The patient went to the restroom and urinated, and when he/she was ready to get up from the toilet he/she farted, the patient fainted/blacked out and fell backwards and hit the elbow, and thumb and back of head on the floor. The patient woke up, when that happened, it was a very hard crash. After that, the patient was unable, could not walk because when he/she tried, he/she got dizzy and had to crawl back to bed, with hands and knees back to bed. The patient asked if he/she should get the second shot. Outcome of the events was unknown. No follow-up attempts are possible. No further information is expected. |

| 1266058 | 4/28/2021 | MD | 28 | F | 4/7/2021 | 4/7/2021 | Low grade fever; seizure; Passed out; syncope/ fainted; Blood pressure drop; Sore arm; This is a spontaneous report from a contactable consumer (patient's parent). A 28-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiration date were not provided) at the age of 28-years-old, via an unspecified route of administration in left arm on 07Apr2021 at single dose for COVID-19 immunization. Medical history included autism, being nervous, passed out, and anxiety. Concomitant medications included sertraline hydrochloride (ZOLOFT), quetiapine fumarate (SEROQUEL), gabapentin, bupropion hydrochloride (WELLBUTRIN), and lorazepam (ATIVAN) for being nervous. The patient received the Pfizer vaccine last Wednesday (07Apr2021) and immediately after that, at about 1:30 (unspecified), she just started having a seizure. They thought that it was more of a major response she was just having, fighting and was nervous about it, but it was kind of a different situation. The reporter has seen the patient passed out before. She did some blood test on 07Apr2021 and her sugars were fine. The reporter's concern was that they didn't know whether she should get the second one. The reporter didn't believe she got a seizure but was not sure about it. It's just that what immediately happened after she got the shot was that she passed out and they called the ambulance. After she passed out, she went to the emergency room and they did blood work on her. The reporter just did not know if they were going to let her go for the second dose because they couldn't relay if it was a seizure or a bizarre response where she just syncope and fainted. They were just thinking it was a bizarre response as it was just blood pressure drop but they were just not sure where to go from here. The patient was told to rest and intravenous fluid and something through the blood were given. The patient also experienced sore arm from 07Apr2021 for 2 days and had a low-grade fever the following day (08Apr2021). The outcome of the event sore arm was recovered on 09Apr2021 and recovered on Apr2021 for all other events. Information about the lot/batch number has been requested. |

| 1266126 | 4/28/2021 | CA | 22 | F | 4/23/2021 | 4/24/2021 | Fainted; Thirsty; Shaking; Look pale; Hypotension; Arm soreness; Nausea; CHILLS; Fever; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOPÉ (Fainted) in a 22-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 008C21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. Concurrent medical conditions included Pollen allergy (environmental allergy) and Dust allergy (environmental allergy). Concomitant products included CETIRIZINE HYDROCHLORIDE (ZYRTEC [CETIRIZINE HYDROCHLORIDE]), FEXOFENADINE HYDROCHLORIDE (ALLEGRA) and CLARITHROMYCIN (CLARITIN [CLARITHROMYCIN]) for Allergy, MONTELUKAST for Asthma, COLECALCIFEROL (VITAMIN D [COLECALCIFEROL]) for Supplementation therapy. On 23-Apr-2021, the patient received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) dosage was changed to 1 dosage form. On an unknown date, the patient received dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) at an unspecified dose. On 24-Apr-2021, the patient experienced SYNCOPÉ (Fainted) (seriousness criterion medically significant), THIRST (Thirsty), TREMOR (Shaking), PALLOR (Look pale), HYPOTENSION (Hypotension), MYALGIA (Arm soreness), NAUSEA (Nausea), CHILLS (CHILLS) and PYREXIA (Fever). On 24-Apr-2021, SYNCOPÉ (Fainted), TREMOR (Shaking), PALLOR (Look pale) and HYPOTENSION (Hypotension) had resolved. At the time of the report, THIRST (Thirsty), MYALGIA (Arm soreness), NAUSEA (Nausea), CHILLS (CHILLS) and PYREXIA (Fever) outcome was unknown. The action taken with mRNA-1273 in response to the event was not applicable. The treatment medications included Tylenol (paracetamol) and Advil (Ibuprofen). Company comment: Based on the information provided which includes a temporal association between the use of mRNA-1273 vaccine and onset of the reported events, a causal relationship cannot be excluded. Headache, nausea, myalgia, pyrexia and chills are consistent with the product safety profile.; Sender's Comments: Based on the information provided which includes a temporal association between the use of mRNA-1273 vaccine and onset of the reported events, a causal relationship cannot |

| 1265959 | 4/28/2021 | OH | 35 | F | 3/26/2021 | 3/30/2021 | Nearly fainting; vertigo like symptoms; lightheaded; lethargic; blurred vision; shaky; heart palpitations; limbs feel heavy; This is a spontaneous report from a contactable consumer (patient). A 35-years-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE lot number: ep 6955) via an unspecified route of administration, administered on the right arm on 26Mar2021 15:30 at a single dose for COVID-19 immunization. Medical history included anxiety, depression; and known allergies: penicillin and gluten. Concomitant medications included bupropion hydrochloride (WELLBUTRIN) and sertraline hydrochloride (ZOLOFT). The patient previously took amoxicillin and diflucan and experienced allergies. On 30Mar2021 22:00, the patient experienced nearly fainting, vertigo like symptoms, lightheaded, lethargic, blurred vision, shaky, heart palpitations and limbs feel heavy. The event resulted to a doctor or other healthcare professional office/clinic visit, Emergency room/department or urgent care, Hospitalization. The patient was hospitalized for the events for 1 day. Treatment was received for the events which included medication, heart monitor, MRI, MRA, MRV, CT scan. COVID test post vaccination included nasal swab on 01Apr2021: negative. Patient was not pregnant. The facility where the vaccine was administered was in a school or student health clinic. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Post vaccination, the patient has not been tested for COVID-19. Outcome of the events was not recovered. |

| 1265925 | 4/28/2021 | | 35 | M | 4/12/2021 | 4/12/2021 | passed out; black out; tense nerve feelings/nerve twitching; tense nerve feelings/nerve twitching; typical body aches or pain; This is a spontaneous report from a contactable consumer (patient). This 35- year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE Lot number: EN6208), via an unspecified route of administration, on 12Apr2021 at 09:30 am (at the age of 35-years-old) as a single dose for COVID-19 vaccination, in left arm. The facility where COVID-19 vaccine was administered was a hospital. No known allergies. Patient has no relevant medical history. States: I live a healthy lifestyle diet, exercise, proper rest. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient did not receive any other vaccines within four weeks prior to the vaccination. On 12Apr2021 10:00 am, the patient stated: I passed out and or blacked out on my drive home from the hospital. I was careful to follow the 15minute wait period before I left the hospital and was ok at that point. I had tense nerve feelings came over me as it grew so strong, I was forced to try and get my car on an off ramp to leave the highway I was on. I thankfully did not get any real injuries to my body as I spun and landed on the side of the road in the grass area. However, this experience was horrifying to say the least. I had a delayed reaction to this vaccine, other than this one incident, I really only had the typical body aches or pain for 24 hours and a bit of nerve twitching. I will not mark this as a risk of death, because it was my driving a car that risked my safety not the vaccine, however, the vaccine did cause the black out. The clinical outcome of the events was recovered. The patient was not tested for COVID-19 after the vaccination. Information about the Lot/batch number has been requested. |

| 1265903 | 4/28/2021 | CA | 49 | F | 4/11/2021 | 4/12/2021 | This is a spontaneous report from a contactable other healthcare professional (patient). A 49-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EW0158 and expiration date not provided), via an unspecified route of administration administered in the right arm on 11Apr2021 14:00 as a single dose for COVID-19 immunization. Medical history included Crohns Disease. The patient is not pregnant at the time of vaccination. Prior to the vaccination, the patient was not diagnosed with COVID-19. The patient has no known allergies. There were no concomitant medications. The patient did not receive any other vaccine within 4 weeks prior to the COVID vaccine. On 12Apr2021 01:45, about 12 hours after the first dose, the patient passed out and then broke out in a cold sweat, multiple times. No treatment was given in response to the events. The outcome of the events was recovering. The patient has not been tested for COVID post vaccination.; Sender's Comments: Based on the plausible temporal association and product safety profile, the reported events are possibly related to the vaccine BNT162B2. administration. This case will be reassessed upon receipt of additional information. The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate. |

| 1265667 | 4/28/2021 | AZ | 25 | M | 4/27/2021 | 4/27/2021 | The patient reported that they were experiencing tightness in their arm and believed it swelled initially. They left the pharmacy area and went to get Tylenol that was recommended by the pharmacist. They then began to get lightheaded and had syncope, attempted to get back up and the cashier asked to if they wanted to sit, but fell again. It was not clear initially to the employee who was helping them they had received the vaccine. 911 was called and the employee helping them let the pharmacist know they had just gotten their vaccine. The immunizing pharmacist went to check on the patient. EMTs were already helping the patient and had taken his blood pressure which was normal the lightheadedness had stopped and both sitting and standing blood pressure was the same. He had an elevated heart rate per the patient but didn't know any of the numbers the EMTs had taken. His father was driving him. He was not experiencing any symptoms and the injection site had no swelling and was otherwise unremarkable. |
| 1266684 | 4/28/2021 | NC | 25 | M | 4/28/2021 | 4/28/2021 | Patient received immunization. Was sitting in chair for observation and about 5 minutes after immunization was given he passed out. Was awake immediately but said he didn't remember passing out. Knew his name, date of birth, where he was. I watched him until paramedics arrived. He said he felt fine but was sweaty. Paramedics stated all his vitals were normal and he said he felt ok but he said he got really hot. Remained at the pharmacy until his friend could come and get him. |
| 1266426 | 4/28/2021 | CA | 17 | F | 4/27/2021 | 4/27/2021 | Pt had an episode of syncope for 10 seconds after getting vaccinated . Blood pressure dropped to 90/50, Hr 48. After repositioning the pt and giving some fluid Blood pressure raised to 113/96 Hr 72. |

| 1265984 | 4/28/2021 | WI | | F | 4/6/2021 | 4/6/2021 | Patient experienced brief (15-30 second) episode of syncope; This is a spontaneous report from a contactable pharmacist. A female patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 06Apr2021 (Lot number: EW0150) as single dose for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. Patient was not pregnant at the time of vaccination. On 06Apr2021, immediately following injection of 1st dose of vaccine, patient experienced brief (15-30 second) episode of syncope. She was sitting in chair and slumped forward momentarily. It was unknown if patient had Covid prior vaccination and unknown if tested for Covid post vaccination. No treatment received for the event. The outcome of the event syncope was recovered. No follow up attempts are possible. No further information is expected.; Sender's Comments: Based on temporal association, the causal relationship between BNT162B2 and the event syncope cannot be excluded. The information available in this report is limited and does not allow a medically meaningful assessment. This case will be reassessed once additional information becomes available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees, and Investigators, as appropriate. |

| 1269285 | 4/28/2021 | FL | 50 | F | 3/26/2021 | 3/26/2021 | Fainted 2 times; low blood pressure; dizzy; tachycardia; vertigo; nystagmus; body aches; fatigue; Felt nauseas; This spontaneous case was reported by a consumer (subsequently medically confirmed) and describes the occurrence of SYNCOPES (Fainted 2 times) in a 50-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 018821A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included Hypothyroidism. Concurrent medical conditions included Allergy (anything cold.). Concomitant products included NSAIDS for Back pain, LEVOTHYROXINE for Hypothyroidism. On 26-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) 1 dosage form. On 26-Mar-2021, the patient experienced SYNCOPES (Fainted 2 times) (seriousness criterion medically significant), HYPOTENSION (low blood pressure), DIZZINESS (dizzy), TACHYCARDIA (tachycardia), VERTIGO (vertigo), NYSTAGMUS (nystagmus), MYALGIA (body aches), FATIGUE (fatigue) and NAUSEA (Felt nauseas). At the time of the report, SYNCOPES (Fainted 2 times), HYPOTENSION (low blood pressure), DIZZINESS (dizzy), TACHYCARDIA (tachycardia), VERTIGO (vertigo), NYSTAGMUS (nystagmus), MYALGIA (body aches), FATIGUE (fatigue) and NAUSEA (Felt nauseas) outcome was unknown. Not Provided DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 26-Mar-2021, Laboratory test: normal. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Unknown) was unknown. Treatment information included, meclizine 25 mg and metoclopramide was provided for vertigo and nystagmus.; Sender's Comments: This case concerns a 50-year-old female with a serious unexpected event of syncope, and nonserious unexpected hypotension, dizziness, tachycardia, vertigo, nystagmus, and expected myalgia, fatigue, nausea. Event onset the same day as first dose mRNA-1273. Event outcomes unknown. Based on current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded. |

| 1269229 | 4/28/2021 | CO | 17 | M | 4/27/2021 | 4/27/2021 | Patient passed out and ended up falling off the chair hitting his forehead (left side) on the concrete flooring. Patient seemed to be doing okay after being observed by EMS for about 45 minutes. BP 110/74, denied dizziness or nausea but was complaining of headache. Patient's mother refused transport to ER. |
| 1268689 | 4/28/2021 | OK | 18 | F | 4/25/2021 | 4/25/2021 | 18 yo female requests to have injection in supine position due to previous history of passing out with injections. Mom at pts side and sts pt first passed out at the age of 4 years old when she witnessed her father having blood drawn for a health screen. She also reportedly passed out after receiving a vaccine at Pharmacy in 2017. Due to her history of injection related syncopal episodes, pt is placed in a supine position on the cot as precaution. Approximately 30 seconds after receiving the injection, the pt was witnessed becoming unresponsive by this HCP. Pt was then witnessed having her eyes roll up and back followed by a few seconds of generalized seizure activity. HCP remains at pts side. The cot has a suspended cloth and is soft, therefore, pt is safe from harm on it. Seizure ends after seconds and pt awakens. She is initially confused but orients quickly. She remains AOX4 and has no complaints. Spoke with mom extensively about pts condition and presenting symptoms. VS- HR initially 52 but quickly improves to 77, BP 107/64, RR 16, sats 98%. Pt will follow up with pts pediatrician. Mother and pt do not want pt evaluated at the ER today and do not want an ambulance. VAERS info given. |

| 1267320 | 4/28/2021 | CA | 41 | M | 3/26/2021 | 4/4/2021 | <p>3/26 @ 3:15pm ? Got the first dose of Pfizer COVID-19 vaccine for the 1:10pm appointment. However actual time received was around 3:15pm. No vaccine reaction was observed and drove back home. However did not eat or drink much from morning till 4:30pm due to the long line at the vaccination center</p> <p>4/4 @ 9:00pm ? Experienced first sign of near-syncope at the dinner table upon picking up a glass of milk</p> <p>4/6 @ 8:45am ? Experienced brain fog, to be exact head felt like it was filled with cotton candy, at the back and top of the head. Felt this way the entire day. Went to work as usual. Logged out at around 5:30pm</p> <p>4/7 @ 9:00am ? dizziness started getting worse. Started feeling imbalance and started losing depth perception which climbing down staircase</p> <p>4/8 @ 10:00am ? started to get easily startled by any unexpected trigger. Whole body would ?twitch? or ?startle? upon slightest unexpected event. For e.g., sound, touch, taste (hot/cold)</p> <p>4/10 @ 12:00pm ? Went to ER. ER ordered series of blood tests, EKG, chest x-ray. Everything came out normal. ER doctor said to wait it out and after a week symptom may go away. ER doctor felt body?s immune response was over-working due to the vaccine immune response and possibly pollen allergy I may have experienced right after getting the vaccine. No prescription meds give. Advised to take Meclizine 25mg and Zyrtec. Below are the symptoms experienced on 4/10: ? Lightheadedness/Sudden Jerking body movements when triggered/passing out momentarily for a second when taking strain/not in my elements ? Feeling extremely fatigued. Did not sleep well at night on 4/8 and 4/9 ? Head feels Intoxicated, foggy, lightheaded, as if stuffed with cotton candy. Startled when unexpected things happen like a sudden jerking movement along with momentary passing out while anything unexpected happens. E.g., when I am pushing myself on the sofa to re-position, I feel my whole body is turning off for a second. Simply does not feel normal ? Rubbery legs ? Worsens after shower. I feel like I need to lay down as the foggy feeling worsens after shower ? Lightheadedness. Losing control sometimes. ? I am easily startled when climbing down the stairs - no Depth perception. ? Don?t have the strength to blow nose or cough. Feels like momentary fainting when doing these activities ? Dis-equilibrium. Whole body is twitching when something unexpected happens to my senses. ? Unable</p> |

VAERS_ID RECVDDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

to control while laughing feels like momentary faint. I have felt like this when I was down with a fever. Ticked easily ? Difficulty pulling myself out of bed. Felt like muscle was giving away ? Tingling feeling in the right abdomen area ? Difficulty staying alert or focused and random rather unpleasant thoughts constantly coming to mind. Felt a bit of panic attack. 4/11 ? Went to PCP. Body weakness and fatigue got worse. PCP did blood sugar test and flushed out the left ear. Ordered Brain MRI to see if structurally anything was wrong. Brain MRI came out OK as well however noticed minor sinusitis. Prescribed Amoxicillin antibiotics and nasal spray. Referred me to Neurologist and Head and Neck Specialist. 4/11 ? 4/15 - Above symptoms progressively got worse. Especially weakness in the arms and shoulders. Arms quivered every time trying to stand up and felt like fainting. Hand-eye coordination progressively got worse. For e.g., could not pick up water bottle, hands were quivering badly 4/15 ? Neurologist conducted certain diagnostic tests and concluded that there are no neurological issues. Said with rest and plenty of fluids it should get better. Spinal tap was not recommended and said if symptoms got worse a spinal tap can be done during the next visit. Follow up visit with neurologist scheduled on 4/27 4/15 ? 4/27 ? Weakness in arms got better. Arm strength and coordination has improved however it?s still not back to normal. Brain fog and dizziness still persists with no improvement. Left limb and arms are stronger than the left. Difficulty climbing up and down stairs. Dizziness worsens after shower. Not feeling myself. In addition, not able to multitask - getting startled and need to be deliberate about having to do everyday chores need to just focus on one task 100% completely and if something else comes up then my body just goes into a momentary shock. Mostly I can feel my head feeling heavy and my eyelids shutting down when something shocking happens ? a feeling like body is ?turning off?, almost a fainting or passing out feeling. Sometimes when I turn to one side and sleep, I can feel a flickering sensation in the ear. Still always feeling woozy and as if there is something in my head ? a medicated or intoxicated feeling in the head 4/27 ? Neurologist said she sees a lot of improvement and reiterated again that I don?t have any neurological issues. She said I can go back to work starting 5/1. She said I may have

| 1267116 | 4/28/2021 | IN | 48 | F | 4/26/2021 | 4/27/2021 | Received shot in upper right arm and it was painful. My arm grew more painful throughout the day. I became very tired as the day went on. Went to bed for the evening, Monday 4/26/2021 and woke up at 1:50am on Tuesday morning, 4/27/2021 in full body sweats, dripping with sweat. So weak I couldn't get up or lift my head. My husband took my temperature which was 103. Massive headaches, full body aches and pains, chills which made my body shake uncontrollably. My whole body hurt. Could not get up to use the restroom, tried and fainted back into the bed. Heart felt like it was beating out of my chest. My husband wanted to call 911 but I didn't want to. Felt like I had COVID again. |

| 1261795 | 4/27/2021 | NY | 78 | F | 4/5/2021 | 4/6/2021 | she just felt dizzy so fast and passed out; passed out; She hurt her ankle from it; This is a spontaneous report from a contactable consumer. A 78-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 2 via an unspecified route of administration, administered in Arm Left on 05Apr2021 08:45 (Batch/Lot Number: EP7534) as SINGLE DOSE for covid-19 immunisation. Medical history included ongoing hypertension, atrial fibrillation from Aug2020 and ongoing , cystitis. Concomitant medications included sulfamethoxazole, trimethoprim taken for cystitis from 27Mar2021 to 02Apr2021; apixaban (ELIQUIS) taken for atrial fibrillation from an unspecified start date and ongoing; atenolol (ATENOLOL) taken for Blood pressure from an unspecified start date and ongoing. The patient received first dose of bnt162b2 for COVID-19 immunization on 15Mar2021 lot number: EN6202, Expiry date: 30Jun2021. The patient received the second dose of the Covid vaccine around 8:45 a.m. and states that she "felt fabulous." On 06Apr2021 she felt fabulous. She said that she had a doctors appointment at 1200 06Apr2021 and her blood pressure was good. She said that she was also taking an antibiotic prior to that week. She asked the doctors about taking vaccines after taking the antibiotic since the medication said that you should avoid vaccines while taking the antibiotic, and they all said that it was fine. She came home about 1330 06Apr2021 and she passed out while making her lunch. She hurt her ankle from it and she is not a happy camper. She said that all her vitals were good and her blood was good. That was all taken 2 hours before she passed out. The weird thing was she never felt better that day after she passed out. She said that she had no reaction after the first shot. Prior to this she felt good and there was no warning, she just felt dizzy so fast and passed out. Caller said that her ankle is getting better and she hurt her toe too, but it is getting better. She treated the ankle with ice. She said that it could have been worse. She said that she did not understand this and had no side effects previously. The event passed out was assessed as serious (medically significant). The patient underwent lab tests and procedures which included blood test: good on an unspecified date her blood was good. Therapeutic measures were taken as a result of she hurt her ankle |

| 1261752 | 4/27/2021 | FL | 60 | F | 3/27/2021 | 3/27/2021 | This is a spontaneous report from a contactable consumer. A 60-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 1 via an unspecified route of administration, administered in Arm Left on 27Mar2021 12:30 (at the age of 60-years-old) (Batch/Lot Number: ER-8730) as SINGLE DOSE for covid-19 immunization. Medical history included Hypothyroid, High Blood Pressure. Concomitant medications included levothyroxine sodium (SYNTHROID); losartan potassium (LOSARTIN); amlodipine; hydrochlorothiazide; all taken for unspecified indications, start and stop dates were not reported. On 27Mar2021 13:30, the patient experienced Bleeding at the site, fainting and vomiting while passed out for 5 minutes. The patient believes the injection was too high and she hit a vein. It was further reported that the patient is not a squeamish person and have never had reactions to any shots or blood draws in the past. The event fainting and passed out was assessed as serious (medically significant). Therapeutic measures were taken as a result of bleeding at the site. The patient did not receive treatment for the events fainting, passed out, and vomiting. The outcome of the events was recovered. |
| 1262113 | 4/27/2021 | AL | 40 | F | 4/26/2021 | 4/27/2021 | Fainted twice and couldn't maintain consciousness. I woke to urinate and went from feeling a little ill to burning up and unable to move off the ground or move my limbs. I became nauseous and dizzy. I fainted on the bathroom floor and again a little while later when I tried to crawl to my purse for the thermometer. After I laid on the floor for a while, I regained enough energy and to make it back to the bathroom with an intense urge to defecate. (I almost pooped my pants while passed out.) But, it wasn't diarrhea consistency. It was blackish, but normal consistency. At some point I took 2 Tylenol and fell asleep in the floor. By 2:30am, I was feeling strong enough to climb back into bed. I felt like I was dying but then it was over pretty quickly and I was back to feeling normal flu symptoms; 102 fever, body aches, etc. |

| 1261759 | 4/27/2021 | CT | 53 | F | 4/11/2021 | 4/11/2021 | This is a spontaneous report from a contactable consumer. A 53-year-old female patient received her first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, administered in Deltoid Left on 11Apr2021 09:15 (Lot Number: EP7533; Expiration Date: 31Jul2021) as SINGLE DOSE for covid-19 immunisation (Age at vaccination: 53 years). Medical history included asthma, Blood pressure high, acid reflux , allergies: Sulfa, Lactose intolerant and allergies: Latex. The patient's concomitant medications were not reported. The patient had a historical vaccine of Flu shot (INFLUENZA) on an unspecified date for immunisation and experienced bad side effects. The patient previously took bactrim, minocycline, doxycycline, ciprofloxacin, Moxifloxacin, demerol, avelox, nitrofurantoin, naprosyn, motrin, perocet, tramadol and aleve and experienced allergies. The patient experienced anaphylaxis on 11Apr2021. It was also reported that she had an appointment for COVID Vaccine at 9:15AM. Received COVID Vaccine and was told to wait for 30 minutes. Within 10 minutes her chest starting getting tight with difficulty of breathing. Her throat was closing up, and she was light headed. She explained this to the administrator who asked if caller could get up to see the paramedic. As caller tried to stand up, she almost passed out. Had to sit there for a second and the second time was able to get up and made it in to the room. Was going in and out of consciousness. Had to stab her with an Epi Pen. She couldn't breathe. Her throat was closing up. Her tongue was swollen. She was in and out of consciousness. First Epi Pen didn't work. An IV was put in and was given something through it. She was jabbed with a second Epi Pen. Was still in and out of consciousness but she was starting to come back. Was given oxygen and a nebulizer. She does have asthma. Ambulance was called. Was told she was worked on for 20 minutes. When ambulance arrived she was able to get up and get on the cart. She was taken to the hospital. Was given medicine through her IV. Had to be kept at hospital because she had two Epi Pens and medication at the vaccine facility. Hospital wanted to make sure when the Epi Pens wore off she didn't go back into anaphylaxis. Was kept in ER for over four hours. Was given IV fluids. Her oxygen, heart rate, and blood pressure dropped at |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

vaccination facility. Oxygen was 81. Blood pressure was 94. At hospital, her levels started to get better. Once she was given the second Epi Pen and whatever else she was given, the medication started to work and she had come through. At the hospital, someone came in and did bloodwork for research to see why this happened. Was prescribed Epi Pens by the doctor in the hospital and was advised to carry Epi Pens with her at all times. If she has another anaphylaxis, was advised to jab herself with Epi Pen and call right away. Was told her tongue was swelling. Attempted to obtain the outcome of the anaphylaxis. At the hospital, she was so out of breath walking to the bathroom. Was told at hospital now she is having side effects from the COVID Vaccine including the tiredness and headache she is experiences. Was told to take Tylenol and Benadryl, lay down and rest, and to make sure she drinks so she does not get dehydrated. Today, she feels nauseous, lightheaded and tired with a little headache. She feels better from yesterday. Is getting better and is having a little chills maybe an hour ago. She checked her temperature and does not have a temperature, but her insides feel warm . The patient was hospitalized for the event anaphylaxis on an unspecified date. Therapeutic measures were taken as a result of was going in and out of consciousness. Events for anaphylaxis, consciousness fluctuating, chest discomfort. dyspnea, throat tightness, presyncope and swollen tongue occurred on 11Apr2021 while the remaining events occurred on an unspecified date. The patient underwent lab tests and procedures which included blood pressure: dropped and 94, blood work: unknown results, heart rate: dropped, oxygen saturation: 81 and dropped on an unspecified date. Therapeutic measures were taken as a result of all the events. Outcome of the events was unknown.

| 1261278 | 4/27/2021 | | | U | 3/28/2021 | | <p>PASSED OUT; BOTH ARMS WENT COMPLETELY NUMB; LEGS CRUMBLED/COULDN'T STAND UP; VOMITED; THE DAY GOT THE VACCINE IT BLED AND A BLOOD CLOT CAME ON MY ARM; This spontaneous self-report concerned a patient of unspecified age and sex. The patient's weight, height, and medical history were not reported. The patient received covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin, and batch number were not reported) dose was not reported, administered on 28-MAR-2021 for prophylactic vaccination. The batch number was not reported and has been requested. No concomitant medications were reported. On 28-MAR-2021, the day the patient got the vaccine it bled and a 'blood clot' came on my arm (coded to injection site bleeding). On 01-APR-2021, the patient passed out in a store, both arms went completely numb, legs crumbled/couldn't stand up, and vomited. The patient believed this was a side effect of the vaccine. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The outcome of events (passed out, both arms went completely numb, legs crumbled/couldn't stand up, vomited, and the day got the vaccine it bled/blood clot came on my arm) was not reported. This report was serious (Other Medically Important Condition).; Sender's Comments: V0: This patient of unknown age and gender passed out 3 days after receiving the Janssen Covid-19 vaccine. The patient was in a store when when both arms became numb, legs "crumbled" and could not stand; the patient also vomited. No other information regarding the serious loss of consciousness was provided. Additionally, on the day of vaccination, the patient experienced bleeding at the injection site and a clot formed. Considering the missing information (e.g., age, sex, medical history, concomitant medications, clinical details leading up the event, corrective treatment, event outcome), the serious loss of consciousness is considered unclassifiable. The nonserious injection site reaction is consistent with a causal association with vaccination.</p> |

| 1261514 | 4/27/2021 | PA | 44 | F | 4/16/2021 | 4/16/2021 | Fainted; Concussion; Dizziness / Light-headed; Vertigo; Loss of taste; Lost sense of smell; Soreness in the arm; This spontaneous case was reported by a physician assistant and describes the occurrence of SYNCOPE (Fainted) and CONCUSSION (Concussion) in a 44-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 046B21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. Concurrent medical conditions included Thyroid activity decreased and Allergy (Undefined allergies). Concomitant products included CLARITHROMYCIN (CLARITRON) for Allergy, THYROID for Thyroid activity decreased. On 16-Apr-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 16-Apr-2021, the patient experienced PAIN IN EXTREMITY (Soreness in the arm). On 17-Apr-2021, the patient experienced VERTIGO CNS ORIGIN (Vertigo), AGEUSIA (Loss of taste) and ANOSMIA (Lost sense of smell). On 18-Apr-2021, the patient experienced SYNCOPE (Fainted) (seriousness criterion medically significant), CONCUSSION (Concussion) (seriousness criterion medically significant) and DIZZINESS (Dizziness / Light-headed). On 18-Apr-2021, SYNCOPE (Fainted) had resolved. At the time of the report, CONCUSSION (Concussion), AGEUSIA (Loss of taste) and ANOSMIA (Lost sense of smell) outcome was unknown and DIZZINESS (Dizziness / Light-headed), PAIN IN EXTREMITY (Soreness in the arm) and VERTIGO CNS ORIGIN (Vertigo) had not resolved. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. For mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular), the reporter did not provide any causality assessments. The patient received her first dose of the Moderna COVID-19 vaccine on Friday (16-Apr-2021) morning in the left arm and had very minimal symptoms, just soreness in the arm. On Saturday evening, she experienced dizziness, was light-headed and fainted. She had a concussion because she fell on the floor in her home. She is currently experiencing vertigo and still feels dizzy and light-headed, probably as a result of the concussion. She lost her sense of taste and smell more than likely as a consequence of the concussion. Her arm is still a little bit sore. Treatment for the events: Tylenol |

lightheaded comes and goes but the headaches is persistent) and NAUSEA (he feels like he's going to vomit) had not resolved. Not Provided The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Unknown Route) was unknown. Patient received Moderna vaccine almost 5-6 weeks ago, the exact date was not reported. Patient started having events 2 days after the administration of mRNA-1273. Since then, patient has been rushed to ER (Emergency Room) 4 time already. Patient has seen a neurologist, nephrologist, cardiologist but they cant find anything. Several tests and procedure including " all the blood work, CT, MRI. Spinal tap, ECHO Cardiogram" have performed, and the results of this tests/procedure reported as "shows nothing"; Sender's Comments: Based on the information provided which includes a temporal association between the use of mRNA-1273 vaccine and onset of the reported events, and excluding other etiologies, a causal relationship with the product use cannot be excluded.

The occurrence of additional non-serious events is detailed below. The patient's past medical history included Gallbladder disorder on 29-Jan-2021 and Gallbladder removal on 19-Apr-2021. Concurrent medical conditions included Indigestion. Concomitant products included FAMOTIDINE (PEPCID AC) for Indigestion, IRON, ASCORBIC ACID (VITAMIN C ACID), PROBIOTICS NOS and VITAMIN D3 for an unknown indication. On 10-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 06-Apr-2021, received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) dosage was changed to 1 dosage form. On 06-Apr-2021, the patient experienced PRESYNCOPE (almost passed out/Felt like she was going to pass out) (seriousness criterion medically significant), HYPOTENSION (her blood pressure was low) (seriousness criterion medically significant), ABDOMINAL PAIN UPPER (Really bad stomach cramps), DIZZINESS (she was so dizzy), PAIN (urge to have bowel movement, such cramps, pain all the way into the uterine area), TREMOR (shaky legs), MUSCULAR WEAKNESS (weak legs), NAUSEA (nausea), VACCINATION SITE PAIN (as soon as it went in it hurt really bad/arm soreness) and VOMITING (felt like throwing up). On 06-Apr-2021, PRESYNCOPE (almost passed out/Felt like she was going to pass out), HYPOTENSION (her blood pressure was low), ABDOMINAL PAIN UPPER (Really bad stomach cramps), DIZZINESS (she was so dizzy), PAIN (urge to have bowel movement, such cramps, pain all the way into the uterine area), TREMOR (shaky legs),</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

MUSCULAR WEAKNESS (weak legs), NAUSEA (nausea), VACCINATION SITE PAIN (as soon as it went in it hurt really bad/arm soreness) and VOMITING (felt like throwing up) had resolved. Treatment includes Zofran and IV medications. On 06-Apr-2021 at 7.30 PM, the patient got the second dose of vaccine and as soon as it went in it hurt really bad. After the medication was pushed the patient had instant nausea, almost passed out, really bad stomach cramps. The pharmacist did not want her driving home because she was so dizzy. At 7:50pm the patient had urge to have bowel movement, such cramps, pain all the way into the uterine area, felt like throwing up, felt like going to pass out so she got off the toilet and was crawling on the floor because the patient had super shaky legs and weak legs. The patient's husband said get dressed and we're going to the ER. He ended up calling the ambulance which took her to the ER. In the ambulance, they started IV, the patient's blood pressure was low, and gave Zofran under the tongue. The patient said Zofran helped so much that within 15 minutes it took the extreme nausea away. At the ER, around 8:40, the patient was feeling a lot better. The doctor in the ER said that people with inflamed GI were having the same problems with the Moderna vaccine. The patient experienced these symptoms from 7:30-9:20 pm and by 9:30pm the patient was completely fine. She went home and even had a snack. The patient did not have an ounce of arm soreness or any other symptoms after that. The patient's first gall bladder attack was on 29-Jan-2021. On 06-Apr-2021 at 4.30 PM the patient had a gall bladder scan. On 19-Apr-2021, the patient had a gall bladder removal. Patient could not eat or drink for 6 hours prior to scan. She said she did hydrate before the shot. Action taken with mRNA-1273 in response to the event was not applicable. | 1261713 | 4/27/2021 | CA | 62 | F | 1/19/2021 | 1/20/2021 | <p>on the verge of fainting; blood pressure was was 82/48/blood pressure remained low; felt faint/extremely light-headed; This is a spontaneous report from a contactable nurse (patient). A 62-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 2 via an unspecified route of administration, administered in left arm on 19Jan2021 06:45 (Batch/Lot Number: EL3248) as single dose for COVID-19 immunisation. Medical history included hypertension, diabetes (well controlled), and fatty liver disease. The patient was not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination and had not been tested for COVID-19 since the vaccination. Concomitant medications included hydrochlorothiazide; olmesartan medoxomil (BENICAR); and omeprazole (PRILOSEC); and vitamin B complex. The patient previously took the bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection), dose 1 via an unspecified route of administration, administered in left arm on 28Dec2020 06:30 (Batch/Lot Number: EL1284) at the age of 62 years old as single dose for COVID-19 immunisation. On 20Jan2021 09:15, the patient experienced felt faint and extremely light-headed and on the verge of fainting. The patient laid down and then took her blood pressure. It was 82/48. Her blood pressure remained low throughout the day and did not return completely to normal until 3 days later. No treatment was received for the events. Outcome of the blood pressure was 82/48/blood pressure remained low was recovered on 23Jan2021 while of the remaining events was recovered on 2021.; Sender's Comments: Based on the information currently available, there is a reasonable possibility of an association of the suspect drug administration with the reported events, due to a plausible temporal relationship. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.</p> |

| 1260022 | 4/26/2021 | OR | 16 | M | 4/23/2021 | 4/23/2021 | Patient presents with a potential reaction to the COVID19 vaccine. I was called to the patient's vehicle just outside the vaccination area. The patient appeared to having a moderate to severe vasovagal episode without total syncope. There did appear to be slight pseudoseizure activity present, however, there was no LOC or loss of bowel or bladder tone. The patient was placed in a supine position and moved to the monitoring area. With positional changes and aggressive hydration, he rapidly improved to baseline. He did endorse that he has had similar episodes with blood draws, etc. He was returned home with his mother as the driver and with preventative instructions for his second dose. |
| 1258113 | 4/26/2021 | TX | 16 | F | 4/24/2021 | 4/24/2021 | Received first dose of Pfizer , within 1 minute father noted she "passed out". Called staff to car and observed pt with clonic/tonic movement of hands, eyes closed, respirations slowed but even pulse approx 58/min. Responded to verbal Stimuli. Said she felt faint, lips pale, skin clammy. 911 called had additional same incident 9 minutes later. Transferred pt to medical facility by EMS after 2nd episode . |
| 1258399 | 4/26/2021 | | 17 | M | 4/18/2021 | 4/18/2021 | Patient had syncope (BP 100/59 -- > 97/63), flushing/sweating, dizziness, nausea. Stable -- released from vaccination site. |
| 1259981 | 4/26/2021 | NV | 16 | M | 4/26/2021 | 4/26/2021 | 5 minutes after dose while standing and watching sister receive dose of vaccine, patient experienced presyncope. Patient started to sway and lost muscle control. I helped to the floor and laid him out. Patient conscious whole time and never stopped breathing. Did not lose cognizance. Had momentary feeling of nausea that immediately passed. Did not believe necessary to call 9-1-1 as patient did not exhibit any allergy symptoms of any distress during the whole episode. Allowed to lay on floor for about 5-10 min. Supplied patient with bottle of water to help with dry mouth and he drank and felt better. After another 10 minutes patient was up on feet and felt much better. Mother called an hour and a half later (about 5 min ago as I prepare this form) to inform me that he was back to 100%. |

| 1259719 | 4/26/2021 | IN | 16 | F | 4/26/2021 | 4/26/2021 | After RN administered vaccine she spoke to my daughter for some time afterwards 5-6 minutes and my daughter was fine answering her questions and just visiting with her. She directed us to the table to schedule her second vaccine which was directly in front of us. We went to this table and spoke with two other ladies choosing a date and time and she was also fine talking with them and answering questions of eat time offered and then suddenly she went straight back with warning passed completely out and struck the back of her head on the concrete floor. EMS and RN?s who were there went to her aid immediately and she was unconscious for a little over a minute. They initially couldn?t get her to respond and finally she came to and had no idea what happened and no recollection of falling. She had blurred vision and bleeding a bit from the back of her head and they wanted her to have CT of her head after hitting it that hard. They took her by ambulance to hospital and they assessed her and ordered a CT. The CT thankfully came back clear and she has follow up appointment with concussion doctor first thing in the morning. On discharge she was describing her pain from hitting head a 7/10 It was very scary and everyone around us was visibly upset as well. She has never fainted or had a reaction to any other shot, vaccine or needle before today so that was a very unusual reaction. |

| 1254611 | 4/25/2021 | MO | | M | 4/6/2021 | 4/6/2021 | fainted/passed out; Fainted/passed out; This is a spontaneous report received from a contactable pharmacist via a medical information team. This report is in reference to one of the patients the caller states passed out. A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, Formulation: Solution for injection, Lot number: ER8729, Expiration date: 20Jul2021), via an unspecified route of administration on 06Apr2021 as a single dose for COVID-19 immunization, sodium chloride (SALINE, Formulation: Unknown, Batch number: 6023228), via an unspecified route of administration on an unspecified date at an unknown dose and frequency for an unknown indication. The patient's medical history and concomitant medications were not reported. The patient had fainted/passed out on 06Apr2021. It was reported that, vaccine coordinator said that they use the same lot number for all three of their facilities. An hour ago, at one of their facilities, he said 3 people fainted and 1 had seizure after receiving the 1st dose of the Pfizer-BioNTech Covid-19 Vaccine. HCP wants to know if there have been any reports of having these reactions associated with the specific lot number: ER8729. He said he already has 56 vials of the vaccine mixed up with the same lot and wants to know if he should still continue using it. HCP also added that out of 3,200 vaccines that they have out of the same lot, they only had 4 incidences. Pharmacist told the HCP that there was no information available about fainting and having seizures associated with the lot: ER8729. However, pharmacist told him that I would forward his concern to someone from our team for further research. Escalating to second line for further research and handling. Caller was a pharmacist who was heavily involved in the COVID-19 vaccine. He manages 3 locations and more than 1500 COVID-19 vaccine doses. Today he's reporting that at one of his other locations, administering the COVID-19 vaccine within about 20 minutes there were 4 patients with reactions. One patient had a seizure and 3 patients passed out. These patient's had just received the COVID-19 vaccine and were still being watched within the 15-minute post vaccination time. All 4 patients received the COVID-19 vaccine from the same lot number but not from the same vial. One of the patient's that passed out said that she has had some |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

issues with vaccines in the past. Caller reports that his COVID-19 vaccine facilities are busy today giving COVID-19 vaccines and about half the people receiving the vaccine are waiting inside and about half are waiting outside. It's about 84F outside and he's reporting that he's not seeing anything to eat or drink in these individuals waiting for the COVID-19 vaccine. He believes the NDC number for the COVID-19 vaccine ends in "02". Caller did not have any information on the patients involved. The outcome of the events was unknown. Information on Lot/Batch number was available. No further information is provided or obtained. Additional information has been requested.; Sender's Comments: As there is limited information in the case provided, the causal association between the events of syncope, loss of consciousness and the suspect vaccine BNT162B2 cannot be excluded. The case will be reassessed once new information is available. The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

This consumer reported events for mother (self) and child. This is the maternal report. A 35-year-old female patient received the first dose of BNT162B2 PFIZER-BIONTECH COVID-19 VACCINE, lot number: ER8733), via an unspecified route of administration in the left arm, on 06Apr2021 12:15, as single dose, for COVID-19 immunisation, at a drug store. The patient medical history was not reported. The patient had no known allergies. The patient was not pregnant at the time of vaccination. The patient had no prior COVID-19 and was not tested for COVID-19 post vaccination. Concomitant medication included minerals nos, vitamins nos (PRENATAL VITAMINS). The patient did not received other vaccines in four weeks. On 07Apr2021 at 03:00, the patient went to the bathroom and felt fine. She sat on the toilet and all of a sudden felt dizzy and nauseous. Next thing she knew, she woke up on the floor and had a huge bump on her head near her left eye. She passed out and hit her head on the tile in the bathroom. Her left eye was half swollen shut, her eyelid and under eye were black, was very swollen all over her head and eye and was in lots of pain. She went to the emergency room around 04:30. All tests, CT scan and blood work came back normal. She was told that it was most likely caused by the vaccine. Treatment for the events included "CT scan, bloodwork, IV fluids" (as reported). She was hoping that Pfizer will pay for her ER visit since the events were vaccine reactions. She reported that she was still in lots of pain and was not taking pain meds because she was breastfeeding. The events resulted to emergency room and physician office visits. The outcome of pain was not recovered. The patient was recovering from the remaining events.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2021442302 Baby case</p> |

| 1255234 | 4/25/2021 | NY | 65 | M | 4/10/2021 | 4/10/2021 | <p>vasovagal syncope; This is a spontaneous report from a non-contactable consumer (patient). A 65-year-old male patient received the second dose of bnt162b2 (BNT162B2, Solution for injection, lot number: EP6955), intramuscular, administered in Arm Right on 10Apr2021 11:00 (received at 65-years-old) as SINGLE DOSE for COVID-19 immunization. The vaccine was administered at a clinic. It was unknown if patient received any other vaccines within four weeks prior to receiving bnt162b2. Medical history included always gets nervous. Concomitant medications were not reported. The patient had no known allergies and denied having other medical history. The patient previously received the first dose of bnt162b2 (BNT162B2, Solution for injection, lot number: EP6955), intramuscular, administered in Arm Right on 20Mar2021 (received at 65-years-old) as SINGLE DOSE for COVID-19 immunization. On 10Apr2021 11:00 AM, 1-2 (unspecified) after receiving vaccine #2, the patient became pale and diaphoretic and then lost consciousness. He was taken out of car and medics evaluated person and family stated he had not eaten or drank anything and glucose stick was 130. When patient became conscious, he stated he had a similar episode when he was a child and received a vaccine. States he was very anxious receiving both vaccines and always gets nervous. The reported adverse event resulted in doctor or other healthcare professional office/clinic visit and emergency room/department or urgent care. The patient was evaluated in emergency and diagnosed with vasovagal syncope. Therapeutic measures were taken as a result of the event. Outcome of the event was recovered on an unspecified date. No follow-up attempts are possible. No further information is expected.</p> |

| 1254758 | 4/25/2021 | CA | 33 | M | 4/6/2021 | 4/6/2021 | Felt like was fainting; Five to ten minutes after receiving the first dose I started feeling dizzy; numb (tingling) in my fingers.; numb (tingling) in my fingers.; I also started to sweat; my BP fell when the nurse checked.; This is a spontaneous report from a contactable consumer (patient). A 33-year-old male patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration, administered in Arm Left on 06Apr2021 12:45 (Lot Number: ER8737) as single dose for COVID-19 immunisation. The patient medical history and concomitant medications were not reported. There was no other vaccine in four weeks or in two weeks. There was no known allergies. The patient has no Covid prior vaccination and has no Covid tested post vaccination. After receiving the first dose, on 06Apr2021 13:00, the patient started feeling dizzy and numb (tingling) in his fingers. Felt like him was fainting. He also started to sweat and his BP fell when the nurse checked. The patient did not have a full breakfast or lunch before getting the dose. The patient had coffee in the morning with some dates and later had two oranges and a Kind Nut Bar. Drank some water and juice after the dizziness subsided. The events did not result in emergency room visit or physician office visit. Therapeutic measures were taken as a result of all the events. The outcome of events was resolved on unknown date. |
| 1255287 | 4/25/2021 | CA | 41 | F | 4/8/2021 | 4/8/2021 | Fainting; Nausea; Dizziness; Fatigue; This is a spontaneous report from a contactable consumer (Patient). A 41-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE Formulation: Solution for injection, Lot number: EW0162) via unspecified route of administration on arm left at a single dose on 08Apr2021 17:00 for COVID-19 immunization. The patient medical history. Concomitant medication was not reported. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. On 08Apr2021 at 17:15 patient experienced nausea, fainting, dizziness and fatigue. The outcome of the events was recovered on an unspecified 2021. No follow-up attempts are possible; information about lot/batch number cannot be obtained. |

| 1255224 | 4/25/2021 | IL | 46 | F | 3/27/2021 | 3/27/2021 | fainted/fainting; felt weak and dizzy/weakness; felt weak and dizzy/dizziness; blood pressure was very high; fast heartbeat; This is a spontaneous report from a Pfizer-sponsored program. A contactable consumer (patient) reported that a 46-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ER8733), via an unspecified route of administration, administered in arm left on 27Mar2021 18:15 (at the age of 46-years-old) as a single dose for covid-19 immunisation. The patient was not pregnant at the time of vaccination. The patient's medical history and concomitant medications were not reported. The patient had no known allergies. The patient had no covid prior vaccination. No other medication in two weeks. No other vaccine in four weeks. On 27Mar2021 18:45, the patient felt weak and dizzy a few minutes after getting the vaccine and then she fainted. The paramedics took her to the ambulance to check her vitals. EKG, blood sugar and blood oxygen was good, but her blood pressure was very high. Clinical course details was reported as she received the first dose of the Pfizer COVID vaccine on 27Mar2021 and she experienced fainting, dizziness, weakness and a fast heartbeat. The patient would like to know if fainting was considered an allergic reaction. The patient would like to know if she should receive the second dose of the vaccine. She received the 1st dose last 27Mar2021 and 2nd dose will be on 17Apr2021. The reported events resulted in doctor or other healthcare professional office/clinic visit. The patient did not received any treatment for the events. The outcome of the events was recovering. The patient did not covid tested post vaccination. |

| 1254681 | 4/25/2021 | KS | 18 | M | 4/7/2021 | 4/7/2021 | <p>Passed Out; feeling light headed/lightheadedness/being lightheaded; Fell Down Stairs/falling; hit his head and his knee; hit his head and his knee; This is a spontaneous report from a contactable consumer (patient's father). An 18-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), dose 1 via an unspecified route of administration, administered in right arm at the age of 18-year-old on 07Apr2021 09:50 (Batch/Lot number was not reported) as single dose for COVID-19 immunisation. Medical history included ongoing congenital diaphragmatic hernia (that prevented his lungs from developing before he was born). There were no concomitant medications. The patient previously took influenza vaccine (FLU) for immunization and without a reaction. Caller is a consumer, calling about his 18 years son who received the covid vaccine this morning and had an adverse event afterwards. Caller reported that his 18 years son had his first covid vaccine dose this morning. He has had all of his vaccinations, even the flu shot every year without a reaction. After having his covid vaccination, on the way home he said he started feeling light headed. He was supposed to go back to school once they got home but the caller noticed that his son hadn't left yet because he drives himself. He reported that his son's room is downstairs and when he looked his son was laying down at the bottom of the stairs and appears to have passed out. He reports that now he is fine and he has eaten. Calling now because he was concerned and "wanted to make sure there was nothing else I should do in this situation". Caller stated that he took his two kids to get their vaccines. His son is 18 years old and his daughter will be 18 next Tuesday. Stated that they stayed at the site in case of a reaction to the vaccine and nothing happened. On the way back home the son became lightheaded. Caller thought maybe he needed to eat even though he had eaten a light breakfast before they went to get the vaccines. Stated his son got home and passed out. Caller had never seen his son pass out before. Said his son fell down the stairs while going to the basement where his room is located. Caller was concerned this could've been a reaction and is calling to see if there is anything further they should be concerned about. The son's vaccine, lightheadedness, passing out, and falling all took place today 07Apr2021. Caller said</p> |

he nor his son are certain if he was injured during the fall. His son thinks he hit his head and his knee and noticed that his shorts where ripped behind the leg on 07Apr2021. Caller states his son says he is feeling back to normal and fine. The son was supposed to go to school after the vaccine but the caller had him stay home so he could keep an eye on him. Caller stated it was scary. The caller opened the door and saw his son lying on the floor with the gum he had bought at the drug store strewn out everywhere. Caller stated they are believers in vaccines. Stated his son used to have a part time job at the grocery store bagging groceries for customers and was wanting to go back to work. Caller also said that his son was born with a congenital diaphragmatic hernia that prevented his lungs from developing before he was born. Caller stated that due to this him and his wife felt it was best for the son to get the vaccine since if he got the Covid virus it could have been really bad for him. Caller denies any medications, labs, testing or treatments that are relevant to these events. Caller stated his son is healthy. Stated when his son mentioned being lightheaded in the car, the caller didn't think much of it. The outcome of events was recovered on 07Apr2021. Information on the lot/batch number has been requested.

fainting; seizure; Tachycardia; dizziness; This is a spontaneous report from a contactable consumer. This 24-year-old non-pregnant female consumer (Patient) reported that she received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 Vaccine; Solution for injection; Lot number: unknown; Expiry date: Unknown) via an unspecified route of administration in the right arm on 07Apr2021 at 12:45 PM. The patients past medical history included Postural orthostatic tachycardia syndrome. The patient was allergic to Phenergan and Zofran. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since vaccination, patient had not tested for COVID-19. Concomitant medication was not reported. On 10Apr2021, at 12:00PM the patient developed Tachycardia, dizziness, fainting and seizure. The patient did not receive any treatment for the events. The outcome for the events was recovering. Information about Lot/batch number is requested.

| 1256950 | 4/25/2021 | WA | 18 | M | 4/25/2021 | 4/25/2021 | Patient fainted after waiting for 10 minutes. He did not lose consciousness. He responded to RPH commands. He did not have shortness of breath, rash, inflammation. He urinated himself after falling. He remained laying on the ground for 20 minutes, after which he stood up and had recovered from the dizziness/nausea. Patient and parents did not wish for 911 to be called or to go the hospital. They agreed to call 911 if patient has any further symptoms. |
| 1254535 | 4/25/2021 | | | F | 4/1/2021 | 4/1/2021 | had a "protein thing" around her heart; BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE) subcutaneously; blood pressure to go "sky high"; This is a spontaneous report from a contactable consumer (patient). A 64-year-old female patient received the first dose of BNT162b2 (PFIZER-BIONTECH COVID-19 VACCINE) subcutaneously on 01Apr2021 at single dose for COVID-19 immunization. Medical history and concomitant medications were not reported. The patient would like to know the percentage of BNT162b2 that was in her system after one dose. She spoke with one physician who told her that she was 50% covered and another who told her it was 80%. The first dose of the vaccine caused her blood pressure to go "sky high" in Apr2021 and reported she almost passed out. She was taken to the emergency room where it was found that she had a "protein thing" around her heart that the doctors were not sure came from the vaccine or not. Due to this reaction, the patient was unsure if she would be able to get the second dose and would like to know how protected she was with just the first dose. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained. |

A 28-year-old male patient received first dose of BNT162B2 (Pfizer COVID Vaccine, solution for injection, Lot Number: ER8733; Expiration Date: 31Jul2021), via an unspecified route of administration, administered in left arm on 28Mar2021 at 17:00 (at the age of 28 years-old) as single dose for COVID-19 immunization. Medical history included ongoing asthma, anxiety experienced years and years ago when he was about 19-20 years old and it has been under control, he hasn't had this happen in years. The patient mother suffers from slight anxiety at times; dad currently has high blood pressure. Concomitant medication included albuterol sulfate taken for asthma (in inhalation (90mcg per actuation 200 metered inhalations: 2 puffs as needed) and liquid form (0.083% 2.5 mg out of 3ml as needed) for nebulizer since he was born). Patient did not have COVID prior vaccination. Patient did not want to contract COVID-19 because he has asthma. On 28Mar2021 at 17:00 (within 5 minutes of vaccination), patient experienced Tunnel Vision, chills, weakness, insane rush from the bottom of his feet to the top of head, felt like he was going to pass out (which was recovered same day with lasting effects), weakness, hasn't felt the same; feels like something is off every day; not himself, very weird like an out of body experience this was almost like an anxiety attack/anxiety attacks for every 30 minutes or so, tension headaches, dizziness and felt immediate rush to the head and feeling of fainting, at 8PM or 9PM, he felt pain at the injection and body aches. The patient visited physician room as a result of Insane tension headaches, and anxiety. On 29Mar2021, he |

VAERS_ID RECVDDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

didn't really feel too anxious, but he felt out of place, kind of off and uneasy. The chills and body aches, kind of off and uneasy were disappeared on 30Mar2021. On 31Mar2021, brain fog and slight dizziness does not like he was going to fall over but cant stand still without lean a little/felt immediate rush to the head and feeling of fainting. On 02Apr2021, injection site pain was gradually faded away. The patient states that these events started after the Pfizer COVID 19 vaccine. Therapeutic measures were taken as a result of events included Tylenol. The patient underwent lab tests and procedures which included SARS-CoV-2 test (Nasal swab): Pending on 06Apr2021. The patient did not take any other vaccinations four weeks prior to vaccination. The patient was afraid to take second dose of Pfizer COVID-19 vaccine due to the events. Patient felt very hard to work with these symptoms and to get through everyday life, it is very tough. Patient knows plenty of people that died from COVID-19 and he does not want to have to make changes and fix things in his life that he did not cause and worries this will stick around for the rest of his life all because he took a vaccine. The patient had physician office and Emergency room visit. The outcome of the events insane rush from the bottom of his feet to the top of head, felt like he was going to pass out, pain at the injection, chills and body aches were recovered, while for tension headaches, anxiety attacks, dizziness, weakness, brain fog, hasn't felt the same; feels like something is off every day; not himself was not recovered, and for tunnel vision it was unknown. Information on the lot/batch number has been requested.

| 1254579 | 4/25/2021 | MO | | M | 4/6/2021 | 4/6/2021 | seizure; This is a spontaneous report received from a contactable pharmacist (patient) via medical information team. Follow-up (06Apr2021) was received from same reporter and processed together with initial information. A male patient of an unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, Lot Number: ER8729; Expiration Date: 20Jul2021), via an unspecified route of administration on 06Apr2021 as SINGLE DOSE for covid-19 immunization. Other suspect medications included: saline [sodium chloride], via an unspecified route of administration from an unspecified date (Lot Number: 6023228), at unspecified dose for an unspecified indication. The patient medical history and concomitant medications were not reported. The patient reported that after administering the Covid 19 vaccine on 06Apr2021, within about 20 minutes there were 4 patients with reactions. One patient had a seizure and 3 patients passed out. These patients had just received the Covid 19 vaccine and were still being watched within the 15-minute post vaccination time. All 4 patients received the Covid 19 vaccine from the same lot number but not from the same vial. Seriousness of event was medically significant. The outcome of event was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Based on the information in the case report and strong temporal relationship, A possible causal relationship between event Seizure and suspect drug bnt162b2 cannot be excluded. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics Committees, and Investigators, as appropriate. |

| 1254796 | 4/25/2021 | CT | 53 | M | 3/21/2021 | 3/22/2021 | Blood clots in right leg below knee; he passed out from pain; pain in his right knee; he couldn't bend his knee at all; knee was swollen; couldn't walk/limping around; his knee more stiff; This is a spontaneous report from a contactable consumer (patient). A 53-year-old male patient received the first dose of BNT162B2 (Pfizer-BioNTech COVID-19 vaccine, lot number: EN6206), via an unspecified route of administration, administered in the right arm on 21Mar2021 at 10:00 as a single dose for COVID-19 immunization. Medical history included ongoing Factor V Leiden heterozygous, allergies to mushrooms from an unknown date and unknown if ongoing and a torn meniscus in his right knee and he had surgery 3 to 4 years ago. The patient's concomitant medications were not reported. The patient previously took Cephalexin and Percocet and experienced allergies. The patient did not have COVID prior to vaccination and has not been tested post vaccination. On 22Mar2021 at night around 2:30AM, the patient woke up and started walking to the bathroom and he passed out from pain. He had pain in his right knee. He thought he had torn his knee again. He had surgery 3 or 4 years ago for a torn meniscus in his right knee and he thought he had torn his meniscus again. He passed out, his wife found him and he went back to bed. In the morning, his knee was still very very sore, he couldn't bend his knee at all. He took an Advil between 6:30AM and 8:00AM. He hadn't taken any medications prior to the COVID-19 vaccine. His knee was swollen but the pain was manageable. He couldn't walk, he was on crutches for about 24 hours then the swelling started coming down and he put a brace on his knee. He could then walk without the crutches but it was still painful. The next day he had pain in the back of his knee. He thought the pain was caused because he had put the brace on and had been using the crutches. Like he had made his knee more stiff from not using it. He was limping around and the pain was bearable. At that point, the pain was maybe a 4 on a scale of 1-10 where his pain had been a 9 on a scale of 1-10. He took another Advil and he realized the pain in the back of his knee wasn't going away. He went to see his family doctor and his doctor was able to get him in that same day for an ultrasound. The ultrasound showed 2 blood clots behind his right knee. The patient had blood clots in right leg below knee. The week of the report, he got an |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

appointment with a hematologist. The hematologist reviewed his case and the doctor isn't 100% sure the blood clots were from the Pfizer COVID-19 vaccine but the doctor isn't ruling it out either because it happened within 24 hours of receiving his first COVID-19 dose. He hadn't done anything strenuous before getting the COVID-19 vaccine, nothing that he thinks would have caused the blood clots. He would like to add, what he thinks is relevant, is that he is positive for Factor V. He reports he has one copy and Factor V only impacts about 3% of the population. The hematologist thought that he might be prone to developing blood clots. The hematologist reports that he has had patients who have had the COVID-19 virus who have developed blood clots. Maybe it's possible that the COVID-19 antibodies were trying to build up his immune system to COVID-19 and it created something similar to having the COVID-19 virus. If he is predisposed to blood clots then the COVID-19 vaccine may have precipitated the blood clots. His second COVID-19 vaccine is scheduled for Sunday, 11Apr2021. He had talked to both his family doctor and his hematologist and they both thought he should be ok in getting the second COVID-19 vaccine. He was prescribed blood thinners. If the second COVID-19 vaccine caused more blood clots the blood thinners would help him. He was asking if there is any additional information or guidance on receiving the second COVID-19 vaccine after his reaction. The pharmacist told him that the COVID-19 vaccine trials were all done in the left arm. He received his vaccine in his right arm and his right knee was affected. If he gets the second COVID-19 vaccine he's getting it in his left arm. He was prescribed Eliquis 5mg take one tablet twice daily. The outcome of the event blood clots in right leg below knee was recovering while the outcome of the other events was unknown.

| 1254611 | 4/25/2021 | MO | | M | 4/6/2021 | 4/6/2021 | fainted/passed out; Fainted/passed out; This is a spontaneous report received from a contactable pharmacist via a medical information team. This report is in reference to one of the patients the caller states passed out. A male patient of an unspecified age received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, Formulation: Solution for injection, Lot number: ER8729, Expiration date: 20Jul2021), via an unspecified route of administration on 06Apr2021 as a single dose for COVID-19 immunization, sodium chloride (SALINE, Formulation: Unknown, Batch number: 6023228), via an unspecified route of administration on an unspecified date at an unknown dose and frequency for an unknown indication. The patient's medical history and concomitant medications were not reported. The patient had fainted/passed out on 06Apr2021. It was reported that, vaccine coordinator said that they use the same lot number for all three of their facilities. An hour ago, at one of their facilities, he said 3 people fainted and 1 had seizure after receiving the 1st dose of the Pfizer-BioNTech Covid-19 Vaccine. HCP wants to know if there have been any reports of having these reactions associated with the specific lot number: ER8729. He said he already has 56 vials of the vaccine mixed up with the same lot and wants to know if he should still continue using it. HCP also added that out of 3,200 vaccines that they have out of the same lot, they only had 4 incidences. Pharmacist told the HCP that there was no information available about fainting and having seizures associated with the lot: ER8729. However, pharmacist told him that I would forward his concern to someone from our team for further research. Escalating to second line for further research and handling. Caller was a pharmacist who was heavily involved in the COVID-19 vaccine. He manages 3 locations and more than 1500 COVID-19 vaccine doses. Today he's reporting that at one of his other locations, administering the COVID-19 vaccine within about 20 minutes there were 4 patients with reactions. One patient had a seizure and 3 patients passed out. These patient's had just received the COVID-19 vaccine and were still being watched within the 15-minute post vaccination time. All 4 patients received the COVID-19 vaccine from the same lot number but not from the same vial. One of the patient's that passed out said that she has had some |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

issues with vaccines in the past. Caller reports that his COVID-19 vaccine facilities are busy today giving COVID-19 vaccines and about half the people receiving the vaccine are waiting inside and about half are waiting outside. It's about 84F outside and he's reporting that he's not seeing anything to eat or drink in these individuals waiting for the COVID-19 vaccine. He believes the NDC number for the COVID-19 vaccine ends in "02". Caller did not have any information on the patients involved. The outcome of the events was unknown. Information on Lot/Batch number was available. No further information is provided or obtained. Additional information has been requested.; Sender's Comments: As there is limited information in the case provided, the causal association between the events of syncope, loss of consciousness and the suspect vaccine BNT162B2 cannot be excluded. The case will be reassessed once new information is available. The impact of this report on the benefit/risk profile of the Pfizer drug is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

| 1254922 | 4/25/2021 | PA | 50 | F | 3/3/2021 | 3/1/2021 | Dizziness/ extreme dizziness/ Some degree of dizziness every day/ Varies from daily light headedness to extreme dizziness; had extreme fatigue; Almost fainted once; This is a spontaneous report from a contactable consumer (patient). A 50-year-old non-pregnant female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; lot number: EN6199), via an unspecified route of administration, administered in right arm on 03Mar2021 19:30 at single dose for COVID-19 immunisation. The patient's medical history included Hashimoto's autoimmune, and known allergies to penicillin. The patient's concomitant medications included liothyronine, and levothyroxine, both taken for an unspecified indication, start and stop date were not reported. The patient had no other vaccine in four weeks. The patient had no COVID prior to vaccination and was tested for COVID post vaccination. The facility type vaccine was Pharmacy or Drug Store. The patient experienced dizziness on 10Mar2021 at 12:00 and has not ceased. It varies from daily light headedness to extreme dizziness. The patient almost fainted once on an unspecified date in Mar2021. The patient had some degree of dizziness every day. The patient also had extreme fatigue since 09Mar2021. The patient was completely normal and physically active before the first dose, and she have not felt normal since. Events resulted in doctor or other healthcare professional office/clinic visit. The patient underwent lab tests and procedures which included nasal swab, with both negative test results on 17Mar2021 and on 31Mar2021. No treatment was received for the events. The outcome of the events were not recovered. |

| 1254422 | 4/25/2021 | PA | 36 | F | 1/17/2021 | 1/1/2021 | having discoloration on her toes; she was having numbness and tingling; she was having numbness and tingling; her extremities, from the knee down and both her hands and feet were cold,ice cold; Tachycardia; palpitation/palpitation complications without doing anything straight away; Pulse keeps raising, elevating to 148-157/Pulse went to 209; shortness of breath and basically blasting of air; Difficulty breathing; Dizziness; Weakness; Syncope episodes; Costochondritis; chest pain; The initial case was missing the following minimum criteria: suspect product was not reported or specified. Upon receipt of follow-up information on 06Apr2021, this case now contains all required information to be considered valid. This is a spontaneous report from a contactable nurse (patient). A 36-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration on 17Jan2021 (Batch/Lot Number: EL3246) (at the age of 36-year-old) as single dose for COVID-19 immunisation. Medical history included migraine from an unknown date and unknown if ongoing. Concomitant medication included topiramate (TOPAMAX) at 250 mg, daily (2 DF 100mg and 1 DF 50mg at bedtime) taken for migraine, start and stop date were not reported. The patient previously received fist dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) on 27Dec2020 (Lot Number: EK5730) for COVID-19 immunization. The patient reported that since the second vaccination experienced tachycardia, palpitation, shortness of breath and basically blasting of air, difficulty breathing, dizziness and weakness, all on 18Jan2021. She reported pulse keeps raising, elevating to 148-157, she had palpitation complications without doing anything straight away. Elevated pulse and tachycardia, that all started and that was very concerning, pulse went to 209 and that was when she got transported to the emergency room. The patient reported also syncope episodes, costochondritis and chest pain on Jan2021. On 26Mar2021 the patient experienced having discoloration on her toes, numbness and tingling and that her extremities, from the knee down and both her hands and feet were cold, ice cold. The patient was transported to the hospital by ambulance three times due to the events (hospitalizations on 22Jan2021, 30Jan2021 and 25Mar2021). The patient underwent lab tests and |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

procedures which included Troponin, D dimer, electrocardiogram (EKG), Chest X ray, Full blood count (CBC), exercise electrocardiogram (TMT) all resulted: normal, nuclear stress test: unknown results and pulse 148-157, 209, all on unspecified date. The patient outcome of the events was unknown.; Sender's Comments: Based on available information, a possible contributory role of the subject product, BNT162B2 vaccine, cannot be excluded for the tachycardia and other reported events due to temporal relationship. However, the reported events may possibly represent intercurrent medical conditions in this patient. There is limited information provided in this report. Additional information is needed to better assess the case, including complete medical history, diagnostics, counteractive treatment measures and concomitant medications. This case will be reassessed once additional information is available. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to Regulatory Authorities, Ethics Committees and Investigators, as appropriate.

| 1254904 | 4/25/2021 | IN | 58 | M | 3/4/2021 | 3/4/2021 | Four hours later he passed out/ Four hours after getting vaccine he was on the floor and out like a light; Sore right arm; goofy; This is a spontaneous report from a contactable consumer. A 58-year-old male patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), first dose at the age of 58-years-old intramuscular, administered in Arm Right on 04Mar2021 09:30 (Batch/Lot Number: EN6200) as single dose for covid-19 immunisation and prophylaxis. Medical history included high cholesterol, allergy (When pollen is heavy, it is worse) from an unknown date and unknown if ongoing, fractured his shoulder in 05Feb2021, sinus jacked up from an unknown date and unknown if ongoing, covid-19 from Nov2020 to an unknown date, anemic from Dec2020 to an unknown date, nasal surgery on an unknown date, fever blisters from an unknown date and unknown if ongoing, immune system disorder from an unknown date and unknown if ongoing. Concomitant medications included zolpidem tartrate (AMBIEN) taken to help sleep; atorvastatin (LIPITOR) taken for high cholesterol; loratadine taken for allergy; cetirizine hydrochloride (ZYRTEC) taken for allergy; mometasone furoate (FLONASE) taken for allergy; start and stop date were not reported for all; fish oil (OMEGA 3) and selenium (SELENIUM) taken for an unspecified indication, start and stop date were not reported; colecalciferol (VITAMIN D3 1000) taken for immune system disorder; iron (IRON) taken for anaemia; lysine taken for fever blisters ; zinc taken for immune system disorder, start and stop date were not reported for all and multivitamin. It was reported that four hours after getting vaccine on 04Mar2021, he was on the floor and out like a light. This is the first one he received and his doctor said not to get second one. He had the first one and about 4 hours later, he was on the kitchen floor and out like a light. He doesn't know if it was connected to shot or not. He never had problems before. He got the vaccine around 09:30 and around 13:30, his friend came in for lunch and found him on the floor. She freaked out. She said she liked to never got him awake and said he was goofy for a good half hour. He does not know how long he was on the floor. His arm was sore on 04Mar2021 09:30 for about 4 days. The patient underwent lab tests and procedures which included blood iron: so low on an unspecified date. The patient was recovering from |

| 1254609 | 4/25/2021 | PA | 54 | F | 3/7/2021 | 3/1/2021 | <p>passed out; trouble flexing her right hand open and closed; not feeling well, she feels very bad; sores in her mouth and nose; sores in her mouth and nose; anal hemorrhoid sores; had difficulty speaking, with her words; has been dropping things, she has broken glass; her eye felt heavy and her eye was drooping; Dizzy; Fall; Slight fever; Fatigue; extreme pain through right side (right side means her shoulders, neck, torso, arm, and entire leg); first dose given 14Jan2021, and second dose given 07Mar2021; first dose given 14Jan2021, and second dose given 07Mar2021; Shortness of breath; severe nerve pain; Vomiting; had a feeling of urination, like she had to urinate when she didn't, that feeling of urination; Disorientated; eye pain like pins and needles; skin is burning and painful to the touch; Headache; joint and muscle pain; joint and muscle pain; Nausea; horrible lack of appetite/couldn't eat anything other than soup; This is a spontaneous report received from a contactable consumer (patient) via a Pfizer-sponsored program called COVAX US Support. A 54-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 2 via an unspecified route of administration, administered in Arm Right on 07Mar2021 (Lot Number: EN6204) as single dose for covid-19 immunization. The patient's medical history included history of three spinal surgeries (takes no pain meds, she is not on pain meds, she has never been on or kept taking them); and has "neuropathy and nerve related issues" that were not this bad since ten years ago in 2011, clarified that what she has is not actually neuropathy, something with the peripheral nerve, she says she doesn't remember actual verbiage), since ten years ago in 2011, and the only difference was this vaccination, it was not this bad until this vaccination. She doesn't react well to pharmaceuticals anyway (unspecified). Her medications are that she takes the minimum amount of medications, very minimal (unspecified). There were no concomitant medications. There was no other products. Also, she has not had any other recent vaccinations or started any new medications. For past drug, she didn't take anything other than 5mg of zolpidem tartrate (AMBIEN) to sleep at night because of her spine. Patient previously also took pregabalin (LYRICA) and was off it, was also on gabapentin or neurontin (patient did not have those</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

medications to provide NDC/LOT/EXP for either of them because she took them back to the pharmacy or turned them in to the police station because she doesn't keep medications in her house if she isn't taking them, and she couldn't take that medication). Historical vaccine included first dose of bnt162b2 on 14Jan2021 (at the age of 54-year-old; Lot Number: EN5318) in Arm Right for covid-19 immunization, and for her first dose the only thing was a sore arm, it was very sore, and she only experienced a slight bit of fatigue after her first dose. She received both doses of vaccine. Her first dose was LOT: EN5318 and was given 14Jan2021, and her second dose was LOT: EN6204 given 07Mar2021. The patient was reporting for Pfizer COVID-19 vaccine, for she was having a horrible reaction to it "45 days" (as reported) after taking 2nd dose, and had been in the ER, and her temperature still hasn't gone back down to her normal, her oral temp is still raised and her rectal is raised even more. She was not feeling well, she felt very bad, she would never get a vaccine again, that is how bad it was. Since "45 days" later she was still having significant pain and trouble flexing her right hand open and closed. For events treatment, she took over the counter Tylenol for fever and pain, strength unknown. Patient said she had not had this kind of disabling symptoms or anything before this vaccination. She had a slight fever almost the whole "45 days". On 08Mar2021, her oral temp was over 98 degrees Fahrenheit when her norm temp being 97.2 or 97.3degrees Fahrenheit. Her rectal temp stayed at 100 degrees Fahrenheit. The next day, actually on the 09Mar2021 (which was two days after her second dose), she had the slight fever, fatigue, and extreme pain through her right side. She said her right side means her shoulders, neck, torso, arm, and entire leg. She also had shortness of breath, and severe nerve pain. She called her primary care provider who said to wait 5 days to be seen. On day 5, or actually the whole five days (reported as in Mar2021), she was in bed and didn't leave her apartment because she was in bed and she was vomiting. On day 2 or within 6 hours of vaccination, she had a feeling of urination, like she had to urinate when she didn't, that feeling of urination was equivalent of having contrast dye (NDC/LOT/EXP: Unknown) put in her IV which makes her feel like she is peeing her pants but she did not, and that feeling has not gone away. On day

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

5 (11Mar2021), she was dizzy and fell. In Mar2021, she was disorientated and vomiting, she couldn't eat anything other than soup. On day two (Mar2021) she had some kind of eye pain that is still there "45 days later", it feels like pins and needles. Her skin was burning and painful to the touch, she couldn't keep an IV in her when she was in the ER. She was not admitted to the hospital. She was having headaches, and joint and muscle pain. She had nausea and vomiting at different times. She continued to have shortness of breath. She had a horrible lack of appetite. She had sores in her mouth and nose. She had anal hemorrhoid sores. Last night (05Apr2021)she had a headache that was severe like someone put a knife behind her right eye, and when she got up (06Apr2021) her eye felt heavy and her eye was drooping. She also had difficulty speaking, with her words. She says she had passed out, and had been dropping things, she had broken glass. She has been to a neurologist and a gastroenterologist. She clarified that all of these events were after her second dose, for her first dose the only thing was a sore arm, it was very sore, and she only experienced a slight bit of fatigue after her first dose. None of her doctors know what to do, her gastro doctor was giving her an anti inflammatory suppository and was going to do some tests. She had blood done from neurologist and at the ER and no one knows what to do, they keep referring her to other doctors. She wished someone could explain to her, but no one know and they said it was uncharted territory, they didn't know what to do. She is now back on Lyrica which she was off of but the ER prescribed her 300mg three times a day. She wanted to know what the hell is going on with this vaccine, and that she doesn't think having these side effects "45 days" out is normal. She wanted to be transferred to speak with someone about what to do because her doctor's don't know anything. The outcome of the events was unknown. No follow-up attempts are needed. No further information is expected.

| 1255350 | 4/25/2021 | NY | 45 | F | 3/26/2021 | 3/26/2021 | is passing out at 7PM; had two antibody tests and she's been negative; Patient verifies she is not dizzy, she just feels like yuck; Patient states she has pain; she felt like she couldn't breathe; she felt like, not herself, like un-well. Patient states she is feeling unwell since; zapping, basically like a electric shock; nausea and vomiting; nausea and vomiting; extreme fatigue/that night she was exhausted, she couldn't pick up her head; head just doesn't feel right/she couldn't pick up her head; fever; closing of her throat; heat coursing through her body, felt heat in her vessels/she was a bloody, hot mess; chills; This is a spontaneous report from a contactable other health professional. A 45-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), via an unspecified route of administration, administered in Arm Left on 26Mar2021 at 10:00 (Batch/Lot Number: ER8733) as single dose for COVID-19 immunization. Patient states she had chronic strep throat, she was sick four times a year for the first 12 years of her life. Patient stated she has no allergies, she was a healthy woman. Concomitant medication included simvastatin taken for an unspecified indication from 2020 and ongoing. On 26Mar2021, the patient experienced nausea/vomiting happened almost immediately, soon after the injection. The patient stated she wasn't feeling well, she had to go home from work, but the symptoms started that day almost immediately and persisted for a few days later. She has this zapping. The patient stated it was actually a term, it's basically like an electric shock that she was feeling throughout her body, like from head to toe on 08Apr2021. The patient stated and her head just doesn't feel right, just like dizziness. The patient stated she has pain and was uncomfortable. Patient stated she was concerned about what to do moving forward. Patient stated the day she got the shot, within three minutes, she felt like she couldn't breathe. Patient stated it was not emotional, she's very self aware, she was a psychologist. Patient stated it was a closing of her throat, but that has turned on and off as well. Patient stated then she had heat coursing through her body, felt heat in her vessels, down the center of her throat down in to her throat into the center chest and down into legs. Patient stated that night she was exhausted, she couldn't pick up her head. Patient stated she threw up and had chills, she felt like, not herself, like un-well. Patient states |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

she was feeling unwell since. Patient states she did travel that Monday after, which she doesn't know if it made it worse, but was gone only for an hour, then got sick again that night with fever and throwing up. Patient states then yesterday, she started getting these zaps in her body, it felt like someone had put a taser to her all over her body. Patient stated she was just not herself, she wasn't at her normal. Patient stated she passed out at 7PM at night. Patient verified she was not dizzy, she just felt like yuck. Patient stated she also experienced chills and fever, that happened later that day on 26Mar2021. Patient stated she came back to work and she just felt like she needed to go home. She was instantly not well. Patient stated she has had two antibody tests and she's been negative. Patient stated she checked after that, she made sure she had no antibodies. Patient clarified she checked her antibodies twice before getting the vaccine. Patient stated her resting heart rate was at 55, she was in athletic shape, she was healthy. Patient stated when she had the both, she was on the toilet and throwing up at the same time, she was a bloody, hot mess. Patient states she ripped her clothes off, she was hot. The outcome of the event nausea, vomiting, fatigue, "head just doesn't feel right" was recovered with sequel on 03Apr2021; fever was recovered with sequel on 07Apr2021; chill was recovered on 03Apr2021; electric shock was not recovered and unknown for the other events. The patient did not received any recent vaccines for SARS-COV2 other than Pfizer- BioNtech COVID-19 Vaccine prior to the event being report and has not received any other vaccines around the time of Pfizer- BioNTech Vaccine Vaccination.; Sender's Comments: A causal association between BNT162B2 and the reported events cannot be excluded based on a compatible temporal relation. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate.

| 1255324 | 4/25/2021 | OH | 38 | M | 3/30/2021 | 3/31/2021 | <p>passing out/ passed out; fainted; Vomited all over self; Blood pressure: Low, experiencing hypotension; Lethargy; Pains in legs; Pain in lymph nodes on left side; Migraine headache/ headache; Felt unwell; This is a spontaneous report from a contactable consumer (patient). A 38-year-old male patient received the first dose BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE Lot Number: ER8732, expiration date: 31Jul2021) via an unspecified route of administration, administered on the left arm on 30Mar2021 09:00 at a single dose for COVID-19 immunisation. Medical history included ongoing asthma, thyroid cancer, thyroid removed, rhinitis, allergic to eggs (ongoing). Concomitant medications included calcium since they took out part of parathyroid, levothyroxine for Thyroid removed and calcitriol taken for Better absorption of calcium; and all were ongoing. The patient previously received Tetanus shot on an unspecified date in 2021 (3 weeks to a month prior to getting the first dose of the Covid-19 vaccine) with no adverse events. Patient was calling to report adverse side effects that he experienced 2 days ago on 07Apr2021 after having the first dose of the Pfizer Covid-19 vaccine. He said that on 07Apr2021, he was taken ill in an ambulance after passing out and vomiting all over himself and his wife. His wife may have saved his life by keeping him from falling down when he fainted. He was taken in an ambulance to the emergency room after he passed out. He said that it was an unpleasant experience as he had to strip down all of his clothes because they had vomit all over them and change in front of the paramedics before being placed on a stretcher and taken to the emergency room. While in the emergency room, he had a CT scan, bloodwork, and checked body movement by having him follow a finger and various other regular tests. He mentioned that the emergency room physician determined that in likelihood, the reason that he passed out and vomited on himself was a side effect from the Pfizer vaccination. He talked to his physician yesterday. His physician explained to him that because of his health background, what happened following the first dose of the Covid-19 vaccine, and due to the severity of things, the physician believed that it wouldn't be a good idea for the caller to get the second dose of the Covid-19 vaccine given his reaction. The physician stated that it was up to him whether or not he</p> |

4/24/2021

got the second dose of the Covid-19 vaccine. He had his first dose of the Covid-19 vaccine on 30Mar2021. He began to feel unwell the following day of the Covid-19 vaccine (31Mar2021), experiencing lethargy, pains in his legs and migraine headache. He reported that he got progressively worse and thought he was having a thyroid issue. He reported that the physicians in the emergency room couldn't really determine what the cause of the fainting episode could be as all lab work and the CT scan came back normal. The emergency room physician thought that the caller experienced the fainting episode and vomiting due to the Covid-19 vaccine. He experienced a headache and pain in his lymph nodes on the left side. He took Tylenol and was ok. The next day, 31Mar2021, he didn't feel too well but was ok. He reported that for a few more days following 01Apr2021, he felt not too bad. He didn't have a temperature or a fever and didn't think he was suffering from any specific flu like symptoms. The facility where the vaccine was administered was in a Medical Facility, outpatient hospital like a walk-in center. The event passing out resulted in Emergency room visit. The patient underwent lab tests and procedures on 07Apr2021 which included, potassium levels: normal, blood pressure: low, experiencing hypotension, thyroid levels were normal, CT scan normal and checked for diabetes: negative. Outcome of the events lethargy, pain in legs and migraine headache was recovering, pain in lymph nodes on left side recovered on 31Mar2021 while unknown for the other events.

Systemic: Chills-Mild, Systemic: Dizziness / Lightheadness-Mild, Systemic: Exhaustion / Lethargy-Mild, Systemic: Fainting / Unresponsive-Mild, Systemic: Shakiness-Mild, Systemic: Visual Changes/Disturbances-Mild, Systemic: Weakness-Mild, Additional Details: Family History: Both parents had seizures after being immunized in the past and this was their son's first immunization. Otherwise, the patient was calm and healthy.

A 44-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 via an unspecified route of administration, administered in arm left on 30Mar2021 16:00 (Batch/Lot number was not reported) as single dose for covid-19 immunisation. Medical history included Mild/moderate TBI in Oct1999 with herniated disk in lower lumbar region from auto accident (patient was a pedestrian and a car ran into her); fractured tibia/fibula from occurrence; low blood pressure which she had occasionally fainted from at blood draws (started after being active athletically during recovery from 1999 injury). Patient was not pregnant. There were no concomitant medications (no vaccine in 4 weeks and no other medication in two weeks). Patient did faint 15 minutes after receiving Pfizer Covid vaccine on 30Mar2021. Medical people at vaccination site made a vasovagal note on record. Patient reported that there were no body aches or fatigue or fever, only slight injection site soreness for a couple of days which was hard to notice through intense tingly whole body sensations that started after receiving vaccine on 30Mar2021 16:15. Still continuing to feel a week and a half later. It was very uncomfortable but not painful. Patient also experienced sense of pressure and tingling on eyeballs and increased sensitivity to touch. Menses were due one week after vaccination but 4.5 days after vaccination on 03Apr2021, nipples became very hard and sore. After a few days on nipples slightly sore still but mostly swollen breast tissue with soreness on Apr2021. Patient had not had this as PMS symptom since becoming pregnant almost 9 years ago and it never lasted 7.5 days with it still ongoing as of time of report. Her menses was late on Apr2021 and hasn't started but she was not pregnant. Patient's usual PMS symptoms have kind of started yesterday on 09Apr2021. It quickly formed bilaterally symmetrical lumps on the distal sides of her breasts which was also unusual on Apr2021. No</p> |

A 53-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ER8732), via an unspecified route of administration in the left arm, on 07Apr2021 10:30, as single dose, for COVID-19 immunisation. The patient's medical history and concomitant medications were not reported. The patient had no known allergies and was not pregnant at the time of vaccination. The patient did not have COVID-19 prior to vaccination and was not tested for COVID-19 post vaccination. Historical vaccine included the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EN6207) received at age 53 years, via an unspecified route of administration in the left arm, on 16Mar2021 11:00, for COVID-19 immunisation. The patient did not receive other vaccines in four weeks. On 08Apr2021 at 03:30, the patient woke up trembling uncontrollable and was freezing. She had a terrible headache. At about 04:30, the patient got out of bed to get some Advil and go to the bathroom. She almost got to the bathroom but was unable to hold her urine and had sudden diarrhea as soon as she sat down. She then became extremely weak and passed out. She was sweating profusely and had a temp of 101. She took Tylenol and Advil and her temp broke an hour or two later. She then had a headache and was lethargic all day on 08Apr2021. On 09Apr2021, the patient felt much better but reported she was still weak, she also had a rash covering most of her torso. Treatment for the events trembling uncontrollable, freezing, terrible headache and temp of 101 included Tylenol and Advil. No treatment was taken for the remaining events. The outcome of extremely weak was not recovered; and the outcome of the remaining events was recovering. |

An 80-year-old female patient received bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 via an unspecified route of administration on 23Feb2021 (Batch/Lot Number: EN6200; Expiration Date: 06May2021) as single dose for covid-19 immunisation. Medical history included insomnia from an unknown date and unknown if ongoing. Patient weight was 155 now. Patient was overweight because this eating and eating. Feeling inactive, not going out so patient gained a lot of weight. Patient took blood pressure medication and for heart some basically and patient didn't sleep well, so patient took Alprazolam to relax to sleep, but patient was an insomniac but that was basically problem. The patient's concomitant medication included isosorbide. Patient had the first Pfizer shot and wasn't even sore or anything, patient was so happy but that about 4 or 5 hours later about maybe 5 o'Clock, patient had allergic reaction and started to feel a sensation in lip and when she looked in the mirror, what was all that on lip and one side on lip it had turned white and it had lump was extended along lip line, lymph node was swelling up and patient had white lumps on lip which still had but it was going down and some white patches on face. Nothing happened on the 24Feb2021. Patient thought it was the 25Feb2021 that was when all trouble started. Patient felt like nightmare because she started feeling like something was choking her in mouth and next minute patient started coughing, coughing real hard and that was terrible cough then after this strange voice and patient realized it was breathing and it was like somebody has cranky paper in hand which screaming up that's what breath sounded like. Patient start to get out of bed and then waken to kitchen, patient had terrible headache, joint pain, pain all over from head to foot and</p> |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

patient was certainly dehydrated. She had no water in at all, she was like don't know something come over and felt like she was sort of leaving the world, patient was like fainting, and panicked. Patient had terrible pains all over and felt like patient was dying, patient was going to die. Patient said she need an ambulance, patient was very ill and had to be taken to hospital. They came within a few minutes, they started questioning about what was happening and they put patient to the emergency room and well they test patient for Covid as well naturally. It was negative, they did it 2 times and it was negative. When they took patient to one of the room in fact patient was frightened because they didn't told patient it was negative. Patient said she got the virus, they said not but patient had to take the oxygen as it's surge to scan on lungs. They said patient had allergic reaction to the vaccine. Patient was supposed to have it but at the same time there was the variant, doctor said patient was 70% covered, didn't have it but patient want to just check the status was with a person like her was allergic. Patient had shots in face and patient did tell them that she had all sorts of things on face. Now patient still had the white lips and couple of patches around mouth and naturally patient was worried like what to do. The patient didn't take the second shot because she was too nervous. Patient went hospitalization on the 25Feb2021 very early, and was relieved on 27Feb2021 (not sure). Reason of Hospitalization: On the University hospital. They put down to the Pfizer injection but that was older happens to patient, they infused patient with antibiotic they gave pills. Patient said she won't be able breath with them and that was what they did, they 'reflect' her, they said patient had pneumonia which she did not have (Further clarification was unknown). Early the next morning they put patient down 2' o'clock in the morning. Patient wanted to go home, they said patient can't as she had very bad infection in lungs which was completely untrue. The next morning (the same morning early), patient was okay because the pains and everything was gone but she believe the medication they put patient on that caused to short of breath and patient said please don't give her the medication and they did. They only give generic medicine in the hospital and patient took brand name. On 26Feb2021 patient actually called the doctor for all results and she told nothing, patient didn't get the result.

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

Anyway they took patient off one medication, they didn't give it to her and this medication you can not get off of it and through that patient had a headache the whole of the day and the whole day on the 26Feb2021 patient was suffering with very bad headache and kept asking for the medication they said they would give to the patient. Finally the doctor gave only to the aspirin and paracetamol (TYLENOL) that both the same and in the end patient husband have to go and get the pill because they still hadn't given it to patient all day long. Patient said to doctor because she was breathing hard and she said the doctor did this to her by giving these pills that don't agree with her. She told she can not take this medication, anyway the doctor said to patient husband go home and get her medication, and he said so now you are medicating yourself. By the next day patient was ready, she was breathing normally and was ready to go home but late afternoon they said patient should go home but she still had those white patches but they were not as prominent as what they were. Patient whole lip turn white, whatever they did, whatever they gave, patient had sore around mouth and face swollen up. Patient didn't know whether she was allergic to the medicine or what but her face, it looked like she had, patient was fine anyway couldn't get an appointment with GP to the Wednesday (unspecified week) but it free appointment on the Tuesday and patient went in and showed him what it looked like. He said it should return to normal within 2 weeks and it but still face like normally excepted lips. Outcome of events pain, short of breath was recovered in 2021, and outcome of other events was unknown. Date of second shot was 17Mar2021, it was reported patient had got the both shot of covid vaccine.; Sender's Comments: Linked Report(s) : US-PFIZER INC-2021404239 similar report from same reporter

| 1255577 | 4/25/2021 | IN | 22 | M | 4/8/2021 | 4/1/2021 | <p>Passed out; pounding headache/headache symptoms are getting worst; body ache; tiredness; This is a spontaneous report from a contactable consumer. A 22-years-old male patient (Son) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), dose 1 via an unspecified route of administration on 08Apr2021 (Batch/Lot number UNKNOWN) as single dose for covid-19 immunisation. The patient's medical history and concomitant medications were not reported. My son is having a tough time with the vaccine. Everyday he has a couple of side effects. He started with body ache and tiredness on unspecified date Apr2021. He had a pounding headache. His headache was moderate today. However, the headache symptoms are getting worst. Generally, the symptoms last a day his have been getting worst for 7 days. He has been taking Tylenol and Advil. But the Advil doesn't even seem to hep anymore." headache is a common side effect reported with the vaccine. If the symptoms persists or get worst please consult your HCP. Please note blood clot has not been associated with the vaccine. Patient is been experiencing what I considered to be pretty severe, I guess reaction in term of aches and headache. This morning he woke up with the pounding headache, he kid described it as pounding and I just I guess I want to ask because everywhere I read, it says mild headaches are common and aches and I understand that but I guess understanding why this, this is considered somewhat as severe reaction or is there anything he can do to alleviate the symptom and should he, I guess my question is actually I guess my question also is should he not possibly get the second dose if he is experiencing such bad headaches with the first dose. When paraphrased the concern, reporter stated, Yes, basically we are thinking if can do to alleviate it and then he could not get the second dose, if you have any advice, I guess and just let you know he went to his health center in the college he went to get a COVID test and a flu test just to make sure he doesn't have actual Covid or flu and those report I got yesterday and so they told him that it's most likely still vaccine reaction. When probed for event start date, reporter stated, I would say a day after, I would say 09Apr2021, I guess it's phantom (not clarified) with symptom, the first day he was just tired, as far as the headache that started on the 09Apr2021. He (son) also</p> |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

passed out after the vaccine, which I also did that I didn't have Pfizer I (reporter) had Moderna and I had that same reaction, so I think that sometimes happens to some people but that's it happens also. When probed for vaccination anatomical site, reporter stated, Outside of the body I guess, I don't know that for sure. Patient still having the problem (event), and out event outcome, reporter stated, Yes, I think persisting, I think it varies. Patient has been taking Advil (Ibuprofen) and Tylenol (treatment). The patient underwent lab tests and procedures which included influenza virus test: negative on 12Apr2021, sars-cov-2 test: negative on 12Apr2021. They told him that it's most likely still vaccine reaction. Therapeutic measures were taken as a result of body ache (pain), tiredness (fatigue), pounding headache/headache symptoms are getting worst (headache). The outcome of the events was reported as unknown. QR Comment: Call handler not filed split case. Might have been split case. Information about the lot/batch number has been requested.

| 1255746 | 4/25/2021 | FL | 81 | F | 2/2/2021 | 2/18/2021 | heart arrhythmia; cardiac arrest; This is a spontaneous report from a contactable consumer who reported for his wife. An 81-year old female patient received her second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, Batch/Lot number EM9810) via unspecified route of administration on 02Feb2021 (at the age of 81-year old) at single dose for COVID-19 immunization. Relevant medical history was not reported. Concomitant medication included metoprolol from Jan2021 for congestive heart failure. The patient received the first dose of the same vaccine BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE, Batch/Lot number) on 12Jan2021 and on 15Jan2021, she had such trouble breathing diagnosed in the Urgent care as congestive heart failure with enlarged heart and fluid in her lungs because of her heart being enlarged. She had not had any previous heart problems. On 18Feb2021 she collapsed, went limp and went into the hospital and she was neurologically unresponsive. They tried to revive her and did bring her back with 5 epi shots, he was told that they did bring her back. When she got to the ER she went pulseless again and they gave her two more epi shots and got her back but she never did come out of a coma-like state. They admitted her to ICU. She stayed there until she passed away on the 22Feb2021. CT scans, X-rays, images of her heart, echocardiograms were performed. She was tested for COVID in Feb2021 and it was negative. They did a brain scan and there was no activity because she had been too long without oxygen. The consumer reported that the week before the cardiac arrest, she was feeling faint but she never passed out. Death certificate stated cause of death was heart arrhythmia and cardiac arrest. No autopsy was done.; Reported Cause(s) of Death: heart arrhythmia; cardiac arrest |

| 1250827 | 4/24/2021 | OH | 19 | F | 4/15/2021 | 4/15/2021 | After receiving my second dose, I started to develop mouth ulcers covering the entire inside of my mouth. Throughout the weekend, they continued to develop. I went to the ER to receive pain medication, as the ulcers were so bad that I could not talk or eat. The following morning, I passed out going to pick up my medication at CVS, where I was taken back to the hospital in an ambulance and had a 103 degree fever. I was given IV fluids and was sent on my way. I was on strict bedrest for 4 days, until on Thursday 04/22/2021, I was readmitted to the ER due to worsening of the sores and lack of nutrition. For 3 days since then, I have been on IV fluids, pain medication, and taking a steroid solution to help the ulcers in my mouth lessen. The doctors here believe that it is an extremely strong reaction to the COVID-19 vaccine second dose. |

On 24-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) 1 dosage form. On 02-Apr-2021, the patient experienced SYNCOPE (tripped over a pallet and fell) (seriousness criterion medically significant) and FALL (fell on 2april at a local) (seriousness criterion hospitalization). On an unknown date, the patient experienced PRURITUS (started itching last night in my hands after I took Oxycodone/Every time I take opioids, I have itching) and URTICARIA (woke up with hives on my torso, knees, and my arms/hives are most likely related to oxycodone). The patient was treated with Surgery for Fall. At the time of the report, SYNCOPE (tripped over a pallet and fell), PRURITUS (started itching last night in my hands after I took Oxycodone/Every time I take opioids, I have itching) and URTICARIA (woke up with hives on my torso, knees, and my arms/hives are most likely related to oxycodone) outcome was unknown and FALL (fell on 2april at a local was resolving. Not Provided The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Unknown) was unknown. For mRNA-1273 (Moderna COVID-19 Vaccine) (Unknown), the reporter did not provide any causality assessments. Treatment drugs included, Oxycodone , Zyrtec, Benadryl. Patient went to see doctor and they put on a new brace called T-form. It was reported that these hives are most likely related to oxycodone.; Sender's Comments: Based on reporter's causality (Tripped over a pallet and fell) the event is |

The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient recovered from headache on 17-MAR-2021, and had not recovered from almost fainting sensation, cold arms, blurry vision, sweating, nauseas, and fatigue. This report was non-serious. |
| 1252671 | 4/24/2021 | TN | 17 | M | 4/24/2021 | 4/24/2021 | Patient received vaccine and came and sat down next to his father in the waiting area. Approximately 5 minutes after sitting down he fainted and fell out of chair. His father guided his fall. It took 2-3 minutes for patient to gain conscientiousness. He was disoriented, pale, groggy. 911 was called and arrived approximately 20 minutes after event. After the paramedics examined patient, he regained his bearings and color. The family decided to go home at approximately 10am. I spoke with mother at 7pm tonight and patient has been fine all day. |

| 1252652 | 4/24/2021 | CA | 18 | F | 4/24/2021 | 4/24/2021 | Patient is a 18-year-old, female. No known medical history. No known allergies. At 3:18 pm, the patient received her first dose of Pfizer vaccine (lot number EW0179, expires on 08/2021) on left deltoid, given by RN. Patient informed RN that she has a history of fainting after vaccines. RN recommended the patient wait in the zero-gravity chair. Patient continued to be A&Ox3, walked herself over to the EMT waiting area with a steady, balanced, and sat down in zero-gravity chair. At 3:20 pm, patient checked in with EMT and stated she feels "fine". At 3:27 pm, while waiting in observation area, patient stated "I don't feel good" and went unconscious. EMT reclined patient into supine position. Patient remained unconscious for approximately 10 seconds. RN called 9-1-1 at 3:28 pm. Patient regained consciousness at 3:28 pm and stated "I need something sweet". At 3:30 pm, the patient's BP 69/44, RR 8/min, HR 63 bpm and weak, skin dry and cold to touch, lips pale and cyanotic. At 3:33 pm, the patient's BP was 87/60. Fire Department arrived on site at 3:34 pm. Patient was transferred to gurney by FD. Patient left facility at 3:34 pm . |

| 1252422 | 4/24/2021 | IL | 16 | M | 4/24/2021 | 4/24/2021 | Pt was seated in the waiting area after receiving his first dose of covid 19. His parents who also received the vaccine were waiting with him. I was preparing another dose for patients waiting for their covid vaccination. I heard pounding on the clinic room and ran to check. The mom had knocked on the door because her son had fallen out of his chair.. when I arrived he was on the floor and his parents said he was regaining consciousness and moved him in to a seated position. At this point another customer was calling 911. I had my technician call management. I observed the patient and asked if he was doing ok. His parents asked him if he was hurt and he responded in the negative. The patient was feeling cold and his hands were "cold and clammy" according to his mom so I held off on the cold compress. He wanted water but was also nauseous so I told the parents that I do not want to risk aspiration. We gave him a bag to throw up. I recommended that they take him to get seen when the paramedics arrived as I was concerned about him shaking before fainting. At this point the paramedics arrived and he was taken to the hospital as he was not feeling well. I followed up with the patient's mom and she said all his tests came back normal (EKG, et) and that the doctors may think it could have been due to anxiety from getting the vaccine. She was really appreciative of the call. |

She ultimately required splenectomy and mx units of blood. (did get embolization but progressed to further bleeding) and ultimately needed splenectomy 4/24. She is sp 7 units prbc total, 2ffp, 1 plt, 1 cryo. She remains hospitalized as of 4/24 on critical condition |
| 1252099 | 4/24/2021 | MD | 25 | F | 4/3/2021 | 4/3/2021 | About 7 minutes of receiving my J&J vaccine, I started to feel nauseous while sitting down and waiting for my fifteen minutes of monitoring. I experienced pain in my left arm and my heart was beating fast. My vision was in and out, started seeing black and white spots. I then got up from my chair and I went to the counter and as I was talking to the clerk telling her I did not feel good, I just went down and fainted. I had fainted and when I came back, woke up a nurse was trying t put an epi-pen on me but I told her I did not need it. They called the ambulance and they monitored me there. The EMT said to me that my blood pressure had dropped and I had had a "vasovagal syncope" and that my body probably went into shock. I did not go to the hospital and went home. For the rest of the day I felt ill, and out of it. I also felt pain, an aching pain to the right buttocks region. The next day I still felt not good. Also I have noticed since the J&J vaccine, I had my menstrual cycle but normally my menstrual cycle lasts 5 days now this month it only lasted about 4 hours and I this concerns me. Before this vaccine, I did not have experience these symptoms. |

| 1246269 | 4/23/2021 | CA | 46 | F | 4/5/2021 | 4/5/2021 | I'm writing this as a former, trained healthcare professional (physical therapist). 30sec-after injection I raised my left (injected) arm and my deltoid/bicep had a sudden hard spasm. I told my husband (who was in the middle of getting his shot) and the administrator that I was passing out. I blacked out. They ran over. They said 5 minutes passed in which my eyes were wide open and dilated. I suddenly began profuse sweating and convulsions/ severe full body shaking. They could not keep me lucid, and called 911. Paramedics came and got a systolic BP of 36 (I'm unaware of the diastolic BP) with blood sugar at 111 ish. I could not form words and kept going in and out of consciousness. I was transported by ambulance to the ER. A few minutes into the ambulance ride I was able to form words, and vitals started to return. I've passed out a few times and this WAS NOT a normal episode of syncope. |
| 1246431 | 4/23/2021 | CT | 21 | F | 4/8/2021 | 4/8/2021 | Upon receiving the vaccine, I immediately fainted (vasovagal syncope). I was unconscious for ~15-20 seconds. My apartment-mate who came with me for the shot laid me down on the floor until I could sit up again without feeling dizzy (~15 min). I also had pretty serious bruising at the injection site for ~9 days following the injection and my arm was swollen and painful (although this is a pretty normal side-effect). |

| 1245409 | 4/23/2021 | MN | 36 | F | 4/11/2021 | 4/12/2021 | seizure; passed out due to extreme vomiting as per doctor in ER; vomiting every 40 minutes; stomachaches; body pain; Sweating; Headache; This case was received via an unknown source no reference has been entered for a health authority or license partner on 15-Apr-2021 and was forwarded to Moderna on 15-Apr-2021. This spontaneous case was reported by a consumer (subsequently medically confirmed) and describes the occurrence of SEIZURE (seizure) and LOSS OF CONSCIOUSNESS (passed out due to extreme vomiting as per doctor in ER) in a 36-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 027B21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No medical history provided.). On 11-Apr-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 12-Apr-2021, the patient experienced SEIZURE (seizure) (seriousness criterion medically significant), LOSS OF CONSCIOUSNESS (passed out due to extreme vomiting as per doctor in ER) (seriousness criterion medically significant), HEADACHE (Headache), ABDOMINAL PAIN UPPER (stomachaches), VOMITING (vomiting every 40 minutes), PAIN (body pain) and HYPERHIDROSIS (Sweating). The patient was treated with IBUPROFEN at an unspecified dose and frequency. At the time of the report, SEIZURE (seizure), LOSS OF CONSCIOUSNESS (passed out due to extreme vomiting as per doctor in ER), HEADACHE (Headache), ABDOMINAL PAIN UPPER (stomachaches), VOMITING (vomiting every 40 minutes), PAIN (body pain) and HYPERHIDROSIS (Sweating) outcome was unknown. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. No medical history or concomitant medications provided. Patient used ibuprofen for treatment of headache. Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1247073 | 4/23/2021 | IL | 55 | F | 4/1/2021 | 4/1/2021 | Patient experienced two episodes of syncope 5 minutes after receiving immunization and approximately 2 minutes apart from each other. Patient fell out of chair as result and reportedly hit head. Blood pressure upon initial evaluation was 88/50. EMS was called. Upon arrival and assessment by EMS, vital signs were WNL. Patient was transported to local hospital. Patient was not evaluated at hospital. Patient has since been to E.R. 2 times after incident and to PCP 1 time since incident. Patient continues to feel "flushed, faint, and dizzy" at times. |
| 1246091 | 4/23/2021 | NJ | 26 | F | 4/22/2021 | 4/22/2021 | Systemic: Dizziness / Lightheadness-Mild, Systemic: Fainting / Unresponsive-Medium, Systemic: Seizure-Mild, Additional Details: Pt fell face flat on her face within 5 minutes of her injection and scratched her left cheekbone. Look like she was having a seizure but she was already conscious when we flipped her over. She felt fatigue from working a night shift yesterday, and a morning shift today. She ate a couple hours before the appointment. FS associate, monitored her for an extra 15 minutes before she walked home. I followed up with her at 4:40pm and 7:30pm on 4/22. Recommended that she report this to her PCP. |
| 1247491 | 4/23/2021 | VA | 30 | M | 4/11/2021 | 4/11/2021 | Client was leaving the parking lot post vaccination waiting period when he felt lightheaded. Wife indicates that client passed out twice in the car. Client reports feeling dizzy and hot and he looks pale and sweaty. His BP is 60/40. Client does not have any other medical history and is not taking any medications currently. He is allergic to sulfa. EMS on site evaluated client and was determined that 911 needed to be called. EMS responded and client was transported to the hospital. |

Concomitant products included ATORVASTATIN CALCIUM (STATIN [ATORVASTATIN CALCIUM]), CLOPIDOGREL BISULFATE (PLAVIX) and MULTIVITAMIN [VITAMINS NOS] for an unknown indication. On 23-Mar-2021, the patient received first dose of mRNA-1273 (unknown route) 1 dosage form. On 10-Apr-2021, the patient experienced SYNCOPE (passed out) (seriousness criterion medically significant), CHEST PAIN (chest pain), DYSPNOEA (shortness of breath), SARS-COV-2 TEST POSITIVE (Tested positive for COVID) and NAUSEA (nausea). On an unknown date, the patient experienced SARS-COV-2 TEST NEGATIVE (Negative COVID test). At the time of the report, SYNCOPE (passed out), CHEST PAIN (chest pain), DYSPNOEA (shortness of breath), SARS-COV-2 TEST POSITIVE (Tested positive for COVID), SARS-COV-2 TEST NEGATIVE (Negative COVID test) and NAUSEA (nausea) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 10-Apr-2021, SARS-CoV-2 test: positive Positive. On 14-Apr-2021, SARS-CoV-2 test: negative Negative. The action taken with mRNA-1273 (Unknown Route) was unknown. This case concerns a 77-year-old male with a serious unexpected event of syncope, and nonserious unexpected chest pain, dyspnea, and expected nausea. SARS-CoV-2 test positive. Treatment with Regeneron antibodies. Event onset 19 days after first dose mRNA-1273. Event outcomes unknown. Based on current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded.; Sender's Comments: This case concerns a 77-year-old male with |

| 1248233 | 4/23/2021 | IL | 16 | F | 4/23/2021 | 4/23/2021 | Patient stated that she sometimes gets a little lightheaded after a vaccine and would like to wait her 15 minutes after the vaccine in the room instead of the waiting area. After the administration of the vaccine she stated she was going to pass out and lost consciousness. She had a normal pulse and was breathing normally. Her mother stated that she has passed out after injections in the past. Once for close to an hour. Her mother indicated that she did not want an ambulance called. I watched her closely for about 30 to 40 minutes and made sure she was not disoriented until she felt steady enough to stand up and walk. Upon leaving the pharmacy the patient felt fine and ready to get on with her day. |
| 1248429 | 4/23/2021 | CA | 75 | F | 4/12/2021 | 4/22/2021 | Patient came to ED with complaints of syncopal episode. passed out, hit her head, felt mildly short of breath with ambulation. |
| 1248436 | 4/23/2021 | IL | 17 | M | 4/23/2021 | 4/23/2021 | A few minutes after getting vaccine, while still sitting in chair, pt fainted. Never left chair. Came to quickly, and was helped to a cot. VS: P=76 BP 120/72 P. Ox=98% He was given a juice box, declined crackers. Was initially very pale, but pinked up nicely once he was prone. After 5-10 minutes, he sat up, with VS: P=80 BP 128/70 P. Ox=99% After 5 minutes, he stood up, felt fine. VS: P=80 BP=136/82 P. Ox=99%. Per mom and pt, this has happened with other vaccines in past, most recently earlier this year with a Men B vaccine. We advised giving next COVID vaccine (and others) while laying down. VAERS form completed. Pt left without further incident. |

| 1240560 | 4/22/2021 | NY | | F | | 4/11/2021 | <p>FAINTED; BLOOD PRESSURE WAS LOW; This spontaneous report received from a consumer concerned a 31-year-old female patient. Initial information was received on 13-APR-2021 and processed with additional information received on 20-APR-2021 via telephone log. The patient's height, and weight were not reported. The patient's medical history included flu shot in OCT-2020 without any side effects, gestational diabetes during pregnancy 6 years ago, and gave normal birth. The patient is a non-smoker and does not consumer alcohol. No surgery or injuries were reported. The patient did not have any prior clotting disorder or family history of clotting disorders. The patient did not have varicose veins. No allergies were reported. The patient received vaccination with JANSSEN COVID-19 VACCINE (covid-19 vaccine ad26.cov2.s) (suspension for injection, route of admin not reported, batch number: 206A217, expiry: UNKNOWN) dose was not reported, 1 total, administered on right deltoid muscle on 11-APR-2021 for prophylactic vaccination. No concomitant medications were reported as it was reported that patient did not take any medications. On 11-APR-2021, the patient received the vaccine and within 3 minutes, she felt dizzy and fainted and was taken by Emergency Medical Services to a hospital. Her vital signs were taken (pulse rate, blood pressure, and oxygen saturation) and patient was found to be hypotensive (the husband did not recall blood pressure level). When blood sugar was being tested using a needle for a prick, the blood was not coming out. Her blood sugar was normal at 129 and electrocardiogram was normal. The patient was given intravenous fluids and released home after 6 hours without any other treatment. The patient has been doing well since the release from the hospital ED and no further complaints were reported. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient recovered from fainted and blood pressure was low on 11-APR-2021. This report was serious (Other Medically Important Condition).; Sender's Comments: V0: The case concerns a 31-year -old female who experienced low blood pressure 3-4 minutes after Janssen Covid-19 vaccine was administered intramuscularly for prevention of symptomatic SARS-CoV-2 virus infection. Patient's height and weight were not reported. Medical history included resolved gestational diabetes. The patient had</p> |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

no history of allergic reactions or reactions to a flu vaccine (last one received OCT-2020). No concomitant medications. Post vaccination the patient felt dizzy, could not sit on the chair and fainted and was taken to Emergency Room. Her blood pressure was low and she experienced hot flashes and watery eyes. Her blood sugar was 129 and electrocardiogram was normal. The subject was given IV infusion and was released from the ED without any medication. Symptoms of low blood pressure and fainting are known anxiety related reactions to immunization and given temporal relationship are considered likely related to Janssen vaccine administration.

| 1240495 | 4/22/2021 | WA | 35 | F | 4/18/2021 | 4/18/2021 | PT MENTIONED SHE WAS NERVOUS ABOUT GETTING THE SHOT. AFTER SHE RECEIVED THE SHOT, SHE WENT INTO THE WAITING ROOM AND A FEW MINS LATER, FELT LIKE SHE WAS GOING TO PASS OUT. WE HAD HER LAY ON THE FLOOR AND ELEVATED HER FEET. SHE PROCEEDED TO PASS OUT. WE ADMINISTERED THE SMELLING SALTS, SHE WAS SLIGHTLY AWAKE BUT OUT OF IT AND SAID SHE DIDN'T SMELL ANYTHING. WE LIFTED HER MASK AND DID ANOTHER SMELLING SALT AND SHE "WOKE UP" BUT STILL REMAINED ON THE FLOOR. SHE FELT WEIRD, EYES REMAINED CLOSED AND SHE WAS SLIGHTLY CRYING AN SCARED. WE ASKED HER PARTNER IF THIS HAS EVERY HAPPENED BEFORE AND HE SAID SHE HAS ONLY PASSED OUT B/C OF PAIN NOT ANXIETY. WE TOOK HER PRESSURE/HEART RATE EVERY 5 MIN FOR 15 MIN. IT WAS ELEVATED 165/110 (HR 69) AND STAYED AROUND THAT EACH READING. WE ASKED HER IF SHE WANTED US TO CALL EMT AFTER THE FIRST 5-10 MIN AND SHE WASN'T SURE. 15-20 MIN LATER WE CALLED EMT AND THEY CAME TO ASSIST. THEY TOOK HER VITALS AND THEN EVENTUALLY HELPED HER SIT UP AND EVENTUALLY SHE WALKED OUT ON HER OWN. |
| 1240234 | 4/22/2021 | NM | 53 | M | 4/21/2021 | 4/21/2021 | He felt nauseous, got up to go to kitchen sink and passed out for a few seconds. When I got to him, he was on the ground, eyes open, but seriously disoriented. He got up to the couch. He was very, very clammy and his heart rate was 44 bpm. I held three fingers for him to identify, he correctly answered. He has a small gash on his forehead. His heart rate came up to 70, 20 minutes after episode. Refused to go to urgent care. |
| 1243919 | 4/22/2021 | IN | 66 | F | 3/29/2021 | 4/1/2021 | Patient presented one week pos vaccination with 2 days of easy bruising and petechiae. Platelets were 4K. Seen by doctor of hematology. Started on steroids with improvement to 21K and discharged. Came back a week later with presyncope and chest tightness. Platelets again 4K. Treated with IVIG |

| 1241913 | 4/22/2021 | MN | 16 | F | 4/19/2021 | 4/19/2021 | Within a minute of receiving the vaccine, my daughter fainted and had a short seizure. She did not hit her head because I was able to help her on her way down - it was a ver small room with 3 people in it. The pharmacist was there and he said it was a seizure, she just jerked her chin up, sharply 3 or 4 times. She laid on the ground for about five minutes, then sat on the ground, then sat in a chair for a total of about 20 minutes. She felt dizzy and nauseated for about 15 minutes after. She drank a juice and felt better so we drove home, no other symptoms since. |

| 1240520 | 4/22/2021 | NY | | U | | | <p>FAINTING; DIZZINESS/LIGHTHEADEDNESS; This spontaneous report received from a pharmacist concerned multiple patients of unspecified age and gender (specific number of patients unknown, reported as handful/bunch of patients). The patients' weight, height, and medical history were not reported. The patients received covid-19 vaccine ad26.cov2.s (suspension for injection, route of administration was not reported, batch number and expiry date were unknown) dose, start therapy date was not reported, 1 total, for prophylactic vaccination. The batch number was not reported and will not be requested because the pharmacist does not have the lot number of the vaccine used. No concomitant medications were reported. On an unspecified date, the patients fainted and experienced lightheadedness/dizziness. It was reported that the patients experienced these side-effects not only during vaccination which were from the anxiety or stress of the injection itself but, also during the 15 minutes that the patients were kept for surveillance. The patients did not require any hospitalization or any additional medical care. They just got monitored by a nurse and some of them became better after drinking water and taking rest on the chair for 15 minutes or a bit longer than that. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The outcome of the fainting and lightheadedness/dizziness was not reported. This report was serious (Other Medically Important Condition).; Sender's Comments: V0: 20210420689-Covid-19 vaccine ad26.cov2.s-Fainting. This event is considered unassessable. The event has an unknown/unclear temporal relationship, is unlabeled, and has unknown scientific plausibility. There is no information on any other factors potentially associated with the event.</p> |

| 1243829 | 4/22/2021 | NY | 78 | F | 2/8/2021 | 2/18/2021 | On 2/18/21, 10 days after receiving the vaccine, I donated blood as usual. About 30 minutes later I was light headed, had abdominal cramping pain, bowel emptying and possibly fainted. I was transported by EMTs to the ER and was later diagnosed with inflammatory bowel by a CT scan. I took antibiotics and was feeling fine. My gastroenterologist performed a colonoscopy on 3/24/21 and the findings were that I was healed and tissue samples were normal. 3/25/21 I had an annual physical and was told I was in good health. Later that afternoon I began feeling light headed upon standing. In the night I called my health insurance hotline because my blood oxygen meter was beeping continuously. The Dr. on call told me to go by ambulance to the ER. When sitting or lying down, I felt fine and all the tests at the ER for my heart and my vital signs were good. A few hours later, they did a chest Xray and then a CT scan of my lungs which showed a saddle embolism. I had also thought I had bruised my knee if and when I fainted on 2/18 and 10 hours later a blood clot was found by ultrasound of my left knee. I was given blood thinners in the ER and then in ICU where I spent the next night. I am now taking Eleris. I was also given pantoprazole for GERD coughing the next day. I continue to have periods of abdominal cramping/pain, light headedness in waves and pressure in my head. I have discontinued the stomach medication with some feeling better with the lightheadedness. |

| 1235714 | 4/21/2021 | VA | 19 | F | 3/23/2021 | 3/23/2021 | Nausea; Passed out; Felt a little dizzy; Mumbling, slurred speech; Developed a "static" feeling in her head; Eye shutting; Weakness in her left arm and leg; This is a spontaneous report from a contactable physician. A 19-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, lot number/expiration date not reported), intramuscular on 23Mar2021 as single dose for COVID-19 immunization. Medical history included seasonal allergies from an unknown date. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, it was unknown if the patient has been tested for COVID-19. Concomitant medication included fluoxetine 60 mg taken for an unspecified indication, and an unspecified oral contraceptive. It was reported that on 23Mar2021, the patient received Pfizer Covid vaccine and felt a little dizzy on 11:00. She also started noting mumbling, slurred speech, passed out for about 15 (unspecified) after using the bathroom, developed a "static" feeling in her head and then noted her left eye shutting and then weakness in her left arm and leg. She was taken to the Emergency Room (ER) for evaluation. Symptoms lasted about 5 hours. She fell asleep in the ER. Symptoms seemed to clear by about 8:30 PM. She had lab and head CT at the hospital which were essentially normal. She felt okay the next day, but had some nausea for a couple days starting on the 3rd day on 25Mar2021. She stated she feels fine at the time of report in the Student Health Clinic and asked whether she should receive her second Pfizer dose scheduled on 20Apr2021. The adverse events result in Doctor or other healthcare professional office/clinic visit and Emergency room/department or urgent care. No treatment was received for the adverse events. The outcome of the event nausea was recovered in Mar2021, and for other events was recovered on 23Mar2021 20:30. Information about lot/batch number was requested.; Sender's Comments: Based on the information currently available and temporal association, a possible causal relationship cannot be excluded between the suspect product BNT162B2 and the reported event Passed out. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, |

| 1235515 | 4/21/2021 | MI | 91 | F | 2/23/2021 | 2/23/2021 | 48 days post first vaccine and has not received the second dose; Weak; Underweight; Nausea; Dry Heaving; Upper Respiratory Infection; Fainted; Chills; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOPE (Fainted) in a 92-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 023M20A) for COVID-19 immunisation. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event. On 23-Feb-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 23-Feb-2021, the patient experienced SYNCOPE (Fainted) (seriousness criterion medically significant) and CHILLS (Chills). On 16-Mar-2021, the patient experienced UPPER RESPIRATORY TRACT INFECTION (Upper Respiratory Infection), DYSPNOEA (Dry Heaving) and NAUSEA (Nausea). On 12-Apr-2021, the patient experienced INAPPROPRIATE SCHEDULE OF PRODUCT ADMINISTRATION (48 days post first vaccine and has not received the second dose), ASTHENIA (Weak) and UNDERWEIGHT (Underweight). On 23-Feb-2021, SYNCOPE (Fainted) had resolved. On 28-Feb-2021, CHILLS (Chills) had resolved. On 06-Apr-2021, UPPER RESPIRATORY TRACT INFECTION (Upper Respiratory Infection) had resolved. On 12-Apr-2021, INAPPROPRIATE SCHEDULE OF PRODUCT ADMINISTRATION (48 days post first vaccine and has not received the second dose) had resolved. At the time of the report, DYSPNOEA (Dry Heaving), ASTHENIA (Weak), UNDERWEIGHT (Underweight) and NAUSEA (Nausea) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On an unknown date, SARS-CoV-2 test: negative (Negative) Negative. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. She reported that she Fainted, and had chills, after the first vaccine. About 2-3 weeks after Vaccination she had an Upper Respiratory Infection with Negative COVID Test. She had Nausea, and Dry heaving since then. She feels Weak and Underweight. Today 12APR2021 and 48 days post first vaccine, She has not recovered from her upper respiratory infection. MD and Cardiologist told her to get the second vaccine. She wants to receive the second |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

vaccine but she would like to delay it more, until she feels 100% well. Patient had a pneumonia shot and Flu shot SEP2020.; Sender's Comments: This case concerns a 92-year-old female with a serious unexpected event of syncope, and nonserious unexpected upper respiratory tract infection, dyspnea, asthenia, underweight, inappropriate schedule of product administration and expected chills, nausea. Event onset the same day as first dose mRNA-1273. Events resolved. Based on current available information and temporal association between the use of the product and the start date of the event, a causal relationship cannot be excluded.

| 1235774 | 4/21/2021 | MO | | M | 4/6/2021 | 4/6/2021 | fainted/passed out; patient passed out; This is a spontaneous report from a contactable pharmacist reporting same events for suspect products for 4 patients. This report is for the 4th patient. Follow-up (06Apr2021) was received from same reporter and processed together with initial information. A male patient of an unspecified age received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, Lot Number: ER8729; Expiration Date: 20Jul2021), via an unspecified route of administration on 06Apr2021 as SINGLE DOSE for covid-19 immunization. The patient medical history was not reported. Concomitant medication(s) included saline [sodium chloride] (SALINE [SODIUM CHLORIDE]). The patient reported that after administering the Covid 19 vaccine on 06Apr2021, within about 20 minutes there were 4 patients with reactions. The patient experienced fainting/passed out on an unspecified date and patient passed out on 06Apr2021. Three people fainted and one had seizure after receiving the first dose of the Pfizer-BioNTech Covid-19 Vaccine. These patients had just received the Covid 19 vaccine and were still being watched within the 15-minute post vaccination time. All 4 patients received the Covid 19 vaccine from the same lot number but not from the same vial. Seriousness of events was medically significant. The outcome of events was unknown. Information on the lot/batch number has been requested.; Sender's Comments: Considering close temporal association, a possible contributory role of bnt162b2 to the events fainted and passed out cannot be completely excluded. Relevant medical history and details of clinical course are missing for further assessment. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to RAs, Ethics Committees, and Investigators, as appropriate. |

A 47-year-old female patient (non-pregnant) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EK9231), via an unspecified route of administration, administered in right arm on 14Jan2021 at 08:30 at a single dose, second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: EL8982), via an unspecified route of administration, administered in right arm on 03Feb2021 at a single dose for COVID-19 immunisation at hospital. Medical history included known_allergies Penicillin, sulfur, NSAIDs. Patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Prior to vaccination, patient was not diagnosed with COVID-19. The patient received medications within 2 weeks of vaccination. Concomitant medications included gabapentin, trazodone, fluoxetine hydrochloride (PROZAC), oxymetazoline hydrochloride (CLARITIN ALLERGIC). Since the vaccination, patient has been tested for COVID-19. After second dose, but before patient left waiting area, on 17Mar2021, felt dizzy & fainted. Taken to ER. Had an abnormal EKG. Followed up with heart doctor. Blacked out several weeks ago while going to bathroom & got head injury. Husband and 2 sons tested positive for COVID mid March. Had a weird rash on elbows, been having headaches. Went to doctor about rash; not sure of cause. Told representative several times during contact updates for sons; representative said patient can't get COVID if she has been vaccinated. Went to doctor about head injury (diagnosed concussion on 17Mar2021. Supposed to see cardiologist and orthopedist for follow up but need to postpone due to positive COVID test on 17Mar2021. Started feeling more unwell several days ago; been fatigued for weeks. Symptoms included coughing with phlegm, headache, light-headed, mouth sores, sore throat, laryngitis, extreme fatigue, muscle aches. Positive rapid test 05Apr2021; PCR test on 05Apr2021; waiting |

A 60-year-old female patient received the first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE) lot number: EN6199, via an unspecified route of administration, administered in right arm on 04Mar2021 15:00 as single dose for Covid-19 immunisation. Medical history included known allergies to Atovaquone/proguanil. Concomitant medications were not reported. On 04Mar2021, approximately 10 minutes post vaccine, the patient fainted in the waiting area. She was told by a witness that she fainted two times. EMTs administered an IV and did a simple EKG. The patient lost all color and her skin was wet and clammy. EMTs were concerned about her heart and transported her to the ER where she had a full EKG and lab work for D-Dimer to consider blood clots. The patient has remained lightheaded for weeks after the vaccine. The outcome of the events was recovered with sequelae.</p> |

A 46-year-old female patient received bnt162b2 (BNT162B2), dose 1 via an unspecified route of administration at the age of 46-years-old, administered in Arm Left on 01Apr2021 13:30 (Lot Number: ER8734) as single dose for COVID-19 immunization. Medical history included ongoing High Blood Pressure, hyperthyroidism from 28Mar2021 and ongoing, allergy to Cheese and penicillin. Everyone in her family has done fine with the vaccine except her. Concomitant medications included thiamazole (METHIMAZOLE) taken for hyperthyroidism from 28Mar2021 and ongoing; atenolol, chlorthalidone (ATENOLOL AND CHLORTHALIDONE) taken for hypertension from an unspecified start date and ongoing; amlodipine (AMLODIPINE) taken for hypertension from an unspecified start date and ongoing. On Thursday 01Apr2021, the patient had her first shot and she stayed for 30 minutes. After she was allowed to leave, she passed out and went completely unconscious and she was rushed to the ER. She sat for the 30 minutes, then got to her car and it took 10 minutes to get to department store and with in 7 minutes of being at department store she started feeling nauseous then came the fatigue and she felt nauseous and felt like she was going to pass out so she sat down, she didn't know what was going on. It started with her feeling nauseous and then she started to feel weak like someone sucked all her energy out. She states in between going unconscious and coming to, she threw up and peed on herself and had shaking and chills. The EMS took her to the ER. The adverse events occurred on 01Apr2021 14:30 (as reported). The ER let her go home Thursday night. They gave her an IV and did lab work and the lab work came back fine. It was a combination of her meds and the vaccine or it was just the vaccine. Her primary doctor said it was the vaccine.</p> |

VAERS_ID RECVDDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

She is scheduled 22Apr2021 for her second one and she is calling to see if there is any advice or anything she needed to do for the second shot. Her doctor told her that when she takes it, she needs to be close to the ER so a doctor can monitor her. Treatment for events included IV fluids to help from being dehydrated and throwing up, Emergency Room, possibly Benadryl. The events required a visit to Emergency Room on 01Apr2021 and to the Physician Office on 05Apr2021. The outcome of the events passed out and went completely unconscious and felt weak like someone sucked all her energy out was recovered on 02Apr2021 while for the rest of the events was recovered on 01Apr2021. The events were considered as serious (medically significant). No Prior Vaccinations (within 4 weeks), no adverse events following prior vaccinations. Information on Lot/Batch number was available. Additional information has been requested.

| 1235495 | 4/21/2021 | MA | | F | 3/26/2021 | 3/27/2021 | extreme dizziness; fainted; unable to get a reading because the pressure was so low; diarrhea; felt like I was hallucinating; sweating; shivering; vomiting; nausea; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOP (fainted) in a 40-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 011J20A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No reported medical history). On 26-Mar-2021 at 1:45 PM, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 27-Mar-2021, the patient experienced HYPOTENSION (unable to get a reading because the pressure was so low), DIARRHOEA (diarrhea), FEELING ABNORMAL (felt like I was hallucinating), HYPERHIDROSIS (sweating), CHILLS (shivering), VOMITING (vomiting) and NAUSEA (nausea). On 27-Mar-2021 at 1:30 AM, the patient experienced SYNCOP (fainted) (seriousness criterion medically significant) and DIZZINESS (extreme dizziness). 27-Mar-2021 at 1:30 AM, the patient experienced LOSS OF CONSCIOUSNESS (lost consciousness) (seriousness criterion medically significant). At the time of the report, SYNCOP (fainted), DIZZINESS (extreme dizziness), DIARRHOEA (diarrhea) and VOMITING (vomiting) had resolved and HYPOTENSION (unable to get a reading because the pressure was so low), FEELING ABNORMAL (felt like I was hallucinating), HYPERHIDROSIS (sweating), CHILLS (shivering) and NAUSEA (nausea) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 27-Mar-2021, Blood phosphorus: 0.6 mg/dl and 4.7 mg/dl. On 27-Mar-2021, Electrocardiogram: abnormal (abnormal) elongated heart rhythm (Arrhythmias) and normal normal. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. Treatment for the events included IV fluids and oral phosphorus.; Sender's Comments: Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. |

| 1238249 | 4/21/2021 | CA | 17 | F | 4/6/2021 | 4/6/2021 | emale client received her first dose of Covid Vaccine (Pfizer, Lot # ER8729, Expiration date: 07/31/2021) at 1132. This minor client, accompanied by her mother proceeded to the observation room for her 15 minute wait period. Co-lead RN, was present in the observation room assessing another client. At 1137 this client's mother loudly voiced from the back of the room, "she's feeling dizzy" and co-lead observed client was hanging her head. Co-lead and EMT1 hurried to her side, and client stated she was feeling lightheaded and dizzy and was suddenly pale and diaphoretic. EMT1 immediately transferred her from chair to floor with full assistance to prevent a fall/injury. Client was placed in trendelenburg position by elevating feet and placing them on the chair. Client was unresponsive for about 15 seconds until she regained consciousness and returned to baseline mentation. Client verbalized she "blacked out" and did not remember being placed on the floor. Client denied pain and respiratory distress. EMT1 called 911 at 1138. Client and her mother deny she has any medical issues, allergies, medications, or previous incidence of syncope. At 1145, first set of vitals taken by EMT1 indicate hypotension and bradycardia as follows: BP 68/44, HR 58, and RR 16. At 1145 paramedics arrived and assumed care after receiving report from EMT2. At 1150 medics took VS with BP 70/50, HR 54, and blood glucose 95, and determined they would start an IV to administer a 500cc bolus for dehydration and to improve BP. Client was also placed on 2L O2 for comfort, no desat noted. At 1200, medics advised client's mother and co-lead they would transport client to the Hospital for further evaluation. Medics departed at 1205 to transport client to the hospital. |

| 1237090 | 4/21/2021 | MI | 27 | F | 2/5/2021 | 2/7/2021 | Vertigo Presents to medical clinic. C/o dizziness x 2 wk Feeling persistently dizzy since the visit on 1/25/21 (12 days ago) for near-syncope. No syncopal episodes. Light-headed, mild imbalance/unsteady. Able to walk but feels like she is floating. Receives 2nd cov-2 vaccine Friday 2/5/21 at about 5pm. Tolerates well. However on Sunday 2/7/21 - awakens with profound dizziness - room is spinning. Persistent. Not positional. Unable to get out of bed. Slept all day. No vomiting. NO paresthesias/HA or other focal neurologic symptoms. Today there is significant improvement but continues to have persistent light-headedness/off-balance/floating - Ok with walking and position changes. No fevers/C/S/Headache. No cough/cold symptoms. 4/20/21 re-evaluation - continues to have mild intermittent light-headedness/dizziness, 1 recurrence of severe acute vertigo with duration 2 days. |
| 1232538 | 4/20/2021 | IN | 30 | F | 4/20/2021 | 4/20/2021 | Pt. received vaccination and less than a couple of minutes the patient was sitting in a chair and fell face first on the floor. She fainted and was not responsive when the pharmacist arrived to the scene. At that point the pt. had a pulse but lying face first on the floor, that is when the EpiPen 0.3mg dose was injected in the right thigh. The pt. was at that point able to communicate and able to identify her name and date. App. 5 min later the paramedics took over the scene and the pt. sat up and started to feel better. |
| 1232611 | 4/20/2021 | CO | 25 | M | 4/20/2021 | 4/20/2021 | Patient passed out shortly after receiving his second dose of moderna vaccine. |
| 1232626 | 4/20/2021 | OH | 27 | M | 4/20/2021 | 4/20/2021 | Patient experienced syncope shortly after receiving first dose of Pfizer COVID vaccine in the lobby during his 15 minute waiting period. Patient hit chin and did lacerate it; this was attended to by NP who was administering shots at the time. Patient mentioned that he "tasted like he threw up," was instructed to drink water. NP took vitals and patient showed no sign of concussion. In the mean time patient was trying to get ahold of a friend or family member to come pick him up. Still felt lightheaded 15 minutes after being attended to, at this time we called the squad. Before the squad could show up patients brother came to pick him up... was whisked away too quickly for us to stop him. Patient was adamant about us not calling squad because he does not have insurance. |

| 1232481 | 4/20/2021 | GA | 35 | F | 4/11/2021 | 4/11/2021 | I recieved the vaccine on 04/11/2021 at Pharmcy in the left arm and started having numbness/tingling in my extremities 72 hours later. I had fever chills and aches within the first 24 hours after the vaccine. The body aches were there till Thursday. Once the body aches started subsiding, I felt the numbness and tingling in the legs on Thursday. Then it spread to my arms. Stays in the legs. Then I started feeling in back of arms and upper back. Certain things make it worse, laying and sitting is worse. Standing helps it. I have no swelling. I have never had a reaction before to a vaccine. No problems ambulating, no breathing problems, no wheezing. I would also like a refill of my headache medication and inhaler today. The patient is a 35 year old female who presents with a complaint of COVID vaccine reaction. COVID Janssen J&J vaccine recieved on 04/11/2021 at Pharmacy, IM in left deltoid. Several hours later I had fever/chills/body aches/ racing heart which lasted 24 hours. The body aches lasted for 72 hours. I began noticing numbness and tingling in my extremities as well as in my upper back. The numbness and tingling worsens when I sit and lay down. No bowel/ bladder problems. I also have Raynaud's and I do not know if that ties in to my symptoms at all. My nipples have also been abnormally hard and sensitive. Note: hx of raynauds denies cp/sob/rash/abdominal pain/n/v/bowel or bladder incontinence/seziures/syncope. symptoms are constant. no fam hx of neurological conditions. no injury and no fall. able to walk okay. no muscle weakness. no rashes. pt denies anaphylaxis |
| 1232643 | 4/20/2021 | CA | 20 | F | 4/16/2021 | 4/16/2021 | patient c/o shortness of breath and dizziness. | 1233000 | 4/20/2021 | IN | 19 | F | 4/19/2021 | 4/19/2021 | Patient was given Moderna shot #1 by pharmacist. She was waiting her 15 minutes afterwards and she fainted in her chair and then fell out of her chair. There was no loss of consciousness. She does not know if she hit her head or not. She was on the ground and we got her leaning up against the wall sitting down. She said she was not feeling well before she fainted (did not report to staff) and then she did not remember passing out. She felt nauseous and hot/clammy afterwards. |
| 1233060 | 4/20/2021 | MA | 33 | M | 4/18/2021 | 4/18/2021 | Participant was in observation area when they fainted. Recovered quickly and left on his own accord. |
| 1233150 | 4/20/2021 | MA | 34 | M | 4/20/2021 | 4/20/2021 | syncope after 15 post administration |
| 1233166 | 4/20/2021 | PA | 44 | M | 4/17/2021 | 4/18/2021 | Lost consciousness, Either a seizure or passed out. Cardiac events - Varied and Rapid Heart rate, Low Potassium and Low Magnesium |
| 1233174 | 4/20/2021 | OH | 42 | M | 4/16/2021 | 4/16/2021 | While in waiting area client experienced loss of consciousness and seizure-like activity lasting approximately 48 seconds per nurse that responded to incident. Loss of bladder control noted. Squad responded and transported patient to the hospital via ambulance. Patient was coherent prior to transport. He states he was admitted to the hospital and Observation x 24 hours. He had a CT scan and bloodwork, both normal. Neurologist at the hospital told him he experienced syncope and no seizure activity was suspected. He states a history of feeling faint when he sees blood. He states the Neurologist advised he get the second dose and lay down after the shot. |

| 1232432 | 4/20/2021 | VA | 59 | F | 3/4/2021 | 3/9/2021 | Immediately following the vaccine, at 3 minutes into my 15 minute waiting period, I had saw black dots on the ceiling, had rapid heartrate and a dizzy spell. It quickly subsided. Five days later, I experienced another vertigo type dizzy spell and from that time, I have been generally very dizzy. At times, the dizzy spells have also included rapid heart rate and a feeling of near fainting. At the time the dizziness started, I also had spleen pain and gut fizzing. I am now over six weeks past the vaccine, and the rapid heart rate, gut fizzing and spleen pain have subsided but the dizziness is persisting. |
| 1232076 | 4/20/2021 | FL | 61 | F | 4/20/2021 | 4/20/2021 | Patient suffered a syncopal episode and confusion while under observation following her booster vaccination. Patient has a history of diabetic related emergencies but this syncope/confusion resolved itself while under the care of on site paramedics. Patient was transported to a hospital of her choosing. |

| 1233196 | 4/20/2021 | MA | 20 | M | 3/12/2021 | 3/20/2021 | Admission HPI: Right-sided chest pain began 2 days prior to admission (3/19) after getting out of car, without identifiable trigger. Pain was sharp, pleuritic, and worst with movement; didn't feel it when still. Pain not responsive to ibuprofen or heating packs. Reported 30-60 seconds of self-resolving heart racing during ocular migraine which has been his baseline for years. Not associated with SOB (at rest or with exercise), palpitations, presyncope, or syncope. No viral URI symptoms, N/V, or rash. He did receive his 2nd Moderna COVID vaccine about 1 week PTA, followed by 36hrs of fevers, chills, and body aches. Given persistence of pain, Patient asked his parents to present to urgent care. In UC, he was noted to tachycardic with CXR with bibasilar atelectasis and b/l effusions, per report. Given continued tachycardia, decision was made to transfer to ED to r/o PE. In ED, tachycardic to 104-116 and tachypneic 22-26. Had one episode of tachycardia to 182 iso ocular migraine. Endorsed chest pain but points to R middle abdomen when asked where worst. Exam was unremarkable. He received 1 dose of morphine which reduced pain from 10/10 to 0/10. Labs notable for leukocytosis (14.61), thrombocytopenia (422), elevated d-dimer (1.56), and elevated CRP (5.6). Otherwise normal chem and coags. COVID/RVP negative. CXR unremarkable. CTPA showed scattered PEs in b/l lower lobes with small pulmonary infarct in RML. No evidence of right heart strain. Heme was consulted who recommended starting him on lovenox and sending lupus anti-coagulant. Cardiology was consulted who recommended EKG, BNP, and troponin, all of which were normal and reassuring against right heart strain. ECHO was therefore deferred to the AM. The decision was made to admit. Upon arrival to the floor, Patient was tachycardic 114 and tachypneic to 22, otherwise stable vitals. He denied any pain since morphine. Denied any unexpected weight loss; reports that car ride was short. Mom reports that Patient has been less active d/t cold weather and baseball being on hold. Denies family or personal history of clots. Last seizure ~13 years ago. Hospital Course: (3/21 - 3/22) Patient was admitted to the hematology service. He was therapeutically anticoagulated with LMWH injections and his anti-Xa level prior to discharge was 0.92. (goal 0.5-1.0) Lower extremity ultrasound with Doppler showed patent veins |

U

and no evidence of DVT and upper extremity ultrasound showed no evidence of DVT, though there was potential evidence of collateralization seen in mid and distal third of right subclavian vein and left internal jugular vein. Since this was an unprovoked PE, a full thrombophilia workup was sent and will be followed up by the outpatient hematology clinic. Cardiology consulted regarding possibility of right heart strain and the tachycardia during migraine episodes. Echocardiogram performed on 3/22 was technically limited but showed no gross abnormalities. The cardiology team requested a repeat echo scheduled outpatient for 1-2 months after discharge.

FAINTING; INCREASED BREATHING; LIGHTHEADEDNESS/DIZZINESS; NAUSEA; This spontaneous report received from a consumer concerned multiple patients (18). The reporter saw this information on the news. The patients' weight, height, and medical history were not reported. The patients received covid-19 vaccine ad26.cov2.s (suspension for injection, route of admin not reported) dose, start therapy date were not reported, 1 total administered for prophylactic vaccination. The batch number was not reported and has been requested. No concomitant medications were reported. On an unspecified date, 18 patients experienced fainting, increased breathing, dizziness/lightheadedness, and nausea. 4 out of the 18 patients went to the hospital. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The outcome of the nausea, lightheadedness/dizziness, fainting and increased breathing was not reported.. This report was serious (Other Medically Important Condition). This case, from the same reporter is linked to 20210420362.; Sender's Comments: V0-20210420809-covid-19 vaccine ad26.cov2.s -Fainting. This event(s) is considered unassessable. The event(s) has a compatible/suggestive temporal relationship, is unlabeled, and has unknown scientific plausibility. There is no information on any other factors potentially associated with the event(s).

I threw up 5 times and my arms started to get numb. I had a fever when I got home and I couldn't move because my body hurt so badly. Migraine and dizziness has been persistent ever since and is interfering with my daily life. Been treating with tylenol which helps a little but not completely. As soon as I stand up and move I feel like I'm going to pass out. |

| 1235462 | 4/20/2021 | WA | 62 | F | 3/26/2021 | 3/26/2021 | 2 hours after receiving the vaccine, I grew exhausted and had to sleep into late evening and was chilled, had a fever of 101 and developed severe pain and inflammation on the top of my collar bone that was feverish and migrated toward my shoulder region on the same side as my vaccine. Ibuprofen would not help with the pain but helped with the fever. My mind told me that I had things to tend to the next day, but still was forced to sleep off and on for 2 more days. After a week and a half, not only did I have thirst, but also food didn't taste right and was metallic. This lasted for 2 days and finally my taste was restored. The exhaustion lasted off and on for 2 weeks and I just listened to my body. The pain and inflammation on my collar bone has subsided 4 days ago but still have pain in my shoulder when I sleep. On April 5 around 8:30 a.m. a nasty virus hit me out of the blue. I grew weak and tired and had to go to bed. I slept all day until around 9:00 p.m. and woke to uncontrollable diarrhea and fainting spell while in the bathroom. I had abominable pain and nausea that last for a half hour and then I returned to bed. The next 2 days, I was weak and exhausted but continued with my regular routine. My equilibrium is still affected from time to time. |

| 1233320 | 4/20/2021 | NJ | 22 | M | 4/20/2021 | 4/20/2021 | Patient fainted 15 minutes after getting his first dose of covid-19 vaccine. He fainted for about 15-20 seconds and came back saying his vision decreased and thought he was dreaming. He was breathing normal upon waking and didn't complain of anything else. he was lying flat until EMS arrived on site after approximately 10 minutes. He was able to get up and leave the facility by himself and didn't get transported to any medical facility. |
| 1234781 | 4/20/2021 | | 45 | F | 4/5/2021 | 4/6/2021 | day after shot: syncope, fever, chills, running high BP and has a cold. Following up with PCP. |
| 1233611 | 4/20/2021 | NC | 20 | M | 4/19/2021 | 4/20/2021 | Patient had bowel movement after waking up and going to bathroom. He fainted, calling for help to his parents on his way down to the floor. Parents found him on floor cognitively responsive but not moving body (He does not remember anything after coming to kneel on floor). Parents found him clammy. Mother called 911 and was instructed to keep him lying on floor. He complained of being cold but was sweaty. Blanket placed over him on floor and kept there until EMS arrived. Patient c/o nausea. They got him into rolling chair and was going to leave when he had another episode of dizziness, clammy and nausea. EMS transported him to hospital. Blood work was done with no abnormalities noted. Upon discharge he complained of headache. Nausea dissipated upon eating and some ginger ale. Patient had previous had "covid arm" with first injection but no other complaints. |
| 1235138 | 4/20/2021 | CA | 27 | M | 4/19/2021 | 4/19/2021 | Fainting (laid head on table) within seconds after vaccine administration. Assessed and aroused patient. Took blood pressure, put cool wet towels on neck, kept patient alert and put in supine position with legs elevated on chair. Continued to monitor blood pressure and when able to sit up was given food and water. Patient was observed for approximately 1 hour |

| 1229158 | 4/19/2021 | NY | 21 | M | 4/11/2021 | 4/11/2021 | a number of minutes after receiving the vaccine, patient fainted while seated, fell backwards in his chair, and hit his head on the floor. as a result of the fall, the back of his head was cut. he remained on the floor and gauze was held against the cut to slow/stop the bleeding until the ambulance service arrived. Patient was taken to the hospital for treatment of the cut. Patient is currently in good health. |
| 1229126 | 4/19/2021 | MN | 59 | F | 4/13/2021 | 4/18/2021 | Presyncope. Was walking around lake and for about 45 minutes I felt like I was going to faint. I never did faint but I had to stop and rest. This has never happened before when I was walking or running or anything. I still feel the remnants of that feeling today 1 day later but otherwise ok. The episode had nothing to do with low blood sugar as that is a completely different feeling. This felt like a blood flow to brain issue. |
| 1229056 | 4/19/2021 | FL | | U | | | Intense shoulder pain at time of injection. Shoulder joint pain, not actually at injection site. 24 hrs after shot got a high fever, vomiting, fainting, and still more shoulder pain. Can not move my arm to brush teeth, brush hair, very limited mobility in the right arm. Not getting better and this is day 4. |
| 1229043 | 4/19/2021 | FL | 54 | F | 4/19/2021 | 4/19/2021 | 11:15. Patient had fainted after her first vaccination, so we had her receive the second dose in a quiet, secluded part of clinic. Shortly after the 2nd dose, she said she felt weak, and slumped in her chair. She was assisted to the floor. EMS and NP in attendance. Patient was quiet but anxious. VS 144/84; HR 99; r 22-25/ Pulse oximeter 100 on RA. Fingertick glucose 111 @ 11:20 am. Patient was more awake, talking about her family. Her cousin and sister in law were in attendance as well. Continued her observation period in the quiet environment. Recovered without incident and left at 11:40 am. |

| 1228868 | 4/19/2021 | FL | 49 | M | 4/19/2021 | 4/19/2021 | Patient received vaccine at 10:29am. Upon walking toward post-vaccination area, patient fainted at 10:30am. He struck his head on the ground when he passed out. Patient regained groggy consciousness at 10:31am and was able to answer basic questions and seemed somewhat alert. Cold compress was applied to head and neck. EMS was called to assess patient for potential concussion. Patient was taken to local emergency room for follow up assessment/treatment |
| 1228956 | 4/19/2021 | OH | 55 | F | 3/31/2021 | 3/31/2021 | Approximately 5-10 minutes after receiving vaccine, patient felt nauseous, lightheaded, and she fainted and lost consciousness. EMS was called and due to patient's blood pressure being very low, she was transported to the clinic emergency department. Patient reports she received something by IV to help with blood pressure and given the patient's heart history they performed a chest x-ray and blood work, which came back normal. Patient also reports that she experienced a heaviness in her chest for a week following vaccination, but after one week it went away. Patient denies any difficulty breathing. |

| 1228872 | 4/19/2021 | NY | 26 | M | 3/18/2021 | 3/18/2021 | I received the J&J vaccine at 10:00am on March 18, 2021 at the Community Center. By about 5:00pm, I started to feel minor flu-like symptoms, but as the night progressed it got significantly worse. Around 8-9pm, I was bedridden with the worst chills/shaking I've ever experienced in my life. Around 9:30-10:00pm, I was filling water at my sink and projectile vomitted multiple times into the sink and could not make it to the bathroom. Subsequently, I ate a bagel and drank lots of water, knowing my vomitting could make me dehydrated. Throughout the night, I was awake and shaking, and drank and filled my water bottle repeatedly. At 8:00am, I was filling my water, and without my knowledge of awareness, fainted on my kitchen floor, dropping the Brita filter and likely hitting my head. My roommate heard the commotion and saw me passed out in our kitchen. He tried to wake me up and I phased in, but then subsequently phased out again 20-30 seconds later as I was trying to stand and likely hit my head again. My roommate eventually got me over to our couch and called EMTs. Upon their arrival, EMTs checked my pulse, which was fine, and saw an open laceration on the back of my head, so they took me to Hospital to access the Trauma Center. On the way, I threw up repeatedly and was very lightheaded. Upon my arrival at Hospital, I was checked for any neck bone breaks, given an IV, a CT scan, an EKG, and staples were placed in the back of my head to heal the laceration. After my release, I was bedridden for 2-3 days and required a daily nap during work (1-2) hours for the next 1 1/2 to 2 weeks. For a while, everything was fine, but recently during the first two weeks of April, it has become apparent that my head is foggy and reacts to changes in the weather, which leads me to believe that I likely banged my head pretty good when I fainted those two times. |
| 1228812 | 4/19/2021 | | 61 | M | 4/8/2021 | 4/8/2021 | Feeling unwell. "Burning" head to toe, shakes, near syncope, sweats, tiredness, dizziness, lightheaded. Onset of symptoms less than 1 hour. Patient denied symptoms of chest pain, (L) arm pain, or SOB. Patient sent by EMS to local emergency department. |

| 1227816 | 4/19/2021 | IA | | F | | 4/7/2021 | <p>FAINTED; SEIZURE; STOPPED BREATHING; LIGHT HEADED; CYANOSIS; This spontaneous report received from a health care professional (public health nurse) concerned a female of unspecified age. The patient's weight, height, and medical history were not reported. The patient received covid-19 vaccine ad26.cov2.s (suspension for injection, route of administration not reported, batch number: 043A21A, and expiry: 31-DEC-2069) dose was not reported, 1 total, administered on left arm on 07-APR-2021 for prophylactic vaccination. No concomitant medications were reported. On 07-APR-2021, about 5 minutes after vaccination, the patient experienced lightheadedness, then fainted, had a seizure, stopped breathing (for 10 seconds), and developed cyanosis (turned blue). The nurse did cardiopulmonary resuscitation (CPR) and the Emergency Medical Services (EMS) was called. By the time the EMS arrived, the patient felt better. The action taken with covid-19 vaccine ad26.cov2.s was not applicable. The patient recovered from stopped breathing on 07-APR-2021, and was recovering from light headed, fainted, seizure, and cyanosis. This report was serious (Other Medically Important Condition, and Life Threatening). This case, from the same reporter is linked to 20210417723.; Sender's Comments: v0 This report involves a female patient of unspecified age who experienced lightheadedness, then fainted, had a seizure, stopped breathing and developed cyanosis about 5 minutes after receiving Janssen COVID-19 Vaccine Ad26.CO2.S for prophylactic vaccination. Given the close temporal relationship the events are considered possibly related to the vaccination.</p> |

| 1227977 | 4/19/2021 | IN | | M | 3/24/2021 | 3/26/2021 | <p>Pulmonary embolism/ blood clot/ passed out; This is a spontaneous report from a contactable consumer (patient's daughter). A male patient of an unspecified age received BNT162B2 (Pfizer COVID-19 vaccine), dose 1 via an unspecified route of administration, administered in arm, side unknown, on 24Mar2021 14:30 (Lot Number: EN6208) as single dose for COVID-19 immunisation. Vaccination facility type was clinic. Medical history included colon cancer in 2011. He had cancer in 2011 but resolved that year without chemotherapy or radiation. His lab work was good. There were no concomitant medications. No prior vaccinations (within 4 weeks). No family medical history relevant to AE. The patient experienced pulmonary embolism on 26Mar2021 with fatal outcome. The reporter was reporting on the Pfizer COVID vaccine that her father received. She stated he died from a blood clot after receiving the first dose. Stated she needs help because he had no health issues and he died. She just wanted this information to be out there and for people to be aware. This morning they had been reading on the news that the Johnson and Johnson vaccine is on hold. It seems to be put on the market without research. She felt like her father was a guinea pig. Her mother didn't want to get her second dose. Stated there seems to be an issue with Pfizer too. Her father had no issues whatsoever. His death certificate stated the cause of death was a pulmonary embolism, but he had no history of blood clots. Passed away Friday 26Mar2021 at 11:33 am. The reporter stated when he went to Emergency Room they thought he was having a heart attack. All physicians were wondering what happened because he had no health issues. The event required a visit to the emergency room that day because he passed out at his job. The patient underwent lab tests and procedures which included lab work: good in 2011. The patient died on 26Mar2021. An autopsy was performed that revealed pulmonary embolism.; Reported Cause(s) of Death: Pulmonary embolism; Autopsy-determined Cause(s) of Death: Pulmonary embolism</p> |

| 1227829 | 4/19/2021 | | 62 | F | 4/5/2021 | 4/12/2021 | I received the Janssen COVAX on Monday morning, 5 Apr 2021. A week later, on Monday evening, 12 Apr 2021, I experienced extremely painful leg cramps and broke out in a sweat. I felt extremely nauseous, and weak, this was followed by a sever pain in my head that was so extreme that I passed out. After coming to, the pain in my head finally began to subside, along with the leg cramps. My husband indicated that I was unconscious for just under a minute. For the next two days, I had bouts of nausea, headaches, sweats, and was extremely tired. On Wednesday, 14 Apr, after learning of the issues related to the Janssen vaccine, and the symptoms described being what I experienced, I contacted the advice (cont'd)..Additional information for Item 18: Line and was told to go to Emergency Room at the hospital, which I did. I do not feel that they addressed my concerns or the symptoms that I was experiencing, and at no time did they try to determine if it was due to the vaccine. The discharge papers did not even address the "event" and the "symptoms" that I described. They did not take any information down related to the vaccine, lot number, etc., that I had received. They seemed to go through a set routine: blood pressure, blood work, temperature, EKG, and CAT scan. 21. (continued)...Visited Emergency Room, however, was requested by ER to go to Primary Care as follow-up, however, as a Employee we cannot be seen by Primary Care on THIS site. Instead , we have to go on the local clinic to receive care. The issue is that this was a vaccine that I was scheduled by my leadership to receive, with no choice in choosing which vaccine I could receive, and without follow-up care for adverse reactions. The hospital did not indicate to me that I should report this incident, however, I am concerned as a result of the "event" that I experienced, that it should be reported. Furthermore,we should have a choice as to which vaccine we want to receive, just as everyone does. Your form does not allow for input addresses Also, your form does not allow for a phone number. I am out of the country. |

| 1227418 | 4/19/2021 | AK | 23 | F | 4/18/2021 | 4/18/2021 | Patient was seated, given injection IM into right deltoid and immediately fainted and gave a jerk of the body. Immunizing pharmacist yelled out for Rapid Response from the ER. Emergency room staff was on scene within 1 minute. They measured patients pulse and BP and took her to the emergency room for monitoring. Patient was gone from immunizing area for 30 minutes. She came back to see us, looking much better and said that she faints all the time. She remarked she was glad she was seated because when she faints when she stands and hits her head she has a sore head for days. She proceeded to schedule her second vaccination utilizing the QR reader we had provided to all patients. Although she didn't tell us beforehand, afterward she told us she faints all the time, that it isn't unusual, and that she had deliberately eaten food and drank plenty of liquids before she came so that it wouldn't be a problem. Patient stated that she was fine and fit to drive and unconcerned about the reaction. |
| 1227406 | 4/19/2021 | | 25 | M | 4/14/2021 | 4/14/2021 | Patient complained of feeling anxious a few minutes after receiving the vaccine, while he was just about to walk up stairs to the observation area. . Stated, "I could not see, my eyes went black, and my fingers were tingling. I almost passed out". Clinician immediately sat patient on a chair and gave him water, which he drank. Medics were called to see patient. Vital signs were WNL. Once cleared by medics, patient was escorted to the ground level observation area. He soon reported that he was back to baseline. Medics cleared him as being medically stable. Patient reported that he no longer was light headed and had no visual disturbances. {Patient did say that he often gets anxious with needle injections. |

| 1227948 | 4/19/2021 | FL | 67 | M | 4/4/2021 | 4/4/2021 | fainted; collapsed; This is a spontaneous report from a contactable other health care professional. A 67-year-old male patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, formulation: Solution for injection, Lot number: EP6955), via intramuscular route of administration in deltoid on 04Apr2021 at 02:00 PM at single dose for COVID-19 immunisation. Medical history included allergy to penicillin (PCN), congestive heart failure (CHF), diabetes mellitus (DM) and had chronic/long-standing health conditions (pacemaker). Concomitant medication was not reported. Patient previously received first single dose of bnt162b2 (Lot number: EP6955, Pfizer Covid Vaccine) via intramuscular on 14Mar2021 on deltoid for Covid-19 immunization. Patient fainted while shopping after receiving second dose of vaccine. Patient was fine for initial 15 mins but shortly after collapsed. Patient had BP Of 120/70 an unknown glucose level. Patient was conscious coherent the entire time. On 04Apr2021, patient underwent lab test included blood pressure (BP) with result 102/70. Adverse events were resulted in emergency room or emergency department visit. The outcome of events was unknown. Follow-up attempts are needed; Information related to batch/lot number could be requested. |
| 1228449 | 4/19/2021 | NY | 26 | M | 4/19/2021 | 4/19/2021 | Pt was vaccinated in med eval area with vaccine and recovered 10 minutes lying down and ambulated to observation area with no dizziness. Pt c/o dizziness after sitting in chair & diaphoretic. VS taken 118/72 68P 20R 100%sat. Pt brought to med eval area and lying down with icepack. Recovered lying down, fluids offered. Transition to sitting then standing and walking in med eval area. Denies any dizziness. Recovered for total of 25 minutes. Feeling better after drinking, discharge ambulatory home. HX: fainting, dizziness with vaccines , labwork and BP taken. |

| 1228260 | 4/19/2021 | FL | 63 | F | 4/6/2021 | 4/7/2021 | The morning I received vaccine 4/6/21, I had no ill effects. I received the vaccine about 4 and 1/2 weeks after having Covid. The next morning 4/7/21 I had severe aches and pains and a fever of 99-100.5. I stayed in bed all day, the fever ended at 7 pm that evening. That evening I went to bed feeling weak tossed and turned the enter night had very severe aches and pains worse than normal my entire body from my neck to my legs, the aches and pains were unbearable. I took cipro at 5 am that morning 4/8/21 due to a UTI infection with a lot of water no food. I got up with the aches and pains I had and felt very nauseous. I decided to shower and felt faint. I passed out for 30-40 seconds on my bed according to my husband when I came to I had no recollection of fainting. This all happened at around 7am. I ate a few bites of a half of a ham sandwich and had juice which helped to get me to feeling a bit better. My husband took my pressure that was very low my doctor who I spoke to said this may have caused me to faint but that the vaccine may have led to this as well. I was weak from it all but started to feel better and I?m fine now. My next vaccine is April 27, I?m afraid to take it but the doctor advised to take it. |

| 1230765 | 4/19/2021 | PA | 35 | F | 4/15/2021 | 4/15/2021 | Patient was fine immediately after vaccination. She left our vaccination room to sit down and wait 15 minutes and for some reason did not sit down, but kept walking, then proceeded to lay herself down in an aisle of the store. She says she passed out. I only witnessed her being awake. She urinated herself. She asked for a pillow and cold wash cloth. We got her those. We tried to get her a snack and a juice, but she didn't take those. I had a technician call an ambulance and pressed a button we have that calls the police as well. The police arrived first. The ambulance crew took her out into their truck to be evaluated and said she was fine, but had her mom come pick her up because they just didn't want her to drive. She did tell me before I gave her the shot that she passes out from vaccines. |
| 1230929 | 4/19/2021 | CA | 31 | F | 4/19/2021 | 4/19/2021 | Pt has anxiety to vaccines and fainted. She felled off the chair and regained consciousness within minutes. |

| 1231165 | 4/19/2021 | | 50 | F | 4/17/2021 | 4/18/2021 | I fainted Approximately at 5:30 am while was in the restroom , 18 hours after I received the second dose. Symptoms started with nausea then vomiting , fatigue, fever and chills, I was unconscious for 5 minutes, my jaws were completely locked and my tongue was rolled back to my throat keeping from breathing my family was next to me who was able to open my jaws and keep my tongue out to open my air ways. I was taken to the emergency room by an ambulance there it was decided that it was my bodies reaction to the vaccine. |
| 1231306 | 4/19/2021 | MI | 36 | F | 4/9/2021 | 4/9/2021 | 20 minutes after shot while passenger in vehicle I passed out and went into convulsions for 2 minutes The next day after shot at 7am I passed out again and went into convulsions while blacked out The next few days I did not feel right |
| 1231296 | 4/19/2021 | CA | 29 | M | 4/18/2021 | 4/18/2021 | After administration of the vaccine, pt stood up and fainted. He regained conscious quickly. Emergency service was called but he refused service and was fine later to go home. He stated that he got anxious getting vaccinations in general anyway. |
| 1231294 | 4/19/2021 | AZ | 22 | F | 4/16/2021 | 4/16/2021 | Patient experienced syncope after 0.3ML(30 MCG) OF COVID vaccine was injected intramuscularly in Left arm. Patient recovered after brief syncope incident |
| 1231281 | 4/19/2021 | NY | 60 | F | 4/12/2021 | 4/12/2021 | Sore arm started at 4 hours, starting at 8 hours: chills, fever 99.8, muscles aches, pains in feet, mid back, neck, burning pains in skin in linear pattern, felt faint in the middle of the night almost passed out when I got up. Next day April 13th - slept on and off most of the day, after a 3 hour nap woke up drenched in sweat, fever broke and then felt better. April 14th still felt worn out and weak. Neck discomfort on the side of the shot (left) still feel pressure and discomfort (Perhaps swollen cervical lymph nodes). Today (One week post vaccine) - feel a buzzing sensation on and off in left axillary lymph nodes and left breast (After the first dose left axillary lymph node and breast discomfort lasted for one week). Still feel more tired than usual. |

| 1231200 | 4/19/2021 | MI | 39 | F | 3/31/2021 | 4/1/2021 | Day 1: moderate arm pain. Day 2: fatigue, headache for half a day in the am and started developing heavy breathing and sudden changes in cardiac rhythm (mild). Days 3-6 heavy breathing and changes in cardiac rhythm continued increasing, particularly at night. Took ibuprofen, increased liquid intake, rested. Days 7-8: Symptoms were a bit milder. Day 9: Tachycardia at night, sensation of fainting. Day 10 to 19 (today): dizziness that varies from lightheadedness to vertigo to nausea every single day. I went to the pharmacy on Day 16 and got Sea Band Accupressure bands, ginger Dramamine and ginger gum which have helped a little. As a side note, I am a very healthy person who has never suffered a side effect like this one from any vaccine. I haven't even had a cold in the past year. I had to google the symptoms online and found a thread at VEDA (vestibular.org) with a very long list of people who are suffering from the same thing. |
| 1231042 | 4/19/2021 | TX | 19 | F | 4/19/2021 | 4/19/2021 | Patient is an employee at this store. She passed out immediately after receiving injection. She was unconscious for no more than 5 seconds then regained consciousness and remained in the vaccination room for 15 minutes. She stated numerous times that she was ok and eventually went back to work on her own volition. |

| 1229968 | 4/19/2021 | NH | 56 | F | 4/16/2021 | 4/16/2021 | 12 minutes after the injection, I felt very dizzy, nauseous, a few minutes later, I totally blacked out, they took me into the emergency room and took my blood pressure, which was very low and my heart was racing. I came to about 7-10 minutes later with very dizzy feeling, a itchy throat and was feeling very dizzy. The hospital staff gave me water and took a EKG - I was told to just rest. I got the chills and felt waves of dizzy/nauseous for a while. After about an hour, I felt strong enough to go home. I went home and was very tired and still dizzy. I was tired and was too tired to do anything other than stay in bed for three days. I lost my appetite, had weird metal taste in my mouth and had a few dizzy episodes the next day where I couldn't walk to the bathroom without help. I am usually a very healthy person, never have passed out before and now three days later, I can only work a few hours a day without getting tired and my brain feels foggy - hard to focus. |
| 1229936 | 4/19/2021 | IN | 22 | F | 4/17/2021 | 4/18/2021 | Fainted, nauseous, light headedness, fever, chills, weakness, exhaustion. |
| 1229865 | 4/19/2021 | CT | 24 | M | 4/17/2021 | 4/17/2021 | APPROXIMATELY 5 MINUTES FOLLOWING ADMINISTRATION, PATIENT FAINTED WHILE SITTING IN THE OBSERVATION AREA POST-VACCINATION. PATIENT WITHIN A FEW SECONDS OF FAINTING. WAS HELPED BACK UP TO CHAIR AND GIVEN WATER. MONITORED CLOSELY FOR AN ADDITIONAL 30 MINUTES. PATIENT WAS FULLY AWAKE AND ALERT WITHIN A FEW MINUTES WITH NO OTHER REPORTED EFFECTS. FOLLOWED UP WITH PATIENT VIA THE PHONE A COUPLE HOURS LATER AND PATIENT STATED THEY HAD EXPERIENCED NO OTHER EPISODES OR SIDE EFFECTS UP TO THAT POINT. |

| 1229840 | 4/19/2021 | FL | 26 | M | 4/19/2021 | 4/19/2021 | Administered a Covid-19 vaccine and after 2 minutes of administration the patient fainted falling off his chair. Once the father notified me and I arrived to check on the patient he was conscious, breathing normally and stood right back up to sit back down on his designated seat. His father explained that this does occur when he receives vaccinations. After 20 minutes the patient did leave the pharmacy with no complications. We called 911 but they did not arrive since the patient was able to get off the ground with no complications. Patient recieved the shot at 12:47pm and fainted on 12:49pm. No treatment was administered |
| 1230445 | 4/19/2021 | MA | 19 | F | 4/11/2021 | 4/11/2021 | Patient fell from chair and hit head on table in waiting area approx. 5 minutes after receiving vaccine. Resulting from syncope event. Patient stated she has anxiety and is nervous when receiving vaccines. She had her boyfriend in the car and he came in and waited with her for approx. 20 to 30 more minutes. Patient had a small egg on forehead from hitting table and was given an ice bag and water to aid with symptoms. Patient stated she was trying to "breath through it". May have over breathed and resulted in too much CO2. Patient had no other episodes or symptoms following fainting. Patient was contacted and checked on that evening and the next morning, she stated she is feeling okay. |
| 1229839 | 4/19/2021 | MA | 28 | M | 4/18/2021 | 4/18/2021 | The patient received the vaccine on 4/18/21 at 12:56pm. As he was waiting 15-minute post-administration, he walked to the front, (~1 minute post-administration) and fainted. He was caught by his girlfriend and brought down to the floor, where he remained sitting. No injuries reported, reported no nausea, was oriented, held a normal conversation, reported being hot, temp was 95.5F. Paper towel soaked in cold water was applied to forehead, and gave him water to drink. Declined juice. The patient mentioned he had a reaction to a flu vaccine in the past where he was very ill after. He expressed a fear of needles, and he has fainted after bloodwork previously. EMS evaluated, patient declined hospital visit. |

Pulse 82 Respirations 16 Oxsat 97%. Radial pulse strong. Denies nasuea/vomiting, throat swelling or chest pain. Patient was moved to the post vaccination observation room. Walked himself without assistance and was observed for 30 minutes. |
| 1230250 | 4/19/2021 | CA | 20 | M | 4/16/2021 | 4/16/2021 | Syncope while seated; patient was placed on the floor with legs elevated. Provided food, water, and ice pack until felt better. |
| 1230260 | 4/19/2021 | NJ | 22 | M | 4/8/2021 | 4/8/2021 | Nurse was called to vaccination room for patient evaluation. Patient was alert and oriented x3, lying down, no signs of injury or loss of consciousness. Reports history of near syncope with vaccine administration. VS obtained. BP 100/70. Pulse 82 Respirations 16 Oxsat 97%. Radial pulse strong. Denies nasuea/vomiting, throat swelling or chest pain. Patient was moved to the post vaccination observation room. Walked himself without assistance and was observed for 30 minutes. |
| 1230287 | 4/19/2021 | CA | 45 | F | 3/13/2021 | 3/13/2021 | 20 min after injection, I almost lost consciousness and my heart started pounding irregularly, hard, and out of sync. I would say I was 90% passed out, barely hanging on to consciousness. Luckily I was close to a fire department so I ran in there. My heart eventually calmed down after maybe 20 min. Then, March 15 from about 3am-5am, I woke up & couldn't fall back asleep. My heart was pounding hard and out of sync again, and I almost passed out again. I had the paramedics come and check me out, but they found nothing odd. My pulse oximeter was spiking to 130 bpm and going down to 90. Standard resting bpm for me is 70. I have also had non-stop ringing in my ears ever since Dose #2. |

| 1225470 | 4/18/2021 | NH | 19 | F | 4/13/2021 | 4/16/2021 | While talking to my parents I started to say things completely opposite of the conversation we were having. My speech began to slur and then I passed out/fainted and was unconscious for approx 1 minute. Once I came to I was disoriented and nauseated. |
| 1225454 | 4/18/2021 | TN | 38 | M | 4/16/2021 | 4/17/2021 | Hey guys, just a heads up if you know anyone with a CPAP machine who just received a second dose of the vaccine. I received the shot on Friday. No reaction all day. No reaction all day Saturday. Saturday/Sunday night I started vomiting into my CPAP mask/machine while still asleep. I wouldn't have woken up unless my wife was there to hear me choking. She cleaned out my mask and had me lay on my side all night while monitoring me. Scary stuff. Just thought you should make your friends with apnea aware. I still don't remember the incident at all. I have a mild fever right now, 99.8. I used to tell my wife she saved my life, but now I don't mean it figuratively. UPDATE: I forgot to mention that I passed out Saturday night. I was standing in the kitchen and the next thing I knew I was on the ground. |
| 1225428 | 4/18/2021 | CO | 61 | F | 4/1/2021 | 4/3/2021 | Fainted on day 2. Woke up with a bruise under eye. Extreme pain in entire chest, shoulders. No headaches, no fever. Did not injure myself during fainting spell. Pain in chest and arms, occasional chills continued for 2 weeks solid. I needed to take pain relief round the clock. Pain when sneezing or coughing, continuing for 2 weeks. Prior to the 2nd shot, I would describe myself as in very good condition. After, very weak physical condition. I feel like I need to recover from this shot. |

| 1225710 | 4/18/2021 | MN | 26 | F | 4/18/2021 | 4/18/2021 | Shortly after vaccine was administered member began to feel weak and heavy. Reports losing feeling in her extremities and having a hard time breathing, felt like heart was racing. Pt was slumped over in her chair but conscious and coherent with staff supporting her upright in chair. A wheelchair was brought and pt assisted in transfer to the wheelchair. Pt was taken to a private observation area. Vital signs were checked and were stable. Pt reported feeling cold and weak. Pt was transferred by staff to a cot and her legs were elevated. She was covered with her jacket and 2 blankets as she began to shiver. Reported tingling and numbness in extremities but had adequate color, good radial and pedal pulses. Reported numbness but able to feel with touched and able to move on command. Spouse was present during evaluation. When pt reported feeling difficulty with breathing but O2 sats were stable at 98-99%. Member was given directions on how to slow her breathing and engaged in conversation. Spouse stated she has a history of syncope and that this happens regularly. Member was brought back at 1021 and by 1051 she was able to sit independently and drink water. She sat in Cot for another 5 minutes and requested to leave. Member was able to stand independently and stably. She walked around observation area and again requested to go home. ER precautions were given to spouse. Spouse stated he would drive her home and in the event of another episode would go to emergency room. Member walked out of facility independently with spouse near by. Member began to feel weak outside facility and dropped to her knees. She remained conscious. Pt refused to return for evaluation and asked to be wheeled to her car. She was breathing at a normal rate and rhythm. No signs of distress. Spouse reported this was not out of the ordinary for her condition and would also like to be released home. Pt was offered several times evaluation which she declined. She was assisted to personal vehicle and left the site. |

| 1224419 | 4/18/2021 | OH | 51 | F | 3/22/2021 | 3/24/2021 | <p>passed out; ischemic colitis; This is a spontaneous report received from a contactable consumer (patient). This 51-year old female patient (not pregnant) received 1st dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number ER8727) at single dose via an unknown route in left arm on 22Mar2021 09:45 for Covid-19 immunization. Prior to vaccination, the patient was diagnosed with COVID-19. Patient had no allergies to medications, food, or other products. Other medications the patient received within 2 weeks of vaccination included fluoxetine hydrochloride (PROZAC), levothyroxine, colecalciferol (VITAMIN D 3), cetirizine hydrochloride (ZYRTEC), and fish oil. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Patient passed out on Weds evening 24Mar2021 at 09:00 PM, followed by nausea, vomiting, passing of blood, and stomach cramping and was admitted to the hospital on 25Mar2021. Duration of hospitalization was 5 days. Patient was diagnosed with ischemic colitis. This was a condition she had never had before and considered herself completely fine before this incident. A battery of tests uncovered no reason for the passing out to have happened. Lab data included nasal swab on 26Mar2021: negative. The adverse event result in Emergency room/department or urgent care. It was unknown if treatment received for the adverse event. Outcome of the events was resolving.</p> |

gave the morphine, it lasted about 6 hours; she still had problems breathing, they took her, she must have passed out because she didn't remember all the tests, she was in and out of it, the severe pain stopped after 6 hours, still had pain off and on, periodically. When she got pain in the ambulance then the nausea went away. After the hospital nitro and another shot for the pain, the nausea stopped. After the hospital after this they gave morphine and the pain subsided a little but didn't totally go away until 6 o'clock in the evening, she still had problems breathing because every time she breathed she got pain under her left rib cage. She says the sweat was at home, real bad, number 10, she broke out in a clammy sweat, on the 6th when she was having pain. She says that after the hospital, a couple days after that, she saw her cardiologists, he told her what happened, it was related to vaccine, it was the muscle that goes around her heart, it was having like a charley horse, he says it felt like you're having a heart attack, her tests said her heart was good. She talks about her blood pressure and heart rate, and says 102, 103, it went up to 200 in the ambulance. She says they thought it was a heart attack, her blood pressure was usually low blood pressure and all the symptoms she was having was because of her muscle having a charley horse that felt like it was coming from the heart, if they had contacted him, he said she would have just needed a massive amount of anti-inflammatory and it would have stopped the pain. The events required an emergency room visit. She wanted to know if anybody else has been hospitalized for massive heart attacks and says that's what she was having. The patient had her second shot on 22Feb2021. Outcome of event nausea was recovered on an unspecified date; and outcome of the rest of events was unknown.

Systemic: Dizziness / Lightheadedness-Severe, Systemic: Fainting / Unresponsive-Severe, Additional Details: She complained to employee of lightheadedness. By the time I went to see her she had fainted. She opened her eyes again, but felt fainty . We called 911. Administered EpiPen. Rescue came and stayed with her for about an hour when her relative came to pick her up.

| 1224818 | 4/18/2021 | NJ | 48 | M | 1/27/2021 | 1/28/2021 | Heart stopped 6 times; unresponsive; soreness; felt like unwell; vomiting; Body aches; achiness; passed out 7 times; fever; chills; Left arm soreness at injection site and up back of shoulders; Left arm soreness at injection site and up back of shoulders; This is a spontaneous report from a contactable consumer.A 48-years-old male patient received second dose of bnt162b2 (Pfizer-Biontech Covid-19 Vaccine, Formulation: Solution for injection, Lot Number: EN5318), intramuscular, administered in left arm on 27Jan2021 11:00 at single dose for covid-19 immunisation. Medical history included asthma, myocarditis and allergies to Fruit or nut that grows on trees. Concomitant medication included esomeprazole magnesium (NEXIUM). The patient's heart stopped 6 times on 29Jan2021, he had a low grade fever, achiness and chills at 01:30, but they were gone the next day. Basically, at first, he took the shot and got the reactions that everyone else does, right arm soreness 01:30. On 07Jan2021 17:00, patient took the first dose of bnt162b2 (Pfizer-Biontech Covid-19 Vaccine, Formulation: Solution for injection, Lot Number: EL1042), intramuscular, administered in left arm. No prior vaccination was given within 4 weeks. He fell in the shower and passed out and hit his head at 18:00. He was not hooked up to a machine. About 18:30, his wife got him to the couch. He drank carrot juice and ate a granola bar. At 18:30 his eyes were wide open, but he was unresponsive. About every 30 minutes, he was going down. The third one came about 18:45-19:00. The pass outs lasted 15-20 seconds. and all he remembers was waking up to her screaming at him. The next one came at 19:15 and was in the ambulance on the way to the hospital and that is when he vomited in the ambulance and on the couch. Pass out number 3 was at home and 4 was in the ambulance. There was vomiting with both of them. Pass out number 5 was in the hospital when she was getting in the bed and was not hooked up in the room yet. Finally, they got him hooked up to a machine at 20:30 and into a room. They said if you feel dizzy, press the button. He found out his heart rate went from 80's down to 30's. That was the 6th pass out. This was the first time he was on a machine. His heart did not actually stop, it just went down to 30's and would come back. Then, it happened one more time on the machine and at that point, they were hooking him up to an IV and giving him medication to |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

keep him from vomiting. He does not have the name of that medication or the dose or lot or expiration. He got stabilized but they had him hooked up shockpads in case anything happened. They recorded his heart stopping 6 times during the night and of those 6 times, he does not have the times. 2 seconds was the longest time of all of the stops. He does not know how many each were. This was when he woke up on 30Jan2021. He later stated he was hospitalized 28Jan2021 at 7pm and those 6 stops occurred 29Jan2021 through the night previously. The patient was hospitalized for heart stopped 6 times from 29Jan2021 and discharged on 01Feb2021. The patient underwent lab tests and procedures which included body temperature was low grade fever, echocardiogram, brain scan and electrocardiogram shows normal, heart rate: 80 beats, heart rate was down to 30 on his heart beat. They gave shot in the leg for blood clots, nausea medication and a bunch of pills given as treatment. The outcome of heart stopped 6 times was recovered with Sequel, patient passed out 7 times, body aches, fever and chills, left arm soreness at injection site and up back of shoulders was recovering, unresponsive and soreness next day felt like unwell and vomiting was unknown, achiness was recovered. No follow-up attempts are possible. No further information is expected

Patient's concomitant medication includes omeprazole, ethinylestradiol, levonorgestrel (MARLISSA), venlafaxine and gabapentin from unspecified dates, received within 2 weeks of vaccination, for unspecified indication. Patient historically took first dose of Pfizer BNT162B2 (Lot number: EN6204) on 13Mar2021 at 11:00 AM on the left arm for COVID-19 immunisation. Patient previously took hydrocodone bitartrate, paracetamol (VICODIN) on an unspecified date and indication and had allergy. On 02Apr2021, around 10pm, patient began having chills and extreme muscle pain and spasms, and the lymph nodes in her left armpit swelled up so much that she couldn't put her arm down without extreme pain. By midnight (03Apr2021 00:00), patient had a fever and was unable to stand unassisted. She was writhing in pain and arching uncontrollably off the bed. She believed in hindsight that this was a seizure as she went in and out of consciousness and her tongue swelled up, making it hard to breathe and impossible to speak. She was sweating profusely, and had to drink water constantly. Her husband had to help her get to the bathroom because she couldn't support her own body without tipping over. The chills and fever alternated all night, and</p> |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

she finally passed out from exhaustion at 03Apr2021 at 7am. The next 2 days, she was in a cycle of fever and chills again, and the fever got so bad that she seized twice more on Saturday (03Apr2021). She had to take the day off work on Monday (05Apr2021) as she was still in so much pain that she could barely leave bed except to use the bathroom. Events were reported as life-threatening, immediate risk of death from the events. Patient was not hospitalized. Treatment for the adverse events were cool baths, naproxen (ALEVE) for fever and pain, and PEDIALYTE. COVID-19 was not tested post vaccination. Vaccination facility type was at a hospital. The outcome of the events was recovering. No follow-up attempts are possible. No further information is expected.

| 1224863 | 4/18/2021 | FL | 83 | M | 2/14/2021 | 2/14/2021 | Lightheadedness/almost fainted; Nauseous; Headache; fluish sick; This is a spontaneous report from a contactable consumer (patient). An 83-year-old male patient received second dose bnt162b2 (BNT162B2), via an unspecified route of administration, administered in Arm Left on 14Feb2021 11:30 (Lot Number: EL9267) as single dose for COVID-19 immunization. Medical history included artificial heart valve from Jun2018 and ongoing, transient ischemic attack (TIA), high cholesterol, blood pressure (abnormal), all from an unknown date and unknown if ongoing. Concomitant medications included apixaban (ELIQUIS) tablet taken for transient ischemic attack from Oct2019 and ongoing; rosuvastatin tablet taken for high cholesterol from an unspecified start date and ongoing; metoprolol caplet taken for blood pressure from Nov2020 and ongoing. The patient previously received first dose bnt162b2 (BNT162B2), administered in Arm Left on 22Jan2021 13:00 (Lot Number: EL9263) for COVID-19 immunization. Patient was reporting reaction to Pfizer COVID vaccine. Patient stated he read some articles to call and reported if you have a type of reaction or something after having the COVID vaccine. Patient had second COVID vaccine on 14Feb2021. Three or four days later (as reported), he began feeling lightheaded, nauseous and headaches beginning around 18Mar2021 or 19Mar2021. Patient reported he almost fainted a few times and it had gotten progressively worse. The patient reported having headaches not every day, but pretty much close to every day, 4 out of 5 days a week. Patient reported sometimes the headaches were bad and sometimes constant. Patient was hospitalized and had every test known to mankind. The patient reports actually being kind of fluish sick for 2 days after having vaccine, the normal feeling that every one says they have. He completely recovered; started night of the 14Feb2021, lasted next two days and then totally gone on 16Feb2021. Blood thinner stopped a couple of days before the shot per his doctor. Patient stated that every test he had was negative, nothing that would cause the symptoms. He had a Computerized axial tomogram (CAT) scan with dye; CAT scan without dye; carotid artery tested; echocardiogram; left the hospital said they didn't find anything to cause it. After talking to people and reading, he decided to call Pfizer. All results came back negative. Vaccination Facility Type was community |

center - other. Vaccine was not administered at Military Facility. No additional vaccine was administered on same date of Pfizer COVID vaccine. No additional vaccine was administered. Adverse events lightheadedness, nauseous, headache required a visit to Emergency Room. The patient was hospitalized for 2 days from 29March2021 to 31March2021 due to lightheadedness, nauseous, headache. The outcome of event fluish sick was recovered on 16Feb2021, of other events was not recovered. Follow-up attempts were completed. No further information was expected.

| 1224918 | 4/18/2021 | PA | 67 | F | 3/15/2021 | 3/15/2021 | bradycardia; fainting; Head and neck ache; Head and neck ache; first dose received on 09Mar2021; second dose received on 15Mar2021; first dose received on 09Mar2021; second dose received on 15Mar2021; This is a spontaneous report received from a contactable consumer (patient). A 67-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date unknown), via an unspecified route of administration in the right arm, on 15Mar2021 15:00, as single dose, for COVID-19 immunisation. Medical history included psoriasis, high blood pressure, scoliosis and low thyroid. The patient has no known allergies. The patient did not have COVID-19 prior to vaccination and was not tested for COVID-19 post vaccination. The patient was not pregnant at the time of vaccination. Concomitant medications included levothyroxine sodium (SYNTHROID); sertraline; sertraline hydrochloride (ZOLOFT); and levothyroxine sodium (LEVOTHYROXINE), all taken for unspecified indications, start and stop dates were not reported. Historical vaccine included the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number and expiry date not reported) received at age 67 years, via an unspecified route of administration in the right arm, on 09Mar2021 14:45, for COVID-19 immunisation. On 15Mar2021, the patient experienced bradycardia, was fainting, and had head and neck ache. One week after the second vaccine, in Mar2021, the patient was taken to the hospital due to the events. Treatment for the events included "had to have a pacemaker put in". The patient reported that she never had heart problems before, and she was curious if these could have been side effects from the vaccine. The events resulted to physician office and emergency room visits, and hospitalization. The duration of the hospitalization was reported as 4 days. The events were reported as life-threatening illnesses. The patient was recovering from the events. Information about Batch/Lot number has been requested. |

| 1224494 | 4/18/2021 | NV | 62 | F | 3/26/2021 | 3/26/2021 | eyes rolled back/passed out; my throat area under my jaw line started to hurt; my left leg was achy and tingly; my left leg was achy and tingly; headache; nauseated; weak; fever; just didn't feel good; sick; became rigid; This is a spontaneous report received from a contactable consumer (patient). A 62-year-old female patient received the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) (brand=Pfizer-BioNTech, lot unknown=true, lot unknown reason=unable to locate or read the details) via an unspecified route of administration in right arm on 26Mar2021 11:45 (62-year-old at vaccination date) at a single dose for COVID-19 immunization. Medical history included hypertrophic cardiomyopathy (HCM), a bruit, ventricularomegaly, gastrointestinal (GI) issues, many female issues (before she got a hysterectomy), cancer activity, hepatitis C (Hep C), COVID-19 since 18Mar2021 (diagnosed as extremely positive, remained sick until 25Mar2021), and allergies to medications, food, or other products included Motion sickness meds. The patient was not pregnant at the time of vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Other medications the patient received within 2 weeks of vaccination was reported as yes but unspecified. About 25 minutes after the vaccine, her throat area under her jaw line started to hurt, her left leg was achy and tingly, and she was started to get a bad headache. She became nauseated and weak. She made it home, took paracetamol (TYLENOL), and got in bed. Saturday her headache was on steroids, she had fever, and just didn't feel good. Later that day, she was so sick she went to the bathroom and she guessed she passed out. Basically, her husband said he found her on the floor after he heard a thump. He asked me what was his name. He said she responded correctly, but then her eyes rolled back, she became rigid, and he called 911. she knew 2 sets of paramedics arrived w/ambulances. They monitored her vitals and stayed until she was normal. They were willing to take her to the hospital, but offered other options for her husband and she to consider. They suggested she see her Primary care doctor (she did on 29Mar2021). Her doctor believed she should not take the 2nd dose of the vaccine. Adverse event start date was 26Mar2021 at 12:30 pm. AE resulted in doctor or other healthcare professional office/clinic visit. It was reported no |

| 1226481 | 4/18/2021 | VA | 35 | M | 4/18/2021 | 4/18/2021 | Patient received his first dose of the Covid-19 vaccine. After 5 minutes of sitting, he decided to walk around the store to shop. The patient experienced syncope and fell face first to the floor, cutting his lip. The patient was bleeding from his lips. Customers and pharmacy technicians tended to the patient. He was alert and responsive the entire time. The pharmacist called 911 and an EMS team was dispatched. The patient rose and sat in a chair. He was given water. He stated that he just felt overheated and that the store was very warm. EMS arrived, evaluated the patient, and stated that the patient just experienced a bout of syncope. They asked if the patient would like to go to the hospital and the patient declined. EMS left and the patient remained seated, resting for an additional 20 minutes. The patient left the pharmacy. The pharmacist spoke with the patient several hours later and the patient reported he was doing fine at home resting. The pharmacist counseled the patient to contact his primary care provider regarding the incident. |

| 1227132 | 4/18/2021 | OH | 17 | F | 3/1/2021 | 3/1/2021 | <p>Vasovagal Syncope; unauthorized age patient, 17 years of age; This spontaneous case was reported by a nurse and describes the occurrence of SYNCOPE (Vasovagal Syncope) in a 17-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 012A21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. Concurrent medical conditions included Congenital heart disease NOS since 22-May-2003. On 01-Mar-2021 at 2:30 PM, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 01-Mar-2021 at 2:30 PM, the patient experienced SYNCOPE (Vasovagal Syncope) (seriousness criterion medically significant) and PRODUCT ADMINISTERED TO PATIENT OF INAPPROPRIATE AGE (unauthorized age patient, 17 years of age). On 01-Mar-2021, SYNCOPE (Vasovagal Syncope) had resolved. On 01-Mar-2021 at 2:30 PM, PRODUCT ADMINISTERED TO PATIENT OF INAPPROPRIATE AGE (unauthorized age patient, 17 years of age) had resolved. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. For mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular), the reporter considered SYNCOPE (Vasovagal Syncope) to be unlikely related. No further causality assessment was provided for PRODUCT ADMINISTERED TO PATIENT OF INAPPROPRIATE AGE (unauthorized age patient, 17 years of age). No relevant concomitant medications were reported. The patient did not receive any treatment. The event, SYNCOPE (vasovagal syncope) was an acute episode and recovered quickly within minutes. Follow-up received on 06-APR-2021 included additional reporter information, date of vaccine administration, patient's race, ethnicity and other relevant medical history, start and dates of product administered and the events, anatomical location, and reporter causality. This report refers to a case of inappropriate schedule of vaccine administered for mRNA-1273 (lot #unknown) with no associated syncope reported. The reporter considered SYNCOPE to be unlikely related. Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded. Most recent FOLLOW-UP information</p> |

incorporated above includes: On 06-Apr-2021: additional reporter information, date of vaccine administration, patient's race, ethnicity and concurrent condition, additional event - Syncope, onset and stop dates of the event, - Product administered to patient of inappropriate age, injection site, and reporter causality.; Sender's Comments: This report refers to a case of inappropriate schedule of vaccine administered for mRNA-1273 (lot #unknown) with no associated syncope reported. The reporter considered SYNCOPE to be unlikely related. Based on the current available information and temporal association between the use of the product and the start date of the events, a causal relationship cannot be excluded.

Severe syncope; This is a spontaneous report from a non-contactable consumer (patient). A 33-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Batch/Lot Number: ER8737), dose 1 via an unspecified route of administration, administered in Arm Left on 02Apr2021 14:00 (at the age of 33years) as single dose for Covid-19 immunization. Medical history included oral allergy syndrome, polycystic ovarian syndrome, and Gluten, Apples, Almonds, Cherries allergy; all from an unknown date and unknown if ongoing. Concomitant medications included fexofenadine hcl and ethinylestradiol, norgestimate (TRI LO MARZIA), both taken for an unspecified indication, start and stop date were not reported. The patient is not pregnant at the time of vaccination. The patient was not diagnosed with COVID-19 prior to vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. The patient experienced severe syncope on 03Apr2021 (12:45PM). The event resulted in Emergency room/department or urgent care. It was unknown if treatment was received for the adverse event. The patient has not been tested for COVID-19 since the vaccination. The outcome of event was recovered on an unspecified date. No follow-up attempts are possible. No further information is expected. Information on lot number already obtained.

| 1227205 | 4/18/2021 | AR | 68 | F | 3/22/2021 | 3/22/2021 | 19 second pause of no heartbeat and in third degree heart block; 19 second pause of no heartbeat and in third degree heart block; Awoke to throw up; Thinks she fainted; Oxygen level of 93 on oximeter; she wasn't feeling well; This is a spontaneous report from a contactable consumer (patient). A 68-year-old female patient received the second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), via an unspecified route of administration, administered in left arm on 22Mar2021 at 15:00 (Lot Number: EN6198) as single dose for covid-19 immunization. Medical history included mild stroke from 18Jan2020 and not ongoing, suspected she had atrial fibrillation and she had a heart monitor placed 21Feb2020. Her heart monitor never showed Atrial Fibrillation after one year of being monitored. Ongoing low thyroid/hypothyroidism and blood cholesterol increased from an unknown date. Concomitant medications included levothyroxine taken for low thyroid/hypothyroidism from an unspecified start date (started probably been 10 years) and ongoing; atorvastatin taken for reduce cholesterol from 2020 (started right after she had stroke, either Jan2020 or Feb2020) and ongoing. No additional vaccines administered on same date of the Pfizer suspect. No prior Vaccinations (within 4 weeks). The patient previously took the first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, Solution for injection), via an unspecified route of administration, administered in left arm on 01Mar2021 (at age of 68 years old, Lot Number: EN6200) as single dose for covid-19 immunization. She was fine right after the first dose. She only had a sore arm for 3 days. Just last week, she had a severe adverse reaction right after her vaccine. With the second dose, she had everything possible. Twelve hours after, on 23Mar2021 at 03:00, she awoke to throw up. She thinks she fainted. She had to throw up 2 more times that night. She had been wearing a heart monitor. On 24Mar2021 her cardiologist called her and told her she had a 19 second pause of no heartbeat and was in a 3rd degree heart block. The very next morning, they put in a pacemaker. She was overall healthy and athletic. She was a runner and golfs all the time. She had an outpatient procedure for the pacemaker placement at the hospital on 25Mar2021. She was still recovering but improving. Caller added it was scary when your heart |

VAERS_ID RECVDATE STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

stops. Caller added she did not see this as a possible related side effect, but that evening when she was not feeling well, 22Mar2021, she checked her oxygen level with her oximeter. It was 93 and usually runs around 99. It is back to normal now. She checked it the night she was vomiting. Stated this was before the third degree heart block by a few hours. She did not think it was related. All her symptoms are gone other than the placement of her pacemaker. The outcome of the events " 19 second pause of no heartbeat and in third degree heart block" was recovering. The outcome of the event " Oxygen saturation decreased" was recovered. The outcome of other events was unknown.

| 1227220 | 4/18/2021 | GA | 67 | F | 3/11/2021 | 3/11/2021 | <p>Blurred vision; Headaches; Chills; Itching rash on arms, back, neck and chest; Fainted at home, fell, and busted her lip/ she dropped to the floor and everything was turning black; Fainted at home, fell, and busted her lip/ she dropped to the floor and everything was turning black; busted her lip and it was bleeding real bad; Weakness/ feeling weak; Feel weak in her arms and legs; Sweating profusely; Aching of joints and muscles kind of like flu symptoms in shoulders and arms; Aching of joints and muscles kind of like flu symptoms in shoulders and arms; Aching of joints and muscles kind of like flu symptoms in shoulders and arms; Foggy Brain; This is a spontaneous report received from a contactable consumer (patient). A 67-year-old female patient received (PFIZER-BIONTECH COVID-19 VACCINE; Dose 1) intramuscularly, administered in the left arm on 11Mar2021 (batch/lot number: EN6205) at 67 years old as a SINGLE DOSE for COVID-19 immunization. The vaccine was administered at a Pharmacy/ drugstore. The patient's medical history included compromised immune status; respiratory illness, genetic /chromosomal abnormalities; endocrine abnormalities (including diabetes) and obesity; asthma diagnosed since childhood; diagnosed allergies, allergies (seasonal and food); food allergies included gluten, dairy, artificial sweeteners including Sorbitol and Xylitol, broccoli, cauliflower, cabbage, brussel sprouts, asparagus, all "percifirous"/ cruciferous vegetables; she also has allergies to cats, pollen, trees, grass, ragweed, mold, mildew, and dust; and allergies to Codeine, Penicillin, Sulfa, Iodine, Epinephrine, Morphine, and Clindamycin (patient does not have a manufacturer, lot or expiration to any of these medications). The patient had no family medical history. Concomitant medications included unspecified prescription medications for years which she did not feel they were relevant. On 11Mar2021, the patient experienced "weakness/ feeling weak" (weakness), "feel weak in her arms and legs" (weakness of limbs), "fainted at home, fell, and busted her lip/ she dropped to the floor and everything was turning black" (faint), "fainted at home, fell, and busted her lip/ she dropped to the floor and everything was turning black" (fall), "busted her lip and it was bleeding real bad" (bleeding lips), sweating profusely (excess sweating), "aching of joints and muscles kind of like flu symptoms in</p> |

shoulders and arms" (Flu-like symptoms), "aching of joints and muscles kind of like flu symptoms in shoulders and arms" (Joint pain), "aching of joints and muscles kind of like flu symptoms in shoulders and arms" (muscle pain), and foggy brain (foggy feeling in head). On 12Mar2021, the patient experienced headaches, chills, itching rash on arms, back, neck and chest (itchy rash). On 13Mar2021, the patient experienced blurred vision. It was reported that after the first shot, on 11Mar2021, patient experienced weakness, then she got home and she fainted, fell, and busted her lip and it was bleeding real bad. Then she began sweating profusely. She started feeling weak 30 minutes after getting the shot. Someone took her there because she would not have been able to drive. They brought her home and she was in the kitchen. While over the sink, she started to feel weak in her arms and legs. Before she could tell her husband that she was feeling weak, she dropped to the floor and everything was turning black. She fell face first and busted her lip and it was bleeding real bad. The weakness gradually started getting a little better on 30Mar2021. She is having to walk with a cane now because of the weakness. She was not using a cane before. Two days later on 13Mar2021, she was in the kitchen again and she felt that feeling coming and her husband was able to grab her and sit her down and she did not faint but she could tell it was coming. Patient also reported that from 12Mar2021, she is getting headaches every day off and on and in different spots of the head. Sometimes it is in the forehead, top, side and back. For about a good week, she had chills and it tapered off after the first dose. Also, on 12Mar2021, she experienced itching rash on arms, back, neck and chest. They were fine bumps and they just itch. The patient was recovering from the events faint, fall, bleeding lips, excess sweating, and itchy rash; and has not recovered from the events weakness, weakness of limbs, flu-like symptoms, joint pain, muscle pain, foggy feeling in head, headache, chills, and blurred vision. Follow-up attempts are completed. No further information is expected.

| 1227271 | 4/18/2021 | FL | 55 | M | 3/27/2021 | 3/27/2021 | actually passed out slightly; Really dizzy; can't move and stand by; This is a spontaneous report from a contactable consumer (patient). A 55-year-old male patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE; Dose 1) via an unspecified route of administration on 27Mar2021 (batch/lot number: ER8730) at 55 years old at a SINGLE DOSE for COVID-19 immunization. The patient's medical history included Type II diabetes, Thyroid inactive, and blood pressure management, all from an unknown date. Concomitant therapy included unspecified blood pressure medication. On 27Mar2021, the patient actually passed out slightly (loss of consciousness), got really dizzy (dizziness), and can't move and stand by (movement disorder). It was reported that about 5 minutes after vaccination, patient got really dizzy and actually passed out slightly and was dizzy for about that day; he was dizzy all day, he can't move and stand by. Patient stated that he actually got better but took five days. Patient further stated, "I just determine, because of the reaction, people say, second is worse and I don't know if its allergic reaction or is that normal. If they consider." Outcome of the events was recovering. |

| 1227387 | 4/18/2021 | NM | 44 | M | 4/16/2021 | 4/16/2021 | Approx 15mins after having the shot administered I sat in my car and felt the medication coming on by it clouding my vision then causing me to faint (and by description from my fiancé) I had what appeared to be a mild seizure. I was out for a minute or two and when I was conscious again my vision was blurry and I felt very drunk for the next 45mins - hour. I also felt like I could taste the chemicals from the vaccine when I became conscious again. The drunk/vertigo feeling subsided slowly over time but I was given a Benadryl from the pharmacist so I?m not sure when the dizziness stopped but I definitely could not drive home. My fainting was not due to any anxiety due to having a shot or anything, I was perfectly fine for approx 10-15 mins after the vaccine then I felt a cold feeling coming on from my right shoulder then up my neck then I got foggy and dizzy and passed out |
| 1225895 | 4/18/2021 | NJ | 61 | M | 4/18/2021 | 4/18/2021 | Patient received vaccine was sitting for 15 minutes and got up in the middle of his 15 minutes to approach the pharmacist and the pharmacist sat him down again and he passed out onto the floor hitting his head with a cut on his eyebrow and nosebleed. Ems arrived and got patient back into chair and he again passed out and began seizing. He again regained consciousness and was taken away in a stretcher. |
| 1225838 | 4/18/2021 | | 28 | M | 4/18/2021 | 4/18/2021 | syncope, cleared, pt. left site. |

| 1226413 | 4/18/2021 | NC | 22 | F | 4/12/2021 | 4/12/2021 | At the time of vaccination, patient experienced a vasovagal reaction of nausea, headache, near-fainting. After eating a snack and drinking water symptoms improved over about 1 hour and patient returned home. Pharmacist call to check on patient the next day, she said she was feeling better, not 100%, but Ok. Since then, she had a headache for 4 days and started having mental distress (out of body feeling, memory loss, and covid-like symptoms). She also states she has had excessive sweating since a week ago and feels very unstable on her feet. She went to a doctor who tested her for covid. It came back negative. The doctor advised if the symptoms continue to get worse, she should go to the hospital. She was at work today, we discussed all these things here. She said she couldn't even remember her name or walk straight. I told her she needed to go to the hospital ASAP and not to work the rest of her shift. |

| 1226241 | 4/18/2021 | CT | 26 | M | 4/18/2021 | 4/18/2021 | Patient received dose 1 of Moderna COVID-19 vaccine. Approximately 5-10 minutes after administration, the patient's mother alerted me that the patient was feeling faint and sweaty. I came to check on the patient. He appeared pale and diaphoretic. Patient said his vision was narrowing and he subsequently lost consciousness for approximately 10-20 seconds. I checked the patient's blood pressure and initial result was 88/64. Upon regaining consciousness, patient reported immediately feeling better. His blood pressure was still low at 94/70. He remained seated and drank some cold water and a cool compress was applied to his forehead. I questioned the patient to determine if he was experiencing any other symptoms that may indicate anaphylaxis (skin itchiness, tight throat, stomach upset) and he denied any other symptoms. I continued to monitor the patient for approximately 30 minutes. During monitoring, the patient told me he is nervous of needles, and has fainted trying to give blood in the past. After 30 minutes of monitoring, diaphoresis had resolved, color returned to patient's face, blood pressure recheck was 116/84, and patient self-reported feeling fine. He was escorted home by his mother. |

| 1226140 | 4/18/2021 | CA | 34 | M | 4/18/2021 | 4/18/2021 | At 1140, RRT was activated for a 34 y/o M that passed out for a few seconds. He stated, "I felt like I was in a dream." His eyes rolled back before passing out. When he was alert after his fainting episode, he stated that his right arm was numb and had c/o nausea, weakness, a brief moment of blurry vision, and "feeling hot?". Head-to-toe assessment completed. Client was diaphoretic and pale. Client also reported that he was feeling hot and then feeling cold all of a sudden and this was ongoing. Client vaccinated on the R arm at 1130. NKA, no past medical hx. Does not take any medications but smoked marijuana just prior to his appointment. Vitals ? BP: 138/98, RR: 20, HR: 65, 0/0 pain. EMS called. Client's condition improved during monitoring period but as EMS arrived, client began to feel same symptoms again but did not pass out. EMS arrived at 1149. Vitals when they arrived were: BP: 142/77, HR: 48. Client's condition did not improve significantly but did not get worse. Client opted to have ambulance transport to Community ER to be further evaluated and treated. Client left vaccination clinic via Representative, accompanied by Fire Engine and unit @ 1200. Girlfriend, who came with client, followed client to hospital. Client left in stable condition, AA0x4, breathing even and unlabored, in no acute distress. |
| 1226410 | 4/18/2021 | NM | 60 | M | 3/26/2021 | 3/26/2021 | Approximately 1 hour after the vaccination, Patient reported feeling a sudden "pop" in his head. That was followed by loss of balance, weakness, and inability to walk. He collapsed and either passed out or slept for 2-3 hours. Upon awakening he still felt weak and unbalanced. He also had bitten his tongue and lip while unconscious. He slowly recovered over a period of 3-4 days after the vaccination. He has never before had a stroke or a seizure. No one was with him to observe any of his symptoms. |
| 1225867 | 4/18/2021 | TX | 40 | M | 4/3/2021 | 4/3/2021 | Patient fainted while sitting in observation area. Patient regained consciousness within a few seconds. Patient was assessed and left vaccination clinic in stable condition. |

| 1222493 | 4/17/2021 | IN | 39 | M | 4/15/2021 | 4/16/2021 | I received the vaccine around 11am and did not experience any adverse reactions aside from a sore arm throughout the day. I went to sleep at 10pm and was awakened at 3am with moderate soreness in my arm and I began to feel feverish and woozy. About 2 minutes later I could tell that I was going to faint. The thing I remember was waking up on the floor next to my bed with my wife holding me up. She said that I started making sudden, loud guttural noises and she was afraid that I had been choking. She reached over to touch my arm and my body jerked out of bed and I hit the ground. When I woke up, I realized that I had fainted (I have passed out after a flu shot a couple years ago, but that incident happened about 15 minutes after injection) and my entire body was trembling and sweating profusely. My wife left the bedroom to get me some water and a cold towel. I got myself back into bed and passed out again. The trembling and sweating continued but gradually decreased for about 15 minutes until I felt back to normal. After I had calmed down, I felt no adverse symptoms and fell back asleep and have felt fine since the incident. |
| 1222786 | 4/17/2021 | TN | 30 | F | 4/16/2021 | 4/17/2021 | Near-syncope Symptoms started as an intense wave of nausea. I sat down. Within 30 seconds to one minute, I become very hot and diaphoretic. Then, black spots appeared in my vision, and I heard ringing in my right ear. I felt like I might lose consciousness, so I laid down on the ground. Within another minute, the symptoms started to pass. I never lost consciousness. This event only occurred one time. |

| 1222800 | 4/17/2021 | CT | 55 | F | 4/13/2021 | 4/14/2021 | Fainting. After the COVID vaccine she was feeling completely normal, however about 23 hours after she woke up lightheaded, nauseous, became dizzy and fainted. (hit her head, elbow, knee, face when she fell) She then was helped up, was confused. When she was being walked to her bed with help she again collapsed in the person's arms. It looked like here eyes were staring, unable to respond, mouth was open, possible facial drooping. |
| 1221545 | 4/17/2021 | WI | 20 | F | 4/15/2021 | 4/15/2021 | Around 11:00 in the morning I was starting to feel weak and hard of breathing with a sore arm where the injection site was. As the day went on it progressed to muscle aches and a low fever, I went to bed with chills, muscle pain, heavy breathing, and a 100.8 fever. I work up in the middle of the night to go to the bathroom and felt nauseous, I don?t remember much but I remember waking up on the floor in a cold sweat, so I assume I passed out from the nausea. I went back to bed and I woke up with a 101.8 fever and weakness and muscle pains. My mother told me to take Tylenol every 4 hours and be on top of things, my symptoms have been decreasing since this morning but as I am filling this out at 11:00 at night I?m slowly getting my fever back. I will add this is exactly how I felt when I got covid back in November of 2020. |
| 1221578 | 4/17/2021 | CA | 62 | F | 4/9/2021 | 4/12/2021 | Received the vaccine friday then monday has numbness to the tongue , near syncope, dizziness, ems called taken to ER and admitted to hospital for TIA. CT of neck, head, abd done, chest xray, full blood work, echo, results sent to primary care said all test ok |

| 1221581 | 4/17/2021 | PA | 27 | F | 4/7/2021 | 4/7/2021 | After shot felt increasingly nauseous and dizzy and tired. I went to the bathroom and threw up. Upon return to the observation area, I lost consciousness, fainted, and woke up on the floor. My blood pressure was low but within normal range and my blood sugar was normal. I was not nervous about receiving the shot or possible symptoms and do not have a history of fainting not relating to medication side effects (meds I am no longer on) and over exertion (ie. likely not psychosomatic). Fainting on a hard surface led to a serious concussion with effects (brain fog, fatuige, headache, and dizziness primarily) continue to persist. I saw doctors at an urgent care and then the ER where they performed a pregnancy test (negative), blood sugar test (normal). EKG (normal), and a concussion screening that led to a CT scan (normal). I left with no explanation as to why I felt sick and fainted after the vaccine and was only told later by my psychiatrist to report. The only clear side effect was pain in the arm of the injection site. Other possible vaccine symptoms overlap with concussion symptoms. |
| 1221594 | 4/17/2021 | CA | 46 | F | 4/8/2021 | 4/13/2021 | I got Jonson and Jonson vaccine on 4/8/2021 . I was fine after that and suddenly on 4/13 /2021 I had cramping in my both leg and foot whole day. At night I woke up from deep sleep and started crying that my leg was hurting badly and felt like something was stuck in my knee couldn?t move for couple min. 5 min later I got up to take pain medicine and try to walk and I was able to walk after that so went to use bathroom (to urinate) while I got up. After that since I had pain in my leg earlier I went to grab pain medicine than again I started crying and saying I don?t feel good than I passed out completely and was unconscious. My husband picked me up and brought me to bed and said I had black out and fell on my face on floor . |

| 1222291 | 4/17/2021 | IL | 50 | F | 4/1/2021 | 4/2/2021 | sudden side effects around one hour after taking my thyroid medication. Nausea, dizziness and weakness - very winded. Pain at injection spot. Difficult to walk and just get back to bed or call someone. Blacked out in bed, waking up soon after to extreme shaking, cold, extreme pain at inject shot. Again difficult to get out of bed to find extra blankets/covering. I am not sure I feel back to sleep or just passed out but woke around 7am, extreme pain full arm, with fever 102.7, was able to get to kitchen get ice cubes. fever dropped to 101. took Tylenol once I could hold some food in stomach. Nausea, but felt like I needed to eat something. back to bed. bed rest most of the day, when I trying to get up to eat something or pick up mail, very dizzy, light headed. Temp lingered around 101 for the next day or so. Through weekend was very winded, but was able to contact via email doctor what was going on. Sunday temp was under 99. other pain at injection and fategue lasted for week. Metal taste in month started Sunday 3 days after shot. Doctor not sure if I should get 2nd shot. Help. what do I do? |
| 1222309 | 4/17/2021 | NV | 38 | F | 4/17/2021 | 4/17/2021 | Patient states she has a vasovagal reaction to needels/injections. After vaccine was administered patient was askied how she was feeling. She stated she felt the vaccination but felt fine. She proceeded to sit in the seat in the lobby , but then fainted a few minutes later |
| 1222377 | 4/17/2021 | GA | 32 | M | 4/16/2021 | 4/16/2021 | Pt fainted. Staff alerted by customers that someone was laying in floor. We immediately ran out. Pt was laying face door on floor. Pt was tapped, and verbally asked if he could hear us. Initially there was no response. Checked for breathing, then begin checking for pulse, but he came to. He started speaking with us, saying he was feeling light headed, and got up to notify us, but then he couldn't remember the rest. Asked if he had a history of seizures or diabetes and he said no to either. At some point he went out again, briefly. Meanwhile, the tech called 911. He came to again, begin talking with us. At some point he requested water, which we got. After seeping, he wanted to sit up. We asked him to place his back against the wall, if he wanted to. He did so, and after a few seconds said he wanted to lay down again. EMS came. They asked if he wanted to go to the ER which he consented to. They rolled him out on a stretcher. |

| 1222401 | 4/17/2021 | MD | 24 | F | 4/16/2021 | 4/16/2021 | The patient received the Pfizer vaccine, given by HCP. After the vaccine, the patient felt a little anxious with increased heart rate so she asked HCP for a bottle of water. HCP went to get the water and informed the pharmacist on duty. Both pharmacist and HCP came back to the patient. She got the bottle and was about to open the bottle, but closed her eyes and started shaking like having a seizure and passed out. She came back right after passing out but didn't know what happened. She then started shaking again for a few seconds but didn't pass out. Everything happened so quickly when she remained sitting on the chair. We called 911 and paramedics came. She mentioned that the seizure happened to her before, maybe once or twice a year. When paramedics came, they checked her blood pressure and it was ok. We asked her and she wanted to come to the hospital to check out to make sure that she is ok. |
| 1222414 | 4/17/2021 | SC | 20 | M | 4/17/2021 | 4/17/2021 | patient was nervous after the injection-stepped out of the immunization room and sat in chair- felt light headed and passed out for about 5 seconds |

| 1223886 | 4/17/2021 | CO | 22 | M | 4/17/2021 | 4/17/2021 | Patient fainted shortly after receiving second dose of Moderna Covid vaccine. When I approached the patient he was laying on the ground and very pale but still breathing. I rolled him onto his back and elevated his feet and asked him to keep breathing and try to stay calm. I asked someone to grab him some water and someone else to run to the pharmacy and grab the pharmacy manager while I monitored the patient. I asked if I could help him sit up to drink some water and he accepted. After sitting up I asked if he had eaten and if I could get him something to eat. He stated he hadn't eaten all day and that he had a panic disorder and felt like he was having a panic attack. I asked if he had medicine he needed to take to help him feel better, he stated no, he needed to just wait it out. Then he told me he felt like he was going to throw up and I got him a waste basket that he threw up in right away. I asked the patient if he hit his head or if he wanted us to call an ambulance; he stated no to both questions. The pharmacy manager arrived and sat with the patient for the next half hour or more until he felt better. He stated that his dad was going to take him home now that he felt better. Some store staff had us fill out an incident report and the pharmacy manager walked the customer out to his car where he said he would call and find his dad. |
| 1223647 | 4/17/2021 | | 35 | F | 4/16/2021 | 4/16/2021 | pt had vasovagal response, one she woke up she told me she had a history if, She was in a chair when she passed out, we attempted to get her on the ground with feet up but in the process her head bumped the floor (it was not too bad it seemed), paramedics came as i called them when she was unresponsive, they did take her to the hospital i assume for low blood pressure but I am not sure what for (she was awake, i had to walk away for a few minutes and let the paramedics takeover), |

| 1223750 | 4/17/2021 | CA | 16 | M | 4/17/2021 | 4/17/2021 | Patient received Pfizer vaccine and was standing with parents during his suggested 15 minute wait time. During this time, parents noted that he "passed out" but they caught him. He then gained consciousness immediately and sat down to be monitored by pharmacists on duty. His vitals were checked immediately. O2 saturation was 97-99. Blood pressure 138/83mmHg with HR of 81. Patient had trouble breathing for 2 minutes. O2 saturation did not change. After 2 minutes, he breathing improved and patient was calm. |
| 1223558 | 4/17/2021 | | 28 | M | 4/17/2021 | 4/17/2021 | After client received 1st dose of Pfizer in left deltoid, client stood up to receive vaccine card and ID. Client then passed out, fell on the floor and hit head. C/O right side jaw hurts. MD & EMT evaluated. 130/75, 75, 97%, zero bumps felt on head/scalp. Girlfriend at side, instructed to go to ER to be evaluated today. |

| 1223939 | 4/17/2021 | CA | 16 | M | 4/17/2021 | 4/17/2021 | Recipient experienced brief loss of consciousness (few seconds per report) / vasovagal syncope from a standing position. He fell and hit his right frontal bone of skull upon fainting. Patient awoke after a few moments per report and was AAOx4 within moments of this reporting clinician's arrival to scene. Vital signs stable. Patient's frontal bone with minor red abrasion / erythema and scant swelling. He did not complain of changes in vision/ nausea / emesis. Neurological and Musculoskeletal exam intact without issues. |
| 1223953 | 4/17/2021 | CA | 56 | F | 4/16/2021 | 4/16/2021 | Dizzy and briefly fainted about a hour later. Next day vomiting, aches, fever (100.4), chills, dizzy, muscle and joint pain, patchy red skin all over body, feeling exhausted and dehydrated. |
| 1223957 | 4/17/2021 | MS | 60 | F | 4/17/2021 | 4/17/2021 | Moderna COVID-19 Vaccine: The PQCF was reviewed with the patient who stated that she was feeling ok today: no cough, diarrhea, vomiting and didn't require a tetanus shot for an injury. The patient did state that she was allergic to Penicillin and that she had just completed a course of antibiotics Cipro 500mg for an UTI. After she was administered the Moderna vaccine 1st dose, the patient was advised to sit for a couple of minutes near the pharmacy area where she had just taken her shot while her husband was administered his vaccine and then they would be walked up together to the Post-Vaccination Sitting Area. The patient sat near the pharmacy for roughly 5-10 minutes and then walked over to one of the pharmacy Counseling windows to let us know that she was feeling funny and weird. No sooner than she uttered those words, she collapsed and fainted. 911 was called. Once conscious the patient stated that she truly wasn't feeling the best before getting the vaccine but wanted to go ahead and get her vaccine today. EMTs checked vitals. Her blood pressure and blood sugar were normal; however, her heart rate was low and skin turgor was poor. Her preliminary diagnosis before being transported to a nearby hospital was dehydration. I truly do not think that the vaccine caused her syncope spell but reporting since event occurred shortly after Moderna was administered. |

| 1223987 | 4/17/2021 | TX | 17 | F | 4/15/2021 | 4/15/2021 | Nausea, dizziness and fainted for some few minutes. Paramedics were called, patient did not need any treatment and was able to go home.. Mom was counseled on signs and symptoms to watch out and if needed to seek medical care |
| 1224008 | 4/17/2021 | IL | 69 | F | 4/1/2021 | 4/8/2021 | Passed out |
| 1224026 | 4/17/2021 | | | U | | | Since Jan 2020 I have been experiencing positional/vasovagal fainting spells once every 4-6 weeks. They tapered off and were manageable. Since 3/6/2021, I have had 7 episodes, 5 of those since 4/2/2021, two weeks after my second vaccine. My family suggested I look thru my journal to see what could have triggered this explosion in events. My physician contact was thru messaging. I don?t go out much and had only two social interactions during that time period. I had my second Pfizer vaccine at same location on 3/18/2021 at 4 pm; lot number EP7534 |
| 1222303 | 4/17/2021 | AK | 24 | F | 3/20/2021 | 3/20/2021 | Patient came in for 2nd dose of Moderna COVID-19 vaccine on 04/17/2021. They reported fainting spells after receiving the 1st dose on 03/20/2021. Patient stated they fainted 3 times later in the evening after receiving their 1st dose. Patient said that she never hit her head. Patient was denied their 2nd dose at the pharmacy on 04/17/2021. Patient did not seek medical treatment and was fine thereafter. |
| 1222813 | 4/17/2021 | OH | 56 | M | 4/17/2021 | 4/17/2021 | Patient had a vasovagal reaction. 30 seconds after his vaccine he fainted. He was sitting and told his wife he was going to faint. According to him and his wife he has a history of that with injuries or pain. He did not have it on his first vaccine but it has happened to him several times in his life. He regained consciousness quickly and we had him sitting and gave him water. He was fine within 3 minutes. Rested for his 15 minutes and he and his wife left. |

| 1223862 | 4/17/2021 | CA | 53 | F | 4/17/2021 | 4/17/2021 | PATIENT STARTED OUT BEING NERVOUS ABOUT THE VACCINE. I CALMED HER DOWN AND ADMINISTERED VACCINE. I INFORMED PATIENT TO WAIT FOR 15 MIN. I CHECKED ON HER IN A FEW MINUTES AND SHE SAID SHE HAD NAUSEA. I GAVE HER A PLASTIC BAG TO BARF IN IF NEEDED AND I RAN TO THE FRONT OF STORE TO GET A BOTTLE OF WATER. MANAGER SENT ME TO BREAK ROOM TO GRAB A BOTTLE OF WATER. AS I WAS RUNNING BACK, I OBSERVED PATIENT PASSED OUT ON THE FLOOR WITH BLOOD AROUND, NOT RESPONDING. I CHECKED PULSE (LOW) AND ASSUMED SHE HAD AN ANAPHYLAXIS REACTION TO THE VACCINE, SO I ADMINISTERED EPIPEN 0.3 MG AND PATIENT WOK UP. SHE HAD BLOOD NEAR HER MOUTH AND BLOOD ON THE FLOOR. WE CALLED 911 AND THEY ARRIVED WITHIN MINUTES AND TOOK HER IN THE AMBULANCE. I HAVE NO FURTHER INFORMATION ON THE PATIENT. |

| 1223449 | 4/17/2021 | CO | 61 | F | 4/15/2021 | 4/17/2021 | Fainted around 3:00 am on 4/17/2021. Fortunately, I was able to catch my fall by holding on to things, so no major injury. |
| 1223530 | 4/17/2021 | KY | 26 | F | 4/1/2021 | 4/1/2021 | Vasovagal syncope, I was taken out of the waiting room and laid down in a back room, they checked my blood pressure and let me go once my blood pressure increased again (I think this took 20-30 minutes; I'm not entirely sure) |
| 1223504 | 4/17/2021 | IL | 37 | M | 4/17/2021 | 4/17/2021 | Possible vasovagal near syncope post vaccination. Transferred to ED for evaluation. |
| 1222980 | 4/17/2021 | CT | 55 | M | 4/17/2021 | 4/17/2021 | Fainted in 3 mts after the vaccine administration. Tech helped the patient to sit. Then he was fine talking. He did mention that he did not eat anything before coming for the vaccine. Called 911. All vital signs were tested and were good. |
| 1223498 | 4/17/2021 | IN | 63 | F | 4/15/2021 | 4/15/2021 | Pain at injection site, generalized fatigue, ache ~10 hours post-injection- Chills, leg muscle cramps ~16 hours post-injection Nausea, headache (passed out for several seconds) ~19 hours post-injection Completely fine ~42 hours post-injection |
| 1223270 | 4/17/2021 | AK | 32 | M | 4/15/2021 | 4/15/2021 | Client received vaccine, where Health Center was holding a vaccine clinic for staff needing the vaccine. Client came in for his first dose of the Pfizer vaccine. He was nervous prior to receiving the vaccine. Stated that he didn't like getting vaccines. He stated that he had seasonal allergies and was on zyrtec or claritin. He did not have any other allergies or history of a serious allergic reaction to food, medications or vaccine components/vaccines. I vaccinated patient, and he went into the observation room with two APRN's for his 15 minute observation. He stayed in the room for 20 minutes per APRN. When he got up to leave, he walked 20 feet and fainted per APRN note. She stated, "he was cold, clammy pale, bradycardic and was difficult to rouse but spoke less than 2 words or none at a time. Blood pressure at 6:10 pm was 90/50, pulse 40, shallow respirations at 10/min. At 6:15 pm blood pressure was 120/60, pulse 70, and respirations at 10/min. At this time EMS arrived and put patient onto the gurney and transported him to Hospital. |

| 1223392 | 4/17/2021 | MA | 65 | F | 4/8/2021 | 4/8/2021 | By the first evening (Thursday), I had developed a low fever. Overnight, it rose to over 102, with shakes and body aches. When I got up during the night to use the bathroom, I passed out twice (I have only fainted twice before in my life). The following day (Friday), I took Tylenol about 7:30 am, and my fever remained over 101 (101.4, 101.2, 101.1) all day. That evening it dropped to 100.4, and remained there overnight. Over the course of the next day (Saturday), it remained over 100 (100.4, 100.2, 100.1) until about 5:00 pm, when it dropped to 99, and then went away overnight. On Sunday, I was exhausted, but felt okay by evening. I am still thrilled I got the vaccine. |

| 1219076 | 4/16/2021 | IL | 35 | F | 4/8/2021 | 4/8/2021 | Within 15 minute observation period, patient reported not feeling well, feeling dizzy and hot. Patient stated she had been anxious prior to injection, after injection felt a pain in her neck and then did not feel well. Patient was brought by another staff member as patient appeared pale ,hands were clammy, and patient seem to have near syncope where she fell and patient was held by two staff members. This RN went to get vitals machine. Patient seemed to be hyperventilating, vital signs were checked while a provider was called for help. Oxygen was 100%, BP 94/63, HR 45. The doctor came in auscultated heart, patient was drinking water while speaking to provider, HR seemed to be improving to 70s and BP went to 101/67. Patient reported feeling better. The Doctor requested that fingerstick glucose and hemoglobin be checked which were also normal. Patient reported feeling much better after about 5-7 minutes. Patient was stable and sent home with call back parameters. Patient had follow up appointment with provider next day with improvement. |
| 1219162 | 4/16/2021 | ME | 24 | F | 4/16/2021 | 4/16/2021 | After vaccination and a brief conversation, patient was going to sit in our waiting area and upon arriving at her chair, she passed out. She was nervous leading up to the vaccination, but seemed ok right after. She regained consciousness quickly and was a bit disoriented. She proceeded to drink some water and sit for a while. After 15-20 minutes she looked much better and alert. She was unable to get someone to pick her up, but waited for 30-40 min after the event before she felt confident to drive. She stated that she had eaten breakfast and it was the first time she had every passed out before. She said a cold feeling came over her and she just went dark. |

Patient woke up on the floor about 5 minutes later, where she remained for 10 more minutes until the muscle stiffness subsided enough for her to return to bed. Nausea subsided enough after an hour for her to return to sleep. |
| 1218796 | 4/16/2021 | FL | 27 | F | 4/16/2021 | 4/16/2021 | Pt. got the first shot of Covid 19 Moderna Vaccine. Pt was seated in the post vaccination area. After 5 min pt. fainted. Pt suffers of vasovagal syncope. Pt. had pulse and was breathing all the time. Pt. came back in less than 1 min. Pt was laid on the floor with her legs up. Pt. asked for alcohol swabs, I provided it. Pt. was feeling dizzy and throwed up after 15 min of being laid on the floor. Pt. asked for water, I provided. Pt. 's mom was next to her all time. Pt. stayed in the area of the event for one hour until she was ready to leave. Pt.'s mom drove her back home. |
| 1218777 | 4/16/2021 | LA | 53 | F | 4/8/2021 | 4/8/2021 | received her 2nd dose of Pfizer on 4/8@8:32am, was given discharge information, education and directed to our monitoring area. About 8:40am the clinic RN, went to assess the patient as she began to feel nauseated, began dry heaving without vomiting, had generalized redness, then complained of feeling light headed. She passed out so the RN eased her to the floor. A Rapid Response(RR) was called and the patient was moved to the stretcher. VS were taken and at about 8:50am the RR team arrived and assumed care. Once they arrived the patient began to seize. She was taken to the ER where she had another seizure. She remained in a post-ictal state for most of her stay at our facility. |

| 1218765 | 4/16/2021 | OH | 18 | M | 4/16/2021 | 4/16/2021 | Patient recieved vaccine without any issues on 4/16/21. Patient walked to waiting area with pharmacist, was not having any issues or concerns, and was observed for several minutes by the RPH. Approximately 5 minutes after receiving the COVID-19 shot, the patient passed out, fell out of his chair, and hit his head. The patient immediately regained concousness and sat back in his chair. The RPH immediately had a pharmacy associate call 911 and observed the patient. Patient stated he felt a liquid tingle go down his arm from where he received his vaccine then passed out. Patient stated he had a headache and appeared clammy. RPH provided an instant ice pack and observed patient until EMS arrived. EMS provided care to patient and determined he did not need to go to the hospital. Patient was advised to go to hospital if he becomes nauseus. Patient claimed he was okay and just has a headache. Patient's mother took him home. |
| 1219214 | 4/16/2021 | MI | 31 | F | 4/10/2021 | 4/10/2021 | ABOUT 5 MINUTES AFTER THE INJECTION THE PATIENT BECAME DIZZY AND LIGHTHEADED , ALMOST FAINTED. SHE WAS HELPED TO A IMMUNICATION AREA WHERE SHE STATED THAT HER HEARING AND VISION WERE FADING. AFTER 5-10 MINUTES SHE STARTED TO FEEL BETTER , AND THEN THE SYMPTOMS RETURNED AGAIN FOR ANOTHER 15 MINUTES. THE PATIENT'S TEMP, BLOOD PRESSURE, AND PULSE WERE CHECKED FLUIDS WERE GIVEN AFTER ANOTHER 15-20 MINUTES THE BEGAN TO FEEL BETTER AND CALLED HER HUSBAND TO PICK HER UP |

| 1218785 | 4/16/2021 | IL | 61 | M | 4/15/2021 | 4/15/2021 | Patient told the vaccinating pharmacist he had a history of fainting after receiving vaccinations. Patient was feeling okay after vaccination and went into waiting area. Pharmacist was called over because patient fainted. By the time we got to the patient he was awake, alert and sitting upright. He knew who he was, where he was, and that he just received a covid vaccine. The patient said he felt light headed. We offered water and an ice pack as the patient was sweating but he did not say he was hot. The patient was able to get up after a few minutes of sitting and sat in a chair. After another few minutes, the patients head went backwards and he was making a snoring sound. I tried to talk to the patient but he didn't respond. We called 911. We placed the patient on the floor and turned him on his side. After about 1 minute he was with it again. He knew where he was and thought he fainted again. Upon speaking with the patient we received details about his history of seizures due to alcohol withdrawal. He also confirmed the last time he drank was that morning and he had "a few shots and was cutting back." Patient told us he was not on any medications but did take 50 mg of benadryl around 12:00pm that day. The paramedics arrived and took him to the hospital. |

| 1219640 | 4/16/2021 | MN | 23 | M | 4/12/2021 | 4/12/2021 | Client fainted in the post-vaccine monitoring area at 12:57. The left forehead made contact with the floor. LOC for 5-10 seconds. PHN responded right away and advised client to remain laying on the floor while EMS was called. Vitals were WNL and client was coherent upon waking. Oriented x3. Fire EMS and hospital EMTs both responded and determined that client was OK. Offered client transport to ER for further evaluation but client declined. Discussed s/sx of concussion and when to seek treatment over the coming days. Continued to monitor client in first aid room -provided ice and water. Advised to call emergency contact for a ride home - client declined. Discussed importance of monitoring for concussion. Also discussed s/sx of allergic reaction. Client reports that he faints frequently, especially when receiving injections and other medical treatments. Advised client to request to receive 2nd dose laying down . Client remained on site for an hour and remained coherent and oriented. He called his mom and reports his mom and girlfriend would meet him at home but that he had no concerns and felt "normal". |
| 1219630 | 4/16/2021 | OR | 50 | F | 4/14/2021 | 4/14/2021 | 12 hours after I received the vaccination I got fever and chill, and extreme joint pain. 24 hours after the vaccination I began vomiting, had a splitting headache, and then my vision blurring, I called my husband to be near me and completely passed out for about 15 seconds. I woke up with no recall of what happened. I thought I had had a heart attack or stroke. My left side ached where I had the injection. I have NEVER fainted before. We were unsure if I had fainted or had a seizure. Apparently my head was shaking and my hand was also when I unconscious. I stayed in bed with a 101 fever the rest of the day. Today, 2 days from vaccination, I am feeling better. It was terrifying and we were considering going to the ER. I am pro vaccine but was inadequately prepared for what could have been a dangerous reaction. I was sitting when I passed out. I was home. I had someone with me....otherwise it could have been really terrible. |

| 1219296 | 4/16/2021 | NY | 22 | F | 4/16/2021 | 4/16/2021 | Patient appeared anxious prior to vaccine administration. When asked if she felt like she was going to pass out, patient advised she did not pass out from needles/shots before, but has fainted because of extreme anxiety; but did not feel like she would pass out at this time. After shot was administered, pt. was more relaxed, and advised she was feeling ok. Patient was ambulatory, with no complaints of light-headedness or adverse feelings, and walked to the observation area. Approximately five minutes following vaccination, patient told companion that she did not feel good, and laid down on the floor. She then experienced a syncopal episode. Patient did not hit head, or have any injury as a result of the syncopal episode. Patient was breathing normally, but was unresponsive for approximately 15-20 seconds. Following episode, patient regained consciousness (COAx3), and was upset from incident, but confirmed no injury or other illness, following episode. Patient was evaluated by EMTs on site, and was able to sit up and transfer from the ground, to a chair, and the chair to a wheel chair without issue. Further evaluation was conducted by EMT on site. Blood pressure was 110/80, SPO2 was 98% room air, and pulse was 66 at approximately 13:22 hours. Patient laid on gurney/cot on-site for approximately 20 minutes, to rest, and to be monitored for additional side-effects. During monitoring, patient advised the only thing she had eaten today was "one peanut butter cup." Patient was provided water and a juice box during monitoring time. Patient was released from monitoring area at 13:45 hours, after she advised she was feeling ok. She was wheeled into the parking area as a precaution, and left with her companion. Patient was the passenger of the vehicle. |

| 1219278 | 4/16/2021 | NC | 56 | M | 4/13/2021 | 4/15/2021 | Patient is 56-year-old male who presents to the ED for complaint of febrile reaction and swollen axillary lymph nodes after covid-19 vaccine. Patient reports febrile episode overnight. Patient reports fever up to 104, chills, and diaphoresis. Patient reports nausea without vomiting. Patient reports axillary lymphadenopathy, however no chest pain, shortness of breath, sore throat, syncope, palpitations, or diarrhea. Patient has history of CLL, which is currently just being monitored without treatment. Patient otherwise feels well, is a nonsmoker, has no significant confounding illnesses. Patient was hospitalized for viral pneumonitis subsequent to covid-19. |
| 1219262 | 4/16/2021 | | 47 | F | 4/14/2021 | 4/14/2021 | Patient was given her first dose of the pfizer vaccine at around 915 am she had mentioned that she had an allergy to penicillin but it wasn't an anaphylactic reaction. After the shot she went and sat in the chairs out front and shortly after someone called out that she needed help nurse ran to her side and she was unresponsive with shallow breathing and sweating and we called 911. As nurse was checking on her nurse 2 grabbed the epipen and administered right away. She came to after the epipen and we were able to talk to her a bit she mentioned that she has fainted a few times. We noticed that she had urinated at some point not sure if it was before or after epipen. The 911 operator suggested that we get her on the floor and have her lay down so we got her on the ground and laid her down as we were doing this she was going in and out of responsiveness. We attempted to take her blood pressure but the machine errored out a couple times. As we were trying to get the blood pressure the ambulance showed up and they took over care. She was transported to Clinic ER. She called later in the afternoon to let us know that she was doing okay and that she appreciated what we had done for her. |

| 1216643 | 4/16/2021 | CA | 34 | F | 4/15/2021 | 4/15/2021 | Patient fainted about 5 minutes after receiving vaccine. Pharmacist checked patient and she had a pulse. Patient quickly gained conscious and laid down on the floor. Patient said she usually faints when she receives a vaccine or has her blood drawn. Pharmacist checked patient's blood pressure and pulse, within normal range. |
| 1217654 | 4/16/2021 | CA | 21 | M | 4/15/2021 | 4/15/2021 | Systemic: Dizziness / Lightheadness-Mild, Systemic: Fainting / Unresponsive-Mild, Additional Details: Redo: Pt was waiting for 15 mins observation, he felt dizzy and fainted and fell to the ground and hit his head. Called ambulance, temp. was 97.2 bp 120/71. pt gained concious right away and stood up. I assisted pt to lay back to the ground and raised his leg to a chair. ambulance came, checked blood sugar was 80. took him to hospital. |
| 1216616 | 4/16/2021 | CA | 23 | M | 4/15/2021 | 4/15/2021 | About 5 minutes after receiving the shot, patient complained of being light headed, hot, patchy vision, loss of hearing, pale color and almost passed out at the pharmacy contour. He had been helped to have a seat and drink some water, about 5 minutes later he felt much better but only experienced tingling in his fingertips. He stayed for another 20 minutes in pharmacy and mentioned he felt totally alright before leaving the pharmacy area. |
| 1216613 | 4/16/2021 | WA | 25 | F | 4/6/2021 | 4/6/2021 | I had the Pfizer-BioNTech vaccine on 4/6 and felt dizzy 30 minutes later. The dizziness continued for the next 84 hours. On 4/9 (three days after vaccination), I fainted on my driveway as I was heading home around noon time. I felt dizzy the whole afternoon but were trying to help out the groceries from the car. I fell down on the concrete driveway with two bags of groceries on my hand. I did not blackout, but were not able to get up for 10 seconds due to the dizziness. I eventually recovered from the dizziness 84 hours after the first dose of vaccine. I injured my knee as I fell, but the wound were treated at home immediately. As for the sore arm, I could not hold any items heavier than 1 lb. The arm soreness went away after 48 hours with ice pack applied on upper arm(injection area). |

| 1217899 | 4/16/2021 | PA | 41 | F | 4/9/2021 | 4/14/2021 | Extreme fatigue - days 2-7 after vaccine Prolonged dizziness - comes and goes - not only from standing up too quickly - starting 4/14 - can be anything from momentary to 30 minutes. Occasionally fainting. Fainting - starting 4/14 - following dizziness - has happened 4 times Tinnitus - starting 4/14 - comes and goes - severity/loudness increases before dizziness |
| 1216662 | 4/16/2021 | CA | 50 | F | 4/8/2021 | 4/8/2021 | APPROXIMATELY 3 HOURS AFTER VACCINATION THE PATIENT EXPERIENCED A SLIGHT FEVER, CHILLS, SWEATS, AND AN EXTREME MIGRAINE HEADACHE. SHE TOOK TYLENOL FOR HER SYMPTOMS. OVER THE NEXT 2 DAYS THESE SYMPTOMS IMPROVED BUT SHE DEVELOPED A RASH WITH BUMPS ON HER TONGUE, DIZZINESS, AND SLOW COGNITION WHICH LASTED ABOUT 2 DAYS. SHE WAS FINE FOR 24-48 HOURS WHEN ALL THE PREVIOUSLY MENTIONED SYMPTOMS RETURNED BUT EVEN MORE PRONOUNCED AND SHE HAD EXPLOSIVE DIARRHEA WITH INCREASED PAIN AT THE INJECTION SITE. AT SOME POINT DURING ALL THIS SHE VISITED HER MAIN PHARMACY AND AS SHE WAS TELLING THE PHARMACIST ABOUT HER SYMPTOMS SHE FAINTED AND WOKE TO EMS AND WAS TRANSPORTED TO THE HOSPITAL. THE ER DID NOT FIND ANY REASON FOR HER FAINTING. SHE WAS HYDRATED AND THINKS IT WAS ANXIETY BROUGHT ON BY HER EXPERIENCE. SHE CALLED ME TODAY 4/15/21 TO TELL ME ABOUT HER SYMPTOMS AND EXPERIENCE. SHE STATED THAT SHE HAD A NEW SYMPTOM OF A SHARP PAIN IN HER BACK SO I STRONGLY SUGGESTED SHE GO BACK TO ER TO CONTINUE TESTING IN CASE THE PAIN WAS SOMEHOW RELATED TO THE VACCINE INCIDENT. SHE SAID SHE WOULD GO TO URGENT CARE IF SHE FELT THE PAIN WAS BAD ENOUGH. |

| 1218264 | 4/16/2021 | FL | 32 | M | 4/15/2021 | 4/15/2021 | We had a customer pass out after a shot and came too quickly. He began to fall forward several minutes after the shot and another customer pointed out that he needed assistance. As I hung up quickly and went to the patient he was coming to and recovered. I wasn't sure if he bumped his head but did not see any lacerations or signs of obvious severe injury. Store manager was contacted to help assess reporting through Incident reporting process. His BP was 118/82 after spending a few minutes with him and giving him water. He had a sweaty forehead and sat with us for a bit. I did offer to call an ambulance and administer Benadryl. Patient declined. He mentioned fainting with blood donations in the past, never with vaccines. We discussed for second shot we will stand nearby ready for fainting again, or receiving the shot at an MD office in prone (lying down) position. There was no answer to a follow-up phone call the next morning. |

Computerised tomogram: ruled out stroke normal. On an unknown date, Blood pressure measurement: 192/144 High. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. For mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular), the reporter considered FACIAL PARALYSIS (Left side of face cured up/ left side of my face was drooping, could not smile/ happened again in the ER around 1:15 AM so i was admitted), HEADACHE (Terrible headache/ massive headache/ headache around back of head persisted), DYSTONIA (body contracted again, started in calves and feet and hands, went into neck and face), TETANY (full body tetany), HYPERTENSION (elevated BP persisted), DYSTONIA (Could be a Tetany or dystonic reaction to the vaccine due to timing of everything/ Muscles tightened all over body/ within minutes after vaccination hands/ feet/ legs contracted/ curled up), LOSS OF CONSCIOUSNESS (passed out immediately following vaccine), HYPERTENSION (Blood pressure was still high pulse was high 120/ BP went sky high (196/148)/ BP remained high), TETANY (Could be a Tetany or dystonic reaction to the vaccine due to timing of everything), PAIN (Whole body hurt/ very sore body) and LUMBAR PUNCTURE (lumbar puncture relieved excess CSF and reduced pressure) to be possibly related. No further causality assessments were provided for HEMIPLEGIA (Couldn't move left side), SYNCOPE (Fainted when she got the shot), TINNITUS (Ringing in ears), HYPERVENTILATION (Hyperventilation syndrome), DYSPNOEA (Shortness of breath), DIZZINESS (Sometimes dizzy) and FATIGUE (Fatigue). Treatment medication included: Injections of Benadryl and IV Benadryl en route to hospital, Ibuprofen daily as needed and a shot of Toradol. Case Comment/Sender's Comment - This case concerns a 44 year old, female patient, with history of fainting, COVID-19 (September 2020), who experienced a serious unexpected event of syncope, hemiplegia, facial paralysis and dystonia among others, 2 day after receiving 1st dose of mRNA-1273 (Lot# Unknown). Very limited information regarding this event has been provided at this time. Further information has been requested. Most recent FOLLOW-UP information incorporated above includes: On 12-Apr-2021: Updated patient medical history, concomitant

| 1218620 | 4/16/2021 | | 37 | F | 1/12/2021 | 1/12/2021 | Within one hour of the shot administration I became tachycardia, hypertensive, and with chills. Over the next 48 hours my symptoms worsened to include headaches, dizziness, fatigue, and near syncope requiring an emergent visit to the ER. My symptoms persisted and two weeks later I required another visit to the ER and was admitted to the hospital overnight due to tachycardia, hypertension, diarrhea, chest pressure, headaches, fatigue, weakness, chills, and near syncope. Since the onset of events post the Pfizer vaccine, I have required multiple visits with MDs/specialist for management of symptoms and course of treatment. My local physician suspected postural orthostatic tachycardia syndrome (POTS) of which I sought medical opinion and met with a world expert and after meeting with him, he concluded my symptoms were in fact in line with POTS. Since then I have continued to experience flare-ups and episodes of tachycardia, most recently 4/14/2021. It has now been over 3 months since the onset of symptoms post vaccine and I continue to require treatment and management of above symptoms. I have not returned back to previous level of function nor have I been able to return to work. I do not have any prior medical history of this condition or set of symptoms. |
| 1218607 | 4/16/2021 | MI | 28 | F | 4/15/2021 | 4/15/2021 | Patient received vaccine and proceeded to observation area. While patient was sitting she had a brief episode of syncope but quickly regained consciousness. Patient was placed on the floor to lay down and given juice. She stated that she felt much better almost right away. We observed her for 20-30 minutes until the patient felt well enough to leave on her own. |
| 1218583 | 4/16/2021 | MI | 50 | M | 4/8/2021 | 4/8/2021 | Immediate onset with pre-syncope. Persistent profound fatigue, diaphoresis, nausea, foggy, weak legs, muscle aches. Improving after 8 days. |

| 1218428 | 4/16/2021 | ME | 47 | F | 4/10/2021 | 4/10/2021 | The evening after the vaccine was administered I experienced severe pain in my right leg (4/10 at 7:30pm). The pain occurred in the groin and knee area and mostly through the thigh. I took 1000mg of Tylenol and it helped resolve the pain. The following day (4/11) I experienced the same leg pain and continued with Tylenol which helped. Monday I had dizziness and almost fainted so I went to the ED to get examined (4/11). I have a family history of clotting and carry the prothrombin gene mutation so I'm aware of issues with leg pain and get evaluated. The pain has continued over the week and is now in my left leg with mild pain. Visited walk in clinic to have a follow up on 4/15 and they administered a Covid test. |

Patient became conscious, was seated on a chair, and then had second syncope episode followed with convulsions. Stabilized patient. Vitals monitored, assessed by MD and released with referral to PCP. |
| 1220640 | 4/16/2021 | OH | 50 | M | 4/16/2021 | 4/16/2021 | Patient came in for first Covid shot. After the vaccination, he was instructed to stay for 15 minutes in the "post vaccination" area. He went and sat there and I walked back into the pharmacy to finish the paperwork. I then was alerted by a customer that the patient fell off the chair and hit his head. I ran over to him and by then, he was back in his chair and just realized that he had passed out. While I was with him and talking with him, we paged out for code white. I had instructed one of my techs to call 911 as he was pale and palms were sweaty. I had him walk over to the IMZ area and had him lay on some towels and had his feet propped up on a chair. He was given water and I kept talking with him until EMS arrived. They checked his vitals and were asking standard questions and after about 15-20 mins, he was feeling better and didn't want to go to ER. By then, his coloring was much better and he stated he was feeling a lot better. I asked him if he had a headache and he says that he didn't have a headache and was more embarrassed than anything. He thanked me for my professionalism and care and assured me that he felt back to normal. I called him 2 hours later and he was doing well. |
| 1220621 | 4/16/2021 | IN | 38 | M | 4/16/2021 | 4/16/2021 | Patient received vaccine about 5 minutes later he was pale, cold to touch, slouching and sweating. reported not feeling well. reported not being able to hear anything being said to him. Pressure was normal but he responsive but was almost to the point of passing out was sweating profusely. After laying on ground for a few minutes he was responding better said he has poor response to needles. He has passed out previously with needle stick. Emergency services was called patient was evaluated and released in good condition. |

| 1220591 | 4/16/2021 | IL | 37 | F | 3/26/2021 | 3/27/2021 | Approximately 18 hours after the shot, I had a near syncope event. My arms and legs became weak and heavy. My limbs still have not recovered their strength. I cannot be left alone because of near syncope events and I cannot stand long enough to make food or shower by myself. I have had 6 more near syncope events, two of which landed me in the ER. About a week after the shot, I developed moderate vertigo with nausea and a worsening of tinnitus in my right ear. The tinnitus has returned to normal as of today, so far. The vertigo is decreasing slowly. I am still nauseous, especially first thing in the morning. I still have limb weakness and shaking. The intensity waxes and wains. I check my blood pressure multiple times a day, especially when feeling light headed or faint. Most of the time it is in 100-115/ 60- 90. The worst near syncope episodes were 102/56 and 108/60, respectively. Blood sugars within normal range. Oxygen between 97-99% and pulse between 80-95 bpm. Currently, I am on a 30-day event monitor for my heart. My doctor has prescribed a low blood pressure medication, 2.5 mg of midodrone, but haven?t taken it out of fear. |

| 1221449 | 4/16/2021 | TX | 66 | F | 4/5/2021 | 4/6/2021 | 04/06/2021 between 3:00 a.m. 9:45 a.m. Early morning hours at home experienced soreness in right arm where injected, chills, body aches, nausea, lightheaded, dizziness, fainted and hit head on hall tree before hitting the floor. When conscious saw tooth on floor beside me , bruises to chin and inside mouth, two front teeth pushed back in mouth. Called dentist emergency, then periodontist who called 911 when I became lightheaded with fluctuating blood pressure and heart rate. Was taken by EMS to Medical Center. Seen by Dr. who diagnosed me with Vasovagal Near Syncope Collapse. Periodontist treatment plan includes 3 implants to replace/repair lost and displaced teeth..ongoing. |
| 1221422 | 4/16/2021 | NC | 39 | F | 4/14/2021 | 4/14/2021 | Presyncope occurred the morning after receiving the vaccine. I did not actually faint, but when I got out of bed in the morning and walked across the house I suddenly had ringing in ears, started sweating profusely, felt lightheaded and felt like I was going to faint. This lasted for at least a couple minutes. I'd received the vaccine at 9:10am on 4/14. The first side effects started around 8:15pm and were along the lines of what I expected: body aches, low fever, fatigue, chills. Overnight, despite the fatigue, I had trouble sleeping due to heart palpitations and intermittently feeling too hot or too cold, and eventually I had a headache. All night, I was falling asleep and waking up a little while later. At around 6:30am on 4/15, after sleeping poorly, my headache had gotten bad enough that I decided to take acetaminophen. I had not previously taken any medicine leading up to the vaccine or after getting the shot. I got out of bed and walked across the house, and that's when the presyncope came. Feeling very faint, I sat down, took the acetaminophen, and waited for the feeling to pass. Once the feeling did pass, I started to feel better pretty quickly, which may have been the medicine working, and then I was able to sleep for a few hours. A slight fever came back over the course of the day, I took a couple more small doses of acetaminophen as needed, and then on 4/16 I woke up feeling fine. |

| 1221330 | 4/16/2021 | | 39 | M | 4/11/2021 | 4/11/2021 | Patient is a 39 y.o. male with no significant past medical history who came to the ED with a sudden onset of chest pain that radiated initially to his right shoulder then to his left shoulder, left arm and back with intensity of 7/10 starting Tuesday 4/13/21 associated with SOB that is worse when laying flat or taking a deep breath. States he received his second Pfizer vaccine on Sunday, 4/11/2021 at 11 AM and started experiencing fever, chills, headaches, body aches and uncomfortable around 11 PM. He finally decided to take Tylenol x2 on Monday between 2 PM and 11 PM with some relief. He felt a little better on Tuesday morning and did some work from home but later around 7 PM, he notes a temp of 100.2, experienced body aches which he attributes to Vaccine side effects because his wife was also not feeling well post Vaccine. He went to bed and woke up later with cold sweats, felt pain in his chest and back. He described his chest pain as constant pain/heaviness that "felt like someone is sitting on his chest", he later felt pain in his left arm and back prompting ED evaluation. He denies similar episodes in the past, denies abdominal complaints, denies lightheadedness or dizziness, palpitations, shortness of breath at rest, orthopnea, PND, syncope, denies urinary complaints, denies smoking, drinks alcohol socially. States his father has CAD and MI x2 with stent in his 50s, his mother is doing okay with no cardiac history. In the emergency room, his EKG is consistent with pericarditis, initial troponin noted as 4.24 with repeat noted at 8.91, his LFTs are elevated at 107/123. He received full dose aspirin, Lopressor 25 mg with improvement in pain. IMG cardiology is on board with plan for cardiac cath today by doctor. Echocardiogram showed EF of 35-40% with wall motion abnormalities with initial reading. |

| 1221112 | 4/16/2021 | OH | 54 | F | 3/8/2021 | 4/6/2021 | neck is all sore; Fainted; aching all over; Fall; temperature was 100; This spontaneous case was reported by a consumer and describes the occurrence of SYNCOPE (Fainted) in a 54-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 019B21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No medical history reported). On 08-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 05-Apr-2021 at 9:10 AM, received second dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) dosage was changed to 1 dosage form. On 06-Apr-2021, the patient experienced FALL (Fall) and PYREXIA (temperature was 100). On 06-Apr-2021 at 6:00 AM, the patient experienced PAIN (aching all over). On 06-Apr-2021 at 3:30 PM, the patient experienced SYNCOPE (Fainted) (seriousness criterion medically significant). On 07-Apr-2021, the patient experienced NECK PAIN (neck is all sore). At the time of the report, SYNCOPE (Fainted), NECK PAIN (neck is all sore), PAIN (aching all over), FALL (Fall) and PYREXIA (temperature was 100) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 06-Apr-2021, Body temperature: 100 (High) 100. No concomitant medications were reported. On 06 Apr2021 at 6, the patient got up because she was aching all over. The patient fainted (medically significant) on the kitchen floor at about 3:30. Her temperature was 100. Her neck was all sore today 07 Apr 2021, so she was not sure if that was from the fall. Patient stated that she took some pain reliever on 06 Apr 2021. The patient received both scheduled doses of mRNA-1273 prior to the event, therefore action taken with the drug in response to the event is not applicable. Very limited information regarding these events has been provided at this time. Further information has been requested. This case was linked to MOD-2021-069995 (Patient Link).; Sender's Comments: Very limited information regarding these events has been provided at this time. Further information has been requested. |

| 1219820 | 4/16/2021 | NY | 87 | M | 3/16/2021 | 3/17/2021 | Patient passed out the day following the vaccine and was transported to the hospital by ambulance. Hospital ran several tests over a 3 day stay and did not find anything wrong but could not conclude that it was from the vaccine or not. Upon receiving the second dose on 4/16/21 the same adverse event happened the day following the vaccine again. The patient was transported by ambulance to a different hospital, tests were ran and hospital doctor determined it was due to receiving the vaccine because both incidents were the same. |
| 1220076 | 4/16/2021 | GA | 41 | F | 4/8/2021 | 4/9/2021 | woke up overnight feeling extremely nauseated. She was on the toilet holding the trash can and gagging and thinks she remembers putting the trashcan down but then passed out. Her husband found her on the bathroom floor with her jaw clenched. She says the nausea was so intense it felt like alcohol poisoning when she was younger. She did not go to ER. She felt weak and tired for the next several days. |
| 1220062 | 4/16/2021 | DE | 25 | F | 4/11/2021 | 4/11/2021 | About an hour after her vaccine, patient called and said that she was nauseous, vomiting, had passed out twice, a rash from the injection site up to her throat, and her arm was swollen from the elbow up. I told her to take Benadryl and to go to the ER or to the immediate care. I followed up with her the next day and she went to the ER, she said the Benadryl helped her out significantly and that she was feeling much better that day. She was still inquiring about the second shot but, she was following up with her MD on Wednesday. |

| 1220053 | 4/16/2021 | MA | 49 | F | 3/21/2021 | 3/21/2021 | <p>Typical symptoms began the evening of the day I got the shot (March 21st): sore arm, achy, headache, dizziness, and just generally beginning to feel "off". Took Aleve. Symptoms worsened the next day and I was extremely fatigued and that carried into Tuesday. Taking Advil as needed. Started vertigo exercises "just in case" to help with the dizziness. By the end of day on Tuesday, all symptoms had cleared except headache, dizziness and fatigue. However, I was beginning to feel a sense of "brain fog"? I was starting to have a really hard time writing a simple email without it being littered with typos or inconsistent thoughts. By Thursday I was in my doctor's office/prescribed meclizine and by Friday he sent me to the ER: EKG, CAT scan and blood work all checked out. No "real" explanation for my symptoms except a weird reaction to the second shot. Over the course of the following three weeks, the headache has subsided but flares up from time to time however the "dizziness", disorientation, brain fog has continued. Sometimes it feels like I have a focus problem too? like it takes me a while to register what it is I am looking at. Then the more I try to live a "normal" day, the more I seem to experience something that I refer to as a "neurological meltdown" starting mid-afternoon and by dinnertime I can barely think my way through dinner preparation. ANY stimulation like children singing, TV noise, dog barking, etc. feels intolerable. It is all I can do to keep myself upright and engaged in the evening routine and then I am passed out on the couch. The other way to describe this is that I feel "concussive"? like I have a concussion. I have to wear sunglasses now. I can't listen to music through my headphones anymore? it is just too much for my brain. It is like by the end of the day my "brain battery" is drained and if I doesn't recharge overnight, I wake up off and dizzy and just can't think clearly or remember much of anything. I saw an ENT on April 12th and am scheduled to see a neurologist on May 3rd. I have NO idea what has happened to me but I was a high energy, multi-tasker, never sit down kind of person who exercised daily until the second shot. NOTE: Prior to the second shot, I was running 6 miles three times a week and swimming 1 1/2 miles three times a week.</p> |

| 1220049 | 4/16/2021 | MT | 38 | M | 4/13/2021 | 4/13/2021 | Patient experienced near syncope immediately following first dose of vaccine. Patient reports that this is a common occurrence following any procedure involving needles. Patient recovered quickly and refused any further treatment prior to leaving the vaccine POD. |
| 1219983 | 4/16/2021 | MI | 46 | F | 4/13/2021 | 4/14/2021 | At 5:00 AM I woke up and walked to the kitchen to take some Tylenol for my headache. I started feeling dizzy, hot and lightheaded, so I went and sat down. I don't remember, but I must've tried walking back to bed and fainted while walking. I was dizzy after the second dose also for several hours, but never actually fainted. |
| 1219969 | 4/16/2021 | TX | 38 | M | 4/16/2021 | 4/16/2021 | Pt reported feeling lightheaded about 10 minutes after receiving his vaccine dose as well as witnessing another pt have a syncopal event. Pt lost consciousness and was gently lowered down to the floor by a bystander. The patient regained consciousness a few seconds after being aroused. The patient was A&Ox3 and was feeling better after 30 additional minutes of monitoring. The patient declined EMS evaluation when they arrived and felt comfortable going home. He believed his anxiety watching the previous event unfold may have caused his syncope. |
| 1219914 | 4/16/2021 | IN | 37 | F | 4/16/2021 | 4/16/2021 | Patient fainted after receiving the vaccine. She felt light headed immediately before fainting. |
| 1219907 | 4/16/2021 | TN | 73 | F | 4/14/2021 | 4/14/2021 | Patient reports received vaccine 4/14/2021. During evening hours began having nausea that persisted all evening. During the night she was awakened. Upon getting up during the night, reports she "went down to the floor." She thinks she may have fainted but is unsure. Reports she was not injured but was unable to get up from the floor. Her husband called EMS who arrived at their home to assist patient from the floor. Reports no other symptoms other than feeling weak today. |

| 1219876 | 4/16/2021 | CA | 25 | M | 4/15/2021 | 4/15/2021 | At 1455 client had a vasovagal syncopal reaction following 1st dose of Pfizer vaccine. Client stated he had a history of syncope and anxiety with injections and blood draws. No injuries were sustained and client regained consciousness with sternal rub and verbal prompts. Client was unconscious for less than 20 seconds. Vital signs were obtained and were within normal limits. Client denied shortness of breath, headache, nausea, vomiting, diarrhea, dizziness or blurry vision. Client's pupils were PERRLA. Client complained of feeling stiffness and cramping in hands and arms. Paramedic was able to flex hands and arms without resistance, capillary refill was less than 2 seconds. Client offered 911 evaluation and declined three times. Client left via wheelchair and released to care of significant other following a 60 minute observation time and stated resolution of symptoms. |
| 1219856 | 4/16/2021 | NY | 87 | M | 4/13/2021 | 4/14/2021 | Patient passed out (reported as "blacked out") the day after receiving the vaccine. He was transported by ambulance to hospital. This was the second incident (same incident reported after first dose). He does not have any memory of having passed out. |

| 1220079 | 4/16/2021 | CA | 61 | M | 4/7/2021 | 4/7/2021 | PT RECEIVED HIS COVID-19 VACCINE AND WAS WAITING IN THE OBSERVATION AREA. AFTER ABOUT 10 MIN MY TECHNICIAN NOTICED HIM SIT ON THE FLOOR FROM HIS CHAIR AND SHE CAME TO GET ME. AS I APPROACED HIM HE LOOKED DAZED AND SUDDENLY BLACKED OUT. IN ABOUT 15-20 SECONDS HE AWOKE AND ABOUT 1 MINUTE LATER HE WAS SPEAKING. ROUGHLY 5 MINUTES LATER, EMS ARRIVED AND CHECKED HIS VITALS, BLOOD SUGAR AND EKG. ALL WERE WITHIN NORMAL LIMITS. WHILE TALKING TO PATIENT AND THE TWO LADIES WITH HIM, WE FOUND OUT HE HAD DRIVEN 3 HOURS FROM HIS HOME TO COME TO OUR PHARMACY FOR THEM TO GET VACCINATED. AND THEY PLANNED TO GET ON THE ROAD AND RETURN. EMS SUGGESTED HE GO TO THE HOSPITAL, BUT AFTER 20 MINUTES HE WAS WALING AND TALKING AND DRINKING WATER. HE AND HIS FRIENDS DECIDED THEY WOULD NOT GO TO THE HOSPITAL. I FOLLOWED UP WITH HIM 2 DAYS LATER ON 4/9 AND HE FELT FINE EXCEPT FOR SORENESS AT THE SITE OF INJECTION. HE ALSO RECALLED A TIME WHEN HE HAD PASSED OUT FROM AN INJECTION WHEN HE WAS A TEENAGER |
| 1219845 | 4/16/2021 | GA | 34 | F | 3/19/2021 | 3/20/2021 | Fainted 13 hours after shot. Low-grade fever (up to 102) for 24 hours, chills, slight headache, loss of appetite, fatigue |
| 1219814 | 4/16/2021 | CT | 47 | F | 3/30/2021 | 3/31/2021 | Lightheaded immediately and almost passed out. Felt a tingling in both hands. Metallic taste in mouth for about an hour. 8 hours later had the chills, body aches, headache, sinus pressure, and blocked ears. I developed tinnitus in both ears 24 hours after the shot and it still hasn't resolved 16 days later. |

| 1220477 | 4/16/2021 | NC | 19 | M | 4/16/2021 | 4/16/2021 | Patient experienced loss of consciousness after administration of vaccine. This happened within 45 seconds of administration. This happened 3 separate times within a 5-10 minute time frame. No signs of anaphylaxis were identified during this time. Patient would "faint" briefly (approximately 10 seconds) and then regain consciousness and confirm that he had no symptoms of anaphylaxis. Symptoms observed were loss of color of the face and lips and some diaphoresis. The patient was monitored for any changes and EMS was called. The patient refused EMS service or hospital service. He stated that the "fainting" happened to him regularly whenever he received a vaccine. The total time of the event was approximately 30 minutes and the patient was advised to stay longer for monitoring if he would refuse EMS service, which he did. The patient has since been called and is currently feeling "normal except for being somewhat tired". He has been advised to follow up with his primary care. |
| 1220459 | 4/16/2021 | NY | 27 | F | 4/9/2021 | 4/9/2021 | fever, rash, hives, palpitations, headache, syncope. Lasting 7 days after vaccination. Evaluated in the ED on 7th day post vaccine. |
| 1220424 | 4/16/2021 | TX | 18 | M | 4/16/2021 | 4/16/2021 | Syncope, lightheadedness. Observation had him walk and he fainted while walking. Ate Crepes for breakfast, lunch he had chips and a small cup of water. |

| 1220466 | 4/16/2021 | CA | | M | 4/16/2021 | 4/16/2021 | Patient came to observation after receiving first dose of the COVID-19 pfizer vaccine. Patient passed out from his chair to floor after about 5 minutes in observation. Patient placed on mat with 6 liters oxygen. Vital signs of 116/68, HR 78, and oxygen saturation of 98%. Patient remained lying down for about 10 minutes on oxygen to recover. Patient moved to sitting up and then standing with stable vital signs. Oxygen removed. Patient had no other concerns and left in stable condition. |
| 1220369 | 4/16/2021 | AZ | 36 | F | 4/16/2021 | 4/16/2021 | Patient is a 36 y/o F here for her 2nd Moderna vaccine this AM. After being observed for 15 minutes pt c/o N/V and ran to the bathroom. Vitals 140/89, 98% RA, 105. Retook vitals after pt stood up (140/95, 100% RA, 83) and pt still c/o Nausea and dizziness. While exiting the restroom the pt fainted as I was assisting her out. I called for help and guided her to the floor. Dr. was on site and assessed the pt. She was initially tachycardic but improved immediately. cool and clammy to touch. Pt had LOC for approximately 15-20 seconds following episode. Vitals: 135/89, 98%RA, 79. After symptoms improved pt was escorted to an exam room where we monitored her for the next hour. Vitals: 0842-129/89, 99% RA, 84; 0847-134/94, 100% RA, 77 with c/o nausea 7/10. At 0852 Dr. assessed pt again. Pt still c/o nausea; isopropyl alcohol sniff provided and PO water; sx improved, but pt needed to "urinate" and was escorted back to the bathroom by myself and her husband. Pt was able to urinate, upon finishing she stood to walk out; I noticed pallor and clamminess, and she then fainted again. I guided her into the chair I had brought into the bathroom and Dr helped me to guide her to the ground; he auscultated a rapid weak radial pulse; slowed breathing: then she "snapped to". Pt did not have any seizure activity but RUE wrist flexed, pressed against wall. Vitals: 132/84, 100% RA, 71. After the second episode; called 911 to help transport the pt for farther evaluation. FD arrived at 0937 to evaluate the pt. Blood glucose was 80, vitals WNL. Pt still c/o Nausea/dizziness/headache on evaluation. Pt transported by EMS to Hospital. |

| 1220361 | 4/16/2021 | MI | 22 | M | 4/16/2021 | 4/16/2021 | While in observation area, patient said he was feeling a little lightheaded and then fell. Patient slightly stabilized his fall by grabbing onto a chair, but still fell on floor, hit his head. Patient was unresponsive for a few seconds as more help arrived, then was asked where he was, what vaccine he got, what his name was, he answered all questions correctly. Blood pressure was taken 3 times with blood pressure cuff pharmacy staff had on hand, readings were 171/76, 166/79, 151/91. EMS arrived took additional blood pressure 141/89, blood glucose 117, performed EKG. EMS said BP, EKG looked good. Patient said he had one time passed out around needles as a kid. Today refused hospital, said he felt okay. He did say his head was a little sore still, EMS said he was looking okay, EMS left. Patient stayed for about a half hour after event, then felt fine and went home. |
| 1220321 | 4/16/2021 | NY | 48 | F | 4/8/2021 | 4/13/2021 | I am not sure if my event was caused by the vaccine I received on April 8, but I have a very strong feeling it is, as never in my life have I experienced anything like it. My day began normally, and I just had returned home from an appointment. I had some lunch, and a few minutes later as I was standing in my kitchen, I began sweating terribly, heart was racing, and I felt like I was going to pass out. I managed to make it to a large living room chair, and once I lay down and put my head back, I passed out. My daughter witnessed everything and said when I passed out, my arms were trembling and my eyes rolled back. This lasted for about 30 seconds. She was unable to arouse me for a bit, but when I came to my speech was slurred. I did not know what had happened. My daughter called 911. By the time medics arrived, I was feeling much better and aware of everything happening. They checked for signs of stroke, vital signs, blood sugar, and everything was normal. I was transported to the ER, and my work up there was normal, including EKG and blood work. The physician that I saw diagnosed me with vasovagal syncope and did not feel the event was related to the vaccine. I completely recovered, and like I said I'm not sure if it was related to the vaccine I received or not. I just feel that it may be worth noting since I've never had an experience like this and I'm pretty healthy with really no medical history. |

| 1213268 | 4/15/2021 | MO | 23 | M | 4/13/2021 | 4/13/2021 | Pt received the vaccine at 7:15pm and was told to wait in the observation area for the required 15 minutes. The pharmacist started to walk back to his station when he heard a thud. He turned to look at the patient and they were face down on the ground. The pharmacist put his hand on the patient's shoulder to check if they were okay. Patient had urinated and left a puddle on the ground. When the patient awoke, they stated that they were okay except for a sore head. The pharmacist checked their head for any scrapes, bruises, or bumps. None were found and the patient was asked to wait in a chair for an extra 25 minutes. Personally monitored for 5 minutes for additional syncope then had their companion stay close to them. After waiting for 30 minutes, the patient said they felt fine and asked to leave. |
| 1213183 | 4/15/2021 | CA | 79 | M | 2/3/2021 | 2/4/2021 | Received the vaccine on 2/3/2021 I felt fine that whole day. The following day as I was showering I got lightheaded and fell in the bathroom . I went to the ER and the sent me home because I had no injuries. My blood pressure was high . For a few days I got lightheaded off and on. Then on 2/24/2021 I went for the second dose again i felt fine the whole day. On 2/25/2021 as I was showering I got lightheaded and fainted. My family called the ambulance and I was hospitalized from 2/25/2021 to 2/27/2021. I had facial fractures, fractured septum (nose) and cut upper lip received 10 stitches and teeth and gums were numb and still are a little numb. |
| 1213541 | 4/15/2021 | CO | 26 | F | 4/9/2021 | 4/10/2021 | Extreme headache, lethargy, and fatigue morning after vaccine. Pale clammy skin, cold-sweats, diarrhea, nausea, vertigo, dizziness, fainting, lightheadedness, muffled hearing, and blurred vision, later that afternoon. Pale, clammy skin, cold-sweats, vertigo, fainting, lightheadedness, muffled hearing, and blurred vision spells 1-2x/day since vaccine 1 week ago. |
| 1214291 | 4/15/2021 | CO | 32 | M | 4/15/2021 | 4/15/2021 | Fainted a few mins after receiving the dose. Was sitting for his 30mins post vaccination due to allergy history and fell to the floor. Cut his upper lip during the fall. Will go to PCP to determine if he will need stitches for the lip. Woke within 15 seconds of fall, sweaty forehead and palms. Reported no similar incidents in the past after receiving a vaccine. |

| 1213132 | 4/15/2021 | NY | 25 | M | 4/15/2021 | 4/15/2021 | About 10 minutes after receiving the first shot of COVID-19 (PFIZER), patient fainted and fell to the floor from the chair he was sitting on. He gained consciousness within seconds and was responsive. Patient reported feeling dizzy but no signs of trouble breathing or any other symptoms. EMS arrived shortly and assessed the patient. According to the EMS, patient's vitals were all normal and patient refused to go to the hospital with them because he was feeling fine. |
| 1213092 | 4/15/2021 | KY | 22 | F | 4/13/2021 | 4/14/2021 | fainted and had decreased HR. has only ever fainted when she was very young. history of only one other episode. |
| 1213088 | 4/15/2021 | DE | 40 | F | 3/19/2021 | 3/19/2021 | Patient (driver of vehicle) passed out shortly after leaving the vaccination lane, while proceeding to the post administration area. Patient was involved in a 5 vehicle in the post administration area. Patient was assessed on scene by emergency unit and transported by emergency unit to local ER for further evaluation. |
| 1213090 | 4/15/2021 | PA | 43 | F | 4/7/2021 | 4/7/2021 | I had multiple side effects, which I will list below, but the one that was most concerning and which I have not seen listed as a typical side effect is that I got very dizzy and fainted, losing consciousness briefly. I got my vaccine around 10am. By 9pm I had severe chills and was achy. Around midnight I got up to use the bathroom and felt dizzy, then I fainted. Thankfully I had called for help beforehand, so my husband caught me and called my name until I regained consciousness. Immediately after coming to I started sweating profusely. My temperature at that time was 100.3. Through the rest of the night and for the following day and night I experienced nausea, chest pains, achy, sore arm, weakness, and fatigue. I felt relief from symptoms by about 48 hours after my vaccination. |

| 1211955 | 4/15/2021 | FL | 31 | M | 4/14/2021 | 4/14/2021 | Patient received vaccine and was asked to move to observation area. Shortly after sitting down the patient came back to pharmacy counter and stated he was feeling dizzy. Just as the pharmacist was telling him to sit back down he fainted and fell on the floor. He recovered rather quickly (matter of seconds?) and tried to sit up right away. Pharmacist asked him to stay on the floor for a moment, the store's first responder (MIC) was called over to pharmacy. After a minute of sitting on floor the patient got up on his own accord and transferred to a nearby chair. His BP was taken twice per emergency protocol of pharmacy. Patient initially appeared calmmy and BP was 132/81, pulse 44, respirations 18 at 12:25p. BP was 142/89, pulse 48, respirations 16 at 12:35. Patient was given both a water and a Gatorade while he was seated. Patient stated he had not eaten anything yet for the day. Patient was repeatedly offered medical services (i.e. "Do you want a medic? Do we need to call an ambulance?") The patient repeatedly refused any further medical treatment. After further observation patient was able to stand, check out at the pharmacy and left the store on his own accord. |
| 1213074 | 4/15/2021 | CA | 20 | M | 4/9/2021 | 4/9/2021 | FAINTING. RECOVERED SOON WHEN WE HAD HIM LYING DOWN. CALLED 911, THEY TALKED HIM AND CONFIRMED THAT HE WAS CONCIOUS AND DIDN'T COME. BP CHECKING (80/42)..REALLY LOW. HE STAYED AT OUR LOCATION FOR 1 HOUR AND LEFT. CHECKED ON HIM ON 4/14/21, HE STATES HE IS FINE. |

| 1211435 | 4/15/2021 | CA | 41 | F | 3/25/2021 | 3/31/2021 | Immediately after the JANSSEN vaccine I felt tenderness in my jaw that lasted for about two days. My body was sore, my Legs felt like I was having cramps ?growing pains? I also was experiencing allergy/asthma like symptoms that included difficulty breathing and shortness of breath that worsened over time I couldn't speak in full sentences or laugh I was unable to walk 10 steps without gasping for air, after a couple of days of trying to maintain and cope with my theses symptoms. I couldn?t take it anymore, as I was preparing myself to go to the emergency room. I got into the shower the steam from the shower felt like it was suffocating me and I passed out my children took me out of the bathtub and rushed me to the emergency room where I was given several tests that include x-ray, CAT scan, artery bloodwork and vein bloodwork. I was being treated for asthma and given several different breathing treatments and steroids, unable to keep my stats at a decent level and the hard rebound even after continuous treatments, I was admitted because the breathing treatments were not effective. I am still uncertain of the ?actual outcome? the Hospital doctors treated me for an asthmatic episode and gave me directions how to handle my asthma i was prescribed prednisone and referred to my primary that would then refer me to a pulmonologist and cardiologist. At the hospital I was told that there was black spots on my lungs I was told that I was being treated for infection, but then also told it could be pneumonia no certain answer was ever given and i was given and antibiotic and was also told that I needed to see my primary for a way to maintain my asthma. The antibiotics seem to work for a couple of days and again I'm back to having difficulty breathing, shortness of breath, muscle pain soreness and mild lingering headaches. STATUS ASTHMATICUS ASTHMA EXACERBATION ACUTE TRACHEOBRONCHITIS SHORTNESS OF BREATH |

| 1212973 | 4/15/2021 | DE | 36 | M | 3/19/2021 | 3/19/2021 | According to the witness (driver of the vehicle): The patient received the vaccine and within five seconds was slumped over in the seat, passed out. The driver notified staff and they were instructed to exit the vaccination lane, prior to proceeding to post administration area. Staff requested on scene BLS unit for evaluation. The patient became alert and oriented and allowed BLS to perform an assessment. BLS reported all vitals good. Patient stated that his has never happened before and didn't remember anything beyond receiving the vaccine until he woke up. Patient refused BLS transport. Driver stated they were self transporting to the ER for further evaluation. |
| 1212952 | 4/15/2021 | CA | 46 | F | 4/15/2021 | 4/15/2021 | Patient passed out immediately after receiving vaccine. Pale, diaphoretic, and hypotensive (80 systolic). Patient sent to the ED. |
| 1212947 | 4/15/2021 | PA | 30 | F | 4/9/2021 | 4/9/2021 | 1hr after vaccine: lightheaded + had presyncope when moving around, stretching, or moving from sitting to standing. Injection site sore from arm to shoulder and into neck, unable to lift arm for 3 days. 3hrs after vaccine: developed shortness of breath that is only getting better after day 6, Needed to use asthma inhaler several times. Prior to vaccine, had not needed inhaler for many months. Day after vaccine: developed severe migraine, vomited. Had persistent brain fog and made mistakes at work, didn't start to get better until day 6 post-vaccine. Brain fog and shortness of breath have not fully resolved but do seem better today and more transient rather than constant (day 6 post vaccine). Side effects persisted far longer than expected, and were more severe than my peers, so I feel like it is notable. |
| 1212915 | 4/15/2021 | OH | 42 | M | 4/1/2021 | 4/1/2021 | patient was nervous about getting vaccine. Asked him to wait in out waiting area to be checked on. after couple minutes he came upto register and said feeling dizzy. I brought him in consultation room,he sat on chair ,gave him water to drink. then I let him lay down on floor,he passed out,but was talking to me,answering my question,called 911,EMT came in few minutes,checked everything. They said he might got anxious about getting vaccine,checked BP everthing was fine |

| 1212822 | 4/15/2021 | SC | 47 | M | 4/14/2021 | 4/14/2021 | Patient received Moderna vaccine dose 1 at approximately 2:30 pm on 4/14/21. After about 10 minutes, the patient had a syncopal event. 2 pharmacists quickly rushed over and aided in laying him on the floor. His feet were lifted off the floor and leaned against a chair. He was sweating profusely and his face was red. He has no prior history of fainting. He stated he only had a power bar to eat all day and has severe anxiety from receiving vaccines. After the patient started to feel better, he sat up on his own on the ground. He given a granola bar, chips, a soda, and some candy. After finishing the snacks, the patient sat in the chair and was advised to stay for at least an additional 15 minutes. |
| 1212209 | 4/15/2021 | IN | 49 | F | 4/13/2021 | 4/14/2021 | Felt dizzy and not well- at work. Put head down between legs and next thing I remember is laying on the floor (having passed out for at least one minute). Tried to sit up and passed out again. When I woke up the second time (unknown duration) I was sweating over entire body and remained on the ground. Waited ten minutes until someone found me. EMT was called. Normal heart rate, blood pressure, EKG at scene. All blood work was within normal range. Hematocrit 12.1, blood glucose level 102 1.5 hours after episode. Spent approximately 5 hours under care of either EMT or emergency room care. |
| 1212727 | 4/15/2021 | DE | 42 | M | 4/11/2021 | 4/11/2021 | As described by the patient: Patient (driver) was feeling anxious, received the shot and almost immediately started to see white spots and was dizzy. The patient asked to be directed out of the vaccine lane (prior to proceeding to the post administration area) to just get some air. The patient got out of the car, felt dizzy and fainted. Patient fell to the ground in a sitting position. Patient was assessed by BLS and refused transport. Patient switched positions and allowed his passenger to drive off scene. |
| 1213031 | 4/15/2021 | PA | 22 | F | 4/15/2021 | 4/15/2021 | Warmth, dizziness, temporary loss of hearing shortly after vaccination. No nausea, diaphoresis, or tunnel vision. Near syncope prevented by lying down quickly. Typical vasovagal reaction for her. Rapid recovery with all normal vital signs. No orthostasis. |

| 1212630 | 4/15/2021 | WI | 34 | M | 4/14/2021 | 4/14/2021 | Description: __On 4/14/2021, Patient arrived for his COVID vaccine. Moderna lot number 047B21A. This was his first dose of Moderna. Patient did not disclose to staff any pre-existing medical issues prior to vaccine administration at screening or to nurse prior to administration of vaccine during screening process. Patient was deemed safe to receive vaccine based on information he provided to both screening nurses and administration nurse. Vaccine administered by RN into left deltoid via IM injection. Patient immediately shared he has a history of ?passing out? after injection was provided, information client did not share during original screening process. Patient then lost consciousness for brief moment. Onsite contracted paramedics called to assess directly as event unfolded. The RNs notified at assisted directly as well. Client regained consciousness within a few seconds of event Privacy screens were placed for patient dignity and privacy. Patient assisted to wheelchair by onsite EMS crew. Patient was then taken to EMS area and further evaluated by onsite EMS crew. Sheriff Detputy outside area for additional backup if needed. RN remained with EMS crew for duration to assure Public Health RN available for assistance. EMS assisted client to cot and had client lay flat. Vitals assessed with machines. B/P 105/60 initially Patient slow to respond but answered questions appropriately. Patient shared he has been seeing a neurologist for fainting spells and other health issues. Additionally shared asthma history and is on lisinpril, Advair and Benadryl for allergies. Took all medications on day of event. Repeat b/b 114/62 pulse ranged from 59-66. O2 sats WNL on room air. EMS placed 12 lead. Patient noted to be in sinus to brady rhythms. EMS then called the hospital for further evaluation due to patient continuing to remain unstable. Patient was agreeable to transfer to hospital for further eval. At time of transfer, patient was alert, orientated, and responding. No IV placed at time o transfer of care to transport. RN updated team that patient was being transferred to local hospital for further eval. |

| 1215858 | 4/15/2021 | TX | 21 | M | 4/15/2021 | 4/15/2021 | At the pre-counsel stage, the patient said that he was a little nervous about getting this immunization, but wanted to go ahead and do it. I counseled him on the immunization and sent him into the booth to get the shot. Technician administered the vaccine and then told Technician that he felt a little nauseous. Technician told him to stay seated. A few seconds later the patient passed out and started slipping down the chair. Technician grabbed him from behind and called me over to assist. I yelled for Staff to call 9-1-1 and a code white. I held him from the front and Technician held him from the back and we slowly lowered the patient to the floor. Technician sat behind the patient to hold him up while I assessed the patient and tried see if he was responsive. The patient was breathing and had a pulse, so I patted him on the face and chest to see if he would become responsive. After about 15 seconds, the patient became responsive and confused. He asked what happened and if he got the shot yet or not. After talking to the patient for a moment he said he was fine, but needed to vomit. I gave him a trash can and he vomited. We gave the patient some water and sat with him on the ground for a few minutes until the paramedics arrived. The paramedics took the patient's vitals and the patient said he felt fine and declined going to the hospital. We had the patient sit in the observation area for another 30 minutes. He said he felt totally fine and was ready to go home. |
| 1216039 | 4/15/2021 | TX | 18 | F | 3/13/2021 | 3/25/2021 | 12 days after COVID vaccine, patient had episode of syncope, preceded by dizziness and confusion. |
| 1215817 | 4/15/2021 | OR | 50 | M | 4/9/2021 | 4/9/2021 | Patient presents with a potential reaction to the COVID19 vaccine. I was called to evaluate the patient in the car lineup into the monitoring area. The patient had a moderate vasovagal episode without syncope. He was given oral hydration, placed supine, and moved to the monitoring area. He improved rapidly. With close monitoring and hydration, he improved to baseline and was returned home with his wife as the driver. |

| 1216383 | 4/15/2021 | | | U | | | At 1855 observation nurse assessed patient. Patient fainted in observation line per wife statement, presented with cyanosis of the lips, pale in skin color, diaphoretic and incontinent. Vitals upon assessment: BP- 76/48, HR: 68, Temp: 35.1, O2 Sat: 75%. Wife reported that patient took 0.25 mg of Xanax at 1400 and then again at 1615 to calm nerves. Second set of vitals obtained: BP- 86/50, HR: 69, O2 Sat: 97%. 911 called, they arrived around 1600 where patient left AMA. |
| 1216054 | 4/15/2021 | GA | 31 | M | 4/15/2021 | 4/15/2021 | Today 4/15/21, patient was administered the Moderna COVID-19 vaccine. Prior to the vaccination, his wife mentioned to us that he has a severe phobia of needles and has passed out previously to other shots. He had no other issues on his PQCF preventing him from receiving the vaccine. The PQCF was reviewed with the patient by pharmacist. Tech administered the vaccine under supervision of both pharmacist and other technician due to his phobia. Patient received the vaccine with no issues except obvious nerves and a few minutes later while still in the booth, he reported not feeling well. We got him a bottle of water and he went to the post-vaccination waiting area with his wife. We were monitoring him closely and noted that his head was slumping into his wife's stomach when he was sitting down, and he appeared ill. Immediately, we got patient in supine position on the floor with his feet on a chair elevated. Cold ice packs were put on his head, neck, and wrists. Within 5-10 minutes, he was feeling much better. He sat back up in the chair, still with ice packs, and drank water. Patient was asked to stay for 30 minutes so we could continue to monitor him. After 30 minutes, he left with no issues. |

| 1216100 | 4/15/2021 | NC | 30 | F | 4/14/2021 | 4/14/2021 | At approximately 7:30 pm (almost 9 hours after receiving the second Moderna vaccine), I began to have chills and a low grade fever of 100.4. My neck also became extremely stiff. The chills continued to persist and each hour my temperature increased. At 10:00pm my fever was 103 in the ear and I took 1000mg Acetaminophen. The fever went down to 101 overnight and eventually the chills subsided. The morning after the vaccine at 6:20am, I went to take a shower and nearly passed out in the shower - experiencing tunnel vision, ringing in ears, and extreme nausea. The rest of the day, I continued to have a low grade fever between 100.0-100.4, muscle and joint pain, bad neck stiffness, headache, occasional eye pressure, intermittent nausea, and fatigue. The symptoms improved by 8:00 pm (about 33 hours after the vaccine). |

| 1215093 | 4/15/2021 | KY | 18 | M | 4/7/2021 | 4/7/2021 | This patient had some dizziness after the shot and was apprehensive in receiving it. He claimed he felt dizzy and in seconds had slumped off of his chair. He was unresponsive for a few seconds only about 5-10 seconds and we gave him an IM Benadryl as a precaution. He awoke complaining of a funny feeling in the mouth and tongue but had no rash or redness or swelling to indicate an allergic reaction. We decide to monitor closely for an escalation of symptoms but to have a EpiPen handy, and call an EMT unit. His blood pressure was low at first at around 107/68 then quickly come up in about 10 minutes to 130/80. With no other issues we believe he had a vasovagal syncope but wanted the ER to make sure we were correct. I called and checked on him after he was at the ER. and the nurse stated that he was doing very well and that they had seen this happen with the vaccine at other site locations. |
| 1215406 | 4/15/2021 | | 27 | F | 4/15/2021 | 4/15/2021 | Reported being light headed exit monitor walking client to the cot. Client fainted assisted to the floor. Client quickly came responsive and was assisted to get in wheelchair. Taken to a private monitoring room. b/p 118/50 PSO2 100% pulse 84. Respirations even and unlabored. Skin pink warm and dry. 3:53 Given water and a snack. Stated she felt 80% better. 3:57 stated she was ready to go, no further symptoms. informed to seek medical attention with any further problems. |
| 1215403 | 4/15/2021 | OR | 49 | M | 4/7/2021 | 4/14/2021 | 1 week post vaccination - patient, not responding to albuterol HFA, called 911, he passed out, was unresponsive, pronounced dead. |
| 1215393 | 4/15/2021 | CA | 40 | F | 4/15/2021 | 4/15/2021 | Patient started experience syncope symptom after the vaccine administration and during the waiting period (15 minutes). She started feeling light headedness on her chair and tipping over to the floor. Her father who arrived with her to the vaccination had come to the rescue, and together with the pharmacist on duty, helped situating her on the floor. Paramedic was also called to ensure the patient safety but left shortly after since the patient had recovered nicely. |

| 1215122 | 4/15/2021 | WA | 42 | F | 4/12/2021 | 4/12/2021 | Pt was seated in observation area after vaccine administration. She started to get dizzy and walked up to pharmacy counter and fainted/passed out. She fell and hit her head on the ground. She had a gash on her forehead, so we called 911 and had paramedics notified. Fire Department arrived and assessed her. BP and HR wnl, bleeding under control, no further medical attention needed. Pt was feeling better, and was able to stand up. Pt was able to go home, no hospital necessary. I contacted her later that evening and she was feeling better, no further adverse effects. |
| 1215094 | 4/15/2021 | MN | 27 | F | 4/12/2021 | 4/12/2021 | Patient received Janssen COVID19 vaccine at 10:15am. Upon receiving vaccine she sat down on chair to wait for 15 minutes post-vaccination. Just minutes after sitting down patient lost consciousness, fell from chair, hit her head on the floor, seize for a short moment, only to momentarily regain consciousness, and faint for a second time. EMS were called and patient was transported to Emergency Department for testing and observation. Patient believes she fainted the first time due to not having eaten much by that point in the day and due to anxiety about receiving the vaccine, and she was told she fainted a second time due to hypotension. She states she has a history of previously fainting during other medical procedures, though no similar previous reactions she can recall after vaccines. |
| 1215348 | 4/15/2021 | TX | 38 | M | 4/15/2021 | 4/15/2021 | Fainted 10min post injection. History of same symptom with venipuncture. No acute distress BP: 115/78 HR: 66 SpO2: 98% Seen and cleared by EMS |

| 1214904 | 4/15/2021 | MT | 36 | M | 4/15/2021 | 4/15/2021 | After patient received his shot, while sitting during the 15 min waiting period. The patient began getting lightheaded and hot, his color went out of him and his eyes began rolling back in his head. His eyelids turned a purple color and he appeared to momentarily stop breathing. Myself and another pharmacist got him on the ground and supported his head with a coat. When he "came to" and was talking to us. He described feeling better on the cold floor and his color began coming back. I was speaking with him the entire time. While we were out with his 9-1-1 was called and paramedics arrived 15 min later. by the time paramedics had arrived the patient had gotten up and back into the chair himself, was lucid and had color back in his face. Paramedics arrived and took over. He was given the green light from them and remained in the pharmacy area for a total of about 30 minutes before heading home. The patient was admittedly nervous for the shot and had not eaten or had anything to drink the whole day to that point. I believe he passed out from a variety of factors not related to the actual ingredients in the vaccine but cannot confirm this. |

| 1207953 | 4/14/2021 | FL | 23 | M | 4/10/2021 | 4/10/2021 | Pt received the vaccine sat in our waiting area and then passed out a couple minutes after receiving the vaccine. He came to in a minute or so. We called 911 and the paramedics came and took him to the local hospital. Per his report he had not had anything to eat that day and when he came to he felt nauseated and clammy. |
| 1208056 | 4/14/2021 | CA | 24 | M | 4/13/2021 | 4/13/2021 | A 24 year old male who has completed a 15-minute observation period with the following signs and symptoms of an adverse reaction: loss of consciousness and other - dizziness. Pt endorsed he is very anxious about the vaccination. Had a hx of fainting spells during vaccinations. Pt endorsed that while he was on the chair, he felt anxious and dizzy, then tried to take deep breath and passed out. Pt was found on the ground for 5 seconds but regained consciousness right away. No headache, chest pain, SOB, swelling of lips/tongue/throat. Denies any urinary/bowel incontinence. PMHx: none Pt was sent to examination via wheelchair. Vital signs check. Given water for hydration and apple juice. Felt better. vital signs stable Have abrasion on right knee and left dorsal wrist. Physical exam unremarkable. No hematoma or laceration on the head Observed for additional 30 minutes More likely syncopal episode vasovagal This is not an allergic reaction to the vaccine |
| 1207843 | 4/14/2021 | UT | 25 | F | 4/12/2021 | 4/13/2021 | While sitting in a chair waiting 15 minutes after the shot she was fine one minute and then passed out. When she came to the pharmacist gave her some orange juice. It didn't help and she was very nauseous. When she got up to leave she was totally incoherent, was unable to walk on her own. When she got home she was no better so I first called our family doctor which both said take her to the ER. There they did many tests and they all came back fine so they sent her home. By that evening she was able to walk on her own and talking right. She was terribly tired and still today 4/14 she is feeling worse but still not 100%. With the pause today for this vaccine we are very worried about this. |

| 1206906 | 4/14/2021 | WA | | F | 3/29/2021 | 3/30/2021 | <p>passed out 24 hours after the first shot; heartrate went to 99; freezing; chills off and on; wiped out; freezing ,chills off and on; This spontaneous case was reported by a consumer and describes the occurrence of LOSS OF CONSCIOUSNESS (passed out 24 hours after the first shot) in an 87-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 025A21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event. Concomitant products included ASCORBIC ACID, ERGOCALCIFEROL, NICOTINAMIDE, RETINOL, RIBOFLAVIN, THIAMINE HYDROCHLORIDE (VITAMINS [ASCORBIC ACID;ERGOCALCIFEROL;NICOTINAMIDE;RETINOL;RIBOFLAVIN;THIAMINE HYDROCHLORIDE]) for an unknown indication, TRIAMCINOLONE ACETONIDE (NASACORT), FLUTICASONE PROPIONATE (FLOVENT), LISINOPRIL and PRAVASTATIN. On 29-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) 1 dosage form. On 30-Mar-2021, the patient experienced LOSS OF CONSCIOUSNESS (passed out 24 hours after the first shot) (seriousness criterion medically significant), HEART RATE INCREASED (heartrate went to 99), FEELING COLD (freezing; chills off and on), FATIGUE (wiped out) and CHILLS (freezing ,chills off and on). On 30-Mar-2021, LOSS OF CONSCIOUSNESS (passed out 24 hours after the first shot) had resolved. On 06-Apr-2021, FEELING COLD (freezing; chills off and on), FATIGUE (wiped out) and CHILLS (freezing ,chills off and on) had resolved. At the time of the report, HEART RATE INCREASED (heartrate went to 99) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On an unknown date, Electrocardiogram: (Inconclusive) result not mentioned. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Unknown) was unknown. Treatment included as EKG and discontinued Glipizide. Company comment:This case concerns an 87-year-old female with a serious unexpected event of loss of consciousness, and nonserious unexpected heart rate increased, feeling cold, and expected fatigue, chills. Based on current available information and temporal association between the use of</p> |

| 1208620 | 4/14/2021 | | 23 | M | 4/14/2021 | 4/14/2021 | I immediately got a headache after the shot and became dizzy several hours later. I went to bed around 9 pm and then woke up around 10 am and was very dizzy and my arm was in severe pain. I had to vomit so I got out of bed and fainted and fell to the floor. I got up again and then fainted and hit the floor. My husband then called 911 and I was transported to the hospital. |
| 1208686 | 4/14/2021 | PA | 37 | M | 4/6/2021 | 4/14/2021 | syncope for 2-3 seconds, hit head on ground. symptoms improved after laying down. |
| 1208617 | 4/14/2021 | FL | 19 | F | 4/14/2021 | 4/14/2021 | I woke up 7 days after receiving the vaccine with shooting sharp pains across my abdominal / midsection. While attempting to go to the bathroom, I must have passed out because I woke up some time later on the floor with a busted face and nose, and a severe headache. Initially the day after the shot, I had sharp shooting pains down my right leg. I have also had a headache on more days since getting the vaccine. Mental fog and tiredness is also occurring a few days after the initial shot. |
| | | | | | | | Patient was very nervous upon receiving vaccine and told immunizing tech that she had previously fainted upon donating blood. Immediately after receiving the shot, she said she felt like fainting. Her mother walked her to the observation chair for monitoring. She fainted and her mother along with two grocery associates went to hold her from falling off the chair. Two paramedics who happened to be a few feet away came to assist and took her vitals. Other medics arrived and took her to the hospital. |

| 1208602 | 4/14/2021 | FL | 26 | F | 4/11/2021 | 4/11/2021 | Rush throughout body, then passed out. Immediate recovery. Paramedics @ side. Refused transport to hospital. |
| 1208580 | 4/14/2021 | CA | 36 | F | 3/8/2021 | 3/9/2021 | I got the vaccine at 4pm at the pharmacy where I work. I had no symptoms except for very mild local injection discomfort but was able to do my usual normal activities. At 2 am that evening, I woke up with a lot of pain in my legs, I felt they were so heavy to move around in bed. My lower back was extremely painful too, I tried to stand up to walk a bit, the pain was very severe and I couldn't stand straight, it was very hard to drag my feet, they felt very heavy and my muscles were painful to the touch even. So went back to bed, and was in agony. I had to go to work in the morning to open the store I work at until they find me coverage. Driving was very hard with my painful legs. I reached the store and I was walking very slowly, I couldn't have a full control over my legs, they were painful waist down, and felt very heavy, when I sat down my muscles were painful wherever pressure was applied to them (from the chair). Lightheadedness: I felt lightheaded when I woke up from bed at night to try to walk and ease the pain. So decided to go back to bed to prevent falls. At work, while walking and sitting, I had episodes of very light headidness and sat often on the floor and lifted my legs. Measured my blood pressure on 3 occasions it was 90/50 then 100/50 then 110/60. One time only I fainted where my colleagues put me down and lifted my legs. At 8am (morning of 3/9/2021) I had a feeling of heavy breathing. Needed to take deep breath as if my lung muscles were tired and needed to take deep breath to fill them with enough air. At work and because of the increased intensity of muscles pain, I started to breath faster and deeper coz I was in agony Headache: severe and excruciating headache started from 6am to 12pm on 3/9/21. Throughout the symptoms, I refused to take medications to let the vaccine run its course. My family drove me back from work coz I was weak and lightheaded and in severe pain at 10.30am. Came home, took one Advil 200mg at 11am. I was completely pain free at 12pm. Lungs still felt weak, needed to breath deeper for two days but then got better. |

| 1208416 | 4/14/2021 | WA | 33 | M | 3/25/2021 | 3/25/2021 | I received my first dose of the pfizer vaccine at 11am at the safeway pharmacy. I had consumed several glasses of water in the morning before the event, a cup of yerba mate tea, and a piece of toast. I smoke, and had smoked one cigarette in the morning before my appointment. Just after receiving the vaccine I ate a few pieces of jerky and maybe 15 Jojo potatoes from the safeway deli. I was advised to wait 15 minutes before leaving. I set an alarm. I bought some food to eat (jojo potatoes and jerky) and waited to leave the site until 11:22am. I felt strange/weird, but this isn't an unusual feeling after receiving any kind of shot/vaccine for me. I was driving to work and I started to feel just a little bit strange after smoking another cigarette. I got a little nauseous but nothing too bad. Thirty seconds later I started to get dizzy, my ears rang, I felt my blood pressure drop, and I passed out on the interstate going freeway speeds. I woke up around a minute and half later according to my brother who was on the phone. I was treated for injuries at emergency room. |
| 1208372 | 4/14/2021 | CO | 41 | F | 3/22/2021 | 3/22/2021 | Approximately 5 minutes after receiving the shot, got light headed and fainted |
| 1208357 | 4/14/2021 | FL | 38 | F | 4/10/2021 | 4/10/2021 | Fainted after 30 minutes |
| 1208239 | 4/14/2021 | TX | 20 | M | 4/13/2021 | 4/13/2021 | Pt received vaccine and was seated. I went back to pharmacy and realized the patient had fainted. By the time I got to the patient he had regained consciousness. I gave the patient 2 cold packs and told him to take off his mask. I also gave him a bottle of water and a glucose tablet. |
| 1208185 | 4/14/2021 | NH | 64 | F | 4/11/2021 | 4/12/2021 | During the night I felt like I had a fever, chills and body aches. And the next morning after I woke up needing to use the restroom, got up but started feeling dizzy and fainted for about 2minutes. EMT was called and once they arrived I began vomiting and my BP was super low. During the transport to the hospital I vomited again and was given antinausea meds. At the ER I was given IV fluids, chest xray, EKG and blood was drawn and I was released after a few hours of monitoring |

| 1208153 | 4/14/2021 | NE | 22 | F | 4/5/2021 | 4/5/2021 | Right after the nurse administrated the vaccine to my daughter, she complained about having numbness on her feet, flurry eyes, was not able to hear very well, dizziness and fainted for a short time. |
| 1208149 | 4/14/2021 | TX | 45 | M | 4/12/2021 | 4/12/2021 | 5 minutes after receiving the injection, my husband passed out, starting sweating profusely, and was out cold for a minute. EMS were called and he was seen in ER due to low heart rate and sweating to rule out any heart conditions. He had 2 EKGs - one in the ambulance and one in the ER. He also had to have a CT for falling and bumping his head to rule out that injury. The DX was listed as a vagal response, but we are not so sure we agree given that he is 45 years old, has no priory history or anxiety about shots. |
| 1208478 | 4/14/2021 | KS | 50 | M | 4/1/2021 | 4/12/2021 | History of Present Illness The patient presents with 50-year-old male with a history of hypertension and diabetes who presents via private vehicle with complaints of atraumatic left calf pain x4 hours. Symptoms started while typing on computer at work sitting in chair. Described as mild soreness to his left medial calf rating behind his knee. No frank tenderness with palpation. No fall, trauma, injury, or overuse syndrome including gym. No swelling, edema, or asymmetry. No associated motor/sensory disturbance able to wiggle and feel all digits with good pulses. No chest pain, shortness breath, palpitation, lightheadedness, or syncope. No spasms, cramps, or charley horses. Patient denies any history or DVT/ PE, hypercoaguable disorder, recent immobilization or surgery, recent long trips or travel, or active malignancy (w/ treatment in last 6 months) but does take prescribed clomiphene for androgen replacement/stimulation. Discomfort scribed as soreness, minimal intensity, 2 out of 10 without provocative or palliative factors. |

| 1207052 | 4/14/2021 | MD | 21 | M | 4/10/2021 | 4/10/2021 | The patient presented to the pharmacy to receive his Covid-19 vaccination. He was accompanied with his mother, who stated that she was there for support. It was not made clear to the vaccinator that the patient had a history of fainting with vaccines or blood draws. The vaccine was administered, and the patient immediately lost consciousness. The patient was placed in a chair with arms, and was caught before falling to the ground. The patient did not come in contact with the floor or any surfaces to cause further damage. The patient with quickly assessed by the pharmacist on duty and 911 was called by the other pharmacist. The patient quickly regained consciousness and was aware that he had "done it again". Neither the patient nor the mother were particularly concerned about the event, but we called the paramedics to be safe. The paramedics came and took vitals, everything checked out okay and the patient declined transport to the hospital. The patient's mother then drove the patient home. |

| 1206954 | 4/14/2021 | TX | 34 | M | 3/29/2021 | 3/30/2021 | Patient active-duty military on deployment at time of vaccination. Patient to return to later this week. Dr. and I remains on deployment and are best reached via e-mail or above phone number. 34 y/o active-duty male received the Jannsen COVID 19 vaccination on 29-Mar-2021. He describes expected symptoms of fatigue and body aches overnight, but reports development of melena the next morning, 30-Mar. On 31-Mar-2021, he developed nausea/vomiting and persistent diarrhea/melena. He presented for care after an episode of syncope with extreme pallor and hypotension (BP 70s/40s). Hypotension and pallor resolved with 2L NS bolus and patient felt well and was dispositioned to quarters without further workup. On the night of 01-Apr, patient had a recurrent episode of syncope with recurrent hypotension. He was transferred to the ED and found to have a Hgb 5.0 secondary to GI bleeding due x3 peptic ulcers in different stages of healing. He received x4 units PRBCs and started on a proton-pump inhibitor. He continues omeprazole and iron supplementation. Hgb is now stable at 11.6. H. pylori pending. He will follow-up with GI physician. Of note, patient has had a voluntary weight loss of 30 pounds over the past x3 months. He has aggressive supplement use as above and reports exercising twice daily. |
| 1207084 | 4/14/2021 | NH | 34 | M | 4/13/2021 | 4/13/2021 | Systemic: Dizziness / Lightheadness-Medium, Systemic: Fainting / Unresponsive-Medium, Additional Details: After the first dose of the Pfizer COVID19 vaccine, patient felt faint while sitting. When patient stood up to report dizziness, the patient ended up fainting and falling. Patient reported that he did not hit his head. He regained consciousness quickly after and was able to sit for 30 minutes before leaving the facility. |

| 1207547 | 4/14/2021 | NH | 46 | F | 4/9/2021 | 4/9/2021 | Metallic taste filling mouth within first two minutes of injection, lasting for three hours. Cold sweat and the feeling of possible fainting lasted ten minutes. Nausea occurred for 24 hours. Swelling of lymph node in the armpit of the left arm (non-injection) arm as well as a feeling of burning near the underside of the arm just above left elbow lasting 48 hours. When the metallic taste resolved, it was replaced by an indescribable taste lasting for two hours. Within 24 hours, a strong smell of "plastic" for two hours was replaced by the strong smell of "burnt toast/burning" for several hours. The lymph node in the left arm still feels swollen but less so, and it six days past the injection date. Menstruation began a week early, which has not been off schedule for ten years, so it feels related. I hope this helps; feel free to reach out if you have additional questions. |

| 1207213 | 4/14/2021 | NC | 57 | F | 4/11/2021 | 4/12/2021 | The symptoms started a few hours after the shot, feeling tired and fatigued. About 16 hrs after the injection, 4/12/2021 at approximately 3:30 AM I woke up feverish, chills, nauseous and with a bad headache. When I got out of bed I felt dizzy. I was so dizzy I must have fainted on our bathroom floor as I was returning to my bed. My husband had to carry me to bed. I had these symptoms for approximately 24hrs. On 4/13/2021 I still felt fatigues and dizzy. Today, 4/14/2021 I am still fatigued and dizzy. |
| 1210215 | 4/14/2021 | MD | 19 | F | 4/8/2021 | 4/8/2021 | A few hours after I got home from getting the shot, my lower body started to ache super bad. My skin started to hurt like I had rug burn, but I wasn't surprised because that happens to me when I get the flu. My legs and groin region started to hurt more and more and I got the chills. It was extremely bad and I was sort of writhing but I told myself I was overreacting. At around 8 or 9, I decided I would sleep it off and went to bed. At 1:00 am, I got up to use the bathroom and I began feeling lightheaded. I thought I had just stood up to fast so I continued. As I walked, i got more and more dizzy and I couldn't hear well. When I sat on the toilet, I realized I wasn't going to be able to get back up, so I sat and waited. I started to get super hot so I took my shirt off. I finally was able to get up and walked towards the sink but I collapsed before I got there. I started drinking the sink water and ran my shirt under the water and put it on my head to cool off. This really helped so I went back to my room to call my mom. I have never fainted before or come this close to fainting. For the rest of the night I had the worst migraine of my life that gave me aura in my left eye and made my left arm and left side of my face go numb, as well as pulsing in my head. The pain on my skin, and in my legs and head was still there for two days after but it was manageable enough for me to go about my day. I tried to exercize to ease the muscle pain but this did not work. |

| 1210025 | 4/14/2021 | MI | 17 | F | 4/14/2021 | 4/14/2021 | Patient arrived with mom for Covid vaccine at 12:48 pm. Mom reports a history of fainting so nurse decided to administer vaccine with client lying down. Vaccine was administered and client immediately stiffened arms and appeared to seize while her eyes rolled back. Nurse reported she turned the client onto her side and she "came to within 20-30 seconds." She reported blurry vision but could read when asked to do so. She quickly became alert and oriented. Her mother reported that she had a previous episode one time in the past year with painful menses. Her vitals remained stable but each time she attempted to stand up, she reported feeling "sick." She developed a headache within minutes of the vaccine and took 2 Tylenol while still there. Client left with parent to follow up at hospital. |
| 1209957 | 4/14/2021 | FL | 27 | F | 4/14/2021 | 4/14/2021 | PT FAINTED ABOUT 10 MINUTES AFTER VACCINE WAS ADMINISTERED, FELL FORWARD FROM SEATED, HIT HEAD ON GROUND, HUSBAND CALLED EMT, PARAMEDICS ARRIVED TO TAKE PT TO EMERGENCY ROOM, PT HAD SUFFERED FROM POSSIBLE SEIZURE AND CONCUSSION |
| 1209945 | 4/14/2021 | CA | 39 | F | 4/5/2021 | 4/5/2021 | The minute after the vaccination I had fainted, vision went, low blood pressure, after laying down became better. Rested almost an hour in order to be able to walk. next day, I had severe headache, with nausea, and a day later I had bleeding. Bleeding became severe, I had miscarriage. I was 7 weeks pregnant. |
| 1209934 | 4/14/2021 | FL | 52 | F | 4/11/2021 | 4/11/2021 | Within minutes vaso vagal syncope. May not be related. Has occurred before with other injections or drawing blood. Next day, injection site soreness. Fatigue. Everything normal by day 2 |

| 1211314 | 4/14/2021 | MA | 60 | F | 4/8/2021 | 4/9/2021 | Developed heart palpitations approximately 10 hours after receiving vaccine. Also insomnia making it impossible to sleep. Palpitations seemed to get better by 11 am the next morning but my heart rate was still elevated (pulse 106-112). Shortly after that (around 11:45 am) I became extremely light headed and dizzy and felt like I was going to pass out. I also started to feel nauseous and sweaty. I rested lying down for two hours before hearing back from my doctor's office. I was able to control the lightheadedness and dizziness by lying down. The feeling of passing out / nearly fainting went away. I continued to feel nauseous and my heartrate was still elevated. I started to get a headache as well. On the advise of a nurse at my doctor's office, my husband took me to the ER. My EKG was normal . My heartrate was elevated. Due to the overcrowding at the ER that day I was made to wait at least an hour and half for further evaluation. I continued to feel light headed and slightly dizzy. My nausea and headache got much worse . I was finally taken back to a treatment room and received IV fluids, Zofran and Tylenol. My heartrate went back to normal and my headache and nausea improved with treatment and I was discharged around 7pm. I continued to feel very tired and slightly lightheaded that evening. The next morning I was much more nauseous again and still very weak feeling and slightly lightheaded. I have continued to feel weak, very fatigued , unwell and nauseous on and off until today, April 14, which is 6 days after I was vaccinated. |

| 1210747 | 4/14/2021 | MI | 21 | F | 3/16/2021 | 3/16/2021 | Patient passed out and we could not get her to come to. She was taken to the hospital by ambulance. Her blood pressure was very low. She became very weak. She had a horrible and very scary reaction to the vaccine. She was in the hall face down when we found her and we could not get her to wake up. When she did come to, we could not calm her. Patient normally lives by herself and luckily was with us when this happened. We can't imagine what would have happened if she was alone. |
| 1210726 | 4/14/2021 | OH | 16 | F | 4/13/2021 | 4/13/2021 | Patient stated in evaluation form that she had passed out once before after giving blood for labwork. She and her mother decided to continue with the vaccination as it had never occurred before after getting a vaccine. A few minutes after the vaccine the patient lost consciousness. Mom stated that her face tensed up right before hand. The patient remained in her chair for the duration of the event. She regained consciousness about 30 to 60 seconds later, and within a few minutes she was conscious but still very shaky, pale, and hot. She was able to sip some water and we put a cool, wet paper towel on the back of her neck. The patient and her mother remained seated and under observation for an additional 15 to 20 minutes with no further issues, at which point they left the store. I followed up with the patients mother the next day and she said her daughter was exhausted last night, but this morning she woke up feeling well and went to school like normal. |
| 1210694 | 4/14/2021 | | 32 | F | 3/30/2021 | 4/7/2021 | Fatigue for 2 days after shot. Headache starting 8 days post vaccination. Lasted 2-3 days (4/7-4/9/21) Dizziness, blurred vision, almost fainted on 4/9/21 |

| 1210692 | 4/14/2021 | MN | 70 | F | 2/18/2021 | 2/19/2021 | I woke up at 3:30 a.m. lightheaded. I went to the bathroom and on the way back to the bedroom I fainted. I regained consciousness and realized that I was on my knees on the bedroom floor. I felt as though the room was whirling and fainted again. I woke up to find that I was laying down on the bedroom floor. At that point, I heard my husband asking me what happened. I felt him pick me up and put me back in bed. He didn't sleep the rest of the night listening to me to make sure I was breathing. I woke up in the morning feeling fine, no more symptoms. While my episode was going on, I never thought to call for help from my husband. Very unusual for me not to do that. I just didn't think about talking, strange for me. |
| 1210686 | 4/14/2021 | | 20 | F | 4/13/2021 | 4/13/2021 | The patient felt dizzy when after the vaccine was administered and then fainted. The patient was given crackers and juice and recovered on their own. |
| 1210685 | 4/14/2021 | MI | 51 | F | 4/10/2021 | 4/11/2021 | Approximately 3:00am I woke up with severe chills & severe headache. After not being able to fall back to sleep due to headache I decided to take medication for headache. Walked to kitchen for water and before I could take medication I passed out and fell to the floor hitting head on cupboard door. After realizing I passed out and fell I got up to take meds and passed out again. I woke up on the floor some time later and was able to get to the couch. |

Patient refused to go to the ER, family notified, patient is released from facility accompanied by sister. |
| 1209385 | 4/14/2021 | NY | 23 | F | 4/12/2021 | 4/12/2021 | i received the vaccine at 3pm on monday april 12th. i started shaking less than 5 minutes after i received the dose and my throat started to swell and i couldn't swallow. they placed me under observation for 30 minutes and gave me water?saying that ?i might just be afraid of the needle and not to worry, this is an abnormally normal reaction to a new vaccine.? after 30 minutes a man walked over to me and said ?oh you?re still here?? and chuckled. they then told me i would be fine after a while and to leave. i started walking down the sidewalk and almost passed out so i called an uber to take me to the nearest urgent care. i arrived at urgent care around 4pm unable to swallow and having a reaction to the vaccine. they saw me immediately and gave me 3 50mg of prednisone and a benadryl and placed me under observation for 45 minutes. he said i looked better and i even felt marginally better. i called another uber and when i was almost home my tongue started to go numb as well as my lips and my breathing was becoming constricted. i had the uber driver pull over as i had to sit on the sidewalk and get some air. i then called another uber to the hospital because my symptoms were becoming increasingly more alarming. Hospital admitted me and gave me a shot of epinephrine and IV fluids and kept me under observation for 6 hours. they discharged me a little after midnight with a prescription for prednisone, epinephrine, and benadryl. if i had been administered epinephrine at the vaccine site on monday and not been told i was just squeamish by the male air force cadets?i probably wouldn't still be short of breath, painfully swallowing, and bedridden. |

| 1209251 | 4/14/2021 | TX | 30 | M | 4/14/2021 | 4/14/2021 | Pt had vaccine and said he fainted and fell down. When asked if he hit his head he said yes. His head was assessed for laceration or bumps, none were observed at the time of assessment. He was under observation until he felt he was okay to go home. He was a&ox4 after vital signs were locations. |
| 1209248 | 4/14/2021 | OH | 41 | M | 3/6/2021 | 3/6/2021 | I received the dose at 5:35am on 3/6/21 went home slept most of the day woke up and felt tired, 8:00pm on 3/6/21 I left for work drove a few miles up the road and fainted and crashed my vehicle. |
| 1209241 | 4/14/2021 | NC | 55 | F | 3/10/2021 | 3/25/2021 | next day extreme fatigue, fever lethargy. Got better but never got energy back and had some body aches and trouble sleeping. On Wed. March 25th an EXTREME headache began and I could find no relief with High doses of Tylenol or Ibuprophin or a mixture of both. It was my whole head. Stayed on the couch all day Saturday and Sunday 27th and 28th unable to move because of the pain and extreme fatigue. Monday the 29th made myself go to work but was not able to function or get much relief. On Tuesday the 30th went to see physician who said he thought it was Occipital Neuralgia and gave me prednisone and said use hot compresses. Told him I thought it was more due to other symptoms like hallucinations (shadows I would see) Mind not clear and made me worry about driving. Asked if the shot could be a possibility. He just said he couldn't rule it out. The doctor also mentioned I felt very hot but never took my temperature. I Took the prednisone. Headache did start to clear on Wed the 31st in the evening but my neck seized up where I could no longer turn it to the left and was very painful. Also felt like my lymphnodes were swollen. I called on call doctor and they prescribed a muscle relaxer. I did not start to get better until Sunday April 11th. Experience a couple ocular migranes as well during this, Still experiencing some fatigue and almost to a fainting point in the mornings |

| 1209237 | 4/14/2021 | PA | 47 | M | 4/14/2021 | 4/14/2021 | Patient fainted, but patient mentioned that he does faint after needle exposure. Patient also ended up vomiting. Laid patient on floor and observed for 40 minutes took blood pressure and patient stated that it was normal for him. After 15 more minutes we let patient leave and wife drove him home. Called at 2:40 and confirmed that patient made it home safe. |
| 1209418 | 4/14/2021 | NY | 35 | M | 4/12/2021 | 4/12/2021 | Patient experienced extended episode of syncope and temporary discontinuation of respiration approximately 8 minutes after vaccination. |
| 1209101 | 4/14/2021 | OH | 26 | M | 4/6/2021 | 4/7/2021 | Within 12 hours of injection: Body aches, fever, severe chills (convulsions), headache, nausea, threw up three times, passed out. |
| 1209148 | 4/14/2021 | WA | 20 | M | 4/9/2021 | 4/9/2021 | The patient had a needle phobia and was very anxious prior to the vaccine. Once the patient received the vaccine, he waited in the waiting area for 15 minutes post-vaccine. About 5 minutes after the vaccine, he notified the pharmacy staff that he wasn't feeling well and he was feeling faint. The pharmacy staff provided him with a glass of water and was monitoring him. He said he felt like he fainted and wasn't feeling well. He said he felt warm and sweaty. The pharmacy staff provided him with an ice pack. He then notified the pharmacy staff that he urinated in his chair while waiting post-vaccine. He wanted to be checked out and wanted us to call 911 . The patient began to feel better after about 20 minutes. The EMT arrived and checked the patient. Even though, the patient was feeling better, the EMT recommended the patient be checked further anyways. He was brought to the Triage center and was there for about 1 hour, according to the patient, and was feeling better. He said he felt slightly fatigued that day and the following day, but other than that he was feeling back to normal and no issues. He stated he has severe needle phobia and has experienced these fainting spells and anxiousness in the past. We followed up with the patient and he provided this information to us. He stated he was feeling good and back to normal. He had no further questions or concerns. We told him to follow up with us if questions or concerns came up. |

| 1208926 | 4/14/2021 | FL | 19 | F | 4/14/2021 | 4/14/2021 | <p>This is a 19 y.o. female status post 1st dose of Moderna vaccination on 04/14/21 at 130PM. Patient was outside under the tent waiting 15 minutes post vaccination when she fell out of her chair and onto the ground. Upon arrival, patient was lying face down and unresponsive. 10 seconds later patient regained consciousness, but was lethargic, clammy and pale. Patient is nauseous and vomiting. With assistance, patient was transported via wheelchair inside the modular unit in the parking lot. Reports eating a cookie this morning. Last meal was last night and it was a bowl of spaghetti. Patient reports having a syncopal episode and seizure 5 months ago after getting a COVID-19 nasal testing. Denies any medical history, no NKDA, no medications, no recent illness. Initial VS at 1400 was 90/56 HR 52, O2 sats 98% on room air. Denies SOB, denies difficulty breathing, denies chest pain, denies HA, denies dizziness. VS 1408- 90/56 HR: 57 BPM, RR: 12 BPM, O2 Sats: 98% Room Air VS 1425-91/57 HR 50 BPM, RR: 12 BPM O2 Sats 98% Room Air VS 1440- 94/57 HR: 54 BPM, RR: 12 BPM, O2 Sats: 98% RA Plan: Syncope and collapse- Patient was evaluated for 1 hour. Patient reports that she was feeling much better and was eager to go back to her room. Her pallor improved, she was AOx3 and speaking in clear sentences. , RN was advised to try patient with sips of clear liquids and provide her some crackers and have patient ambulate prior to discharge. When the nurse was repeating her VS and providing the patient the crackers, patient experienced another syncopal episode, but regained consciousness immediately. VS at 1450: HR 49 BPM, O2 Sats 99%, BP 82/50. Because patient experienced another syncopal episode, 911 was dispatched for ER evaluation. Patient asked that I speak to her mother, mother updated on patient's condition and that she needs to go the ER for further evaluation. Mother agrees and verbalizes understanding of care. Spoke to with the local health department and she reports that this case will need to be reported to VAERS. Patient is being transported by stretcher to the hospital. Will follow up with the patient. Nausea and Vomiting- Patient refusing Zofran IM, prefers PO. Zofran 4 mg SL given once at 1400 for nausea and vomiting. Nausea and Vomiting improved within 20 minutes. No nausea or vomiting upon discharge from the health center.</p> |

| 1209202 | 4/14/2021 | TX | 27 | M | 4/14/2021 | 4/14/2021 | Fainted (hx of similar symptom with venipuncture) and tingling sensation to bilateral fingers Seen and cleared by EMS |
| 1209663 | 4/14/2021 | CO | 55 | F | 3/6/2021 | 3/6/2021 | Sorry for delay in reporting. I didn't realize I should report the adverse effects. I had the vaccine at 11:30 am and felt fine. But around 6pm, I was sitting outside on a cool night with a jacket and scarf on and I suddenly very very hot and had to take off my layers. I felt nauseous. I got up to go inside because I thought I would throw up and then fainted. I came to a second later (some friends where with me) and felt extremely nauseous. My friends brought me a bucket and I got sick. I felt immediately better. But later that night I had a headache, and chills. I didn't get sick again, but I left as if I had the flu. I felt better in the morning. |
| 1209794 | 4/14/2021 | IA | 32 | M | 4/7/2021 | 4/7/2021 | On Wed, April 7, 2021, Kurtis received the first dose of Pfizer COVID vaccine. About 14 minutes after receiving the shot, he passed out while sitting on a chair and was found on the floor (5:45pm). He regained consciousness almost immediately and he stated he was dizzy and lightheaded. He also stated he only ate one spinach salad during the day and is trying to lose weight. We gave him water and a protein bar to eat. He slowly sat up on the floor, sat in a chair, and then stood. His fiance came to pick him up and drive him home. When called on 4/9, he stated that he was doing well and having no adverse reactions. |
| 1209855 | 4/14/2021 | MA | 23 | F | 4/14/2021 | 4/14/2021 | PT received Covid19 vaccine at 16:30. PT experienced sudden weakness and dizziness at the site of her own blood that occurred at the vaccination site of her L arm. PT also stated she felt close to fainting. EMS responded to the vaccination table and assisted the PT to sit in a wheelchair where she could be moved to another location for further evaluation. PT condition improved and refused transport. |

| 1209734 | 4/14/2021 | FL | 23 | M | 4/14/2021 | 4/14/2021 | Numbing of tongue, cannot see or hear for a minute, fainted. He fell to ground and regain hearing and sight, and started to feel better. |
| 1209711 | 4/14/2021 | CA | 58 | F | 4/12/2021 | 4/13/2021 | Thirty four hours after my vaccine all of a sudden it felt as though someone gave me a tranquilizer. Everything started spinning, I felt nauseous and could not keep conscience. I felt paralyzed. I could not lift any part of my body. I passed out! I remember this morning that I could faintly hear my husband on the phone trying to get help. I feel much better today, but still dizzy and nauseous, but nothing like what hit me last night. It was as if someone had given me anesthesia. I could not find anyone on line that had this reaction? |
| 1209678 | 4/14/2021 | NJ | 29 | F | 3/10/2021 | 3/11/2021 | Nausea, vomiting, fever, dizziness, headache, body ache, fainting |
| 1209632 | 4/14/2021 | NY | 66 | F | 1/14/2021 | 1/25/2021 | FIRST EVENT: I fainted while walking my dog on 01/25/2021, 11 days after first dose of the Moderna vaccine. I fell on the ground and hit my head. I had never previously fainted before. I injured my forehead, my nose, my knees and hands. I do not remember falling to the ground and I did NOT brace when falling. While fainting, I didn't realize I was falling. SECOND EVENT: In February, after the second dose of Moderna, I started getting strong pain and cramps in both legs in the calf muscles and my toes. I couldn't walk. Starting on 03/09/2021, the pain in the left left intensified and I went to the doctor. The doctor performed ultrasound and told me that I have inflammation of the veins in the calf muscle. I started blood thinner medication (Eliquis) on 03/10/2021 for four days. I also took Ibuprofen (3x600 mg daily) for 12 days and Celebrex for 10 days. Once the inflammation decreased, I stopped taking the medication. I had residual pain for three weeks. I no longer have pain. |

| 1209529 | 4/14/2021 | IL | 42 | F | 4/8/2021 | 4/8/2021 | 15 minutes after injection: out of nowhere became extremely dizzy, nauseous, and fainted. stayed on floor, drank water, juice, crackers, tried to get up but was too weak and almost fainted again. sweating profusely and cloudy vision so lied back down. After 1+ hour felt mostly better so left . 30 minutes into my drive home felt sudden onset of nausea, left fingers tingling & numbing with save wave of extreme dizziness. Pulled onto median and called 911. My face started stiffening into a pucker like position and my muscles all through my body stiffened, but weakened with sharp tingling. I couldn't stand so they carried me out of car and took me to Hospital. The rooms were full so I was in wheelchair waiting for room, shaking profusely, blue fingers, nauseous, dizzy and couldn't stand on my own. I was able to go to restroom w/assistance but My muscles were stiffened for 1 hour+ and over and i felt awful. over the course of 5 hours I gained strength back and started to feel better with just mild headache and nausea. They did EKG, blood panel and chest xray which looked ok. Diagnoses as allergic reaction and told me to come back if more issues. The day after shot and every day since have had a headache at base of neck and pressure in cheek/forehead + nauseau + dizziness and extreme tired. Today is 14th and no headache today. |

| 1209508 | 4/14/2021 | WA | 26 | M | 4/10/2021 | 4/10/2021 | The patient was nervous prior to vaccine and had a needle phobia. About 5 minutes post-vaccine, the patient stated he was not feeling well and feeling warm and sweaty. The pharmacy staff provided the patient with water and an ice pack. The patient stated he was feeling faint. The patient fainted for about 20 seconds and then became conscious again. The patient didn't have any injuries and didn't fall down. The patient was okay and he laid down and elevated his feet on a chair. He then stated that he has severe needle phobia and has fainted several times in the past with vaccine administration and blood draws. He had experienced this in the past. He was still slightly faint and requested that he be checked out. The EMT arrived and they took his vitals and checked him. By the time the EMT arrived, he was beginning to feel better and had sat up and drinking water. There were no further issues. The EMT stated he was good to head home. We followed up with patient and the patient was feeling good with no further issues. |
| 1202447 | 4/13/2021 | OK | 64 | F | 4/11/2021 | 4/12/2021 | Woke up feeling VERY sick and weak with headache. I honestly can't describe better how I felt except I was very ill, more so than I recall feeling my entire life. Got up and used scooter to get to bathroom, as I was non-weight bearing from an ankle from a reconstruction surgery March 2. 70 mins later, I found myself on the bathroom floor after, I assume, I fainted. I have no memory of falling onto the tile and blacking out. My scooter was on the floor near me. The good news is that I no longer felt sick, but was instead sore from slamming into the tile. My coccyx area was hurting, but not enough for me to feel like I needed x-rays. I also had a very sore left shoulder and neck area. I see my ankle surgeon April 15 and will have the ankle x-rayed. I'm hoping to see if I damaged the ankle with the fall. (My ankle hurts a great deal and causes lack of sleep and nausea since the surgery, so I don't know if the fall made the ankle worse or not.) |

| 1201778 | 4/13/2021 | WA | 39 | F | 4/6/2021 | 4/6/2021 | About 2:30pm on 4/6/2021, same day as vaccine, began to have saline/metallic taste in mouth, about 1 hour later started to get cotton mouth and began getting tired; by 5pm same day I was fatigued and had a hard time keeping my eyes open, started getting chills about 7:30pm and took 2 ibuprofen and fell asleep, woke up some time before midnight because my heart was pounding in my chest, was so tired that I'm not sure if I passed out or just fell back asleep but woke up around 3:00am on 4/7/2021 with a fever and headache. The cotton mouth, fatigue, headache and fever of 99.9 to 101 lasted until about 8:00am on 4/8/2021., where I had a second set of chills and the fever broke. On 4/9/2021 I still had fatigue and had to leave work early as I couldn't multi-task and had a hard time staying focused. The inability to focus and fatigue lasted 4/10/2021 and 4/11/2021, just walking up and down my stairs at home exhausted me. On 4/12/2021 I went back to work, my focus is better but still not back to where it should be, I still get exhausted easily and everything is a bit too bright. On 4/12/2021 about 7:30am, I had a bloody nose that took a while to stop (about 30 minutes), that is not normal as I rarely have a bloody nose; I was late to work due to it and had another one while at work around 11:40am; it was not as bad as the first and stopped after approximately 10 minutes. Today is 4/13/2021- Things are still a little too bright and my energy level is not quite back to normal, I also have a slight headache. |
| 1201796 | 4/13/2021 | AZ | 22 | M | 4/9/2021 | 4/9/2021 | Patient fainted while sitting in chair. Started sweating profusely, felt clammy and cold. Elevated legs, checked pulse and pulse oximeter. Was awake and talking within a couple minutes. Gave him cold water and crackers and he was feeling much better. Paramedics arrived and confirmed all was good. |
| 1203507 | 4/13/2021 | AZ | 54 | F | 4/2/2021 | 4/2/2021 | Patient fainted after getting her vaccine. EMS (was present on-site) observed patient for 30 minutes; she felt better after 15 minutes. Patient denied any additional medical attention and she felt okay afterwards. Later patient said that she has needle phobia. Patient has no symptoms or any additional issues as of 4/13/2021, when followed up with patient. |

| 1201944 | 4/13/2021 | MA | 33 | F | 4/5/2021 | 4/6/2021 | The night of my first shot, I went to bed but woke up at 3am to use the restroom. Upon washing my hands, I started seeing stars and completely blacked out. I had chills but was sweating profusely. I thought I could make it back to my bed but apparently lost consciousness and passed out on my way out of the bathroom, fall forward onto my knees and smashing my head on my bedroom floor. My boyfriend woke up from the bang and found me unconscious for ~10 seconds before he got me to come to. I was extremely disoriented once I came to and he was able to get me back into bed. Since that date (4/6/21 3am), I have experienced a headache like never before. 4/7 and 4/11 were the worst headaches I've ever had in my life. I was hysterically crying with ice packs on my head in the dark, as light was very bothersome. Taking Tylenol every 4 hrs during daytime while awake barely shook this headache. I had a good day on 4/10, but then had the set back with the worst headache ever on 4/11. I spoke with my doctor's office on 4/7 and they decided I most likely had a concussion and could recover at home. I called again 4/12 in the AM after having the worst headache of my life on 4/11 and they could not get me in for a visit until 4/13. I just left that appointment and while I passed their "neuro" physical exam, I am still experiencing these headaches along with dizziness and shortness of breath when doing the smallest task or bending down and getting back up. I've requested a CT Scan to ensure there isn't a brain bleed causing these issues from my fall which occurred due to the dizziness from receiving this Covid vaccine. |
| 1201984 | 4/13/2021 | IN | 34 | M | 4/8/2021 | 4/8/2021 | Directly after giving the vaccine the patient fainted. Patient "came to" and paramedics were called. When they got here, he fainted again and they took him to the hospital. |
| 1202026 | 4/13/2021 | MO | 56 | F | 4/8/2021 | 4/8/2021 | Rash all over, redness, fever, chest pain and heaviness, fainting, severe itching, sore throat with blisters in mouth, Migraine, and HBP. Treatment: ER-IV Solu-medrol X1, Pepcid x1, Fiorcet x1, Toradol x1, Caffeine pill by mouth. |

| 1202033 | 4/13/2021 | GA | 22 | F | 3/23/2021 | 3/23/2021 | <p>March 5, 2021: 1st dose of Pfizer vaccine. Severe site pain. March 23, 2021: 2nd dose of Pfizer vaccine. Felt very restless and sick during night, by the next morning symptoms really sat in. March 24, 2021: Went to Urgent Care due to fever. Had COVID-19 test (negative). Very close to passing out there (put head between knees and did not). Was sent to emergency room immediately due to heart rate (high 140s-150s. Highest known was 152 BPM). ER performed following: portable chest x-ray, blood tests, urine tests, EKG. Was told results were all normal with the exception of EKG (not told anything about it, form listed as abnormal). Passed out 2x at hospital. Was given one IV rehydration solution and released that night. Symptoms below lasted for several days: Headache Aches Nausea Aggressive shakes Shortness of breath Confusion Dizziness Site pain (also developed bump under arm) Fever - 103.8 (after 2 Advil, 2 Tylenol, 3 ice packs and eating frozen grapes) Heavy sweats Racing heart Restless March 30, 2021: Still having frequent heart palpitations (they come and go but happen several times during the day. Keep having very high heart rates). Went to doctor. While there, nurse noted irregular heartbeat that sounded like it was ?skipping a beat? and heart rate was also jumping all over the place (high pace, low pace, high, etc.). It was clear something was abnormal. Doctor gave EKG approximately 20 minutes later, EKG looked normal. Was told to come back next morning for blood work and to cut out caffeine. March 31, 2021: Came in for blood work to check thyroid. April 6, 2021: Thyroid results were normal. Still having palpitations among other symptoms (see April 12 for more info) so was told to come in. Was given ?work from home? note and referred to cardiologist. April 12, 2021: Appointment at cardiologist. Still having severe palpitations, occasional dizziness/ lightheadedness, nausea, shortness of breath, exhaustion and chest pain. Heart rate was recorded this day to have gotten up to 139 BPM-- was very high majority of the day. EKG was normal (with exception of high heart rate) but 30 mins later doctor observed high heart rate and abnormal rhythm. Was told to come back in a week and one day for a heart ultrasound and heart monitoring for three days. Still no caffeine intake since 3/30/21. Previous heart rates taken at doctor's visits over the years for comparison below. Never had any prior</p> |

| 1203448 | 4/13/2021 | CT | 24 | F | 4/8/2021 | 4/8/2021 | Received vaccination around 10:15 AM and began experiencing soreness in left arm around 1 PM. Consumed regular diet and drank about 2 L of fluids until 6 PM. Laid in bed around 5 PM and got up at 6 PM to urinate. Felt fine, just a bit tired and sore arm. While urinating, experienced slight nausea. When washing hands, experienced dizziness and lightheadedness. Attempted to stabilize self on doorway of bathroom and quickly after exiting bathroom, lost consciousness and fainted. Remained unconscious for a couple of minutes and returned with full clarity and processing, but weakness. Checked bp about 3 hrs later and was very low, with orthostatic numbers even lower. Fever measured at 100.5 F. Took 250 mg Tylenol and hydrated. Days later, bp remains low -- Friday, one day after: standing - 81/57 with temperature of 101.4 F, remaining entire day, with fatigue, joint pain, muscle cramps. on Monday: 86/64, with fatigue, no fever Bp is usually on lower side of healthy range, but no history of clinically low blood pressure, nor orthostatic bp. |

| 1203644 | 4/13/2021 | CT | 24 | F | 4/7/2021 | 4/7/2021 | Trouble breathing as the shot was administered. Vision began to black out after 3 minutes. Urge to vomit, extreme nausea. Passed out, unconscious within 5 minutes of receiving the shot. Could not sit up/dizzy for 30 minutes. Nausea, weakness, dizzy, poor mental acuity/memory. Later that night, and through the night for 10 hours, severe back pain. Nausea, severe weakness, dizzy, poor mental acuity and memory, sweats and chills. The next day (day immediately after receiving vaccine) symptoms continued but lessened by 5 pm. Each day since then, the symptoms have ALL remained in a more mild form. Today is day 6 and I still have moderate back pain and occasional sweats, weakness and fatigue. |
| 1203610 | 4/13/2021 | CO | 19 | M | 3/31/2021 | 3/31/2021 | Patient had syncope shortly after the Janssen vaccine was given while he was waiting in the medical monitoring area of the vaccine clinic. Patient was unconscious for less than a minute, vitals signs were taken onsite, BP 102/60, O2 96, HR 72, RR 15. Pt was observed and assessed at the time by Dr. Patient reported not eating that afternoon, he was given water and a snack and monitored for 40 min after event. Patient instructed to f/u with primary care doctor the following day and go to the ER/Urgent care if any other changes occur. |
| 1200469 | 4/13/2021 | MD | 29 | F | 4/8/2021 | 4/8/2021 | Pt complained of burning when vaccine injected. Within 2 minutes pt put her head down; stated she was dizzy and then her eyes rolled back and she started to slump over in her chair and then fainted. Moved pt to the floor. She was unconscious for only 1 minute. Vitals: BP: 110/62, Pulse 48, R: 12, T: 98.1, Pulse ox: 99%, Finger stick for blood sugar: 92. Pt had not eaten for almost 24 hours and has a fear of needles. Within 10 minutes vitals improved: BP: 125/90, P: 67, R: 18, Pulse ox: 99%. Pt is a smoker and had worked all night. |
| 1201706 | 4/13/2021 | CA | 32 | F | 3/14/2021 | 3/19/2021 | 7:00 pm Friday started getting left arm: numbness on whole left side of body, left side of face swelling and droopy. Felt a sharp pain in left arm near basilic vein and started swelling like a ball. Felt shortness of breath and dizzy with blurry vision. Almost passed out when stood up. Was rushed to the ER. Had Sharp pains shooting through left leg. |

| 1202770 | 4/13/2021 | CT | 24 | F | 4/12/2021 | 4/12/2021 | Prior to administration of Janssen Covid-19 vaccine the patient was anxious but was completely fine once the procedure commenced and concluded. After finishing explaining the possible side effects of the vaccine and handing the patient the V-Safe handout, she got up slowly and proceeded to our designated post vaccination monitoring seating arrangement. Upon concluding the vaccination process with the patient's partner, she alerted the pharmacist that she does not feel well. To which he asked her to further elaborate on what she is experiencing. She began to say she thinks she's going to faint as she is attempting to drink water. As she was having a drink of water she fainted. To which he responded by running over and catching her before she hit the ground, cradling her upper torso, specifically the head and laid her down on the floor with the assistance of pharmacist and her partner. In the midst of everything he instructed another pharmacy technician to call 911 for the paramedics. As she was in the process of drinking water I saw her other hand go to the region of the neck, thinking it was also an allergic reaction and administered a dose of Epi-Pen. He administered the Epi-Pen on the upper side of her thigh, directly to the skin not through clothing. There was a very brief moment where the patient began to convulse but gradually regain consciousness. The patient became lucid and was conversing with him, apologizing for the incident. He assured her there was nothing to apologize for and to which she told me she had similar incidents from vaccinations as a child. She did not mention this prior to administration of the vaccine and through conversation we believe the incident may be caused from high anxiety of needles / vaccinations. When the paramedics arrived, they assisted the patient from the floor and gave a warning that she believed she was going to faint again, and fainted in the arms of the paramedics. |

| 1203088 | 4/13/2021 | CO | | U | 4/7/2021 | | <p>FAINTING; DIZZINESS; VOMITING; NAUSEA; This spontaneous multiple patient report was received from physicians, consumer, media, and press release and concerned 11-13 adult male and female patients. Initial information received from a consumer on 07-APR-2021 was processed with additional information received from media and then obtained via follow up with physicians on 08-APR-2021, and from the physician and Department of Public Health and Environment press release on 09-APR-2021. The patients' height and weight were not reported. The patients' concurrent conditions included anxiety and fainting. The patients received COVID-19 VACCINE AD26.COV2.S (suspension for injection, route of administration, dose, and site of vaccination not reported, batch number: 18008980 and 201A21A) administered on 07-APR-2021 for prophylactic vaccination. No concomitant medications were reported. On 07-APR-2021, within 15 minutes of vaccination, 11-13 patients out of about 1700 who were vaccinated that day experienced varying symptoms including fainting, dizziness, vomiting, and nausea. The patients received vaccine at a "drive-up" vaccination event, then drove to a parking lot to wait for about 15 minutes with instructions to honk if they felt ill. Two or three patients were transported by EMS to the local hospital for observation. They were later released from the emergency department and were not admitted. Two patients were recommended to go to the hospital, but declined, and were observed and treated with juice and water along with other 7 patients at the site. The reporting physician did not feel that the reactions were due to the lot or the specific vaccine, but were rather due to vasovagal reactions. The press release stated that "the Food and Drug Administration has run the two lot numbers used at the site and found no worrying pattern of similar events with these lots." The action taken with COVID-19 VACCINE AD26.COV2.S was not applicable. The outcome of the fainting, nausea, dizziness, and vomiting was not reported. This case is associated to product complaint PQMS# 90000175639. This case is linked as same patient to 20210415071. This report was serious (Other Medically Important Condition).; Sender's Comments: V0 This report concerns multiple patients who experienced adverse events after receiving an injection at a "drive-up" vaccination site. On 07-APR-</p> |

| 1202651 | 4/13/2021 | CA | 27 | F | 4/7/2021 | 4/7/2021 | All administration of vaccine was done properly, however, patient soon developed sudden syncope. Had patient sit in upright chair, legs not crossed, had BP readings done (113/68, HR 67), patient states light headiness and dizzy. Patient had to be in administered chair for 10 minutes before transitioning to another post vaccination chair to be monitor for additional 20 minutes. Patient regained consciousness within a few minutes and was cleared to leave facility after patient was properly monitored in facility. |
| 1203144 | 4/13/2021 | FL | 70 | F | 3/18/2021 | 3/19/2021 | Congestion in lungs; Upper respiratory infection; Felt passed out; This spontaneous case was reported by a consumer (subsequently medically confirmed) and describes the occurrence of PULMONARY CONGESTION (Congestion in lungs) in a 70-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 047A24A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event. On 18-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 19-Mar-2021, the patient experienced PULMONARY CONGESTION (Congestion in lungs) (seriousness criterion medically significant), UPPER RESPIRATORY TRACT INFECTION (Upper respiratory infection) and PRESYNCOPE (Felt passed out). At the time of the report, PULMONARY CONGESTION (Congestion in lungs), UPPER RESPIRATORY TRACT INFECTION (Upper respiratory infection) and PRESYNCOPE (Felt passed out) outcome was unknown. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. Concomitant product use was not provided by the reporter. Patient had fever, chills, headache and sore throat. Then later she developed cough with mucus and shortness of breath. She still had congestion in lungs and at one time almost felt passed out. She has been to emergency 4 times for this and they told her that it was upper respiratory infection. Treatment medications included Loratadine, Dexamethasone and Albuterol. |

Patient monitored on floor with feet elevated until rescue came and took patient to ER and was monitored. Went home same day and returned to work the next day, feeling better |
| 1200682 | 4/13/2021 | NY | 30 | M | 4/7/2021 | 4/11/2021 | I received the vaccine on Wednesday, April 7th. I was told I had an anaphylactic reaction at the time of injection: I started sweating upon receiving the vaccine, my blood pressure dropped, and I almost passed out. I was monitored for 30 mins before being sent home. Other than some fatigue, I was fine the rest of the day. On Thursday, April 8th, I was tired but felt fine otherwise. Friday and Saturday, April 9th and 10th, I felt like I was back to normal and even did some light exercise. On Sunday morning, April 10th, the left side of my body (side of injection) went numb, I had extreme vertigo, shortness of breath, and blotches that appeared in random places. It didn't look like hives, but rather looked like strips of red. I didn't feel like I was having an allergic reaction, but something did not feel right. I consider myself a pretty healthy guy with a healthy lifestyle. I did not feel the need to go to the ER quite yet, but I did have a friend come over to monitor me. My friend did some acupuncture which helped resolve the numbness and dizziness and some of the blotches, and also mentioned concerns regarding blood circulation and potential clotting issues she thought I was having. |
| 1200657 | 4/13/2021 | CA | 17 | F | 4/12/2021 | 4/12/2021 | Systemic: Dizziness / Lightheadness-Mild, Systemic: Fainting / Unresponsive-Mild, Additional Details: she was sitting for 15 minutes observation she fainted and fell from the chair. | 1201628 | 4/13/2021 | CO | 18 | F | 4/9/2021 | 4/9/2021 | Patient arrived to clinic to receive Janssen COVID-19 vaccine. Patient was accompanied by father. After consenting to receive vaccine, vaccine was given to left deltoid muscle. After about eight minutes, patient started to express feeling strange, reporting that she felt like she was going to pass out. Patient became clammy and pale. Clinic MD was called for assistance. After a few minutes, patient started yawn, with head nodding back. Patient was slow to respond for approximately 30 seconds during syncope. There was no loss of pulse or no s/s of trouble breathing. In clinic emergency response called, along with 911. Paramedics arrived to clinic, received report from MD and nurse about situation. Patient was assessed by paramedics, EKG done and was NSR, blood glucose done, and VS several times throughout incident. Patient was initially hypotensive with BP 80s/60s, with BP returning to 116/62 within a few minutes. Patient was taken home by parents following incident, electing not to go to hospital with paramedics. Patient was in good condition when leaving clinic with directions from clinic staff and paramedics to seek emergent care if needed. |

| 1201649 | 4/13/2021 | FL | 61 | F | 4/6/2021 | 4/7/2021 | Beginning approximately 10 PM (about 8 hours post-injection), I started to have chills (feet were freezing) and was exhausted. Went to bed, and slept most of the night, only waking once to urinate and to drink a small amount (approx 2 oz) of Coca Cola -- I was very nauseous and thought it would help settle my stomach. During the night I sweated profusely. At 8 AM, I woke again and went to urinate. At that time I felt very nauseous, dizzy, and light headed. When I walked about 2 -3 feet to my bedroom, I collapsed on the floor - unconscious. My partner called EMS, they arrived minutes later. By then I was conscious. They transported me to Medical Center Emergency Room, where I remained for several hours. They indicated that my SYNCOPE was a result of dehydration. TODAY, 4/13, news of BLOOD CLOTS has compelled me to report my adverse reaction. |

| 1201664 | 4/13/2021 | NY | 45 | M | 4/11/2021 | 4/12/2021 | Soon after injection I developed soreness at injection site, and about an hour later it travelled down my arm and to my hand, with also arm stiffness. On Monday, 4/12/2021 at 12:15am (about 6 hours after injection) I developed chills and body aches. Throughout the night I also developed a headache, muscle aches, nausea and started sweating. At 9am (4/12/2021) when I woke up, all the symptoms continued (chills, body aches, muscle aches, arm soreness and stiffness, headache, nausea) and also felt extreme tiredness. My temperature at 9:15am was 100.4 degrees F. I basically stayed in bed and slept most of the day. I got up at 2:30pm to get something to eat and had a temperature of 101 degrees F. After eating, which made me feel even more nauseous, I went back to bed and continued to sleep. I woke up at 7:30pm to feed the cats. I felt the same as I did at 2:30pm--listed above--and was up and about for 20 minutes. I started to prepare a quick meal and fainted twice (around 8pm) within a minute from each other. The first time I fell to my knees and the second time I felt onto my back. I was unconscious for only a few seconds each time. I went into bed after and placed an ice pack on my forehead. I took my temperature after the ice pack at 8:15am and my temperature was 101.4 degrees F. I ate soup around 8:45am and took Tylenol (1000mg) at 9:30am. I went back to bed and slept all through the night. This morning (4/13/2021--2 days after injection) I feel much better--only have some slight chills and arm soreness. My temperature at 9:15am (4/13/21) was 95.7 degrees F. |
| 1201668 | 4/13/2021 | NY | 20 | M | 4/10/2021 | 4/10/2021 | 1-2 minutes after receiving vaccine patient was sitting in chair and asked for water. Upon evaluation, patient's head fell forward and he passed out. Once Paramedic and NP responded, patient became responsive, was transferred to wheelchair. VS 122/72, 98%, 82 HR. Client was discharge after 30 min monitoring. |

| 1201686 | 4/13/2021 | FL | 23 | M | 4/10/2021 | 4/10/2021 | Administrated JJ covid shot about 145pm. while having patient wait for 15 minutes, the patient started to feel faint & dizzy. His blood pressure was taken, the meter produced error. upon re trying blood pressure was measured at 70/60mmhg. The patient never lost conscious or passed out. Had patient remained sitting while continuing to monitor. I suggested that the patient allow us to call EMS, The patient declined. Chose to leave store against my medical advice. I suggested the patient follow up with emergency medicine or urgent care for assessment. |
| 1201692 | 4/13/2021 | PA | 62 | M | 4/11/2021 | 4/11/2021 | Patient received vaccine at mass vaccination clinic. Proceeded to observation area and fainting sitting in chair. Patient protected in chair from fall but loss consciousness 2 more times. Episode lasted 46 minutes. Patient given ginger ale and recovered. |
| 1201522 | 4/13/2021 | KY | 23 | M | 4/11/2021 | 4/11/2021 | Pt was observed to be slumped over in chair approximately 7min into waiting post vaccine in waiting room. np alerted. Breathing , appeared to have fainted. Pt started to have jerking entire body movements as staff trying to get pt to wake up.... pt noted to have spit in mouth on lips and was making grunting noises as jerking . Staff assisted pt safely to floor. Epi retrieved but as came back to pt. And pharmacist also present w NP pt was breathing , slowly coming to , no swelling noted so then it became more clear poss vasovagal response ... in the beg it was unclear so Ems was activated . Pt continue to stay w clinic for an hour waiting on ride . Pt had declined Ems . Pt vitals pulse 55-65.... coloring better initially very pale . Mother came and reports that it gets nervous and has passed out before after blood draw but not a shot. |
| 1200978 | 4/13/2021 | CT | 28 | F | 4/12/2021 | 4/12/2021 | Immediately upon getting the dose, I fainted and felt as though my ears were popping. This feeling has only gotten worse and it feels as though my ears have too much pressure in them (like I?m underwater) |

| 1201699 | 4/13/2021 | FL | 49 | F | 4/2/2021 | 4/2/2021 | symptoms started with nausea and worsened greatly over an hour period. Had projectile vomiting and diarrhea which last ~4 hours. later in the evening had dizziness and fainted 2 times. extreme exhaustion lasted approximately 60 hours . symptoms started around 6 hours after injection dose was given at a mobile site |
| 1200845 | 4/13/2021 | NY | 56 | M | 4/11/2021 | 4/11/2021 | Patient was given IM dose of Moderna COVID-19 vaccine. Within 2-3 minutes the patient collapsed in his seat and fainted. Patient was non-responsive for 1-2 minutes then became responsive before intervention was given. 9-1-1- was called and EMS took patient to hospital. |
| 1200873 | 4/13/2021 | NJ | 20 | M | 4/2/2021 | 4/2/2021 | At 10 pm pt. started feeling unwell so he went to lie down. About 10 minutes later he had chills, body aches and was shaking. After a couple of hours he started feeling hot and flushed but did not have a fever. He had body aches and a headache. At 4am he went to the bathroom and started feeling faint so he tried to go back to his bed but fainted in the bathroom. His Mom helped him back to his bedroom, he had no injuries just a headache at that time. He stayed in bed until approx. 5pm when he felt better. No other injuries, or doctor visits. |
| 1200901 | 4/13/2021 | DC | 23 | F | 4/8/2021 | 4/8/2021 | Fainted after receiving shot. |
| 1200936 | 4/13/2021 | FL | 39 | F | 4/12/2021 | 4/12/2021 | Syncope without loss of consciousness |
| 1201328 | 4/13/2021 | MN | 38 | M | 4/8/2021 | 4/8/2021 | Patient felt extremely light-headed and fainted for a few seconds---came to when rph felt for pulse and patted him on shoulder. Rph had reviewed information on consent form including whether he had had any adverse effects to a vaccine that required immediate medical care. His notation on the consent form and verbal information provided to rph prior to injection was no. Immediately after the injection is when he said he should have mentioned that he has fainted in the past when receiving an immunization. EMS was contacted to assess patient and whether it was safe for him to leave pharmacy. EPS monitored blood pressure and other vitals and patient said he felt well enough to leave on his own after 30 minutes observation by rph |

| 1201082 | 4/13/2021 | FL | 18 | F | 4/7/2021 | 4/7/2021 | WITHIN 30 SECONDS OF VACCINE GOING IN HER ARM SHE STARTED TO SWEAT AND GET VERY HOT. SHE SAT IN A CHAIR AND SAID SHE DIDN'T FEEL WELL AND IMMEDIATELY PASSED OUT. HER COLOR DRAINED AND SHE THEN GOT VERY COLD AND SWEATY. THE MAN WHO ADMINISTERED THE VACCINE AND I RUBBED HER FACE, NECK AND CHEST WITH RUBBING ALCOHOL AND A LADY HELD VAPOR BEADS UNDER HER NOSE SHE WAS UNRESPONSIVE AND COMPLETELY OUT ALMOST 4 MINUTES. PHARMACY STAFF CALLED 911. PARAMEDICS CAME RIGHT AFTER SHE WOKE UP AND TOOK BLOOD PRESSURE AND SAID IT WAS VERY LOW AND TRANSPORTED HER TO HOSPITAL TO BE EVALUATED. SHE WAS GIVEN AN IV, HAD BLOODWORK AND AN EKG, HAD A URINALYSIS. WAS DISCHARGED LATER THAT AM. STARTED FEVER & CHILLS SAME DAY 5PM, DID NOT FEEL |
| 1201190 | 4/13/2021 | CO | 28 | M | 4/10/2021 | 4/10/2021 | entered clinic with red bull energy drink, spouse reported Patient drank a soda earlier, skin appeared pale, reported he did not do well with vaccines as a child in the past, still wanted to proceed with vaccine. Had seizure for 2 mins, family reported past history of fainting. EMS attended, responded to questions appropriately, fainted a second time, monitored, pt was released home with spouse |
| 1200956 | 4/13/2021 | CT | 47 | F | 4/1/2021 | 4/3/2021 | 55 hrs after vaccination, I was doubled over with severe abdominal pain. Continuous waves of severe pain. Shortly after severe pain started, tremors/teeth chattering chills even under seven heavy blankets, lasted for hours. Headache (which had been there since 6 hrs after vaccination). Pain was so severe that I was getting ready to go to ER and then vomited. Felt a tad better only to vomit again three hours later, body in a pool of sweat but no fever. Aches, tingling hot prickly sensation running from toes to head, almost passed out. Diarrhea every hour after second vomit, stomach pain started to subside then but never went away completely until 3 days after. |

| 1205329 | 4/13/2021 | TX | 21 | M | 4/13/2021 | 4/13/2021 | Patient said he felt light-headed after his shot. He was advised to continue sitting in the vaccine area. Since he was feeling light-headed, the immunizing pharmacist told me to get the blood pressure cuff. When I got back, the patient passed out. The pharmacist and I moved the chair from underneath him and he gently put him on the floor. He quickly woke up and the pharmacist began to ask him questions such as his name and where he was to make sure he was ok. He was able to answer those questions fine and we placed him in a chair so he can rest. When he was in the chair, he began to pass out again. He quickly woke up again but wasn't feeling good. The pharmacist checked his blood pressure and it was low. His temperature was at 93F. The pharmacist continued to stay with him and he made sure that someone else was able to come and pick him up. Once he felt ok, he had the patient go sit in the post-vaccination waiting area until he had his ride pick him up. |
| 1205322 | 4/13/2021 | | 64 | F | 4/13/2021 | 4/13/2021 | Female caucasian client 64 years old in a wheelchair came with husband at 2:00 PM to get her 1st dose of the Covid 19 Vaccine. Husband reported patient passed out before when they were drawing her blood out years ago. LVN called on site MD to the table to consult with patient and husband on the best way on how to prevent client for passing out. MD advice client to drink fluids first and position patient head leaning down to prevent from passing out. At 2:14 PM Covid 19 Vaccine EW0158 administered to patient left arm Intramuscularly by LVN. Client reported she was having chest pain at around 2:24 PM. Immediately 911 was called and on site EMT's. Patient vitals signs are stable |

| 1205301 | 4/13/2021 | MD | 32 | F | 4/2/2021 | 4/3/2021 | 8 hours after vaccination I had a fever, vomiting, body aches, chills, I fainted, and had extreme leg pains. The symptoms went away after 24 hours. I took acetaminophen when the symptoms started and for the next 48 hours after. |
| 1204951 | 4/13/2021 | CA | 34 | F | 3/25/2021 | 3/25/2021 | Twenty minutes after injection, tongue and throat started tingling. Tingling grew in intensity quickly. The sensation can be compared to having Pop Rocks candy in the mouth. Face became flushed red and paramedics were called. Faint redness on underside of arms. Sensation of heat felt in scalp and neck. Fainting occurred. Paramedics determined reactions were not life-threatening. Tongue and throat were not swollen. Tingling sensation slowly diminished over the next eight hours. About an hour after injection, diarrhea occurred. |
| 1205071 | 4/13/2021 | OH | 85 | U | 2/11/2021 | 2/18/2021 | On February 18, 2021 between hours 18:20-18:40 and a week after taking the second shot, patient lost balance (fainting) at home, fell, bruised a rib and fractured skull, causing subdural hematoma (bleeding outside of the brain). Bleeding stopped and several CT scans were performed. Under medical supervision, an anticoagulant medication was stopped to allow for healing. On February 20, 2021, moved from ICU to regular hospital room and on February 23 moved to another hospital for intense rehabilitation. Within days a thrombus developed causing a minor Cerebrovascular Accident, which was immediately identified by a medical doctor and nursing staff. On March 2, 2021 at 10:30 am moved to a Medical Center for further treatment. An endovascular thrombectomy for the removal of a thrombus was performed by a doctor. After recovery in the Neurosciences Critical Care ICU, under amazing care by the doctors, further thrombi developed on patient's lungs and around the bowel. Patient expired at 8:01 on March 4, 2021 due to Ischemic Complications of Thrombi/Thromboemoli. |

| 1205009 | 4/13/2021 | NY | 67 | F | 3/23/2021 | 3/23/2021 | Patient was administered vaccine, as per protocol moved to the vaccination wait area for 15 minute observation. She passed out about 5 minutes later, she came to and said she was fine, then passed out again. I called 911 when she passed out the second time, I also administered an Epi-pen injection just in case she was having an allergic reaction. Shortly after the injection she came to and by then the paramedics had arrived. They took her BP it was 130/80 they also said they see this a lot with injections and that it was syncope and that it is pretty common. We followed up with her the next day and she was fine, she feels she didn't eat that day and she a little frightened and that is why she passed out. |
| 1205013 | 4/13/2021 | FL | 27 | M | 4/13/2021 | 4/13/2021 | Patient had vaso-vagal reaction from the vaccine. Within 2 minutes of getting the vaccine the patient became flushed and very pale. He as sweating profusely and had vision loss. He was sitting while this all happened which I think prevented him from fainting. I got him water, an ice pack and called ems. By the time EMS arrived the patient was starting to feel better. EMS did their evaluation on site and the patient was able to go home 20 minutes later. |
| 1205016 | 4/13/2021 | CA | 19 | F | 4/13/2021 | 4/13/2021 | A few Minutes after getting the vaccine, patient stood up, felt dizzy light headed and nauseas and then passed out. Patient was unconscious for approximately 5 seconds before waking up. Patient was then assisted to a supine position before getting a set of vital signs, all WNL except for a low blood pressure. Patient was then assisted to a cot where she explained how she felt before hand and another set of vital signs was taken, all WNL and an improved blood pressure. Patient was then asked to wait at least 30 minutes and until all symptoms had subsided before having someone assist her in getting home. |
| 1205051 | 4/13/2021 | CA | 24 | F | 4/13/2021 | 4/13/2021 | After patient received the vaccine, she went to wait in the waiting room for 15 minutes. Though after 5 minutes she fainted and a customer helped her to the ground. The patient was very pale and was sweating. We called 911 and the EMT took her to a nearby hospital. |
| 1205273 | 4/13/2021 | NH | 28 | M | 4/13/2021 | 4/13/2021 | Pt passed out momentarily after vaccination. He recovered quickly without intervention. BP 136/64, HR 60, SP02 99%. His significant other drove him home. He recovered completely at time of departure. |

| 1205060 | 4/13/2021 | AZ | 58 | F | 4/12/2021 | 4/13/2021 | Woke up at 3 am, felt a little off and walked to the restroom. While sitting on toilet, with no warning completely passed out and apparently fell on my face. Woke up in a pool of blood from a nose bleed and cut on my nose. I don't know how long I was out. Was disoriented and lay down on the hallway floor and was shaking for quite some time. My partner cleaned the wounds and helped me to bed. Was in pretty bad pain from the fall - knee, nose and neck. Tried to sleep and finally did about an hour later then woke to profuse sweating and nausea. Didn't throw up, but then finally went back to sleep. Have had a 100.1 degree temperature most of today. |

| 1205243 | 4/13/2021 | | 31 | F | 4/4/2021 | 4/4/2021 | fainted; having an odd taste in my mouth; shortness of breath/breathing took 40 minutes to return to normal; vasovagal syncope response; the expected sore injection site; headache; felt overheated; could quite literally only see stars; This is a spontaneous report from a non-contactable consumer (patient). A 31-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE), dose 1 via an unspecified route of administration, administered in Arm Right on 04Apr2021 10:45 (Lot Number: ER8732) as single dose for covid-19 immunisation. Medical history included hypoglycaemia (she ate before the injection) and fainting. Concomitant medication(s) included Birth control and prednisolone acetate ophthalmic sus. The patient did not receive other vaccines within 4 weeks prior to the COVID vaccine. 5 minutes after the injection, the patient began having an odd taste in mouth, shortness of breath, and she fainted. She had a history of fainting, but it took longer for her to recover than usual (50 minutes instead of 15). When she regained consciousness a few minutes after, she had a headache, felt overheated, and could quite literally only see stars. Her breathing took 40 minutes to return to normal, and her body temperature took 2 hours to feel normal. She assumed this was mostly a vasovagal syncope response, but she wasn't anxious or in pain beforehand. After 6 hours, she still have the odd taste, a headache, and the expected sore injection site. The events resulted in Doctor or other healthcare professional office/clinic visit. Therapeutic measures were taken as a result of the events included Paramedic took vitals and monitored for an hour. The outcome of the events was recovered with sequelae. Prior to vaccination, the patient was not diagnosed with COVID-19. Since the vaccination, the patient had not been tested for COVID-19. No follow-up attempts are possible. No further information is expected. |

A 51-Year-old female patient (who was not pregnant at the time of vaccination) received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, formulation: Solution for injection, Lot number: EN6204 and expiry date was not provided) via an unspecified route of administration, in left arm on 12Mar2021 at 13:30 as a single dose for COVID-19 immunisation. Medical history included rheumatoid arthritis and immunotherapy. The patient had allergies to penicillin, sulfa drugs and peanuts. The patient's concomitant medications were not reported. The patient previously took ibuprofen and had allergy. The patient stated that On 18Mar2021 at 12:30, the patient experienced sudden severe onset of vertigo and dizziness with syncope and vomiting. The patient was hospitalized for 3 days. On an unknown date in Mar2021, the patient was hospitalized, and a week and a half later still had dizziness which prevents patient from performing daily tasks. Patient received unspecified treatment for the adverse event. Seriousness of the events was reported as hospitalization. Outcome of the events vertigo, syncope, vomiting and loss of personal information was recovering, and for the events dizziness it was not recovered. |

| 1205150 | 4/13/2021 | | | F | 3/6/2021 | | <p>Passed out; Cannot make it on the second dose schedule; missed from receiving her second dose; She has vomitted; she is still sick; can't keep her head up and has headaches; Feeling sick; She cannot eat; This is a spontaneous report from a contactable consumer (reported for herself). The female patient (80 unit not reported) received BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, solution for injection, Lot no: not reported) on an unknown route of administration on 06Mar2021 as SINGLE DOSE for COVID-19 immunization. Patient's medical history included Diabetes. Concomitant medications were not reported. It was reported that the patient had the first dose of the vaccine on 06Mar2021 and now can't keep up with herself. The patient has vomited and can't keep her head up and has headaches. and stated she knew the vomiting goes on for 14 days but today was 23 days and she was still feeling the same. Patient was due for her second dose of the vaccine and wanted to know if she should still get her second dose or if she should wait a couple weeks until she feels better. Upon follow-up (29Mar2021, on an unknown date the patient had passed out, cannot make it on the second dose schedule; missed from receiving her second dose, cannot eat, vomiting, Feeling sick. The patient reported that she experienced different symptoms like she passed out and was in IV fluid (as treatment) after the first dose. Now the patient cannot make it on the second dose schedule. The patient was reported that the treatment was advised by her physician because the patient passed out and missed from receiving her second dose. The patient cannot eat, vomiting and she was still sick, up until now, that is why she cannot go to get the second dose of vaccine. Limited information was available over the call. The outcome of the events was unknown. Information about lot/batch number has been requested. Follow-up attempts are completed. No further information is expected.</p> |

| 1205179 | 4/13/2021 | OH | 78 | F | 3/17/2021 | 3/1/2021 | <p>passed out for a very short period of time; was awakened by total body shaking and it was not just shivers but was uncontrollable shaking; her body felt warm but then she was freezing; her body felt warm but then she was freezing; was sick and was different and very weak; muscles were sore; This is a spontaneous report from a contactable consumer. A 78-year-old female patient received the second dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE)), via an unspecified route of administration, administered in the left arm on 17Mar2021 12:10 (Batch/Lot Number: EN6207; Expiration Date: 31May2021) as a single dose for covid-19 immunization. The patient's medical history was not reported. There were no concomitant medications. The patient received her first dose of the Pfizer BioNTech COVID19 vaccine on 23Feb2021 (lot number: EN6198 with expiry date 31May2021) for Covid-19 immunization. The patient experienced passed out for a very short period of time and awakened by total body shaking and it was not just shivers but was uncontrollable shaking on 18Mar2021; her body felt warm but then she was freezing, she was sick and was different and very weak, and muscles were sore in Mar2021. It was further reported that the patient got the 2nd dose of the Pfizer BioNTech vaccine that day on 17Mar2021 and about 12:45am or 1:30am the next morning she was awakened by total body shaking and it was not just shivers but was uncontrollable shaking; the shaking has resolved completely but she is not sure when it resolved but she was shaking for a good while because she can remember being so uncomfortable with her body moving so much which went on for maybe 20 minutes or so when her husband woke up. Patient's husband then woke up and got Ibuprofen and gave it to her and that stopped the shaking which surprised her and she did not know the Ibuprofen would work to stop the shaking that well and the Ibuprofen did work in stopping the shaking. The Ibuprofen stopped the shaking and she can remember to touch her body felt warm but then she was freezing and she does not know what this means but this was not ongoing and resolved when her husband gave her the ibuprofen and she stopped shaking right away which always amazed her that the Ibuprofen worked. She stated fortunately the Ibuprofen stopped her from shaking and she was able to sleep until early morning when she</p> |

VAERS_ID RECVD STATE AGE_YRS SEX VAX_DATE ONSET_DATE SYMPTOM_TEXT

woke up and knew she was sick and was different and very weak; states the weakness was not ongoing and the approximate time the weakness resolved was unknown but she was down the rest of the day and after that she passed out for a very short period of time and held her head up and stood up and thought wow something was going on and asked where was this coming from and it was not nausea but she was just weak. She has not passed out for a huge amount of time but fortunately she had some towels laying close by and was able to use a towel; states after that she stopped for the rest of the day and only got up to go to the potty and was just so weak and heard that from many people that they just slept afterwards. Caller states her muscles were sore and she realized that was just normal and after the 2nd dose of the vaccine she knew her muscles would probably be sore and this was resolved. She came downstairs and was sitting on a chair and then stood and no longer sat in the chair and her husband knew things were not right with her and her eyes looked funny and she passed out and that never happened to her before and she was passed out for a few moments. Other than the Ibuprofen she did not have treatment and did not go to the emergency room or the HCP office. Patient only took one Ibuprofen and she has a very small body and her husband sometimes takes 2-3 Ibuprofen and she thinks wow that is so many but she herself does not have any medication and she just took one Ibuprofen and it worked; She took the Ibuprofen on 18Mar2021 in the early morning. Fortunately she was in good health. Outcome of the event passed out for a very short period of time, was awakened by total body shaking and it was not just shivers but was uncontrollable shaking and muscles were sore was recovered in Mar2021, and unknown outcome for the remaining events.

| 1205208 | 4/13/2021 | IL | 18 | F | 3/24/2021 | 3/24/2021 | acute sinus infection; bilateral cerumen impaction; Bilateral otitis media; Had a syncopal episode; Dizzy; This is a spontaneous report from a contactable physician. A 18-years-old female non-pregnant patient received first dose of bnt162b2 (PFIZER-BIONTECH COVID-19 VACCINE, Formulation: Solution for injection, Batch/Lot Number: ER8730), dose 1 intramuscular, administered in right arm on 24Mar2021 as single dose for covid-19 immunisation. Medical history included dysmenorrhoea, menometrorrhagia, obesity, guillain-barre syndrome. Concomitant medication's included ethinylestradiol, levonorgestrel (LUTERA) taken for an unspecified indication, start and stop date were not reported. The patient previously took fluconazole (known allergies). Patient had not received any other vaccines within 4 weeks prior to the COVID vaccine. The patient was not diagnosed with COVID-19 prior to vaccination. The patient was tested for Covid test post vaccination on 25Mar2021 show the negative result. Patient claimed she became dizzy within 15 minutes of the vaccine and had a syncopal episode. She stated that it occurred twice since the vaccine. This MD conducted physical exam on 30Mar2021 and found bilateral cerumen impaction that was cleared. She reported that this revealed bilateral otitis media and she was diagnosed with acute sinus infection and treated. Although her symptoms can be explained by these findings, this MD was continuing work up for Guillain-Barre. The adverse event result in Emergency room/department or urgent care. Treatment received for the adverse event are supportive care, antibiotic for sinus infection and clearance of impacted cerumen. The outcome of the events were recovered with lasting effects. No follow-up attempts are needed. No further information is expected.; Sender's Comments: The event syncope is assessed as possibly related to the suspect vaccine BNT162B2 based on strong temporal association, but consider also possible contributory effects from patient's medical history and/or concomitant medications. The impact of this report on the benefit/risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action in response, will be promptly notified to regulatory authorities, Ethics |

| 1205962 | 4/13/2021 | NY | 17 | F | 4/12/2021 | 4/12/2021 | While waiting during the 15 minute monitoring period patient (17 year old female) fainted in her chair. Mom noticed that patient's arms went rigid right before she passed out. Patient was still breathing and was laid on the ground to her side and 911 was called immediately. Mom was massaging her thighs and arms to increase blood flow and she regained consciousness within a few minutes. She was very pale and felt weak. She was given water and remained laying on the ground for another 10 minutes before EMS arrived. She explained she gets anxiety about any medical procedure, has had history of fainting after shots/blood draw/blood pressure reading. EMS took fingerstick reading and gave her oxygen to ensure she doesn't faint again from blood glucose fingerstick. Vitals came out to be normal. Mom explained this is very normal and she doesn't see the need to take her to the hospital. EMS offered to have patient with them in the ambulance for another 15-20 minutes before she's free to leave. |
| 1205858 | 4/13/2021 | MD | 60 | F | 4/7/2021 | 4/7/2021 | Shortly after the vaccine I fainted which came on quite quickly and upon waking within a minute I felt sick and vomited. |
| 1205991 | 4/13/2021 | FL | 65 | F | 4/12/2021 | 4/12/2021 | The patient experienced an unknown taste after receiving Moderna as well as dizziness and fainting. She also had periods of feeling faint. The store management was called and alerted EMS which arrived after 20 minutes approximately. Basic vitals were taken and the patient was taken to the hospital. |
| 1205784 | 4/13/2021 | OH | 20 | F | 4/11/2021 | 4/11/2021 | At 10PM (8 hours after getting the JnJ vaccine) pt developed chills and pulsate headache. Pt was able to sleep. Next day in the morning by 7:40AM she went downstairs and got dizzy and fall gradually on the floor. Pt got help, but when she was trying to get up she got lightheaded/passed out again bumping her head on the wall. Pt reacted, fluids were given. Pt slept all morning. At 2PM she got up from bed. No pulsate headache, just "mild headache." Today, 48 hours later, pt reported light headache. Denies abdominal pain or pain in extremities. Pt and parents of pt were encouraged to report to patient's PCP. |

| 1205686 | 4/13/2021 | PA | 26 | M | 4/13/2021 | 4/13/2021 | Patient noted on form that he had a severe reaction to peanuts which causes him to have anaphylaxis. He stated that he does carry an EpiPen and any time anything with peanuts touches his mouth/lips he immediately notices his throat starting to close. He also is allergic to cats. Before administering the vaccine, the patient noted that he does not like needles and was not going to look. I administered the vaccine and the patient and I exited the vaccination room. I explained that he should sit in the waiting area for about 30 minutes due to his severe allergic reaction in the past. By the time that I walked back into the pharmacy, the patient's wife shouted "He's not breathing!". My technicians called 911 while I grabbed an EpiPen and rushed to the patient. I immediately administered a 0.3 mg dose of epinephrine and observed that the patient had passed out, was not breathing, but had a pulse. A few seconds later he regained consciousness and his breathing was erratic. I gave him water and he stated that he felt very lightheaded and dizzy. I instructed him to remain seated. He also noted that his vision was blurry and he saw a black dot. His wife was fanning him to cool him down while I tried to obtain the patient's blood pressure, but could not get a reading. The paramedics came and evaluated him thoroughly. His blood pressure, heart rate, EKG, and blood sugar were all within normal limits. They determined that the syncope was most likely due to the patient not eating during the day and not liking needles. The patient was feeling much better and declined further medical treatment, including going to the hospital. He was instructed to go home and relax. |

| 1205742 | 4/13/2021 | MI | 24 | M | 4/13/2021 | 4/13/2021 | I received dose #1 of COVID and planned to walk through the store to shop. While walking passed the observation chair, I began to feel dizzy and decided to sit down. After I took a seat, I immediately began to feel numbness in my arm which spread to my entire body. I was also feeling a piercing headache with ringing in my ears and my dizziness was extreme. At this point I called for help to the individual who had administered my shot as I had feared I would have fainted. I was in this extreme state for approximately 3-5 minutes. The individual at the pharmacy then checked in on me, gave me a bottle of water and after drinking it I began to feel better. I was then able to walk around and buy some food. Approximately 20 minutes after that event and eating and drinking some food, I felt like I was back to normal. I am writing this 5 hours later, and I currently feel normal, with some soreness in my arm I received the vaccine in. |
| 1205751 | 4/13/2021 | KY | 23 | F | 3/23/2021 | 3/24/2021 | I fainted twice the following day after my vaccine shot and hit my head against the hardwood floor. I first fainted at around 4:00 AM on March 24, 2021 after waking up. My parents carried me down the stairs and I fainted again after that. I didn't receive any treatment afterwards. I had a fever for the entire day and was feeling dizzy and nauseous for most of that day. I haven't fainted since then but still feel a little bit dizzy every once in a while. |
| 1205626 | 4/13/2021 | NJ | 28 | F | 4/5/2021 | 4/5/2021 | After the vaccination was given the patient started to wait her 15 minutes. After 5 minutes of waiting the patient slumped over and passed out onto the floor. Her color was very pale and her eyes were rolling in the back of her head. She regained consciousness but her color was still poor and we called and ambulance because she was still feeling faint. The EMT's immediately took her blood pressure and it was extremely low. She acknowledged that she did not eat or drink anything at all that morning. The EMT's recommended she go to the hospital but she refused. After 30 minutes with emergency personnel she felt better and well enough to leave with her family member who was with her. |

| 1204076 | 4/13/2021 | TN | 48 | F | 4/13/2021 | 4/13/2021 | Patient became light headed after receiving vaccine and passed out briefly. She was complaining of being dizzy and nauseous. After several minutes of laying in the floor and not feeling better, EMS was called. While waiting for the EMS she complained of trouble breathing. EMS took her to the hospital. |
| 1204276 | 4/13/2021 | KY | 25 | F | 4/9/2021 | 4/9/2021 | Client passed out upon reaching vehicle. Her eyes were dilated approx. 1 to 1.5 cm. unresponsive. Was able to get small response out of patient. O2 at 4L placed BP taken 160/98 pulse 66. but was weak and thready. Patient passed out once again and did sternal rub while calling her name. Patient came slowly to and pupils returned to normal. Patient confused on what had happened. States she has passed out before from shots but states this was different. States when she was out she had dreams but couldn't remember them. Patient remained extremely pale but was communicating normally. Stayed with patient another 20 minutes. Paleness getting better. Patient did not want to go to ER. Encouraged her to f/u with PCP ASAP. Ver Patient verbalizes understanding. She was with her parents so did not have to drive. Parents verbalized patient would not be alone. Patient called early evening of that same day. Patient states she is feeling fine denying any left over symptoms. Called patient Sunday 04/11/2021 and she verbalized doing fine. |
| 1203952 | 4/13/2021 | OH | 18 | F | 4/13/2021 | 4/13/2021 | Pt had vagel response. Due to high anxiety about the shoot pt , passed out after shot for 2 to 3 s ,and was helped to get down on floor with her legs elevated. Patient was in shock, this her BP was high, but was alter and oriented, helped to get stable. with in five minutes of the response pt was at her base line but we kept her at vaccine site for 30 minutes to monitor her response. |
| 1204008 | 4/13/2021 | NY | 45 | F | 4/13/2021 | 4/13/2021 | ABOUT 15 MINUTES POST VACCINATION, PATIENT FAINTED IN THE WAITING AREA OF THE PHARMACY. HER BLOOD SUGAR AND BLOOD PRESSURE WERE CHECKED AND WERE NORMAL. SHE HAS A PHOBIA OF NEEDLES AND IT MAKES HER DIZZY AND LIGHTHEADED. |

| 1204105 | 4/13/2021 | GA | 66 | F | 3/25/2021 | 3/25/2021 | at about 4 hours after vaccine I thought I was having a stroke. The right side of my face went numb and felt like it was drooping, my right arm went numb, my right leg and foot went numb. But I could still talk and make a smile face so I did not go to ER. Gradually both of my legs became very weak and then my hands became very weak. This lasted for over a week/ten days. By the first night I couldn't sleep because my brain could not seem to get into a deep sleep pattern, had body aches and sore arm but not dreadful, and by the next day had a fever which maxed at 101 degrees (my normal is 97.2-97.4). Had a low grade fever for 10 days! Also by the 2nd day I had swollen glands in my right neck and armpit, and pain from my right elbow to my neck. My usual level of unstable balance was MUCH worse for at least a week and my usual tinnitus was MUCH louder than usual for about 10 days! Night 3 I had a very bad episode of something like restless leg which also extended not just in my legs but also into my head! Very bizarre! By day 4 I was having episodes of near fainting, often. This lasted for about another week. All in all it was a dreadful experience, which I believe was related to issues with my already compromised nervous system due to the Parkinson's/MSA. I will NEVER have another one fetes vaccines or booster shots if those become available. I am quite frightened that the next vaccine could result in me actually having a stroke or other serious consequence. |
| 1204179 | 4/13/2021 | MI | 21 | M | 4/13/2021 | 4/13/2021 | The patient passed out after 10 minutes after feeling really hot and sweating. He became conscious in less than a minute and was feeling okay. |

| 1206163 | 4/13/2021 | WA | 23 | F | 4/6/2021 | 4/6/2021 | I received the shot at 14:30, in which medical staff in the jail's medical center watched me for 20 minutes to ensure there were no immediate reactions. I went about my day afterward with no symptoms. At 21:30 when I went to sleep, I got some aches in my joints and took 1 dose of liquid capsule NyQuil to help with the pain and went to sleep. At 00:30, the 7th, I woke up groaning in my sleep to the extreme pain in my joints and feeling hot internally. I decided to get up and take a warm bath to ease the aches. I went and ran the bath and all of a sudden while it was running, I had a severe need to throw up, but could not naturally. Since this was concerning, I got up and walked out of the bathroom and all of a sudden in the hall I got a feeling of impending doom and that something was not right and I fainted. I laid on the floor for what I would approximate to be 5 minutes going in and out of consciousness waiting for the blood to fully return to the brain. After this, I instantly felt like I needed to survive and that I felt like I could be dying so I slowly crawled down the stairs to get to my military ID so I could call the military's nurse advice line. I had to take a break and lay on the concrete in my garage because I felt so dizzy and so hot and began to feel my vision disappear like I was going to faint again. I waited a few minutes before getting back up the stairs crawling to my phone to call. When I called them 00:58, they told me to call 911 because they believed I would be having a severe reaction, though I noted to them I did not have a rash or hives. I then called 911 at 01:08. They sent EMT's to my home which took my vitals. I had normal blood pressure, SPo2, and temp, but an elevated heart rate of just under 100 and a high respiration rate. EMT's made the decision for me to stay home since the hospital did not seem immediate in their opinion. After this I stayed on the couch for a few minutes and then felt very tired so I walked slowly to my room and fell asleep. I woke up at 06:00 for work, and arrived at 07:00. In the hour after waking up I was achy, sweating, and felt light headed. I got to work and my Sergeant told me to go home and sleep. I slept another 5 hours at 08:00 and when I woke up most of my symptoms went away other than aches and getting flush very easily for 5 days. At this current time all I notice is some random light headedness that quickly resolves and comes a few times a day at random and without cause. |

| 1203947 | 4/13/2021 | NC | 43 | F | 4/9/2021 | 4/9/2021 | Profuse sweating, light headed, hard to hear, almost fainted within minutes of receiving the shot. Was fanned, given orange juice and a cool towel. After 30 minutes I felt okay to leave the pharmacy. Felt lightheaded the rest of the day and really out of it. Developed a fever later that evening that ran throughout the night. Loss of appetite for 3-4 days. Diarrhea on day 4. Pain in arm at injection site for 4 days. |
| 1203804 | 4/13/2021 | TX | 31 | F | 4/6/2021 | 4/6/2021 | After I gave the her the vaccine in the passenger seat, she was fine. Then a couple of minutes later we could not distinguish what kind of reaction was occurring and had another patient call 9-1-1. The patient jerked at that moment, but the paramedics arrived within 8 minutes and checked her out, she is fine. It turned out that she has a history of fainting when needles are administered with blood draws or vaccines. She drank some juice and recovered without incident. The paramedics released her home and no other concerns arose. |

| 1196786 | 4/12/2021 | MN | 59 | M | 4/9/2021 | 4/9/2021 | Client reported prior to vaccination, that it is common for him to become faint and possibly "pass out" when receiving injections, having blood draws completed, and IVs started. Verified that client was feeling well and had eaten breakfast and was hydrated prior to injection. Client sitting in chair and tolerated injection well. About 5 minutes after injection given, client reported that he was feeling faint. Client was clammy and pale, and lost consciousness for about 30 seconds. Wife present and held his head and stood next to him in the chair. Client did not fall, and stayed seated in the chair. He slowly regained consciousness, and when able to sit and speak, client was offered water, which he accepted. VS collected - BP sitting in RUE - 108/78, P - 64, R - 16, O2 sats - 96%. Client started to regain color, and report that he was feeling better. Granola bar offered and client ate. Wife reported that this is a common event for client, when having blood drawn, IVs started, or injections given. Client states that he has "passed out many times before." Client stayed seated in chair, with RN and wife in room with him. By 0945, client states that he was feeling "back to normal." No s/s of allergic reaction. Wife to drive home and stay with husband for the rest of the day. Discussed s/s of allergic reaction, and other s/s that require immediate medical attention. Wife and client verbalized understanding. |

| 1197619 | 4/12/2021 | WI | 29 | F | 3/27/2021 | 3/27/2021 | syncope and collapse (most likely vasovagal); hypoglycemia; got hot; This is a spontaneous report from a contactable consumer (patient). A 29-year-old female patient received bnt162b2 (Pfizer-BioNTech COVID-19 Vaccine, Batch/Lot number was not reported), dose 2 via an unspecified route of administration, administered in left arm on 27Mar2021 10:15 (at the age of 29 years) as single dose for covid-19 immunization. The vaccination facility was Pharmacy/drug store. The patient has no medical history and no known allergies. The patient was not pregnant. No vaccines were given 4 weeks prior. No prior issues with vaccines, no health issues, had cereal and juice two hours before vaccine and was not hungry. The patient has no COVID-19 prior to vaccination. The patient was not tested post vaccination. Concomitant medications included ethinylestradiol, norgestimate (SPRINTEC). Historical vaccine includes dose 1 of bnt162b2, on 25Feb2021 (05:15 PM) at the left arm for COVID-19 immunization at the age of 29 years. On 27Mar2021 at 1030 AM, 10 minutes (as reported) after receiving vaccine and during wait period, got hot and passed out. Ambulance was called and transported to hospital. CMP, serum pregnancy test, troponin (ekg), urinalysis with reflex culture, CBC/auto differential, Glucose WH-BLD lab tests performed on 27Mar2021. Monitored pulse and oxygen on 27Mar2021. Diagnosis-syncope and collapse (most likely vasovagal) and hypoglycemia (unspecified). The events resulted in Emergency room/department or urgent care visit and did not receive treatment. The outcome of the events was unknown. Information on about lot/batch number has been requested. |

| 1197325 | 4/12/2021 | MN | 21 | F | 4/12/2021 | 4/12/2021 | Patient reported a history of nervousness around needles and had passed out after an immunization in the past. I walked her through the immunization process and after administering her vaccine, I asked her if she was feeling ok before allowing her to leave the clinical room. She stated she was feeling ok so I instructed her to have a seat in the post-vaccination waiting area just outside the pharmacy for 30 minutes so we could observe her as a safety precaution. Shortly after sitting down, the patient fell off her chair. I ran out to check on her and found her unconscious and lying face down on the floor. As soon as I touched her shoulders she began to wake up and tried to get up. I asked her to remain laying down and offered to help her roll over onto her back. I asked her if she could tell me her name - she responded correctly. I asked if she knew where she was and she correctly stated she was at store. I had her take some deep breaths until her color came back and when she asked if she could please sit up, I assisted her into her chair and asked a technician to get a bottle of water for her. She felt a little shaky so I continued to hold onto her shoulders until she felt completely stable. She was able to take a few sips of water which helped her feel more steady. EMS arrived and checked her blood pressure and blood glucose levels. She was cleared by EMS and chose not to go to the hospital for further care. I had her call a friend to drive her home and stay with her for a while to make sure she was ok. |
| 1197101 | 4/12/2021 | | 23 | M | 4/12/2021 | 4/12/2021 | syncope. Evaluated by EMS-Refusal to transport. |
| 1197320 | 4/12/2021 | NY | 43 | M | 4/12/2021 | 4/12/2021 | Patient received dose at 1:19pm walked to OBs area, sat in chair. Started texting, noted weakness, c/o sweaty feeling, alerted staff. Placed in WC, back to Med Eval tent where he was diaphoretic, pale. Did not lose consciousness. Patient admits to not eating or drinking today at all, very stressed about vaccine. Drank a bottle of water, and gatorade, fan for air circulation. Patient recovered well on cot in supine position, walked out without incident. Likely vasovagal response without syncope. NP |

| 1196057 | 4/12/2021 | MN | 35 | F | 3/17/2021 | 3/18/2021 | at 1:30 am I started with the chills and feeling that i was going to vomit when i got up to go to the bathroom i because very dizzy and laid down and passed out this time i am not sure how long i was out for at approximately 4:30 am I had the same feeling went to the bathroom and yelled for my husband as i was very dizzy again when i got into the bathroom he said i was passed out and was doing some convulsing I was out for over a minute and he was trying to get me to wake up. Prior to waking i could feel him touching me and i could hear noise but i could not make out the noise or open my eyes and was unaware at that moment what was going on after I woke i threw up and then went back and laid down. then again about 7:30 am I had to use the restroom so walked into the bathroom I went to the bathroom after I felt very dizzy again and laid down on the floor at this point i passed out again and this time i could feel myself shaking see bright light but couldnt stop the shaking or see anything else. I am unsure how long this lasted. After that I went and laid down again and felt better I then was only tired. After resting I felt good and didnt feel i should go in since i was feeling better I did call my dr a few days after and inform her on what happend. ** I had also started my period during this morning. |

| 1195888 | 4/12/2021 | OH | 62 | F | | | Started out the day with a fever of around 100.8, had body aches, chills then that night I started having bad stomach cramps and diahreach and I fainted. Had to call 911 and ended up with an overnight stay in the hospital. |
| 1196363 | 4/12/2021 | FL | 24 | F | 4/10/2021 | 4/12/2021 | Patient fainted shortly after receiving dose on 4/10. Patient did respond shortly afterwards and was given juice and a ice pack. Continued to monitor for some 30 plus minutes prior to releasing. Called patient around 5PM same day, patient sounded great and was doing well. Note: Patient has a history of fainting upon vaccine admin. but did not indicate to provider prior to administering vaccine. Patent called at moms request on 4/12 at 9:54 am and indicated she noted upon waking 2 hives in crevasse of arm which spread to all over body. Advised patient to call MD office for guidance and speak to live person. Spoke to doctor's office whom indicated they would address hives condition and then advise provider this provider. |
| 1196621 | 4/12/2021 | MI | 39 | M | 4/7/2021 | 4/8/2021 | In the Morning after my shot, I was getting breakfast ready for my kids. Everything seemed fine at the time and I started getting an odd feeling. Not really a dizzy or lightheaded feeling, but an odd feeling. The next thing I know, I came to on the floor. My security camera in the living room caught part of it from down a hall. I fell strait forward, onto my stomach with a large crash. The rest of the day, I did feel fatigue, joint pain in my knees and then chills/hot flashes later in the day/evening. The next morning (Friday) I woke up with a scratchy throat but felt fine the rest of the day. I have never fainted in the past. I don't know what would bring that on. I also have not had that feeling or any fainting spells since that incident. My wife came home about 8am out of concern. |

| 1199084 | 4/12/2021 | GA | 60 | M | 4/9/2021 | 4/10/2021 | I was extremely tired on Saturday. My shoulder hurt. About 3 pm, while urinating, I felt very light-headed as if I was about to faint. I stopped urinating and went back to bed. That evening, about 8:30, I tried to eat dinner, but after three bites, I felt extremely tired. I leaned back in my chair, and I passed out. My wife woke me, but it took several minutes. She said my eyes rolled back in my head. She splashed water on my face. She said that I stopped breathing. I woke up, then pushed my plate away and put my head on the table. I could not hold it up. I was sweating profusely. After several minutes, I felt that I was about to have diarrhea. My daughter and wife tried to walk me to the bathroom, but I did not have the energy to get there. I collapsed in the hall and hit my head on the door jamb. After several minute of trying , they pulled me up, and I then got the strength to walk the rest of the way. I had diarrhea, not suddenly, but it was as if my GI system emptied. It was soft, not loose, and there was a lot. I went back to bed, and eventually slept. I felt queasy the next day (Sunday), and I felt lightheaded at times, so I just sat or laid down. But I was feeling better. Today (Monday) I feel much better. A little tired, but much better. I went to the Pharmacy this morning, and they referred me to this website. I did not see the doctor. |
| 1199077 | 4/12/2021 | CA | 19 | M | 4/12/2021 | 4/12/2021 | While patient was waiting out the 15 min, he states he felt weird and went to let his father know. Upon getting up and leaving waiting area, pt. fainted but was quickly alert and able to speak. Patients father did state the patient has a needle aversion and has experienced this situation in the past. |
| 1199073 | 4/12/2021 | NH | 23 | F | 4/12/2021 | 4/12/2021 | Patient has reported having an issue with fainting with vaccines in the past. Approximately 1 minute post vaccine, patient reported feeling dizziness and nausea. Patient was laid down on the floor with her feet elevated and given a cold compress for the back of her neck and her wrists. Patient did not lose consciousness but did report dizziness, nausea, and numbness in her hands and fingers. Patient was able to hold conversation and reported feeling better after about 5 minutes. Patient was allowed to move to a sitting position and was monitored for any changes. Patient reported feeling better. Patient was monitored for an additional 15 minutes and reported feeling normal before she left. |

| 1197682 | 4/12/2021 | WI | 49 | M | 4/12/2021 | 4/12/2021 | I counselled the patient prior to giving him the Pfizer Covid19 vaccine. He received the vaccine at 10:10am. During the 15 minute observation period, one of my technicians was standing next to him talking to another patient. She saw some papers slip out of patient's hand and noticed he was unresponsive when she tried to talk to him. She yelled out for help and I ran out and saw his head rolled back, eyes open, and he sounded like he was snoring. He never left the chair--just his head rolled back. We tried to rouse him awake and I had my other technician call 911. I also called for a store manager. The patient came to about 15-30 seconds later. I asked him his name, what day it was, and if he knew where he was. He answered all questions correctly. He told me that he's fainted before after vaccines, however he never disclosed this to me prior to the vaccine and had answered "no" under the question if you've ever had a serious reaction to the vaccine. We gave him some water and a cold paper towel. The paramedics came and evaluated him. He declined to go to the hospital and his wife came and picked him up. |

| 1199550 | 4/12/2021 | CA | 32 | M | 4/12/2021 | 4/12/2021 | Patient received the Pfizer COVID vaccine at around 4:50pm and while under observation he began to feel dizzy. He eventually passed out and became unconscious (5:00pm). Unfortunately he hit the ground with his head after he became unconscious. He also appeared to begin shaking while unconscious. He regained consciousness after about 20 seconds and was immediately fully alert. He stated he had no history of losing consciousness in the past. He was then taken to a nearby hospital via ambulance for evaluation and required staples to address the cut. He was discharged from the hospital around 8:00pm. |
| 1199537 | 4/12/2021 | IL | 62 | F | 4/4/2021 | 4/4/2021 | Fever aches chills started after 12 hours, 24 hours after dizziness, weakness fatigue. Passed out at home after the 24 hour mark. After coming "to" was vomiting. Perhaps was a seizure. The paramedics were called and I was evaluated and all was ok- O2 was fine, sugar 138, BP 110/60. I was to drink pedialyte, rest . |
| 1199529 | 4/12/2021 | | 37 | F | 4/6/2021 | 4/6/2021 | My arm started hurting pretty much right away after I got the shot on Tuesday and hurt badly all day Wednesday. When I woke up Wednesday morning, I felt nauseated and light headed. My rectum and anus felt like they were on fire when I passed stool at 8:30 AM on Wednesday, then I almost fainted walking from the bathroom back to my bed. My skin hurt and I felt feverish all day, although I didn't actually have a fever. I was awake for fewer than 6 total hours on Wednesday, all of them lying in my bed. On Thursday I had some joint pain and muscle soreness, but was otherwise ok. By Friday morning I felt fine. |
| 1199523 | 4/12/2021 | CA | 28 | M | 4/12/2021 | 4/12/2021 | At 4:15 pm the Covid-Janssen vaccine was given to the left deltoid and the patient was told to sit down for 15 minutes. When the patient got up after 2-3 minutes, patient became disorientated, sat down, and shortly fainted thereafter. The patient was brought into a nearby room, away from a busy thoroughfare and laid down. The patient regained consciousness soon after. Symptoms included: sweaty, palpitations and low blood pressure. After resting for 15-30 minutes he was able to walk out. |

Patient was given a cold compress for his wrists before the vaccine was given. Approximately 1 minute post vaccine, patient reported feeling dizziness and feeling warm. Patient was given a cold compress for the back of the neck and the wrists. Patient did not lose consciousness but did report dizziness. Patient was able to hold conversation and reported feeling better after about 5 minutes. Patient was monitored for an additional 15 minutes and reported feeling normal before he left. |
| 1199396 | 4/12/2021 | NV | 40 | M | 4/10/2021 | 4/10/2021 | Ten minutes after the vaccination, pt passed out and came right back. He said he was fine except his hands were tingling. We called 911 and they took him for the vital. |
| 1197956 | 4/12/2021 | IL | 25 | F | 4/12/2021 | 4/12/2021 | Patient fainted while sitting in the waiting area about 5 minutes after receiving her first dose of the Pfizer COVID Vaccine. Patient was unconscious briefly, but woke up after less than a minute a little disoriented. She was sweating and felt very hot, except for her hands that were cold. We gave her water and an ice pack to cool her down and waited with her until paramedics came to treat her. She seemed alert and that the issue had mostly resolved as she left with paramedics approximately 15 minutes later, but it is unknown what happened after she left with them. |
| 1198218 | 4/12/2021 | MI | 25 | F | 4/12/2021 | 4/12/2021 | Patient received Janssen COVID vaccine at a clinic today at approximately 2:10pm. When seated in a chair in the waiting area, patient stated she started to feel light headed and sweaty and has fainted before (not from a vaccine), so she sat back in the chair and then awoke on the floor. She bumped her forehead on the floor and has an egg-sized raised bump on her forehead. We applied ice instantly and monitored her blood pressure until she felt well enough to sit up. She did not feel she needed an ambulance and refused going to urgent care. She is feeling fine other than the bump. A worker took a report and I discussed with her what to watch for to monitor for concussion. Her roommate is driving her home. Event will also be reported today. |

| 1198130 | 4/12/2021 | CA | 36 | M | 4/12/2021 | 4/12/2021 | 10:30am: Pt was sitting in the vaccine site observation area after receiving vaccine for COVID-19 (Janssen). Pt had been sitting for approximately 15 min when RN noticed pt dropped paperwork and cell phone onto the floor. Pt's head went back, mouth open and eyes closed. Pt visibly pale. RN quickly approached pt while speaking loudly, pt did not respond. Audible "snoring" heard. RN placed pt's torso and head in her arms and moved patient to the floor into a supine position with legs raised onto his chair (pt did not fall to the ground). Once on the floor, pt opened eyes and asked RN, "Did I fall asleep?" RN reassure pt that he may have fainted while sitting in his chair. RN reassured pt and gave pt bottle water to drink. Color returning to patients face. 10:40: Pt reports "I'm feeling much better." Pt sitting upright on the floor. 10:45: Pt sitting up in chair. Alert to person, place, and time. Color WNL, peripheral pulses strong. Pt reports feeling well enough to leave. RN encourage pt to stay a few minutes longer to make sure able to stand/walk to his car. 10:50: Pt left observation area. |
| 1198125 | 4/12/2021 | | 27 | F | 4/12/2021 | 4/12/2021 | seeing spots, near syncope. Evaluated by EMS-Cleared |

| 1198064 | 4/12/2021 | TX | 45 | M | 4/1/2021 | 4/1/2021 | Became light headed, Fainted, Turned Pale, Sweated. EMTs were called who took BP, Blood Sugar, and ran EKG (I think). and was told all were normal. |
| 1198007 | 4/12/2021 | CA | 53 | F | 4/12/2021 | 4/12/2021 | After about 7 minutes of getting the Janssen Covid-19 vaccines, patient husband said patient is not feeling well. I attended to patient immediately. She said she is not feeling well, and her eye was rolling (as if when she tried to look up and couldn't get their eye to remain open) a for about few seconds and then she her eye was open back to normal. She was sweating on both hands and face were cold to the touch. I got the manager from the store to help me lie patient flat on the floor's surface gently to prevent her from falling off the chair. Based on this our adverse event protocol, patient exhibited similar symptoms to Syncope (paleness, sweating, coldness of extremities), so I patient is lying flat on the floor, feet elevated, and cold compression was apply on her arms and face. Unfortunately, patient conditions was not improving as it seem but she was alert and able to breath (fast pace) the whole entire time the incident occurred where she answer all questions when we myself, then the paramedics asked her questions. Paramedic arrived at scene within 10 minutes after individual got off the phone with 911. They took her away around 9 am and said patient probably experience anxiety attack. |
| 1198253 | 4/12/2021 | CA | 18 | M | 4/6/2021 | 4/6/2021 | About 10 minutes after the vaccine, the patient was standing in front of the pharmacy with his mom and fainted. He landed on his buttocks and did not appear to hit his head. He immediately appeared conscious but disoriented. He had a steady pulse and no itching or rash or trouble breathing, but he seemed pale. EMT was called and upon evaluation determined that he did not need further treatment. The patient went home with his mother. |

| 1197711 | 4/12/2021 | MS | 64 | F | 4/12/2021 | 4/12/2021 | Patient received J&J COVID Vaccine 4/12/21 around 12:05 pm. Patient waited in waiting area and complained to her husband about feeling dizzy and might faint. Pharmacists went to aid the patient and lay her down gently, monitored her blood pressure which was high at the time, once patient sat up her BP decreased, it fluctuated the whole time, EMT was called and once they arrived and monitored her, they said the cause of her fainting was due to her blood pressure. Patient was alert and responsive the whole time. Patient was unsure if she took her BP medicine this morning. |
| 1197691 | 4/12/2021 | KS | 88 | M | 3/10/2021 | 3/27/2021 | The weeks following vaccination, the patient felt lethargic, dizzy, unstable on his feet. Mental cognitive ability was unchanged, and he seemed to still be sharp. Up until the day of death, the patient was still active, able to drive, speak, make jokes, eat, and do everything normally. The morning of death, he had a bad fall, but couldn't recall what happened. It's assumed that a low blood pressure event, syncope, partial aneurysm, something of that nature causing temporary loss of consciousness occurred. We attended a funeral that afternoon, ate lunch, and dropped him off at his home. Sometime during that evening, he fell and died. The cause is unknown and still "undetermined" on the death certificate. (Heart attack or brain aneurysm is what I'm guessing) |
| 1198739 | 4/12/2021 | MD | 44 | F | 4/5/2021 | 4/5/2021 | patient had a syncope; was sweaty, then felt a little dizzy then fainted. This happen within about 5 minutes while waiting after the vaccination. Patient was laid on the floor before fainted for about few seconds (@5sec). Patient waited in the pharmacy for about 30 mins and felt better. After follow up with patient, she said she felt tired for couple more days then felt better |
| 1199230 | 4/12/2021 | MT | 33 | M | 4/12/2021 | 4/12/2021 | After the vaccination patient sat down in waiting room next to the pharmacy. He passed out in his chair and appeared to have a seizure. He was pale in color and had sweat dripping off is forehead. Blood pressure was 150/90 and pulse 80 bpm. He was given a cold compress and two bottles of water to drink. After 45 minutes patient felt fine and was able to leave on his own. |

| 1198314 | 4/12/2021 | IA | 64 | F | 4/1/2021 | 4/3/2021 | Friday morning 10 hours of temp, as high as 101.2. Went to bed and got up at 4:15 am woke up with nausea , got up one more time around 4:30 to go to the bathroom and woke up on the bathroom floor. Had passed out. Went to on Monday and was told that she had a concussion. |
| 1198299 | 4/12/2021 | CA | 51 | F | 4/12/2021 | 4/12/2021 | Patient is a 51 year old female who has not completed a 30-minute observation period due to the following signs and symptoms of an adverse reaction starting @ 1054: swelling of tongue and lips, body numbness, clammy skin, syncope, shortness of breath, hypertension, and tachycardia (see VS flowsheet for values). Pfizer-BioNTech COVID-19 vaccine # 1 in series administered @ 1035. Action(s) taken: @ 1056 Epinephrine administered and Transferred to higher level of care post RRT @ 1105. Allergy to COVID-19 vaccine documented in Allergies activity: Yes Patient and husband advised to discuss second dose considerations with a clinician and obtain refill for Albuterol and Epinephrine. |
| 1198321 | 4/12/2021 | IL | 66 | F | 4/11/2021 | 4/11/2021 | About 30 minutes after the vaccination (on the way home), I felt very faint and almost passed out. At the same time, my injection arm started burning. Also, I started experience a mild headache while on the way home which became VERY bad about an hour after the vaccination (at home). My head, neck and shoulders hurt so badly that I could not move and my vision was blurry; it was a searing type of pain. Then, I developed a fever which, at its highest temperature, was 101.6° along with overall achiness, malaise and severe fatigue, |

| 1198352 | 4/12/2021 | MD | 18 | F | 4/12/2021 | 4/12/2021 | Patient fainted upon receiving the Janssen COVID-19 vaccine. They were in a chair in the waiting area and did not fall or injure themselves. We gave her no food or drink, took her blood pressure and stayed with her. She then fainted again at which point we called for a paramedic. They evaluated her and took her blood pressure again and her blood sugar. She then recovered and walked out of the store unassisted. She did not go to the ER but chose to go to an urgent care center I believe. |
| 1198364 | 4/12/2021 | IN | 35 | M | 4/8/2021 | 4/8/2021 | Nearly passed out. Lost color in face and felt hot |
| 1198371 | 4/12/2021 | VA | 23 | F | 4/10/2021 | 4/11/2021 | vasovagal syncope - Fainted 16 hours after receiving vaccination. Felt lightheaded when woke up. Received care from EMTs and was admitted into ER. |
| 1198383 | 4/12/2021 | OH | 32 | F | 4/11/2021 | 4/11/2021 | Immediately after injection at 10:20am, I felt hot and light headed. I have passed out from shots and IVs before so I brought my own smelling salts to my appointment, and I used them as soon as I felt faint, which kept me from passing out. I felt ok after waiting 30 minutes. Later that day around 5pm, I started getting chills and felt a little achy. At 6pm I checked my temperature and it was 99.9, at 7pm it was 101.9, at 7:30pm it was 104 so I took ibuprofen 400 since I had severe chills, headache fatigue and muscle and joint aches. At 8pm it was 102.7 so I took another 400mg of ibuprofen. At 9pm it was 101.7, and at 10pm it was 100.4 and then I went to sleep. On 4/12: it was 98.7 when I woke up at 9am, then 99 at 10:30 so I took ibuprofen 400, then 100.1 at 11:30 so I took ibuprofen 400 again. Since noon, the fever has subsided and the fatigue and aches and headaches have become mild so that I could work from home. |
| 1198385 | 4/12/2021 | KY | 20 | M | 4/12/2021 | 4/12/2021 | Vasovagal Syncope Patient was sitting in waiting area when his friend alerted pharmacy staff that he had passed out. Patient was sitting on a backless chair and fell off, but did not hit head or have any apparent abrasions. Pharmacy staff quickly responded and patient was conscious and stated he had a history of vasovagal responses to blood draws. |
| 1198312 | 4/12/2021 | | 47 | F | 4/12/2021 | 4/12/2021 | Syncope, blackout, with vomiting. 2 mins after injection. |

| 1193665 | 4/11/2021 | IL | 39 | F | 3/9/2021 | 3/19/2021 | On March 10 (the day after my vaccine) I felt the normal body aches and had a pretty bad headache. That all went away in the evening on March 10. Since that day I have had off and on dizziness/lightheadedness. On March 19 I fainted in my kitchen. I hit my kitchen table and had a huge knot on my head and bruises all down my left side of my body. My left shoulder still hurts from the fall and I still have a small knot on my head (left side just above my left eye on my forehead). I went to my primary care doctor on March 24 and reported the event. I asked if it could be related to the COVID vaccine and she said she wasn't sure since the Jansen one was so new, but that she had seen these effects from the other two vaccines. At the doctor's office my blood pressure was on the lower end (110/60). My normal blood pressure runs about 118/70. They ran some blood work and that all came back normal. They did an EKG in the office, but my blood pressure stayed pretty close to the same as it was the first reading. They then sent me to get a CT scan on my head, which also came back normal. She did diagnose me with a concussion. I was out of work the entire week (March 22-March 26) due to this. She also ordered me to have an echo done. While at the office for the echo, my blood pressure ran 99/46 (this was on March 31). The results of the echo came back normal. I also got a monitor to wear for 72 hours on March 31. I took that to the doctor on April 5 and I am still waiting on results from that. Since the event on March 19, I have had headaches and body aches. I have also had slight lightheadedness off and on. |
| 1194208 | 4/11/2021 | PA | 54 | M | 4/11/2021 | 4/11/2021 | About 10 minutes after shot was taken I got a sharp pain in my stomach and felt like I had to throw up, about the same time I was sweating profusely and felt like fainting, they brought the wheel chair over to me and was going to move me, but the symptoms were improving and I started to feel better, I have never had symptoms appear that fast, very scary stuff for sure. |

| 1194182 | 4/11/2021 | MN | 56 | F | 4/9/2021 | 4/11/2021 | In the middle of the night of the 10th of April I started having what seemed like normal side effects---muscle aches, headache, fatigue.. and then all day on the 10th the same side effects. Then last night I slept 9 straight hours but woke up sweating a couple times in night and in morning woke up sweating but my aches and headache seemed better than the day before so I went downstairs to make tea. After pouring a glass of orange juice and having a couple sips I started to feel strange -- dizzy and oversome with a strange feeling that was not quite like the feeling before fainting -- my back had a weird pain and i was a little nauseous as well. ...it was more overwhelming -- more loss of control like a huge wave of dizziness and ringing. I made my way to a couch to try to regain balance -- but was still very dizzy-- something happened to make me try to get up and go upstairs so I remember walking 12 feet or so then told myself to sit down. Before that happened I must have blacked out. I faintly remember moving myself across the floor but then must have blacked out again. I woke up at the base of the stairwell and then was able to walk upstairs. I had collapsed the first time onto a hard floor as my orange juice glass had spilled all over and when I got upstairs my sweatshirt was covered in juice. I don't remember any of that. Once upstairs I drank water and have been fine since then. I had eaten dinner the night before but maybe it was the sweating in the night that dehydrated me and i cramped up and had a strange pain in my back---i don't know. I am a very healthy 56 yr old woman 5'3" 105 lbs so maybe the Johnson and JOhnson one dose was a lot for my body or maybe my body was just doing what it's supposed to do to react to vaccine.... i also may have had asymptomatic covid in the last year so my body was overreacting. This happened 7 hours ago and I seem fine aside from slight headache and continued weakness from vaccine but I thought I should report the incident in case there might be something more or in case others had similiar responses. |

| 1194129 | 4/11/2021 | MI | 66 | F | 3/14/2021 | 3/25/2021 | <p>COVID-19; Passed out; Diarrhea; Dizziness; Weakness; Low blood pressure; This spontaneous case was reported by a consumer and describes the occurrence of LOSS OF CONSCIOUSNESS (Passed out) in a 66-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch no. 044a21a) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event (No relevant medical history provided). On 14-Mar-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) 1 dosage form. On 25-Mar-2021, the patient experienced LOSS OF CONSCIOUSNESS (Passed out) (seriousness criterion medically significant), DIARRHOEA (Diarrhea), DIZZINESS (Dizziness), ASTHENIA (Weakness) and HYPOTENSION (Low blood pressure). On 26-Mar-2021, the patient experienced COVID-19 (COVID-19). At the time of the report, LOSS OF CONSCIOUSNESS (Passed out), DIARRHOEA (Diarrhea), DIZZINESS (Dizziness), ASTHENIA (Weakness), HYPOTENSION (Low blood pressure) and COVID-19 (COVID-19) outcome was unknown. DIAGNOSTIC RESULTS (normal ranges are provided in parenthesis if available): On 26-Mar-2021, COVID-19 (positive-negative): positive (Positive) Positive. The action taken with mRNA-1273 (Moderna COVID-19 Vaccine) (Intramuscular) was unknown. Treatment was given intravenous bamlanivimab monoclonal antibodies therapy in the emergency room Based on the natural history of COVID-19, and the established information about the mRNA-1273 vaccine, a causal association between the event of Covid-19 and the product use is assessed as unlikely. The remaining events are assessed as a symptom of the disease and also assessed as unlikely related to mRNA-1273.; Sender's Comments: Based on the natural history of COVID-19, and the established information about the mRNA-1273 vaccine, a causal association between the event of Covid-19 and the product use is assessed as unlikely. The remaining events are assessed as a symptom of the disease and also assessed as unlikely related to mRNA-1273.</p> |

| 1194288 | 4/11/2021 | TX | 34 | F | 4/11/2021 | 4/11/2021 | After the shot was administered the store had me wait in case there was a reaction. While I was sitting down, waiting for about 15 minutes I felt dizzy and fainted. My head hit the floor. The store called the paramedics. I woke up sweating and the paramedics arrived. The paramedics took my bloodpressure and reported it at 84 over 50. They waited while I felt ready to stand up. After a 3 to 4 minutes I felt I could stand up and they took me outside. Once outside they took my blood pressure again and it was at 110/80. I opted to go home instead of the hospital and I feel tired. |
| 1192883 | 4/11/2021 | PA | 46 | F | 4/5/2021 | 4/5/2021 | On Mon, April 5, had the vaccine, fainted at site 5 minutes after getting the vaccine. 9pm Apr 5, had fatigue, fever, slight headache, night sweats, clammy skin feeling. This continued until Wed Apr 7th Wed Apr 7 and Thursday Apr 8th were fine Friday, Apr 9th developed all of the above issues plus dizziness, nausea, upset stomach and dry heaving. This continued into Sat Apr 10th with added shortness of breath and heart palpitations. Went to the emergency room Sat Apr 10th Sunday, Apr 11th, severe nausea and stomach problems continuing along with continued night sweats. |

| 1193289 | 4/11/2021 | PA | 38 | M | 4/7/2021 | 4/7/2021 | Within approximately five minutes of injection, I experienced increased sweating, light headedness, and difficulty seeing until I passed out unconscious for a minute or two. When I awoke I was still sweating and cold for the next five to ten minutes. Paramedics checked my vital signs onsite afterwards (blood pressure, sugar levels, and pulse) and everything appeared to be normal. I was able to drive home 30 minutes later after making sure that all side effects subsided. I have not experienced any other side effects from the vaccine. |
| 1193278 | 4/11/2021 | FL | 41 | M | 4/10/2021 | 4/10/2021 | Patient received vaccine and was instructed to sit for 15 minutes as required for monitoring. About five minutes in, another patient who received the vaccine together with patient told us the patient had fainted. Patient was slumped over to the side when I came to check on patient. I called the patient a few times and patient started to come to. I asked the patient how he was feeling and if he had any difficulty breathing to assess for anaphylactic shock. Patient was breathing normal, but was sweating and a bit confused. Patient reported feeling dizzy. I explained to patient that he fainted for a few minutes and instructed to sit as I did not feel comfortable having patient lay down in the state he was in. Patient was given water and a fan to help cool him down and legs elevated (patient reported feeling much better with the fan blowing on him). Patient sat at the pharmacy for over 30 minutes before heading to the bathroom. At this point, patient were no longer dizzy and I instructed him to get up slowly and assessed that patient was no longer dizzy before letting him go to the bathroom. |
| 1193275 | 4/11/2021 | PA | 85 | M | 4/10/2021 | 4/10/2021 | developed stomach pain beginning minuets after the shot administered. Left site 15 minuets after the shot and returned home. Stomach pain increased and in a sitting position vision started to become blurred and I passed out for a very short period of time. After that proceeded to have uncontrolled diaherrea and developed blood in the stool and on the toilet paper. Mild spotting continues the day after the shot. No other adverse symptoms. |

| 1193248 | 4/11/2021 | FL | 18 | M | 4/9/2021 | 4/9/2021 | Patient received the vaccine and was instructed to sit for 15 minutes as required before leaving. About five to ten minutes to, we were alerted that the patient had fainted. Upon coming to the patient, he was starting to come to but was out of it. I tried asking the patient how he was feeling, is he having a hard time breathing? Patient's entire arms and legs were bright red with possible rashes that lasted about 5 minutes and went away quick. Patient's face remained their normal shade. Patient reported he fell asleep and patient's father reported waking the patient up prior to coming to get his vaccine. Patient sat at the pharmacy to be monitored for an addition 30 minutes before leaving with father. Patient was given water and fan to help cool him down. Patient reported feeling ok after about 10 minutes with legs elevated but was instructed to sit for longer than that time. Patient was ok to leave with father after 30+ minutes of monitoring. |
| 1193209 | 4/11/2021 | WI | 30 | M | 4/10/2021 | 4/10/2021 | I developed extreme body aches and chills along with an extreme fever, and it progressed throughout the night until I was delirious. I fainted once trying to take medication (ibepofren) in the bathroom. I never measured the fever because I was delirious and could hardly move due to pain. I have never felt so sick in my life and I am a healthy 30 year old with no other health issues. I am feeling better this morning but have lingering symptoms of chills and aches. I am reporting this because the intensity of the reaction seemed overwhelmingly extreme and scary for someone of my health and age. |

| 1193112 | 4/11/2021 | MI | 34 | M | 3/29/2021 | 4/7/2021 | April 7, woke up with a headache, took ibuprofen. A few hours later, started feeling hazy, lightheaded and had trouble concentrating while working from home. Felt like I was going to pass out. Took a break from computer screen, symptoms appeared to subside. An hour later, same haziness feeling came back. Thought I was going to pass out again. Called 911. ER diagnosed me with near syncope. Told me to keep an eye on symptoms and come back if things worsen. I informed them I had received one dose of vaccine, they didn't seem to think it was related. Symptoms have slightly improved since, but still have bouts of dizziness four days later. |
| 1193064 | 4/11/2021 | | 53 | F | 3/1/2021 | 3/15/2021 | Extreme pain head to toe. Dizziness and I passed out 28 hours after my second shot. I passed out walking to the bathroom when I felt nausea. I have never passed out before. After the second shot in March, I have also experienced slight twitching in my legs and sometimes across my temples and other locations in my head. Not visual twitching but I can feel it. Now more than one month from second Moderna and I still feel it. Will this go away? |
| 1193060 | 4/11/2021 | NJ | 34 | F | 4/9/2021 | 4/10/2021 | I fainted around 6:35 am on 4/10/21. This was about 10 mins after I had taken Tylenol because my fever was at 101 and I had a bad headache. My heart was racing and I felt very weak. I was crawling on the floor to try to get my husband because I felt like I couldn't stand. I passed out in the hallway and came to probably 30 seconds later (I'm not sure how long it was, but I think it was only a little while) and was very disoriented. I then got my husband who told me to lay in bed but I felt so weak that I couldn't get off the floor for about a minute. Finally I was able to lay down in bed and I was very sweaty. I slept/laid there for a couple of hours and felt a little better after but had a bad headache until mid afternoon that day. |
| 1193046 | 4/11/2021 | NC | 71 | M | 2/15/2021 | 2/16/2021 | Chills,Body hurt all over, Passed out 3 times, left hand went numb, left arm numb,taken to an urgent care, transferred by ambulance to hospital, MRI, Cat Scan, ECG, neurological determined TIA, mini stroke, spent night in hospital. 4 days later rash on just both arms and both legs. Went to Urgent care directed by Dr put on Pregnazon for 10 days and follow up pack for 5 days. |

Was observed, blood pressure taken and was slightly elevated. Symptoms dissipated and was released to go home. Later had lasting headache and muscle pins for approx 18 hrs along with hot flashes. On 4/11/21 I then experienced the same episode lasting over an hour. |
| 1195047 | 4/11/2021 | TX | 22 | M | 4/5/2021 | 4/5/2021 | Pt was administered Pfizer dose #1. After administering to sister he passed out per mom. Mom got nurse's attention while returning to tent. When arrived to the car, pt was awake and alert and responding appropriately. He stated he feels light headed. EMS called to tent. Pt given bottle of cold water. Mother then drove pt over ti observation area and EMS continued to evaluate. EMS stated pt had vaso vagal response. Pt remained in observation until cleared by staff. |
| 1195022 | 4/11/2021 | MI | 21 | M | 4/11/2021 | 4/11/2021 | Patient became dizzy and fainted on the way to the observation chair. He did not lose conciousness, he said he just felt very dizzy. He said it felt good to lay on the ground, so I him lay for 5 minutes, then I helped him to a chair. I told him I wanted him to stay seated for 30 minutes so I can monitor him. He called his father, who came to pick him up after the 30 minutes were up. He slowly stood up and walked a few steps and then left the store with his father. |

| 1195010 | 4/11/2021 | CA | 42 | F | 4/11/2021 | 4/11/2021 | 42 y/o female, hx of fainting ?when getting shots?. c/o SOB, stated ?I feel numb on my face from nose down to my mouth?. Also stated ?I feel like my throat is closing and having hard time swallowing?. Pt is hyperventilating, crying. Paramedics V/S taken HR 95, BP 149/88, O2 Sat 100%. Educated on calming and deep breathing techniques, given po fluids tolerating well. Pt now more calm and sent home without s/s acute distress. |
| 1195008 | 4/11/2021 | OK | 24 | F | 4/11/2021 | 4/11/2021 | pt become very dizzy, almost passed out (her companion had passed out just moments before), probably due to anxiety and stress in situation, also warm in the area. She was laid on ground and began to get color back in her face, dizziness went away after about 5 minutes, was assessed by EMT (since with companion who fainted), seemed to fine a few minutes later. |
| 1194809 | 4/11/2021 | PA | 19 | M | 4/11/2021 | 4/11/2021 | Near syncope. Trendelenburg position. Cold water bottle on neck. |
| 1194988 | 4/11/2021 | LA | 21 | M | 4/11/2021 | 4/11/2021 | Pt Fainted shortly after receiving vaccination. Pt came for a moderna covid vaccine with his friend, both first doses. Pt said he "fainted recently" from a shot where he fainted "for a couple minutes" according to his nurse, and he was sure it was psychologically induced by anxiety. He said he was more mentally prepared this time. After I gave the dose to him and his friend, he got lightheaded and slowly started losing consciousness in his seat after a few minutes. Pt was alert and responded to our questions. I quickly stepped out to give the pt a bottle of water, and upon coming back to the IMZ room, his friend said he urinated himself. He was less responsive, but still alert. I notified the technician. He started to turn pale and felt more cold. He pulse was weak. I encouraged the pt's friend to keep him alert while we call EMS. I reminded the pt to keep breathing. The technician called EMS, and I stayed with the patient to kept him calm, but alert until EMS arrived. Pt slowly felt better after a few minutes (color return, and temperature normalized). Pt said he was okay, and he was able to walk. EMS arrived and tested blood sugar; he was within normal range. Pt did not need EMS service, and went home with friend. |

| 1195148 | 4/11/2021 | GA | 26 | F | 4/9/2021 | 4/9/2021 | Severe body aches and pain, chills and shakiness, dizziness, black out / fainting, nausea, stomach pain, vomiting stomach bile, profuse sweating, redness and swelling of injection site, sharp pain in shoulder on injection side, headache, brain fog, fatigue, cough, chest tightness. Timeline: Shot at 1:15pm. Headache at 6:30pm. Shoulder pain, redness, heat, and swelling on injection site at 8pm. Chills, shaking, body aches at 10pm. Cough, chills, body aches, chest tightness at 10:15pm. Same as above plus increased chest tightness, nausea, and stomach pain at 2am. Sweating, body aches, dizzy, brain fog, fatigue, weakness, stomach pain at 8:30am. Black out / fainting at 2:15pm. Nausea and subsequent vomiting at 2:30pm. Continued body pain, chills, and fatigue for the next 24 hours. All symptoms ended abruptly at 2-3pm next day (48 hours post-injection). |
| 1194970 | 4/11/2021 | WA | 26 | M | 4/11/2021 | 4/11/2021 | Patient was sitting for his 15 minutes. At about 5 minutes after his vaccine he passed out and fell off his chair to the floor. The Pharmacy intern noticed that the color of his skin was like a purple and he was passed out. When she started to approach him he started slowly moving his head and adjusting his eyes. He said he felt really dizzy and we had him lay down. He was very sweaty and was shaking a little bit. I took his blood pressure at 11:53 and it was approximately 124/93. He was responsive but feeling dizzy and warm and I stayed with him until the paramedics arrived at about 11:54 |
| 1194953 | 4/11/2021 | IL | 41 | M | 4/11/2021 | 4/11/2021 | About 10 minutes after shot I asked patient how he was feeling, he said he was hot. I walked out to talk to him and he said he felt dizzy. He turned pale and fell sideways off chair onto floor lowering himself with his knee. He did not bump his head, he was sweating profusely, but did not lose consciousness. I yelled to the tech to call 911. Patient was sitting on floor. He said he did not eat much all day. He was alert and talking. He said he fainted when his wife had their baby. We gave his some orange juice. The paramedics arrived 8 minutes later and checked his vitals. In the meantime we called his wife. Paramedics checked his BP, glucose and questioned patient. Patient refuse to go with paramedics. Wife came and paramedics released him to her. |

| 1194417 | 4/11/2021 | FL | 57 | F | 4/11/2021 | 4/11/2021 | Patient received vaccine at 1153am in Left Deltoid, walked 20feet to observation area to wait 15 minutes in an armchair with arms under observation of staff. Was alert until 1156am when husband alerted staff that she was feeling very light-headed and nauseated. Pharmacist rushed over with hand-fan, but noticed Patient had started to become unresponsive. 911 Emergency response activated, ambulance on route. Pharmacist noted open eyes, glassy, there was no response to voice. She was sitting stable in chair husband and pharmacist at side. Pharmacist noted normal breathing and pulse. She was warm and sweaty to the touch. We kept talking to her, keeping the fan on her to keep her cool. Purse strap was removed from around her shoulders. Pulse and breathing still normal. She then came out of the syncope episode at 1159am. She was alert and oriented to time/place/person/self. Color returned to normal. Emergency services arrived approximately 3-4 minutes later. She was advised that it was a syncope episode that should be followed up at hospital/urgent care. She signed AMA with emergency ambulance services. She stayed in pharmacy under care of pharmacy support and store staff with water/fan staying seated whole time for additional 30 or so minutes until she and husband elected to leave the store. |

| 1195506 | 4/11/2021 | MN | 35 | F | 4/9/2021 | 4/10/2021 | About 15.5 hours after the injection, I had been experiencing some chills, headache, and slightly nauseous, but barely. I did not feel lightheaded or dizzy that I remember. I walked to my bathroom, at around 4:15 am I got up and used the bathroom, washed my hands. I fainted and lost consciousness. The next thing I remember I woke up and the light was off in the bathroom. It is not unusual for me to get up in the middle of the night, and do not believe I was dehydrated or ate less that evening. Luckily, I believe my butt took the brunt of the fall, as evidenced by the severe soreness there and lack of other areas of pain. |

| 1195368 | 4/11/2021 | IN | 23 | M | 4/9/2021 | 4/9/2021 | Vasovagal syncope in the 15 minute waiting period. Response by staff was great: laid me down, brought a cot, regularly checked my heart rate, blood oxygen, and blood pressure until it returned to normal and waited to make sure the symptoms did not return. Later that night, I started experiencing some of the typical COVID vaccine side effects: sore arm, chills, nausea, and fever-like symptoms; in addition to the symptoms I was warned was possible, I also experienced periods of dizziness and an uncomfortable sense of balance. Three days later, the dizziness and other common symptoms have gone away, but my sense of balance still feels off, although I do not know if related to the vaccine. It's not so bad that I'm at risk of falling over, but I have a semi-regular feeling of unsteadiness which I cannot explain. |
| 1195146 | 4/11/2021 | VA | 25 | M | 4/9/2021 | 4/10/2021 | Fever, chills, and passed out when getting up middle of night after urinating. My family had to open the bathroom and pick me up off the floor before i regained consciousness |

| 1195267 | 4/11/2021 | WA | 35 | M | 4/6/2021 | 4/6/2021 | DURING COVID VACCINATION CLINIC, DIVISION 1 EMPLOYEE ASSISTING WITH POST-VACCINE OBSERVATION REPORTED TO PHARMACIST THAT A PATIENT WAS FEELING LIGHTEADED. SHE IDENTIFIED PATIENT WHO WAS DISTRESSED AND APPEARED UNSTEADY. THE PATIENT REPORTED THAT THEY HAD TUNNEL VISION AND FELT VERY LIGHTEADED. PHARMACIST ASKED THE PATIENT TO REMAIN SEATED AND TRY TO TAKE SEVERAL DEEP BREATHS WHILE THE PHARMACIST HELD THE PATIENT'S LEFT SHOULDER TO ENSURE HE WOULD NOT FALL IF SYNCOPE OCCURRED. THE PATIENT HAD FLUTTERING EYELIDS AND APPEARED IAPHORETIC AT FIRST, BUT AFTER SEVERAL MINUTES RECOVERED SOMEWHAT. THE PATIENT REPORTED THAT HE HAD RARELY HAD SIMILAR EPISODES IN THE PAST DURING SOME MEDICAL PROCEDURES, BUT NEVER ASSOCIATED WITH A VACCINATION. PHARMACY TECHNICIAN HAD A D1 EMPLOYEE RADIO FOR A CODE WHITE AS SHE CONTACTED 911 ON HER CELLULAR PHONE. PARAMEDICS ARRIVED AND ASSESSED THE PATIENT'S HEART RATE, SEATED BLOOD PRESSURE. AND STANDING BLOOD PRESSURE. THE PATIENT REPORTED FEELING SLIGHTLY LIGHTEADED WHEN FIRST STANDING, BUT MUCH IMPROVED OVERALL. THE PARAMEDICS INDICATED THAT THERE DID NOT SEEM TO BE A MEDICAL EMERGENCY BY THIS POINT AND EXPRESSED CONCERN THAT THE PATIENT MAY BE DEHYDRATED BUT THE PATIENT REFUTED THIS POSSIBILITY. HE ALSO STATED THAT HE HAD NOT RECENTLY OVEREXERTED HIMSELF AND HAD EATEN LUNCH EARLIER THAT AFTERNOON. PHARMACIST PROVIDED THE PATIENT WITH GATORADE AND ICE TO IMPROVE BLOOD SUGAR, ELECTROLYTE, AND HYDRATION STATUS AND THE PARAMEDICS DEPARTED. THE PATIENT REMAINED FOR APPROXIMATELY 30 MINUTES UNTIL HE WAS FEELING CLOSE TO BASELINE AND FELT COMFORTABLE LEAVING. |

GIRLFRIEND KNOCKED ON HEALTH SCREENING ROOM WHILE ANOTHER PATIENT WAS GETTING READY FOR VACCINE. PATIENT HAD PASSED OUT IN CHAIR. PHARMACIST CAME INTO ROOM, TRIED TO ROUSE PATIENT AND DID STERNUM RUB. PATIENT SCARED AWAKE. TOOK A COUPLE MINUTES TO REGAIN COMPLETE CONSCIOUSNESS. PATIENT WAS SWEATING, SOON BECAME VERY COLD AND VERY SHAKY. EMS WAS CALLED AND ON SCENE WITH PATIENT. EMS WANTED PATIENT TRANSPLANTED TO HOSPITAL BUT PATIENT DENIED MEDICAL ATTENTION AND TRANSPORT. ACCORDING TO EMS, PATIENT DID HAVE LOW PULSE BUT BLOOD SUGAR WAS NORMAL. EMS HAD ME HAVE PATIENT SIT FOR ANOTHER HALF HOUR WHILE PATIENT ATE A PROTEIN BAR AND HAD A GATORADE. AFTER THE HALF HOUR PATIENT STATED THAT HE WAS FEELING FINE AND LEFT THE BUILDING. |

| 1194381 | 4/11/2021 | NC | 22 | M | 4/7/2021 | 4/7/2021 | 12 hours after receiving vaccine I got sharp pains in back and legs. Burning sensation all over body. I was walking across my room and passed out waking up on the floor. Muscle cramps and tightness followed this. I could not move my muscles for roughly 12 hours. After 24 hours from receiving vaccine these extreme symptoms seemed to fade and I was left with fatigue, soreness and fever as expected. This lasted for the next 3 days |
| 1194807 | 4/11/2021 | | 53 | F | 4/11/2021 | 4/11/2021 | Pale, diaphoretic rigid, twitching, unconscious, syncope episode, EMS was called and patient was transported |
| 1195297 | 4/11/2021 | MD | 31 | M | 4/8/2021 | 4/9/2021 | 0800 - Experienced very mild common symptoms (tiredness, headache, muscle pains, and chills) while sitting at a desk. 0830 - Previous symptoms worsened. New symptom, nausea, appeared while still sitting at the same desk. 0840 - Fainted after standing up to use restroom. Consciousness and strength returned almost immediately after event. 0845 - Most symptoms dissipated except for lingering tiredness and slight headache (not due to fall). |

| 1194456 | 4/11/2021 | MA | 39 | F | 4/9/2021 | 4/9/2021 | After the immunization was administered to the patient, she was asked to have a seat in the waiting area for observation. A few minutes after she sat, she told her husband who was seated with her she didn't feel well (he did not inform us). The technician observing her noticed she passed out and reported to the pharmacist (myself). I designated a team member to call 911 and ran out to the patient. She was extremely pale and her lips were blue. With the assistance of her husband I laid her on the floor, had him elevate her feet and checked for pulse and breathing. I couldn't immediately find her pulse but within 30 seconds she began to come to. She appeared to tremor a few times as she came to and her color began to return. She was extremely confused and did not know where she was upon awakening. EMS arrived on the scene approximately 10-15 minutes after the event. They did standard patient evaluation which was unremarkable and proceeded to bring her to the local ED, According to the patient, the ED visit yielded nothing and they said "she couldn't be more healthy". One note, that was revealed in conversation with the patient while waiting for EMS to arrive is that the patient had very little to eat or drink prior to being administered the vaccine. |

| 1194791 | 4/11/2021 | MI | 22 | M | 4/11/2021 | 4/11/2021 | patient fainted; light headed, dizzy, sweaty and nauseous for about 5 minutes watched patient closely, used ice pack, gave water .patient was fine after |
| 1194579 | 4/11/2021 | MA | 24 | M | 4/7/2021 | 4/7/2021 | Patient received the vaccine and was asked to wait in the observation area afterwards. He approached the counter a few minutes later to report he wasn't feeling well. As he was speaking with the technician he became very pale, reported lightheadedness and fainted with loss of consciousness. The technician reported that he witnessed convulsive type tonic movements concentrated in the neck and upper-arms more than the abdomen or legs. He also reported foaming at the mouth and following each event which repeated 3 times in less than 15 minutes, he woke with confusion and no memory of where he was. EMS arrived after 15 minutes and transported the patient to the ED for evaluation. Upon follow up with the patient the next day, he reported that the ED found nothing on his medical exam and he had worked a 10 hour shift prior to receiving the vaccine and had had nothing to eat or drink. |
| 1194769 | 4/11/2021 | LA | 32 | F | 4/1/2021 | 4/6/2021 | Constant vertigo to the point of almost fainting making it very difficult to partake in normal daily activities Also excessive drowsiness and sleeping. |

| 1194619 | 4/11/2021 | NY | 18 | F | 4/9/2021 | 4/9/2021 | I had horrible shaking/trembling in my arms, chest, and legs about six hours after the vaccine, and they continued for about four hours more, uncontrollably. I passed out briefly around 12 hours after the vaccine, and I'm not sure how long I remained unconscious. Through all of this, my left arm was difficult to move or use, I felt hot suddenly and then cold, and I was tired. The next day, the most serious side effects were gone, but I remained feverish, tired, and largely unable to move my left arm. Those side effects were gone on the third day and now I'm better. |
| 1194717 | 4/11/2021 | AL | 32 | M | 4/11/2021 | 4/11/2021 | Within 10 minutes of receiving the vaccine the patient became hot and sweating and passed out. He was given water, gatorade and crackers and remained seated for about 45 minutes before leaving the pharmacy. |
| 1194622 | 4/11/2021 | FL | 30 | M | 4/11/2021 | 4/11/2021 | PATIENT GOT LIGHT HEADED AND PASSED OUT |
| 1194677 | 4/11/2021 | VA | 21 | F | 4/11/2021 | 4/11/2021 | Patient fainted within a minute of getting the vaccine. She walked to her seat in the observation area. She was unaware she fainted. Her BP was 123/70. She said she felt fine she had scratched her face and hit her head when she fell on the floor. 911 was called immediately. They took her out to the ambulance because her HR was low and she eventually left on her own accord |
| 1194720 | 4/11/2021 | NC | 49 | M | 4/10/2021 | 4/10/2021 | Passed out in chair, vomitted, took a while to recover |
| 1194694 | 4/11/2021 | VA | 26 | F | 4/11/2021 | 4/11/2021 | Patient walked to her seat in the observation ear and sat down. Within 1 minute she jerked back and fell to her right side hitting her head and face on the glasses display and landing sprawled out on the floor. She had her eyes wide open. She was not aware she fainted and was completely conscious. Her blood pressure was 123/70. 911 was immediately called. The EMTs took her to the ambulance due to low heart rate when they arrived. She ended up leaving on her own accord |

| 1191846 | 4/10/2021 | ID | 62 | F | 3/12/2021 | | <p>I thought that I had kidney stone; aches and pain/Pain in my right side was very severe/Body ache; Foggy brain; When I stood up and I had been standing for a minute or two and it wasn't that I got up too fast and then I got very dizzy; almost passed out; can't even focus; I was not feeling well; They did gave me Cyclobenzaprine, Prednisone and Hydrocodone and I took them for two days and then I just stopped because it was just making it worse and then I was foggy and couldn't event get up; This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), dose 1 via an unspecified route of administration on 12Mar2021 (Batch/Lot Number: EN6206) as SINGLE DOSE for COVID-19 immunisation; cyclobenzaprine, prednisone and hydrocodone; all via an unspecified route of administration from an unspecified date (Batch/Lot Number: Unknown) to an unspecified date, at unspecified dose for an unspecified indication. Medical history included COVID-19 from Dec2020 to an unknown date. The patient's concomitant medications were not reported. The patient stated, "First, I had COVID back in early December and then on 12Mar2021, I got my first vaccine and I have lot of aches and pain and very foggy brain. I was just with the 'chiropractor' and he was just with me and I stood up and we were talking and I just got super dizzy and almost passed out, I just don't know. I missed, I can't even focus." When clarified the concern, the patient stated, "When I stood up and I had been standing for a minute or two and it wasn't that I got up too fast and then I got very dizzy and almost passed out, luckily there was a chair to catch me. So, my concern is, do I get the second vaccine if I already had COVID, should I didn't had this first vaccine since I already tested positive? When I had COVID, I was very cloudy in the brain. I don't know if this is a part of side effect, I am trying to find out if I can get the second vaccine." The patient experienced kidney stone. The lab data is clear, upon checking, the blood and urine samples. CAT scan has been done and the report is clear. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.</p> |

| 1190419 | 4/10/2021 | CA | 32 | M | 4/10/2021 | 4/10/2021 | Approximately 2 minutes after the patient received the vaccine, the patient had other questions and while talking about the vaccine, the patient's eyes rolled back and he experienced a vasovagal reaction (syncope). Although he was sitting in a chair, his head fell to the left and his forehead bumped the table. The patient's legs were elevated and his upper body was laid back. Ammonia inhalant was crushed and immediately placed under the patient's nose. The patient came back to consciousness approximately 30 seconds after passing out. Patient was asked what symptoms he felt leading up to passing out. He said that he suddenly felt dizzy and does not remember much after. Patient states that he did not eat breakfast prior to receiving the vaccine and has a history of not doing well with needles or vaccines. He states that he now feels completely fine, however, the patient was advised to stay 30 minutes for monitoring, and once he felt comfortable standing up, a nurse walked with him to the observation area. Patient was provided an ice pack for his forehead. Observation nurse was notified of the adverse event and is now monitoring the patient. |

| 1190348 | 4/10/2021 | IL | 49 | F | 3/31/2021 | 4/8/2021 | 8 Days after first injection almost fainted while driving. Heart raced and felt hot/clammy/dizzy/blurred vision. Lasted for 20 minutes. Continue to feel light headed, occasionally dizzy, and brain fog since then.. |
| 1190245 | 4/10/2021 | GA | 55 | F | 4/7/2021 | 4/7/2021 | Three waves of discomfort... felt like ice water was poured inside of my body. Extreme weaknesses of arms/legs. Visual issues. First wave within 60 seconds of shot (ended up on floor - embarrassing!). Second, and most severe, wave about 10 minutes later while sitting in chair. Apparently, I passed out with my eyes open. Hubby got nurse. They said I was unresponsive. Nurse checked blood pressure and heart rate after second wave - both normal. Third wave, much less severe, hit after 10 more minutes. Ice water/weakness feeling in arms and legs and not so much in chest area. Nurse speculated it could be low blood sugar (based on medications). Have never had low blood sugar event previously AND had eaten about an hour prior to vaccination. However, drank 4 ounces of orange juice, just in case. Went home about 20 minutes later... no other significant side effects. No swelling/redness at injection site. No other illnesses, etc. |
| 1190234 | 4/10/2021 | SC | 39 | M | 4/6/2021 | 4/6/2021 | Patient fainted about 3-4 minutes after receiving the vaccine. Patient was very pale and sweaty. We laid the patient down and gave him an ice pack and water. He quickly came back and felt better within 5-10 minutes. |

Dinner-pizza and salad 8-9pm. Stomach pains started 9pm. Dying. Worst headache Couldn't sleep entire day 11pm. Massive headache & aches. Went to bed & cried myself to sleep pretty much 3am Woke up massive headache took one more Tylenol Passed out til 8:15am. Woke up achey and slight headache. Passed back out til 10:30am. Still achey and no energy Drank 12 glasses water yesterday so was well hydrated. |
| 1190165 | 4/10/2021 | TX | 21 | F | 4/9/2021 | 4/10/2021 | I felt severe arm pain after the injection. About 12 hours later I had a fever of 100.1 and went to bed. At 1 am I went to the restroom and passed a good deal of blood as I am on my period. I got up and then fell to the floor. Then I went to my parents bedroom and fell again. I drank two bottles of water and took Tylenol at that point and after about two hours I felt better and went to sleep. I also twisted my ankle when I fell the first time. I have never fainted nor have I had such severe cramps or passed so much blood associated with a period. |

| 1190957 | 4/10/2021 | NY | 58 | F | 3/4/2021 | 3/1/2021 | developed acute delirium; redness in arm; Right arm swelling; After that very wild, I was screaming. Very scary. My memory was gone; she passed out at home; she is very depressed has anxiety; she is very depressed has anxiety; panic attack; gained 16 pounds; vomited; loss of appetite; body ache/pain; This is a spontaneous report from a contactable Other HCP (patient). A 58-years-old female patient received first dose BNT162B2 (PFIZER-BIONTECH COVID-19 mRNA VACCINE; Solution for injection, Lot number: NN6206 and expiration date: Not available), via an unspecified route of administration in the right arm on 04Mar2021 12:00 as a single dose for COVID-19 immunisation. Medical history included removed brain tumor, she has sciatic nerve damage on left arm and left leg and is paralyzed, coma, chronic body aches, seizures, bad vision, high blood pressure and three brain surgery, short term memory. The patients historical vaccine included Flu vaccine injection in right arm deltoid muscle. The patient's concomitant medications included Oxycodone (5mg three times a day tablet) been taking for 3 years since she has brain tumor removed and for chronic body aches and Lyrica. On an unknown date, the patient gained 16 pounds. In Mar2021, the patient experienced she passed out at home and she was very depressed, anxiety, panic attack, body ache/pain, vomited and loss of appetite. On 04Mar2021, the patient experienced right arm swelling, screaming, scary, memory was gone. On an unknown date, she experienced developed acute delirium. On 06Mar2021, the patient had redness in arm. The patient was in the hospital for 4 days and was admitted on 14Mar2021. Her memory came back little by little and side effect of vaccine it says that if she had side effects from first one do not take second dose because it is worse and she is scared to be admitted to the hospital and does not want to experience that again. She was taking pain medication and did not tell her she cannot take Tylenol of course with body aches they did not tell her. It was not specific acute delirium it is a psychiatric disorder and she was wild and has never been like that before, she was tied up to the bed. The reporter states that she is disabled. She has bad vision and she is by herself at home. She is 5 1/2 already going down. She is not going to get the second one until get report results because it is ridiculous, and she is very nervous as she |

was admitted at night to the hospital. Body ache happened 24 to 36 hours after vaccine not that severely unusual as it went away, and she has a chronic illness and is in a wheelchair from chronic pain. Reporter stated she could not swallow liquid or eat food and she was scheduled for a cat scan, but she could not go since she has been on the phone with Pfizer to get truth and fairness. Reporter stated yesterday this started getting better. Reporter stated was discharged from hospital last Tuesday but had pain at home. Developed acute delirium: stated when she woke up in the ER the next day in few hours she was admitted and in the ER she was crazy and tried running even though she cannot run because she is paralyzed and she did not remember nothing. Reporter stated no she did not get it that when she was discharged, it had been 48 hours. Pain started 48 hours after the vaccine. She has chronic pain the pain is not that excruciating, and it has stopped. She could not remember what happened but just knew it was redness and hurt a lot. Her memory and everything came back. States she had MMR (as provided by Reporter) done, because of pain in her whole body and everything came back negative. She had terrible pain, she asked to be given pain medication, and was given pain medication. Reporter stated it disappeared about one week now it disappeared and has recovered completely. Reporter stated black and blue inflammation and it does not hurt and the pain it went away. She was discharged from the hospital and discharge paper said second vaccine on 26Mar2021. She has been taking Oxycodone pain medication, reporter thinks she even got a higher dose since the pain was excruciating. The patient did not take any vaccines with 4 weeks. No Relevant Tests were performed. While providing an AE for the COVID vaccine she took Tylenol and Motrin as treatment, on top of it, but the pain didn't go away. She has been taking Oxycodone pain medication, reporter thinks she even got a higher dose since the pain was excruciating. The clinical outcome of events gained 16 pounds, passed out at home, depressed, anxiety, panic attack, body ache/pain, vomited and loss of appetite, right arm swelling, screaming, scary, developed acute delirium, redness in arm was unknown whereas of memory gone it was recovering/resolving.; Sender's Comments: Based on known drug safety profile, there is reasonable possibility

| 1190644 | 4/10/2021 | NC | 24 | F | 4/7/2021 | 4/8/2021 | 7 AM (about 21 hours after I received the second dose) I woke up having the most intense nausea I have ever experienced. I went to my kitchen to get water and passed out, dropping the glass I was in the process of getting from the cabinet, and I crashed. I felt so horrible I just tried to get back to my bed at that point without getting water. I passed out again trying to get back to my bed, bruising my right knee and my ribs. One the most horrible feelings I have experienced. I stayed on the floor for a bit recovering the second spell. My sister heard the commotion and quickly brought me water and Tylenol. My head felt full of pressure that I couldn?t get rid of by holding my nose and blowing. Eventually that went away. I stayed in bed for the rest of the day drinking water and Gatorade. I felt like I had an intense flu for the remainder of the day with chills and fever. The following day I needed more sleep but felt better. Now today, Saturday I feel better, but I still feel shocked at how intense my body?s reaction was to the second dose. |
| 1190620 | 4/10/2021 | ME | 37 | M | 4/10/2021 | 4/10/2021 | Patient was administered the COVID vaccine and felt fine. He relocated to our pharmacy waiting area for observation. Once there he started to read the provided material (EUA, V-Safe) and started to feel anxious. He said the next thing he knew he was sweating and had tunnel vision. He wasn't 100% sure he passed out. A fellow associate helped him to the ground and elevated his feet. We got ice for behind his neck, and a cold cloth for his forehead. We took his blood pressure and it started to come back up. He waited for about 30 minutes before leaving. His color had returned and he stated he felt fine. |

| 1190612 | 4/10/2021 | IN | 19 | F | 4/7/2021 | 4/7/2021 | Upon resting later the day of my vaccine at home, my left arm became extremely painful and sore. Which I found to be normal and expected. However, I became very exhausted suddenly and ended up falling asleep 2-3 hours before my normal bedtime. I woke up 12 hours later unable to motivate myself to get out of bed. Finally, I did and went to go take a shower. I had chills as soon as I got out of bed and had to sit down in the shower for 10 minutes out of exhaustion and had the water running extremely hot but I was still cold. My arm was still in extreme pain. Finally, I arose from the shower floor and began showering when I started to feel as if I was going to puke right away. I laid down in the shower quickly becoming dizzy, and tried to puke. I dry heaved once to no avail. Immediately after dry heaving, my ears went numb and the shower noise was barely audible. My hands went completely numb. Home alone, I knew I needed to get out of the shower before I passed out. I managed to step out of the shower before immediately falling and possibly blacking out for some seconds and fell to the floor and laid there for a minute. Finally, I was somehow able to grab a towel and struggle to my bedroom and laid there numb for about 10 minutes. This episode ended at about noon but for the rest of the day, I had to sleep on and off, it exhausted me to try and eat, I had hot flashes, more dizziness, arm pain, and nausea. I called the doctor and they said there was nothing they could do and my symptoms were normal since I had COVID-19 in December. |

| 1189598 | 4/10/2021 | OK | 47 | F | 4/7/2021 | 4/7/2021 | Around five hours after shot I felt what I would describe as brain fog and light headache, by the evening I was aching, chilling and had 101 fever. Aches in my muscles and joints as if I had Rocky mountain spotted fever again. That is what the side effects reminded me of. This went on for over 48 hours. I have never been so sick. Very nauseous by next day. Also fell to the floor from nearly passing out the following morning. Took a minute for the light headed To pass. Arm pain still today. It was very scary and seemed to be a very serious reaction. Friday after noon finally started feeling better. The other strange part of this is that my daughter and best friend and I received the shot together in the same lot number and every one of us was deathly ill with the same symptoms. I am the only one with the fainting spells. Still feel fatigued today. And shoulders and left arm injection site still sore and achy. |
| 1192205 | 4/10/2021 | AK | 33 | F | 4/10/2021 | 4/10/2021 | Pt received her Covid vaccine and within the first 5 minutes of observation period she fainted. We immediately activated 911. She was pale and clammy to the touch. Her pulse was normal and her breathing was steady during the initial observation. She slowly regained consciousness within the next 5 minutes and told us her chest hurt, her right hand hurt and she couldn't move her right arm or hand. The fingers on her right hand were white. EMT arrived shortly after and immediately took over. |

| 1189822 | 4/10/2021 | MI | 21 | F | 4/9/2021 | 4/9/2021 | It was around 5:00-6:00 PM when I started to feel very lightheaded all the time and had bad muscle aches. It got to the point where if I did anything but lay down, I would feel lightheaded and off balance. The worst happened at 3:00 AM on 4/10/2021 (the day after) when I got up to use the bathroom. I was washing my hands afterwards and nearly passed out. I couldn't hear, I couldn't see, and it was a bit difficult to breath. Luckily I knew what all of this meant and I sat down and took deep breaths until I felt fine again. |
| 1189802 | 4/10/2021 | VA | 36 | F | 4/9/2021 | 4/9/2021 | patient stated was very anxious and gets light headed when given vaccines or shots. WE keep her in the wellness room to observe. it was about 15 minutes after injection and patient fainted. She said she felt warm before fainting. She responded to her name laid on the floor for awhile and felt much better A relative of hers came in later for a shot and stated she was doing well |
| 1189796 | 4/10/2021 | | 36 | F | 4/10/2021 | 4/10/2021 | Patient developed lightheadedness/presyncope. Given water. Vital signs taken. Patient monitored for additional 15 minutes. |

| 1191778 | 4/10/2021 | MA | 70 | F | 3/23/2021 | 3/23/2021 | <p>Very difficult to fall asleep that evening; Passed out in bed; nausea/queasy; simultaneously had diarrhea and vomiting (several times in a row).; simultaneously had diarrhea and vomiting (several times in a row).; headache; Slept all day; sore arm; chills; very tired; Fever about 100.5/temp now almost 101; This is a spontaneous report received from a contactable consumer (patient) reported for herself. A 70-year-old female patient received second dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE, lot number: ER2613) via unspecified route of administration in left arm on 23Mar2021 09:30 AM at single dose for COVID-19 immunization. Medical history included prone to bronchitis with bad cold. Known allergies included strong reactions to oxycodone hydrochloride;paracetamol (PERCOCET), zolpidem tartrate (AMBIEN) and some anesthetics. Patient did not have COVID prior vaccination, did not receive any other vaccines within 4 weeks prior to the COVID vaccine. Patient was not pregnant at the time of vaccination. Concomitant medications included rosuvastatin, loratadine, ergocalciferol (VIT D) and multi-vitamin. The patient previously received first dose of BNT162B2 (lot number: EN6205) in left arm on 01Mar2021 09:30 AM for COVID-19 immunization. Evening of the shot on 23Mar2021 07:30 PM, patient experienced sore arm, chills, later and very tired. Fever about 100.5. Middle of night, about 16-17 hrs after shot (24Mar2021) awoke with nausea. Rose to go to bathroom and simultaneously had diarrhea and vomiting (several times in a row). Extreme tiredness and nausea. About 4:30 took 2 paracetamol (TYLENOL) and anti-nausea med. Passed out in bed on 24Mar2021. Woke about 11:30 AM. temp now almost 101, headache, paracetamol and more anti-nausea med. Slept all day until 10:45 PM 24Mar2021 fever normal, nausea gone, quite tired still. On 25Mar2021, patient was able to get up, still tired but so much better, stomach still queasy. Ate bit of toast, later, rice and applesauce. Bit of headache took paracetamol. Very difficult to fall asleep that evening (25Mar2021), awoke 26Mar2021 and fell so much better although stomach still a bit queasy. Treatment was received for all events. Patient had not tested COVID post vaccination. The outcome of events was recovering.</p> |

| 1192129 | 4/10/2021 | IL | 24 | M | 4/7/2021 | 4/7/2021 | Patient felt lightheaded, and his brother laid him on the ground and then he passed out for a few seconds. Pt was responsive after but felt drowsy. Pt was given water felt better. Per discussion with patient, he has a history of getting faint from seeing needles and getting blood drawn. |
| 1191986 | 4/10/2021 | NY | 17 | F | 4/10/2021 | 4/10/2021 | patient stated feeling dizzy and seeing darks spots. patient passed out for about 30 seconds. |
| 1192154 | 4/10/2021 | NM | 25 | M | 4/10/2021 | 4/10/2021 | Patient had trouble breathing (and is Asthmatic), and turned white and almost fainted, their brother went to the care to get their inhaler, and we provided orange juice and cold water for the patient. |
| 1191944 | 4/10/2021 | TX | 42 | M | 4/10/2021 | 4/10/2021 | About 10 minutes after receiving the shot, patient felt dizzy. He continued walking and fainted. He was caught by his wife and was let down to the floor. After resting, he regained consciousness. After resting longer, he felt better and was able to leave on his own. After about 2 hours, he said he felt fine and had no lingering effects. |
| 1191939 | 4/10/2021 | MI | 73 | F | 3/31/2021 | 3/31/2021 | On the day of my 2nd vaccination, I developed chills and felt slightly queasy. I woke the next morning with the same symptoms plus a headache. After being up several minutes, I suddenly had a syncopal episode and fell against an antique trunk I use for a coffee table, hitting my face. There was no explanation for the fainting other than the Moderna shot. I have had no symptoms since then other than the injuries I sustained from the fall. I saw a dentist the same day and have an appointment with my PA on Monday, April 12. I was encouraged to report this incident by family members since it was more than mild flu- like symptoms. |
| 1191938 | 4/10/2021 | MI | 22 | F | 4/10/2021 | 4/10/2021 | COVID vaccine given at 10:58 AM. Patient had syncope (fainted) at 11:00AM. Patient did not fall but was brought down to lay on floor and became conscious in 30-60 seconds. 911 was called with EMT's responding. Patient felt fine, no further faintness, dizziness, was able to ambulate on her own. Desired no further treatment. Patient left Pharmacy at 11:30 AM with no further adverse events. |

| 1191846 | 4/10/2021 | ID | 62 | F | 3/12/2021 | | <p>I thought that I had kidney stone; aches and pain/Pain in my right side was very severe/Body ache; Foggy brain; When I stood up and I had been standing for a minute or two and it wasn't that I got up too fast and then I got very dizzy; almost passed out; can't even focus; I was not feeling well; They did gave me Cyclobenzaprine, Prednisone and Hydrocodone and I took them for two days and then I just stopped because it was just making it worse and then I was foggy and couldn't event get up; This is a spontaneous report from a contactable consumer (patient). A 62-year-old female patient received BNT162B2 (PFIZER-BIONTECH COVID-19 MRNA VACCINE), dose 1 via an unspecified route of administration on 12Mar2021 (Batch/Lot Number: EN6206) as SINGLE DOSE for COVID-19 immunisation; cyclobenzaprine, prednisone and hydrocodone; all via an unspecified route of administration from an unspecified date (Batch/Lot Number: Unknown) to an unspecified date, at unspecified dose for an unspecified indication. Medical history included COVID-19 from Dec2020 to an unknown date. The patient's concomitant medications were not reported. The patient stated, "First, I had COVID back in early December and then on 12Mar2021, I got my first vaccine and I have lot of aches and pain and very foggy brain. I was just with the 'chiropractor' and he was just with me and I stood up and we were talking and I just got super dizzy and almost passed out, I just don't know. I missed, I can't even focus." When clarified the concern, the patient stated, "When I stood up and I had been standing for a minute or two and it wasn't that I got up too fast and then I got very dizzy and almost passed out, luckily there was a chair to catch me. So, my concern is, do I get the second vaccine if I already had COVID, should I didn't had this first vaccine since I already tested positive? When I had COVID, I was very cloudy in the brain. I don't know if this is a part of side effect, I am trying to find out if I can get the second vaccine." The patient experienced kidney stone. The lab data is clear, upon checking, the blood and urine samples. CAT scan has been done and the report is clear. The outcome of the events was unknown. No follow-up attempts are possible; information about lot/batch number cannot be obtained.</p> |

passed out/unconscious; feel weak; dizzy; not normal; This is a spontaneous report from a contactable consumer (patient). A 58-year-old male patient received first dose of BNT162B2 (PFIZER-BIONTECH COVID-19 VACCINE) via an unspecified route of administration in arm left on 26Mar2021 09:45AM (Lot Number: ER8730) as single dose for COVID-19 immunisation. The patient had COVID prior vaccination. The patient had no other medical history or known allergies. The patient's concomitant medications were reported as none. The patient did not have COVID test post vaccination. The patient did not receive any other vaccines within 4 weeks prior to the COVID vaccine. After taking the vaccine the patient waited for 15 minutes prior to departing the facility in order to make sure there was no adverse reactions. At approximately 10:15 10:30 AM the patient drove back home. After driving for about five minutes while stopped at a traffic light the patient completely passed out at 10:45, he was unconscious for approximately 2 to 3 minutes, almost crashed his car and EMT support had to be called. The patient regained his conscience but it took him over a half hour to feel 50% better. Until 8:30 PM 26Mar2021, the patient still felt weak and dizzy and not normal. No treatment was received for events. The outcome of events was recovering.

| 1192239 | 4/10/2021 | IL | 26 | F | 4/8/2021 | 4/8/2021 | 26-year-old female with past medical history of asthma and anxiety, and syncopal episode after her first Covid vaccination, presents to the emergency department after syncopal episode after her second Covid vaccination. Patient states she received her shot, and about 45 seconds later started feeling similar to the way she felt during the first syncopal episode. She started having tunnel vision, and her mom who is with her this time, notes that she was getting more pale. Mom notes that patient was talking about what she was feeling and was slowing down, until she passed out for about 30 seconds. During her LOC, she was shrugging her shoulders repeatedly, and after she awoke, she returned to her baseline mental status after about a minute or 2. As she was returning to her baseline mental status, she was talking about how she was feeling and it was appropriate. No urinary incontinence or tongue biting. Denies any recent chest pain, shortness of breath, other episodes of lightheadedness or syncope. She is not had syncopal episodes after shots before. After her last injection, she had a syncopal episode and fell flat on her face, thus had a CT head. At the time her CT head is negative, she had a D-dimer that was also negative. Her labs at the time were notable for hypokalemia 3.3, and in preparation for that she states she has been eating a lot of bananas this week. At this time she does not want any lab work, and feels as if this was a similar vasovagal episode similar to last time. syncopal episode right after a COVID vax. Same thing happened with the first dose. Prior to passing out felt sweaty, lightheaded, body tingling then passed out. Didn't fall this time as she was expecting it. Never had fear of needles before. No abd pain, back pain, chest pain. No h/o PE, DVT, OCPs, calf pain, SOB. No cough, SOB, palpit, diaph, chest pain/pressure, headache. No abd pain, no back pain, no vomit, no diar. No urinary complaints. No rash. No numb/weakness. No URI Sx. Mom noted a few shoulder twitches but not GTC type symptoms. rapid response called, pt went to emergency department |

| 1192350 | 4/10/2021 | CA | 28 | F | 4/10/2021 | 4/10/2021 | HPI: PT 28 y/o F feeling light headed after J&J vaccination. PT with her mother, became light-headed and dizzy while walking from vaccination site back to vehicle for 15 minute wait. PT became unresponsive with mother and fainted. Parking staff alerted rapid response team, PT regained responsiveness and was given chair to sit on, water to drink. Rapid response team arrived to a responsive, A&Ox4, pale female who was still feeling weak and light-headed. PT was transferred to a cot (in the shade) where she was placed in supine position with legs elevated on a chair. PT was given water and hard candy to suck on while vitals were taken,, Airway, breathing and circulation were all WNL. PT states she presently has a strep infection (throat area) and has been afebrile, and is to begin oral antibiotics once she picks RX up from pharmacy. PT began feeling significantly better over 10-15 minutes of laying down in the shade. EMS LAFD was called and transfer of care to EMS Station 93 for further work-up was instituted. PT felt much better and was able to stand and ambulate from cot to EMS vehicle without issue. PT chose to go home with her mother instead of being transported by EMS to medical facility. Exam (update as needed): GEN: Alert and oriented x 4, relaxed in appearance. HEAD: WNL EYES: PERRL, EOMI ENT: Ears normal, Nose normal, OP normal, no evidence of angioedema, no cyanosis NECK: Supple, without LAD. CV: RRR, no m/r/g |
| 1191175 | 4/10/2021 | MA | 19 | F | 4/10/2021 | 4/10/2021 | Fainted. Did not need transport. |
| 1191363 | 4/10/2021 | MO | 36 | F | 4/8/2021 | 4/8/2021 | 10 hours post-vaccination, lightheadedness and one episode of syncope (fainting). Then approximately one hour of shivering and chills. |
| 1191359 | 4/10/2021 | | 19 | F | 4/10/2021 | 4/10/2021 | After vaccine, patient fainted and registered nurse and CNA assisted to floor with no incidents. EMT and Doctor at side. Vitals 123/75, HR 86, 97%. Food and water was given. Dr. cleared patient to sit at the thirty minutes tent for closer observation. |

| 1191351 | 4/10/2021 | IN | 45 | F | 4/5/2021 | 4/9/2021 | I reported previously that the day of the shot (that evening at close to midnight) I fainted. I woke up on my bathroom floor. I walked down my hall and saw black dots and felt dizzy with nausea. The next thing I knew I was on the bathroom floor and didn't remember how I had gotten there. It is Friday and I now am experiencing shooting pains in the side of my head. I also have been experiencing pains in my calf muscles and some chest pains. I am still extremely tired and having abdominal pain. I have contacted my doctor's office about the fainting but I am going to call Monday to get an appointment to get checked out. I am concerned about possible blood clots. |
| 1191343 | 4/10/2021 | FL | 53 | F | 4/7/2021 | 4/7/2021 | Dizziness, tingling, heart rate increased, blood pressure increased-stayed longer in the tent with paramedics but then another person fainted nearby and I signed off to leave so they could assist the other person. After getting home, nausea, chills, high fever of 102.9, severe headache, sore muscles, My skin turned red on my chest soon after the shot and I took Benadryl. Took ibuprofen for the high fever. The next day still had a severe headache, muscle aches, fatigue and still feel that way today. |
| 1191324 | 4/10/2021 | TX | 26 | F | 4/10/2021 | 4/10/2021 | Client received first dose of Vaccine, complained of dizziness and experienced a Syncope episode. |
| 1191316 | 4/10/2021 | SC | 23 | F | 4/8/2021 | 4/8/2021 | Patient fainted shortly after getting the Janssen vaccine. She felt faint and let us know so we laid her down elevated her legs, and she fell out for a few seconds she continued to have a strong pulse. We gave her an ice pack and water after she came back and had her lay down for 10 more minutes. I checked with her a few days later she said she had fever and chills 8 hours after the vaccine but felt better. |
| 1191308 | 4/10/2021 | FL | 34 | M | 4/10/2021 | 4/10/2021 | VISIBLE FULL BODY SWEATS, CHILLS, LIGHT HEADEDNESS, ALMOST PASSED OUT. GAVE PATIENT WATER, COOL DAMP CLOTHS, AND KEPT THEM SEATED FOR OBSERVATION FOR 30 ADDITIONAL MINUTES. PATIENT FELT FINE AND RETURNED TO NORMAL AFTER ABOUT 5 TO 10 MINUTES AFTER ONSET OF SYMPTOMS. |

| 1191140 | 4/10/2021 | MO | 84 | F | 4/10/2021 | 4/10/2021 | Pt experienced vasovagal syncope after 2nd dose of moderna vaccine today. After administration, pt was able to walk and sit in chair in waiting area to begin 15 min waiting period. After 1 minute I overhear pt tell husband she is getting dizzy. I go over and talk to pt and she states she is getting very dizzy, but states no issues breathing. Pt closes eyes and begins to mutter responses. I lay her down on the floor and have someone call 911 and code white at the store. I raise the patients legs while pt lays flat on the floor, pt begins to be responsive and regains full consciousness. She sits up and begins sipping on a bottle of water. Paramedics show up and evaluate her vitals. Her daughter is called and pt is able to leave with daughter and husband to return home. |
| 1191111 | 4/10/2021 | UT | 55 | F | 3/21/2021 | 3/23/2021 | I had the expected symptoms of chills and low grade fever. The unexpected symptoms were really acidic stomach and I passed out. |
| 1191089 | 4/10/2021 | NC | 34 | F | 4/9/2021 | 4/9/2021 | Around 5.5 hours after I got the shot my blood sugar bottomed out. I had a hot flash, started sweating and my vision went blurry. I couldn't walk 3 feet without having to sit with my head between my knees. I passed out in a 5 foot walk but luckily I sat down on my couch as it was happening. I'm not diabetic, haven't ever been hypoglycemic. Ibuprofen and food after about 2 or 3 hours is a must. |
| 1191074 | 4/10/2021 | KY | 44 | F | 4/8/2021 | 4/9/2021 | 6 weeks 2 days pregnant for second shot - due date Nov30, 2021 mild morning sickness until vaccine reaction day, then severe nausea and vomiting the day of vaccine reaction day - return to low morning sickness symptoms day after vaccine reaction day. Other vaccine reaction day symptoms: nearly fainted (panic attack?) 35 minutes after receiving shot, next day I had low fever, chills and muscle/joint aches for 12 hours. Note: After 1st shot I also nearly fainted (panic attack?) about 35 minutes after shot; had pain at injection site and neck ache that lasted 30 hours. |

| 1191066 | 4/10/2021 | CO | 59 | F | 4/6/2021 | 4/6/2021 | Immediate pain /ache at injection site Approximately 6 hours later experienced headache and body aches. About 12 hours after vaccine I had chills, fever, vomiting diarrhea, and almost passed out. The vomiting and diarrhea went away after one episode. The headache/body aches continued throughout the next day. The chills/fever were gone by morning on April 7. I developed a red rash around the injection site 2 days after receiving the vaccine and as of today, April10, I still have some redness and soreness. |
| 1191057 | 4/10/2021 | MI | 23 | F | 4/10/2021 | 4/10/2021 | Dizzy, Left ear buzzing which lead to syncope upper arms tingling for 2-3 seconds |
| 1191042 | 4/10/2021 | UT | 23 | M | 4/9/2021 | 4/10/2021 | Approximately 12 hours after vaccination, awoke with severe trembling and nausea. Fainted twice. Fever of 100F. Nausea lasted approximately 30 minutes, trembling lasted about 45 minutes. Important to note that I previously had COVID-19 60-70 days prior to vaccination. The symptoms from the vaccine were significantly worse; however, they appear to have lasted for a much shorter period. |
| 1191037 | 4/10/2021 | NC | 32 | F | 4/10/2021 | 4/10/2021 | Patient arrived at pharmacy to receive her vaccine. Patient seemed nervous. Pharmacist asked if she has any questions and whether she's eaten or drank anything today. Patient states that she's had a little something. Pharmacist engaged patient in conversation during vaccination. Patient was able to raise her arm and walk to waiting area after vaccination to wait her required 15 minutes waiting time. After around 5 minutes, pharmacist went to check on patients at the waiting area, and patient got up and mentioned that she's not feeling too well. In the next second, she had fainted on the floor. Associates in the store called 911 while pharmacist and pharmacy tech stayed beside the patient to monitor breathing and heart rate. Pulse was faint but breathing was steady. Patient was completely unconscious for a good 3-5 minutes, but she started opening her eyes when EMS arrived. After EMS took over, patient was able to sit up with assistance, talk, and respond. Patient was taken out of the store on a stretcher. EMS recorded that patient's BP was 132/82. |

| 1191759 | 4/10/2021 | FL | 25 | U | 4/10/2021 | 4/10/2021 | Patient passed out couple minutes after shot but became conscious in couple minutes. Patient legs were elevated and wet towels were placed on him and was given something to drink. Emergency response team cleared patient after checking all vitals. |
| 1192248 | 4/10/2021 | TX | 57 | F | 4/10/2021 | 4/10/2021 | patient fainted about a minute after IMZ was administered |
| 1191235 | 4/10/2021 | CA | 25 | F | 4/9/2021 | 4/9/2021 | After vaccination for couple minutes, patient felt dizziness and fainted and fell. 911 was called and ambulance dispatched to the pharmacy. Before ambulance arrived, breathing is heavy and blood pressure was measured with readings of 92/51. Patient complaint of dizziness and hot. |
| 1191620 | 4/10/2021 | NC | 37 | F | 4/10/2021 | 4/10/2021 | As the vaccine was being administered into my left deltoid, the vaccine hurt at the injection site and I immediately felt very strange and felt a rushing sensation to my head and throughout my body, with a concentration in my upper body. It felt like an out of body experience: I fainted, hitting my head on the adjacent wall and fell to the ground, where the impact caused a bruise to my shoulder and back. It was reported to me that I lost consciousness for about 10 seconds. I felt disoriented, but lucid when I came to. I was not exactly sure what happened, but I could feel that I hit my head on the right side and asked if I fainted since I was disoriented and on the floor. With assistance, I was able to sit back on the bench, but felt extremely dizzy, light headed, fuzzy/strange type of blurry vision, and intense sweating. I did not feel well and knew I would have an unsteady gait if I attempted to stand. After about 15 minutes, I felt well enough to return home. |

| 1191729 | 4/10/2021 | IN | 22 | M | 4/3/2021 | 4/4/2021 | At around 7PM the day of the J&J vaccine, I began to feel very fatigued and could tell that I was going to come down with a fever. I went to bed early that day around 10PM. Woke up around 1:30AM on the 4th. Felt terrible and took my temperature. It read 101.5. Got up to use restroom and when washing hands, everything started to go blurry, I thought i had just become lightheaded and that it would pass so i stood there leaning against the bathroom door.I ended up fainting and hitting my head on the cabinets. I was completely soaked in sweat. An hour later we drove to the ER to make sure everything as okay. IV was started, some test performed, and fever was gone by 5AM. Felt completely fine after going home and resting for a few hours. |
| 1191192 | 4/10/2021 | AZ | 20 | F | 4/10/2021 | 4/10/2021 | Patient fainted a few minutes after vaccination. The patient told her father she was feeling lightheaded and then her legs became weak. Her father grabbed her to make sure she didn't fall and hit her head. We had the patient sit on the ground. Pulse and color for patient was good. We gave the patient water and had her sit for about 30 more minutes before releasing her. We checked in with her every few minutes and patient had noi issues. |
| 1191402 | 4/10/2021 | | 27 | F | 4/10/2021 | 4/10/2021 | syncope. Evaluated by EMS-Cleared |

| 1191495 | 4/10/2021 | FL | 19 | F | 4/10/2021 | 4/10/2021 | After receiving her vaccine, patient moved into our waiting/observation area at my request to wait for 15 minutes of observation. Within a few minutes I heard the patient's mom calling out for help. I quickly ran over to help. I observed the patient who was now sitting on the floor. Her eyes were wide and she looked shocked. I helped her mother to calm patient and asked her to remain seated. I asked her mom what happened and she stated patient twitched a couple of times and began to fall off of her chair at which point mom caught her. Mom had blood on her arm and I noticed it had come from patient's ear where a couple of earrings were pulled as she fell. I asked if she wanted water and quickly provided her a bottle of water. Mom stated that patient had fainted from vaccine(s) in the past, but mom stated that this appeared to look like a seizure. Mom went to get a chocolate bar since patient had had nothing to eat and they were worried about low blood sugar. After patient looked like she was back to normal I left to administer another vaccine but asked mom to remain until she felt necessary. Mom and patient advised my tech that they were ok and they left the store. |

| 1185367 | 4/9/2021 | MI | 29 | F | 3/26/2021 | 4/8/2021 | On April 8, I fainted shortly after getting out of bed around 8:30 AM EST. Despite increasing my hydration and ensuring I was eating adequately, I've felt dizzy and off-balance since then to now (April 9 2:00 PM EST). I also had "moderna" arm a week after the shot where I had a rash/splotch at the site of the injection. I could feel a bump on Friday, April 9 and then the splotch grew over April 3-5. It then started to fade and is almost gone. |
| 1185326 | 4/9/2021 | MN | 39 | F | 3/25/2021 | 3/25/2021 | 2:00pm - headache and body aces started 5:30pm- headache, body aches, low grade fever and chills 5:45pm- was driving with my children and felt a wave of heat, followed by extreme nausea, was able to pull over my vehicle and then fainted. After passing out, I started to seize. Rapid breathing, lost feeling of my arms and legs. Ambulance was called. I was transported to the hospital. |
| 1185310 | 4/9/2021 | | 58 | F | 4/9/2021 | 4/9/2021 | Near syncope that resolved without intervention |
| 1185385 | 4/9/2021 | FL | 48 | M | 4/8/2021 | 4/8/2021 | 5 minutes after receiving the vaccine, the client fainted. Attending nurse performed a sternum rub and administered an ammonia inhalant. The client woke up pale and diaphoretic. Fire Rescue responded. Client presented hypotension, Client's vitals recovered to normal limits. Client was released to home at 4:45pm. No further evaluation needed as per Fire Rescue. |
| 1185425 | 4/9/2021 | OH | 26 | M | 4/6/2021 | 4/6/2021 | Pt experienced vasovagal syncope within 15 minutes after vaccination. Supportive care provided and pt recovered without incidence. |
| 1185489 | 4/9/2021 | NY | 32 | F | 4/9/2021 | 4/9/2021 | patient became pale and stated she was not feeling well and fainted immediately after receiving the vaccine. Patient regained consciousness immediately and was alert and oriented x 3. Recovered and was well enough to leave the clinic on her own. |

| 1185505 | 4/9/2021 | MI | 40 | M | 4/8/2021 | 4/8/2021 | Approximately 5 minutes after the patient received his vaccination, he rested his head on the wall behind him in the chair he was being observed in and passed out and turned white. His wife began slapping his face and screaming his name and the observer called for me. I arrived within seconds and assisted his wife in moving him from the floor to the chair. Within seconds of getting his head to the ground safely, he came back to and was very sweaty, red in the face. He stayed on the ground laying down, and then sitting for approximately 25 minutes. During that time, he told us that he had previously passed out during 3 procedures done at doctors offices. We got him an ice pack and a orange pop as he was complaining of being hot and having only eaten a granola bar all day. He was able to get up to a chair and sat there for an additional 5 minutes, before he was able to walk out on his own accord. I have spoken with the patient twice since, once last evening and once today and he reports he feels great now besides the expected body aches from the vaccination. |

| 1185182 | 4/9/2021 | FL | 77 | F | 4/7/2021 | 4/7/2021 | She got the vaccine, did not have any reaction or that she was even given a vaccine. Then around 7:00 PM her arm started to get a little sore but kept moving it and massaging it. She then could not move anything by 10:00 PM, and had gone straight to bed as she felt so bad. She was dizzy, light headed, and these symptoms continued all night and all day Thursday. She dozed to sleep off and on all day Thursday and was in so much pain, didn't have to move to have pain. She is still having some pain today, but feeling much better. She still is a little bit dizzy. Feels as if she laid down she could sleep for a long time. She has pain in her back area, her arms, her hips. She did not take anything for her reaction as was told not to take aspirin and does not use other medications. She feels exhausted and if she moves her arm too much and also her legs then they start to hurt. Getting in and out of bed is easier today, but she could not get them over the bed to get in or out on Wednesday. Her neck also hurt to turn. She had similar symptoms to when she had the COVID virus in November/December. She had been hospitalized for it twice, was informed that she had a stroke after she had passed out. |
| 1185189 | 4/9/2021 | GA | 44 | M | 4/9/2021 | 4/9/2021 | pt fainted, the pt was sitting in the chair and fell off. the pt immediately woke up after falling. the pt said he was ok. he said he just wanted to lie down. he did so for about 10 minutes and then sat back up in the chair. we said he was feeling ok. he said he fainted because he was nervous. he did not think that it was because of the covid shot. |
| 1186173 | 4/9/2021 | CO | 47 | F | 4/5/2021 | 4/6/2021 | Fainted, blacked out, for maybe a few seconds - I was alone. Whooshing in my ears, dizziness lasted appx. 15-20 minutes. I didn't think it was a big deal, but it was unusual for me to faint. I haven't fainted since I moved in 1985 because of altitude. I also had moderate body aches different from my fibromyalgia or RA symptoms. This all happened about 25 hours after I received the Johnson Johnson vaccine. I didn't think to report it until I read the news. I am fine now and don't need any help. |

| 1185269 | 4/9/2021 | CO | 36 | F | 4/7/2021 | 4/7/2021 | I experience Vasovagal syncope within 2 min of the J&J Jansen injection. The nurses were very nice and explain to me what it was. I got hot and sweaty and horrible tunnel vision, I almost fainted. I laid down on one of their medical beds to recover while the sweet nurse fanned me. I was observed over 30 min before leaving. I woke up yesterday and felt weird along with bodyaches, chills, joint pains, random stinging sensations throughout my body (almost like a pen prick), sporadic short headaches and muscle cramps. I left work yesterday and didn't even go in today. |

| 1186175 | 4/9/2021 | NC | 56 | F | 4/8/2021 | 4/8/2021 | U/A found EMS with 56 yo F seated in stationary vehicle, CAO x 4, c/o N/V and dizziness approx 10 mins after receiving her Covid vaccine (Johnson & Johnson). Paramedic advised that pt had initial BP of 90 mmHG systolic, 12 lead showed sinus rhythm w/o ectopy, and that he attempted ODT zofran w/o success due to pt's vomiting, all prior to EMS arrival. Pt. denied CP, abd pain, diarrhea, fever, cough, HA, syncope, neck or back pain. Pt. stated she felt SOB immediately after vomiting. All assessments/interventions as noted in rest of ePCR. GCS= 15, skin pink, warm, diaphoretic. No obvious signs of trauma. Pt. assisted from vehicle to stretcher, secured w/ straps. VS taken, WNL. Abd. soft, non-tender to palpation. Cardiac monitor showed sinus rhythm, rate of 60 bpm. Pt. actively vomited x 3 while IV access attempted and established. Pt. given 4 mg zofran IV w/ improvement in N/V. Pt requested transport for further evaluation. During transport, pt's VS remained WNL, and pt stated she was feeling better, that dizziness and nausea had stopped. Noted occasional unifocal PVC on 4 lead as well as increase of HR to 124 bpm for approx. 3 seconds during transport, then returning to baseline of sinus rhythm or sinus brady. Pt. stated she normally had a low HR and BP, and had felt palpitations in the past, but no episodes of palpitations today, including during transport. Pt. transported COLD traffic to where pt care, 12 lead, and report were transferred to RN in triage w/o incident. |

| 1185954 | 4/9/2021 | FL | 54 | F | 4/7/2021 | 4/7/2021 | Around 10pm on 4/7 I felt a sudden onset of body aches. I had similar symptoms after the first vaccine so I knew this was an expected side effect and decided to take two Tylenol 500mg and go to bed. I had a restless night with pain on the injection site, chills, and severe body aches. At 8:30am on 4/8, I got out of bed and still feeling sick, thought of taking Tylenol again. I didn't want to take medication on an empty stomach so I took two sips of milk and coffee and two bites of a cookie, when I started feeling severe nausea. It was a very strong nauseous sensation. I started sweating. I stood up from the table to take the cup to the sink and my vision turned partially black. I thought I had stood up too quickly, so I sat down again. I walked back to the table and sat down. I felt I was losing control of my body. I stood up again with the intention of going back to bed, and started walking towards my bedroom. I told my husband that I was seeing all black. I don't recall what happened next. My husband says that he was asking me if I was alright but didn't answer. He walked towards me and I fainted against the pantry door and he was able to hold me. I lost consciousness for a few seconds. Paramedics came and took me to emergency room. I was released 2 hours later. Had a fever of 100.4C in the afternoon with chills and body aches. |

The patient's medical history was not provided. concomitant product used not provided by reporter. On 14-feb-2021, the patient received their first of two planned doses of mRNA-1273 (batch no: 031L21A) via unknown route for prophylaxis of COVID-19 infection. On 01-mar-2021, the patient experienced muscular weakness (legs felt weak). On 03-mar-2021, the patient experienced fall (had a terrible fall), gait inability (never able to walk, she crawled) and contusion (bruises all over body). On 05-mar-2021, the patient experienced loss of consciousness (passed out) (seriousness criteria hospitalization and medically significant) and hallucination (hallucination) (seriousness criteria hospitalization and medically significant). On an unknown date, the patient experienced urinary tract infection (urinary tract infection), dehydration (severely dehydrated), amnesia (no memory) and hypoaesthesia (lost feeling in her legs). The patient was hospitalized on 05-Mar-2021 due to hallucination and loss of consciousness. No treatment information was provided. The outcome for the events, loss of consciousness (passed out), hallucination (hallucination), fall (had a terrible fall), gait inability (never able to walk, she crawled), contusion (bruises all over body), urinary tract infection (urinary tract infection), dehydration (severely dehydrated), emotionally distraught/emotional distress, amnesia (no memory) and hypoaesthesia (lost feeling in her legs) was not reported. The action taken with mRNA-1273 in response to the event was not reported.; Sender's Comments: Very limited information regarding these events has been provided at this time. The events are probably related to the patient's comorbidities |

| 1183539 | 4/9/2021 | MD | 42 | F | 4/6/2021 | 4/6/2021 | Immediately after injection, there was a feeling of being warm and lightheaded within a minute after sitting in the waiting area. As I have had a history of low blood pressure and feeling lightheaded and occasionally fainting after injections during adolescence, I monitored my symptoms to see if they were progressing. However, those symptoms seemed to dissipate after 5 minutes. Then arm soreness started within 10 minutes after injection and worsened over the course of the day. As pain began, arm was rotated and moved around which seemed beneficial in improving the discomfort. As the level of arm soreness seemed moderate and tolerable, there was no additional treatment besides moving and stretching the arm. The arm soreness was However, when trying to go to sleep more than 12 hours after injection, the arm pain was problematic enough to prevent sleep. I then shifted my weight onto the arm that received the injection which seemed to alleviate the soreness and was then able to fall asleep. The arm soreness was still there the next day but less noticeable and more tolerable. |

| 1183596 | 4/9/2021 | CO | 50 | F | 3/26/2021 | 3/26/2021 | At 12 hours through 16 hours after administration of the vaccine I experienced rigorous shivers, feeling freezing cold to the bone for hours and couldn't get warm (even with piles of blankets), periodic heart pain and some chest pressure, periodic knife like stabbing pain in my right knee, mild nausea, dizziness, lightheadedness, severe weakness, sometimes a cough. At 16 hours I got up to get water and had to hold onto things to keep my balance. After drinking a couple of cups of water, I turned away from the bathroom sink and lost consciousness, fainting and falling onto my bathroom floor. The jolt of the fall woke me up and it took a lot of strength to get up. The symptoms were vicious. When I fainted, the brunt of my weight must of been on my upper left rib cage. My ribs were so sore for a week. It was difficult to walk, breath, blow my nose, or cough. My health provider recommended a Tylenol regime for pain control so that I could take deep breaths and prevent pneumonia. I had a low grade fever of 99 degrees F for one to two days following the vaccine. During the week that followed I felt periodically very ill, had a constant headache for a day or two, and had extremely foggy thinking and sometimes confusion. I was very fatigued all week long. I lost my appetite and have still not gained my typical appetite back. Day 8 to 9 is when I was finally feeling closer to normal. Today I feel I may be back to 100%, but my rib cage is still healing, either from a contusion, fracture, or break (likely a contusion). |

| 1183800 | 4/9/2021 | NY | 59 | F | 2/13/2021 | 3/15/2021 | Sodium levels dropped dangerously low; Passed out; Dizzy; Hit my head; Headachy; This spontaneous case was reported by a consumer and describes the occurrence of blood sodium decreased (Sodium levels dropped dangerously low) and loss of consciousness (Passed out) in a 59-year-old female patient who received mRNA-1273 (Moderna COVID-19 Vaccine) (batch nos. 015M20A and 038A21A) for COVID-19 vaccination. The occurrence of additional non-serious events is detailed below. The patient's past medical history included No adverse event. Concomitant products included FEXOFENADINE HYDROCHLORIDE (ALLEGRA) and CALCIUM CARBONATE, COLECALCIFEROL (VITAMIN D 2000) for an unknown indication. On 13-Feb-2021, the patient received first dose of mRNA-1273 (Moderna COVID-19 Vaccine) (unknown route) 1 dosage form. On 15-Mar-2021, the patient experienced (Sodium levels dropped dangerously low (seriousness criterion hospitalization), Passed out (seriousness criterion medically significant), dizzy, Hit my head and Headache. The patient was hospitalized from 24-Mar-2021 to 26-Mar-2021 due to BLOOD SODIUM DECREASED. At the time of the report, BLOOD SODIUM DECREASED (Sodium levels dropped dangerously low) was resolving and LOSS OF CONSCIOUSNESS (Passed out), DIZZINESS (Dizzy), HEAD INJURY (Hit my head) and HEADACHE (Headachy) outcome was unknown. Treatment medication included intravenous sodium.. She was being monitored through blood samples and she was fine on 29 Mar 2021, she will have to do it one more time in a week.; Sender's Comments: Based on the current available information and temporal association between the use of the product and onset of the events of blood sodium decreased, loss of consciousness, dizziness, and headache, a causal relationship with the events cannot be excluded. Head injury was due to dizziness. Headache is consistent with the product safety profile. |

| 1184953 | 4/9/2021 | TX | 39 | F | 4/1/2021 | 4/2/2021 | I was sick for 6 day straight, flue like symptoms. fever for 3 days diarrhea for 5 days on my 3rd day nausea to the point of fainting and didn't know if i was going to throw up or more diarrhea. My body wouldn't allow me to do either for hours until the evening when I got fever and diarrhea again. Body aches and headaches for 5 days. chills like i was freezing in the evenings. it was absolutely horrible! |
| 1184954 | 4/9/2021 | OR | 48 | F | 3/25/2021 | 3/26/2021 | I had the usual flu symptoms and then about 12 hours after the second shot I was up in the night to find an Advil and two minutes later I fainted. This was not a result of getting up too fast. In the subsequent two weeks, I have had two episodes of feeling weak at the knees, like it is happening again. I had never fainted before this. |
| 1184998 | 4/9/2021 | GA | 20 | F | 4/9/2021 | 4/9/2021 | Gave patient the vaccine approximately 9:50am. Shortly after giving the vaccine, patient fainted in her chair. Patient said she was fine, however, she fainted afterward again. We did get the patient to lie down on the floor while we call 911. EMS responders arrived and assessed her, patient did refuse to go to the hospital. We did monitor her for 45 minutes before she left our facility with her friend. |
| 1185091 | 4/9/2021 | FL | 18 | F | 4/8/2021 | 4/8/2021 | The Pfizer shot was given at 1:30. We shopped at the store for 15 minutes (they didn't have a waiting area to sit down). We left the store. As I (her mother) was driving home she passed out and her head almost hit the dashboard. I grabbed her head and pulled into a parking spot. She was white as a ghost. I called 911. The ambulance arrived 6-8 minutes later. She was speaking incoherently to the paramedics and her blood pressure was extremely low. They transported her to the Medical Center. Her blood pressure was monitored and she was given a bag of fluids. We were there over 2 hours before she was released. They said it was Vasovagal Syncope and the paramedic said he had a few similar calls shortly after the Covid-19 shot had been administered (I hope they are all reporting it). A friend of ours called us and told us his daughter passed out after the Pfizer shot just last week. She was at (college in out of state) and got her shot there. They didn't report it or anything. I think this needs to be looked into. Especially in regards to younger people. |

| 1187903 | 4/9/2021 | IN | 32 | F | 4/9/2021 | 4/9/2021 | About one minute after the woman sat down from getting her COVID shot she told our cashier she was feeling ill and was going to the bathroom. I went in the bathroom and found her sitting on the floor with her head between her legs. She said she started feeling ill and hot and sweaty. Her palms were sweaty as well. She was dizzy and she was starting to black out and then got tunnel vision. I tried twice to take her blood pressure and could not get a reading from the machine. We got her a glass of water that she wanted. She said she did not eat that morning. During our conversation she started feeling worse and laid down. She felt that 911 did not need to be called. After a few minutes she started feeling better and was able to stand. She said she has previously passed out after getting a shot. She answered no on the questionnaire and to the direct question of have you ever fainted afer getting a vaccine before the shot. She went back out to sit in the waiting room for 15 more minutes. Before she left she came to me and said she felt better. We went to the HIGI machine to get her BP. It was 116/79 |
| 1187779 | 4/9/2021 | NY | 18 | F | 4/5/2021 | 4/5/2021 | Patient was reported to have fainted in an aisle about 10 minutes after administration of the vaccine. Upon arriving the patient was conscious but appeared to be disoriented, sitting in a chair. 911 was called and a police officer responded; patient was evaluated and EMT services were called in afterwards. |
| 1187797 | 4/9/2021 | LA | 18 | F | 4/9/2021 | 4/9/2021 | Patient felt dizzy after injection, head hit the plexiglass divider at pharmacy counter. Pharmacist was able to go out and grab her before she fainted. |
| 1187809 | 4/9/2021 | WI | 26 | F | 4/9/2021 | 4/9/2021 | Patient immediately had a syncope episode after injection. Patient tensed up and made grunting sounds. Episode lasted 10-15 seconds. EMS was called and assessed patient. Patient refused further medical services. |

| 1187931 | 4/9/2021 | NY | 27 | F | 4/9/2021 | 4/9/2021 | The patient was seemed OK after I gave her the shot. She came in with her mother who was in the vaccination room with her while I gave the shot. I told them to stay in the store at least 15 to 30 minutes after receiving the first dose. They walked out the vaccination room and I returned to the dispensing area. The mother immediately came up to the pharmacy dispensing window to ask for an ice pack because her daughter passed out on the floor and hit her head. I got the ice pack and went to the patient to see if she was OK. She was lying down on her back. The mother took the ice pack and rested it under the patients head. I checked her pupils and checked her pulse. Those vitals were normal. I asked the patient if she could tell me her name and what day of the week this was. She answered correctly. I took her temperature on her forehead and it was elevated to 100.4 - I re-checked her temperature again in 3 minutes and it was 99. The patient was able to get up to a chair a few minutes later, and then they left after 15 minutes and the patient seemed OK. |
| 1187933 | 4/9/2021 | VA | 60 | F | 3/25/2021 | 3/25/2021 | Felt hot within a few minutes after the vaccine, then passed out. The NP on site said she was unable to find a pulse so did 10 chest compressions before I woke up. Called the rescue squad who did an EKG on route to Hospital and once I was in the ER another EKG was performed along with blood work and chest X-ray. Entry was noted as allergic reaction but diagnosis was noted as Vasovagal Syncope, Adult. EKG?s performed along with labs were normal. I have pulled muscles, tendons and ligaments from the chest compressions which were questionable but since that day have experienced tingling in upper body and arms and have felt bad. Went back to my Primary Care Doctor for follow up on March 29 for another EKG. Have had panic attacks from the situation and per Doctor will take 2 months for my chest, muscles, tendons and ligaments to heal. Hard to determine if the way I have felt is from the vaccine or what transacted when I fainted. Today which is April 9, I still feel weak, normally I am very energetic. Just wanted to report as when I saw the news that others had some situations thought best to let you know. |

| 1187946 | 4/9/2021 | CA | 31 | F | 4/9/2021 | 4/9/2021 | We are a Pharmacy. Today, April 9, 2021, we had a patient. She was scheduled for her first dose of the Pfizer vaccine at 9:30 am. The pharmacy manager gave her the vaccine inside the store at around 9:30 am. She was accompanied by her husband. After the shot, she sat down in one of the chairs in front of the pharmacy to wait for the mandatory 15 minutes wait for any reactions. At 9:43 am, we noticed that she was looking a bit dizzy. As we were approaching her, she slid down the chair and became unconscious. Luckily her husband was right beside her and caught her before she fell. Pharmacy manager then helped her husband to quickly lay her down flat on her back. The husband asked to call 911. The pharmacy technician was there to assist and she called 911. The patient regained consciousness roughly around 30 seconds after she fainted. She was alert and breathing normally. We asked again if they wanted us to continue calling 911. They said yes. Roughly 5 mins later, the paramedics came and assisted the patient. The sugar was good, blood pressure was good, temperature was good. They asked her if she wanted to go to the hospital. The patient denied. The paramedics left and the patient stayed for more time at the pharmacy and eventually left. |
| 1187952 | 4/9/2021 | AZ | 63 | F | 4/7/2021 | 4/7/2021 | Started with Chills, headache, aches and pains in joints and muscles. Body feeling heavy. Got up to use the restroom around 2:45am and got nauseous and very hot and passed out for about 15 seconds. Woke on the floor which cooled me down, drank some water and went back to bed. Next morning I got woozy and had trouble standing. Slept most of april 8. April 9th felt better. |

| 1187423 | 4/9/2021 | WI | 20 | F | 4/8/2021 | 4/8/2021 | I began feeling a migraine at 3pm. I took a nap and woke up at 6pm feeling extremely ill. My temperature was 101.5F and my entire body was in pain. I took two Tylenol as suggested. Over the course of the entire evening, I was vomiting profusely; I vomited approximately 10 times. By around 10pm my extremities became numb and I could not walk without assistance. I could not think or speak straight. I nearly fainted every time I tried to sit up. I tried to take ondansetron for vomiting but proceeded to vomit the medication as well. I wanted to go in to the ER because I felt like I was dying, but I do not feel financially comfortable doing so. All symptoms remained consistent until about 3am when I was able to sleep until 7am. I woke up with several bouts of diarrhea, intense nausea, and head to toe muscle and joint pains, as well as numbness and tingling in my arms and legs still. It is now 5pm the next day and I still can't eat or stand for too long without feeling faint. I still have diarrhea and strong migraine. |

| 1187520 | 4/9/2021 | MO | 19 | F | 4/9/2021 | 4/9/2021 | Patient received the vaccine and approximately 5 minutes later, patient passed out and fell out of her chair onto the floor. 911 was called. Patient was unresponsive for approximately 30 seconds. She came to and was very disoriented and her pupils were extremely dilated. The paramedics came and did blood pressure checks and several other evaluations. They advised her to go with them by ambulance to the ER to be evaluated due to falling directly on her face/head. Patient went outside and was evaluated further in the ambulance but was not willing to go to the ER. |
| 1187526 | 4/9/2021 | AL | 42 | F | 4/9/2021 | 4/9/2021 | PATIENT'S HUSBAND SAID SHE WAS FEELING REALLY SLEEPY. I ASKED IF SHE WAS NERVOUS BECAUSE SHE JUST SAW ANOTHER PATIENT FAINT AND SHE SAID YES. SHE FAINTED JUST AFTER THAT AND HER HUSBAND HELPED ME MOVE HER TO THE FLOOR. SHE WAS STILL BREATHING BUT SHE WAS IN AND OUT OF CONSCIOUSNESS SO WE CALLED 911. PATIENT WAS RESPONDING TO CONVERSATION BUT WOULD SLUR SOMETIMES AND EYES WOULD ROLL BACK AS SHE LOST CONSCIOUSNESS AGAIN. PLACED COLD COMPRESS ON FOREHEAD AND BACK OF NECK. PATIENT'S HEART RATE WFLUCTUATED THE WHOLE TIME. PARAMEDICS CAME TO ASSESS HER, BLOOD PRESSURE WAS HIGH 180 SYSTOLIC (DIASTOLIC WOULDN'T READ), AND SUGAR WAS 401. PATIENT DECIDED TO GO TO ER VIA AMBULANCE AFTER SHE ALMOST FAINTED AFTER STANDING. |

| 1188009 | 4/9/2021 | VA | 36 | F | 2/24/2021 | 2/25/2021 | Vasovagal syncope - Once I started feeling sick the morning after the second dose, I was unable to sit up or stand without feeling like I was going to faint. This persisted throughout the day. The fainting feeling was accompanied by dizziness, nausea, drop in BP, and needing to lay down to catch my breath. I had a fever that day and took NyQuil which allowed me do sleep and broke my fever. But the fainting feeling persisted throughout the day until 8 pm when I was able to sit up and eat. |
| 1187459 | 4/9/2021 | CO | 43 | F | 4/9/2021 | 4/9/2021 | Syncope/Nausea/Light-headed, Diaphoretic |
| 1188339 | 4/9/2021 | CA | 34 | F | 4/7/2021 | 4/8/2021 | Woke up 1am with extreme headache crown of head. Chills, nausea. Weak limbs. Barely made it to bathroom, had dhiarrhea. Fainted on bathroom floor. After about an hour was able to get back into bed. Shivering with 100 fever for 3 hours. Loud ringing in ears. Was blacking out. Still sick but the fainting and extreme episode at 1am seemed worth reporting and extreme |
| 1188205 | 4/9/2021 | WI | 34 | U | 4/9/2021 | 4/9/2021 | After 90 seconds felt warm and dizziness come on, then I fainted, the EMT that administratored the shot said I had a seizure. I have never had one before this vax and never had issues with the navy and vaccinations then. |
| 1188208 | 4/9/2021 | NY | 18 | M | 4/9/2021 | 4/9/2021 | Patient received vaccine in left arm and during waiting/observation period a few minutes later (while sitting), he told the person near him he felt dizzy, and he fainted. He soon regained consciousness (within about a minute) and was observed/attended to. 911 was called immediately as a precaution, and paramedics monitored his vital signs slowly helped him into a chair. He drank some water and a little electrolyte drink. He did not want to seek hospital treatment, and paramedics left. He stated he was experiencing nausea while sitting in the chair, and said he started to feel like he was going to faint again. Again 911 was called and paramedics attended to him, but he did not faint again. After resting in a chair and drinking some more water and some electrolyte drink, as well as cold compresses on his forehead and the back of the neck, he was eventually escorted by two store employees on a motorized scooter cart to his parent's car and went with his parent home (he did not want to seek hospital treatment). |

| 1188215 | 4/9/2021 | CA | 57 | F | 4/8/2021 | 4/9/2021 | Fainted when getting up in the middle of the night. Came to, then fainted again. Called nurse, then video call with doctor on 4/9/21, then visit to urgent care on 4/9/21. |
| 1188230 | 4/9/2021 | NJ | 23 | M | 4/9/2021 | 4/9/2021 | Patient fainted 5 minutes after receiving vaccine. He regained consciousness immediately and paramedics were called. Patient reported having breakfast at 5am and did not have lunch yet. The paramedics said he was ok to go home. I followed up with a phone call to the patient a few hours later and he said he felt better after having lunch and resting. |
| 1188251 | 4/9/2021 | FL | 44 | M | 4/9/2021 | 4/9/2021 | pt became weak and sweating, passed out. came to, and was sweating and weak and confused. |
| 1187958 | 4/9/2021 | CA | 31 | F | 4/9/2021 | 4/9/2021 | Patient was given the vaccine at 12:26 pm and was advised to wait for observation. While waiting, patient started to complain of some anxiety and lightheadedness. We advised patient to wait a little longer for further observation. A few minutes later, at 12:36 pm patient said the lightheadness was getting worse and then passed out for a few seconds while waiting sitting in our observation area. The pharmacy technician was in the area to hold up the patient and keep her calm while patients mother requested that EMS/911 be called. EMS came minutes later and patient was coherent and talking to the technician and her mother. EMS asked patient if she wanted to be taken to the hospital and patient agreed. Patient called a few hours later to follow up with pharmacy staff and informed us that she was discharged and feeling better. |

| 1188329 | 4/9/2021 | CO | 37 | M | 4/9/2021 | 4/9/2021 | Patient was waiting in designated waiting area following vaccine administration. About 5 minutes after vaccine I heard wife calling for help. When I went out to assess patient I found him laying back in chair with his head back, shaking, eyes open, and making fists with his hands. I asked him if he wanted me to call 911. He was able to respnd through clenched teeth that he felt very strange and to call 911. He remained conscious and knew his name. We contacted 911 and I supported pt from opposite side of wife. After a few minutes he calmed down and asked for water, he appeared to be sweating around head area. He took a few sips of water until operator on phone asked us to withhold further liquid until EMTS arrived. He was completely back to normal status within 5 minutes, EMTS came and assessed pt and allowed him to leave of his own accord. After the incident her relayed that similar reactions including full fainting spells have occurred to him in the past when receiving vaccines. this was not indicated on his intake form |
| 1188184 | 4/9/2021 | CA | 40 | M | 4/9/2021 | 4/9/2021 | Vagal - passed out while driving to observation. Was assessed on site and refused medical treatment. Left against medical advice |

| 1188342 | 4/9/2021 | MI | 33 | M | 4/8/2021 | 4/8/2021 | It was a drive thru shot facility. They gave me a shot in my left arm and asked me to pull around to park. I parked my vehicle and didn't feel well so I switched seats with my girl friend. As soon as I got into the passenger seat I was out. She said My eyes rolled back in my head and I started shaking and eyes at this point she said where going up down and side to side . She ran for help and after about 1-2 minutes I woke up. I thought I passed out so I instantly put my feet on the dash of my car and the pharmacist gave me water and chocolate milk. He then checked my heart rate it seemed good and after 20 minutes he let us go home. |
| 1188343 | 4/9/2021 | CA | 19 | F | 4/9/2021 | 4/9/2021 | patient was sitting in waiting area and felt dizzy and fainted. was on ground for 30-40 seconds and had nurses and paramedics attend to her. blood pressure was high at first and then she felt fine after 30 minutes and denied ambulance and went home |
| 1188377 | 4/9/2021 | CA | 18 | M | 4/8/2021 | 4/8/2021 | Perfectly healthy, fit, thin 18 year old young man with no allergies and no previous reactions to vaccines or medications... immediately upon receiving J&J injection his eyes rolled back into his head and he was unconscious for two to three minutes, then in and out of consciousness for another eight to ten minutes. He convulsed for around ten seconds after about two minutes of being unconscious. Four to five healthcare workers attended to him, asking him to "stay with us." They called an ambulance, and the medics monitored him for awhile. Heart rate dropped to 34 bpm, clothing drenched with perspiration. Blood sugar was slightly low, although he had eaten a late brunch of two fried eggs, sourdough toast and fruit salad. The last thing he remembers is a cold sensation shooting down his arm and into his left hand. He tried to talk to say he wasn't feeling well, but he couldn't form the words, so he raised his arm and then fainted. He felt generally unwell the rest of the day, and today he is still not fully recovered. |
| 1188392 | 4/9/2021 | CA | 31 | M | 4/7/2021 | 4/7/2021 | Near syncope, diaphoretic, nausea, BP 60/30 |

| 1188322 | 4/9/2021 | CA | 31 | F | 4/9/2021 | 4/9/2021 | Patient fainted post vaccination. |
| 1188132 | 4/9/2021 | CO | 23 | M | 4/9/2021 | 4/9/2021 | Patient had syncope symptoms and gave ice pack and asked him to put his head between his legs to help with the dizziness, took BP and was normal and found out he was pre-diabetic so I gave a coke in case it was low sugar, he felt better 30-45 mins post-vaccine and returned to work, he came back after 5 minutes feeling cold and spinning, so we called EMS and asked him to lay down with feet elevated and covered him to try to keep him warm. EMS arrived and conversed with patient, took vitals, and recommended him to go home and rest as he was finally feeling better; overall, it took roughly 3 hours for symptoms to completely fade. |
| 1188013 | 4/9/2021 | ME | 18 | F | 4/9/2021 | 4/9/2021 | The patient fainted a few minutes after receiving the vaccine. She came to shortly thereafter and checked out thoroughly by paramedics. All vitals were normal and she was picked up by another party. |
| 1188014 | 4/9/2021 | FL | 27 | F | 4/9/2021 | 4/9/2021 | Patient was sitting in chair for 15 minutes and started to feel dizzy and tried to get up from chair and passed out for 5 to 10 seconds, hitting her head on the aisle as she went down. Myself the Pharmacist ran down the aisle to her where I instructed her to remain laying down on her side as we called 911 for help! She was alert and oriented with no rash or breathing difficulties! I sat with her until paramedics arrived and evaluated her and recommended that she get checked out by someone at a hospital or her own doctor. She was released without future assistance from us! She did complain of a headache and was told by paramedics that it maybe the vaccine or the head injury and needs to seek medical attention. |
| 1188034 | 4/9/2021 | ME | 31 | M | 4/9/2021 | 4/9/2021 | Patient received the vaccine and fainted shortly thereafter. He became very sweaty and came to in a couple of minutes. Paramedics attended to him and deemed it necessary to take him to Medical Center for further evaluation due to irregular heart rate. |

| 1188042 | 4/9/2021 | CA | 20 | F | 4/8/2021 | 4/8/2021 | Patient was sitting down for about 10 minutes after receiving 1st dose of COVID vaccine. She stood up to ask for some water and a few seconds later she fainted. She was on the floor for a few seconds unconscious but then quickly regained consciousness. We called 911 to get an ambulance to arrive. EMT's tended to her and checked her vitals upon arriving. Patient was able to leave on her own power and have a friend take her home. |
| 1188078 | 4/9/2021 | IL | 22 | M | 4/9/2021 | 4/9/2021 | after administering the johnson and johnson covid vaccine patient fainted a few minutes later. He fell to the floor . he also cut his jaw in the process once we saw what was happening we rushed to help patient but he got back up almost immediately and refused calling 911 or going to convenient care of emergency room from for further care. he reported that he had fainted in the past with a different vaccine and believes he will be fine. we had patient sit in the pharmacy for an additional 30 minutes and confirmed that he wasn't experiencing any more symptoms before letting him go. |
| 1188103 | 4/9/2021 | CA | 53 | M | 4/8/2021 | 4/8/2021 | Patient was scheduled for an appointment for a Johnson &Johnson covid-19 vaccine through a drive thru Thursday April 8, 2021 @12:45pm. We arrived early and he received the vaccine at 12:15pm, waited 30 minutes for reaction and he was feeling fine. Later that same evening, the patient was driving to work on the freeway when he felt a dry throat so he coughed hard, at that cough he felt a massive pain in his head, like his "head was going to explode." He immediately had tunnel vision closing in on him, so he pulled over and later woke up in our parked car with flashing emergency lights on, parked on the shoulder of the freeway. Disoriented and confused why he was there, he looked at his watch and saw he lost 15 minutes when he had passed out. MY HUSBAND COULD HAVE BEEN SERIOUSLY INJURED OR KILLED IF HE HAD NOT PULLED HIMSELF OVER WHEN PASSING OUT. Today we reported this to our doctors office and to you! |
| 1186223 | 4/9/2021 | OH | 28 | M | 4/2/2021 | 4/2/2021 | Pt experienced vasovagal syncope within 15 minutes of vaccination. Supportive care provided and pt recovered without incidence. |

| 1188151 | 4/9/2021 | MA | 49 | M | 4/2/2021 | 4/2/2021 | I went with my wife, whom we were more concerned about possible reactions to the vaccine given her history of anaphylaxis reactions to bee and wasp stings, has had to carry a Epi-pen always, so we stayed an additional 15 minutes for 30 minutes total before we left. She was completely fine throughout, I however as we were walking out I began to feel a little "Off?", not necessarily nauseous or dizzy, just a bit Off. Told my wife that and that I wasn't sure I should drive us home (I drove us there), so she drove. About 15-20 minutes into the drive, it got worse and I passed out. My wife says my eyes rolled in the back of my head with my eyes open but no responsive. She says she kept hitting my chest but I didn't respond. I came to about 2 minutes after passing out. She asked me if I felt like I needed to goto the hospital, I told her I needed to eat, that I felt like what I needed was food, then we go from there. I did eat breakfast, an English muffin at about 8am that morning, it was almost 12:30 by that point. When I finally got food in me I felt much better and have had no adverse reactions since. |
